THE ENCYCLOPAEDIA OF ISLAM
EXECUTIVE COMMITTEE:

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government, and from Mr. Gerald L. Parsky.

The articles in this volume were published in double fascicules of 128 pages, the dates of publication being:

1979: Fasc. 79-80, p. 1-128
1980: Fasc. 81-84, p. 129-384
1982: Fasc. 87-88, p. 513-640
1983: Fasc. 89-92, p. 641-896
1984: Fasc. 93-94, p. 897-1024
1985: Fasc. 95-98, p. 1025-1263

ISBN 900407893

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia, or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee, where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

VOLUME V

P. 849, KİBLA, l. 2: al-Daghmuni lived ca 618/1223-24, since, according to Hâghipi Khalifa (though not in the printed versions of the Kâshaf al-şunûn), this was the date of composition of his treatise on astronomy.

P. 850, 2nd formula from bottom: the quantity $\cos \varphi$ is to be multiplied by the preceding quotient and the product is to be added to $\sin \varphi$.

P. 859, l. 8, before $\frac{\cos \varphi \cos \Delta L}{K}$ insert $-$

P. 859, l. 10, before $\frac{\sin \varphi \sin \varphi}{K}$ insert $-$

P. 859, l. 15, before $\frac{\cos \varphi \cos \Delta L}{K}$ insert $-$

P. 868, l. 4, after $\sin \theta$, insert $-$

P. 87, Table 1, instead of $ij$ read $\varphi$.

P. 87*, ll. 7 and 9, instead of $\varphi_{p}$ and $\varphi_{r}$ read $f_{p}$ and $g_{r}$.

P. 106, KILWA, l. 3 from below, instead of KÎNIVI read KÎNÎNE.

P. 243, KÎZ, 3rd paragraph: Ewliya Celebi and, following him, Mamboury are wrong when saying that the Elz-tashli, i.e. the Byzantine "Maiden's stone" (of porphyry), was incorporated into the Süleymaniye Mosque. The order books (1550-7) of the Süleymaniye mention the transportation of a column from the Kstahli Mahallesi to the mosque, but that one was from granite. See C. Mango, Antike Statuari und die Byzantiner beholder, in Dumbarton Oaks Papers xvii, Washington 1963, 61; O. L. Barkan, Süleymaniye camii ve inşaat, Ankara 1972-9, l. 344-6, il. 23-4, Nos. 44-5; J. M. Rogers, The state and the arts in Ottoman Turkey, i, The stones of the Süleymaniye, in JAMES xiv (1982), 79.

P. 268, KORDOS, The correct name in Ottoman Turkish of the city of Corinth emerges rather as Kördes or Gördes in the pages of Ewliya Celebi, where it is consistently spelt with hâfsâfî and not with hâfî, confirmed by such European renderings as Gourdese (Bernard Randolph, 1689) and Ghiurdos (W. M. Leake, ca 1805). Add to the Bibliography: P. A. MacKay, The fountain at Hadji Mustafa, in Hesperia, final. of the American School of Classical Studies at Athens, xxxvi (1957), 193-5; idem, Aerocnôth in 1668, a Turkish account, in op. cit., xxvii (1968), 386-97, with map, plan and photographs.

P. 428, KÛRÂN, add to Bibliography, section "General studies": A. Neuwirth, Studien zur Komposition der mekanischen Suren, Berlin 1981.

P. 509, KÜRSAN, l. 23, instead of Khârî I Island read Khârî Island.

P. 508*, l. 7, instead of Malcom's read Malcolm's.

P. 532, KUTB MINAR, place Plates XXVIII-XXIX between pp. 508 and 549.

P. 557*, KUTN, l. 24 from bottom: instead of Bozdogan read Bozdogan.

P. 558*, l. 23 from bottom: instead of Calışlı read Calışlı.

P. 559, l. 19 from bottom: instead of Eiuçay read Uluçay.

P. 560*, l. 8 from bottom: instead of muslim read muslin.

P. 550, l. 16 from bottom: instead of of read or.

P. 561, l. 10: instead of 873/1470 read 875/1470.

P. 561, l. 39: instead of muslims read muslims.

P. 563*, l. 5: instead of Starhemberg read Starhemberg.

P. 564*, l. 7: instead of Mecmerrer read Moriner.

P. 565*, l. 20 from bottom: instead of 1241/1225 read 1244/1225.

P. 565*, l. 12 from bottom: instead of journalist read journalists.

P. 565*, l. 25 from bottom: instead of hayats read hayats.

P. 566*, l. 14: instead of Edseby read Ecseby.

P. 570, A-KUTUB, l. 7 from bottom: A part of the 6Uyain, edited by Fayyal al-Sâmîr and Nabila ‘Abd al-Munîm Dâdûd, has been published in Baghdad in 1357/1977. Following an unconfirmed report another part has been published in Cairo in 1980 and further parts are planned.

P. 590, LAHAWR, place Plates XXX-XXXI between pp. 600 and 601.

P. 898, MÂ, section 7: Irrigation in North Africa and Muslim Spain, add to Bibliography: R. Brunschvig, Hafsidens, ii, 210-13 and the bibliography given there.
P. 1027a, MADJÁZ I. 4, instead of more read mere
l. 31 from below, after mind insert to

P. 1056b, MADJILIS, add to bibliography of section on Jordan: R. G. Khoury, Jordan Assembly meets, clears way for elections, in International Herald Tribune, 10 January 1984, p. 1.

P. 1103b, MADJINÜN LAYLÁ, l. 7 from below, after his love add of

P. 1231b, AL-MAHDI, l. 12 from below, add to end of paragraph: The Companion ʿAbd Allāh b. Busr al-Āyānī, who died in Himṣ between 88/707 and 95/715, attributed the following tradition to Kaʿb al-Aḥbār: "The Mahdi will send (an army) to fight the Rūm, will be given the knowledge (fikhr̄) of ten and will bring forth the Ark of the Divine Presence (tābūt al-sakhīna) from a cave in Antioch in which are the Torah which God sent down to Moses and the Gospel which he sent down to Jesus; and he will rule among the People of the Torah according to their Torah and among the People of the Gospel according to their Gospel."

P. 1232b, ll. 8-19, replace by: The theme was evidently adopted from the tradition ascribed to Kaʿb by ʿAbd Allāh b. Busr in Himṣ.

P. 1235a, add to Bibliography: W. Madelung, The Sufyānī between tradition and history (forthcoming).

SUPPLEMENT

KHEMASHIN, a numerically small group of Muslim (Sunni) Armenians who had been converted from Christianity in the beginning of the 13th century. In the U.S.S.R. (population 529, according to the 1926 Soviet census), they now inhabit the Black Sea coast near the Turkish border. In Turkey they live in compact settlements along the Diftiri and Karadere rivers (Bash Khemashin) and in the mountains not far from Hope (Hope Khemashin). The traditional economy is based on sheep and goat herding, and related activities. The Khemashin dialect (like the Erzurum, Cilicia and Istanbul dialects) is part of the western dialect group of the Armenian language. The Khemashin have, to a great extent, assimilated by the Turks, nor have they been listed in either the 1959 or 1970 Soviet censuses.

KHERLA, a fortress of mediaeval India, lying to the south of Malwa and east of Khándesh [q.v.], and in the extreme northern part of Berar [q.v.], just to the south of the headwaters of the Taptí River. It is in fact some 50 miles west of modern Deogafh; in British India it fell within the Central Provinces, now Madhya Pradesh.

The foundation of the fortress is attributed to a Râdîput râdiâ, the last of whose line is said to have been killed by a commander of the Dilî Sultan, perhaps in the time of Allâbâd Khâlid; but the fortress as it stands today is Islamic in construction. During the revolt of the Deccan in the latter years of Mubârram b. Tughluq, it fell into the hands of a local Gond dynasty. In the early 9th/10th century, the Gond ruler Nasîngh was made subject to the ruler of Mâla, Hushang b. Dîlâwar Khân Ghûrî (508-38/1105-35), appointed to Mâla by the Tughluqids. It now became a subject of discord and covetousness between the rulers of Mâla and the Bahmânis; the latter took over the territory in 831/1428. The foundation of the fortress is attributed to a Râdîput râdiâ, the last of whose line is said to have been killed by a commander of the Dilî Sultan, perhaps in the time of Allâbâd Khâlid; but the fortress as it stands today is Islamic in construction.

According to the 'Abbâsid tradition, Khidâsh was a nickname derived from 'âh-d-âsh “to tear apart”, "to scratch" because “he has torn religion to pieces” (khâdâsha al-dîn) (Tabârî, ii, 1503; Bâladhûrî, Anshâb, f. 292b). This is a clear indication of the efforts made on the part of the 'Abbâsids to blacken his name, especially after his death. In another tradition, however, Tabârî says that it was Khidâsh who adopted this name whereas his real name was 'Ammâr or 'Umâra b. Yazîd (ii, 1588, cf. Anshâb, f. 292a, inf.; Ibn al-Athîr, Kâmîl, Beirut 1939-48, ii, 237, lists Khâlîa as a sâhîr of the sâhîr of Berâr with a revenue of 171 million damûn.

Bibliography: Sir Wolseley Haig, in Camb. hist. of India, iii, index. (C. E. Bosworth)
name is concerned, Khidāsh is not an uncommon name in Arabic, derived from the third form of the verb ʿād-š (cf. Lane’s Lexicon and LA, s.v. and Aṣḥāb, xxix, 52 and index). It is quite possible that the ʿAbbāsids added their interpretation to the name later, when already there existed a tradition according to which the Prophet disliked the name Khidāsh. (Bu Wālib, Dilwa‘, Cairo 1939, 97, cf. Rster, “Call yourselves by graceful names”, in Lecceus in memory of Prof. Martin M. Plossner, Jerusalem 1975, 21). However, whether Khidāsh was his name or not, it does not make much difference to the fact that his activities in Khorasan for over eight years as head of the Hashimiyya (q.v.), caused so much trouble to the ʿAbbāsids that his memory was almost completely obliterated from the records of the ʿAbbāsids daʿwa.

In order to understand the enigmatic personality of Khidāsh, one must remember that in the early phases of the daʿwa the contacts between the centre of its activity in Khorasan and the parallel centre in Kuṭa were, for security reasons, very weak. The same considerations necessitated extreme caution in the contacts between the Khorasanis and the ʿAbbāsids Imāma in Hunayna. Although the sources say that the propagandists in Khorasan acted in the name of the ʿAbbāsids, it is highly improbable that the ʿAbbāsids intentionally failed to uncover this connection or to discover the identity of the Imām until the very end. The contents of the daʿwa teachings were extremely ambiguous throughout, and its propagandists spoke in general terms about the rights of ʿAbī al-ḥaṣaṣ (cf. al-Imā mùa, al-Imā‘a, ed. Samarrai, Leiden 1973, 571 l. 18) a term which was accepted to mean the family of the Prophet (cf. M. Sharon, Thè ʿAbbasid daʿwa re-examined, 9, n. 23). Thus through most of its phases, the daʿwa in Khorasan was, in fact, nothing but an extension of the Hashimiyya of Kuṭa. It is thus highly possible that even the leaders did not know what exactly were the essential ideas that differentiated their activities from those of the other Shiʿa in Khorasan, and especially those in Nishāpūr and its environs.

The only information about Khidāsh supplied by Tabārī and Balṣdhuri is as follows. After Asad b. ʿAbī Allāh al-Kārī had killed several of the first propagandists of the daʿwa in Khorasan, headed by Abū ʿIkrima, and had severely punished some of the others, another leader was sent from Kuṭa to Khorasan. The new leader was Abū ʿl-Husayn Khāshālander. As he was an uneducated man (if the term ʿumma in Tabārī’s account is to be understood thus), Khidāsh was able to overcome him and assume the leadership (Tabārī, ii, 1503, Ansāb, l. 292a).

In another tradition there is some more and rather different information about Khidāsh. According to this tradition, it was Bukayr b. Mihin, one of the veteran adherents of the Hashimiyya who, in 215/736 sent ʿAmār b. Yāzīd to Khorasan as a “leader of the Shīʿa of Bann ʿl-ʿAbbās” (Wāliyyan ʿalā ʿlf bann ʿl-ʿAbbās). He resided in Marw and changed his name to Khidāsh (a custom common to the early adherents of the daʿwa, who for reasons of secrecy, used to adopt new ʿumma once initiated into the movement [see Kārta]). He began making propaganda for Muḥammad b. ʿAlī, in which he was very successful. According to another tradition in the Ansāb, it was Muḥammad b. ʿAlī who nominated him. Sometimes later, however, Khidāsh changed his initial propaganda and “turned away from the Imām’s instructions and began to teach improper and disgraceful ideas. Therefore, the adherents of Muḥammad b. ʿAlī fell upon him and killed him. Some say that it was Asad b. ʿAbī Allāh al-Kārī who killed and crucified him” (Balṣdhuri, Ansāb, f. 292a). The “disgraceful ideas” according to Tabārī (fns. cvid.) were those of the Khurramiyya (q.v.). His execution by Asad took place, according to Tabārī, in 103, during the governor’s second term of office (ii, 1589–9; Wellhausen, 510). Although these traditions reflect clearly the ʿAbbāsids distortion of the information about Khidāsh, it is possible, however, to build the following picture, from the combination of the above narrations with the information transmitted in the Aṣḥāb. Khidāsh’s predecessor as the leader of the Hashimiyya in Khorasan, Khāshālander, b. Saʿād, led the movement in Marw from ca. 108/726 for three years until 111/730. It was probably in that year that Khidāsh arrived from Nishāpūr, a centre of Hashimit activity, and took over. For at least seven years, until his execution in 118/736, he was the leader (ṣādiq) of the Hashimiyya there (Tabārī, ii, 283, l. 2) and the one responsible for creating its sound organisation, as Wellhausen rightly observes. He was the first to achieve a real and enduring success and to gain wide support among both Arabs and Muslims. The lists of the leaders of the daʿwa in his time show people from Ṭūmān, Ramḍān and other Arab tribes, including Sallām b. ʿAbī Saʿīd of Kufa, who was later to replace him (Wellhausen, Tabārī, ii, 1586–7, Aṣḥā, 216–22). There is no neutral evidence whatsoever that he was Khurrami, though Wellhausen, Cahen and Lewis tend to accept ʿAbbāsids traditions which attributed to him Khurrami and Mazdakite theories (this tradition is presented in its complete form by al-Naṣabī al-ʿAkbar, ed. J. van Es, Beirut 1971, 32–5, cf. Wellhausen, 515–16; Cahen, Point de vue . . ., 324–5). Cahen, however, points out that many people who fell out of favour were accused of sandaṣa, and this is clearly true of Khidāsh; a tradition which presents him as a Christian from Yūrā should be understood also as representing the same trend (Ansāb, loc. cit.). From a unique tradition in the Aṣḥāb, we know exactly the nature and content of his propaganda, and it also explains why the ʿAbbāsids later hated him. The tradition states: “A group of Khidāsh’s adherents in Nishāpūr, called the Khidāshiyta after its leader, a certain Abū Khidāsh. The group acted against the ʿAbbāsids from the very beginning of their reign, and in the time of Abū Dīsār al-Mansūr changed its name and became the Fātimiyat. They argued that, since after the death of ʿĪbrāhīm al-Imām [q.v.] a new ʿimām was not nominated in the way of wāʾṣiya, the ʿimām should return to the ʿAlids, now already represented by the descendents of Fātimah (Aṣḥāb, 439–4). From the statement that the Khidāshiyta-Fātimiyat continued the former Khidāshiyat, it is clear that Khidāsh as a Hashimi leader furthered the cause of the ʿAlids.

Having worked for a while in Nishāpūr, Khidāsh seized the opportunity of the growing activity of the Hashimiyya in Marw in order to move there in 118/730, and being intellectually superior to Khāshālander b. Saʿād, he was able to depose him and take over the leadership of the movement there. For the Hashimiyya of Marw, both his leadership and ideology were congenial. After the death of Abū Ḥāṣim, the original Hashimiyya continued in general terms to support the cause of the House of the Prophet, which became more and more identified with the Fātimid ʿAlids. This development disturbed Muḥammad b. ʿAlī, and on one occasion he is said to have warned one of his early emissaries to Khorasan, the Khilāf leader Abū ʿIkrima, about the ʿAlids leaders in Nishāpūr.
During the seven years of his activity, the 'Alid cause gained widespread support, whereas the 'Abbasid Imam was kept completely in the shade. Khidash spoke in favour of al-Ra`if min Al Muhammadd or al-Kifin min al-lb bayy, slogans which were common to all the 'Alid adherents in Khurasan and the early da`wa.

Khidash’s independent ideas, which were inconherent with the aims and aspirations of the 'Abbasid Imam, are explicitly indicated in Ta'rikh al-Khulafa', ed. Grazievich, f. 252b l. 18-2531. 6, and especially in a unique note on the margin of the manuscript, f. 253a, which is the key for understanding the whole problem. It runs as follows: Khidash, radhunu nabilah wa-rasidun bi-Khurasan wa-nisabahu li-l-lahum min ukhri bayyi rasidul alladhi fa l-sharia ba-dhut "I shall not return to all the Alid adherents in Khurasan."

Muhammad b. `Abd understood that the new independent centre in Khurasan had to be connected directly with him and not through Kufa, but as long as Khidash was alive this was impossible, and it was difficult even after Khidash’s death in 121/736.

The new leader, Sulayman b. Kathir, went to see the Imam in Humayma in 120/739, but this meeting led to a crisis. Muhammad b. `Abd tried to repropose the Khurasani for accepting Khidash’s wrong ideas, but Sulayman and the Khurasani could not see what was wrong in pure 'Alid-Hajjajiyi ideology, and for over five years the relations between Khurasan and the 'Abbasid Imam were almost non-existent (Tabari, ii, 1240, 1277, 1269, Baladhuri, f. 292b).

Only in 120/744 were relations restored, and the centre in Khurasan acknowledged the leadership of the new Imam, Muhammad b. Kathir (died in 125/745). Sulayman welcomed Bukayr b. Mihah in Marv and sent money with him to the Imam (Tabari, ii, 1240, 1269, Baladhuri, loc. cit.). This improvement in the atmosphere was due to the great crisis in the Shfa that followed in the wake of the collapse of Zayd b. `Ali’s revolt in Kufa in 121/736 and the execution of his son Yabu in 122/737. The messianic expectations of the Shfa which were connected with these two were replaced by the usual feelings of sorrow and repentance after their death. This feeling was especially acute in Khurasan, where black garments were worn everywhere as a sign of mourning for the dead 'Alids and where mourning for the dead 'Alids and newborn Alids was introduced. The circumstances were, therefore, ripe for coming to terms with the 'Abbasids imam and for turning the da`wa into an 'Abbasid one. Even so, this change was not easily accepted. Not only did the pro-'Alid Khidashiyia continue to exist under a new leader, but also (as Baladhuri reports, Anas, f. 305a), Muhammad the son of Sulayman b. Kathir was himself an adherent of the Khidashiyia who was opposed to the transference of the movement in Khurasan to Alu Muslim. Because of the activities of Khidash we can now understand that it was not until 120/744 that the da`wa in Khurasan was changed from a purely 'Alid one to an 'Abbasid one. But the 'Abbasid was, after reaching power, known as al-Mansur is reported once to have said, that "the love for the Al Ali 'Abd in the hearts of the people of Khurasan is mixed with the love for us" (Fragmenta, ed. De Goeje, 245).

which He has created him; while țayn consists in His preparing the fasîk for the evil for which He has created him. Linguistic usage, the Kirân, the force of logie, and the attitude of the jussaâs and those in the past who handed down traditions and of the Companions and Successors as well as of those who came after them and of the whole body of Muslims with the exception of those whom God has led astray as regards their intelligence, namely such as belong in the past who handed down traditions and of the firman (passion, desire). When Allah protects the soul, țamyiz (power of discrimination) and another, haw (unanimous). Then follows this reasoning: Allah hat m, Thumama. aMAIIaf and aI-DjH»?i are all to the followers of slanderers and outcasts, like al-

is "the creation of the ability to disobey". The Mu'tazills (as already indicated by Ibn Hazm’s words) see in it a contradiction to Allah’s commandment. He strengthens the law with a strength which amounts to leading astray (ıddal).

Therefore it is the refinement of divine grace. It is the "prince, lord", while, according to the Ash'arists, țidhal is "the creation of the ability to disobey". The use of the Arabic form of the title Khedive is "lord, prince, ruler". The use of the Arabic form of the title Khedive is "lord, prince, ruler".

KHIDHLÄN—KHIR BEG

KHIDHLÄN, Khidhlä, title of the rulers of Egypt in the later 19th and early 20th centuries, deriving from Persian khidhlä, kadäsh "lord, prince, ruler". The use of the Arabic form of the title Khedive is "lord, prince, ruler".

In a way, it was a unique title among the vassals of the Ottoman Sultan, which the ambitious viceroy of Egypt sought precisely in order to set himself apart and above so many other governors and viceroyâs of Ottoman dominions. Closely related to his efforts to render his rule more secure within his family was Ismâ'îl's ambition to acquire the more formal accoutrements of sovereignty in relation to his master in Istanbul and the European powers. After lavish gifts in Istanbul, the distribution of outlays, his master in Istanbul and the European powers.

formal opening of the Suez Canal. From a mere viceroy of Egypt, he rose to become the viceroy of Egypt and the vassal of the Ottoman Sultan, which the ambitious viceroy of Egypt sought precisely in order to set himself apart and above so many other governors and viceroyâs of Ottoman dominions. Closely related to his efforts to render his rule more secure within his family was Ismâ'îl's ambition to acquire the more formal accoutrements of sovereignty in relation to his master in Istanbul and the European powers. After lavish gifts in Istanbul, the distribution of outlays, his master in Istanbul and the European powers.

Although Khidhlän is reputed to have introduced the versified chronogram into Ottoman literature, very few of his Turkish poems have survived (Sehi, 9). His three sons, Ya'qub Pasha, Mustâfî Ahmâd Pasha and Sinan Pasha, were also notable scholars, the latter being the author of the famous Tadarrusvâs. Although Khidhlän is reputed to have introduced the versified chronogram into Ottoman literature, very few of his Turkish poems have survived (Sehi, 9). His three sons, Ya'qub Pasha, Mustâfî Ahmâd Pasha and Sinan Pasha, were also notable scholars, the latter being the author of the famous Tadarrusvâs.

The title remained in use until 1914, and was assumed by Ismâ'îl's son Tawâfîk Pasha (1879-92), and Tawâfîk's son 'Abbâs II Hilmi (1892-1914) [9v.]. When soon after the outbreak of the Great War Egypt was declared a British Protectorate and 'Abbâs II was deposed, his successor, his uncle Husayn Kamîl, assumed the title of Sultan of Egypt.

Ilyas is described as a horseman. Ilyas is further mentioned in oral tradition. In one poem the Turk Istanbul 1941, 54; Dergama'da cinsaneler, detaylar, 77.

In beliefs which explain the name of joy from their reunion (Ali Irner, hitir that of the land, but others hold the inverse impression on the hands which he touches; and that he brings abundance, fertility and happiness. Another feature of his legendary personality is that he comes to the aid of beings in distress, and in particular, of those in danger of drowning in the sea or lost in the desert. In regard to Ilyas, beliefs and traditions are somewhat rare. In the written literary texts and ceremonies are reserved for women and girls. They are generally limited to two days only. Nevertheless, they form a sequence of seven weeks in the 'Alawi villages of a mountainous region in the province of Kirkkale. During the month which precedes the day of Hidrellez, the ceremony of "drawing from the divinatory pitcher" takes place every Thursday evening. The seventh Thursday is called "the day of Nazari", when a communal meal is eaten, prepared from the meat of sacrificed animals. On this same day, the children, carrying flowers and willow branches, search out, and organise for themselves, communal meals by a sanctuary; they also carry out other rites which are, more or less, to be connected with those aimed at summoning rain [see 2STisgiv]. On returning to the village, they throw their crowns of flowers and leaves into the river (Etem Utul, Yuhan Kanara bayindir Nazari sentikleri, in Türk folkbh arastirmaları, No. 167 (1971)).

In addition to the sources cited in the entry for Khi<Jr Beg in von Hammer's Geschichte der osmanischen Dichtkunst, Pest 1860, i, 124, is actually that of his son, Sinan Pasha.

AL-H饲料USAYN [SEE AL-H饲料USAYN].

KHI<JR BEG — KHI<JR KHAN

AL-H饲料USAYN (in Turkish, Hidrellez), is the name, in Turkish tradition, of a popular festival in the spring and celebrated on the 5-6 May, this date being considered as marking the beginning of the season of summer, extending from then till 7 November (Kusma). The two dates correspond respectively with the feastsdays of St. George (23 April) and St. Demetrius (26 October).

Khidr (Teish, Hizir) also symbolises in Turkish tradition the renewal of vegetation in the spring. It is believed that, when this personage shows himself upon the face of the earth, the dry vegetation becomes green again as he passes; that he leaves a green impression on the banks which he touches; and that he brings abundance, fertility and happiness. Another feature of his legendary personality is that he comes to the aid of beings in distress, and in particular, of those in danger of drowning in the sea or lost in the desert. In regard to Ilyas, beliefs and traditions are somewhat rare. In the written literary texts and oral tradition they are limited to allusions to his certain beliefs, Ilyas is the master of the seas, and a power which he shares with Hinr; according to a local source, Bihamad Kh.ini’s TVriAA-i hagiologically attributed to the $flfl EjalAl al

Funds, such as abundance, prosperity, happiness in general, or more specifically, the acquisition of a house, the birth of a child, etc. Early in the next morning, there takes places the "drawing from the divinatory pitcher". The previous evening, there are placed in the pitcher, to the accompaniment of appropriate rites, various small objects belonging to women and girls who wish to ask Fate about their future destiny; the pitcher is then placed under a rosebush during all the night. In the morning, a young girl draws out the objects in the pitcher one after the other, and Woman recites the "divinatory quartain", which is interpreted in regard to the future fate of the owner of the corresponding object. (3) On 6 May, there is an outing to go and eat, in groups of relatives, neighbours and friends, in the countryside, usually by some sanctuary. Games and amusements, including swings, the preferred pastime for this festival, are organised.

The festival and its attendant ceremonies are normally limited to two days only. Nevertheless, they form a sequence of seven weeks in the ‘Alawi villages of a mountainous region in the province of Kirkkale. During the month which precedes the day of Hidrellez, the ceremony of “drawing from the divinatory pitcher” takes place every Thursday evening. The seventh Thursday is called “the day of Nazari”, when a communal meal is eaten, prepared from the meat of sacrificed animals. On this same day, the children, carrying flowers and willow branches, search out, and organise for themselves, communal meals by a sanctuary; they also carry out other rites which are, more or less, to be connected with those aimed at summoning rain [see 2STisgiv]. On returning to the village, they throw their crowns of flowers and leaves into the river (Etem Utul, Yuhan Kanara bayindir Nazari sentikleri, in Türk folkbh arastirmaları, No. 167 (1971)).
When Timur invaded India in 801/1398-99, he took refuge in Mewar, but later entered Timur's service, and became the governor of Dihli and khilāʿd-dar of Multan and Deogadpur. However, it was not until 817/1414 that he finally took possession of Dihli. He regarded himself a vassal of Timur, and later of the latter's son Shah Rukh (q.v.), whose names were recited in the Mubda and inscribed on the coinage. He obtained Shah Rukh's permission in 820/1417 to affix his own name also on the coinage; he chose for himself not the title of mullah, but that of rūyāt-i nāʾī, suggesting presumably that he was a standard-bearer of the Timurids.

His reign of seven years, until his death in 839/1431, was full of campaigns undertaken by himself and by his able and loyal māst Tāj al-Mulk which extended the frontiers of his authority and re-united Paṇḍāb with Dihli. Punitive expeditions were organised against rebellious nobles, especially the Tārān nakhs; there were also several expeditions against Hindu rājās such as those of Kotahe and Gvālījār (q.v.) in order to collect taxes and tribute. Near-contemporary chronicles regard him as a kind and benevolent ruler who brought to Dihli and the other areas which he governed relief from the economic sufferings and insecurity which had continued since the invasion of Timur.

KHILA (pl. khilāʾ), "robe of honour," also called tasāghī ṭaṣāghī, and tasāghījāt. Throughout much of the Middle Ages, the term khila did not designate a single item of clothing, but rather a variety of fine garments and ensembles (khilaʿ or baddā) which were presented by rulers to subjects whom they wished to reward or to single out for distinction (hence the alternate name tasāghīf, "honouring"). These robes, the most common of which was the ḥabī (see above), were normally embellished with embroidered bands with inscriptions known as firāz (q.v.) and were produced in the royal factories (dār al-firāz).

(i) Origin of the custom.

The custom of bestowing garments of honour in the Near East is very ancient. The Patriarch Jacob singled out his favourite son Joseph from amongst his brothers by giving him a khilāʿi passār (Gen. xxxvii, 3), which was a ceremonial or royal robe. E. A. Speiser, Genesis, Anchor Bible, Garden City 1964, 290). Joseph was later similarly honoured by Pharaoh, who had him dressed in garments of linen (Gen. xli, 42). Herodotus reports that the Egyptian king Amasis sent to Croesus of Lydia as a royal gift a cotelet of linen embroidered with gold thread and cotton with the figures of animals woven into the fabric (ίστικτ, iii, 47).

This custom had a most important precedent in Islam with Muḥammad's gift of the baddā (q.v.) which he was wearing to the poet Kāʾb b. Zuhayr (b. al-ʿAtlīr, Kāmil, Cairo 1903, ii, 137-4). The very word khila denotes the action of removing one's garment (A. Ḥabīb) in order to give it to someone (TA, v, 342). L. A. Mayer has suggested that this was "originally more a promise of personal security [māṣlaḥa] than a token of distinction" (Mamluk costumes, 56), but this is an overstatement.

This term khila does not appear until ʿAbbasid times, when the practice became so institutionalised that the bestowal of garments of honour was an almost daily occurrence. Members of the caliphal entourage came to be known as aṣḥāb al khilaʾ those who wear the khila". The presentation of a robe of honour was a standard mark of investiture. Such was the case for an heir-apparent (see e.g. Maṣḥīd, Murājī, vii, 305), a vizier (e.g. Ḥūdā al-Ṣāliḥī, Taʿrīkh-i Wāsārī, ed. Mamed, Beirut 1904, 175), or a provincial governor (e.g. Ṭabarī, iii, 217). The bestowal of khilaʾ and other gifts to favourites was an occasion for poetical compositions and was noted by historians (e.g. Ibn al-Fawārī, al-Baḥāshāl al-dimīrī, ed. M. Djalal, Baghdad 1337).

In the heyday of Fatimid rule in Egypt, the new haute bourgeoisie found itself with the means to emulate—after a fashion—many of the luxurious practices of the aristocracy. Among these was the custom of bestowing khilaʾs upon friends and relations (Y. K. Stillman, The importance of the Cairo Geniza manuscripts for the history of medieval female attire, in JIMES, vii (1976), 582).

The Mamlūkīs with their strong military psychology and a marked penchant for heraldic symbolism, standardised the khilaʾ in accordance with the class of the wearer and his rank within that class. The three major classes of khilaʾs were the military (aṣḥāb al-ṣawāfī, the civil service (aṣḥāb al-ṣawāfī), and the religious scholars (al-ʿulāmāʾ). Makrizī draws in detail the great variety of khilaʾ worn by these three important classes of Mamluk society (Khitāt, ii, 229-8; tr. by Mayer, in Mamluk costumes, 58-60).

A special official, the Nīsār al-Khāṣī (Keeper of the Privy Purse) oversaw the khilaʾ in the Great Treasury (al-khassā al-ḥabīr) which contained only robes of honour (ibid.). In addition to garments, the Mamluk military tasāghīf could consist of arms, such as gold-ornamented swords, and a horse from the sultan's own stable (min al-ṣīghāḥ), fully outfitted with saddle, bridle, and caparison (kandās).
officers upon the accession of a sultan (C. Barbier de Meynard, Dictionnaire turco-français, Paris 1881, i, 706), so that this term is to a large extent synonymous with that of ġulāt i jātī "accession payment".

Robes of honour were given on all sorts of occasions and for a variety of reasons. Thus, there was the ḥādīyat al-ma'āniya ḋ.or ḫ. al-sitaḥār (robe of appointment), the ḫ. al-wasīrah (robe of viziership), the ḫ. al-risāda ḋ.or ḫ. al-rīḍa (robe of pardon), and the ḫ. al-safar (robe of dismissal—with honour of course). The ḫ. al-hadīdām was given to a guest from afar, while the ḫ. al-sāfar was given upon his departure. A sultan might give a ḫ. al-ṣīfāya (robe of health) to a favourite who had recovered from an illness (Mayer, Mamluk costume, 5r-4, and the sources cited there).

The custom of bestowing robes of honour remained widespread throughout the Muslim world until recent times. In 19th century India a khilafat (also ḥilafah, ḥilāfa, khalīfa) might consist of anywhere from a minimum of five articles to as many as one hundred and one (Mrs. Neer Hassan Ali, Observations on the Mussulmans of India, London 1917; repr. Karachi 1971, 149-50; see also Yule and Burnell, Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, London 1903, repr. London 1968, 483-4).

[N. A. Stillman]

KHILAFA — KHILAFA

KHILAFA, KHILAFA movement, a politico-religious movement in British India, manifesting itself in the years after the First World War. On the one hand, it had its roots in Pan-Islamism, which came to the fore about 1900. On the other hand, it had its roots in Pan-Islamism, which was stimulated by nationalism [see A. C. Nicmecijer, The Khilajat movement in India, Delhi 1925 (confidential publication of the Govt. of India)]. Material concerning the movement can be found in Afzal Iqbal, ed., Select writings and speeches of Moulana Mahomed Ali, Lahore 1944 (containing among other things an unfinished autobiography of the author). In many books, the movement is treated as an episode in the nationalist struggle, e.g. A. Aziz, Discovery of Pakistan, Lahore 1944, and R. C. Majumdar, History of the Freedom movement in India, iii, Calcutta 1963. The most recent monograph is A. C. Nieemijer, The Khilajat movement in India, 1919-1944, The Hague 1972.

Khilâfa's wardenship over the Holy Places and the integrity of the Ottoman Empire—claims which, by the way, constituted a check on Arab nationalism and the ambitions of the Sharif 'Abd al-Qasim of Mecca. Another deputation, headed by Muhammad 'Ali, went to Europe and had two (unsuccessful) interviews with members of the British Government in March 1920.

The Khilâfa movement started as a communal movement and met with mass approval within the Indian Muslim community (only among upper-class Muslims was there a marked tendency to hold aloof from it). Large funds were collected, partly by petty contributions. But it also got the support of the Indian National Congress. Thereby the Khilâfists became more and more involved in the nationalist movement, which entered upon its first non-cooperation campaign (1920-2). Gandhi became a member of the Central Khilâfa Committee and issued a Khilâfa Manifesto in March 1920. The Khilâfists, however, accepted Gandhi's creed of non-violence only conditionally: if it did not bring success, they would have to resort to dhikha. This former seemed possible in connection with an Afghan invasion; the latter was actually performed in the summer of 1920. Some 30,000 mutahharin, most of them coming from Sind or the Pandjâb, crossed the Afghan border, but about 75% of them came back, disillusioned by their reception in Afghanistan. These aspects of the Khilâfa movement had an adverse effect upon Hindu-Muslim relations, which were vital to its nationalist character. Gandhi's suspension of non-violence in February 1922, constituted a severe blow in this respect; Indian Muslims felt betrayed by the Hindus after bearing the brunt of the nationalist battle.

No less deadly blows came from the Turks. The nationalist government at Ankara succeeded in restoring Turkey's position. The Khilâfists supposed that Kemal Pasha was acting on behalf of the Sultan-Khilâfa, but this proved to be an error. In November 1922, the Sultanate in Turkey was abolished and the Khilâfa lost all temporal power; he was "Vaticanised" (a condition which the Khilâfists had declared to be incompatible with his office). Khilâfa leaders tried to explain away the fact, but their followers left them. The movement wholly collapsed when in March 1924 the Ottoman Khilâfa was abolished. Some leaders, like Abu 'l-Kalâm Āṣāl and Dr. Ansārī, remained in the Congress; others found their way back to the Muslim League, which up to 1929 had been the political organisation of Indian Muslims. Other leaders again, like the Āl brothers, tried to save the Khilâfa organisation, but to direct it towards communalist goals. It grew into an instrument to further Muslim interests as opposed to Hindu ones, but even in this form, the organisation had lost all significance by 1928.

Bibliography: Among the contemporary accounts the most important is P. C. Bamford, Histories of the non-co-operation and Khilafat movements, Delhi 1925 (confidential publication of the Govt. of India). Material concerning the movement can be found in Afzal Iqbal, ed., Select writings and speeches of Moulana Mahomed Ali, Lahore 1944 (containing among other things an unfinished autobiography of the author). In many books, the movement is treated as an episode in the nationalist struggle, e.g. A. Aziz, Discovery of Pakistan, Lahore 1944, and R. C. Majumdar, History of the Freedom movement in India, iii, Calcutta 1963. The most recent monograph is A. C. Nieemijer, The Khilajat movement in India, 1919-1944, The Hague 1972.

KHILAT—KHINZIR

KHILAT [see A-KHILAT].

KHILATI. [see KHALD].

KHINALUG self designation: Kattitturur; Russian, Khinalug (from the A Khinalug), a people of the eastern Caucasus. Khinalug is a numerically small ethnical group, which forms an independent branch of the Northeastern Ibero-Caucasian language family. According to the 1959 Soviet census, there were (ethnically) 95 Khinalugs, and linguistically 1,540. The Khinalugs are Small Moslems of the Sháffi rite.

In Khural law, suidae are included in the same divine anathema as monkeys (V, 65/60) [see qimun], and since their flesh involves the major impurity (najis al-tayr), no Muslim eats it (Túrân, 169/175, V, 34, XVI, 11/16). This food prohibition inherited from the Old Testament (Lev. xi, 17; Deut., xiv, 8) was abolished by Christ for Christians (Matt. xix, 17-20; Mark, vii, 15-21). In Islam, the prohibition of eating pig meat implies ṣīnput fadu the illegality of buying it or of raising the animal, whose presence near a person praying renders void the prayer; only the use of its bristles for making footwear is tolerated. These bristles are provided by Christian pig breeders who obtain them by scalding the beasts in boiling water after they have been slaughtered, whence the saying akrab min khindat al-khinzir li-l-ṣallat al-maghār "showing more aversion than the pig for boiling water".

Al-Jahiz, although admitting the excellence of the pig's flesh, which has pride of place on the tables of the Caesars and the Persian Emperors (iénawd, i, 234, iv, 40), is careful to point out, in regard to the animal and its behaviour, its most unattractive habits, aiming perhaps at justifying the strict terms of the Kur'anic prohibition. It is omnivorous, though not really coprophagous (ṣāiži), but it devours on occasion excrement. It consumes snakes, like the porcupine, certain raptores, the cat and the Purple Gallinule (zhahmu), its zeal to prolong the act of copulation (iénawd, ii, 35, iii, 188, 400, 496, 525, iv, 50 suggested scornful sayings like afyash min 'urf "more flighty than a boar" and akbah min khinzir "more vile than a pig". The sight of a pig squealing in the mire or a wild boar wallowing in mud (mashar), present in everyone's mind, did not lessen the obloquy heaped on the species, without even having to recall the legend current about its base origin. This legend (iénawd, v, 387-8, vii, 204) stated that Noah, distressed when in the Ark by the pestilence that Jehovah had created out of the lion's sneeze in order to end the great spreading of rats in the ship, appealed once again to the Almighty, who sent down to him a pair of pigs (or wild boars), who soon set to work razing the beasts In boiling water after they have been slaughtered, whence the saying akbah min khinzir li-l-khtnzir li-md* al-miighar "showing more aversion to al-Daralr! (tfayate, i, 304), there was a tradition person expiating the divine punishment; according to the passage (tfayate, iii, x76, 354, 496, 525, iv, 50) suggested scornful sayings like afyash min 'urf "more flighty than a boar" and akbah min khinzir "more vile than a pig". The sight of a pig squealing in the mire or a wild boar wallowing in mud (mashar), present in everyone's mind, did not lessen the obloquy heaped on the species, without even having to recall the legend current about its base origin. This legend (iénawd, v, 387-8, vii, 204) stated that Noah, distressed when in the Ark by the pestilence that Jehovah had created out of the lion's sneeze in order to end the great spreading of rats in the ship, appealed once again to the Almighty, who sent down to him a pair of pigs (or wild boars), who soon set to work razing the beasts In boiling water after they have been slaughtered, whence the saying akbah min khinzir li-l-khtnzir li-md* al-miighar "showing more aversion to al-Daralr! (tfayate, i, 304), there was a tradition person expiating the divine punishment; according to the passage (tfayate, iii, x76, 354, 496, 525, iv, 50) suggested scornful sayings like afyash min 'urf "more flighty than a boar" and akbah min khinzir "more vile than a pig". The sight of a pig squealing in the mire or a wild boar wallowing in mud (mashar), present in everyone's mind, did not lessen the obloquy heaped on the species, without even having to recall the legend current about its base origin. This legend (iénawd, v, 387-8, vii, 204) stated that Noah, distressed when in the Ark by the pestilence that Jehovah had created out of the lion's sneeze in order to end the great spreading of rats in the ship, appealed once again to the Almighty, who sent down to him a pair of pigs (or wild boars), who soon set to work razing the beasts In boiling water after they have been slaughtered, whence the saying akbah min khinzir li-l-khtnzir li-md* al-miighar "showing more aversion to al-Daralr! (tfayate, i, 304), there was a tradition person expiating the divine punishment; according to the passage (tfayate, iii, x76, 354, 496, 525, iv, 50) suggested scornful sayings like afyash min 'urf "more flighty than a boar" and akbah min khinzir "more vile than a pig". The sight of a pig squealing in the mire or a wild boar wallowing in mud (mashar), present in everyone's mind, did not lessen the obloquy heaped on the species, without even having to recall the legend current about its base origin. in the neighbourhood of pigs. The fact was noted by R. Reclus (Nouvelle géographie universelle, Paris 1884, ix, 190) that in many stables in Fars there was the custom of keeping horses in the company of pigs, and that a most close affection grew up between the two very different creatures. On the Christians' farms, the pig rivalled the cock in the role of waking people in the morning; since its cries for its food allowance could be heard from the earliest hours of the day (Hayyavân, ii, 294-5).

The ancient empirical forms of medicine attributed curative virtues to various organs of the pig. Thus its liver was used as an antidote against the venom of reptiles and soothe colics; its dried and powdered gall sprinkled on haemorrhoids made them go down; inserted in the nostrils, this lost soothed cough; a bone carried as a talisman secured against the quartan ague; and an ointment of its lard rubbed on the body gave protection against all evil and against malevolent spirits. Numerous other beneficial properties were attributed to its blood, urine and dung, as well as to the wild boar's tusks (see al-Damāri, op. cit., I, 306, and in the margin, al-Kazwīnī, 'Aqīdābī, II, 224-5).

Arabic synecgetic literature is poor in material relating to hunting the wild boar in particular and to the dangers involved in this. It was considered to be a dangerous beast because of its bad temper and its defecations, so that hares for its destruction were held by local rulers and officers; it was hunted with the lance, hunting spear, bow and sabre on these occasions. In Syria, the farmers preferred to let the lion roam on the fringes of their lands rather than to exterminate it, since it was a sure protection against the possible nocturnal ravages of herds of packy-boars through their crops (Hayyavân, iv, 49).

Kushādjīn (g.v.) simply recommends that a person on foot charged by a wild boar should feign death, face downwards on the ground (Masāyid, 215). In the 6th/12th century, the valiant lord of Shayzar, Usāma b. Munṣīd, tells in a realistic fashion of his perilous encounters with the black beast which, in his time, abounded in the Oronites lowlands (N. al-Mubīwī, Princetont 1930, 202, 223-4). 'Isā al-Asadī (27th/38th century), in his encyclopedia of hunting ('Al-Dhāmirat fī tālūnah al-bayzara (Iscorial ms., Ar. 931, l. 262a), advises farmers that, in order to ward off the depredations of wild boars, they should cause to boom out in the middle of the night a big caudron, emptied and placed upside down, and with a drum skin stretched over its mouth; a bunch of hair should then be flicked between the fingers with an alternating movement of the two hands. He also gives directions for making a trap (huṣna), roofering over the mouth of a conical hole dug in the normally-used pathway of the animals (op. cit., ff. 303b-304).

Finally, a century later, the Mawlaik Ibn Munfī, completing al-Asadī, brings to bear the fruit of his experience for anyone wishing to measure his strength against the savage beast, whether on foot or mounted (Uns al-mala' bi-waṣīth al-falād, B. N. Paris ms. Ar. 2832, ff. 17b-18b, and annotated tr. F. Vīrī, in the press). The arms which he recommends for fighting with it are the double-edged sabre (bābaddarlār) and the arrow with a flat-edged head (yāsdīlāh), which the attacker should plunge right into the animal's forehead or pierce with them its paws. If the hunter is thrown to the ground by the beast's charge (bānīlāh), he should flatten himself on the ground and strike upwards with a slashing motion in order to cut the tendons of one of the beast's limbs. He should also lie in wait for the moment when the beast turns round in order to spit it with a backwards action and rip it open. Another secret of success is perfect mastery of one's mount, which must not take the bit and bolt when it sees the attacking beast. With a lance or hunting spear, the best way is to gouge out one of the beast's eyes, which cannot then survive this wound. Finally, Ibn Munfī records that, according to the ancients, the bold taliṣman against the wild boar's violence is to carry a crab's claw hung on the arm.

At the present time, in the mountainous regions of the Maghrib, where the wild boar is sometimes abundant, hunting it is used as a tactical means of training for troops practising firing in the countryside, and the dead victims are left on the ground for wild carnivores.

The term khirīsīr plus other terms is also used to designate several other wild animals which have a long muzzle: the potamocherus (Potamocherus percaris) of Africa is therefore called khirīsīr al-nahr ("wild boar of the river") or khirīsīr al-mā'ī, wrongly identified by Rashīdí with the hippopotamus [see farān al-nahr in Suppl.]; the two other African subdes, the phacochoerus (Phacochoerus aethiopicus) and the hylochoerus (Hylochoerus meinertzhageni) are lumped together under the name khirīsīr abī al-nahrāyyn because of their highly-developed defensive tusks; with its long snout for grubbing up ant-hills, the orycterus (Orycterus afer) is called khiriṣiṣ abī al-nahr whilst the dolphine and the porpoise are called khirīsīr al-bahr "sea pig". Finally, in pathology, the plural khamṣīsīr designates scrofulous growths on the neck.

(F. Vīrī)

AL-KHIRAKI, 'UMAR b. AL-HUSAYN AL-BAĞDĀDI (d. 334/946), better known under the name of Abu 'l-Kāsim al-Khirakī, was one of the first and most celebrated of Hanbali jurists. He was first guided into the maghlab of the Imām Ahmad by his father Abū 'Ali al-Khirakī (d. 290/902), who was himself a pupil of Abū Bakr al-Marwānī (d. 275/886). He also knew Ahmad's two sons, Sālīḥ (d. 268/880) and the ghāfīš 'Abd Allāh (d. 290/903).

On the eve of the arrival of the Shī'ī Būyids in Baghdad, al-Khirakī left the Irānī capital as a mujādīd seeking refuge in Damascus, where a Hanbali school was already taking root. He died there soon after his arrival there, in 334/945, although the exact date of his death is not known. He was buried in the cemetery of the Bāb Sāḥīr, at the side of the martyr's tomb (Kūbih al-guθādah), and his tomb became a place of pilgrimage. Ibn Bāṭa visited it when he passed through Damascus, and it still existed in Ibn Kathīr's time (Bīdawī, xi, 214).

Shams al-Dīn al-Nābulusī (d. 797/1394-5), in his résumé of the Bābī Abu 'l-Husayn's Tābi'īn al-hanbalīn, 532, tells us, on the basis of a report going back to Muwaffak al-Dīn Ibn Kūdāna, that al-Khirakī had denounced publicly in Damascus a "reprehensible practice" (munkar), whose nature is not otherwise specified. Because of this, he was condemned to be flogged and died as a result of his wounds. However, this version of his death does not seem to be given by his other biographers.

Al-Khirakī's only work which has come down to us is his famous Al-Muhkam, the first précis of Hanbali fiqh, which was to enjoy a considerable success and to contribute to the education and formation of numerous generations of legal scholars.

It is said that he wrote numerous other works whose titles are not specified and which have all
been lost. He had left his personal library in Bagdad in the care of a friend in the Darb Sulayman, before leaving for Syria. A fire there destroyed it (Bidaya, xi, 214).

Ibn Kathir remarks, loc. cit., that the Mukhassas was written when the Black Stone was in the hands of the Carmathians. In fact, al-Khiraki tells us in the Mukhassas, iii, 395, when describing the Pilgrimage rites, that "The Pilgrim must kiss the Black Stone if it is in its proper place". It is well-known that this last was carried off in 327/930 and restored in 339/950; one may accordingly conclude that the Mukhassas was put together between 317/930 and 334/945, after the death of Abu Bakr al-Khaliil (d. 314/928).

Abu Bakr 'Abd al-Aziz b. Di'antar (d. 356/967), called Qudam al-Khaliil, gave out that he did not follow the views of the Mukhassas on 60 questions (mas'ala). The had Abu 'l-Qaysayn, in his Tabakht, iii, 76-118, returns to this problem and enumerates 98 points of divergence between the two scholars, whilst defending that doctrine which he deems the best.

A large number of commentaries were written on the Mukhassas, of which three became especially celebrated, sc. those of Ibn Haniil (d. 403/1011), of the had Abu Ya'la (d. 458/1066) and of Muwaffak al-Din Ibn Khushru (d. 620/1223). The first two have been lost, however; under the title of Maq'tu, Muwaffak al-Din, has been published in Cairo by Rashid Ridai (12 vols., 1341-42/952-30). But there were also many other commentaries, and no text of Hanbalism was so much commented upon. The shaykh Badran, in his Madkal, 214, states that 300 commentaries still existed in the time of Yusuf b. 'Abd al-Hafl (d. 909/1503), a Hanbali known as a historian of Damascus.

Various disciples are known to us of al-Khiraki, including the following: (1) 'Abd al-Aziz b. al-Harith Abu 'l-Qaysayn al-Tamimi (d. 371/981), prolific author and founder of a famous line of legal scholars (Ishibli, 324); (2) Abu 'l-Qaysayn Sam'an (d. 387/998), one of the most famous preachers of his generation and a mathematician (bid., 350-3); (3) 'Abd Allah b. al-Ba'tha (d. 387/998), even though he does not mention al-Khiraki amongst the authorities upon whom he based his creed (bid., 346); and (4) Abu 'Hasan al-'Ukbari (d. 387/998), considered one of the best-informed scholars of Hanbalism.

Khirbat al-Bayda', an early Arab structure in the Syrian Desert. Khirbat al-Bayda', or Qar al-Abayd is situated about 100 km. southeast of Damascus, looking out to the east over the Ruba'a, a fertile depression in the middle of the southeastern Syrian desert. It is a structure set out as a square, 50 m. x 60 m. At every angle and in the centre of each side, except for the eastern one, there are circular cell-like rooms. The eastern side contains the gate, giving on to a courtyard on the other sides by ranges of rooms, 7.6 m. deep and ca. 5.0 m. (type a), 6.5 m. (type b), 7.5 m. (type c), and 5.8 m. (type T) wide, forming the scheme a-b-a-T-a-b-a. All these rooms were living quarters. On the eastern side there were two small rooms flanking the entrance and four long rooms, which must have served as store-rooms. On the southern and northern sides the rooms were articulated into two groups with the scheme a-b-a and a-b-d respectively. Entrance from the courtyard was given by doors in the b-rooms, whence doors led to the a-rooms and further doors led from there to the T-rooms. On the western side were two groups of rooms following the scheme a-b-a which were also accessible through doors in the b-rooms. Thus we have on three sides of the courtyard two groups of rooms separated by isolated room of the T-type. The residential character of the building is attested by the organisation of the rooms, together with the abundant mural decoration especially on the lintels. First impression suggest that Khirbat al-Bayda' is another example of the genre of Unayyad palaces. Closer investigation, however, reveals this identification to be impossible. It lacks many elements shared by Unayyad palaces, principally the basilica organisation of the rooms, the peristyle, brick and vaulted construction, and stucco decoration. Both the decoration and the technique of construction demonstrate an ambitious local Syrian craftsmanship. The decoration shows this craftsmanship to be working with oecumenical patterns of the 5th and 6th centuries A.D. The relations of this local craftsmanship can be more closely determined. Masonry comparable with that of Khirbat al-Bayda' is found in northeastern Syria, not in the neighbouring Hawrin. Equally, the decoration is not Hawrain in type, but resembles closely the ornament found in the region northeast of Hamah. This suggests that Khirbat al-Bayda' is not an Unayyad structure but was built in the 5th and 6th century by one of the Arab rulers, clients to the Byzantine state.

Khirbat al-Mafjar, popularly known as Kafr Higam, is the modern name for the ruins of an unfinished Unayyad mansion in the Wadi 'l-Nuwaywan, north of Jericho. The ruins comprise three separate buildings: a palace proper, a mosque and a bath attached to a hall. On the east side of this complex stood a colonnaded forecourt with an ornamental pool at its centre. Additional architectural remains lie north of these buildings, but have not yet been excavated. Foundations of a wall, found north of the site, suggest that the buildings were originally surrounded by a walled estate, comprising cultivated land, agricultural settlements and perhaps a game preserve. A complex irrigation system, developed already in Roman times and based on three neighbouring springs—Ayn al-Sultan, Ayn al-Makhtjar and Ayn el-Duyrah, provided the water for the residential buildings as well as for the cultivation of the land. The modern name of the site, meaning "a place where water springs from the earth", attests to the abundance of water in this area. The site, which has not yet been identified with any place mentioned in written sources, was first visited and described by Captain Ch. Warren and Mr. F. J. Bliss on behalf of the Palestine Exploration Fund (Survey of Western Palestine, iii, 1883, 211-12;
Our main knowledge, however, derives from the excavations conducted between 1935 and 1948 by the Department of Antiquities of Palestine, under the direction of R. W. Hamilton with D. C. Barski as field director. Their finds, which appeared first as preliminary reports in the Quarterly of the Department of Antiquities of Palestine, were later published by Hamilton (Khirbat al-Mafjar, an Arabian mansion in the Jordan valley. With a contribution by Dr. Oleg Grabar, Oxford 1959).

I. Architecture. A glance at the plan of Khirbat al-Mafjar reveals some remarkable irregularities and a somewhat awkward relation between the main units of the building complex (Fig. A). The walls of the square, two-storeyed palace, which was by far the largest part of the whole complex, are of uneven length (the south and west walls, 67.28 m. externally; the north wall, 67.21 m.; the east wall, 63.86 m.), its façade is asymmetrical, and there are further oddities in its inner division. However, the plan of the palace conforms to those of other Umayyad castles. A three-quarter round buttress-tower stood at each of the four corners and a serai-circular one in the middle of the west and north walls. In the middle of the southern wall only there was a square tower—presumably the base of a minaret—and another rectangular porch-tower faced the entrance in the east. The rooms of the palace were arranged around a central porticoed court. They were generally not connected, although along the west side of the palace they were arranged in communicating pairs, one behind the other, with a group of five intercommunicating rooms in the centre. The central room in the south was provided with a niche, probably a mihrab, flanked by two colonnettes. The northern wall had a single elongated hall with a row of six piers down the centre. Six pairs of parallel wall piers suggest that this hall was divided by lateral arches into two times seven bays. In the centre of the western porch, but not aligned with the axis of the central room, three flights of stairs descended to a small forecourt preceding a sirbāb, a small room supplied with cold water and intended for refreshment. A balustrade around the top of the staircase clearly blocked the direct access to the central room.

At a distance of about seven metres from the north-east corner of the palace and aligned with its eastern wall stood a mosque (23.6 m. x 17.1 m.). It could be reached in two ways: either by a staircase which descended from the first floor of the palace and led to a door in the kibla wall, or by three doors in its northern wall. The door in the kibla wall, next to the mihrab, was probably used by the owner of the palace and his close attendants exclusively, while the openings in the northern wall were presumably used by the public.

The mosque was preceded by a small courtyard or vestibule, which had three additional openings in its northern wall. The mihrab was flanked by two cylindrical columns and was covered with white plas-
ter which remained undecorated. In front of the mshāb the excavators found the fallen remains of two arcades composed originally of three arches each. These arcades must have sheltered a strip of slightly more than 10 m. of the enclosure. The construction of the mosque was probably never finished, for the walls nowhere stood more than these courses high, and the excavators found no traces of a floor.

About 40 m. north of the palace are the ruins of a second large building complex which was separated from the palace by an open area. A wall and a butter-tower enclosed the area on the side aligned with the western palace wall, and the mosque was erected on the east. A paved and originally covered passage crossed the open space, connecting the palace with the northern buildings. The dominant feature of this complex was a square hall (north wall, 30.28 m.; south wall, 30.33 m.; west wall, 30.42 m.; east wall, 30.79 m.). The north, south and west sides each had three horse-shoe shaped exedrae, while a stately entrance porch, flanked by similar exedrae, occupied the eastern wall. Two additional entrances were found at either end of this wall. Each of the eleven exedrae was flanked by a pair of engaged columns, whose bases stood about a metre above the floor. Between and inside these exedrae were small rectangular niches which stood about 1.10 m. above floor-level and were covered by arched heads. Square plaisters with three-quarter round shafts at their corners supported the roof and divided the hall into nine central bays and an ambulatory. The piers were interconnected by stone-built arches carrying intersecting walls which rose high enough to provide room for windows. According to Hamilton's reconstruction (Fig. B) (Mufjar, 67-91; Pl. CV and Eavant, 63 and Fig. r for revised isometric restoration), the four central bays were square and had cross-vaults, while the axial naves were rectangular and barrel-vaulted. The central bay was raised above the rest and carried a dome over a cylindrical drum which was also pierced with windows. Except for the four compartments at the corners, the bays of the ambulatory were barrel-vaulted. The spacing of the piers was such that the central nave, connecting the porch with the central ase in the north, south, and west sides, was wider than the other passages (5.50 m. to 6.00 m. as against 4.40 m. to 4.60 m. for the flanking aisles and 3.30 m. to 3.90 m. for the aisles closest to the walls).

Along the southern wall of the hall, and including its three exedrae, there was a pool. It was bordered by a barrier built between the four southern piers of the hall and continued at either end in a right angle towards the wall. This pool, the floor of which was at about the same level as the rest of the hall, was apparently not included in the original plan of the hall and only added subsequently.

The main entrance into the hall was by way of a monumental porch (8.45 m. wide) in its eastern façade. This porch was entered by an arched opening with stepped and undercut crenellations at the top edge. It was covered by a dome resting on pendentives carrying its high drum. Within the porch was a pair of arched recesses, and there was another part of niches in the jambs of the entrance arch. A doorway connected the porch with the main hall.

Attached to the hall at the north-west corner was a small, originally domed, room with a semi-circular apsis, the dīwân, used apparently for private audiences. There were extensive latrines at the north-eastern corner (F). In the centre of the northern wall there was the bath proper, comprising two rectangular rooms (A, B) with benches along the walls (and two tanks in room B), and two additional rooms (C, D). Their floors, built over hypocausts, were heated by a furnace in the stoke-hole (E). The first room (C) was nearly square with a single niche in the east, while the other, a circular originally domed chamber, was surrounded with eight horse-shoe shaped niches, one containing the door to room (C). These two were the more temperate and the hotter caldaria respectively, while the first two chambers may have served as waiting rooms or vestiary (A) and frigidarium (B).

The rooms of the hawāmum are remarkably small and could be reached from the large hall through chamber (A) only. There was no direct connection between the bath and the disproportionately large latrines.

2. Decoration.—Apart from the mosque, which was never finished, and the ground floor of the palace, the buildings at Khirbat al-Mafjar were lavishly decorated. There were mosaic floors at the sīrāb, the hall adjoining the bath, and the dīwân. The façade, the porches and the walls of the hall and the dīwān were covered with stone and stucco panels respectively. The walls of the upper floor of the eastern wing of the palace, and of the bath hall, showed remains of paintings; figural sculptures, many of them nearly life size, were placed in niches or arcades at different parts of the buildings. The mosaics were of natural stone in a rich colour scale of red, brown or yellow, bluish, grey and white grades. While those in the sīrāb are technically of mediocre quality, the mosaics in the hall and dīwān are extremely fine. There are forty-two carpets altogether (thirty-eight in the hall and four in the dīwān). They are partly adapted in size and pattern to the architectural superstructure, and their placement appears to have been guided by the purpose and function of these buildings (Pl. IIb). The majority of these patterns show geometric or abstract designs and interlacings which are enriched by stylised floral devices. In the centre of the Hall a radiating rosette pattern accentuates the main axis and "reflects" the central dome above it (Panel 17 in Hamilton's chart, Mufjar, 305, Fig. 256). Roundels containing concentric interlacings decorate the floors of the four corner bays which were apparently cross-vaulted. There is a continuous mosaic panel in each of the outer corridors (Nos. 1, 2, 3 in Hamilton's chart). The rectangular panel between the entrance porch and the main rosette, in its composition and ornament, leads towards the central axis of the Hall. Finally, the design in the central ase (No. V in Hamilton's chart) is distinguished from the other apses by a large rosette in its interior and a semi-rosette at its base (Pl. IIa). The pavement includes only two figurative designs: one at the base of the central ase, representing a citrus fruit, a branch and a knife; and the other in the dais of the dīwān showing a fruit-bearing tree flanked to the right by a pair of gazelles and to the left by a lion attacking a gazelle (Pl. IIb).

Together with Kasr al-Hayr al-Gharbi (45J, Khirbat al-Mafjar provides the richest accumulation of early Islamic architectural decoration so far known. Apart from stone—and occasionally marble—the artists made abundant use of mosaic for decorating the interior and exterior of the mansion. This technique, not used in Syrian architecture until later Umayyad times, had the advantage of being comparatively cheap, and its flexibility allowed it to be used for life-size sculpture. Moreover, it could be painted, and since it lent itself to modelling in a wide variety of forms, these stucco carvings must have contributed to the impression of richness and sumptuousness of the buildings.
Generally speaking, two groups of motifs predominate in the architectural surface decoration of Khirbat al-Mafjar. The first, and largest one consists of vegetal elements, such as acanthus leaves, full and half palmettes, vine garlands, flowers and fruit. The other comprises geometric elements and various abstract designs. Pure geometric compositions, however, are comparatively rare. In general they appear together and interwoven with vegetal designs, such as interlaced roundels, or roundels alternating with rectangles filled with rosettes, or diamond-shaped units filled with rosettes and palmette leaves respectively (Hamilton, Majjar, Pl. XI, III, 2). In most of the plaster ornaments the geometric units are interrupted and combined in such a way that the resulting patterns completely conceal their original rigid construction (Balustrade panels from Palace, Hamilton, Majjar, Pl. IX, 13, 14 and pp. 225-6, Figs. 182-91). The same principle was used in the mosaic pattern.

Wall paintings were found in two areas only: in the rooms of the east wing on the first floor of the Palace and in the "Bath Hall". Fragments on plaster, in both fresco and tempera, hardly any of these paintings were found in situ, and all that has remained are fragments. Since we know so little about Umayyad painting, this situation is all the more deplorable. Professor Oleg Grabar has studied these fragments and found that in subject matter, style and iconography the fragments in the Palace differed from those in the "Bath Hall". In the north part of the eastern wing of the Palace Sassanian textiles motifs predominated. In addition to floral ornaments, such as heart-shaped leaves, rosettes, lotus and palmette designs, a pattern of interlacing circles with a simurg painted within each of the roundels could be reconstructed. In the rooms to the south the excavators found architectural and figurative remains as well as painted imitations of marble. The style is less homogeneous than in the Palace proper and the Roman tradition of public baths is uncertain. In the ground floor rooms, is generally explained by a heavy unbroken band representing the eyelids, and the brows are marked by a grooved line; the eyelids of the other figures are more smoothly sculptured, and the brows are painted (Pl. Illb).

There were various animal figures at the Palace entrance. Rams or mountain sheep decorated the front of the "Bath" porch and the bottom of its drum, and about a hundred partridges (Pl. IIa) were found in the Diwan and the "Bath" porch. On the whole the animals were more delicately modelled than the human figures.

### Interpretation of structures and decorations

Our knowledge of the purpose for which Khirbat al-Mafjar was built, and of the actual function of its different units, is based primarily on interpretations of its architectural features and decorations. The irregular plan of the whole complex seems to imply that it was not conceived as a single unit and was built in consecutive stages. The function of most of the rooms of the Palace, except the little mosque, or mawlid, and the underground siribble, is uncertain. The discovery of numerous wall paintings in the upper story, in contrast to the lack of decoration observed in the ground floor rooms, is generally explained by the fact that the upper floor was reserved for the living quarters and private rooms of the owner of the mansion. This seems to be confirmed by the only painting which could be fully reconstructed, the textile pattern with the simurg and the interstitial heart-shaped four-petaled rosettes, which came from a room in the northern part of the east wing. This pattern would have been appropriate for a princely dwelling, as its Sassanian prototype figures on the garb of Khusraw II at the bas reliefs of Tak-i Bustan and in similar royal Sassanian representations. Scholarly opinions vary as to the purpose and function of the "Bath Hall". In relating it to the bath-rooms proper and the Roman tradition of public baths in Palestine and other provinces of the Roman empire, Creswell and Hamilton interpreted the Hall as...
Fig. C "Bath Hall". Porch façade (after Hamilton).
one of the other functions of the "Bath" Hall. First, of the main apse (Hamilton, Majjar, with the knife, citrus fruit and leafy branch in from 35-6), Ettinghausen further uses the mosaic panel in or near the particular spot.* Moreover, while all the exedrae in the ambulatory were plastered white, the archivolt of the bulatory were plastered white, the archivolt of the apse is related to the situation or activity that took place at the particular spot. In relation to its function. According to his interpretation of these functions in the niches along the walls, which had to be peeled with a knife in order to be eaten, appears to indicate that one of the purposes of this Hall was feasting and banqueting.

Assuming that the "Bath" Hall was built for public audiences, the Dīdan or small apsidal room in its north-western corner (Fig. 1) was probably built as a private audience chamber. The interpretation of its function has again been based on the iconography of its decoration—the figural mosaic pavement on the raised dais (Pl. IIb), and the stucco ornaments of the dome in front of it (Pl. ica). Accordingly, it has been pointed out that the lion preying upon a gazelle to the right of the fruit-bearing tree was probably meant to demonstrate the caliphal power, while the two eating gazelles to the left alluded to a peaceful caliphal reign—the Dār al-Islām versus the Dār al-Harb, the Abode (or Realm) of Islam versus the Abode of War (From Byzantium, 45-6).

The mosaics in the Dīdan are based on ancient oriental concepts and symbolism. The winged horses and the pendentives of the cupola (Pl. IIIe), on the other hand, represent an Iranian, particularly Sasanian, motif. They are beasts which figure on seals, textiles and silver vessels as the royal mount of ascension and symbolise the semi-divinity of the Sasanian king. Their representation on the cupola provides additional proof of the princely character of the chamber which, like in other parts of the mansion, is expressed in the iconographic language of Sasanian Iran.

The identity of the owner and builder of Khirbat al-Mafjar has not yet been established conclusively. On the basis of certain graffiti with the name of Hishām which were found in the debris of the palace, it has been assumed that Khirbat al-Mafjar was built during the caliphate of Hishām, between the years 105-125/724-44. More recently, however, Hamilton tried to prove that although the mansion was built at the time of Hishām, it was owned and occupied by his nephew, al-Walid b. Yazīd. Hamilton asserted that the palace was built during the reign of Hishām, between the years 105-125/724-44. More recently, however, Hamilton tried to prove that although the mansion was built at the time of Hishām, it was owned and occupied by his nephew, al-Walid b. Yazīd. Hamilton's arguments are rather intricate. Yet it is true that in its architectural concept the palace, and particularly the Throne and Banqueting Hall, would have suited the taste of a personality like al-Walid II. Bibliography: The basic publication is R. W. Hamilton, Khirbat al-Mafjar. General presentations are given by: D. C. Barakat, Guide to the palace at Khirbat al-Mafjar, Amman 1956; O. Grabar, The Umayyad palace of Khirbat al-Mafjar,

KHIRBAT AL-MINYA, in mediaeval times known as Minya or 'Ayn Minyat Hisfam, is the name for the ruins of an apparently unfinished Umayyad mansion about 230 m. west of the northern end of Lake Tiberias. The ruins were excavated in 1952 by A. E. Mader and between 1955-6 by A. M. Schneider and O. Puttrich-Reignard. During July-August 1959 the western section of the palace was excavated by O. Grabar in collaboration with the Israel Department of Antiquities.

The building consists of an irregular rectangular enclosure (66.40 m. x 72 m. x 22.30 m.) facing the four cardinal points. Like other Umayyad castles it has round towers at the corners, a semi-circular tower in the centre of three of the walls, and a gateway salient about 3-70 m. north of the centre of the eastern wall. The rooms which surrounded the originally porticoed court differ in size and arrangement. They comprise a mosque in the south-east corner, a three-aisled basilical hall flanked by a unit of five rooms in the south, and residential quarters in the north.

As against the simple unpretentious decoration of the mosque, the domed gate-way chamber and the southern rooms must have been richly decorated. Marble panels covered the dadoes of the walls. Coloured and gilt glass mosaics decorated the summit of the dome, and stone mosaics combined with glass tiles and set in geometric carpet-like patterns on the floor of the five southern rooms indicate the official, representative character of this section.

Another well-preserved floor mosaic was discovered in 1959 in the western part of the mansion.

A fragmentary inscription with the name of al-Wald on a marble slab which had been used as a sill when the gateway was rebuilt centuries later supports an attribution of Minya to al-Wald I (866-955). However, the palace was apparently used throughout the Umayyad period. Moreover, the stratification established in the western part of the site, and the ceramics found in the excavation in 1959, have shown that the site was settled in the later Mamluk period when it served as an important commercial post between Damascus and Cairo. It was abandoned at an uncertain date, but later temporarily resettled.

Sharif is protected by being wrapped in seven silk shelf made a lid, which is given further protection by being those whom it is "given officially by the Ziibdat al-imdm, his about the mantle is known before Ahmed I's time; in fact, because there is no other source of the same [q.v.] named the Khtos Oda by IC. Kufrah) the author refers to the i, 93 cf. Ottoman chrouicles ('Afa 5
placed in a gold casket that was made in the era of lattice work doors were made. Today the Khtrka-yj Celeb!, Dcrwlsh ZilH Mebmed, the head jeweller of and a cream-coloured woolen lining, was kept in a Mecca and other Islamic relics, after the conquest of of Mecca, together with the key of Sherif son of the was brought to Istanbul by Muhammad AbO Numayy, preserved at the Topkapi Palace in Istanbul. It
by the 'Abb&sid caliphs and then later by the Ay-
hard suits of Syria and Egypt, was one of the
features marking out the chivalric orders of the Islamic world before they spread into Christendom.

Bibliography:
In addition to references given in the article, see the definition of Sharif given by the Khtos Oda built by Mebemned IX. No information of the 19th century. In fact, this room is most probably the fourth century or subsequent ones that mentions it until the 19th century. In fact, this room is most probably the Khtrk Oda built by Mebehmed II. No information about the mantle is known before Ahmed I's time; his imam, Mushtas& Sa& Efendi, refers in his Zvd& al-
leu&erikh (Topkapi Saray, R. 1304, i. 238a) to the mantle, and says that Ahmed I had a shelf made above his throne in the Kh&us Oda and had the mantle put on it. We also learn that Ahmed I started the ceremony of dipping a port of the mantle into water, thus making the latter holy; this custom was later changed into dipping the fastenings and then in Mahm&d II's reign, to placing scars on it. We also learn from the Zvd& al-leu&erikh that the Kh&us Oda did not contain all the relics in Ahmed I's time. This room, with its 19th century, was repaired by Mahm&d II, when a new fireplace was built, giving occasions of the doore and upper parts of the walls were redone, and the whole apartment assigned to the keeping of the relics.

There were forty Kh&os Odals—the men in charge of the Privy Chamber—who did the work of guarding the Khirka-yi Sherif. The duties of the Kh&os Odals were to sweep the area, dust the Kur&an and other books, burn incense on special nights, sprinkle rose water, clean and polish the gold and silver objects, etc. (I. H. Uzuncaprl, Osmanli sarayi tepkili, Ankara 1915, 238). The "silver" water carriers, thus named because they carried the water in silver containers, washed the floors of the building (ibid, 455). In the manner of their work, there was a duty that opened into the third century, third a pounding stone used to grind up incense; on the other side of the same wall was a well where the sweepings were disposed of. Four of the Kh&os Odals stayed on duty at night and read the Kur&an (ibid, 32). The guarding of the Kh&os Oda was the duty of Aghas, whose spell of duty lasted for a period of 24 hours before being relieved.

All the Ottoman Sultans believed firmly in the sanctity of the Ka&-y Sherif and tried to remain near it; Ahmed I took it with him wherever he went (ibid, 256). Findikli Mehmed Agha, a Kh&os of the reigns of Mustafa II and Ahmed III, speaks at length about the Kh&os Sherif. According to him, Mustafa II took the mantle with him in a private wagon to Cataldja where he went for Ramadan, had it kept in a special room and visited it ceremonially on the 15th of Ramadan. He also took it with him when he went to Edirne (Nusret-nmke, ed. I. Parmaksizoglu, Istanbul 1966, ii, 45), and when the revolt that ended his reign took place, he tried to escape to Edirne with the mantle (ibid., ii 183). Ahmed III was also keen on keeping the mantle with him. When he went to the Tunisi B&glesi to spend the summer of 1227/1713, or to the W&de Sultan's seaside palace to spend the winter, and when he held a circumcision festivity for one of his sons, the mantle always figured prominently in what had to be taken with him (ibid, 213, 328-9, 397).

Ewliya Celebi writes about Mur&d IV's sword-girding ceremony, after which he went to the Khirka-yi Sherif at the Kh&os Oda, paid humble respect to the mantle and then prayed (Ewliya Celebi, Seyh&-nme, i, 227). We also learn from Findikli Mehmed Agha that, when Mustafa II learned that he was going to succeed to the throne, he went to the Tunisi Odasi (Khid Oda), prayed in front of the Khirka-yi Sherif, and then put on appropriate robes. This act is described in (Nusret-nmke, i, 4). Subsequently, he visited the Khirka-yi Sherif every Friday (ibid., i, 32). Ahmed III's eldest son, Sul&yman, after he finished reciting the Kur&an, held a ceremonial session in the Tunisi B&glesi in front of the Khirka-yi Sherif, according to Findikli (ibid., ii, 388). It had an even greater importance in war-time. A good example of this is the Egri campaign of Mebehmed III, which was
going very badly, but was finally turned into victory when Sa'd al-Din addressed his people and Mehemmed III put on the mantle. The spirit of battle was kindled, and this turned the tide of the war (Ochhan Sâlik Ökyay, Kâtib Çelebîden seçmeler, Istanbul 1968, 39). Mustafa II took the Khirka-ye Sherif on all of his campaigns in order to reinforce the courage of the army (Nusret-nameh, i, 143, 185, 187, 189, 190, 199). It was said that Ahmad III took the Khirka-ye Sherif and the Sandjak-i Sherif—the flag of the Prophet—which was only unfurled for a holy war—with his army in order to raise the morale of the men (Nusret-nameh, ii, 290).

When the sultan took his oath of allegiance, the Khirka-ye Sherif was not forgotten. When a sultan died, the Dâr al-Sâ'âde Âghâsi carried the news to the crown prince and took him to the deceased. He was then joined by the Sâ'di dâr âghâsi, who took him to the Kâhi-ye Oda (Dewcett Pascha, Tahirli, i, 236; Usucarpil, op. cit., 186). The oath of allegiance of the Sâ'di dâr âghâsi or Grand Vizier, the Sâ'di dâr âghâsi of the sultanate, was also taken there (Dewcett, iv, 237; Usucarpil, 187; Nusret-nameh, ii, 187, 189).

During the third week of Ramadan, a visit to the Khirka-ye Sherif was also customary. Even after the sultans ceased to reside in the Topkapı Palace, the Khirka-ye Sherif remained on the Palace premises, either in its own room or at the Sofâ Köşkâl. On such visits as these on the 15th of Ramadan, the sultan would open the silver throne, the seven wrappings and the gold casket with a golden key, take the mantle out, dip its fastening into a bowl of water and then put drops of this water into vessels filled with water, which in turn would be given away as presents. This custom was abolished by Mahmûd II, who chose to touch the mantle with some specially-prepared scarves with poems inscribed on them, and these were then distributed as gifts for his guests. At the end of the visit, during which the Kûrân was recited continuously, the mantle was put away by the sultan himself. This custom had however been abolished by the end of the sultanes.

One other mantle of the Prophet was brought in 1922/1027-18 by Shîhür Âllâh Efendi. It was believed that this mantle was sent to Uways al-Şarabî by the Prophet. Presumably it was preserved by Shîhür Âllâh Efendi and his son at his house in the Eski-Allâ Pascha quarter of Istanbul. Their mansion was built opposite it in 1835 by Abu al-Mejidli. In this mosque, named that of the Khirka-ye Sherif, the mantle was displayed to the public every year by the Queen Mother on the 15th of Ramadan. Today, it is possible to visit it there between the 15th of Ramadan and the Laylat al-Kadîr.

circumcision is mentioned together with the according to al-\textit{I\textasciitilde{f}c}, equally obligatory for males and many of the doctors, \textit{al-Sij\textdoublespacei}, 1283, i, 328) has devoted to the subject, also because giving a survey of the different views it may be, Concerning rules for circumcision. Hadramits who still cling to their native customs, circumcise their children on the 40th day after birth (Snouck Hurgronje, Mehka, ii, 141 ff.).

In Egypt, boys are circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and his attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The kerchief is used to cover a pair of stone swords or knives, some populations of the poor people as well as the procession are also mentioned.

The circumcision of the imperial princes used to give occasion to the displaying of great pomp. Long before the appointed day intimation was sent to the high dignitaries of the empire, sometimes even to the other courts of Europe. D’Ossun gives a translation of Mürdsh’s III letter of invitation to the dignitaries on the occasion of the circumcision of the crown-prince.

In North Africa children are circumcised at ages varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Dan, as cited by Douit, Merrebek, 371, at Algiers a stone knife was used for the operation. It reminds us of Joshua v. 2 ff. where it is said that the Israelites at their entering the Holy Land were circumcised by means of stone swords or knives; some populations of the Dutch Indies also use a stone knife for the operation (Willemen, 212). In North Africa as well as in Egypt often several boys are circumcised together, the father of the richest bearing the expenses of the ceremony. A. Jansen (Costumes des Arabes au pays de Meoh, 163-4) has observed that the Bedouins organise collective circumcisions every two years, as an economy measure; hence the children’s ages vary considerably (see also al-Utayzzi, Kāmīs al-'iddī, Amman 1973-4, ii, 232, s.v. f-ḥ-r). It should be noted here that in most Arabic dialects, the term for circumcision and its accompanying rites is taken from the root f-ḥ-r, implying the idea of purity; this practice is therefore popularly felt as a purificatory rite. In Java, circumcision of boys is often combined with the kadhim- or kadham-ceremony. On the different designations of circumcision used in this part of the Archipelgo, cf. Snouck Hurgronje, Verspreide Geschriften, iv, 1, 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is higher (14-15 years) than in circles which are in closer touch with Muslim law (10 years or younger). Before the preparations begin, the boy is taken to the tomb of his father or ancestors, where flowers and incense are offered and prayer is performed. Then a portico (larus) is made before the house or pendopo, and a small room (kobong) is prepared where the operation is to take place. In or before this room several objects and dishes are placed which have a symbolical or ritual meaning. These preparations are concluded by a religious act at which several dishes are offered to several categories of awe-inspiring beings. Festivities such as wayang, layubus, djangogan precede or follow the ceremony. The djangogan always takes place in the preceding night and follows upon kadaman, the recitation of some chapters of the Korān by the boy. On the day preceding circumcision, a procession is held in which the boys are either conducted by their relatives, or are placed in a kind of cars which have the forms of nagas or other animals. They wear the bridegroom’s dress, and are hung with gold and diamond ornaments, the visible parts of the body being besmeared with holk. It occurs also that the boy wears the Niqah’s dress. Just as in North Africa, poor parents have their sons circumcised together with those of well-to-do people, who bear the expenses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered to be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then he is placed on the lap of an elderly person, usually a santri who has many children, a circumstance which is expected to exercise a wholesome influence on the boy’s marriage. For further details see Snouck Hurgronje, Verspreide Geschriften, iv, 1, 205 ff.

In Atchel, boys are usually circumcised by the mudhen (probably = mudhādhyān) at the age of 9 or 10 years, immediately after finishing their Korān study. The operation (for details see Snouck Hurgronje, The Achelness, i, 390-400) consists in a complete circumcision; in some parts of Java it is rather an incision. The boy here also has to diet himself. In Atchel the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with circumcision. The father of the boy vows, e.g., to arrange a Rapa’s performance or to visit a sacred tomb. In this case the boy, dressed as a bridegroom, is conducted to the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Circumcision is a rite practised by many peoples, primitive peoples of the present time as well as those mentioned in ancient literatures, the Egyptians, the Arabs, the Israelites, the Edomites, Moabites and Ammonites (see Jeremiah, ix, 25).

In the Indonesian Archipelago it was already practised before the rise of Islam in that part of the world (cf. G. A. Willemen, De basmijdenis bij de volken van den indische Archipel, in BTLV, Ser. iv, vol. x, 166, 180 f. = Verspreide Geschriften van G. A. Willemen, iv, 206, 220). The facts mentioned above may be arranged in certain groups.

a. Among many peoples females as well as males are circumcised. We must consequently start from the view that the rite was not originally applied to one of these classes to the exclusion of the other.

b. The rite is sometimes repeated (Willemen, op. cit., 207). In the Muslim world we have the
stance of Malays who in their country were not circumcised in the way prescribed by religious law and who submit to the operation a second time when arriving at Djjida for the pilgrimage (Snouck Hurogjone, Membk, ii, 312).

c. Children are circumcised at ages varying between the 7th day after birth and the 15th year. It is consequently a rite which may take place in any period of childhood and which is often indeed combined with other rites peculiar to childhood such as the first cutting of the hair (saafa, cf. Doutré, Mermith ; 531), the filing of teeth, the conclusion of the study of the Kur'an. As we have seen above, there are linguistic features pointing to a relation between circumcision and marriage. These features, valuable as matter-of-fact evidence, are supplemented by reports of travellers. In Central Arabia, it is said (e.g. Butanun, Ruba, 239), there are tribes among which the operation is applied to adult young men, in a painful and dangerous way; the bride of the patient stands opposite him during the operation; if he utters a cry of pain the projected marriage is abandoned (Snouck Hurogjone, Mekba, ii, 131). In spite of doubts about the authenticity of such information, the relation between circumcision and marriage appears also from the javanese custom of placing the boy who is operated, on the lap of a santri who has many children (see above and Wilken, op. cit., 239).

d. Another group of characteristics is evidence of a relation between circumcision and the transition into a tribal or religious community, e.g.: the boy's being conducted to the tomb of his father or of one of his ancestors (see above); the circumcision of several boys at one time (cf. also Wilken, op. cit., 221); the value attached to circumcision as the ceremony of reception into the Muslim community; cf. the Old Testament designation of circumcision as the "token of the covenant" (Genesis xvii; see also Wilken, op. cit., 227).

e. Many accessory rites express the intention to avert danger; the boy's being dressed as a girl, the use of the handkerchief, the burning of charcoal and salt; the drums and duffs; the recitation of suras; and prayers; possibly the displaying of charity and the slaughtering of victims may also be viewed in this light.

Ethnologists put forward various interpretations for the phenomenon of circumcision: as a surgical operation meant to prevent phimosis and to help fecundity; as a religious rite connected with fertility; as a ritual to prevent phimosis and to help the husband and wife to have children. According to Muslim authorities, the khitba does not involve a contract. It is true that it involves an offer and an acceptance, but before the acceptance is made, it is merely a demand in marriage and does not form a legal act.

The Maliiks, apparently uniquely, give more importance to the betrothal than the Hanafis or even the Shafiis, but the principle remains that the act of betrothal does not involve a legal obligation. However, betrothal can only take place when there are no nullifying factors present which would prevent a valid marriage; every impediment to marriage is an impediment to betrothal. The parties to a khitba are on the one hand, the man making the demand in marriage, and on the other, the woman, who may be represented by her mali (see NIKAI). Yet if betrothal does not in principle involve any legal obli-
gation and is not a legal act, certain effects nevertheless follows from it:

1. The right of seeing the woman. Certain authorities state that the fiancée has this right, even if looking at her is accompanied by sexual desire. Ibn Rushd specifies that this right should be limited to seeing the face and hands only (Biddiya, ii, 3); others extend the right, but they never go so far as to admit the possibility of the couple being left alone (Qalqul), which is the right to be alone with each other away from all indirect looks.

2. The right of betrothal. Betrothal gives the fiancée a right of priority, in that once a woman is betrothed to a man, that woman cannot be sought in marriage by another man; but this right is only sanctioned by the Mālikī.

Dissolving of a betrothal. Either of the two parties can end the state of betrothal unilaterally. The only problem that is that disposal of presents which have been exchanged, and which are subject to the rules of donation. However, in various Islamic countries, part of the dowry is paid over at the time of betrothal, and this must in all cases be given back.

Finally, there remains one problem: can one award damages to the victim of an ill-founded breaking off betrothal? Although certain modern Islamic authorities are endeavouring to introduce an obligation to pay an indemnity for damages in the case of an ill-founded breaking off, the action for damages is not an absolute right. Even so, many Islamic countries have been compelled to adopt the solutions of Western law, since on the plane of practical law, betrothal is of no legal concern except in case of its being dissolved.

Bibliography: Ch. Chehaba, Études de droit musulman, Paris 1971, 73; Ibn Rushd, Biddiya, Cairo 1952, ii, 2; Ibn Kudama, Mughni, vi, 536; and see Dīrām (A. M. Delcambe) — KHITBA — KHIWA

KHITBA ("piece of land marked out for building upon"), a term used of the lands allotted to tribal groups and individuals in the garrison cities founded by the Arabs at the time of the conquests. The layout of these cities everywhere followed the kinship organisation of the conquerors, who were distributed in tribal quarters around a central housing the Friday mosque and the dīr al-imāra. The smallest unit of the khitba was the dīr, in the case of prominent individuals often a sizable estate (usually known as kaftān), otherwise a modest plot of land occupied by one or several families. Next came the quarter based on the smallest political unit of the tribe (what is often known as the "ashīra in Arabic sources, "clan" or "subtribe" in modern literature); these quarters usually had their own mosque, and how small the unit in question tended to be is indicated by the fact that the tribe Khida, which was strongly represented in Fustat, Damascus and Hims in addition to Kufa, had at least twelve such mosques in the latter city. Finally, there was a larger quarter reflecting the tribe proper, often endowed with its own dawbara, a piece of unbuilt land serving, inter alia, as a meeting place and a cemetery. In Syria, where the Arabs settled in existing cities, the tribal quarters were less self-contained and possessed neither mosques nor dawbara of their own.

Khīwa was placed under an officially appointed leader, the raʾs al-rūb or raʾs al-khimṣ, who was selected from among the chiefs of the larger tribal groups represented in the division, and who was responsible for the command of the division in war and the maintenance of order and law within it in peacetime. The lesser groups continued to serve as military and administrative subdivisions under their own leaders. The entire range of tribal chiefs (the aghāʾ of the Umayyad period) served as the link between government and subjects in the Sufyānid system of indirect rule, aghāʾ being governors coming together in the latter’s madjīl, which was under the leadership of a headman (called the magā’īlī, or “sump”, otherwise a modest plot of land occupied by one or several families). These quarters were exchanged, accompanied by a traditional display of generosity. The raʾs al-rūb (or raʾs al-khimṣ) in turn passed on information, orders and gifts in his own madjīl, and the process was repeated in the madjīl of the lesser chiefs until we reach the smallest political unit reflected in the khīṣīl.

The erosion of the tribal ties in the Marwānid period rendered the system obsolete; the aghāʾ disappeared from the political scene, while the khīṣīl survived only as place-names. The larger quarters and districts, on the other hand, persisted until the end of the Umayyad period, physically as military divisions, now consisting of regiments of tribal groups, and morally as categories for the definition of factional loyalties. When the Abbāsids came to power these too disappeared, and the allotments in Baghdād (known as khālīs, or khalīta, rather than khīṣīl) were made on the basis of geographical provenance, not tribal affiliation.

KHIWA, on the western bank of the Amu Daryā, site of the last capital of the khanate of Khūzār, subsequently called the khanate of Khīwa. Its origins are bound up in the history of Khūzār [q.v.].

Khīwa was the third capital, after Gurgandī (385–515/995–1227) and Khāʾ (q.v.), the latter was the capital during the 8th/9th century, in which period, with Khīwa, it was governed by the Čaghatay, and Gurgandī (subsequently called Urgan) by the Golden Horde. After the restoration of unity (under the rule of the Shāybanids) in the 9th/10th century, the capital was again established at Urgan, but neither this dynasty, nor the Pĕnči branch of the Ozbek dynasty that succeeded it, was in a position to restore stability in the region. Assassination increased, and the closure of the commercial routes which covered the land hastened, at the same time, its economic decline and its relative isolation.
During the second half of the reign of 'Arab Muhammad (1637-38/1665-66), which perhaps coincided with the drying up of the left branch of the Amu Darya, the capital was transferred to Khiva, and it was then that the khānate of Khāvarazm began to be called the khānate of Khiva. Little is known of the early history of this town; archaeological remains enable us to date its foundation between the 6th and 8th centuries of the Christian era; it is mentioned by the Arab geographer al-Istakhri in the 9th/10th century. The inhabitants of Khiva were distinguished from the other Khāvarazms by the fact that they were Shi`f rather than Ḥanafis.

The khānate was composed of various feudal districts (shāhkal) loosely linked together, and their chiefs (khābīm) recognised the sovereignty of the khān of Khiva. The degree of unity of the khānate depended on the personal power of the khān; it is relevant, in this regard, to make special mention of 'Abd al-Ghāzī Bahādur Khān (1554-73/1643-63) whose History of Khiva has survived and is available to us. After the conquest of Mashhad by 'Abūlsha in 1553/1643, the khānate of Khorasan was merged with that of Khiva.

The inhabitants of Khiva were described by the Chinese geographer Ch'ien Chih in the 18th century. They were distinguished for their dyes and carpets, which were exported to neighboring countries. In the 19th century, made a number of successful attempts at conquest made by Peter the Great in 1717, and by Nādir Shah in 1755/1749, while invasions by nomads and attacks from the Turcoman Yomuts were particularly violent between 1133 and 1184/1720-70; however, in 1184/1770, the Imām 'Abd al-Qodūr Mūhammād Amin entered the Turcoman Yomuds were particularly violent between 1133 and 1184/1720-70; however, in 1184/1770, the Imām 'Abd al-Qodūr Mūhammād Amin defeated the Turcomans, restored relative prosperity to the region and undertook the construction of a new city on the foundations of the old. In the course of this reconstruction, which lasted seventy years, a number of remarkable architectural monuments were erected, including the palace of Tashkurgan (1850), the mausoleum of Buhshāhūr Shāhīzāde (1859) and the madrasa of Allah Kūll Khān (1853), which are still standing today.

Under the Imām Ḳutbūzār, who became the first Kungrāt Ḳutbūzār in 1304, the khānate attained its greatest territorial extent of the modern period, stretching from the mouth of the Sīr Darya on the Aral Sea as far as Kāfīr-i Mawr on the Kūshā; this sovereign frustrated an attempt by Buhshāhūr at annexing the oasis of Merv, and he improved his relations with the Turcomans who became the first line of defence of the khānate. His successor, Mūhāammad Rāḥīm Khān, who was the most powerful Khān of the 19th century, made a number of successful forays into the territory of the Kazaks, subdued the Kara Kulpaks and ravaged Khurāsān. Although he had repelled an attack by the Russians in 1839-40, Khiva was forced to accept their economic and diplomatic demands, which had the result of reinforcing the Russian presence, which was already showing itself in Central Asia. The conflict which broke out with Buhshāhūr and the Turcomans further increased the already divided State, and in 1875 the Russians were able to take possession of the entire territory without striking a single blow. The peace treaty gave them the right bank of the Amu Darya and made the Ḳhūzān of Khiva a vassal of the Tsar.

The Turcomans continued their struggle against the Khānate and in 1875, the Khān Isandīyar (1905-16) was assassinated at the instigation of Dūnayd Khān, the Turcoman chieflain, who reduced the new sovereign, Sa'id 'Abd Allāh (1188-20) to the status of a puppet. After an initial failure in 1918, the Soviets waited until 1920 before putting an end to the khānate of Khiva and on the 26 April 1920, the People's Republic of Khāvarazm was proclaimed, with a government of young Khivans. On 3 September 1921, this was replaced by the Soviet Socialist Republic of Khāvarazm, controlled by the Bolsheviks, and in November 1924, it became the oblast of Khāvarazm in the Soviet Socialist Republic of Uzbekistan, with Khiva as provincial capital (1920); between 1920 and 1924, there was a considerable movement of resistance to the Soviets, led by Dūnayd and supported by the deposed khān.

The Soviets did nothing to assist the development of the town. Although it is a centre for cotton-growing and has brickworks, dairies and a carpet-weaving industry, modern Khiva no longer plays a vital role in the economic or political life of the Uzbek SSR.

Bibliography: see that for Khāvarazm.

W. Barthold - [M. L. Brill]

KHĪYĀBĀNĪ, SHAYKH MUHAMMAD (1789-1920), Persian religious scholar and political leader. Born in Khānamā, Āḏarbāyjān, the son of a merchant. Khīyābānī received his early education there and then moved to Bāḏgān in the Caucuses, where his father lived. After returning to Tabriz, he studied fūsūl, 'usūl, and Ptolemaic astronomy, and soon became a muḥtaḥid leading public prayers in two central mosques. Responding to the Iranian constitutionalists, Khīyābānī joined the Social Democratic Party and also became a leading member of the Āḏarbāyjānī Provincial Council which played a decisive role in the deposition of the anti-constitutionalist Shāh Muhammad 'Alī (1907-9). Khīyābānī was then elected to the second Parliament, where he rejected the 1917 Russian ultimatum and condemned the Persian government which, on the British recommendation, was willing to compromise. The Parliament rejected the ultimatum but the Regent, Nāẓir al-Mulk, dissolved the Soviet and accepted the Russian ultimatum. Khīyābānī denounced this action in a long speech before the people of Tehran. He then fled to Russia, and later on returned to Tabriz secretly. After the two Anglo-Russian treaties (1907 and 1915) there remained little room for the existence of Khīyābānī and his party. Suddenly, however, in the 1917 Russian Revolution broke out and the Soviets withdrew the claims the Tsars had made against Iran. At this point, Khīyābānī and his friends re-established the Democratic Party and founded Taqaddud, a newspaper which published Khīyābānī's speeches and articles. Among Khīyābānī's targets of attack were the British South Persian Rifles and the existing Persian regime as being submissive to foreigners. Before the end of the War, Ottoman troops invaded Tabriz, arrested Khīyābānī, and imprisoned him in Rūdkhān, but after the War he returned to Tabriz. In 1920 the British signed an agreement with the Wūṯuk al-Dawla which gave them control of the Iranian army, finances, and customs. Under the influence of Khīyābānī and others, the treaty was not passed in Parliament. The Wūṯuk al-Dawla then suppressed Khīyābānī's party and resigned. Khīyābānī rose against the government (now in the hands of Mushtīr al-Dawla) and in April 1920 he declared his province Azāhpūrān (“home of freedom”). Mushtīr al-Dawla appointed Muḥābīr al-Salāma (Mahdi Ḳull Ḥidāyāt) governor of Āḏarbāyjān, and the latter put an end both to the six-month old movement and to Khīyābānī's life.
Khiyabani has been described as a rebel, and his movement as a separatist one. Khiyabani’s attachment to the Soviets has also been a matter of controversy. However, he has been widely recognised as a national hero, whose murder was lamented by poets such as Bahar, ’Arif, Safwat, and Agah.

Options (khwyâlî) may be either conventional or legal in nature.

1. Conventional options. Included amongst these, there is first of all the conditional option, khwyad al-‘ayb, which is extremely important. This is the clause by means of which, in certain legal acts (in particular, contracts), one of the parties, or both of them, reserves the right to accept or reject it within a specified time, the legal act which they havejust drawn up. This clause is undeniable equivalent to a purely potestative suspensive condition. The decision of the one confirming or rejecting the act does not have to be justified. The lawyers of the four schools adopted this institution without difficulty. The other conventional option is the one called by the jurists that of designation (khwyad al-‘ayb). It can only be inserted into alternative obligations, and allows the one making the stipulation to make his final choice between the different objects and one of the same obligation. Thus there are only two conventional options, one common to all four schools and the other peculiar to the Hanafis and Malikîs.

2. Legal options. On the other hand, legal options, in which the law automatically grants the options without the parties having to stipulate them, are very numerous. Some Muslim authors number them at seventeen. Fraud, injury, hidden defects, evocation, and many other deeds, are only to be sanctioned in Islamic law by means of an option. In the Shî’î treatises, only a brief allusion is made to legal options, apart from the option in the case of a latent defect making the agreement void (khwyad al-‘ayb or khwyad al-nakifa). The option of sight (khwyad al-‘ayb) presents a problem. It is rejected by the Shî’îs, and there exists concerning it as many different doctrines as schools of legal opinion. In the four schools adopted this institution without difficulty. The other conventional option is the one denominated as schools of legal opinion; see Ibn Rusâd, Bidaa, and some Sunnis and Twelver split off the Indian caste consisting mostly of Nizaris in the area of Multân and some Mominas in northern GJudarât. The history of Nizarî Isla withdraw the marriage in being or dissolving it.

the Nizāri. Khodja tradition makes one Saēgur Nār, also called ūr al-Dīn, the first ḥādī who, coming from Daylam, was active in Fātān, Gudjarāt. Dates ascribed to his activity vary widely. According to one version he was sent by the imām al-Mustanṣīr (427/840-936/941) in order to preach for his son Nāzir; according to another, by the imām al-Hasan al-Sāhib Khudrī Ṭalizān (552/1156-62-6). He is alleged to have converted the Hindu king Siddhārāja Dijay-sinaḥa (d. ca. 1243). Yet his place in the lists of pirs as seem to put him in the first two centuries of Islam, and he is even identified with the imām Muḥammad b. Ḥusayn. His shrine at Nawsar appears to date from about the end of the 18th century. His historicity has been doubted. Evidence for the presence of Nizāris in Gudjarāt in the first half of the 7th/14th century is too vague to be trusted. Most early Nizāri activity rather appears to have been centred on Sind. The beginnings of the Nizāri daʿwa in Sind are connected by tradition with the pīr Shams al-Dīn, though the previous pīr, Ṣāḥib al-Dīn, who is also called the father of Shams al-Dīn, is mentioned to have already been sent from Alamūt to India. Legend, on the other hand, identifies Shams al-Dīn variously with Shams-i Tabriz, the spiritual guide of Djalāl al-Dīn Rūmī, or with the first post-Abūl imām al-Mustanṣīr Shams al-Dīn Muḥammad who, it is alleged, turned the imānate over to his son Ṣāḥib-Ṣalāḥ in order to come to India. While most of the religious poetry ascribed to him names Ṣāḥib-Ṣalāḥ as the contemporary imān and thus would place him around the turn of the 7th/13th century, several dates mentioned in the poetry for his activity are in the first half of the 6th/12th century. A legendary account of his meeting with the Sufi saint Bahīṣtır Zakariyyāʾ of Multān (d. 665/1266) appears to be without historical foundation. His lifetime thus cannot be dated with any degree of certainty. He is described as having been active in Multān and Učh in Sind and his shrine is located in Multān. The community of the Shāmis claims to have been converted by him to Nizāri Ismāʿiliyya. They live in Multān, Rāwalpindi and elsewhere in Panjab and are mostly goldsmiths. The next two pīrs on the traditional lists, Nasīr al-Dīn and Ṣāḥib (also Ṣāḥib) al-Dīn, are said to be the sons of Shams-i Tabriz. The later became known, however, that some minor figures were omitted. There is no information on their activity except that they worked clandestinely. Ṣāḥib al-Dīn was succeeded by his son Ṣadr al-Dīn who is credited with the conversion of the Khodja from the Lohanas, a Hindu caste. He is also said to have given them the name Khodja, derived from the Persian kāḥeja, master, which corresponds to the Hindu term ṭhakur used in addressing Lohanas and Khodjas, as the Lohanas are considered Kshatriyas. Dates given for his reign from 770/1369 to 819/1416. The latter date seems more reasonable. Ṣadr al-Dīn, according to tradition, also laid the foundation for the communal organisation of the Khodjas by building the first three gurizzas al-akhbar (assembly and prayer halls) and appointing their amīrs (leaders). The centre of his activity was Učh and his shrine is not far from it near Djetur. Ṣadr al-Dīn was succeeded as pīr by his son Ḥasan Kabīr al-Dīn of whom a short vita was included by ʿAbd al-Haqq Dihlawi (d. 1052/1642) in his hagiographical work ʿAbd al-akhbar. His appearance in a list of shahids of the Suhrawardi order reflects the close links of Nizāri Ismāʿiliyya with organised Shīʿism throughout this period. According to the ʿAbd al-akhbar he traveled widely before settling down in Učh and converted many Hindus. The death dates mentioned for him range from 859/1450 to 893/1490. Most accurate are probably those giving 879/1470 or 879/1472. His shrine is outside Učh. As Kabīr al-Dīn's successor, his brother Tadj al-Dīn was appointed by the imām. He was opposed by some of the numerous sons of Kabīr al-Dīn who were also quarrelling among themselves. After Tadj al-Dīn's return from a visit to the imām, they accused him of embezzling the tithes for the imām and he is said either to have died of the shock or to have committed suicide, probably not very long after his brother's death. His grave is in Ṣin in Sind. After his death Imam Shāhī ʿazīz, son of Kabīr al-Dīn, vainly tried to gain the allegiance of the Khodjas in Sind. After a visit to the imām in Persia he settled in Gudjarāt, where he succeeded in converting numerous Hindus, mostly of peasant communities. Legend maintains that he converted Muhammad Begā, sultan of Gudjarāt, who gave his daughter in marriage to Imam Shāhī's son Nār Muḥammad. Imam Shāhī died in 910/1503 in Pirāṇa, a town founded by him, where his shrine is located. Although he is not recognised as a pīr by the Khodja tradition and according to some accounts seceded from the Ismāʿili community, it appears more likely that the schism occurred only under his son and successor Nār (Nūr) Muḥammad Shāh. The latter at an unknown date demanded that the imām's title should no longer be sent to Persia but be turned over to himself, claiming that his father Imam Shāhī had been the imām and that he was his successor. The majority of his followers accepted his orders and came to form the separate Imām-Shāhī community while a minority remained faithful to the Ismāʿili imāms. The Khodja lists of pīrs name after the pīr Tadj al-Dīn the Pandvi-ī javānmāndī, a book of religious admonitions attributed to Imam al-Mustanṣīr al-Mustansīr, II, in place of a person. According to tradition, the imām decided in view of the dissension in the pīrs family after Tadj al-Dīn's death not to appoint any pīr, but instead to send the book as guidance for the faithful. There is, however, reason to assume that the book reached India only around the middle of the 10th/16th century, probably after the Imam-Shāhī succession. It may have been sent at the time with a view to casing the leadership crisis resulting from the schism. Only one pīr mentioned in some of the lists after the book was active in India, Ṣāḥib Dādī. He is said to have been sent by the imām from Persia to Sind with the mission of stopping the conversion of Ismāʿils to Sunnism. He was forced to leave and settled first with some followers from Sind in Nava-nagar (Djamnagar) in Gudjarāt. In 1584 he moved to Bhuj where he died in 1593. An important role in reorganising the community and the prayer is ascribed to him. After the end of the line of pīrs the imāms came to be represented at the local level in India by muqaddams and dādis. This development evidently reflects an attempt of the imāms to gain even more direct control over the Indian communities. However, some local families of sayyids, i.e. descendants of the pīr Kabīr al-Dīn, retained much influence. Most important among these were the Kadiwali sayyids of Sind. Their ancestor, Sayyid Fādīl Shāh, was active in Rādi around the middle of the 17th century. In Sind the family resided in Rāli and after 1780 in Tančo Muḥammad Khān. Shires of early members of the family are located near these two places. Other members are known as authors of extant gnaws. Two sons of Fādīl Shāh, pīr Mughalī and Ḥasan pīr, played a
major role among the Mawlawis in northern Gujrat, Mehdyyik (d. 1108/1697 in Ahmadshahi) actively endeavored to suppress Hindu practices in the community and cut his allegiance to the Isma`ili imams. His extant works espouse strictly Islamic practices and reflect Sunni and Shia Ashari tendencies. He is said to have cooperated with Arangwaz in his wars against the Shi'i rulers of Bhdjapur. His followers later quarreled whether he was a Sunni or a Shi'i. His brother Hasan remained loyal to Isma`ilism and became the saint of the Nizari Mawlawis. In addition to his mausoleum in Thanaplipi near Dhanaghar, Khodjas and Nizari Mawlawis in 1727 built a shrine in his honour in Canon in Gujrat in 1759.

The Khodjas were active in the commerce between India and East Africa at least since the 17th century, and in the 19th century, especially after the Umaiyan sultan Sayyid Sa`id transferred his capital to Zanzibar in 1840, they came to settle in large numbers on the island and later in mainland East Africa. The coming of the Asha Khan [q.v.] Hasan Ait Shah to India in 1840 led to an aggravation of earlier conflicts in the Khodja community about the rights of the imam. In 1866 the judgment of Sir Joseph Arundale in a law suit brought against the Asha Khan by ex-communicated members of the Bhdrui party fully upheld the Asha Khan and the disciples were definitely separated from the community as Sunni Khodjas. Later dissidents seceding in 1877 and 1901, formed Ithna Ashari Khodja communities in Bombay and East Africa.

For Khodja religious doctrine, see ISLAMIV and SATPATH.

(W. Madelung)

Life. He was born in 1536/1537-8 in Istanbul, and died there on 12 Rabii`I 1008/2 October 1599. His grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the grandfather, one of the notables who had joined Sultan Selim I after the battle of Caidir was, had served the supervisor scholars, entered the islamic career and became assistant (mudarris) to the mufti Ebu`l `U-Sa`id (see ARO `L-Su`ufi) at the early age of twenty (96/1553-4). Soon after, he was appointed, with a salary of 30 aspers, to the Mufti Pasha ma¬dressa in Istanbul, and in 977/May-June 1578 he was appointed, "with forty," to the great mosque of Ali-Imam Khodja in Busra, and one year later was promoted to the khadij rank. After another promotion in Dhul-Hijjah 977/May 1578 he rose, in Ramadan 979/January-February 1579, to the rank of professor at one of the eight courtyards (sa`id) attached to the Fatih Mosque in Istanbul. When the preceptor (khadij) of Prince Murad died, Sa`d al-Din was ap¬pointed in his place (Muharram 981/May 1573) and sent to Manisa. This was the beginning of a long period of prosperity and influence for Sa`d al-Din, who was henceforth known as Khodja or Khodja Efendi. When his pupil became sultan as Murad III, he followed him to Istanbul as khadij-i sulhtan (8 Ramadan 982/22 December 1574). As the sultan's trusted advisor, he soon became influential in politics, even in foreign affairs such as the establishment of relations with England. When Nebemmed III succumbed to the plague in 1588, Sa`d al-Din was appointed to be his preceptor in the palace and was expressly referred to for advice, the decree saying that "consultation (meqwerti) should be held with Khodja Sa`d al-Din in all matters of appoi¬nting vizes and religious officials". Although Sa`d al-Din, in Murad III's special meqwerti-i meqwerti, had strongly advised against the "Long War" with Austria begun in 1593, it was he who beckoned the waving sultan Nebemmed III, especially in the Egji campaign. In the great meqwerti on 20 October 1596 it was Sa`d al-Din who with his courage carried all with him, prevailing on the timid sultan to stand fast and eventually win the battle of Hid Cevat (Mardere Keseries). After this triumph, Nebemmed III fell into dispute over the nearest attachment of the next Grand Vizier; on 1 DzumadI 1108/23 January 1597 his opponents at court brought about his dismissal from the office of preceptor. Expressly ordered to refrain from intervention in state affairs, Sa`d al-Din remained in disgrace for 14 months. As soon as he could, in March 1598, the sultan fully rehabilitated Sa`d al-Din and raised him, against some resistance, to the office of shaykh al-Islam, together with that of Nebemmed III's preceptor. This earned him the title Djam`i al-Reysiyleyn. At this time Sa`d al-Din took the inefficacy of Saturdjl Mebemmed Pasha as savior on the Hungarian front as an opportunity to state his views: he drew up a memorandum, outwardly directed to the Commander, but obviously meant for his opponents at court and later circulated as a piece of sayh (it was published by Na`fin in his official history). It voices the sense of impending misfortunes that threatened the Ottomans, and justifies, in the matter of meqwerti, what Sa`d al-Din had done and was considering his duty: not to "meddle" with matters of state, but to render services to it. In 1599 this meant persuading both the sultan and his mother to pay out of their treasuries the funds needed for the next campaign. After a successful term of office as mufti, he died during prayer in the Aya Sofia Mosque.

(W. Madelung)
dedications to him of several of his astronomical works. The Khodja attracted writers and younger scholars of growing fame, some of whom worked as his assistants (Nihat Hacioglu, Nadid) or were his protégés (Loymen); even Mustafa Ali, his severest critic, dedicated a book to him. The charge of nepotism and favouritism which was brought against him, especially by Ali, does perhaps deserve closer inspection within the framework of the times. Of his five sons one died before him; two became shaykh-ul-Islam and two were kadi 'asharis; three of his grandsons were gheykh ul-Islam (S. Turan, art. 'Sad-ed-Din in IA; H. Dannismand, Osmaus deset erbaðli, 115).

Works. Although he did write poetry, he was essentially a prose writer. He translated Arabic and Persian works into Turkish (see Turan's article in IA). His fame as a writer rests on his work seen Li-taaurdih was begun under Selim I and dedicated to Murad III in 1582/1575. As a carefully-written history, based on critical examination of a number of named sources, the work mightily superseded the older chronicles. It deals with the history of the Ottomans from their beginnings to the death of Selim I. In it Khodja Sa'd al-Din displayed his celebrated powers of eloquence, but he was also a great master of Persian. When he was suspected of disloyalty, he was sentenced to death. But it is true that his book abounds in Persian and Ottoman, he could often be simplicity itself: indeed, the contracts are great and have only been disregarded to some extent because Sa'd al-Din is habitually classed among the writers of "ornamented prose". On the many MSS. of the Tâdil, see F. Babinger, Die Geschichtsschreiber der Osmanen und ihre Werke, Leipzig 1917, 125-6; M. Aktepe, Hase Sa'ded-Din Efendi'nin Ta'dil-i-taaurdih'i ve bunun seyi hakkında, in Tarih, ii, 106-10; Turan, art. in IA; B. Flemming, Türkische Handschriften, i, Wiesbaden 1968, 215-5. The work was printed in two volumes at Istanbul in 1297/1871. Based on this edition, a modernised version in Latin script by I. Parmaksiz was published in 1894. Based on this edition, a modernised version in Latin script by I. Parmaksiz was published in 1894. A continuation of the Tâdil-i-taaurdih is Mustafa Sa'di's (d. 1602/1661) Zubdat al-taaurdih. An abridgment is the first part of Hasan Bey-Zade's (4.5) History, Selcukludâ (d. 1657) and Dizerdarzade (d. 1708/1794) made extensive use of the Tâdil.

Sa'd al-Din's Selim-name, a collection of anecdotes based on the recollections of his father Hasan Dina, was printed together with the Tâdil-i-taaurdih (ii, 224-401).

Bibliography: A. A. Abdal, Hase Sa'ded-Din Efendi, Istanbul 1881; 128-9; 429-31; F. Babinger, EV, s.v.; of the works cited above, Turan's article has the fullest bibliography.

KHODJA ELI [see KODJA ELI]

KHODJA EVNDI — KHÔI

by the Communist Party of Russia. On the final overthrow of the Amir's régime in September 1920, Khodjaev became a member of the Communist Party and was constituted head of the newly created Peoples' Soviet Republic of Bukhara. He vigorously opposed the counter-revolutionary Basmachi movement led by Enver Pascha, the Turkish ex-Minister for War. For this and other services to the Bukharian people, he was awarded in 1922 the Order of the Red Banner. Visiting Berlin in 1922, Khodjaev became active in trying to establish economic relations with European countries. This policy was seen as aiming at the economic independence of Bukhara and in 1923 incurred the serious disapproval of the Central Asian Bureau of the Communist Party, to the setting up of which Khodjaev had always been opposed. In the same year, however, he took part in the 12th Party Congress in Moscow as delegate of the Bukharian Communist Party. On the delimitation of the Central Asian Republics in 1924, the greater part of the former khanate of Bukhara was embodied in the Uzbek SSR, of which Khodjaev was in 1925 appointed President of the Council of Peoples' Commissars, a post which he retained until his downfall in 1937.

Although he was then said to have made "errors of a personal character", he was described as "a prominent revolutionary". The long biographical introduction to the edition of his selected works published in 1957 is wholly laudatory, refers only briefly to his differences with the Party authorities and makes no mention of his downfall, trial and execution.

KHODJAN [see KHODJAN]

KHÔI, Khyt, Iranian town (population in 1951: 49,000), situated in long. 45° 52' E., lat. 38° 32' N., in the shahrastân of the same name in the wusent of West Astarbâyjân; the Kurdish district of Çufur is included in the shahrastân of Khôi.

The town lies at an elevation of 2,040 m., in a plain known locally as Khot el kelîr ("the Khot depression"), because all the surrounding areas are at a higher elevation. The mountains surrounding the Khoi plain protect the city from the cold winter winds (the Harâwî range along the Turkish frontier to the north-west averages over 11,000 feet), and consequently Khôî has a warmer climate than either Tabriz or Rûdîbayî. Minimum winter temperature is _14° C. winters are very hot with hot southerly winds. The economy of the region is partly pastoral, partly agricultural; crops include grain, pulses, tobacco, apricots and cotton. The region has a mixed population of Sunnis and Shi'is whose first language is either Turkish or Kurdish (the name Khôî is said
to mean "salt" in Kurdish, and certainly salt-mines are still worked in the area. In the bakbsh of Shahrvar there are several Christian villages.

In ancient times, Khobi acquired commercial importance by virtue of its location on the silk-route. In Safavid times, the proximity of Khobi to the Ottoman frontier made it a town of great strategic importance; in 903/1501-2 a safe-conduct at the borders of the Ottoman Empire was issued to Shah Selim I on the plain of Califdric, some 70 miles north-west of Khobi. In Kadjir times the strategic values of the town continued because of its proximity to the Russian frontier; the ruins of the walls built by General Gardane early in the 19th century at the request of Fath 'Ali Shah are still visible. More recently, Khobi saw fierce fighting between nationalist and royalist forces prior to World War I.

Bibliography: All Razmâr (ed.), Farhang-i Gyurghâisiyyâ-yi Nârân (Tehran 1330h.), 83 f.; M. and S. Skaznyoi, Khokand (Tehran 1330h., i, 185f.); S. S. M. and S. Shafie,J. S. E. (Teheran 1330h., iv, 184). Khobar, Arabic orthography, Khokand, later written Khokand (which is given a popular etymology, khâb + hânâ = town of the oasis), a town in Farghâna (q.v.), where see also for the other spellings and the foundation of an independent Ozbek kingdom with Khokand as capital in the 18th/19th century. The accession of the first ruler of this Mii dynasty, Shâhrukh, was followed by the building of a citadel; another citadel later called Eskî Urdâ was built by his son, 'Abd al-Karim (d. 1746). 'Abd al-Karim and his nephew and successor 'Umar ibn 'Abd al-Karim (who wrote poems himself under the pseudonym Khokand, Asiat. Museen Mal. c. 589 h., especially fols. 332, 145b). When the Kalmuck empire was destroyed and the frontiers of the Chinese empire advanced up to Farghâna (1758), Irdinâ also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter are cited by J. Klaproth, Magasin Asiatiue, i (1825), 81 h. from the T'ai ts'ing yi P'ung ci. Irdinâ also was a member of a coalition of Muslim rulers of Central Asia, which applied to Ahmad Shâh Durrânî (q.v.), the ruler of Afghanistan, for help against China. The alliance had no further results, although Ahmad Shâh in 1759 appeared in Turkistan at the head of an army and occupied the territory between Khokand and Tashkend (at the same time an invasion of the land of the Kâkî-Kirgiz was made from Khokand, Klaproth, op. cit., 85 h.), but he had soon to retire again on account of the claims of his enterprises in other directions. 'Abd al-Karim's grandson, Nâr Bûtâ Beg (probably reigned 1823-1825), is described. According to Filipp Nazarov (see below), this "tower" was visible for a distance of 50 versts (over 30 miles).

Khobi's two sons, 'Ali and 'Umar, are the real founders of the state and city of Khokand as we later know it. The chronology of these reigns (1222-1275/1750-1822) is not sufficiently established; even the year in which 'Ali was assassinated and 'Umar raised to the throne is variously given in the sources. According to the Taârikh-i Shâhârâbî (ed. Fantusov, ii, 106), 'Umar died in the year 1257/1821-2 (in the cyclic reckoning the year of the horse = 1822 is given); according to Nalivkin (Russ. original, 101; French tr., 224), which here follows another source (the Mumtâzâb bâl-Târikh-i Hâlâm Kîmân), 'Ali was not murdered till the spring of 1823 (i.e. 1817, not 1816, as in Nalivkin; on the other hand Nalivkin himself in another passage (Russ. orig. 185; French tr. 228) puts the building of the chief mosque of Khokand by 'Umar Khân in 1253/1836. The Russian interpreter Filipp Nazarov, who was in Khokand in the winter of 1813, was the ruler of Khokand 'Ali Mir-Wâlijâr (Zaplâchii o vseobshchel vydaniâ Sredu-nessyâ dae, St. Petersburg 1824, 40 ff. This is probably for Wali al-NâsÂmi, not Wali Miâyâni, as in Klaproth, op. cit., 45). The ruler at this time was only 25 years of age; this statement can only refer to 'Umar, not to the much older 'Ali; according to 'Abd al-Karim al-Bukhârî also (ed. Schefer, 101), this embassy and the cause of it (the murder of the Khokand envoy by a Russian soldier in Petropavlovsk) both took place in the reign of 'Umar Khân. According to 'Abd al-Karim, 'Ali had already been killed in 1225/1839, which cannot be right, as we have a document of his dated Qumâdâ 1, 1225/June 1810 (Protokoll des Türkischen, Lyb. arkh., ii, 254 f.). The change of ruler must therefore have taken place between 1810 and 1811.

In the oldest known document of his reign, dated 1233/1779-80, 'Ali still regards himself as the representative of an unnamed Kîlmân; later he appears as an independent ruler with the title Kîlmân or Amîr; after the conquest of Tâshkend, his power was as great as that of the Amîr of Bukhârâ. In 'Umar's reign in 1814 (so Nazarov; not so late as 1819, as in Nalivkin, Russ. orig. 110 f.; French tr. 234 l.), the town of Turkistan with the parts of the Kirgiz steppes belonging to it was incorporated in the kingdom of Khokand. 'Umar thereupon took the title of Amîr al-Mulk al-Mulâmân. There were several wars with Bukhârâ regarding the possession of Ua Tribe in the reigns of both 'Ali and 'Umar, and the town indeed remained a bone of contention between the two states right down to the Russian conquest.

'Umar's domestic policy was quite different from that of his predecessor. Like many other Central Asian rulers, 'Ali had made up his mind to break the power of the Ozbek families and therefore surrounded himself with mercenary troops from the highlanders of Karitgin, Darwâz and other lands (Taârikh-i Shâhârâbî, 42 f.). The war against the nobles was, as frequently elsewhere, combined with a war on the religious classes, especially the dervish orders. The historians on this account describe 'Ali as a godless tyrant (fellâm); on the other hand they praise the piety and justness of 'Umar, who was put on the throne by 'Ali's murderers. 'Umar built the present chief mosque of Khokand, which was also used as a madrasa and therefore is known as the Madrasa-yi Dîâmân. 'Umar was also fond of poetry and wrote poems himself under the pseudonym (takhlîs) of Amîr; verses by the Khân himself, his officials
and favourites were collected in a special anthology (afterwards printed) entitled 'Maddal al-she'ara' by M. Hartmann in MSOS, vii, Westas. Stud., 87 ff.

It was probably 'Umar who founded the town of Shahri Khân (west of Andijân); the great canal, led to it from the Kara Darya, Shahri Khân Säy, completely altered the irrigation of Farghana.

'Umar's son and successor, Madali (properly Muhammad 'Ali), was 12 at his accession (according to others 14). During the first half of his reign, the Khanate of Khokand reached its greatest power and extent. In the south the districts of Karakhan, Darwâz, and Kulâb, which now belonged to Bukhârâ, were all conquered; in the north-east taxes were levied on the Kara Kârgir; on the Great and on a part of the Central Horde of Kazak Kârgir; the Khan's representatives even appeared among the tribes of the Great Horde which led a nomadic life on the other side of the Ili [p.134]. The rebellion of Khoda 'Isâ dîhângir in Kâshghar (1826), which received support from Khokand, met with no success; nevertheless, the officers of the Khân were allowed by the Chinese government to collect taxes in the "six towns" (ilâhi dîrâz) of Kâshghar, Turfan, Yarkand and Khôlân. Like Khokand, where one of the largest madrasas bears the name of Madali Khân, Tashkend attained considerable prosperity; from 1835 the town had a population of 80,000, with 15 madrasas of the Khân, and the foundations erected in the town of Khokand. During this period, several buildings were erected in the town of Khokand, including the palace or 'urda of the Khân, and the madrasas of Hâkim Ayn and Sulîtan Murâd Beg, built by the Khân's mother and brother.

Until 1875, it seems to have been the Imperial Russian government's intention to retain the Khânate in a similar status to those of Bukhârâ and Khiwâ. But disturbances within the Khânate, and attacks on Russian-held territory, continued, and in 1875 there was a popular rising against Khudâyâr Khân led by his kinsman Pâlîd Khan, and the former regions of the Khânate then annexed by Russia, such as Khudâjand and Kurâmînsk, joined the revolt. A Russian force advanced up the Syr Darya, thereby driving a wedge between the two Khânates. After the fall of Khudâjand, Khudâyâr came to terms and agreed to become a Russian vassal and to pay an indemnity.

Thus began the last phase of the Khânate's nominally independent existence. Despite all the internal dissensions and intrigues, the economic condition of the Khânate seems to have been prosperous enough, with flourishing local textile, carpet-weaving and other crafts; according to a Russian observer in 1887, the town held a population of 56,000, with 5 madrasas of the Khân and several hundred mosques. Traditional Muslim learning was, indeed, far from moribund in all three of the Central Asian Khânates in this the last phase of their existence. During this period, several buildings were erected in the town of Khokand, including the palace or 'urda of the Khân, and the madrasas of Hâkim Ayn and Sulîtan Murâd Beg, built by the Khân's mother and brother.
became an oblast under the ancient name of Farghāna. In the 1890 administrative re-organisation, Khokand became a head of the oblast of Farghāna. The town of Khokand itself continued to be the chief town of the region, with 21,966 inhabitants in 1911, but with the newly-founded town of New Marghilan, later Skobolev, as the governor’s seat.

The Khokars, one of the power tribes of the former Khurasan played a major role in the anti-Russian rebellions of 1916, when the Imperial government attempted to call up non-Russians for labour service in the war. In the following year, the focal point of the Muslim movement for the autonomy of Turkestan as the Tsarist régime broke up, and in December 1917, the Fourth Extraordinary Regional Muslim Congress met in the town of Khokand and declared the autonomy of Turkestan. Early in 1918, however, the Tagaigov Soviet declared the government set up in Khokand under Mustafīn Chalayev to be counter-revolutionary, and in February 1918 Red Army forces attacked the town of Khokand, which was defended only by a hastily-raised militia, captured it, and conducted a savage massacre in which several thousands of the inhabitants were killed. After this, Muslim desires for self-determination in the region were expressed by the guerilla activities of the Basmajis [9.1.1].

Under the Soviets, Khokand forms a raion or district of the Fargana oblast of the Uzbek SSR. It is now an important centre for light industry, in which silk and linen manufactures are prominent. The palace of Khudayar is now the town’s museum. The population in 1970 was 133,000.

(K. W. Barthold - C. E. Bosworth)

**KHOKAND, **a powerful hill tribe inhabiting the Jhelum area in the northwestern of the undivided Panjab. The Khokars were a dominant race of the province at the time of the first Muslim invasion of the Indian sub-continent; their origins are as shrouded in mystery as those of any other Panjab tribe, but that they were originally Hindus seems hardly open to question.

The earliest mention of the Khokars occurs in Hassan Nūrī's Tafṣīl al-ma'allih which refers to an inscription of the tribe under their chiefs named Bikan and Sarki. The next contemporary chronicle to contain a reference to the Khokars is Miḥālīš-i Sārākū's Tahāris-i Nāṣīrī, which says that they were encouraged by Malik Khusraw, the last Ghaznavid ruler of Lāhūr, to rise against their Lodi overlords. History also records a military contact near Lāhawr between the Khokars and a force of the fugitive Djalil al-Dīn Khvānaazād in 640/1243.

Extending their sway beyond their traditional stronghold in the country between the Jhelum and the Chenab, the Khokars held a considerable area east of the Beas. In 647/1250 they were masters of most of the upper part of the Panjab, but they are no more heard of until the reign of Sultān Muhammad Tūgchūk when they again created disturbance. Yahyā Sīhtīnī's Ḥāfirah-i Muḥarrarīdīsī describes the seizure of Lāhawr in 797/1394 by the Khokar chief Shavkha, and his long-standing feud with Sirang Khan, governor of Dipālūr, resulting in the former's defeat.

The Khokars played a significant role in offering resistance to the invading hordes of Tūmrū in India. After Shāykhī's arrest by Tūmrū in 801/1398, the Khokars disappear from history, but his son Djasrast, who escaped from Samarkand, whether Tūmrū had taken him as a prisoner, emerges later in 823/1420 as a force to reckon with. For more than twenty years, this indefatigable Khokar warior proved to be the cause of constant worry to the Sultans of Dihlī. In 845/1441, Sultān Mūṣīm Shah conferred Dipālūr and Lāhawr on Bahlīl Lōdī and charged him to chastise Djasrast, but the wily Khokar came to terms with Bahlīl and urged him to astate the Sayyids and occupy Dihlī. However, Djasrast was murdered in 846/1442 by his queen, a daughter of Bahlīl De'ēs, Rāğıj of Dāmūn, because her father had been put to death by him. After Djasrast, the Khokars were left leaderless, and coupled with the rise of the Lōdī power in the Panjab, the Khokar ambitions finally came to naught. Scholars and historians have often confused the Khokars with the Gakkhars, a totally distinct tribe, settled in the same province. Fireight in all probability means Khokars when he describes the Gakkhars as a race of wild barbarians, devoid of religion or morality, practising polyandry and female infanticide. Similarly, in his article, *A history of the Gakkhars, in JASB, xii* (1921), I. G. Delmerick has attributed the achievements of the Khokars to the Gakkhars. As a matter of fact, the Khokars were spread all over the central districts of the Panjab centuries before the Gakkhars acquired a foothold in the Salt Range, to which they remained traditionally confined (cf. H. A. Rose, *The Khokars and the Gakkhars in the Panjab history*, in *The Indian Antiquary*, xxvi (1907), 1-9).
from Herzegovina (C. Trubelka has shown that "Radivoj". the brother of the Sultan's son-in-law", to whom the people of Raguša [Split] sent gifts, was Ferhād's brother). Taking part in Sultan Suleyman's campaign against Belgrade (927/1521), Khosrew Beg was appointed sandžak bey of Bosnia on 15 Shawwal/15 September of the same year, a fortnight after the conquest of the city. Having stayed four years in Sarajevo, he was removed from office because he failed at the siege of Škoplje. Some six months later he returned to his post, which he kept until he died, over sixty years old, in 948/1541. Except for an interruption of a few years (1533-36), during which he was at Belgrade sandžak beg of Servia.

Distinguishing himself by his successful campaigns, Khosrew Beg was nick-named Ghāzi; even today he is well-known among the Bosnian Muslims by the name of Gazi Hüsrev-beg. Due to his military activities, Turkish power spread widely in Bosnia, Dalmatia and Slavonia (Ubrovča, Vayl at, Banjaluka, Pođega, Kiš, Gorčači). His campaign brought Khosrew Beg great riches which he spent on embellishing Sarajevo. During his governorship, the city grew into an important centre. Three charters of foundation (waḥfīyye) attest his activities: two (938/1335 and 944/1341) for the Khosrew Beg mosque (Beşāma dāmāsi) next to which was erected the mausoleum (türbe) in which he was buried, and one (943/1341) for the Kuršumlija modesta. The Beşāma dāmāsi is one of the most outstanding specimens of Islamic architecture in Yugoslavia, and an imposing monument of the Turkish period in Sarajevo. The waḥf founded by Khosrew Beg has been of great importance for the city of Sarajevo and for the cultural life of the Muslims in Bosnia and Herzegovina in general. Up to the 20th century, many public buildings were erected with its revenues. It still exists, but most property was lost in the 1930s-40s, especially at the great fire in 1567 when Prince Eugene of Savoy made his breakthrough at Sarajevo. In course of time, many estates belonging to the waḥf were lost, including recently at the land-reform in Yugoslavia after 1918.

In the charter of foundation of the modesta, Khosrew Beg ordered a library to be attached to the school. During the governorship of Topal Othman Pasha in Bosnia (1861-9), the library was separated from the school, and the books were transferred in 1864. After 1867 books and documents from other libraries and institutions were brought to this library, known as Gazi Hüsrev-begova biblioteka. In 1963 it held 6,456 Arabic, Persian and Turkish manuscripts, and many have been added since. There are also ca. 3,500 documents of the Turkish period, 400 charters of foundation and 84 registers (sidjill) of the bābās of Sarajevo.

Other monuments in the town for which Khosrew Beg was responsible include the eponymous two küba buildings, a bedside of 90 stalls and the Taşlih Kǎn, a caravanserai provided with 60 lodgings.

There are numerous references to Gazi Khosrew's military activities in the Diarit of Marino Sanuto, where he appears under the name of Uṣref Beg.

(K. DJURĐJEVIĆ and J.-L. BACQUE-GRAMMONT)

KHOSREW, MOLLA, a famous Ottoman jurist, whose real name was Mehmed b. Farāmuz b. "All. According to one statement he was of Turkman (tribe of Warsak) descent and born in the village of Karghan (half way between Siwās and Tokat); according to others, however, he was of "Frankish" descent and the son of a "French" nobleman who had adopted Islam. According to Sa‘d al-Dīn his father was of Rumi (Rūm) descent. Khosrew became a pupil of the famous disciple of Tafazzūnī, Burhān al-Dīn Haydar of Herāt (cf. Isā, xi, 51 and Sa‘d al-Dīn, Tāh al-tawārid, ii, 436), and received training in the Shah Malik modern in Adria¬nople; in 848/1444 he became bābā of Adrianople and later bābāšker of Rumelia. On the death of Khaḍîr Beg [v.], the first bābā of Constantinople, he succeeded him and was at the same time mādāris at the Aya Sofya. Feeling hurt at Mollā Kārčin [v.] being promoted over him, he went to Bursa in 567/1172 and built a nedrese there. In 874/1469 he returned to Istanbul by command of the Sultan, became Shaykh al-İslām and died there in 893/1480. His body was taken to Bursa and buried in the court of the mosque founded by him. He also founded a mosque in Istanbul, named after his name (cf. ʻUthmān Ḥusayn, Ūdāl al-ḥujūmi‘i, i, 20; J. von Hammer, OR, i, 87, No. 426). Mollā Khosrew was a celebrated jurist, many of whose pupils became famous in after life. He also attained a wide reputation as an author. His two most important works are the aššar-anotated Durar al-buhkām fi ḍharb Qūnār al-ḥašān on the principles of legal practice, written in 877-83/1473-7 (printed at Cairo 1394 and 1405), also a dogmatic work Mīrād al-wuṣūl fi Qum al-wusul (printed at Cairo 1362 and Istanbul 1364). On other works by him, cf. von Ham¬mer, OR, ii, 386 ff. and Brockelmann, ii, 225-7.

KHOSREW PASHÁ, BOSNIANK, -KHOSREW PASHÁ, Ottoman Grand Vizier. Bosnian in origin, Khosrew was taken into the palace service and rose to the office of slikašir. When, in Muhammad 1033/ October-November 1625, the dissident (urba) oda khan of the Janissaries demanded the replacement of their aga by someone not of the corps, Khosrew passed out of the slikašir-i hâmaydn to become Vehbi bey agašir.

The state was at this time going through a critical period: the dominance of the Janissaries in internal affairs had reached new heights with the execution of Othman II (Rèjâl 1031/1622); Abâna (Meh-
med) Pasha [g.o.] was in revolt in Erzurum; and the Safawid Shah 'Abbas I was soon to take Bagḥdād (Rabi' I 1035/January 1626). In Shaban 1035/May 1624 Khosrew Agha, as agha of the Janissaries, left Istanbul with the bâbshâlu soldiery in the train of the Grand Vizier Cerkes Mehmêd Pasha [see Kurânân] and advanced to Diyarbekir, where he had been given the command against Abaza Pasha. Khosrew is mentioned as having fought courageously in the victory over Abaza's forces near Kayseri in Dhu 'l-Ka'da 1033/September 1624. When Cerkes Mehmêd died in winter quarters in Tokat (Rabi' II 1034/January 1625), Khosrew and the baçhadefkar, Bâktî Pasha, wrote to the capital urging the appointment of the beglerbegi of Diyarbekir, Hâfiz Ahmed Pasha [g.o.], as his successor, an action Khosrew came to regret on learning that he himself might have been considered for the office. Though he was soon after given the rank of vizier, he is said by Peçewl, then with the army, not to have been able to overcome his disappointment and to have hoped that Hâfiz Ahmed might fail in the subsequent campaign against Bagḥdād (Peçewl, Ta'rikh ii, 493, 495).

In Rabî' 1034/June 1625 Khosrew and the forces which had wintered in Tokat joined the army under Hâfiz Ahmed to march against Bagḥdād. The ensuing siege of that city, which lasted for nearly eight months (Safar-Shawwâl 1035/November 1625—July 1626), was unsuccessful, but Khosrew again distinguished himself by his bravery, especially when the Ottomans were near to rout in the third of the battles (Rama'dan 1035/June 1626) with a relieving force of some 30,000 soldiers under Shah 'Abbas himself as pasha. His actions earned him the imperial decree of pardon Khosrew during this siege, see Ferîdûn Beg, Miwash 'al-sâlihîn, Istanbul 1854-5 ii, 89-90.

Following the failure at Bagḥdād, both Hâfiz Ahmed Pasha and Khosrew Agha were dismissed (Rabi' I 1035/December 1626), though neither was disgraced. Summoned to the capital by the sultan, Murad IV, Khosrew arrived in Radijb 1036/March-April 1627 and was made a şâbbed vizier (and thus Pasha). The inability of the new Grand Vizier, Kâmil Pasha, to counter the renewed threat from Abaza Pasha in 1627 led to the former's dismissal. The sultan is said to have placed great trust in Khosrew Pasha's courage and in his ability to control the army (Peçewl, ii, 498) and in the composition of the new Grand Vizier the arguments of the Şâyâyîh al-Islâmîn Vâhyî Efendi that it was time to try a new face and that Khosrew's unparalleled reputation for valour made him the best man for the post silenced the other ministers. Because there were viziers senior to him, notably the bãkîn mahbûm Radijb Pasha [g.o.], he was not made Grand Vizier immediately but was first appointed governor of Diyarbekir and sent to Ismit, where the imperial seal was delivered to him on 1 Shaban 1037/17 April 1628. In his letter of appointment he was charged first with subduing Abaza Pasha, then with marching against the Safawids; and he was also given wide discretion in the making of appointments and in the administration of affairs generally (see Ferîdûn Beg, ii, 90-5, for the herea).

Having made careful preparations for the campaign against Abaza, Khosrew moved towards Tokat. Through harsh measures against wrongdoers and those whom he regarded as having failed in their duty, he succeeded in establishing strict discipline in the army. He reached Tokat on 28 Rabî'ân 1037/1 June 1628, where he remained for some seven weeks before a report that Abaza, concerned by desertions from his forces, was seeking aid from Shah 'Abbas spurred him to move quickly against Erzurum. His considerable reputation for bravery persuaded increasing numbers of Abaza's followers to desert to him, a tendency which he further encouraged by treating the deserters well. Abaza had laid siege to Hasanbâd but, on hearing of Khosrew's advance, abandoned it. At the suggestion of the governor of Hasanbâd, Khosrew advanced on Erzurum at great speed with a picked force, arriving before Abaza could complete his preparations (29 Dhu 'l-Hijja 1037/10 August 1628). During the siege which followed, Khosrew again encouraged desertions by promises of pardon and employment in the army. Recognising the impossibility of resistance, Abaza surrendered on terms on 23 Muharram 1038/22 September 1628, and Khosrew thus brought to an end a problem which had bedevilled the state for some six years. A Safawid force coming to Abaza's aid was surprised and defeated by the governor of Kayseri, its commander, Shamsî Khân, being captured and sent to Khosrew. Having decided not to winter in the field, Khosrew returned to Istanbul with both Abaza and Shamsî Khân in his train and made a triumphal entry into the city on 12 Rabî' II/9 December. Abaza, pardoned in accordance with the terms of the surrender, was appointed governor of Bosnia.

Though Khosrew fell ill in the spring of 1629, he recovered and was appointed commander for the campaign to retake Bagḥdād. He left Oskudar on 18 Dhu 'l-Ka'da 1038/9 July 1629 and arrived in Mosul on 1 Dümâdîa I 1039/7 December 1629. An unusually hard winter, with continuous heavy rains and even snow, caused severe flooding over a large area and created great difficulties for the army. On 13 Dümâdîa II/28 January 1630 the army left Mosul for Bagḥdād. Having suffered considerable losses of men and materiel in the crossing of the flooded river Zâb, Khosrew convened a jûmeîn in which it was decided that to besiege Bagḥdād in the present conditions was impossible and that the time would be better spent in a pre-emptive attack on the ruler of Ardalan [g.o.], Khân Ahmad, who might otherwise threaten their rear. As the army advanced, many of the Kurîshî beges submitted to Khosrew. Reaching the district of Şehirezîr, Khosrew was persuaded to rebuild the fortress of Guî'ânbar, built by Sultanîyan I and subsequently destroyed by Shah 'Abbas I. The work began on 10 Ramadan 1038/4 March 1629 and took some fifty days to complete. During the stay at Guî'ânbar, Khosrew sent a force to take the fortress of Mihrîbân, on the road to Hamadhân. The garrison surrendered, but the Ottoman force was then attacked by a Safawî army under the khân-i bâhûdan, Zaymî Khân. In the ensuing battle the Ottomans, with some difficulty, won the day (22 Ramadan/5 May). Moving further east, the Ottomans sacked the palace of Khân Ahmad at Hasanbâd and, on 27 Shawwâl/9 June, reached Hamadhân, which had been evacuated by the Safawîs. They laid waste the city, and, with the intention of marching on Şawrîn, advanced to Dargûzûn, which they also sacked. It was there decided that an attack on Şawrîn would prove both difficult and ultimately pointless and that it was past time to return to the main aim of the campaign, the recovery of Bagḥdād which was now some sixty stages distant. The army departed from Dargûzûn on 10 Dhu 'l-Ka'da 1039/21 June 1630 and marched towards Bagḥdād, meeting serious resistance only from the ruler of Ľukîstân, set against them by Shah Sâfî, whom they overcame on the plain of Camâghûl, near Nîhâvûnd, on 3 Dhu 'l-Hijja/14 July. Reaching the environs of Bagḥdād in early Septem-

Encyclopaedia of Islam, V
KHOSREW PASHA

Khosrew began on 28 Safar 1040/6 October 1630 what proved to be a fruitless siege of the city. Five days after an unsuccessful full-scale assault on 5 Rabī’ II/19 November it was decided to withdraw. During the course of the siege Khosrew had been persuaded by the local Arabs to garrison the fortress at Hillā; and leaving a sizeable force there, he departed with the army for Mosul, where he arrived on 7 Dhu‘ al-Mu‘arram/13 December. While the army dispersed for the winter, Khosrew, ill-health, prepared to winter in Mosul.

When the news that the Ottomans had abandoned the siege of Baghdād reached Kurdistan and the Shāh, an army under Khan Aḥmad attacked the Ottoman garrison at Derteh. The defenders fled to the newly-built fortress at Shahrizūf (Gu‘lānbar) which was subsequently attacked by a large army under Khan Aḥmad and the Safawī Shāh ʻAlāʾ al-Dīn; news of their advance caused the Kurdish khānidtr, under Khan Ahmad and the Šafawī Khosrew to retire to the relative safety of Mārdīn. Having made arrangements for the repair of the fortifications at Mosul, he left on 26 Dhu‘ al-Mu‘arram/12 January 1631 and arrived in Mārdīn on the 29th/2 February. (For further details of the Hamadān/Baghdād campaign from the Safawī side, see Iskandān Beg Munsī, Dīwān-i Ḥamadānī, ed. Sūhāyli Khwānsarāy, Tehran 1938, 39 ff.)

From Mārdīn a request was sent to the capital for men (in particular a large force of Tatars), money and supplies for another campaign against Baghdād in 1631. In Dhu ‘l-Ka‘da 1040/June 1630 Khosrew moved to Kočbīsyr, a short distance to the south-west of Mārdīn, where he spent the summer months awaiting the arrival of the Tatars, several thousand of whom had set out in the spring, and trying to decide on his course of action. When he finally determined to move towards Mosul (Ṣafar 1041/September 1631), heat, fatigue and disease had so affected the army that Khosrew was persuaded to retire to the relative safety of Mārdīn. Having made arrangements for the repair of the fortifications at Mosul, he left on 26 Dhu‘ al-Mu‘arram/12 January 1631 and arrived in Mārdīn on the 29th/2 February. (For further details of the Hamadān/Baghdād campaign from the Safawī side, see Iskandān Beg Munsī, Dīwān-i Ḥamadānī, ed. Sūhāyli Khwānsarāy, Tehran 1938, 39 ff.)

By this time, however, he had already been replaced as Grand Vizier by Hāẓīf Aḥmad Pasha, the decision to do so having been taken in Istanbul on 29 Rabī’ I/1014/25 October 1630. Na‘īmā (Ṭarīqī, iii, 70-9) lists a number of underlying reasons for his dismissal, chief among them his excessive dependence upon, and consequent enmity of favour with, the troublesome elements in the army (ṣorba), this in turn leading to instances of oppression and malfeasance (see also ii, 446-7, where Na‘īmā gives details of Khosrew’s securing the dismissal of a Yasīrī khābī who had been appointed with special instructions from the sultan to end the abuses in the enrolment of Jāniskāries and to prevent improper entries in the registers of the corps). The decisive factor, however, appears to have been his failure to retake Baghadh despite a substantial investment of men and resources. When the news of his dismissal reached Dīwārībīr (22 Rabī’ II/16 November), the army immediately protested, threatening to kill the messenger who had brought the news and urging Khosrew to remain until they could make representations to the capital on his behalf. Khosrew calmed them, however, accepted his dismissal and left Dīwārībīr (26 Rabī’ II/21 November), surrendering the imperial seal in the vicinity of Mārdīn. A recurrence of gout forced him to halt in Tokat, where he was to remain until his death.

Khosrew Pasha’s dismissal became the focus of a serious rebellion in the capital, incited, it is said, by the vizier Radjab Pasha, who coveted the Grand Vizierate. Those involved were the ṣorba, who had been recalled from Dīwārībīr for the winter and a number of individual ṣorba, who, having built up their own followings and made themselves virtually independent in various parts of Anadolu and Rāmūs, had agreed to attempt to restore Khosrew to the Grand Vizierate and had converged on the capital. Demanding the deaths of seventeen leading men identified as those who had brought about Khosrew’s dismissal, the rebels succeeded in assassinating Hāẓīf Aḥmad Pasha, who was replaced by Rabī‘ullāh Pasha (29 Ṣafar 1041/20 February 1632: Peczwii, ii, 420, wrongly cites the execution, not the dismissal, of Khosrew as the cause of this rebellion). Deeply angered by these events, Murād IV held Khosrew to be the cause and determined on his execution. Appointing Murtaḥā Pasha to the governorship of Dīwārībīr, he charged him secretly with putting Khosrew to death. Despite opposition from the people of Tokat as well as Khosrew’s followers, this end was accomplished when Khosrew ordered an end to resistance and accepted his fate. The news of his death, which became public knowledge in the capital on 19 Shābān 1041/11 March 1632, provoked yet another serious rebellion, including that of Ṣīlākzāde, ed. Sūhāyli Khwānsarāy, Tehran 1938, 39 ff.)

Though Khosrew Pasha is credited in the sources with considerable personal bravery and with taking great pains in the preparation of his campaigns, these qualities are overshadowed by what is regarded as his excessive severity, even bloodthirstiness, to demonstrate which numerous examples are given. On this aspect of his character Na‘īmā remarks: ‘He had no hesitation in putting to death men whose execution neither the jāf, nor reason required, who perhaps did not deserve so much as a rebuke’ (iii, 77). This success in terrorizing the people of Tokat to defend him and, while allowing for the selfish ends of some of those involved, the strong reactions aroused in Istanbul first by his dismissal and then by his execution. These events suggest that he was, perhaps, more widely admired, even at the end, than the sources, and particularly Na‘īmā, would lead one to believe.

Bibliography: Kātib Čelbio, Felahi, ii, 52, 66, 84, 94; 102-42 passim; Peczwii, Tarīqī, ii, 401-25 passim; Šīlākzāde, Ta‘rīkh, 742-50; Na‘īmā,
the third time, Khosrew Pasha became Suleyman Pasha a tenacious hatred against him. For denigrate in the eyes of the Porte, evoking in Khadim highly mendacious official, but also a remarkably end of that same year of Blytli Meljined Pasha I life, as evoked by 'All in his
tenure of the governorship he had endeavoured to
finish oganization on behalf of the Ottoman sultan. A commission of enquiry was unable to prove his guilt, but
he was nevertheless dismissed from his office. In fact,
the evidence on his administration in Diyarbakar and
in Egypt reveals a brutal, largely unscrupulous and
highly mendacious official, but also a remarkably
enlighted official. The Ottoman chroniclers of Egypt
(Yusuf, Mehmed b. Yusuf al-Khailak and 'Abd al-
Karim b. 'Abd al-Rahman) stress moreover the un-
usual prosperity and security which the land enjoyed
under his rule.

He was replaced at Cairo by the powerful vizier Khadim Suleymân Pasha, whose previous ten years’ tenure of the governorship he had endeavored to
cenagitate in the eyes of the Porte, evolving in Khadim Suleymân Pasha a temerous hatred against him. For the third time, Khosrew Pasha became beglerbeg of Anatolia at the beginning of 1537, and then of Rumelia in June 1538. His services during his tenure
of these offices (the Moldavian campaign of 1538 and the capture of Castelnuovo in 1539) led the sultan to appoint him as fourth vizier in 1541, Khâdim Suley-
mân Pasha being Grand Vizier and Rûstem Pasha [q.v.] second vizier. It seems very probable that the
latter’s ambitions were the cause of the ruin of the
other two. As the sultan’s son-in-law and enjoying
the support of his influential mother-in-law Kûr-
ren Sultan, Rûstem was able to rage against each
other very skilfully the old enemies Khâdim Suley-
mân and Khosrew in such a way that they were
to blows in the sultan’s presence in 1544 and were
both deprived of office for this affair. Rûstem Pasha
then became Grand Vizier. In despair at having
lost his offices and powers, Khosrew Pasha allowed
himself to starve to death in this year, one of the
very rare cases of suicide amongst Ottoman officials
of this period.

documents sur Djiwân Hîseri Pasha, in KO (1979),
and bibliography cited there.

KHOSREW PASHA, MÈMÈD (1572/1555),
Ottoman Grand Vizier, educated in the Palace
and raised to the post of Kâbul in the service of Selim III [q.v.] in 1503/1509. He entered the
service of the Khûkûz Hayyân Pasha, a protagonist of
military and naval reform, who became Admiral (Kapudan-i deryî) in 1506/1507. In 1552/1580 Khos-
rew sailed with the fleet to Egypt, where he commanded a force of 6,000 and co-operated with the
British in the recapture of Raghid and the defeat of
French forces. In recognition of his services he was
soon afterwards appointed waif of Egypt.

In Egypt he attempted to establish the nigam-i
djejed [q.v.] army and disarm the irregular başîl
beshî troops imported from Rumelia for the war against the French. When he attempted to stop their
pay, the başîl beshî forces rose in revolt and de-
feated Khoor’s own troops. Then Tahir Pasha at-
tacked Khoor, forcing him to withdraw to Damiet-
ta and declared himself waif of Egypt. Shortly after-
wards, Tahir was murdered, leaving Muhammad 'Ali
[q.v.] and the Mamlûks real masters of Egypt. In
Rabî‘ al-Awwal 1228/July 1813, the Mamlûks de-
teated Khoor near Damietta and threw him into
prison. On his release by Muhammad 'Ali 8 months
later, he was removed from the government of Egypt.
His next appointment was as waif of Diyarbekir
(1218/19/1803-4), followed by various governorships
in Rumelia. He was active in the Russo-Turkish war
which broke out in 1222/1806 as waif of Silistra
and military commander on the Danube front. In re-
co gnition of his services, he was appointed Kapudan-i
deryî in Dhu ‘l-Hijja 1225/January 1812 and com-
nanded the Ottoman fleet in the Black Sea until
the conclusion of a peace in Ramaçan 1227/September
1812. He was dismissed in 1233/1821, and afterwards
served in a number of provincial governorships. As
waif of Erzurum he was appointed military commander
(sarhisir) in the east, with instructions to pacify
rebellious Kurdish tribes whose activities had led to
a clash with Persia. However, his mishandling of the
affair led to a rebellion by the former indagatîf of Bây-
cikl, while the Persians, taking advantage of the situa-
tion, captured Bâyçikkâl, Erichish and Bilîks. The Porte transferred him to the government of Trabzon, and in Safar 1233/September 1821 appointed in his place the
former Grand Vizier Mehmûd Emin Râfî Pasha.

With the outbreak of rebellion in the Mores, Kho-
srew Pasha was again appointed Kapudan-i deryî
(Rabî‘ al-Akhir 1238/December 1823) and detailed to
pursue the rebels in the Aegean. For this purpose, he constructed a fleet of shallow-draught vessels, suitable for pursuit in shallow waters, and attempted to cut off sea communications between Morea and the islands, at the same time discouraging Ottoman troops on the Greek mainland. However, during the siege of Missolonghi (1240-1245), rivalry often broke out between Khosrow and Muhammad Ali’s son Ibrahim Pasha [q.v.], who was commanding an Egyptian force on the Sultan’s behalf. Ibrahim and Muhammad Ali sought Khosrow’s dismissal from the admiralty and were eventually successful. He was instead appointed visir of Andolu (Anatolia).

Khosrow, however, retained the confidence of Mahmud II, who recognized him as a protagonist of military reforms and as being instrumental in introducing European tactics to the fleet. In 1242/1827 the Sultan therefore appointed him serasker of the newly formed army, the "asker-i vahd-ye muhammadiyyah," where he also began to introduce European tactics and training techniques. His influence in the capital increased after the outbreak of war with Russia in 1243/1828, when he engineered the dismissal of the Grand Vizier Selim Mehmed Pasha and the appointment of his own former slave and nominee, Rashid Mehmed Pasha. He also secured a commandship on the front for his former slave Khalil Rif’at Pasha, and the dismissal of the serasker on the Russian front, Agha Husayn Pasha. Meanwhile, the Russians crossed the Balkans and advanced on Edirne. Khozrow advised the Sultan to seek a peace, at the same time taking extraordinary measures to prevent panics in Istanbul, to the extent even of executing certain advocates of surrender. This, and the unpopularity of his westernising measures in the army, almost provoked a popular revolt. He was present at the peace negotiations in the presence of the French, English and Russian ambassadors. His influence was now at a height, and he used it to remove his rivals from positions in the government, replacing them with his own slaves, and to have the former Grand Vizier, Selim Mehmed Pasha, dismissed from the governorship of Rumelia.

During the Russo-Turkish war, Muhammad Ali had made excessive demands to the Sultan and was now threatening Edirne. At this point, Mahmud placed the matter in the hands of Khozrow who, in Dhu ’l-Ka‘da 1247/July 1832 appointed Agha Husayn commander of the army in Anatolia. After Muhammad Ali’s victory and advance on Istanbul, Khozrow invited military instructors from Europe, among them the famous Von Moltke. During this period he had the complete confidence of the Sultan, and his responsibility for the security of the capital and the fact that he advanced many of his numerous personal slaves to positions in the government, further increased his influence. By marrying his own men to the Sultan’s daughters, he insinuated his way into Palace circles.

However, in Shawwal 1250/January 1837, two of his own proteges, Khalil and Sa’di Pashas, secured his dismissal as serasker, while in Rabii’ al-Awwal 1253/June 1837, his great rival Mustafa Reshid Pasha became Foreign Minister. Khozrow retired on a pension. His absence from public affairs did not last long. In Dhu ’l-Hijja 1254/March 1838, he received the chairmanship of the Reform Committee (medjelle-i waliyeh) and presided over the councils which met in his villa to discuss the Egyptian question.

A further deterioration of affairs in Egypt and the death of Mahmud II in 1255/1839 caused a grave crisis in the empire. It was at this juncture that Khozrow literally seized power, by grabbing the Imperial Seal from the Grand Vizier, Ra’uf Pasha, during the funeral of Mahmud II, and declaring himself Grand Vizier. This led to the defection of his rival, the Kapudan-i derv, Ameen Feyzi Pasha, who sailed with the fleet to Muhammad Ali in Egypt, with the intention of returning with Egyptian troops and deposing Khozrow. Muhammad Ali, partly on his part, demanded Egypt and Syria for himself and the dismissal of Khozrow. Neither plan succeeded. Khozrow remained in his post, but the Foreign Minister, Mustafa Reshid Pasha, seized the initiative and, partly no doubt, to win the sympathies of the European powers over the Egyptian question, had the famous khafr-i sheikh of Gulkhane proclaimed, marking the beginning of the Towhid [q.v.] era. Khozrow was still Grand Vizier, but Mustafa Reshid Pasha later had the sympathies of the Palace and was able to press for his dismissal and the reinstatement of Ra’uf Pasha. He then had Khozrow tried and convicted for bribery by the Supreme Council of Judicial Offices (medjelle-i waliyeh-i adliyyeh) and exiled in Diyarbak ’l-Usb 1250/July 1840 to Tekirdag.

In the following year, the Sultan Abd al-Medjid permitted his return to Istanbul, where a change in government permitted his return to power. In Safar 1260/January 1845, he was appointed serasker, in which position he removed his predecessor Rija’ Pasha’s nominees and replaced them with his own men. During this period of office, he opened the Military School at Kulelik Tashkent. However, later in the same year, he was removed from office, and the new Grand Vizier, Mustafa Reshid Pasha, took care to prevent his further rise to power. He died, at the age of more than ninety, on 13 Diyembr ’l-Aghira 1271/3 March 1855.

Bibliography: see article Husrev Pasha by Halil Inelcek in IA, of which the foregoing is a summary.

(Ed.)

KHOŠT, Arabic spellings Khwst or Khwst, the name of various places in Afghanistan. The most likely etymology for the name is that given by G. Margonier in his in an etymological vocabulary of Pashtu, Oslo 1928, 98: that it is an Iranised form of Pashto, An etymological vocabulary (Ibn Hawkall, 457, tr. 441, and Muqaddasi, 349), and this is apparently the Khwst mentioned three centuries or so later by Kasmid, Afar al-bilād, ed. Whiston, 244, as a town of Ghur; see Le Strange, Lands of the eastern Caliphate, 420, 417.

Distinct from this seems to be the Khwst further north near Andarab and on the borders of Badakhshan, the district which the Besaid-i al-Islam (end of the 4th/10th century) refers to as (?) Yun, cf. tr. Minorsky, 106, 240-1, perhaps the Khwst of Vašt, Buddir, ed. Beirut, II, 358, and the Khwst of the Hāsun-Tasong, see Marqart, Erdnähre, 241. It is frequently referred to in Timurid and early Mughal times. In 884/1479 we hear of one Mir ’Abd al-Khidr, the governorship of Khwst, “one of the most important districts in Badakhshan and Kunuz” (Tārīḥ-i Rakhsh, ed. and tr. Eijsa and Ross, tr. 105). One of Šāh’s wives, Māhān, apparently came from here; his daughter Baharang was born here, and he is said to have visited it on various occasions, see the Bābur-nāma, tr. Beveridge, index.
In modern times, the most important region bearing the name Khōst is that comprised within the modern Afghan province of Pakhtia, lying to the south of the Sefid-Koh range in the basin of the Kaitu, an affluent of the Kurram river which drains eastwards to the Indus; hence the ethnic and tribal connections of Khōst with the regions of Kurrum, Kohat and northern Waziristan on the modern Pakistani side of the Durand Line have always been close. Khōst now forms an important forestry region of Afghanistan, and, in the southern, sub-tropical zone, dates, citrus fruits, etc. are grown; recent Afghan governments have made considerable agricultural developments (see J. Humiltim, Cultural investment here (see J. Humiltim, Cultural investment here (see J. Hultin, Cultural investment here)).

The town, and the territory which depends on its small coalfield, 35 miles east of Quetta. The latter we team that the population of the kingdom which existed in 125 B.C., following the mission of Kuang K'ien, under the name Yu-Tien. Although numerous archaeological remains have been found at that site, Yotkan cannot correspond to Yu-Tien. In fact, according to Pelliot (Notes on Marco Polo, 412, s.v. "Cotan"), Yu-Tien corresponds to *Qoton, with the variant *Qoton arriving from the transcription Yu-Tien given by Huan-tsang (ibid., 409): the name encountered in the Khōtanese texts is just a transcription of the Chinese Yu-Tien under the form Yutien, while documents of the 4th century in Kharoshī script give the form Khotana (L. G. Gercken, Khotanase and Khotanese, 101). Yotkan is a ruined pre-Islamic cemetery, approximately 8 km. west of the town itself.

In fact, the kingdom of Khōtan was not really known to the Chinese until after the conquest of the Tarim basin, carried out by Han Wu-ti (140-87 B.C.), in the years following 210 B.C. and through the reconquest by the later Han between 75 B.C. and ca. 170 A.D. Little is known of the history of the ruling dynasty and the name of the town is always transcribed Yu-Tien in the Chinese sources. From the latter we learn that the population of the kingdom reached a total of 50,000. All that we can say is that this population spoke a language of Iranian type, which has become known as a result of discoveries made at the beginning of the 20th century and which has been deciphered principally by Lüders, Sten Konow and H. W. Bailey. It now seems that the Khōtanese spoke a dialect of the Saka language.

In its course of the first centuries A.D. that the kingdom of Khōtan received Buddhism. According to the Tibetan tradition, which agrees in some points with the account given by Huan-tsang, Buddhism was introduced to Khōtan by a Kashmiri monk called Vaisscena, during the reign, almost certainly legendary, of king Vijayasambhava (E. Zürcher, The Buddhist conquest of China, in Sinica Leidensia, xi, Leiden 1972, 340-1). This assessment is confirmed by the fact that one of the oldest dated Buddhist monuments is from 209 A.D. (A. Stein, Sand-burried ruins of Khōtan, 1922, *).

In the 7th century, Huan-tsang writes in his Memoirs (Watters, On Yuan Chwang's Travels, ii, 1929) "Khotan in the kingdom of Kuia-ta-ta-na-nan. (Note) In Chinese, this signifies "Breast of the Earth"; it is the formal name used in the region. The local language uses the expression "Kingdom of Huan-na". The Hong-nong call it Yu-touen; the Hui (Iranians), Ho-tan; the Indians, K'iu-tan. Formerly they (the Chinese) called it Yu-Tien; it is an incorrect form*. (On this passage, cf. Pelliot, Notes on Marco Polo, 409-17).

Thus, in the Tang period, the polite and literary form is "Costana" or "Gaustana", difficult to interpret according to Pelliot; the local language used the expression Xuan-nâ (Huan-na?), this name faithfully rendering the name which appears in the Khōtanese texts under the form Hu-tien, Xuan, Huan, and Huan; the nomads of the north would have pronounced it *Qoton or *Quton, a name which is found much later in Syriac, translated from Persian, in the story "The History of the Patriarch Mar Yaballadh and the monk Rabban Sâум, published by Chabot (Paris 1855, 22), where the latter identifies the town of "Lōtôn" with Khōtan. In fact "Lōtôn" is an erroneous form from the Persian original, where the *Lom has appeared as a result of confusion with the initial *Lâf, whence we deduce the correct form "Oden" proposed by Pelliot fifty years ago, while Budge (The monks of Khiibid Kîla, London 1928, 138) and Montgomery (The history of Yaballaha III, New York 1927) have retained the form "Lōtôn". This form appears in the works of Kshâghâr (Strockeimann, 1931), with "Kshāghār" and "Kshāghâr", the Indians would have pronounced it Ho-tan (Xuan-tan) which assumes an original *Hwatan, precursor of the Khōtan of the Muslims, while the Indians would have pronounced it K'iu-tan (*Kut-tan) which presuppose a form Khōtan or Khōtan. The land was known to the Tibetans under the name of Li-yul, "land of Li", although they knew the town under the name of Hui-lên, which is just a transcription.

In the Tang period, the kingdom of Khōtan was bounded to the south by the Kuan-men, while in the east its territory touched that of Kroraina (Niya, Cercen and the Lob-Nor region), and in the west that of Kshâghâr (Kıyasa) which stretched from the Pamirs and the Ferghana to Maranhagh and beyond. The language used throughout the Khōtan region was Saka-Khotanese, which was related to the Tadjik vernacular of the Pamirs, of which no ancient evidence has yet been recovered, to the language of Kshâghâr in the west and north, of which some traces have been recovered at Tumshuk (the Turkish name of a site whose ancient name has disappeared), and in the east to the language spoken in Kroraina, of which apparently no relics remain.

The kingdom of Khotan at that time had a large population which had, no doubt under the influence of Buddhism, lost all interest in expansion and showed an extreme aversion to matters of war; Huan-tsang noted that the Khōtanese were remarkable
Khotan, who called himself Kair Khan Yusuf and reigned in Kashgar from about 491/1050, decided, for reasons unknown to us, to conquer the territory of Khotan. Seeing that he died in 492/1052 (Ibn al-\Alfira s.a.), it is likely that the conquest of Khotan was accomplished sometime between the years 1053 and 1052, for we possess money struck in his name at Kashgar and at Yarkand from 404/1013-4 onwards (A. Markov, Incendiarium catalog, etc., 192 ff.). On the conquest of Khotan, cf. Barthold, Turkestani, 281, 2.

Later, Khotan, like Kashgar, passed under the authority of the Ilkhanids (q.v.), and subsequently under that of the Karakhanids (q.v.). After these events, the crisis arising in Central Asia as a result of the expansion of the Mongol empire led the Khwarazm-Shah to make an agreement with Kulthig, who had deposed and expelled his father-in-law, the Gur-Khan of the Karakhitay, and a partition of the western sector of the Karakhitay empire took place, between the two rulers, giving to the Khwarazm-Shah the territory to the east of the Syr-Darya as far as the heights of Khardar and of Khotan (Barthold, Turkestani, 296-7); after his succession to the throne, Kulthig, who had married the daughter of the Gur-Khan, a Buddhist fanatic, undertook a fierce persecution of Islam in the regions under his authority, particularly in Khotan, after the death of Kulthig, the Khwarazm-Shahs (q.v.). According to Djugazian (tr. Boyle, 65-6, 20), Kulthig persecuted the Muslims cruelly and crucified the Imam 'Ali al-Din Khotan in the door of his madrasa in Khotan. In the time of Haydar Mirkat (qds), nothing more was known of this martyr; even his tomb was unknown (Turkshlard, q.f. D. Ross, 215, and ch. xliii). Thus there was no indigenous historical tradition at Khotan, or if there was, the texts have been lost. Arabic and Persian geographical literature provides us with only the most meagre of information; the real situation is misrepresented by al-Samani (f. 189b) and by Yakut, who followed al-Samani in his own writing (f. 403).

Under the rule of Ogedei, Djugazian (tr. E. Markov, 180), 417) reports that “the lands between the banks of the Ann-Darya and the frontiers of Khotay were placed under the orders of the Chief Minister Mahmud Yulava and of his son Mas'ud Beg; those included Transoxania, Turkestan, Otrar, the land of the Uyghurs, Khotan, Kashgar, Djand, Khwarazm and Farahbana”, Rashid al-Din (Din-i al-tawarikh, tr. J. A. Boyle, The successors of Ghenghis Khan, New York-London 1971, 94), also writes as follows: “The Ka'an (Ogedey) placed all the lands of Khotay under (the orders of Mahmud Yulava, and (the region of) Bej-Balk and Karâ Khogha, with the territory of Uyghurtan, Khuday, Khotay, Kharazm and Budagh, as far as the banks of the Oxus under (the orders of) Mas'ud Beg, the son of Yalavâd”. In the remainder of his work, he makes no further mention of Khotan; nevertheless, under the year 1259, Barthold (22 Verlegerungen, 186) writes as follows: “After the re-establishment of order, the frontiers of his government (sc. of Mas'ud Beg) were extended further: to him were subjected Transoxania, Turkestan, Otrar, the land of the Uygurs, Khotan, Kashgar, Djand, Khwarazm and Farahgana”. After the death of Mangu (Mongko) in 1259, a conflict arose between Kubilai (q.v.) and his younger brother Arikkhöge in the course of which a cousin of Arikkhöge, the Caghatayid Alugu, took to himself the entire area entrusted to the authority of Mas'ud Beg; the latter appealed to Arikkhöge who gave him full authority to dispose of Alugu, but in the course of his mission he
went over to the side of Alqin who died ca. 1268. As Arik-böge had been eliminated during this period, Kubilay appointed in his place another Caghatayid, Barak, who took possession of part of the former possessions of his grandfather Caghatay, but Barak was compelled in his turn to submit to Kaydu, grandson of Ögedey, who sought to reconstitute the territory given to him by Chingis Khan. (Barthold, 12 Vorlesungen, 184-6). Finally, a more or less stable equilibrium was established between Kubilay and Kaydu, so much so that according to a passage of Marco Polo (ed. Yule-Cordier, 1, 188; ed. Hambis, Paris 1955, 62-3), it is reported that in the 1370s Khotan was under the authority of the Emperor of China, while Yarkand depended on Kaydu.

While Central Asia was the object of partition between great powers, it is nevertheless certain (Barthold, 12 Vorlesungen, 188-9) that a number of indigenous dynasties survived as vassals, especially at Khotan. In reference to these last, Barthold mentions some Persian verses of which the date is unknown, which were composed in honour of the sultan of Khotan, Munnigh-Tegin, the last words being quoted in Turkish (tëbadîn biiyey kigîsîyê Türk "yene dâhî biiîmîyê Mûnînîg Têgin"). Barthold (op. cit., 193) also mentions the fact that Dinâmî Karâsh, in the appendices (Mulfut'il) to his translation of an Arabic dictionary of the 4th/10th century, devotes considerable space to the town of Khotan, giving a brief description and a list of some persons native to the place. Again according to Barthold (op. cit., 195), Muhammad Haydar (op. cit., tr. Ross, 301) writing in Kâshgharia, distinguished according to his own terms, four classes at Kâshghar and at Khotan: first—liyên, the peasantry; second—kâshênî, the army; third—oynak, the nomads (who were entitled to a certain quantity of grain, textile goods, etc.); and fourth—the class of the officials and the 'ishânî.

Much later, it seems that Khotin shared the fate of other towns in the Tarim basin, in particular in Kâshghar and other towns in the same region; in the 18th century it was a part of the state established by the Khâdiyas, who defeated the descendants of Caghatay and were compelled to submit to the domination of the Dzungar, and later, in ca. 1760, to that of the Manchus who eliminated the Dzungar. Later still, in the seventh decade of the 19th century, Khotan was obliged to accept temporary domination by Yâshûb Bög and after the death of the latter in 1872 to submit once again to the Manchus. With regard to a historical work completed on 11 Sha'bân 1315/24 February 1894 in Khotan and dealing with events subsequent to 1286/1285, cf. Bull de l'Acad. (1922), 209; cf. also the chapter on the Khâdiyas of Khotan in Tarikh-i emeyyê, ed. Pantusov, 161 ff. The principal source for the history of this region is provided by reference in the Chinese dynastic histories and in other works concerning the autonomous region of the Uighurs itself, which have appeared in Chinese from the 18th century to the present day. It is there that the documentation concerning the town of Khotan is found.

The town itself, like all those in the Tarim basin, has known a variety of activities, but the silk industry which has continued from the Han period to the present day is the principal activity. At the time of writing, the industrialisation of the region is being developed by the People's Republic of China, although it is not possible to assess what progress is being made; it seems that the Chinese government is concentrating there on the search for raw materials. There is no certainty about the population figures; according to Kornilov, Khoqaqiyya, Tashkent 1903, 273, the population amounted to only 15,000; according to E. and P. Sykes, Through deserts and oases of Central Asia, London 1920, 216, the population was 50,000.

Hartmann, Chinesisch-Turkenkauten, Halle 1908, 93 ff.; on the state of the Khâdiyas and their connections with Khotan, cf. idem, Der islamische Orient, I, Berlin 1903, 193 ff., and the index. These sources may be completed by numerous works in Chinese.

KHOOTIN (in Ottoman Turkish usage Khotin; in modern Turkish and in Romanian, Hotin; in Polish Chotin and variants; in German Hüthyn (19th century), Chotin, Chotin, Chotmez, etc.; in Italian (18th century) Cucino; and other forms): a fortress and town on the right (formerly Moldavian) bank of the Dneest (Tula), 20 km. south of Kamenets Podolsk (Kamianî [see KAMIANČI]). Khotin is now (since the end of World War II) in the Ukrainian S.S.R., and forms the administrative centre of the rayon of the same name in the oblast of Černovits (Cernăuți, Csernowitz).

Khotin, which occupied an easily-defensible site at the point where the important medieval trade route from the Baltic to Constantinople crossed the Dneestr, was from the mid-14th to the late 18th century a military stronghold and commercial entrepot of some importance. The region of Khotin, which was, in the 16th and 17th centuries, disputed between Poland and Moldavia, had attracted Ottoman attention as early as the reign of Mohammed II, and in the 16th century Muslim merchants frequented the route via Khotin to Poland. Khotin was besieged unsuccessfully by Ogünman II in 1520/1622; thereafter it was restored to Moldavian control, and is so described by Evliya Celebi, who visited it in the retinue of Melek Ahmed Pasha in 1653 (Señalak-nâme, v, 224-5). In 1664/1673 Khotin was occupied by the Poles, but it was regained by the Ottomans in the following campaign season (Silahdar, Ta'rikh, Istanbul 1928, i, 528 ff.). The Ottoman occupation of Podolía in 1683/1672 carried the frontiers of the Empire beyond the Dneestr, but with the retrocession to Poland of Podolsk, and the evacuation of Kamianica in 1710/1699, Khotin became the most important Ottoman fortress in the region of the upper Dneestr; this importance was to increase in the course of the 18th century, as the conflict with Russia became ever more acute.

Khotin was occupied by the Russians in 1715; on its return to the Ottomans in 1725/1714, the old fortifications were rebuilt and increased in height by more than a half, as part of a general strengthening and rebuilding programme, which was supervised by a special commission sent from Istanbul. The contemporary Moldavian historian Cantemir described the Khotin of this period as the most elegant and well-fortified town of Moldavia, praise which is echoed in an Ottoman description of the town written at the same time. Also in 1725/1714, Khotin and its surrounding districts were removed from the jurisdiction of Moldavia and reorganised as an eyâlet, as part of the strengthened Ottoman frontier defences along the right bank of the Dneestr, becoming, in the words of a German observer, "die einzige Vormauer der Moldau".

The 18th century stronghold of Khotin consisted of the medieval "hâle" and the more extensive new outer works encircling the old fortress on three sides.
In the outer walls were four gates: their names are variously given as the Istanbul (or Jassy) gate, the Temeşvăr gate, the Water Gate and the Ukraine or Bender gate. Within the outer fortresses were two baths, two principal mosques and, near the Istanbul gate, a beşestan. Inside the Istanbul gate, on the right, lay the barracks of the artillery and the supply-train, the residences of their aghas, and the headquarters of the defterdar. On the left was a large and well-constructed reserve granary. Further towards the sea were situated another bath, the office of the yeşiliseri aghas, and the barracks of the Janissaries of the fortress. Higher up, towards the old fortress, was situated the seraglio of the paşa of Khotin, and the mosque of the valide sultan. Khotin was, however, yet again occupied several times by Russian forces in the course of the 18th century: in 1742/1743 (by Münich) and again in 1783/1789 (by Gaitiein). In 1788 Khotin was occupied by an Austrian force; later, after the conclusion of the Peace of Jassy, Khotin was restored for the last time to Ottoman rule. After 1806 it remained in Russian hands; except for the period 1918-47 when the territories south of the Dneus formed part of Russia.

**KOTIN — KHUBAYB**

The first permanent settlers on the spot were members of the tribe of al-Dawāsir who landed in 1341/1342 after fleeing the island of al-Bahrain in fear of British reprisal following clashes with Shī'ī elements. 'Īsa b. Ahmad al-Dawāsir is generally regarded as the first settler of al-Khubayb. Other tribesmen who landed near al-Dammim a few weeks earlier subsequently moved to al-Khubayb. Prominent among the early inhabitants were Muhammad b. Rashid and his brother 'Īsa, 'Usayn b. Surayb, Kādi b. Mibar and his brother Mūsā, Sa'd b. Muhammad and Shīh b. Dāmūs (author's father). The settlers built huts of palm fronds along the sea shore. For two decades the village depended on small-scale pearl-fishing for its survival. No more than 20 boats left the village each pearl-fishing season; the crews came partly from the village, but mostly from nearby oases. In the early 1930s 'Īsa b. Ahmad returned to al-Bahrain with a group of the villagers, mostly crew members of his pearl-fishing fleet.

Al-Khubayb remained a small fishing and pearl-fishing village covering an area of less than 0.5 km² until 1935. In that year the California Arabian Standard Oil Company (later the Arabian American Oil Company) built a pier at al-Khubayb to support the early oil well-drilling at nearby al-Dammim. A storage and shipping terminal was built at al-Khubayb, and barges started carrying Saudi Arabian oil to the refinery of the Bahrain Petroleum Company (BAPCO); this marked the beginning of the export of Saudi Arabian oil. The importance of al-Khubayb port has diminished since 1969/1970, when a deep-water pier began operating in al-Dammim; the al-Khubayb harbour facilities now accommodate only fishing fleets and coastal ships. The city itself, however, now covering an area of 8 km², thrives as one of the most active business centres on the Kingdom's Gulf coast, second only to al-Dammim. Commercial enterprises that were given their original impetus by the oil industry have diversified considerably, supported by both the public and private sectors of the economy. With modern office buildings and living quarters, with stores displaying merchandise from all over the world, and with substantial job opportunity, al-Khubayb attracts foreign communities of various nationalities. (ABDALLAH S. JUM'AH)

**KHUBAYB** b. 'ABI AL-ANṣāRĪ, ONE OF THE FIRST MARTYRS OF ISLAM. The main features of his story common to all versions are as follows: After the battle of Uthmān [q.v.] (on the chronology of which, see below) a small body of ten of the Prophet's followers was discovered and surrounded between Mecca and 'Usān by 200 (or 200) Libyans who belonged to the Ḥudhayl. The leader of the hand-pressed little band, 'Āmin b. Ṭabīt al-Anṣārī (according to others, the leader was al-Muḥājir), proudly refused to yield. He and six others were killed whereupon Khubayb, Zaid b. al-Dağiña and a third surrendered; the latter fell a victim to his stubbornness and the two former were taken to Mecca and sold. Khubayb fell into the hands of the Banu Ḥārīrī b. 'Āmir b. Nawfal b. 'Abd Marāf, who, on the expiry of the sacred period, took him out of the Harm and to al-Ṭanfim, bound him to a stake and killed him with lances (ṣafar) in revenge for al-Ḥārīrī, whom Khubayb had killed in the battle of Badr. Before he was tied to the stake, Khubayb asked for time to perform two rak'as, which became a sunna for martyrs, comparable to the last prayers of Christian martyrs. Khubayb is said to have recited two verses at the stake to the effect that he as a Muslim martyr cared nothing about the treatment of his body as Allāh was able to bestow his blessing even upon his severed members. Ḥudhayl formulae uttered by him besides these verses have also been handed down in which he appealed to Allāh for vengeance on his enemies. Those present are said to have shown great trepidation at this curse of the dying man; it is related that Abū Sūlaiman hurriedly pressed the little Mūwāiyah to the ground to protect him from the consequences of the ill-omened words; and Sa'id b. 'Āmir used to fall into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death 'Āmin prayed to Allāh asking him to communicate news of the event to his Prophet in Medina, which actually happened.
His corpse was protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain. According to al-Wakidi, 155, however, Muhammad received news of the event at the same time as that of Bîr Ma'ûna; and according to Ibn Hishâm, 641, it was not ʿAṣim, but Kubayb, who prayed to Allāh asking him to cause Muhammad to be informed. According to al-Zuhri and ʿUrwa (see the latter’s brief account in al-Wakidi, 150) the ten men were sent out as a suriyya to spy upon the Meccans; according to Ibn Hishâm, 636, al-Wakidi, 357, and Ibn Saʿd, ii, 39-40, ii/ii, 33-4, ten teachers of religion, who were on their way to a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides. This story is too much like which has been woven round the drama of Bîr Ma'ûna, which happened at the same time. Al-Wakidi, 227, tells us under the year 628 that Kubayb was not yet at that time a prisoner among the Meccans. The only certain chronological statement that can be made is that the event took place after the battle of Uhud, as ʿAṣim fought there. In the official Sira, the incident is recorded under the name ʿAwn al-Radî and put by Ibn Hishâm in the year 3 and by al-Wakidi in their text.

The figure of the protagonist Kubayb lent itself readily to embellishment. The daughter of al-ʿArish (according to others Mūywīs, a client of Hudayr b. Abī Thāb), in whose house he was kept a prisoner, saw him one day eating grapes, although these could not possibly be obtained in Mecca. When his martyrdom approached, he asked for a knife with which to remove the hair on his privy parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought of his possible revenge; when Kubayb noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. The verses above mentioned, which he is said to have uttered at the stake, have given the elegies uttered over him. The verses above mentioned, which he is said to have uttered at the stake, have given the elegies uttered over him. The verses above mentioned, which he is said to have uttered at the stake, have given the elegies uttered over him. The verses above mentioned, which he is said to have uttered at the stake, have given the elegies uttered over him. The verses above mentioned, which he is said to have uttered at the stake, have given the elegies uttered over him.

The economy of ancient Arabia was such that the Arabs could not make bread the basis of their diet (see corn [khubz], barley [ṣâ‘ät], rice [ṣurr] etc., and whatever the quality, the shape and size of bread. This story is too much like which has been woven round the drama of Bîr Ma'ûna, which happened at the same time. Al-Wakidi, 227, tells us under the year 628 that Kubayb was not yet at that time a prisoner among the Meccans. The only certain chronological statement that can be made is that the event took place after the battle of Uhud, as ʿAṣim fought there. In the official Sira, the incident is recorded under the name ʿAwn al-Radî and put by Ibn Hishâm in the year 3 and by al-Wakidi in their text.

According to Rycart, in addition to designating a member of the movement, the term Khūbmeslī entered general usage as a description for anyone of mild and amiable disposition. The accuracy of this information in all its points is not to be assumed; many of the statements of Rycart on religious matters are demonstrably erroneous. The Khūbmeslī movement presumably found its inspiration in the teaching of Khādiǧ, executed in Istanbul in 952/1547, after some delay, for allegation that the spiritual rank of Jesus was superior to that of the Prophet. Rycart makes no mention of Khādiǧ, however, nor do any of the sources on Khādiǧ (e.g. Tâbârî, Pâṣawala, Tâbârî, Istanbul 1283/1866, i, 326–46) attribute to him the foundation of the Khūbmeslī movement.

**Bibliography:**

Given in the text.

**KHUBZ** (L) a generic term (nomen unitatis: *khubz*) meaning bread, whatever the cereal employed, e.g. corn [khubz], barley [ṣâ‘ät], rice [ṣurr] etc., and whatever the quality, the shape and size of bread.

**KHUBAYB** — KHUBZ
bread, which was from that time considered, with nuances, "the subsistence of the land-dwellers, the basis of nourishment and the prince of foods" (al-Dhähâ, Bukhâlât, 114) and city-dwellers who did not offer it to their guest unceasingly are taken to task (ibid., 182). The Kîlāb al-Bukhâlât (see index, s.v. Kuswâs) provides interesting details regarding wheat-bread and its use, but in general it gives a picture of an affluent class, whose members were in a position to own a slave charged with the functions of a waiter or of a majordomo rather than a baker, but called khubâb because of the importance attached to bread (ibid., 48).

The same work (108), while giving valuable information on the refined standard of cuisine then practised, shows that bread was never eaten alone, and that it was incorrect to offer it dry, (khubâb kâ fârât). In the more affluent circles, it did not constitute the most substantial part of the diet and was rather used for dipping or was eaten from side-plates, while in poorer families and from a very ancient period, it was always accompanied by some condiments (fîrât) to make it palatable; in the present day, a term taken from the root ʿâd w. ʿâdâ, or dâj to "fan"; ājdā, ājdâ, ādâ, clearly expresses this idea; however, the interested parties probably do not take into account the imbalance which they create in thus adding lipids to the proteins and glucose contained in bread. It should be stressed however that not everyone was in a position to eat it regularly, and even today, it still constitutes a rare luxury for certain particularly impoverished populations; for the more affluent, the basis of the diet is often, in many regions, boiled rice, ground corn (burghût) or kuskus (see Kuskus). Since the classical period and, to a large extent, to the present day, there have existed various categories of bread which can be reduced to the following, while it may be noted that the dialectical vocabulary, extremely variable and rich, deserves to be the object of a linguistic-geographical study, whose ethnological results could yield useful information:

- in Iraq, rice cultivated in the region of Başa was used probably by a limited number of bakers (among whom a popular poet, al-Khubzârûzî, mentioned) to make a bread which was quite cheap and accessible to the poorer classes, as well as to those who lived an ascetic life-style (cf. Ibn Battûta, li, 5); in the other regions where it was cultivated, notably in Palestine and Egypt, rice was used more often in other forms (see M. Canard, Le vin du Proche-Orient, in Arabica, vii2 (1959), 122 ff.);
- white bread, made with pure wheat-flour (hūsār wâd) was in general confined to the more affluent families, but it seems to have been in widespread use in a number of countries, such as Palestine and Egypt; physicians actively recommended it, although it was less nutritious than bread of coarse-ground flour (hûsâr hârâm and vars.) which was consumed by people of less means;
- bread made from common wheat, perhaps mixed with a little barley-flour;
- semolina bread (samâdîsamâd);
- barley bread, more coarse, mention of which appears frequently in the hadith; ascetics judged it to be sufficient, but many poor families even today, must be content with it; in North Africa, khos, and in the Near East, barp, are often added to more than a pancake of barley-flour, pure or mixed with a little wheat-flour;
- to this list it is appropriate to add the bread manufactured, in times of hardship, with flour of maize, millet or sorghum (dâhû) or even of some wild plant, such as nâmî in Jordan.

Apart from various pastries based on wheat-flour, bread was presented, with variations on which we cannot dwell here, in two principal forms;

- rûshâ, very thin, was cooked on a slab of iron (or later, of stone) heated on a hearth or a brazier. This slab, once called tâhâbûd, in the Middle Ages, is still in use in the Near East where it is converted and bears the name sâdî; in the Maghrib, similar baking is not unknown, but a type of earthenware casserole is more often used, and bread thus prepared is called marâbûk or marali (cf. E. Lecomte, op. cit., 56 for the Berber world);

- ragât, or (from Persian) djardakdjardash, is a round bread (nakhâzawar) quite thick and cooked in an oven. But there is a distinction there between the domestic and the communal oven. The former (jausâr; currently tâhâbûkdînâ) has the form of an upturned jar without a base or of the truncated cone open in the upper part; it is heated by means of charcoal which is placed inside the dough is spread on the sides, on the outside (see Beaussier and Desay, Suppl., s.v. tâhûn). In certain regions there is also still to be found a tâmâr dûg into the earth, while in Jordan (Jaussen, Moob, 6) tâbûn refers to a small construction in which is placed a sort of cooking-pot, surrounded by embers to cook the dough in the interior. In encampments the oven is replaced by a pottery plate (gânûn and hâmân in Tunisia) which is heated on a brazier (kâhûn) or oven, on occasion, by heated stones.

As for the communal oven (fûn, kûhû) it is found in various parts of the towns as well as in the villages, and it is there that individuals normally cook their bread for consumption at home. Until recently, in the Maghrib at least, it was considered dishonourable to buy one's bread outside, and the kneading of the dough, an essentially feminine occupation, was the duty of the mistress of the house or of a servant. On a large wooden tray (kâshiqiqa'a), the housewife put, sometimes with a little bran, flour of corn or of barley or of both, or even of semolina, in quantities sufficient to provide food for several days, added yeast and salt, then poured in hot water and kneaded the dough which she then cut into pieces and left to rise on a tray in a warm place. A journeyman baker (jarâdî in Morocco) went round the houses, took the trays, imprinted on each piece a distinctive mark and took it all to the bakehouse.

The baking done, the baker came and handed over to each family the tray and the bread belonging to it. The wages of the baker consisted of a piece of bread which he baked and sold to his profit; in Andalus, this bread was called fâyçâ (and vars.) and this term has survived under the form fânsâfûl bâyâ, in some regions of Morocco and of Algeria to designate the salary of the baker, even after it became the practice to pay him in cash (see W. Marquis, Textes arabes de Tanger, Paris 1917, 242-3; this work contains, pp. 2-39, 127-51, an extremely vivid text relating to the journeymen and the bakers, notes and a bibliography.)

Thus there were no real bakers, and there was no such reserved for the making and the sale of bread. However, foreigners, individuals and bachelors were able to obtain it, either from certain women who kneaded extra pastry in order to sell the surplus bread in the streets, at a price fixed by the muhtâsib, or from bakers or retailers; in fact the farrân sold not only the small amounts of bread that they had
received in wages (for they were in principle forbidden to mix the pieces of dough to make large loaves); cf. E. Lévi-Provençal, *Sevile musalmâne*, §§ 115, 148), but also the bread which they made on their account. The, authors of works of *khubz* [poetry] especially al-Sakati (G. S. Colin and E. Lévi-Provençal, *Un manuel hispanique de khubz*, Paris 1931, 26-32 and passim; Spanish tr. P. Chalmeta, in *Al-And.* (1968 ff.), §§ 52-67 and passim), enumerated in detail the frauds committed by these bakers, in such matters as the mixing of flours of different qualities (and even the addition of white earth), as well as malpractices in the baking and in the weighing of the bread, and also the rules of hygiene which were to be observed by the bakers and the traders who, in particular, were not allowed to work at professions such as those of the butcher or the fishmonger. (cf. Ibn 'Abd al-Rahîd, ed. E. Lévi-Provençal, *Travaux hispaniques de khubz*, Cairo 1955, 89-91 French tr. R. Arîb, in *Hespéris-Tamuda*, ii/2 (1960), 202-2).

In spite of these precautions, the quality was not always high, and bread sometimes contained gravel and other impurities (cf. M. Talbi, in *Arabica*, i/5 (1954), 319).

The price of bread, sold by weight and not by the loaf, was fixed by the mahkâtîb, but it varied enormously, and it is the price of corn which provides the most convenient basis for estimating the cost of living; we confine ourselves to referring to E. Ashotor's fundamental work, *Histoire des prix et des salaires dans l'Orient médieval*, Paris 1919, and to the article *Tâbûn* for all matters relating to the different types of flour.

Yet in other civilizations, bread is treated with great respect. It is always broken and it should never be cut with a knife. A crumb which falls to the ground is picked up, raised to the lips and swallowed; a piece of bread found on the road is put, for the benefit of some destitute person, in a place where it will not be trodden on and soiled. And even though it does not constitute, strictly speaking, the basis of the diet, it is given in the Arabic dialects names which refer to life and to subsistence; 'sayf/îb, *masâba*, *hât*, etc. And it is not absolutely certain that the magical purposes that it served have totally disappeared.

However, the situation described above has now been perceptively modified in the sense that, in the lower classes at least, if it is true that the bakers that the population buys the bread that it needs; but if the making of bread has borrowed from the West certain modern processes, anyone can still easily obtain *khubz* *arabî* prepared and presented as in ancient times. Also, in the countryside the tradition is still alive.

(Ch. Fellat)

AL-KHUBZ'ARUZZI (many possible vocalisations), *Abû 'L-Kârim NASR b. ÂHMAD b. AL-MU'MIN*,

popular poet of Bâṣra, who probably died in 337/953. He made rice bread (*khubz arroz*) in a shop at the Mirbad [q.v.], where his biographers show him as surrounded by a circle of admirers who were especially attracted by his *ghâzal* verses on boys, these being his specialty. It does not seem that he should be included in the list of those poets whose belligerence involved them in contests and controversies, nor does he seem to have been inclined, like so many of his contemporaries, to attack the honour of others; because of this last fact, al-Mas'ûdî's information that he had to flee into Arabia in order to avoid the vengeance of one of the Barîdîs [q.v.] is dubious. This same author states that his verses, set to music, were sung everywhere, but except in error, the *agālîn* cites none of them. At all events, his *Dîbût*, put together by his friend Ibn Lânakah [q.v.], must have spread considerably beyond the confines of his native town and even of Baghdad, where he lived for some time. This is confirmed by the fact that this illustrious *kumîl* poet was highly appreciated by a person who held fast to the classical tradition like Ibn Sjaraf [q.v.], who attributes to him "ingenious shafts of wit and subtle inventions, in a closely-knit form and a chaste style, with no superfluities". The judgments of the biographers and anthologists confirm this appreciation, which the extant fragments of his work do not however seem entire to justify; but the complete *Dimas* must have been much richer and must have had enough originality to have stimulated the jealousy of a certain "great poet", thus referred to briefly by Ibn Sjaraf.

KHUDÂ BAKHSH, a notable bibliophile of Muslim India; the founder of the celebrated Oriental Public Library, at Patna, Bihar, India. He was born in 1824 at Chhapra, and received his education in the University of Calcutta. After obtaining his degree in law, he began to practise as a lawyer at Patna at the age of twenty-six. He soon achieved considerable success in his profession, and was appointed a public prosecutor, which post he held for many years. In 1894, he was invited to serve as the Chief Justice of the High Court at Hyderabad, Decan. On his retirement in 1898, he lived a quiet life at Patna, where he died in 1908 and was buried in the precincts of the library he had founded. In recognition of his public services, the order of C.I.E. was conferred on him in 1903 by the British Government of India.

Khûdâ Bakhs had inherited his passion for collecting rare Arabic and Persian manuscripts from his father. When his father died in 1876, he left him a collection of 1,400 manuscripts, with the behest to make it into a work as soon as circumstances should permit him to do so. He continued to make substantial additions to it, till the number of manuscripts had reached 4,000 in 1891, when the collection, along with the building which accommodated it, was made into a public trust. The work-deed was duly executed on 29 October 1891, and the library was formally opened by the Lieutenant-Governor of Bengal and Bihar. It was given the name of the "Oriental Public Library", though the people have
often persisted in calling it the "Khidâ Bakhsh Library" after the name of the generous donor.

A new era in the history of the Library opened in 1905, when it was visited by Lord Curzon, then Governor-General and Viceroy of India. He was deeply impressed by its literary treasures, and ordered that a suitable new building be erected to accommodate them. He also discussed plans for the proper preservation and safe-keeping of the manuscripts; and at the same time he directed Dr. E. Denton Ross, then Principal of the Calcutta Madrasa, to make suitable arrangements for the proper cataloguing of the manuscripts.

Twenty-eight volumes of the catalogue have so far (1970) been published, in addition to two Supplements and an Index. The work of cataloguing is still in progress. The library at present contains 4,232 Arabic and 4,238 Persian manuscripts, in addition to a number of printed books in Arabic, Persian, Urdu, Hindi, English, French, German, Latin and other languages.

Khidâ Bakhsh was succeeded by his son Salâh al-Din Khudâ Bakhsh, Barrister-at-Law. Like his father, he too was a legal practitioner, but found time to write a number of essays and papers on Islamic history and was accordingly characterised by D. S. Margoliouth as an "Interpreter of Indian Islam to Europe and of European Orientalism to India". He was a liberal and a modernist in his social and religious views.

Bibliography: V. C. Scott O'Connor, An oriental library, Glasgow 1920; Salah-ud-Din Khudâ Bakhsh, My father, his life and reminiscences, Calcutta 1909; information supplied by the present Librarian.

**KHUDABENDÉ**

KHUDAWAND (p), God, lord, master. There is no established etymology for this word and no qualifying word or phrase such as khuddâwând-i 'ilâm "lord of the world" (ed. Muntâdî al-Din al-Dîwâni, 'Abâb al-Fuqâ'ah, Muhammad b. Husayn Bayhaki, Târîkh-i Bayâhâş, ed. Allâbâd Fâyâyd, Baghdad 1971, 39, 435, and passim.)

In documents and letters belonging to the Saljuqids and the Ilkhanids, it is used as a term of address to the sultan, usually with some qualifying word or phrase such as khuddâwând-i 'ilâm "lord of the world" (ed. Muntâdî al-Din al-Dîwâni, 'Abâb al-Fuqâ'ah, Muhammad b. Husayn Bayhaki, Târîkh-i Bayâhâş, ed. Allâbâd Fâyâyd, Baghdad 1971, 39, 435, and passim.)

In documents and letters belonging to the Saljuqids and the Ilkhanids, it is used as a term of address to the sultan, usually with some qualifying word or phrase such as khuddâwând-i 'ilâm "lord of the world" (ed. Muntâdî al-Din al-Dîwâni, 'Abâb al-Fuqâ'ah, Muhammad b. Husayn Bayhaki, Târîkh-i Bayâhâş, ed. Allâbâd Fâyâyd, Baghdad 1971, 39, 435, and passim.)

**KHUDAWÎNDÎRÎ**

In Ottoman usage, it was used as (a) the title of Murâd I, and (b) the name of the province of Bursa.

(a) The title Khudawândîrî was used for commanders and vizziers during the Sâlîqîd period (Hasan b. Abû al-Mu'min al-Khûyi, Gûnyat al-kâtib wa-nunyat al-fâlîh fu-rusûm al-ra'dîll in-mu'âjîdî al-fâlîl, ed. N. Lugal-Adnan S. Erzi, Ankara 1963, 4-5; M. Čâshabînî Tekând, İzet Koyunluâ Şîxî qilinânâvela bulunan Türkî yazarlar, in TM, xvi 1971, 134-5). As an attribute, the term was used for mystics like Djalâl al-Dîn Rûmî and Hâjjî Pekštânî (Hiqîfî, Monâbîh al-'arşîn, ed. Tahsin Yavuz, Ankara 1993, 90, and index). The word became widely used, especially after its usage as an attribute for the Ottoman Sultan Murad I (1360-89) (e.g. F. Taeschner, Die Wûrde der Familien in ihren Titeln, in Jsl. xxv (1932), 175) and the early Ottoman historians (e.g. Şâshîkpaşa-zâde, Nâşî, Orân, Bâbişî) did not mention this title. In 9th/10th century documents, when referring to the reign of Murâd I, the phrase Khudawândîrî zamânînda is used without mentioning the Sultan's name (H. Inalcîk, Hicri 835 larihli Sâriy-i defler-i sancak in Ârvañ, Ankara 1956, 87, 89, 150, and Karâ Koyunlu documents. The term Khudawândîrî was used for the successors of Murâd I from Bâyârîd I to Selim I (Forûqî, ed. i, 118, 124, 149, 152-3, 154, 165, 182, 296, 304, 373, 377; A. Nimet Kural, Türkî tarhi, in A. K. Lambton, Sûrî, Sarayt MHsesinde bulunan Âlîverdi, Kırım ve Türkistan hanlarına ait yarık ve hikâyeler, Istanbul 1949, 49-50). As applied to these Sultans, it had the same meaning as the terms pâdikâhî and Khudawând. (Kanûn-nâme-i Velîydiyên Efendi Library, no. 1950, 115, 160, 296; Tekând, ed. i, 135, no. 11), but in the 18th/19th century, it was applied to Murâd I exclusively (Ewîvî Yâbûlî, Strûklû-nâme, Istanbul 1314, 14)

(b) The use of Khudawândîrî as a name for the province of Bursa started after its conquest when Orkhan gave the town, together with its surrounding lands, to his son Murâd as a sandîqâ (Nâşî, Gûnûn-ı namûm, ed. F. Taeschner, Leipzig 1951, 56; Şâshîkpaşa-zâde, Tûrîkî, Istanbul 1935, 43). However, there is no record in the contemporary sources that this name was used during the reign of Murâd I (cf. Kûtbî Yâbûlî, Gûnûn-ı namûm, Istanbul 1345/1352, 656). At this early period, Bursa was the capital of the Ottoman leader, himself called the emir-i khebbâh, and the province was therefore called after him beg sandîqâ (see H. Inalcîk, Bursa şerîrin scillerinde Fâhût Sultan Mehmed'în formûlan, in Bâleten, 4
in the 13th century. This province consisted of the sandjaks of Karakasir, Sahib, Kutaya, Bilecek, Erdeb, and Biga in 1847; it was reduced to a more important centre for river navigation along the Sir Darya, which was presumably on the site of the modern village of Kani Badam, some 40 miles from Khudjand. Leninabad, visited by the American traveller E. Schuyler in the mid-1820s en route for Khiva (see Ibn Hawkal, tr. Kramers-Wiet, ii, 457, 489; Le Strange, The lands of the Eastern Caliphate, 479; Barthold, Turkistan, 157-8, 164-5; Schuyler, Turkestan. Notes of a journey in Russian Turkestan, Khiva, Bukhara, and Khudja, London 1876, ii, 3-4). A considerable number of ulama bearing the nisba of ‘al-aqdjari’ are mentioned by e.g. Sams‘i, Anb, ed. Hyderabad, v, 53-6, and Vâkıf, Buldo, ed. Beirut, ii, 548; most notable of these is the mathematician and astronomer Ahi Mahommed Hâfiz al-Ajdjar, d. 18-338/1426-7 (Al-Farabi, in the period of his struggles in Farghana and elsewhere. Ibn Hawkal states that Khudjand was presumably a centre for operations in 903/1497-8; he has given an enthusiastic description of the walled town of bgham of Khudjand and its many amenities (Bâbûr-nâma, tr. Beveridge, 7-8, 89-92).

During the period of the Mongol invasions, Khudjand was in 617/1220 stubbornly defended against a besieging force of 20,000 Mongol troops and 50,000 pressed levies, and after abandoning the citadel, he sailed away down the river and eventually reached Khârâzm (E. Breuschneider, Medieval researches from eastern Asiatic sources, London 1920, i, 277-8; Djoewaïev-Boyke, ii, 92-4). In the next century, under the Ciaqtaghids, the site of the important city of Bâbûr, in the period of his struggles in Farghana, was occupied by the Khorasanian rulers. Another important centre was Khudjand, and in 731/1337 the Khorasanian rulers were dispersed from the region (Barthold, Fewer studies on the history of Central Asia, ii, Ulugh Beg, 9-26). Bâbûr, in the period of his struggles in Farghana, was a centre for operations in 903/1497-8; he has given an enthusiastic description of the walled town of bgham of Khudjand and its many amenities (Bâbûr-nâma, tr. Beveridge, 7-8, 89-92). It was the connections of the Mongols and their epigoni in Central Asia with their kinsmen in northern China which stimulated mentions of Khudjand in the Chinese annals of the 14th century, e.g. in Hsü-ch'än...
in the Yuan-shih, and an early 14th century Chinese map shows it as Hu-juan; mediaeval Chinese travellers call the Sfr Darya the Ho-chen or Hu-keen "river of Khudjand," following Arabic usage of such terms as Nahr Khudjand or Nahr al-Shok for that river (cf. Bretschneider, op. cit., ii, 54-5).

After being under Ozbek rule, Khudjand became part of the Khânate of Khokand at the beginning of the 19th century, but in 1842 was captured by the Manas (Khan of Bukhara), Mahmud b. Chokhray (see F. H. Sayce and E. D. Ross, The heart of Asia, a history of Russian Turkestan and the Central Asian khanates, London 1899, 225-16). In May 1866 Khudjand fell to the Russian armies of General Roma

ibid., and the town was then used as a base for the final

von B. 'All b. 'Irak fowl. In his fi 'l-mayl wa-ard al-balad (ed. L. Cheikho, in Macurix, xi (1902), 59-60). Al-Biruni gave a detailed analysis of this in his Tahdîd, and set down on the plan of the meridian; it was surrounded by walls and covered over by a roof, part of which was vaulted (tâkî) and with an aperture 3 spans (eqûr) in diameter (al-Biruni: one span) coinciding with the centre of the sextant. With this instrument it was possible to take the height of the sun; the sun's light threw a circle on to the sextant and, in order to determine the centre, al-Khudiand asserted that the sextant was his own invention, and he boasted that, by using it, he could make calculations down to the very second. Similar instruments seem to have been employed in the observatories of Maraghah (founded before 660/1261-2) and at Samarkand (built in 823/1420). With this suds al-jahiri, al-Khudiand observed the meridian height of the sun at the summer and winter solstices of the year 384/994; the procedure involved consisted in making observations on two consecutive days at the time of the solstice and in determining, by interpolation, the exact moment of the passing of the sun into the solstice. He was able to do this in the month of June, but clouds prevented him from repeating the procedure in December, so that the exactness of the whole operation was somewhat affected. His observations were made in the presence of a group of leading scholars who drew up a report. The result was: \( \varepsilon = 23^\circ 34'16" \) (21° according to al-Biruni in al-Kândîn al-Mas'âdi, Hyderabad 1544, i, 364), a value which, compared to those worked out by the Indian astronomers (24°) and Tolomey (23° 51') justified al-Khudiand's belief in a progressive reduction in the obliquity of the ecliptic. Al-Biruni, who believed that \( \varepsilon \) was a constant (Tahdîd, 107-8, 115; Kândîn, ii, 364) emphasizes that al-Khudiand told him verbally that the aperture of the vault by which the sun's rays came in had been displaced downwards by a span before the observations regarding the winter solstice were made, so that it did not coincide exactly with the sextant's centre. This fact may explain the decrease in the value of \( \varepsilon \) in relation to other determinations made roughly around the same time.

Al-Khudiand made other observations; he fixed the latitude of Rayy at 33° 34' 30" (al-Biruni, Tabâdîd, 86-7, 99, 238; Kândîn, ii, 612), and he asserted that he had observed the planets for Faqâr al-Dawla by described a universal instrument (al-âla al-Âmmâ or al-Âmmâ) to be used in place of the astrolabe or quadrant. He constructed an armillary sphere and other astronomical instruments, and must have worked on theoretical questions concerning the laying out of the plan of an astrolabe, since Abu Nasr Mansûr gives two methods of al-Khudiand's for determining the position of the circles of the alidade on the astrolabe by the intersection of the equator and the muhâsârdâr (Risâla fi 'l-mayl wa-ard al-balad fi 'lam al-kâmâr, in Rossâbi's al-Birûnî, Hyderabad 1943, 3-9). His most important work in the sphere of astronomical instruments was the sextant called al-suds al-jahri (sc. dedicated to Faqâr al-Dawla) which he made in order to determine the obliquity of the ecliptic. He described this instrument and the observations which he was able to make with it in his Risâla fi 'l-mayl wa-ard al-balad (ed. L. Cheikho, in Macurix, xi (1902), 59-60). Al-Biruni said that al-Khudiand was "unique in his age" (awrâh zumânî) for the construction of astrolabes and other astronomical instruments. Some manuscripts have been preserved of his treatise fi 'lam al-âla al-Âmmâ, in which is des-
al-KHUD.IANDT — KHULM
means of armillary spheres and other instruments
[R.fi 'l-mayl, 62). The final result of this work was
the compiling of al-Zl4i al faMpl. An incomplete copy
in Persian of a rfjjj, preserved in the Majlis Library
in Tehran (ms. 181) may be based on al-Kbudjandl's
observations; the period of the tables of average
movements is 600 of the Yazdagirdl era. sc. about
two centuries after al-Khudiandl's death (see K. S.
Kennedy, A survey of Islamic astronomical tables, in
60).

KHULM — KHULT

KHULT, the classical form of the name of a tribe of north western Morocco pronounced Khloj (but often Kholo). The Kholt came into North Africa with the invasions of the Banu Hilal in the 10th/11th century, and formed part of the "mixed" Arab people known as the Djuhan; according to Ibn Khaldun and other historians, the Kholt allegedly belonged to the Banu 'l-Mundafiy. The Djuhan spread throughout the central Maghrib, settled there and took part in all the wars which desolated Barbary. After the Almohad conquest, they vainly tried to rebel, and not long afterwards, the Banu Ghâniya (see ni'âma) had little trouble in engaging them as their auxiliaries after the capture of Bougie (see ni'âma). The Almohad caliph al-Manṣūr, once victorious over his enemies, punished their allies and accordingly transported to the oceanic shores of Morocco the Djuhan and Riŷâb Arabs. The latter were established in the Hibt and the Gharb, and the first group in the Tamesnî (Shawiya), depopulated since the extermination of the Bergawûta (g.v.) by the Almoravids.

Under al-Manṣūr's successors, the intrigues of the Almohad shaykh found excellent support in the two component groups of the Djuhan, the Kholt and the Susîyan, whose jealousies yet further aggravated the internece conflicts. In 621/1224 the Kholt espoused the cause of the pretender al-Mâ'mûn against the caliph al-'Adîl, who was supported by the Susîyan. In 625/1228, al-Nâmrûn was proclaimed caliph; in 635/1237 his son al-Rashîd succeeded him, but because of their misdeeds and violence, he was obliged to take strong measures against the Kholt chiefs, who then rebelled and took the side of the pretender Yâlî b. al-Nâsr. The Susîyan, now reconciled with al-Rashîd, attacked the Kholt on the banks of the Umm al-Rabî' and a frightful carnage ensued. The Kholt sought vengeance by proclaiming as caliph the Andalusian pretender Ibn Hud, but al-Rashîd pursued them, drove them back, and captured and then executed their chiefs (635/1237-8). Much weakened and browbeaten into obedience, they took part in the caliphs' expeditions, but their rivalry with the Susîyan was in no way extinguished and proved fatal to the Almohads. In 649/1250, at the siege of Tameshûk against the Zayînîd pretender Yaghmorasen, this rivalry brought about the caliph al-Sa'dî's death and the Almohads' defeat.

The Moroccan sultan Abd al-Rahîm treated the Kholt harshly for their violence (707/1308), but he took advantage of their resistance in order to destroy the power of the Riŷâb. They were then settled on the former's lands, in the Azghûr and the Hîbt, and formed part of the makhzan (g.v.) of the Moroccan sultans, made marriage alliances with these rulers and provided for them provincial governors, ambassadors and advisers. They subsequently passed into the service of the Banu Waṭûs and gave no support to the Sa'îdids, who at first held them at arm's length despite the importance of the tribe which, according to Leo Africanus, could put 12,000 cavalry and 50,000 infantry into the field. However, the Kholt's important part in the Moroccan victory of Wâdî al-Maghâzî against the Portuguese gave them entry in part at least to the makhzan of the Sa'îdids. At the time of the Marînids' decadence, the marabout Karîm al-'Ayyîdî (g.v.), who sought to compel them to march against the Christians of Lurâiche, was unable to bring them to obedience and was assassinated by them (1048/1638-9). Under the 'Alâwîs, the Kholt took the side of the petty principalties of northern Morocco who had made themselves la-

political position and the splits among
the Khāṭīb in their article *Trouous arabes de la ville
de Lébanois*, in AM, iv-vi (1905-7). (A. Cour)

KHUMARAWAYH b. ABD-r. TULAYN, second Tūlūnid ruler of Egypt and Syria. He was born in Sāmarrāʿ in 250/864 and, after the abortive rebellion of his brother 'Abbās [q.v. in Suppl.] against Ahmad b. Tulān [q.v.], was designated heir-apparent as early as 259/872. In an unprecedented act in the history of Muslim Egypt, the popular Khumarawayh came to power upon the death of his father on 10 Dhu-l-Ka‘da 270/10 May 884 without the caliph's sanction, but with the general approval of the military and civil authorities of the Tūlūnid régime.

His brother 'Abbās was forced to pay homage to his rule, and was assassinated under obscure circumstances only a few days after Khumarawayh's accession. Khumarawayh reigned for twelve years; on 28 Dhu-l-Ka‘da 281/18 January 896 he was killed, a victim to a palace cabal, by one of his own slaves.

Khumarawayh inherited both a stable and wealthy polity from his father—the treasury is said to have contained ten million dinārs, thanks to Ibn Tulūn's far-sighted internal and external economic policy—and also an unresolved struggle with the court of Baghdād. Since he had come to power only through his father's death, despite the affluence of his polity, the caliph regarded him as an exsurger. Immediately upon receiving the news of Ibn Tulūn's death, al-Muwaffāk, the ruler of the eastern half of the 'Abbāsid empire and strong man in the Baghdad court, broke off the negotiations which had led to the de facto recognition of Ibn Tulūn as governor of Egypt and Syria. One of Ibn Tulūn's foremost generals, Abūd b. Mūhammad al-Wāṣīṭ, then changed sides and urged al-Muwaffāk to attack Khumarawayh and reconquer Egypt, exploiting Khumarawayh's lack of political and military experience (al-Kindi, 234, ii, 4-5). Two generals of the caliph with al-Muwaffāk's sanction now invaded Tūlūnid Syria: Isḥāq b. Kandājī, the governor of Mosul whom al-Muwaffāk had appointed 'legal' governor of Egypt and Syria in 259/864-5, and Mūhammad b. Dīwād Abī l-Sa’dī of Anbār. The defection of the 'Abbāsid governor of Damascus and finally the appearance of Ahmad b. al-Muwaffāk [the future caliph al-Muḥāsin] led an 'Irākī army challenged Khumarawayh's control over Syria even further. In Shawwāl 271/February-March 885 (Grabar, 68) Ahmad's troops met the Egyptians under Khumarawayh's command in the tragic-comic Battle of the Mills (al-Tashābūn) in southern Palestine. Both Ahmad and Khumarawayh ignominiously fled from the battlefield; the military decision in Khumarawayh's favour was confirmed and confirmed Bìnhūnī Tūlūnid general Ṣa’īd al-Aṣyār. After his victory he went to Damascus and rebelled, though unsuccessfully, against the humiliated Khumarawayh. Khumarawayh's long-term strategy of achieving a rapprochement with the 'Abbāsid court is reflected in the exceptional eloquence with which he treated his 'Irākī prisoners of war. In the following years his realm was considerably extended. He beat decisively,

though with inferior forces, Ibn Kundajā, who submitted to him and brought areas as far east as Harrān (Grabar, 75) under Khumarawayh's control. The Duṣṭra became part of the Tūlūnid lands when its governor Ibn Abī l-Sa’dī sought Khumarawayh's protection. On Khumarawayh's own initiative, Yazdān of Tārūk finally accepted Tūlūnid sovereignty over Gilea.

In Rajab 273/December 886 al-Muwaffāk and Khumarawayh eventually came to terms. Khumarawayh discontinued the public slandering of al-Muwaffāk in the sermons of Egypt and formally acknowledged 'Abbāsid sovereignty. In return he was granted the de jure governorship of both Egypt and the lands of Syria (al-Sham) for thirty years for himself and his progeny (ubūdī). Thus not only his own succession, but also the dignity of his family, were recognised by the caliph. The time limit imposed, however, clearly shows that the caliph regarded the Tūlūnid rule over Egypt and Syria to be temporary and revocable, unlike the privileges granted to the Abbasids [q.v.] of Ifīrātka. In return for Khumarawayh's recognition of the Abbasid sovereignty, Khumarawayh and al-Muwaffāk are not recorded in the sources. Syria soon became an integral part of the Tūlūnid domains; in the provincial capitals of the Sha'mat, Ramīs/Fusfūs, Ḥims, Ḥalab and Akāntū, new mints were set up.

In Rajab 274/Optober 892 al-Mu‘taḍid, the son of al-Muwaffāk, succeeded al-Mu‘taṣib as caliph. In a new treaty he readily confirmed these arrangements with Khumarawayh. The annual tribute to be paid by Khumarawayh as vassal to al-Mu‘taṣid was fixed at a rate of presumably 300,000 dinārs, supplemented by 200,000 dinārs to be paid for each preceding year of his rule. These figures are vague and inconsistent on these crucial figures. Khumarawayh lost the territories east of the Euphrates, Mawṣili, Diyar Ḍafūr of Dirās, where coins had been struck on his behalf before 279/892. The important and prestigious ḥadīs-manufactures of Fusfūs and Alexandria remained under the control of the caliph. Tūlūnid coins bore his name with Khumarawayh's name.

Khumarawayh's limited autonomy made him susceptible to honours bestowed upon him by the caliph, the most exalted and highest sovereign of the Muslim community. In 279/892, through the mediation of his closest adviser, al-Rusayn Ibn al-Dhāqān al-Dawbar, he arranged for one of the great political marriages of mediæval Islamic history. He offered his daughter Kātir al-Nadā to the caliph al-Mu‘taṣid's son 'Ali, but the caliph took her as a bride for himself. It remains unclear whether or not this marriage, which entailed an exorbitant dowry of one million dinārs, was a calculated device on the part of the caliph to wreck the marriages of his dangerously wealthy and powerful vassal. The splendid mints of Kātir al-Nadā lived on in the memory of the Egyptians well into the Ottoman period, as is recorded in the chronicles and the folk-literature.

Khumarawayh's frivolity and generosity are well attested in the sources. He had sumptuous palaces and gardens built for himself and his favourites. To his contemporaries, his awesome blue-eyed palace lion epitomised his prodigality. He was said to ride no horse more than once. Becker (Beiträge, i, 191) connects his addiction to luxury and debauchery with his status as heir to the capable and successful founder of a dynasty. "Rule was something self-evident to him, something given. He liked to exercise it, but shied from the burdens which were indispensable for
When Khumārawayh was murdered in 282/896, the treasury was empty. All the wealth Ibn Tūlūn had amassed had been squandered within a few years. In Khumārawayh's rule the dinār's worth sank to one third of its former value (Hassan, 245). Under Khumārawayh's sons Dżyayh and Hanīca who succeeded him in rapid sequence, the political and financial demise of the Tūlūnids state was still further accelerated. In 292/905 Abdālīs troops sacked Ibn Tūlūn's new city of al-Ḳaṣīd and brought back for thirty years direct Abdālīs rule to Egypt.

Khumārawayh's military prowess was notable. After the disaster of al-Jawāfīn he showed strategic skills that personified his control of the country. 'Allī b. Ahmad al-Mākhāriṣī and under the Ikhshīldīds, directed the finances of Egypt and Syria. Significantly enough, there seem to stand in rapid sequence, the political and financial precarious finances of the state.

Possibly under Abdālīs influence (al-Muṭaqādīdīs) had his own elite body of military slaves, al-mukāthra. Khumārawayh established a corps d'élite, al-muṣlahi, consisting mainly of native Egyptian freedmen of the Eastern delta, on whom he bestowed various privileges. By converting these tribesmen into a loyal and efficient bodyguard he reassured control and brought back peace to this strategic region between the centres of Egypt and Syria. Significantly enough, there seem to have been no Turks among Khumārawayh's mukāthāra soldiers; he seems rather to have used them to offset the predominant influence of his own Turkish entourage. One thousand Negroes formed a less highly privileged special contingent within the mukāthāra.

Already under Khumārawayh, the civil administration of Egypt passed gradually into the hands of the Māṭar family who later, during the Abdālīs intermezzo and under the Ikhshīldīs, directed the finances of the country. 'Allī b. Ahmad al-Mākhāriṣī began his illustrious career by bringing under his control the bard, the intelligence and communications service. Khumārawayh's relations with the religious establishment of Egypt were strained; his libertinism and frivolity made him the target of harsh attacks both in contemporary and later historiography.

Khumārawayh's prodigious rule encouraged a rich life. Few traces of his splendid architectural and cultural monuments and the minor arts are preserved. His patronage of scholarship and poetry is well known; the grammarian Muhammad b. 'Abd Allāh b. Muhammad b. Mūsā (d. 295/907) was his protege and the teacher of his son, Yabhīl b. Mākhāriṣī (d. 317/928) wrote encomia to celebrate Khumārawayh's triumphs on the battlefield.

(Ü. Haarmann)

**Khumāry** (pronounced locally Khmir, in French Kroumir), an element of the population which has given its name to a mountainous massif extending along the north-west littoral of Tunisia. The Djebel Khmir, or Kroumir, forms part of the administrative district of Djenoub, which covers an area of 3,000 square km. and has a population of 40,000 of whom 283,000 are peasants (census of May 1966). The massif of the Khumāry, a Tunisian extension of the Atlas range, consists of a series of contrasting sandstone features running along a south-west-north-east axis. The two extremities of the massif, separated by the cultivated limestone depression of Ghazawān, present palpable differences in spite of the overall unity. The western Kroumir has its highest point at Djebel Ghcura in an altitude of 1,201 m., at Djebel Elj which dominates Ain Draham. Everywhere the contrasting forms of rockstrata, deeply furrowed and dissected, in their symphony give a dreary aspect to a landscape covered by a forest 170 hectares in area. Of the trees 70% are cork-oak, 20% are zear oak, and 10% other species, including the wild olive. Often the undergrowth consists of fern. Other species have recently been introduced, notably the parasol pine (Asiu). The level of rainfall in Kroumir is the highest in Tunisia, with an average of 1 m. per year and a maximum of 1,575 m. at Ain Draham. In spite of the abundant rain and relatively plentiful falls of snow, the massif suffers from shortage of water. Springs are certainly numerous, but they are dispersed over a wide area and their output is feeble. Some springs even dry up in summer.

In ancient times, the massif of the Khumāry did not escape penetration by the Romans. Three routes crossed it: in the longitudinal axis, the road from Carthage to Hippo Regius (Bône, now called Annaba) via Hippo Diarrhytus (Béja), in the transverse axis the road from Simittu (Cherotou) to Thabraca (Tabarka), of which numerous traces have been discovered, and the road from Vaga (Béja) leading to the same destination via Trisipa. Thabraca, originally a Carthaginian market-town, and from the 4th century one of the richest dioceses in Africa, was the centre for the export to Rome of the products of the massif, timber for building and wild animals, as well as oil, wheat and minerals. "A city of luxury, where there has its place alongside commerce" (P. Gaukler, Mosaiques, 358). Thabraca has given its very fine mosaics.

It is curious that throughout the medieval period, the massif of the Khumāry has gone unnoticed by the historian. The silence of our sources is complete. It is only in modern times, and in contemporary times in particular, that it has begun to play a historical role, appearing at the same time as a place of refuge and of resistance, escaping almost completely the power of the Tunisian authorities.

The Khumāry had cordial and profitable relations with the colony of Genoese fishermen established since 947/1540 on a rocky island of 40 hectares in area separated from Tabarka by a channel 500 metres wide. They were acutely affected when this islands was unexpectedly attacked and forcibly recovered by
are the Awlad ‘Umar, the Hwamdiyya, the Awladments. The most importaut in the eastern Kroumirie ancestor. According to another tradition, the Khu original lived in the south of Tunisia and mayr originally lived in the south of Tunisia and were ruled by the Shibbiyya of al-Kayrawin. In the 12th century, according to al-Istati, it was nothing more than “an unhealthy village” (barya wadli), infested by scorpions, its only claims to importance being the movement of ships between it and Muslim Spain and its status as a customs station (op. cit., 79). In the 12th century al-Bakri noted that impressive ruins of ancient monuments were still to be seen at Tabarka, and that the place enjoyed a certain prosperity on account of the activity of its port. In the 13th century, according to al-Idrisi, it was nothing more than a fort (nasir), thinly populated and surrounded by gangs of Arab bandits, men with respect for neither law nor religion. Finally, at the start of the 15th century (Leo Africanus, Description de l'Afrique, 55) it was nothing more than “an abandoned port”.

Today, Tabarka (population 4,000), is a port of modest size whose primary function is the export of cork from the massif of Kroumirie, 3-4,000 tons per year. There is also fishing and the limited exploitation of coral, and the town has profited, albeit on a relatively minor scale by comparison with other regions, from the growth of tourism in Tunisia. The most important settlement on the massif is Ain Draham, at an altitude of 800 m., a summer resort and a centre for boar-hunting; Fernana, at 275 m., is principally a market-centre; Babouche is little more than a frontier-station controlling the border-crossing into Algeria; at Oued El-Lil, near the hamlet of Ben Mitr, there was constructed in 1955 a dam with a capacity
of 73 million cubic m. to produce Hydro-electric power and to provide Tunis with water. Another dam, at Oued El-Kebir, is in the process of construction. In spite of efforts at re-organisation, settlements continue in the main to be scattered, according to the location of wells and agricultural small-holdings. Hujs and shackls built of branches have not yet disappeared.

In fact, the massif of the Kroumirie, dependant on a silvo-pastoral economy, is impoverished. The standard of living of the inhabitants is the lowest in Tunisia. The most important source of income is the extraction of cork. The cultivation of tobacco is also moderately profitable. The breeding of cattle, sheep and goats, in which the methods used have not evolved at all in the course of time, provides only a mediocre income. Attempts at improving the cultivation of trees, by introducing apple, pear, and cherry-trees to the area, have yielded only very limited results. Products of local craftsmanship—Kroumirie carpets in white, black and beige; wooden kitchen-utensils; embroidery—are not much in demand outside the region and provide employment for a very small number. Finally, let it be added that the limited results. Products of local craltsmanship—Kroumirie carpets in white, black and beige; wooden kitchen-utensils; embroidery—are not much in demand outside the region and provide employment for a very small number.

**KHUMBARADJIL**

bombardeur, grenadier (From Latin bombis—"explosive projectile, grenade, mortar bomb", etc.), a term used in the Ottoman military organisation. The bombardiers in the Janissary corps and the Khumbaradjil unit in the Lifedjil corps are thought to have been first introduced in the 17th/18th century. The Khumbaradjils were of two types, the ulufes, who were paid, and the limar holders, who formed the majority of them and served in the fortresses. The Khumbaradjils were neglected until the beginning of the 18th/19th century. Khumbaradjil Ahmed Paşa [see Ahmed Paşa BONNEVAL] was appointed by Muhâmad I in 1144/1731 to reorganise the Khumbaradjil corps; under his reorganisation, 301 soldiers from Bosnia were registered as paid ulufes, and thus a separate corps of bombardiers was formed. Each 100 soldiers were to go to the location of each oda was to have a captain (ülefe), a cebilbas, and 10 corporals (onbasıa)(Ta'rikh-i Sâmi-Şâh-ı Sâbî, Istanbul 1598, 58-9 b.). In the Ayaza palace at Uskûdar, there were constructed a barracks and a factory for the Khumbaradjil corps, and later, their numbers increased to 600, half of whom were ulufes and the other half limar holders (for the activities of Khumbaradjil Ahmed Paşa, see also Başkanfanik Aşik ve Memleketin Müüridi, Cevdet tasnifî, Askeri Kûsim, no. 45137; for the number of Khumbaradjîl on the strength at 8 Ramaçan 1129/December 1739, see Cevdet tasnifî-Askeri Kûsim, no. 37485). The Khumbaradjil corps, which expanded until 1106/1747, was neglected thereafter, but in 1197/1783, during the reign of 'Abd al-Hamîd I, Ibrahim attempted to improve it again (Dieudret, Ta'rikh' Istanbul 1309, iii, 35; Cevdet tasnifî-Askeri Kûsim, no. 37485). The Khumbaradjil corps, which was included in the plan of reform. According to the decree of 1206/1792, the Khumbaradjil corps, whether paid or limar holders, were to be concentrated on Istanbul and the names of those absent were struck from the pay rolls. Also, there were to be 10 Khumbaradil soldiers and five assistants (müdrim) for each Khumbaradjil, so that the whole corps would comprise 300 Khumbaradjil soldiers and 150 assistants. Out of every to soldiers, one was to be considered as the khalif, and the other nine as his aides (yanmâs); out of every five Khambaradjil one was to be an officer with the title of ser-xhalif, and the most notable among the officers was to be edîk xalîфи, another xalîfi, and another 'ali-mdar or standard-bearer; beside the chief bombardier (Khumbaradjil-xhalif), who was responsible for the soldiers' discipline, there was to be appointed a superintendent (nâzîf) from among the state officials (Enver Ziya Karal, Selim III'nin half-i kûmâyûnâr Nizâm-i cediti (1789-1807), Ankara 1946, 45-6; for the text of the regulation relating to the bombardiers' corps, see Dieudret, Ta'rikh' Istanbul 1309, 356-8). The barracks for their training were built at Hasköy on the Golden Horn shores in Istanbul. A more detailed ordinance for the Khumbaradjil was prepared and put into effect in 1211/1797 (Cevdet tasnifî, Askeri Kûsim, no. 4088). In the move-
ment to dethrone Selim III, the Khumbaradji sided with the rebels, but when the Janissary corps was abolished in 1724/1836 during the reign of Mahmud II, they supported the government action (Djewdet, op. cit., xii, 157; Esad, Üss-i şofr, Istanbul 1293, passim). When a new army was established under the title of the Asakari Mawsera, the Khumbaradji corps was reorganised and retained within it (Lütüf, Ta'rikb, Istanbul 1290, i, 159), but was included in the artillery division and was to be headed by the Topluu-bashi (later by the Topkâbruarya Han adilâr). There was one Khunbarid regiment (nafia) with two battalions (laburs) in existence in 1248/1832 (Bahkakanlı Arif Çenk Müdürüsü, Kâmil Recep, Topog. Hist. de la Syria antique et méditerranée, Paris 1927, 261, 273; C. Cahen, La Syrie du Nord, 293; M. Cuard, H'annâdines, 219-20. [Ed.])

KHNÂTHA BINT BAKKER B. 'ALI B. 'ABD ALLAH AL-MAGHRIBI, wife of Mawlâ Yûsiîl, sultan of Morocco (1085-1139/1672-1727). She was highly versed in literature and the religious sciences and acted as an adviser to her royal spouse. In 1143/1734, during the reign of her sons Mawlâ 'Abd Allah, she performed the Pilgrimage; and at Mecca, she bought buildings and established them as umâbi, in particular, a house in the Bâb al-'Urmâ, one of the gates of the Holy House, which she placed at the disposal of students. The memory of her sumptuous pilgrimage was commemorated by the 'Abû 'Abd Allah Muhammed b. 'Ali al-Husayn al-Shâfi'î al-Tabari, imâm of the Makâm Ibrâhîm, in a splendid poem. She died at Fâs in Djumâda I 1159/May-June 1745 and was buried in the mausoleum of the Shorfa in Fâs al-Djâidî.

Her writings include a letter addressed to the people to calm their fears over the neighbouring Turks, and a commentary on the Isâba of Ibn Hâdîj al-'Ashkalâni.

KHNÀDÏ, FADL ALLAH B. RâBÎHÂN (860-927/1455-1521), Persian religious scholar and political writer, who as a staunch Sunnî fiercely opposed Shâh Isâmîl, left Iran and fled to Uzbek Transoxania.

Khnàdî's background, both on the side of his father (of the famous Râbîhân family, cf. Râbîhân al-Bâkî) and of his mother (of the Shâfi'î family), made him a member of the wealthy and influential 'ulamâ' of Fâs who were important as sayyâğhâddârîn and who enjoyed the high esteem and the protection of the Al-Kayyumi rulers. Khnàdî received an exceptional scholarly training; in his native Shâhîr he studied under the grand shaykh Dârâ Dâwândî (a.v.), the author of the Ašhâbî al-Djâidî. Dâwândî's preoccupation with political thought is likely to have influenced Khnàdî's own interest in a practical application of the norms of the shari'a in a post-Mongol, Sunni state, as his sophisticated manual of government, Sultan al-mulâkâ—which he wrote shortly before his death on the suggestion of the Uzbek ruler 'Ubâyîd Allah Kâhan in Bukhârâ—attests. He was introduced to Shâîrîn by Dâmîl al-Dîn al-Ardîstânî, a follower of the Safawîyûlîyya torikâ. With him he travelled to Egypt and Palestine and he devoted a masâkhî biography to him which has not, however, come down to us. Khnàdî himself joined the Dâsh-rîyûs order, an offshoot of the Nâshabîyûs, possibly only after he had left Aqharbayjân and Iran and had settled at the Uzbek court. Khnàdî represents the typical intellectual Şî'î of his time, for whom 'asâwîfî is an indispensable item in the academic curriculum. He wrote a commentary on the Wâsîyat-nâme of 'Abd al-Kâhîk al-Ghûjûlîwînî (a.v.), one of the great precursors of the Central Asian Nâshabîyûs. Khnàdî enlivened Khâlîjî Baba' al-Dîn Nâshabî and extensively quoted his doctrines; he sought and cherished the friendship of the disciples of the famous Nâshabî popular leader
Kashf futation of Ibo al-Mutahhar al-Rilll's treatise critical of his students and compeers, included in his practices of the nomadic Uzbeks, such as the institutionalised pilgrimage to the tombs of local saints; however, he does not seem to have been very successful with these admonitions.

It was from the well-known Mamlik historiographer and polyhistorian al-Sakhawî (d. 1322) that Khundîl owed his initiation into the sciences of hadîth, i.e. the discipline for which he acquired particular fame in his century. In Uzbek Central Asia, he became known as the "paragon of the traditionalists" (sanad al-mahdathâdîn). He studied law, theology, the Arabic sciences and hadîth with al-Sakhawî in Medina; his proficiency is attested by the very complimentary tardjama which al-Sakhawî, who was normally very critical of his students and compatriots, included in his biographical dictionary of 13th-century celebrity.

Among Khundîl's writings on tradition, one might mention an Arabic risâla on the big fire in Medina in 886/1478, Hadîyat al-laṣâbû ilâ kibyât al-ābâr (ed. Muhammad Dânîzân, in Yâdnama-yi Írân-yi Minârsîn, Tehran 1969, 77-123), which is a methodically exemplary study based on hadîth.

Khundîl began his public career at the court of the Ak Koyunlu Ya'qûb b. Úzun, Hasan, whose father he had attracted in 914/1507 with a copy of his book—possibly penceyistical—work Badî' al-samâ'î li kiswâ Hayy b. Yabdîn. Al-sayr, the carefully-composed Tarîkh-i âlam-darâ-yi aminî (partial translation by V. Mîncsîrî, Forsa in A.D. 1478-1489—An abridged translation of Fodlûlâh b. Rûshdîn Khundîl's Tawîhî Târîhî âlamârâyî-yi Aminî, London 1957; full edition under preparation by John Woods, Chicago). In this work, which is the most important single narrative source on the history of the later Ak Koyunlu rulers, Khundîl presents himself as an active courtier, who probably participated in the cabal to overthrow Ya'qûb's first minister Hâfa of Skiva who had tried to re-Islamise the fiscal system of the state, thus endangering the sayyâgid of Khundîl's affluent âlamârâyî relatives. The most significant passages of this chronicle are his diatribes against Ismâ'îl's grandfather and father, Shaykh Djinayd and Haydar (q.e.), whose self-styled religious authority he reviled in vitriolic language.

After Ismâ'îl's accession to power in 907/1501, he fled in 909/1503 to Kshânâh, where he wrote his rebuttal of Ibn al-Muhammad al-Hillî's treatise Kaškh al-ḥâšî wa-nahjî ilâ-yîd wa-lşâirâ, entitled Ilîâh nahjî al-ḥâšî wa-damal khâfî ilâ-yîd (partial edn. and German tr. by I. Golder, Beiträge zur Literaturgeschichte der Šī`a und der sunnitischen Polemik, in SBWAW, lxviii (1873), 475-86). There he questions the originality and consistency of Ismâ'îl's fuhâf and rash al-fuğâf and disqualifies Šī`î dogmatics as a bad reproduction of Muṣâaffir (that is, in itself reprehensible) kalâm. A hundred years later, the Shi`î Kshân Nâzîr Allâh Shuqûstâr (d. 1016/160, a victim of Dja`hângîr's anti-Shi`î religious policy, again wrote a reparation of Khundîl's treatise. Khundîl's book has had a lasting influence on Shi`î-Sunni polemics in the Arab lands, even in the 20th century. Khundîl, who himself held the ahl al-bayt in high esteem and wrote poems in praise of the twelve imams (see the text in Muhammad Amin Khundîl, Fadl Allâh b. Rûshdîn Khundîl, in Farhang-i Jâm-e-śamîm, iv (1335/1956), 378-9) and, on the occasion of a pilgrimage to Mashhad in the company of Shaykhâbîn Khán (d. 1307), the eight İmâm Allî Ridâ (see Khundîl, Miḥmân-nâma-yi Bûhârâ, ed. Manfûh Sutûdà, Tehran 154/1962, 356-8), accused the İbnî Asahîr theologians of placing more emphasis on the slander and cursing of the Prophet's Companions, and the shaykhyan Abû Bakr and Ūmar in particular, than on the due veneration of the immaculate family.

On his flight to the east, which also took him to Timûrîd and later Uzbek Herât, Khundîl passed through Īrân, where he was inspired, as he describes in a touchingly impressionistic and intimate account, by the decaying ruins of al-Ghazâlî's tomb in the solitude of the steppe (Miḥmân-nâma 355). Al-Ghazâlî was Khundîl's revered model whom he quotes extensively. On this occasion Khundîl splendidly that he would make an effort to emulate the great master and bring to the land of Khurasân, in this age of great calamity, a revival of the orthodox religious sciences. He came to Bûhârâ, to the court of Shaybânî Khán, the successful Uzbek ruler, who had ended Timûrîd rule in Transoxania and Herât and had conquered most of western Khurasân. He gained access to and was to dominate the scholarly madaghîs in which the Khán, himself a cultured man, had scholars discussing questions on religion, particularly on the compatibility of certain policies with the Šī`î, e.g. the issue whether it was permissible for the Muslim Uzbeks to eat the meat of animals slaughtered by their semi-pagan Kazakh enemies. Khundîl compiled at the court before 916/1510, perhaps on suggestion of the ruler himself, the unique "guest-book of Bûhârâ" (Miḥmân-nâma-yi Bûhârâ, see above; partial German tr. by Ursula Ott, Transoxanien und Turkestân in Beginn des 16. Jahrhunderts—Das Miḥmân-nâma-yi Bûhârâ des Fodlûlâh b. Rûshdîn Khundîl—Übersetzung und Kommentar, Freiburg 1973) as a token of gratitude to his host and friend Shaybânî Khán. This work defies any formal classification. Its beautiful language and style evidences his literary talent. We find here, in a loose, more or less chronological sequel, passages on tradition, refreshingly natural descriptions of the scenery of Turkestän in spring and winter, surprisingly personal and autobiographical sketches (Khundîl tells us, unashamedly much about himself, e.g. his fits of hypochondria), and straightforward narrative passages. In the latter he e.g. gives an account of the manners of the Kazaks, the cousins and at the same time the most dangerous enemies of the Uzbeks to their north. He devotes special attention to Shaybânî Khán and to his nephew Ubayd Allâh Khán, who much later was to lead the Uzbek federation back to political power.

The impelling idea of the Miḥmân-nâma was the effort to drive Shaybânî Khán into attacking and exterminating the Šī`î heresy from Iran and reviving the legal order of the sunna in Iranian homeland. He unsuccessfully opposed the scheme of defeating the Kazaks in the rear of the Uzbeks first, before marching against the Safavids, whose deeds Khundîl denounced—in a familiar topos—as even more abominable
noble than the unbelievers of the Franks, who were 

hujza at origin. He expatiates on the apocalyptic hadith of Harb, both in the Mihrān-nāma (93/107) and in a separate visīa: Harb, the prototype of Shāybaṁ Kān, saved the true doctrine of Islam from a heretic tribe which slandered and vitified the companions of the prophet and the four orthodox caliphs, an unconcealed allusion to Shāh Ismā'īl, the foe, and his damnable creatures, the Khwājah [q.v.]. Khundji's concept of history is remarkable. He regards the Usbecks as another manifestation of the nomadic migrations from Inner Asia to the Muslim East, destined to overwhelm Iran and Tūrkistan and to bring back justice to these lands, just as the Saljūqs had done. He praises the legendary past of the Usbecks and predicts a glorious future for them. He elevates Shāybaṁ Kān, beyond the bounds of conventional encomium, to appear as a mujaddid of his age.

The catastrophe of Marv in 916/1510, when Shāybaṁ Kān was slain in battle by the Safavid army, shattered Khundji's dreams. His advice had proved fatal for his protector and sovereign. Taking into account the vulnerable personality of the author, which shines through so often in the autobiographical passages of the Mihrān-nāma, this turn of events must have had disastrous effects on Khundji. He passed the following two years in hiding in Samarqand which had returned to the rule of the Timurid Bābur, Ismā'īl's half-hearted ally. In 918/1512 Khundji suddenly re-appears delivering an eloquent sermon in Samarqand (cf. Zayn al-Din Mahmod Wasti, Badr al-nāma, ed. A. N. Boldyrev, Moscow 1961, 1-45 f.), which had been recaptured by the Usbecks under Ubayd Allāh Kān.

Fulfilling a vow made at the tomb of Shāybaṁ Abūlm Yasafl in the hour of greatest affliction, Ubayd Allāh commissioned Khundji to compile, as a guide for a righteous Sunni ruler, the Sulūk al-muluk (ed. Muhammad Nāẓamuddin, Hyderabad/Dn. 1386/1966). In form this didactic work displays features of the Mirror for Princes books; in its topics and in the treatment of the legal norms, with numerous quotations from the canonical textbooks, with highly realistic and sober opinions on the present state of affairs. This can be observed in his treatment of taxation; he appears to equate certain aspects of the canonical salvation duties with the prevailing Mongol jangār imposts. Even more significant is his chapter on the ḥizzat. He took his lesson from the catastrophe of Marv. No longer does he call for ḥizzat against the Safawids at all costs, lest the blood of innocent subjects of Ismā'īl be shed. He even concedes (and thereby joins the mainstream of traditional Sunni polemics) that the Twelve Shi'ite doctrine does allow for the observance of the precepts of the shari'a, such as legal marriage contracts, the call to prayer etc. We do not know to what degree Khundji's enlightened doctrines were taken up by Ubayd Allāh, an energetic and pious ruler, who despite the bitter polemics on both sides, kept religious issues largely out of his long controversy with the Safawids over the possession of Khorasan. His fame lived on at least in Central Asia; the increasing isolation of Transoxiana from the Sunni central lands probably accounts for the little influence which his writings—particularly the Sulūk al-muluk, which was explicitly directed to a broad audience of Sunni rulers—exercised outside the Usbek domains. An effect on political thought in Mughal India is more likely, yet remains to be investigated.

KHUNDZAL (self designation, Khunzami; Russian designation, Khunzal, Gun(za)ll, Gunzebi, Gunzeala, Gunzebl, Gunzei, Janak; other designations, Khunzez, Gunzez, Gunzeb), a numerically small people of the eastern Caucasus. The Khuza in forms with Bezheta, Dido, Gunzal, and Khurgali [q.v.], the Dido division of the Avan-andi-Dido group, of the north-eastern Iranian-Caucasian languages.

According to the Soviet census, in 1926 there were, ethnically, 106 Khunzals, and 129 claiming Khuzaal as their mother tongue; in 1933 (estimation by Grande) there were 916 Khunzals. The Khunzals inhabit four raions on the upper course of the Avar River in the Tarkhata district of the Dagestān A.S.S.R. They live in the highest and most inaccessible part of mountainous Dagestān. This isolated position has protected the Khunzals from external influences, and they have maintained to a great degree many of the patriarchal customs. The Khunzals are Sunni Muslims of the Shafi'ite rite. The economy has remained traditional: raising sheep with a transhumance system, agriculture on terraces, and handicrafts (especially leather work). The Khuza is a purely vernacular language, and the Khunzals use Avar as their first literary and second spoken (sometimes first) language, having Avar as the language in primary education. Russia is the second literary language. They are in fact being culturally and linguistically assimilated by the Avars.

KHURĀSĀN, today the north-easternmost usūn of province of Persia, with its administrative capital at Mashhad [q.v.]. But in pre-Islamic and early Islamic times, the term "Khurāsān" frequently had a much wider denotation, covering also parts of what
are now Soviet Central Asia and Afghanistan; early Islamic usage often regarded everywhere east of western Persia, sc. Dzhöb or what was subsequently termed 'Irak 'Adjam, as being included in a vast and ill-defined region of Khurasan, which might even extend to the Indian Valley and Sind. Thus the Armenian geography traditionally attributed to Moses of Khoræn depicts Khurasan as stretching from Cugan and Kurnis in the southeastern Caspian region to Badakhshon and Tukharistan on the upper Oxus and Bamiyan in the Hindm Kush (see J. Marquart, Erânsahr, 47 ff.).

Topographically, Khurasan in the modern, restricted sense is dominated by a zone of mountain ranges running roughly NW-SE, a continuation of the Alburz chain, and connecting that chain with the Paropamisus and Hindû Kush ranges of northern Afghanistan; in a district such as that of the Koh-i-Dinâlîz to the north of Nishâpûr, these mountains rise to 12,000 feet. To the north, open steppes and deserts roll down through the Soviet Turkmenistan SSR to the Caspian Sea and the Amôr-Daryâ basin. To the south, lies an extensive region of landlocked deserts and salt flats, such as the Dağı-kêrav, the Dağı-lêt and the Hînsand basin of Sîkân, but within this region is situated an important upland zone, that of Kânî and Bîrdjeld, the early Islamic province of Kûhenîstân (p. 40), one massif of which, the Koh-i Mûminândâd, rises to 9,100 feet. There is thus considerable topographical diversity, but only in the more northerly mountain zone do adequate rainfall, perennial streams and accessible wells permit a relatively flourishing agricultural and pastoral economy; here, the population is quite dense when permanent political frontiers were established. These areas control, which had subsequently to be re-imposed by the local marshád Mâhyûn and his murder in 3/657. Meanwhile, the Arabs had already appeared in Khurasan. During 'Umar's caliphate, forces from Bâspa penetrated as far as Tabasun in the Great Desert, and a determined attack on the province was made in the following reign of 'Uthmân when 'Abd Allah b. 'Amir b. Kûraya (q.v.) was governor of Bâspa (sc. from 29/649 till 33/653). An expedition eastwards was mounted by the men of Kûfa under Sa'îd b. al-'Ash, travelling along the northern route between the Alburz and the central deserts, and another one by the Basran army under 'Abd Allah b. 'Amîr and his lieutenant al-Abnaf b. Arba'a, approaching via Kûmarân and Tabâsan, a route which was for long used as an easier and safer route than that of the modern highway and railway connecting Tehran and Mashhad. It was the Basran army which made most progress, and in 33/653-2 reduced Nishâpûr to obedience, receiving the submission of local rulers and former Sasanid governors in most of the other towns of Khurasan. In the following year, the last great stronghold of the Sasanids, Marw al-Rûd, fell to al-Abnaf after fierce fighting, but the local marshâd, Bâdham, was confirmed in his office and possessions there in exchange for a relatively light tribute. The permanent pacification of Khurasân was, however, a protracted process. Local potentates frequently rebelled against Arab control and appealed to outside powers like the Hephthalites, the Western Turks or Türgësh, the Sogdians, and even the Chinese Emperors (who claimed a vague sovereignty over Central Asia and the Khorasan region, with whom Persian Sasanid had long continued to maintain relations). In particular, the civil war between 'Alî and Mu'awiyâ meant a relaxation in Khurasan of Arab control, which had subsequently to be re-imposed by 'Abd Allah b. 'Amîr (re-appointed governor of Bâspa and the east by Mu'awiyâ from 42/661 to 44/654)
and his generals. Thus an important and revolutionary movement from its centre at Marw under a political adventurer of considerable skill, Abū Muslim [q.v.]. This movement had been organised, from the caliphate of Hishām onwards, under local leaders or representatives of the 'Abbāsid family in Marw, until Abī Muslim took over the leadership there in 295/700, apparently drawing his prime support from the older-established Arab settlers in the district, those whom Tabari and the anonymous author of the Ta'rikh al-bâula/dîn [q.v.] edit as Geyravich call the Abī al-tālabān (see Shabban, The 'Abbāsid revolution, 155-8). By 320/738 Abū Muslim was undisputed master in Marw and soon in Khorāsān as well.

Since Khorāsān support was so decisive in the rise of the 'Abbāsids, the province enjoyed considerable favour from the early 'Abbāsid Caliphate; especially the encomium of the Khorāsānīs as "our party, our helpers and the people of our da'wa" in a Bayāna oration pronounced at Hāshimiyā by al-Manṣūr and reported by Murūdī, Manṣūrī, vi, 305 H., and the similar sentiments quoted from Ibn Kūtayba in Muhammad, 293-4. Many Khorāsānīs migrated westwards into 'Abbāsid service, such as the Barnak family from Bālīg (see Karamīka); this process was accentuated when al-Ḥānjūm, the former governor in Marw, achieved the caliphate in 198/813 with the support of the Persian east against his brother al-ʿĀmin.

The Tāhirīds [q.v.] governed Khorāsān for the 'Abbāsids, as faithful servants of the caliphs rather than as autonomous rulers, for some fifty years (202-59/821-73). They were of Arab stock, Persia only the theatre of a process which had been secondary to an 'Abbāsid da‘wah or propagandist in Khorāsān, Sulaymān b. Ḥāṭir b. al-Ṭāhirī, Tāhir Dhul-ʿAbdān, one of al-Ḥānjūm's generals, and was in 205/821 appointed governor of Khorāsān and the east. The Tāhirīds were strenuous supporters of Sunni orthodoxy and the established Perso-Islamic social hierarchy against Shi‘ī and other Iranian religious movements in the Caspian provinces and Transoxiana, and also against heterodox currents of Persian soci-religious protest which were rocking the Persian countryside at this time (see G. H. Sadighi, Les mouvements religieux iraniens au IIe et au IIIe siècle de l'hégire, Paris 1938). Under the Tāhirīds, Khorāsān blossomed economically and culturally. We find 'Abī Allah b. Tāhir (213/828-29) showing his concern for his province's welfare by his commissioning a book on water rights and the regulation of kanāts, the characteristic means of irrigation throughout much of Khorāsān; this Kālib al-ʿAnwī was, according to the Ghānawīd historian Gardīzī, still in use two centuries later. Whereas in the early Islamic period Khorāsān had been economically and culturally backward compared with western Persia (cf. E. Herzfeld, Khorāsān: Denkmalegeographische Studien zur Kulturgeschichte des Islam in Iran, in Ist., xi (1931), 187-74), its agricultural prosperity now increased; according to Ya‘qūbī, Būdān, 365, tr. x, 308, the abarad or land tax of Khorāsān under the Tāhirīds amounted to 40 million dirhams a year. It benefited from commercial traffic connecting 'Ṭark and Daghfīl with Central Asia and the fringes of the Indian world, and a luxury product like the edible earth of Nīṣāpūr was, according to Thalālī, Lajūd al-ma‘ṣūrī, 132, tr. Bosworth, 132, exported all over the
Islamic world, including to Egypt and the Maghrib. Above all, Khurasan derived much advantage from the transit trade in Turkish slaves, which were a regular component of the annual tribute forwarded to the caliphs by the early 'Abbāsids governors, the Tāhirids, and later, the Samanids, and which often fetched high prices; Ibn Hawkūl, 2, 452, tr. ii, 437, says that he saw more than once in Khurasan slaves only sold for 3,000 dinars. (Further on the Tāhirids, see Bosworth, ch. 3, The Tāhirids and Saffārids, in Cambridge history of Iran, iv, Cambridge 1975, 90-106)

The Saffārid adventurer from Sistān, Ya'qūb b. Layyih, overthrew Tāhirid rule in Khurasan, entering their capital Nishapur in 259/873, and in the ensuing years, Khurasan was fought over by various contending generals, until the Samanid amir Ismā'īl b. Ataμad [q.v.] defeated ‘Amr b. Layyih in 287/998 and incorporated Khurasan into the Samanid dominions. Under what is described in the sources as the beneficent rule of the Samanids, Khurasan continued to be within the mainstream of Sunni religious orthodoxy and culture. It had become already under the Tāhirids a vigorous centre of Arabic literature and of Sunni legal and religious scholarship. There is a large representation of Khuršānī scholars in such literary biographical works as Thā‘alib’s Yatīmat al-dahr and the continuations of Bākhkhārī and Ishākhān. Khuršānī theologians and traditionists were prominent in Sunnī, especially Şā‘īrī and Aḥṣā‘ī, learning, and in such theological and philosophical movements as those of the Mu‘tazila and Karrā‘īyya. The extremist Şā‘īrī Ismā‘īlī sect had pockets of support in the east, and Khuršānī ascetics and mystics played important roles in the development of Ṣūfism. It is, of course, well-known that Khurasan and the eastern Iranian provinces in general played an important part in the Renaissance of the New Persian language and its literature from the 9th/10th century onwards; see Browne, LHP, i, 445 ff., and Rypka cit. alli., History of Iranian literature, 132 ff.

As the Samanid amirate disintegrated in the late 9th/10th century under external attack from the north and internal revolt by unruly Turkish generals, Khurasan passed under the rule of the Turkish Ghaznavid dynasty [q.v.]. In 384/994 the founder of the line, Sebātīkhān, had been given the governorship of Tāhirid Khurasan, and in 388/998 his son Mahdūd consolidated his power in the whole of the province, which was to remain under Ghaznavid control for forty years. The riches of Khurasan did much to finance the successful Ghaznavid war machine, but the financial exactions of Khurasan officials and a series of disastrous famines made the Sultans’ rule there unpopular. Hence Nishapur and the other towns were not averse during the period 428-31/1037-90 from surrendering to the incoming Oghuz nomads led by the Saldjūk family; and the Saldjūk victory at Daudkānān [q.v. in Suppl.] in 431/1039 sealed the fate of Ghaznavid rule over those parts of greater Khurasan to the west of Badakhshān and the central Afghan mountain massif.

Under the Saldjūk Sultāns, Khurasan was an important province of their empire, even though the founder Toghril Beg soon moved his capital westwards from Nishapur to Ray and Isfahān. Khurasan and the east were initially ruled by Toghril’s brother Čagālāg Beg Dāwdr, whose son and grandson Čagālāg and Malik šāh were to rule over the Saldjūk empire to its apogee. In general, firm rule brought peace to the towns of Khurasan. This was temporarily ended in the uncertain years after Malik šāh’s death in 487/1092—the local historian of Bayhaq or Sibzāwar, Ibn Fandik, comments on the recrudescence of sectarian strife and the activities of the para-military ‘ayyār groups in the town—but stability returned under the long reign of Sanjār, who was firstly governor in the east and then Sultan for a total of over sixty years. The intellectual and cultural vitality of Khurasan remained unimpaired, and four of the original nine colleges founded by the great Vizier Nizār al-Mulk were, according to his biographer Subkī, in towns of that province, see in Nishapur, Balkh, Harat and Marv. One effect of the Oghuz migrations into Persia was the arrival of Turkmen groups in northern Khurasan, where suitable pasture was to be found for their flocks. These nomads remained an unassimilable element of Saldjūk Khurasan, until neglect of their interests by the central government drove them into revolt towards the end of Sanjār’s reign, leading to the Sultan’s own capture by the Oghuz and effective deposition in 548/1153.

In the decades preceding the Mongol invasions, post-Salmāk, Khurasan was held by various Oghuz tribal leaders and by formerly Saldjūk generals, and was then fought over by the Ghurids and Khwāzak-Shāhs [q.v.], until the ‘Abbāsids Muhammad finally overthrew his Ghurid rivals in the opening years of the 7th/13th century. (See, for the history of Khurasan in the Ghaznavid and Saldjūk periods, Bosworth, The Ghaznavids, their empire in Afghanistan and eastern Iran, part ii and iii, and idem, in Cambridge history of Iran, iv, ch. 9, v, ch. i.)

The Mongol hordes of Cingiz Khān, driving the Khwāzak-Shāh Djalāl al-Dīn before them, appeared in Khurasan in 607/1210, and seized control of its towns. Whilst not all of the notorious massacres of the Mongols may have been perpetrated at the original surrender of some towns, but at the time of subsequent revolts, Marv and Nishapur, which resisted fiercely in 618/1222, suffered appallingly. Ibn al-Athir, xii, 256, places the number of dead in Marv at 700,000, and Djwaynayr, tr. Boyle, i, 163-4, has the figure of 1,300,000 for the Marv oasis as a whole. Even allowing for statistical exaggeration, the Mongol invasions undoubtedly devastated Khurasan to a far greater degree than the Oghuz incursions of the 9th/11th century had done, as is amply demonstrated in the accounts of European and Muslim travellers and geographers of the following period of the Il-Khānids, e.g. those of Marco Polo, Ibn Battūta, Hamd Allah Mustawī, etc. As well as the population losses and destruction of settlements, the increased proportion of Turkish and Mongol nomads in the province accentuated the existing trend from Saldjūk times towards pastoralisation and the decline of agriculture; moreover, the arbitrary Mongol system of taxation bore especially heavily on cultivators and landholders, according to I. P. Petrushevsky, in Camb. hist. of Iran, v, ch. 6. Certainly, Khurasan never recovered its cultural and intellectual position within Persia as a whole; the Il-Khānids made their centre in western Persia, and Dībāl, Aḫchārīyān and ‘Irāq became the foci of political activity and artistic and literary life. The towns of Khurasan continued to suffer from the warfare between the Il-Khānids and the Čahāratāvis, and a place like Harat only became a major centre with the florescence of the Timurids in the 13th/14th century.

After the death of the Il-Khānīd Aba Sa’d in 731/1335, various local dynasties arose in Persia, including in Khurasan the Karīs or Kürts and the Sarbadārīs [q.v.]. The Karīs arose in Harat during the 13th/14th century, and successive rulers with the
title of malik or long retained power there till the
deposition by Timur of the last ruler, Ghiyath al-
Din Pir 'All, in 751/1350. The Sarbadars stemmed
from Baybak, and in the middle years of the 8th/
14th century they held this region of western Khorasan, extending to Dângân and even holding Nithân-
pur temporarily, till they too were extinguished by
Timur in 783/1381. Timur made his own capital at
Samarkand in Transoxania, but his son Shâh Rukh
became governor of Khorasan for his father in 799/ 1397 and ruled there for fifty years until his death in 830/1426-7. Towns like Harât and Marw were rebuilt,
and a considerable degree of prosperity restored; and
under the Timurid prince Husayn b. Manûr b. Bay-
kurgân (783-949/1381-1485) [gro.] Harât and Khorasan enjoyed a period of political stability and of brilliant
and artistic life.

In the early 14th/15th century, Khorasan was over-
rurn by the Özbeg chieft Muhammad Shâh b. Khân
and his khorde, but three years later, in 815/1410, the
Safavid Shâh Ismâ'îl killed the Khân and incor-
porated Khorasan into the Safavid dominions. The
Safawids were, however, unable to hold Balkh, and lost it permanently in 822/1421. Warfare with the Özbek remained endemic in northern Khorasan, with the possession of frontier towns like Marw oscil-
lating between the two powers. Noteworthy in the
Safavid period—one in which Persia became in
majority Shihâni—was the rise in importance of the
great shrine of the Imam 'All al-Ridâi [gro.] at Mashhad, originally the village of Sanâbâf, where
both the eighth Imam of the Shi'as and the Calîpî
Hârân al-Râshîd were buried. The shrine was already
splendidly ornamented in Il-Khânid times, as Ibn Batûtâ noted (Râhî, iii, 77-9, tr. Gibb, iii, 56-3),
and was increasingly enriched by the Timurids and
Safawids. Shih 'Abbas I endeavoured to discourage the
Shi'i pilgrimage to Mashhad, since the holy places
of 'Irâq, such as Najaf and Karbala', were often in
Sumâr, Ottoman hands. In the comparatively peace-
ful period of Kâjjâr rule, Mashhad gradually attained
its modern position as the principal city of Khurasan.

With the resurgence of tribalism and the political
upheavals of the 16th/17th century, Khurasan became
Nâdir Shâh's capital, and he made his military re-
doubt in the massif of Kal'at-i Nadiri in northern
Khorasan, but after Nâdir's death in 1160/1747, the
eastern parts of Khorasan passed for a while into the
control of the Durrâní Afghan chieft Nâdir Shâh
[gro.], and by 1168/1750, Balkh, Harât, Mashhad and
Nâthânpur were all in his possession. But the blind,
half-Safawid grandson of Nâdir, Shâh Rukh, had
meanwhile been raised to power in Khorasan, and
remained there as nominal ruler at least till his death in 1220/1706.

After Âqâ Muhammad Kâjjâr had made his
power over the whole land of Persia, control over
Khorasan was fully restored to the central govern-
ment, now installed in Tehran. But the depredations of the Özbek and other Turkmen continued to make
life in northern Khorasan chronically insecure; the
progress of commerce and agriculture was inhibited,
and many Persians were carried off and enslaved
by raiders from the Central Asian amirates. These
causes of friction were only ended by the Russians'
virtual annexation of Khâvä in 1873 and the crushing of
the Tekke Turkmen at Gök Tepe in 1881. After
this last victory, the Persian government was not
strong enough to withstand Russian pressure, and
the Russians annexed the Marw oasis in 1884. Relations
with the amirs of Afghanistan had meanwhile
continued to be bad, with contention over possession
of Harât. The town was besieged in vain by the Persians in 1838, and Nâşir al-Dîn Shâh fought a
brief war with Britain in 1856-7 over a temporary
Persian seizure of Harât. After this, overt Persian
attempts on these districts of western Afghanistan
ceased, though disputes over the demarcation of the
boundary between Khorasan and Afghanistan were
not finally settled till the definitive demarcation of
the whole boundary as far south as Sîstan in 1934-5.
Khorasan and the provincial capital Mashhad are
now fully connected with Tehran by a metalled road,
a railway and air services. The present population
of the province (1966 census) is 23 millions, with
Mashhad now the third largest city of Persia with
459,000 inhabitants.

Bibliography: This is largely given in the
article, but note for the earlier period the flourishing
genre of local histories, e.g. of Baybak, Nisâji-
pur, Balkh and Harât (see Storey, i, 353 ff.). The
political and social history of the province must be
largely extracted from such general works as the
books of Spuler, Iran and Die Mongolen in Iran,
Sykes' History of Persia, the relevant chapters of the Cambridge history of Islam, i, and above all,
the published and forthcoming volumes iv-viii of the Camb. hist. of Iran. For the 19th and early
20th centuries, the works of European, mainly
British, travellers, officials, consuls, etc. are a
prime source, e.g. those of J. B. Fraser, C. Macrote,
MacGregor, the Hon. C. G. Napier, the Hon. C. N.
Curzon, C. E. Yate, P. M. Sykes, W. Ivanov, etc.

(CE Bosworth)

BANû KHorâSân, the dynastv which, taking
advantage of the anarchy initiated in Zîrid Ifriqiyâ
by the Hilîlâ invasion, governed Tunis 454/522-
1062-1128 and 543-554/1150-35. When leaving Kay-
rân to take refuge in al-Mahdiyya (449/1062), the
Zîrid al-Mu'izz b. Badis had left Kayrân and
Tunis in the protection of a Sanhâjî chieftain Kâlîb
b. Maymûn. The latter seems to have exercised no
authority at Tunis, which was probably evacuated
by the Sanhâjîs, regrouping at al-Mahdiyya or in
Hamâmadî territory, and independent. Ibn Khallîn
states that it fell prey to a Hilîlâ amîr, a son-in-law
of al-Mu'izz b. Badis, Abî 'Abd 'l-Charîb b. Ziyâd al-
Mu'taferences with the amirs of Afghanistan had meanwhile
to be bad, with contention over possession
The situation (yaqum bi-amrihim khallalati mi yaqmiru dayyinu) they chose one of the leaders of their own community but he refused, and it was then that Abū al-Ḥakīb b. Abū al-ʿAzīz b. Khūrasān took power in the name of al-Naṣrī. According to Ibn Khaldūn, Abū al-Ḥakīb was appointed by the Hammadids immediately following the reception of the embassy of the Tunisian ṣayyids. This historian, who makes no mention of a rudimentary name of Tunisian ṣayyids, proposed initially by al-Naṣrī, seems to have condensed his account of events; possibly there was a second deputation which returned with the designation of the Khūrasānī, or even with the governor in person.

Abū Muhammad Abū al-Ḥakīb b. Abū al-ʿAzīz b. Khūrasān, a native of Tunis, was quite probably, says Ibn Khaldūn, of Ṣanḥājī origin; without this affirmation one would have to postulate for him a Ḥanāfī origin; without this

Ibn Jālālīn, of Abū Sālima Ḥanīfī b. al-ʿArfāz b. Khurasān: from this we may suppose that both of them sons of Abū Muhammad Abū al-ʿAzīz b. Khūrasān, (al-sultān al-manṭūr) called (the most venerable shaykh) by Mubriz b. Ziyād, the amīr of La Malga (al-Murallaka, between Tunis and Carthage). They took as their chief the ḥāḍī Abū Muhammad Abū al-ʿAzīz, son of the imām Abū l-Ḥasan. With his approval, they made an astonishing vole-face, deciding to appoint Mubriz b. Ziyād as their king. In reply to their invitation, the Riyāḥīs approached Tunis; the ḥāḍī and the ṣayyids came in procession to meet him; but a cry taken up by the crowd, “No obedience to an Arab or a Ġuzz (se. a Turcoman),” caused the enterprise to fail. It seems that the ruling class, having acted out of realism or for the defence of their own interests, were foiled by public opinion. Mubriz b. Ziyād made his way back to La Malga where he was joined by the ḥāḍī who had been chased out of Tunis.

In order to put an end to the civil war, the Tunisians decided on a restoration of the Banū Khūraṣān. A deputation went to Bizerta to fetch Abū Bakr b. Ismāʿīl b. Abū al-Ḥakīb who was hailed up at night over the city walls of Tunis in a wicker basket. This secret entry, which is not adequately explained by the closure at night of the city gates, suggests that the population was not unanimous in its desire to adopt him as amīr. Seven months later he was betrayed by his brother’s son, Abū Allāh b. Abū al-ʿAzīz who seems to have had him drowned. Abū Allāh b. Abū al-ʿAzīz b. Ismāʿīl b. Abū al-Ḥakīb remained in power for about ten years. He killed the ḥāḍī Abū l-ʿAdlī al-Djiāfīr b. Ḥalwān, his son and the son of his sister Ibn al-Bannāt, fearing lest they conspire against him with the Arabs, doubtless with Mubriz b. Ziyād.

Nevertheless, it was thanks to a unit commanded by Mubriz b. Ziyād, which had penetrated into Tunis,
that the inhabitants, under siege by Abū Muhammad 'Abd Allāh, son of the Almoravid caliph 'Abd al-Mu'min, made a successful sortie and forced the enemy to retire. On the last day of Djemâldâd I 552/ 20th July 1157, 'Abd Allâh b. 'Abd al-'Azīz reported to the archbishop of Pisa the victory which he had just won over the Maqâmâda, in a letter preserved in the archives of Pisa confirming the verbal terms of a commercial treaty between Pisa and Tunis.

He was succeeded by his nephew 'All b. Ahmad b. 'Abd al-'Azīz b. 'Abd al-Hāfiz b. Khurāsānī (in about mid-February 1159). But five months later (about mid-July 1159), Tunis was laid under siege by a formidable army and fleet under the caliph 'Abd al-Mu'min, and surrendered. A deputation of twelve (or seventeen) shaykhs went to 'Abd al-Mu'min to ask for peace. After an initial refusal, and long equivocation, he accepted. In the list of these shaykhs, unfortunately incomplete, we notice nine names: three brothers, the Banū 'Abd al-Sayyid, Hashimī qāris (the epithet of another member of this line, dating from 528/1133, is qualified byjalil and ināmī), and two sons of Manṣūr Ismā'īl and their paternal cousin; so we are dealing here with an oligarchy, and, once more, it is making terms with the enemy. In fact, 'Abd al-Mu'min promised to respect the lives, families and goods of the shaykhs who had come to negotiate, in return for their readiness to surrender, but he made the same guarantees to the other inhabitants of the city and environs only after they had handed over to him half of their goods.

The last of the Khurāsānīs, 'All b. Ahmad, had not only to surrender half of his goods, but also to accept exile in Bougie; once these conditions were accepted, he left Tunis that same day, but died on the road.

Tunis has kept some relics of the Banū Khurāsānī, etc. the mosque of the Djiâml al-Kasr (ca. 499/1106), which probably adjoined their palace (no longer in existence), and not far from Sidi Bu Khrlsan street, a Khâba, their funeral mausoleum in the centre of a necropolis excavated by S. M. Zbiss, to whom we owe the establishment of an epigraphic museum and the publication of a number of tomb-inscriptions of the necropolis, ca. 499/1005.

KHURĀSĀNĪ, ʿĀHMUD MULLA MUHAMMAD KĀZĪM (1859—1911), a distinguished Shīʿī muftih of Iran; born in Tūs, he received his early education in Mashhad, pursued traditional studies including natural philosophy in Tehran in 1860, and moved to Najaf in 1861 for further studies. He studied under Mīrzā Ḥasan Ṣafarzālī, the then sole māqālāt al-bālīh of the Shīʿī world. After the latter's death (1864), Khurāsānī was recognized as the legitimate successor to Ṣafarzālī. He proved to be a resourceful teacher, during daily classes before more than 1,000 students of tūl al-falāḥ and producing as graduates of his courses over 120 muftihādīs (Mahdī al-Mūsāvi, Aḥsan al-wadā’i, i, Najaf 1568, 127—8).

He established three religious (hijāb, 148) and some modern schools in Tūs (ʿAbd Allāh al-Fayyādī, al-Zahawwâl al-Mubayyib al-khurāsānī sana 1326, Baghdad 1967, 321f.). Since 1965 Khurāsānī's name has been associated with the Persian Constitutional Revolution as one of its most influential supporters. He and the other muftihādīs, Tāhirī and Māzdandarānī, issued numerous fatāwa and manifestos, sent many telegrams, wrote many letters to responsible authorities in Persia and Turkey, and organised two uprisings.

Led by Khurāsānī, the Persian 'ulamā' of Tūs intensified their campaign after Muhammad 'Ali Shah's abrogation of the constitution in 1908, and in a fatāwā they declared that obedience to the Shah and the payment of taxes to his government were un-Islamic (ʿAbd Allâh Kasravi, Tāhirī-i Mashhur-i yī, Tehran 1951, 730) and strongly condemned their clerical opponent Shaykh Fadl Allāh Nūrī (ibid., 538). Khurāsānī's activities were not favoured by 'Abd al-Hamīd II of Turkey. Thanks to the Young Turks' Revolution of 1908, however, there appeared a degree of mutual co-operation between the 'ulamā' and the Turks, and Khurāsānī openly supported the Turkish Revolution. He even threatened to dethrone 'Abd al-Hamīd II upon the latter's counter-revolution in 1909 (Sayyīd Muhammad Ḥasan Nadjīfī Kāshkanī, Shāhī-i sharb, Mashhad 1972, 474-6).

Living in an Ottoman province, Tūs, Khurāsānī and other Persian constitutionalists seem to have been led to an agreement of expediency with the Young Turks. We see Khurāsānī, for instance, sanctioning the Pan-Islamic policy of the Young Turks (RMF, xiii (1911), 385-6) and at times, despite his being a Shīʿī muftihādī, calling the Ottoman sultan "caliph" (al-Tūsīyī, i (1909), 240-1; Nūrī al-Dīn Khurāsānī, Ḥudūd-i Rūs bi-Irān, Baghdād 1913, 43).

In support of the sultan, he also declared a holy war against the Italian invasion of Libya in 1911 (al-Tūsīyī, ii (1911), 246-7, 250-7, 338-42). In return, Khurāsānī appealed to the sultan to interfere in favour of the Persian constitutionalists: once in 1909 when he was successfully working towards the dethronement of the foreign-backed Shah (al-Tūsīyī, i (1909), 240-1), and another time when, upon the Anglo-Russian invasions of Iran in 1911, the deposed Shah vainly attempted to regain his throne (Ḥudūd-i Rūs, 45-6). In both cases Khurāsānī, leading many of his supporters, set out for Persia to mobilize the masses; the first uprising was stopped because of the Shah's downfall (al-Tūsīyī, i (1909), and iv (1912), 39-40), and the second one was postponed because of Khurāsānī's sudden death (Ḥudūd-i Rūs, 58-67).

Despite the allegation concerning Khurāsānī's ties to the Oudh Bequest (Mahdī al-Mūsāvi, Tāhirī-i Mudarris-i ʿArabī-yi Iran, Tehran 1971-5), he does not seem to have favoured the British. Since the Russian troops were suppressing the Persian Revolution and the British were thought to have supported it, Khurāsānī sent delegates to the British Consulate in Baghdad seeking co-operation (Abdul-Hadi Hāfī, Safar-i Qūmīna-i Ṣafarzālī, i, Tehran 1953, xi—xii (1910), 246-7), though this proved useless because of the British commitment to the 1907 Convention. From then on, we see Khurāsānī in an equal opposition to the two powers. He expressed his deep mistrust in the Shah, and paid no attention to the intercession of the two powers under whose pressures the Shah had to promise the re-establishment of the Persian constitution; Khurāsānī only insisted upon the deposition of the Shah and the declaration of a genuine constitutional regime (Hāfī, Why did the 'Ulamā' participate in the Persian Constitutional Revolution of 1905-1909, in IW, xvii (1926-7).

Bamdad, Sharhi hal-i ridqal-i Irnn, i, Tehran 1968.
(Abdul-Hadi Haidi)
KHURMA, Fami (1875-1956) a Syrian politician, a Christian, who played a very important role over a period of almost half a century. Born in a Lebanese village on the slopes of Mount Hermiq, he studied at Sayil then at the school in Beirut which was later to become the American University, while also working as a teacher. When family affairs took him to Damascus in 1899, he took up residence in the Syrian capital, learned Turkish and French and was employed as an interpreter in the British consulate. His political career began in 1909 when he joined the Committee of Union and Progress. As legal adviser to the municipality of Damascus (1930-38) he was elected a member of the municipal council of the town in 1914, took part in 1928 in the Council of State which met in Istanbul, participated in the creation of the Arab Academy, and then occupied a number of important political offices: Minister of Finance in 1920, of National Education in 1926, President of the Chamber of Deputies in 1943 and then from 1946 to 1949, and President of the Council of Ministers in 1944-5 and in 1945-4. At the same time, he was President of the Bar of Damascus (1920-36), for a short time Professor of Law (1924), a founder member of the People’s Party (1925), then of the Nationalist Bloc (al-Ku/laal-ll’afanlyya, 1926), and was a member of the delegation which negotiated with France the Treaty of 1936. After the war he was appointed Syrian delegate to the United Nations, and presided over the Security Council in 1947 and 1948. He retired from active life in 1955 and died on 2 January 1962.

Faris al-Khuri was a calm, level-headed man whose essential aim was to achieve the supremacy of justice. He was a man of great culture and erudition, and his powers of oratory were widely recognised. After the beginning of this century he took an interest in events outside the Arab world and derived from them the inspiration for his literary, more precisely his poetic, production, for this man of politics was also a poet. His classical background gave him the idea of preparing an anthology entitled al-ilimar al-dkahab Jl lafaHJ al~ which has remained un¬

al-KHURMA, an oasis in western Saudi Arabia, situated at lat. 23° 54’ N and long. 42° 25’ E, which became prominent in Arabian politics during the first quarter of this century. The oasis lies in the middle reaches of Wadi Taraba or Turaba (also shown on maps as Wadi Subay). The companion oasis of Taraba (q.v.), capital of the tribe of the Buldan, is farther up the valley about 75 km. to the south-west. Another 75 km. downstream from al-Khurma the valley passes by the wells of al-Kusuliyia and then ends at Irk Subay, whose sands keep the floodwaters from joining the main drainage system emptying into Wadi T-Dawr (see [QAZARAT] AL-SARAJ). The oasis is close to the northern tip of Harrat Nawasi, the southern part of which is called Harrat al-Bultam. The road from al-Khurma to al-Ta’il runs south of west over the range of Hujn, often taken as marking the eastern geographical limit of al-Hijaz (q.v.). About 80 km. north of al-Khurma is the ancient gold mine of Zahlim, attempts to work which in recent times proved a failure. Beyond Zahlim to the north is the present main highway from Duvida and Mecca to al Riyad (Darb al-Hijaz); earlier, many pilgrims and a considerable amount of trade went along the track through al-Kusuliyia and al-Khurma.

The relatively small population of al-Khurma is made up of tribesmen from the western section of Subay (q.v.), who regard the oasis as their capital, Sharifs, and black freemen. The chief place in the oasis is Kaer Khalid, named after a former Amir (see below), and the other principal settlements are al-Suk and al-Sulaymiyya.

Unlike Taraba, al-Khurma is not mentioned by Handan, though it may have been inhabited even before his time. Its first appearance in history seems to have been in 1242/1798, when the Sharif Galib b. Musa’d, a determined foe of the Wahhabis b. ‘All of Mecca tried to assert sovereignty over al-

Khirma became a crucial issue. Many Khurmanas had remained attached to the reform movement since the preceding century. As Wahhabi proselytising also won new adherents in the west, the Sharif al-Husayn b. ‘Ali of Mecca tried to assert sovereignty over al-Khurma, which would have carried his authority well towards the east. In the words of Philby, “Khurma itself was a locality of little importance, economically or politically, though it occupied a strategic position as the back-door to Najd. Its real significance was as a symbol of the struggle for Arabian hegemony, which had now been transferred from the old cockpit of the Qasim (see al-Kasim) to the frontiers of the Hijaz” (Arabian jubiler, 60). The British government held that al-Khurma, which it thought was not very far away from al-Ta’il (the actual distance is 190 km.), fell within al-Husayn’s sphere. ‘Abd al-Aziz, on the other hand, avowed that he had inherited all.

Bibliography: In addition to the archival information held by the family, whose material is untitled, there have been two monographs on Faris al-Khuri: Hamil al-Khabbas and Durji Hachiki, Dark al-Khuri, 1969 (French translation champions). Faris al-Khuri ma-ayyad in muns. Beirut 1964. See also Causeries de l’orient Contempo¬

rain, Paris, i-xxii (1945 55), Index; Nasrin Sh. al-Khuri has presented at the Lebanese University in 1973 a Diesan Daras al-Khuri containing all of his poetic work which is accessible, together with a detailed bibliography; this work should be publish¬

Ed.)
the territory that had belonged to his forefathers, including al-Khurma.

The Sharif Khâlid b. Mâsûr Ibn Lu'ayy, said to have been named amîr of al-Khurma by al-Hasayn, became a convert to the Wahhâbiyya, as a result of which al-Hasayn detained him in Mecca for a time; al-Hasayn also rebelled the Hanbâlîs of al-Khurma for preaching in the Wahhâbi vein. The Khurrami Wahhâbîs were devout enough to be reckoned as belonging to the ranks of the Ikhwân [q.v.]. Late in 1333/1915 al-Hasayn's son 'Abd Allâh delivered ultimata to Khâlid demanding that he return to his original loyalty. Khâlid rejected the ultimata, and the Khurramiyya called on 'Abd al-'Azîz for help. Sympathetic though he was to their cause, he was occupied elsewhere and could do little for them. During 1336/1918, expeditions sent by al-Hasayn to subdue al-Khurma were repulsed one after another by Khâlid and the Ikhwân.

Infuriated by the tenacious and successful resistance of the little oasis, al-Hasayn in 1337/ May 1919 deputed his son 'Abd Allâh with a martial force, well armed by Arabian standards, to settle the account for it. On the way, 'Abd Allâh paused at Taraba, where Khâlid and the Ikhwân, striking suddenly at night, won a signal victory. Allâh paused at Taraba, where Khâlid and the Ikhwân, striking suddenly at night, won a signal victory of the little oasis, al-Uusayn in 1287, and again in 1351/1932, as well as a year or two before that while hunting with 'Abd al-'Azîz. When the move in that direction leading to the capture of Mecca was finally made in 1343/1924, al-Khurma and Taraba provided the springboard for Khâlid and the Ikhwân.

The Khudîr of the Ikhwân beside Khâlid's castle in al-Khurma is said to have been founded after the battle of Taraba. The British explorer Philby visited the oasis in 1336/1917 and again in 1351/1932, as well as a year or two before that while hunting with 'Abd al-'Azîz. When the move in that direction leading to the capture of Mecca was finally made in 1343/1924, al-Khurma and Taraba provided the springboard for Khâlid and the Ikhwân.

ous Mazdakite adherents during his lifetime. After his murder in 327/940, the Khurramiyya in Khurāsān, according to al-Mas'ūdi, rose in revolt. Some of them denied his death and expected his early return to establish justice in the world. Others affirmed his death and held that the imāmāte had passed to his daughter Fāṭima. They were known as the Fāṭimiyya. The Zoroastrian Sunbādī [see sunbādī], a former associate of Abū Muslim, led an army of rebels from Nāyshābūr to al-Rayy where his following swelled rapidly. According to the Siyāsāt-nāma, it was composed of Mazdakides, Shi'īs and Zoroastrians. Sunbādī predicted the end of the Arab empire and promised to destroy the Ka'ba. Abū Muslim, he asserted, had not died and would shortly reappear, together with Mazdak and the Mahdī. By the latter, who is not identified, Muhammad b. al-Hanafīyya may have been meant. The revolt was suppressed after 70 days and the leader was killed. Another former associate or dā'ī of Abū Muslim, known as Ištāq ḥal-Turk, after the former's murder fomented an insurrection in Transoxania, affirming that Abū Muslim was alive in the mountains of al-Rayy and would return. He is also reported to have previously taught that Abū Muslim was a prophet sent by Zoroaster, who himself was alive and would reappear to restore his religion. Nothing is known about the exact date of the activity of Ištāq and the fate of his movement. It has been suggested, on the basis of the account of Gardizi, that the governor of Khurrahān, Abū Dāwūd Khālid (d. 140/757) was killed by followers of Ištāq and that the rebel leader Baražbānda, whom Abū Dāwūd's successor 'Abd al-Dāwūd joined when he revolted against the caliph al-Mahdī, also belonged to Ištāq's movement. The first suggestion is highly conjectural and the second quite unlikely; the white-clad (ṣapīd-dījamān)? murderers of Abū Dāwūd were, according to Gardizi, the followers of one Ṣā'īd the weaver (djūsu), and Baražbānda claimed to be Ibrahīm b. 'Abd (read: Muhammad?) al-Ḥashimī (Gardizi, Zayn al-ashghar, ed. 'Abd al-Rayy Ḥabībī, Tehran 1347, 123 f.). About two decades after the death of Abū Muslim, al-Muqaffā (q.v.), also a former member of his dā'ūn and of the Risāmiyya, appeared in Transoxania to lead another revolutionary movement. His following was composed of white-clad (Ar. Mubayyida [q.v.], Pers. Sapīd-dījamān) Soghdian peasants and by Turkish tribesmen. He claimed to be the final divine incarnation after Abu'l-Ḥasan, Nābī Ibrahim, Maui, Ištāq, Muḥammad and Abū Muslim (a different report adds Shāykh and substitutes ʿAlī and Muḥammad b. al-Hanafīyya for Abū Muslim) and taught the trans-migration of souls and sexual license. The sect of the Mubayyida is still mentioned as surviving in the 6th/12th century.

The latter two movements usually are not called Khurramiyya in the sources, though as branches of the Muslimiyya they were covered by the name in its wider sense. There is no specific information on their doctrine about Mazdak and the role of Mazdakites in them. Al-Birūnī, however, states in general terms that al-Muqaffā prescribed for his followers "everything Mazdak had brought" and al-Shahrastānī counts the Mubayyida as one of the neo-Mazdakite sects and as a variety of the Khurramiyya. They may have been crypto-Mazdakites before the coming of al-Muqaffā (see A. Yu. Yaluntsky, Vostro-Mozhanskie traditsii v belshkh otechestvakh, in SO, v [1948], 35-54).

The use of the name Khurramiyya is more prevalent for the neo-Mazdakites in western Iran. In 62/779 the Muḥammara, i.e. the Mazdakites, of

The anti-Arab and anti-Muslim activity of the Khurramiyya reached its climax in the great rebellion of Bābāk [q.v.] at the Khurramiyya in Adharbayjān (207/821-8). Bābāk had become the chief of the Khurramiyya in the region of al-Badhūn in Adharbayjān in succession to Dīwādīn b. Shahrār, whose prophetic spirit, he claimed, had settled upon him. Dīwādīn was alleged to have predicted the victory of Mazdakism under his successor. The sources offer little information on the religious doctrine of Bābāk and his followers. Their connection with the Muslimiyya is indicated by the fact that some people, according to al-Dinawarī, held Bābāk to be a son of Mūtahhar, son of Fātima, daughter of Abū Muslim. The revolt later spread outside Adharbayjān. In 212/827-8 the Khurramiyya rose in the area of Isfahān and al-Karadž and some of them joined Bābāk in Adharbayjān. In 216/830-33 they revolted among Isfahān under their chief ʿAlī b. Mandaḵ and in Fārs. As ʿAlī b. Mandaḵ took al-Karadž, the sectarians joined him in large numbers. After a bloody defeat by Ṣabīk b. ʿAbd al-Raḥmān near Hamadhān, some of them retreated and pillaged in Isfahān, while others under their leader Bārsī fled to Byzantine territory. They were enrolled in the Byzantine army and are mentioned in 223/838 fighting under the emperor Theophilus against the Muslims.

ʿAbd al-Kāhir al-Baghdadi treats a sect called Māzāryāyya, followers of the ʿArnīnī rule of Ṭabarīsān, Māzyār [see kānīnī] (d. 225/840), as the second major branch of the Khurramiyya besides the Bābākīyya. Māzyār, whose revolt against the caliphate developed out of his quarrel with the big landowners of the lowlands of Ṭabarīsān and his rivalry with ʿAlī b. Mandaḵ, was certainly not a Mazdakite, although he was accused of having aided Bābāk. In his political struggle he came to rely on the non-Muslim elements of the highlands, particularly Zoroastrians, but evidently also Mazdakites. The Khurramiyya of Ṭabarīsān and Dīwānja may have continued to honour his memory as the account of al-Baghdādī suggests.

According to the Siyāsāt-nāma, the rebellions of the Khurramiyya in the area of Isfahān continued after the execution of Bābāk until the year 300/912-3. First they rose during the reign of al-Wāḥīdī (227-32/842-52), and again sacked al-Karadž. Later, at an unspecified date, one Bārūzādīnī succeeded in fortifying himself in the mountains of Isfahān. The Khurramiyya joined him and raided caravans and villages.

The Khurramiyya continued to be mentioned in the 4th/10th century in the regions of Fārs, al-Ahwāz, Ṣaḥānā, al-Burūj, al-Karadž, Masābādān, Mīhrīdān-kadāḥ, al-Ṣaymara, Dīnawar, Niḥwān, Hamadhān, Kāšān, Kunūn, al-Rayy, in the mountains of
Tabaristan, al-Daylam, Adharbaydjan, Armenia, Shahramaz, Dijrjan, Bahl and Khorasan. It has been accepted on the basis of a report of Miskawayh (ed. Amedroz, Elispes, ii, 299; tr., v, 327) that Khurramiyya living along the coast of Makran and Kirmân were subjugated in 360/971 by a general of 'Abd al-Dawla. The name of the Khurramiyya is, however, a corruption in the manuscript and should be read al-Djurumiyya. This is evident from the text of Ibn al-Albidh (viii, 451) which is based on Miskawayh as well as from Miskawayh's mention of the same people called al-Djurumiyya later under the year 356/970-4 (ii, 355 f.; Ibn al-Albidh, viii, 482; Hilâl in Elispes, iii, 377: al-Djurum); this point is also made by C. E. Bosworth, The Bein 111ys of Kirmân (220-57/932-68), in Iran and Islam, in memory of the late Vladimir Minorsky, ed. Bosworth, Edinburgh 1937, 123 n. 34.

The latest mention of surviving Khurramiyya communities is for the first half of the 6th/12th century in the region of Anasâdhan and Darkazlan, north-west of Hamadhân (al-Bundât, Mu'âsîhan sulacterial at-al-munow, ed. M. Th. Houtsma, Leiden 1899, 124), and in Adharbaydjan.

According to al-Mas'ûdî (d. 345/958), the Khurramiyya in his time mostly belonged to two divisions, the Küdâkiyya and the Lûdshahiyya. (variants Küdâshihâyi, Kurdshailliyya). The former were probably named thus because of their veneration of Mâhi b. Fayruz, the son (or grandson?) of Fâtimah, daughter of 'Abd al-Malik, whom they called khâbash-1 dâddî, the omniscient son. They are also mentioned in other sources and apparently constituted the great majority of the Khurramiyya in western Iran. 'Abû Hâtim al-Razi (d. 372/983) states that the extremist factions which originally developed out of the 'Abbasid revolutionary movement were known under different names in different regions; in the country of Isfahân as Küdâkiyya and Khurramiyya, in al-Rayy and elsewhere in al-Dîbil as Mazdakziyya and Sunbâdîyya, in Dinwâr and Niha-ward as Muhâmma and in Adharbaydjan as Îbahîyya (or Dâfiyya). It is not clear if the latter name implies a distinction in religious doctrine between the Khurramiyya in Adharbaydjan and elsewhere in western Iran, though any such differences were most likely not substantial. 'Abû Dûsîr b. Mânîhalî, who visited al-Badâhân around the middle of the 4th/10th century, mentions a place there where the Muhâmma known as the Khurramiyya conserved their flags and where they expected the coming of the Mahdi. Probably the khâbash-1 dâddî or, in any case, a descendant of 'Abû Muslim's daughter Fâtimah, is meant.

The reports of the Muslim sources about the doctrine and practices of the Khurramiyya are mostly summary and biased. An exception is the account of Mu'âsîhâr b. Tâhir al-Madkî, which is based on his personal acquaintance with members of the sect and his reading of some of their books. The Khurramiyya were dualists holding that the principle of the world was the light, some of which had become effaced and turned into darkness. They all believed in the transmigration of souls in human, animal, and angelic bodies. Prophetic revelation: in their view never ceased and the same divine spirit informed in all prophets. They had no religious law but, according to Mu'âsîhâr, had recourse to their impulses in legal matters. Messengers whom they called 'âbeshi (farisâhah) made the rounds among them. They were honest and pure, tried to win people's favour through acts of kindness and strictly avoided bloodshed except when they decided on rebellion. They expected the appearance of a descendant of Fâtimah, daughter of 'Abû Muslim, as the Mahdi who would make their cause prevail in the world. Wine was considered particularly blessed by them. According to Mu'âsîhâr, some held promiscuity licit with the consent of the women and, in general, any fulfillment of natural desires as long as no one was harmed. The more extravagant cliches of some sources concerning their sexual libertinism deserve no credence. There is no sound evidence for community of goods among them.

The Mazdakites and Manichaean basis of these beliefs is manifest. The attempts of some sources to establish a close link between the Khurramiyya and the Karmâtis and Ismâ'îliyya must be viewed with reserve. There is no evidence for any influence of Khurram doctrine on Ismâ'îlian doctrine or of any large-scale conversion of Khurramis to early Ismâ'îlism.

KHURRAMSHAHR, chief town (population in 1966: 88,536) of the Khurramiyya of the same name (population in 1966: 156,281) in the Iranian province of Khurâstan (khusân 6), and situated in long. 38°13' E., lat. 30° 25' N. Its elevation above sea-level is 8 m., and the climate is hot and humid, with summer temperatures rising to 58° C./136° F., and a winter minimum of 8° C./18° F.

The present town is the successor of a number of settlements which, since ancient times, have been located in the general area where the Kûrān (Djûjâyâl) river and the combined Tigris and Euphrates rivers flow into the Persian Gulf a few miles apart. Elamite and Achemenid settlements were succeeded, in Islamic times, by Bâyân and Mâhirâz, which were included by the Islamic geographers in the province of 'Adâm-1 'Abdân. The earlier settlements were situated on the Kûrânum river itself, the later ones on a channel cut to link the Kûrânum and the Tigris-Euphrates estuary (now called the Arba'a Shahîl-Îrân, and by the Persians Arwazand-rûd). The construction of this channel (known at different times as Jayî-i Bâyân, Jayî-i Âuddî after it had been widened by the Buwâyhid ruler A'qîd al-Dawla [923-6], and the Mafrûz channel) created the island of Abdân (see 'Aabdân).
KHURRAMSHAHR — KHURREM

KHURREM (P. "cheerful, smiling") is a name of both men and women. The most famous bearer of it is the Khâysîk [g.o.] and beloved wife of Sulaymân I [g.o.], who was born in the early years of the 13th/xgth century, when a fort called Kût al-Mûbammara ("Red Fort") developed into the town of Mûbammara governed by Arab shâhâb of the Ka'b tribe. The new town was situated on the Hafîr channel, one mile from its confluence with the Kûrûn. The rise of a rival port at the end of the Persian Gulf was recorded by the Ottomans as a threat to the prosperity of Bâguza and, after 1254/1589 they sacked the town, which was, however, subsequently ceded to Persia by the Treaty of Erzurum in 1847. This treaty was violated by the Ottomans in 1886 by the construction of a fort at Faq, at the mouth of the estuary, which enabled them to harass shipping bound for Mûbammara.

In 1925, Ricci Shâh Pašâfawât brought the virtually autonomous shâhâbâd of Mûbammara firmly under Iranian control, and in 1937 the name of the town, by a decision of the Iranian cabinet, was changed to Khûrâmsâh. During World War II, the port facilities at Khûrâmsâh were greatly expanded, and a 75-mile branch line was constructed to link the city with the Iranian railway line. After industrial development under the Second Seven-Year Plan (1955-62), Khûrâmsâh is now one of Iran's principal ports-of-entry on the Persian Gulf; its exports include dates, milk-products, skins and wool.

The 1934-14 Boundary Commission took as the international boundary with 'Irâq the low-water line on the Persian side of the Šâhî-Šârāb, which was originally fixed between the two countries. This dispute appears finally to have been settled by the agreement signed on 6 March 1975, whereby Iran and 'Irâq agreed that the international boundary shall be the ala'mâz, or line of deepest water.

(R. M. Savory)

(R. M. Savory)
In April. She was buried in her mausoleum, built by both infirm, they spent the winter of 965/1557-8 in instigation on 25 Dhu '1-Ra'da 969/23 July 1562. Barigo tells us (Albiri, iii/3, 148) that in her last years she returned to die in Istanbul. The Turk, possibly written in 1542 (see Davey, Sultan, 21-3), and also in Bassano (see, for example, Heyd, Ottoman documents, Oxford 1960, 143, and Kanun Sultan Suleyman sergisi, Istanbul 1958, nos. 71, 90, 102, 125. Some examples of embroidery said to be Khurrem's work are preserved in the Topkapi Sarayi Museum and the Türk i̇slâm Eserleri Müzesi in Istanbul.

Khurrem's fame spread through Europe in her lifetime. It is unlikely that she ever set for a portrait, but several portraits of her exist. In Topkapi Sarayi there is an oil painting (see cover of Ulugay, Aşk mehribanları), made from the engraving in Boisard, Vitae et icones sultanorum, Frankfurt 1556, and also in Bassano (loc. cit., 1896), probably written in 1542 (see Davey, Sultan, 21-3, 503-4; Zinkeisen, iii, 43). Khurrem's story inspired drama and literature in Europe in the 16th and 17th centuries, including two French plays, Las Sultane Rulhine, Paris 1564, and Rouillar, Tah, 1643; see, for example, Heyd, Ottoman documents, Oxford 1960, 21-3), and probably identical to it. There is a fine engraving of her by Melchior Lorich in the policies of the Ottoman Empire were directed by the policies of the Ottoman Empire were directed by the political centre, there begins at this date the political centre, there begins at this date the political centre, there begins at this date the political centre, there begins at this date the
rukin, "The Fortress of Sargon". The earliest excavations there were undertaken by Paul Emile Botta in 1843 when he was the French Consul at Mosul, and he has been described by Parrot as "the first systematic excavator of a Near Eastern site". He himself described his work in a series of letters which he wrote after each important find and he carefully copied all the inscriptions he discovered, although at that time Akkadian was still an undeciphered language. Victor Place continued the excavation of the site from 1852-5, but then it was abandoned until G. Loud worked there on behalf of the Oriental Institute of Chicago for eight seasons from 1927-35. Since then a number of stone reliefs from the palace, including two famous colossal bulls, have been removed to the Iraq National Museum in Baghdad (1938, 1943) and the Directorate-General of Antiquities of Iraq resumed excavations for a short period in 1957.

Sargon II (722-705 B.C.) built the city between 717 and 707 when he moved the centre of his administration from Kalkhu (modern Eris Nimrud), and the city is a model of Assyrian town-planning. It has seven fortified gates and the early excavations revealed the rooms of the palace and the houses of the palace officials. There are a number of shrines to various deities (called by Botta the Harem) and a ziggurat (which Botta described as an observatory). The later American excavation discovered the temple of Nabu who, with his consort Tashmetum, was a god of vegetation and recently it has been suggested by Postgate that the fertility ritual of the sacred marriage was performed in this building. The entrance to the palace was flanked by a pair of massive, winged, human-headed bulls (as in other Assyrian cities) and the walls were decorated with detailed reliefs of battle scenes and festival processions. A number of glazed brick panels have also been recovered from the site and chemical analysis of the blue glazes derived from copper suggests that lead was being used as a flux, a technique that was forgotten but later re-developed.

Cuneiform inscriptions show that the city was completed just before Sargon died. It was during his eighth military campaign, on which he plundered towns and villages in north-western Iran, that he was ambushed and killed (705 B.C.) and his corpse was abandoned the city and turned his attention to the construction of the city described in detail on the pavement stones in the palace gates with these words: "(the king) built the city at the foot of Mount Musul above Nineveh and named it Dur Sharrukin. He erected palaces of ivory, maple, boxwood, mulberry, cedar, cypress, juniper, pine and terebinth as his royal dwelling place. In front of the gates he built a portico, as in a Hittite palace, which is the Assyrian language is called bi-hidat."

It is particularly interesting to note that he received inspiration for at least one architectural detail from his western expedition.

When the site was first discovered, Botta thought he had found the much more famous city of Nineveh, for he was so astounded by the size and obvious splendour of the ancient city. Layard raised objections to this identification because he thought it was too far away from the Tigris. Neither of them appeared to know the traditional identification in Arabic historical sources; Yahyeh describes the village as the site of an ancient city called Sarra, which probably reflects an earlier corruption of Sharrukin.

When excavations began, E. Flandin was sent by the French government to study the sculptures which had been found. It was identified with Dur Sharrukin after the inscriptions of its founding king had been translated. He had had it built as a strategic defence against the troublesome Cimmerian attacks from the north and hadhoffed the main exit roads so that his troops could be transported efficiently with their suppiles. The ancient walls surround an area of 320 hectares with the citadel occupying 20 hectares. Yahyeh mentions that the village of his day (which he refers to as Khurustabad) had good irrigation. The modern village supports a small population (the average density of the area is 29.5 persons per km²) situated on the eastern bank of the river Khwaraz at the northern end of the Dibaj Marshes.

Khorsabad, [900] of the Dabâyid line in Tabaristan. It was long believed that there were two Khorsabids, because of errors in interpreting coin legends; Mordtmann, in SB Assy. Ak. (1971), 30, 36, dated three coins of this prince to the years 70, 60 and 64 of the Tabaristan era, and this led people to postulate the existence of a Khorsid I who reigned 56-60 T. and a Khorsid II who reigned 58-60 T. (ibidm, in ZDMG, xxxii, 120, cited by Unvila, p. 6, § 5, p. 36, § 12). He was followed by Marquart, Erbrünnh, 132, who also read 64 T. on a coin which was originally decorated with mural paintings but no traces have survived.

Sargon had the construction of the city described in detail on the pavement stones in the palace gates with these words: "(the king) built the city at the foot of Mount Musul above Nineveh and named it Dur Sharrukin. He erected palaces of ivory, maple, boxwood, mulberry, cedar, cypress, juniper, pine and terebinth as his royal dwelling place. In front of the gates he built a portico, as in a Hittite palace, which is the Assyrian language is called bi-hidat."
he attributed to Khurshid I, who must in his opinion have reigned 60-6 T. Vasmor, in EJ art. MARDAN was the first to perceive this false reading, which he explained by the resemblance between gahit = 60 and dakah = 110 in the Pahlavi script. Accordingly, Vasmor dated the coins to 110 and 214 T., instead of 60 and 64 T., and he therefore denied the existence of two Khurshids, especially as the local sources make no mention of a Khurshid I. Unavala, p. 7, § 4, p. 8, § 5, p. 80, confirmed Vasmor's conclusions, and remarked that the coins of the alleged Khurshid I are absolutely identical with those which Mordtmann attributed to Khurshid II. As for the bronze coin dated by Mordtmann (ZDMG, xii, 474, No. 170) to the year 70 T. and attributed to Khurshid I, Vasmor corrects this false reading to 107 T. (EJ, loc. cit.). Unavala (p. 9, § 12, coin No. 860 in his catalogue) confirms Vasmor's dating, and observes that to date the coins to 64 and 70 T. and attribute them to Khurshid I would interrupt in an inexplicable fashion the series of coins issued by Farrukhšan the Great (60-79 T.). One must thus cease speaking of two Khurshids, as does Spuler in EJ art. ĠAŠT.
to a peak some 1,500 feet above sea-level. Its vegetation is scanty: only a few marine shrubs, some scattered tamarisks and occasional mimosa relieves the monotony of the landscape. The water is brackish, the best being obtained from a couple of wells sunk by a RAF survey party in 1963. Sawdâ, the second largest island (3 miles long), is equally barren, though it was once inhabited. So also, apparently, was Dju- bâlîa, to judge from a few tombs on the island. Djubâyla and Hâshîkîya, the westernmost island, lying only 20 miles from the mainland, for the haunts of thousands of seabirds, including pelicans and goosanders.

The Khûryân-Mûryân Islands were early identified with the so-called seven successive islands of Zeno- bios, and as such they marked the frontier between the kingdom of the Fârîthân and the kingdom of Hâdramawt. From this it would appear that the Fârîthân frontier should be located in the innermost corner of Khûryân-Mûryân Bay. Over the centuries the inhospitality of the islands has forced their inhabitants to seek their livelihood from the sea. In the sixteenth century, Al-Idrisî (q.v.) records that the islanders, who were then politically under al-Shîbîr, were very poor and could not manage to make a moderate living in the sailing season. They used to sail to Úmân, Aden and the Yemen. Their main source of revenue was tortoise shell, which they traded to the Yemenis, and occasionally very beautiful amber, for which they sometimes got very high prices. Al-Idrisî calls the bay containing the islands Djuhn al-Haşhîfth (Bay of Herbs). The Khûryân-Mûryân Islands in their turn were frequented by Arabs from Shîbîr and Mûkallâ in the Hâdramawt (q.v. in Suppl.), and from Hûdâyîa in the Yemen, to dig guano from Hâsîkîyâ and Djubâyla Islands, where the seabirds during the centuries had left rich deposits. The guano was used as agricultural fertiliser, especially in the cultivation of tobacco.

The Portuguese were the first Europeans in modern times to record the existence of the Khûryân-Mûryân Islands. Alfonso d’Albuquerque discovered them in 1503, and they appear thereafter in Portuguese sources as the Curia-Muria Islands, with Hâsîkîyâ as Asquî, Sawdâ as Sodî and Karzawt as Ro- donde. Kâwâsun (q.v.) from Ra’s al- Khayma descended upon the islands in 1518, possibly with the intention of using them as a base for attacks upon shipping. The local inhabitants were driven off and the islands remained unpopulated for several years afterwards. Sometime before or, more probably, after this incursion (the sources are unclear) the islands came into the possession of a sub-section of the Mâhra tribe, the Ibn Khâlîf, residing in the vicinity of Mîrêb on the coast of Dhuftâr (Zîdarîn, q.v.). It is from this clan that the islands have derived the name by which they are known to the Arabs of southern Arabia—Djuhn al- Khayl. By the middle of the 13th/14th century—and possibly a decade or so earlier—the islands had become a dependency of the sultanate of Mâşkât. French planters from Réunion Islands occasionally resorted to the islands to load guano for use as fertiliser, and it was the existence of these valuable deposits that led the British government in 1854 to ask the Sultan of Masqât, Sayyûd Sa’dî b. Sultan, to cede the islands to Great Britain. The deed of cession was signed on 24 July 1854, and the guano deposits were worked from 1857 to 1859. A cable station was set up on Hâsîkîyâ Island in 1861, only to be abandoned a year later when the Red Sea-Karachi cable proved unworkable.
From 1854 onwards, the Khūyān-Mūyān Islands were formally designated a dependency of the British colony of Aden, although administrative control over them was vested in the British political resident in the Persian Gulf, since it was more practicable for the British political agent at Maskaṭ to visit them than it was for the political resident (later governor) at Aden. When British rule over Aden ceased on 30 November 1967, the islands were handed back to the Sultan of Maksūṭ, despite the protests of the Aden successor government, the People's Republic of South Yemen, that it was entitled to succeed to sovereignty over all the dependencies of the former colony. Since that time the islands have been administered as part of the wilāya of Ḫumnā and the sultanate of Ḫumnā. Ḫallūnāy Island is still populated, the number of inhabitants having remained fairly constant over the past century—36 in 1883, 50 in 1936, 70 in 1947 and 53 in 1976. They still derive their living from the sea, and especially from the great shoals of sardines which appear off the islands in late October each year, at which time the islands are joined by the annual appearance of the δύτη of Ḫumnā, which do not seem to have survived. His fame, however, remains on his biographical works.

### KHUSDĀR [see KALKH]

**AL-KHUSHANI, ABD AL-A'LLAH MUḤAMMAD R. AL-HĀDIṢI, MUḤAMMAD SAKHĪ, and biographer, originally from Khushān near Kūyārān. After studying fiqh at the latter place and at Tunis, he left his homeland ca. 311/921, passing through Cule, where he was held back some time by teaching (he is said also to have corrected the orientation of the mosque there), and travelling to Spain. He resided in the Marches, and completed his legal training, especially from Kāsim b. Aṣbāḥ [a.], and ended up by enjoying the favour of the heir to the throne, prince al-Hakam, who procured for him the job of bādi' of inheritances (mawā'id) at Pechina, then that of the Ḧīrās of Cordoba and after that, summoned him to his own side. He was something of a poet (though accused of committing faults here), and was considered to have a certain manual dexterity and to practise alchemy; he seems also to have acquired some medical expertise which allowed him, after his disgrace following al-Hakam's death in 356/965, to live by making up electuaries (adāhān). He is said to have died in 372/981, but this date is not accepted by all his biographers, who however knew very little information about the last years of his life.

Al-Khushani is credited with a hundred or so works and treatises composed at al-Hakam's behest, which, as is well-known, was a great lover of books. Amongst the titles cited here figure *al-Ittihād wa l-khawāli fi ma'ānī al-Mālik, al-Tahfūz wa l-muqaddāt, al-Futūḥ, al-Tarīqī, al-Manawī wa l-ma'ādal l-Nasab and al-Ittibāb,* which do not seem to have survived. His fame, however, rests on his biographical works. As well as a *Tābī'at al-‘Ulama? al-Anḍalus wa’s Rūhā m al-Mīklīyat,* which are no longer extant, al-Khushani left two collections of especial interest. The first one which one thinks of is his *T. Qādī al-Anḍalus,* ed. and tr. into Spanish by Riberà, Madrid 1914. Posing himself on written sources, archives and oral traditions, the author traces the biographies of the khān of al-Anḍalus from the conquest till 537/946, in a lively and instructive manner; and if he lacks a critical spirit in relating, for instance, the fictitious story of the first three judges in Cordoba, he nevertheless does not omit items of information which are sometimes unfavourable to the Umayyads.

The second work which has been preserved, the *Tābāḥat 'ulamā? al-Ifriqiya,* has been published by M. Ben Cheneb in his *Classes des savants de l’Ifriqiya,* Algiers 1915-20, as a continuation of the *Ṭabāḥat of Abu ʿl-Arab [q.v.]*. These *Ṭabāḥat,* which the bādiʾ Ṭyād [q.v.] utilises freely in his *Madāʾir under the title of Tābāḥat al-Ifriqiya,* calling the author in familiar fashion Ibn yarīb, contain biographies of scholars who did not belong to the Mālikī school, and most remarkably, of converts to Shiism established in Ifriqiya by the Fatimids. It is the opinion of R. Brunswig (*Universale de la litterature historique et géographique de l’Islam*), who utilises freely in his *Abū-l-Ifrīkiyyin,* that the titles cited here figure in this collection of especial interest.

[Ch. Prelat]
But it must be remembered that he had a predecessor, Mrizt Anzâry. Both these early Pashto poets used the Diri or Persian poetic moul, but instead of strictly applying the classical rules of prosody to Pashto, they adopted the metres of popular Pashto songs to verse forms known in Persian. "This metre is syllable in nature, but the pattern is made by the stress usually recurring on every fourth syllable." (MacKenzie).

Khushhal further left many ghazals in Persian under the pen-name of Khudâbâd, and a Persian Sa'di sa'ad as ode on the futility of this world, an ode as the Bah-r al-abâr of Amir-Khusraw Dihalvi; this Persian poetry is amongst the best of that written in the so-called Sâ'dî Hindî or "Indian style".

James of Cyprus (who had been installed with the help of a Mamluk contingent sent by al-Ashraf Inâl [q.v.] in 864/1460), although in a clash between the king and the sultan's resident in Cyprus, the latter was killed, and Famagusta, which he had held, passed into the king's possession (858/1454). Another vassal-state, the march-principality of Elbizan [q.v.] under the Turcoman dynasty of Dughdârî (Dhu l-Kadr [q.v.]), was disturbed by a succession-struggle following the murder of its ruler, Malik Aslan, in 870/1465. Two pretenders, Shah-Budak and Rustom, successively backed by Khushkadam, failed to hold their position against a third Dughdârî, Shâh-Suwûr, who had Ottoman support and at the end of the sultan's reign was threatening northern Syria. Khushkadam sent orders to the governors of Tripoli and Hamâh to assist Aleppo, and made provisional arrangements for an expeditionary force from Egypt (Mubarran 872/August 1467). There are some indications of a resurgence of Arab tribal power during the reign. Five expeditions were launched between 866/1462 and 869/1465 against the Labi tribe of al-Buhayra; while a few months before the sultan's death, he sent a punitive force against Shâh-Kuhâr of Banât, who had plundered the provisions for the pilgrims in the vicinity of Ayâ. One of his last acts was to approve an expedition to Upper Egypt, where the lâbûf had been defeated in a fight with Yûnus b. 'Umar, the chief of the powerful tribe of Hawwâra [q.v.]. The sultan died a few days later. Shortly before his death, an assembly of magnates had elected the aâtâb Yâlbây al-Inâl al-Mu'ayyad to succeed him.

**KHUSRAW** [see ANSHARWIN, AMIR KUSRAW, GHOOREH, KISRA, FARWIL].

**KHUSRAW FROZ,** name of the last Bûyûd ruler, better known by his labab of al-Malik al-Râjmân. He succeeded his father Abû Kâlidjâr in 440/1048. Most of his reign was spent in dispute with his brother Fuladîlî. Sûfîn the possession of Fârs and Khuzistan and in trying to maintain discipline amongst the Turkish troops of his general al-Bâbak [q.v.]. There is no discernible doctrinal reason for his adoption, in defiance of the caliph, of an epithet reserved for God. In any case, the enfeeblement of the Bûyûd dynasty allowed the caliph in question, al-Kâ'im, to recover a certain amount of authority, seen in the appointment once more of a vizier to the caliph, Ibn al-Musîma [q.v.]. A group within the caliphate, in which Ibn al-Musîma was a driving force, hoped to throw off the Bûyûd tutelage as the Sunnî sultan, the Sâdîqî Tughrîl Beg approached, at the invitation also of Fuladîlî Sûfîn. In 440/1050 Tughrîl entered Baghdîd, after having promised to respect al-Malik al-Râjmân's position as his vassal, but a rebellion gave him a pretext to arrest the Bûyûd ruler, and the latter died two years later in prison at Rayy.

KHSURAW MALIK [see DHAZHWA].

KHSURAW PASHA [see DROSEW PASHA].

KHSURAW SHÂH [see DHAZHWA].

KHSURAW THÂN, eldest son of the Mughal emperor Dähângâr [q.v.]; by the daughter of Râji Bhangwâ Dâs, was born at Lahore in 955/1547. He was a favourite with his grandfather, Akbar, who perhaps wanted to make him his successor. He rebelled against his father in the first year of the latter's reign [see 1015/1606], was defeated and imprisoned. He made a second conspiracy in Afghanîstân, and this having been detected, he was, with one interval, kept in confinement for the rest of his life. He died at Aarâlah near Buchârā in the Deccan in 1015/1606, in suspicious circumstances, and was in all probability murdered by Shâh Dâhân. His sister had her body buried in the Khusraw Bâgh at Allahâbâd. His two sons, Dâwar Bağhâli, otherwise Buftâk, and Garshasp, were put to death at Shah Jâhân 21. His body was buried in the Khusraw Bâgh at Allahâbâd in 1031/1622, in suspicious circumstances, and was in prison. He made a second conspiracy in Afghâni-stân in the first year of the reign of his father (sc. in 1015/1606), was defeated and rebelled against his father in the first year of the accession. He perhaps wanted to make him his successor. He of Radia Bhagwin Das, was born at Lahore in 995/1587. It is allowable for him to pronounce the sermon of the Friday-service, except in the following cases, on the days of festival (e.g. Muslim, Ind. Gids., Mr. L. Snouck Hurgronje, Mission und Ausbreitung des Christentums, i, 286. It is also said that Marwân was the first to hold the khutba on these days on a pulpit; the custom of mentioning the ruler in prayer is found as early as the 5th century B.C. in the Aramaic papyri of Elephantine (Pap. i, line 26; cf. also Hamack, Islam und Phonograph, Verspr. Geschr., ii, 214 f.). This practice continued in Mohammedan days; to which should be added, H. Busse, Čařif und Grossohlo, die Buwayiden im Titag (942-1035), Beirut-Wiesbaden 1896. (Cl. Cahn).

KHUTBA (a.), sermon, address, by the khâtib [q.v.]. The khâtib has a fixed place in Islamic ritual, viz. in the Friday-service, in the celebration of the two festivals, in services held at particular occasions such as an eclipse or excessive drought. On the Friday it precedes the salât, in all the other services the salât comes first. A short description of the rules for the khâtib according to al-Sîrârâl (Tanbih, ed. Juyânboll, 40), one of the early Shâfi'i doctors [q.v.], may be given here.

(a.) One of the conditions for the validity of the Friday-service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the khâtib must be in a state of ritual purity; his dress must be in accord with the prescriptions; he must pronounce the two khutbas standing and sit down between them; the number of auditors required for a valid dju'ma must be present [see salât].

Regarding the sermon itself, there are obligatory: the kâmâla, the salât on the Prophet, admonitions to piety in both Muslim, prayer (du'â) on behalf of the faithful, and recitation of a part of the fûrûn in the second seven times; further, he must repeat the khutbas nine times, in the opening of the first khutba nine times, in the second seven times; further, he must repeat several times the salât on Muhammad as well as istâglâf, recite verse 9 of Sûra LXVI, elevate his hands and say Muhammad's du'â (which is communicated by al-Sîrârâl in full). Further, he must turn towards the khâtib [q.v.] in the middle of the second khutba and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it on till he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker was the first to point to the relation between the Islamic pulpit and the judge's seat in early Arabia. This explains why the khâtib must sit down between the two khutbas; it explains why he must lean on a staff, sword or bow; for these were the attributes of the old Arabian judge. It is not easy to see why the khutba precedes the services on Friday, whereas on the days of festival and the other special occasions salât comes first. Ghâlid tells us that Marwân b. al-Nakâm was the first to change this order by pronouncing the khutba before the performance of the salât on the days of festival (e.g. al-Bukhârî, Hadîyân, bâb 6 and especially the pathetic picture in Muslim, Hadîyân, trad. 9).

Regarding the prayer on behalf of the faithful (du'â). It is customary to mention the ruler's name, the suppression of the name at this occasion exposed the khâtib to suspicion. In countries where Muslims lived under non-Muslim rule, even a prayer for the worldly prosperity of the ruler could expose the khâtib to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgronje, Islam und Phonograph, 14 f. = Verspr. Geschr., ii, 430 f. = Iden, Mr. L. W. C. van den Berg's bewoening na het Mohammedadese recht, in Ind. Gids., vii, 809 f. = Verspr. Geschriften, ii, 214 f.). The custom of mentioning the ruler in prayer is found as early as the 5th century B.C. in the Aramaic papyri of Elephante (Pap. i, line 26; cf. also Harnack, Mission und Ausbreitung des Christentums, i, 286.

Several of the characteristics of the khutba prescribed by the doctors of the law occur also in hadîth. The khutba of Muhammad usually begin with the formula annam du'â (al-Bukhârî, Dju'âm, bâb 29). Side by side with the kâmâla (Muslim, Dju'âm, tr. 44, 45) the khutba occurs (Ahmad b. Hanbal, ii, 507, 435). A khutba without the kâmâla is like a mutilated hand'. In a large number of traditions it
is stated that Muhammad used to recite passages from the Kur'ān (e.g. Muslim Diwāna, tr. 45-58; Ahmad b. Hanbal, v. 86, 88, 93 etc.). The khatba must be short, in accord with Muhammad's saying: "Make your salāt long and your khatba short" (Muslim, Diwāna, tr. 47). Just like the salāt the khatba must be right to the purpose (rasdān, Muslin, Diwāna, tr. 47). The audience must be silent and quiet; "who says to his neighbour 'listen', has spoken a superfluous word", al-BuHārī, Diwāna, bāb 36. The two words pronounced by the standing khufba, who sits between them, are based on Muhammad's example (al-BuHārī, Diwāna, bāb 27; Muslim, Diwāna, tr. 33-57; Ahmad b. Hanbal, ii, 35, 97, 98). During the adhān Muhammad used to sit on the minbar; the ihāma was spoken when he had descended (in order to hold the khufba standing); this order was observed by Abū Bakr and 'Umar (Ahmad b. Hanbal, iii, 449 bis).

Neither the term khatba nor the verb khafaka in their technical meaning occur in the Kur'ān. Even in the passage containing an admonition not to abandon the Friday-service for worldly profit, it is only the salāt which is mentioned (Sūra LXII, 9-11). It would be wrong to conclude from this silence that the khufba did not yet form a constituent part of worship in Muhammad's time. Still, it is not probable that the difference between the kinds of service were accurately regulated from the beginning. Ḥadīth has preserved descriptions showing that Muhammad's khatba often did not have much to do with the regular sermon of later times. Abū Dānādī, Kitāb al-diyāq, bāb 23, reports, for example, that the Prophet pronounced two khufbas at the end of a complaint raised against a collector of the ḥadāt. Still, it is not possible to distinguish between the kinds, as may appear from the following traditions. According to one of them related on the authority of Abū Sa'īd al-Khudrī it is said that Mu¬hammad on the days of festival used to open the service with the salāt; then he pronounced the khatba "and his khatba usually consisted in the command to participate in some mission or expedition" (Abu Dānādī b. Hanbal, iii, 56 f.). A similar statement is to be found in Muslim, Kāmil, tr. 9: "When Muhammad had concluded the salāt on the days of festival by his khufba, he remained on his feet and turned to the sitting audience; when he wanted to send a mission or when he desired some other arrangement, he gave his orders on it; he used also to say: give alms, give alms ... then he went away. This state of things lasted till Marwān, etc.". This is a very simple description of the service and would be a considerable support to the view that a service with a fixed order only arose long after Muhammad's time. Yet it must not be forgotten that the description just translated betrays the tendency to connect the simple services of the Prophet with the highly official style introduced by Marwān, who even had a minbar built on the masṣaṭ. According to another tradition, the Prophet once interrupted his khatba in order to reply to a stranger who had asked for instruction in the Muslim faith (Muslim, Diwāna, tr. 60); he is also portrayed as interrupting the khatba to call out directly to a man (ibid., tr. 54-9).

C. H. Becker endeavoured to establish a close connection between the services on Friday and the days of festival on the one hand, and the marūn on the other. But this view was opposed by Wittwech, who found in the Jewish liturgy features corresponding to adhān and ihāma, to the hamāla, the recitation of the Torâ (first khatba) and the recitation from the Prophets (second khatba). It is perhaps impossible to decide the question; probably the example of the Jewish as well as that of the Christian liturgy exercised influence on the final constitution of the Muslim worship.

It is customary to pronounce the khufba in Arabic; nevertheless, this rule is not infrequently broken in non-Arabic speaking lands.

The history of the khufba in Islam remains to be written, and the study of oratory from the minbar or pulpit likewise remains to be undertaken. On the latter point, the enquirer might utilise with profit the texts (of varying degrees of authenticity) of those sermons of the Prophet given in the Sūra, in the Ḥadīth collections and in historical texts, as well as in those ḥadāt works which have preserved specimens of famous khatbas. Collections like those of Ibn Nā巴士 al-Farāhī (q.v.) and the specially-compiled anthologies of sermons used by the professional khufbas, just as the secretaries used collections of model letters, would also be found useful. Collections of this latter type are often arranged according to the calendar, i.e. there are four sermons for each month plus supplementary ones for festival days, the Prophet's birthday and his mi'raj or night-journey (see Aḥwār, Verzeichnis der arab. Hist., iii, 437).

(A. J. Wernick)

**KHUTTALĀN, KHUTTAL, A region on the right bank of the upper Qūs river, in what is now Soviet Central Asia, lying between the WaSihr river and the Panjā river (the head waters of the Oxus), called the Wāṣilbēsh and Diyarbēsh in mediaeval times. It was bounded on the west by the topographically similar regions of Caghāniyan and Waṣilbēsh (q.v.), and was often administratively linked with Waṣilbēsh (Yābul, Baidūn, ii, 402). Khuttal was a land of rich pastures in both the river valleys and on the upper slopes of the hills, where the famed horses of Khuttal, known even to the Chinese, were reared; the geographers advert frequently to the Khuttal and Tūghār breeds, and the men of Khuttal were celebrated for their knowledge of horse-breeding, farriery and veterinary science, and for their skill in making saddles and other accoutrements (see Bosworth, The Gazānvan, 135). The valleys ran northwards towards the Būttāmān mountains, which separated Khuttal from the upper Zarafshān river valley; gold and silver were mined there, and there dwelt in these mountains two fierce and predatory groups, the Kunihs and the Kāngjina Turks, both of them probably remnants of Hepthalite peoples (see Kumpis).**

The form Khuttalān, with the plural ending, is early attested, for this is found in the very early New Persian satirical verses composed by the local
people against the Arab commander Asad b. 'Abd Allah al-Kasri when he unsuccessfully raised Khuttal in 108/726-7, see Tabari, ii, 1492, 1494, 1602. Later Persian poetry requires forms like Khuttal or Khaltân, whilst the 'Hudud al-Sultan', tr. Minorsky, 139, spoils Khottle. Yâkhtân, loc. cit., gives both Khuttâl and Khuttal, with his main entry under the latter form. In the Chinese annals we find forms like Koutut-lo, see Marqart, Erdnbroken, 299-300. An etymological connection with the name of the Hephthalites, within whose northern kingdom Khuttal certainly fell (see PAYATLA) is certainly not impossible.

The principal town of Khuttal and the residence of its ruler was at Halbak to the south of the modern centre Kulâb/Kulayb, whilst Nustâr or Andârârân is described as the main trading centre. Other towns enumerated by the geographers include the important centres of Halawand and Munk, the latter probably corresponding roughly to the modern Bâdjuwân; according to Yâkhtân, Munk was on the borderland with Râzî and the Turkish lands, so those of the Kumbadân, etc. Clearly, Khuttal was a prosperous and well-settled region at this time.

In the pre-Islamic period, the local rulers bore the titles Khuttalân-Shâh or Khuttalân-Khudâb and Shâhie Khuttalân (Ibn Khurarâdâbâd, 40). The Arab invaders did not gain full control of Khuttal till the end of the Umayyad period. The rebel al-Hârîrî, Surâyî (q.v.) received support from the local ruler, and in retaliation, Asad b. 'Abd Allah al-Kasri led two expeditions into Khuttal in 128/643-4. These provided an appeal for help to the Khâân of the Türgez or Western Turks Sulû, and the Arabs had to retreat hastily (Gibb, The Arab conquests in Central Asia, 813). The region was not fully secured till 133/750-1, when Abbâd Dâwûd b. Ibrâhîm, governor of Balkh, drove out the ruler (multâs) of Khuttal, who fled first to the Turks and then to China, where he was granted the honorific title of rajâ (Gibb, op. cit., 92; E. Chavannes, Documents sur les Toutes occidentales, 165, 216.

In the ensuing century or so, Khuttal same under the rule of the Khudâbâdîs or Abbâd Dâwûdîs, who exercised power on both sides of the upper Oxus. In the Sâmânîd period, the amirs of Khuttal were in loose tributary status only to the Sâmânîs, sending presents but not taxation to Bâghrân (Mukaddasî, 337), and they exercised suzerainty south of the Oxus, for the 'Hudud al-Sultan', 105, says that the diwan of the small principality of Yûn in Bâdjuwân was tributary to the amir of Khuttal. In the warfare of 355/749-7 between the Sâmânîs Nûh b. Nâsr and Abbâd 'Alt Câghânî, all the vessel rulers (multâs-i dâfî) along the upper Oxus were stirred into revolt by Abbâd 'Alt, including the amir Abbâd b. Dâfî of Khuttal, the amîr of Râzî and the Kumbadân (Gardîlî, ed. Narîmân, 36-7, ed. Abbâd b. Hâjî (Tabari, Tehran 1347/ 1965, 157-8, cf. Barthold, Turkestân, 248).

Under the early Ghânzmawis, Khuttal was strategically important as being in the buffer zone between the Ghânzmawis and their Karâkânî rivals. Khuttal is included with Câghânîyân and Kûtâbâhîyân amongst the territories enumerated in the 'Abûsîzâl Câlîfî's investiture diploma of 1322/932 to Mas'ûd b. Mahmûd (Baybaki, in Bosworth, The Ghânzmawis, 54), but it was also claimed by the Karâkânî 'Alt-tîn (see ILKHâNGs), who stirred up the Kumbadân to harry the region. Unlike as in the neighbouring principality of Câghânîyân, where the Mubtadâi amirs remained, no separate family of local rulers is mentioned for Khuttal at this time; Ghânzawî influence was exercised directly, seen in Mas'ûd's appointment of a kâhâ-i 'Afsârî for Khuttal (Bosworth, op. cit., 178).

In the Sâlâtîd period, however, various local amirs are mentioned. An amir of Khuttal rebelled against Alp Arslân in 456/1064, but was killed (Ibn al-Ash'ârî, x, 22), and in 553/1168 there was a campaign by the lord of Khuttal, one Ibn Shujî'î Farârkâhî, formerly a vassal of Sandjar, against the important crossing-place of Tîrânîsh, taking advantage of the chaos in Khurâsân consequent upon Sandjar's capture by the Ghûz and then his death; this Ibn Shujî'î is said to have claimed descent from the Khâânân emperor Bâhrân Gûr (Ibn al-Ash'ârî, xi, 135).

In the period of the Ghânzmawis and Khârânî-Šîrânî, no separate native dynasty is mentioned. When BâkfiWalsh, it may have been part of the Ghânzawis empire and may have become one of the small principalities into which that empire broke up, see Dâfînî, Tabâhî-i naskirî, ed. Habûbî, Kabul 1341-3/1622-4, i, 387, 392, tr. Rauvery, 426, 235, 490. A Dâfîl al-Dîn 'Umar al Mawshî, apparently from the Bâniyan branch of the Ghânzawis (q.v.), was carried off into captivity in Khârânî-Šîrânî ca. 612/1215, according to Nasawî, see Barthold, Turkestân, 322.

In the 8th/14th century, Khuttal was likewise one of the small states into which Câghâtây's empire disintegrated; Shâhâr al-Dîn Vândî records that the ruler of Khuttal, Kay Khusraw was killed by Timur for reasonable excuses with Khârânî (Zafar-nama, Calcutta 1885-8, i, 243). Later, Khuttal was one of the dependencies of the region of Hîrân (q.v.) and was controlled by the later Timûrid amir of Kûnduz. Then in the 16th/20th century it passed under Ozbâg control. The name Khuttal now disappears from use, being replaced by that of the modern town of Kulbâb; one of the last recorded uses of the old name is in the dynastic history of the Ozbâgs, the Bâdh al-arâd fi manâdîl al-âdâbî of Mahmûd b. Amîr Bâlî (begun in 1040/1634). After being included in the Khâânate of Bûhûshân during the 15th and 16th centuries, the mediaval region of Khuttal now forms part of the Tâdzhikistan SSR.

Yâkhtân, Dabûtî, ii, 102, also mentions a village of al-Khuttalân-afr on the Baghâdî-Kûrâshân high road near Daskard.

they were descendants of al-Salt b. al-Nadr b. Kināna b. Khuzayma b. Mudrīka b. Iyās b. Muḍar. The claims for Muḍar descent made by some groups of Khuzāʾa were firmly rejected by genealogists, who asserted that both Kamaʿa and al-Ṣalt died childless. (Ibn al-Kalbī, Diwan al-nasaʾ, Ms. B.M., Add. 32997, fol. 4b, il. 9-10; al-Wazīr al-Maghribī, Abū al-huwayšī, Ms. Bursa, Ḥuseyn Cebî, 10, fols. 8b-8a; al-Baladhurī, Ascend, i, 34 UK, 36-9; Muṣṭafâ, op. cit., ii, 12). Musṭafâ, recording the Muḍarī genealogy of Khuzāʾa, confirmed by an utterance of the Prophet, remarks cautiously that the pedigrees uttered by the Prophet is certain true, provided that it was actually compiled by him (Muṣṭafâ; Ibn ʿAbd al-Barr, Al-Imāh, 98). Harmonising traditions, trying in the usual way to bridge the contradictory reports about the origin of Khuzāʾa, claim that the mother of Lubayy married after the death of Kamaʿa the Yamani Ḥārīqa and the child traced his pedigree to the Yamani father who adopted him (al-Fāṣī, Shīrāz, ii, 46). Another tradition states that Kamaʿa married, begot children, but clashed with his relatives, left for al-Yaman and allied himself with the Aṣl (al-Baladhurī, Ascend, i, 35, li. 1-2). The Yamani tradition, on the other hand, records a lengthy list of ancestors of Khuzāʾa beginning with (ascendants of) Khuzāʾa himself (i.e. Ṭabīʿ b. Ṣalāḥ). The pedigree is traced back, of course, to Ḥaṭṭān (al-Fāṣī, Shīrāz, ii, 45, li. 5-10; Ibn ʿAbd al-Barr, Al-Imāh, 92; Ibn Durayd, Al-Īṣābāh, ed. ʿAbd al-Salām Hārin, Cairo 1378/1958, 468; al-Ḥāzimī, Uḏrāšt al-mubtadi, ed. ʿAbd Allāh Kārub, Cairo 1384/1965, 54).

The traditions about the beginnings of the rule of Khuzāʾa in Mecca, ascribing Khuzāʾa to Azd, record a lengthy story about the migration of the tribal groups of Azd from al-Yaman to the North. While some tribal divisions continued their migration to Syria (Ğassūr) and Umān (Azd Ṣhaʿraw), the Khuzāʾa separated (inḏalqāʾ) and managed to control Mecca. One of the traditions reports that the leader of the Azd asked Ḥijrūm (i.e. Ḥijrūm b. Ṭāʾūb), the tribe which ruled over that period of time, to permit them to settle in the territory of Mecca, which their forage would find for them suitable pasture-grounds, threatening war if they were denied this. In fact, when Ḥijrūm refused to grant permission, Khuzāʾa fought them, defeated them and got possession of the Sanctuary of Mecca. Another tradition, on the authority of Abū ʿAmr b. Shuqayr b. Ṣalāḥ, reports that the custodianship of the Kaʿba was gained legally by Khuzāʾa, as their leader Ṣalāḥ b. Ḥārīqa married Ṣulaymāna, the daughter of al-Ḥāʾib b. Mūḍār al-Dhurūm; his son Ṣalāḥ b. Ṣalāḥ (i.e. Ṣalāḥ b. Ṣalāḥ) had thus a legal basis for his claims to the custodianship. In the protracted battles which ensued between Khuzāʾa and Ḥijrūm, Khuzāʾa’s defeated Ḥijrūm, who had to leave the city. A third tradition ascribes the defeat of Ḥijrūm by Khuzāʾa within their deteriorating and moral decay. Afflicted by plagues, God’s chastisement for their wickedness, they were extirpated, and the main area of abode of the Khuzāʾa, who introduced the worship of Hubal and stating that Hubal was consequently called “Hubal Khuzāʾa” (al-Baladhurī, Ascend, i, 37, no. 77; al-Fāṣī, Shīrāz, ii, 51 inf.). As in the case of Ṣalāḥ, some traditions mention among the Khuzāʾa’s ancestors of other tribes who, in their search after the true religion, worshipped Ziyād. The unbelievers used to refer to the Prophet as Ibn Abī Ḥabība in the early period of his prophethood, pointing out his deviation from the current beliefs of his people. (Muhammad b. Ḥabīb, Al-Muḥaddib, ed. I. Lichtenthaler, Hyderabad 1362/1943, 129; Al-Bāhrī, Al-Dīn al-Kabīr, Insān al-saḥābī fī sharḥ al-ṣaḥābīn, i, 333; al-Baladhurī, Ascend, i, 91, 327; al-Sīyūḥī, Al-Durr al-maʿṣūm, Cairo 1314, iv, 131; Al-Kūtābī, Taṣawwur, 1387/1907, xvii, 119; al-Maktrī, Insān al-ṣaḥābī, ed. Mahmūd Šāhirī, Cairo 1941, i, 77, 158; al-Kāẓimī, Sharḥ al-nabī, Ms. B.M. Add. 1455, fol. 31a-3b; Abī al-Salām Hārin, ed. Nāṣir al-Dīn al-Maḥfūzī, Cairo 1375/1954, i, 100; al-Fayrūzābādī, Toḥlīl al-ābāb fīmā ṣanāʿa ilā gḥarīb abīḥ). These conflicting and contradictory stories seem to indicate that the formation of the tribe of Khuzāʾa took place over a long period of time, ramifying into various tribal units. The main area of abode of the tribe was between Mecca and Medina. When Khuzāʾa arrived in Mecca aiming to gain control of the city, he had to subdue the ruling Bāḥrī b. ʿAbd Manāṣir b. Kināna, the Khuzāʾa’s and their abettors, the Siwāt. The different stories about the emigrative Khuzāʾa resemble in their outline the stories about the former rulers of Mecca; his marriage with Hubbā bint Huṣaylā b. Ḥubshayya gave legitimacy to his custodianship of the Kaʿba. Another manner of
legitimation, the tale of how this office was purchased by Kusayy for a goat's skin of wine from the drunken Abu Gubahbên, is recounted in the compilations of proverbs and stories of fools (al-Ašārī, Djamārātul-anwâhīl, ed. Muhammad Abū l-Faḍl Ibn al-Mudīl and Abū l-Mudīl Kušāmī, Cairol 1384/1385, i, 187, no. 388; Kamās al-Isakhbār, al-Durr al-
şimātur fi al-anbīyā wa 'l-sirāt, Cairo 1372/1373, i, 189, no. 335). The court of Abū Gubahbên (dār Abū Gubahbên) was extant in Mecca in the second half of the 3rd century of the Hijra (al-Fākhīl, Ta'rīkh Makkah, Ms. Leiden, or. 463, fol. 456b, i, 15). Like the preceding rulers, he fought, according to another no count, the two tribes Bakr b. 'Abd Manât and Khuzā'a and crushed their power. His wife Ḥubbā revealed, as in the story of Yūdîl, the place where the pillar with the Black Stone was buried, and so the trustworthiness of the Ka'bah could be resumed (al-Fākhīl, ii, 73; al-Nuwyārī, Niḥyāt al-ārāb, Cairo 1374/1375, xvi, 31). The relations between Kušayy on the one side and the Bakr b. 'Abd Manât and Kušā'a on the other were settled on the basis of the judgment of the arbiter Yûnār b. 'Awf of the Bakr b. 'Abd Manât, called al-Shu'dhādh. The verdict granted Kušayy the custodianship of the Ka'bah and provided that Kušā'a should be left in the area of the ātblum (Ibn al-Kalbī, Dijamārāta, fols. 51a, inf.—31b, sup.).

In the new régime set up by Kušayy, in which the scattered tribal units of Kuraysh were gathered and settled in Mecca, the groups of Kušā'a played an important role in strengthening the power of Mecca, aiding Kuraysh to extend their influence among the tribes. Kušā'a was included in the organisation of the Hums. Two tribal groups of Kušā'a, the Muṣṭālīlīk and Hayya, were included in the organisation of the Al-Shābīlī, the allies of Kuraysh (see e.g. Ibn Kuṭayba, al-Maṣāriʿūtā t̲-b̲a'ībīl, Hyderabād 1368/1949, i, 4; Muhammad b. Ḥabīb, al-Muḥāābatān, 178; al-Ḫazīmī, al-l-ṭabūr fī-bāyān wa l-nāsīkh min al-ṭabār, Hyderabād 1339/1950, i, 150; Ibn al-Kalbī, Dijamārāta, fols. 45b–46a sup.; al-Fāṣl, Shī'ā, ii, 41; Yākūtī, s.v. Makkā; al-Bukrī, Mīṣāq al-ma'sāqīm, ed. al-Salāhī, Cairo 1364/1945, 245; Ibn al-Fāṣlī, al-Bulādān, ed. de Goeje, Leiden 1885, 13). Together with Mudāḏa tribes, Kušā'a worshipped al-Uzūz and Munā'[ together with the Da'ūs they worshipped Dhu l-Kaffān (Yākūtī, s.v. Munā'); Ibn ʿArabī, Muḥāḥābatā t̲-b̲a'ībīl, Beirut 1388/1968, i, 411; al-Aṣqāfī, al-Shāmīlī, the section Ta'wīshītā il-b̲a'ībīhā, Ms. B.M. Or. 1493, fol. 27a; Muhammad b. Ḥabīb, al-Muḥāābatān, 158). The involvement of Kuṭā'az and Bakr b. 'Abd Manât in the affairs of Mecca and their influence can be gauged from the story about the agreement between Kuraysh and Taḥfīl concerning the mutual rights of these two tribes to enter Mecca and Wa'dīlīj: the Taḥfīl complied with the demands of Kuraysh, fearing the strength of Kuraysh, Kuṭā'az and the Bakr b. 'Abd Manât (Muhammad b. Ḥabīb, al-Munāmahā, 280).

The considerable number of names of Kuṭā'az married by Kuṭa'āqīs recorded in the sources bears evidence of the close relations between Kuraysh and Kuṭā'az. These data allow us to see that with 'Abd al-Muṭālīk, they stressed that he was "borne" by Kuṭā'az women (fa-bād wa'l-wāldāhā). In the same style the Kuṭā'az Amr b. Sālim ad dressed the Prophet with the words had kusni

woładan wohnānā wūldīdī when he came asking his help against the Banu Bakr and Kuraysh (Ibn Sayyid al-Nisā, ʿUyīn al-aṣbāb fī-jumān al-maḥāsīt wa'l-gašālīl fī 'l-sīyāsāt, Cairo 1356, ii, 154–5, 234).

When the Prophet was on his ḥijrā to Medina he met, according to one tradition, Burayda b. al-Huṣayn al-Aṣlān (ra.) with a large group of his people; he summoned him and his people and embraced Isma'il b. al-Muṭālīk and the Prophet. These Aslam, a branch of Kuṭa'āqīs, allied themselves very early to the Prophet and warriors of Aslam took part on the side of the Prophet in his campaign. The agreements of the Prophet with Aslam (see Ḥamīdullāh, Mudīmīmī il-qāyīlāt al-nāṣīkhīyya li il-ṭabībī al-muṣālāta, Cairo 1376/1956, 191–2, nos. 165–70) bear evidence to the friendly relations between the Prophet and Aslam. After the murder of the people of the expedition of Bīr Maṣfīn (ra.), the Prophet invoked God's blessing for Aslam (see Aslam al-sālimātā Allāhū; al-Wāṣīlī, al-Maṣāriʿūtā al-sālimātā Allāhū, ed. Mas'ūd Jones, Oxford 1966, 350). When the Prophet mobilised the forces for the conquest of Mecca, he summoned the Aslam, who dwelt in the neighbourhood of Medina, to present themselves in Medina. In fact, 400 warriors of Aslam, among them 30 riders, took part in the conquest of Mecca. The two standard bearers were Burayda b. al-Huṣayn and Nādiyya b. al-Ṣāliḥām of Aslam (al-Fākhīl, Shī'ā, ii, 123; Ibn Ḥadīdār, al-Īṣābāt, ed. Afīl al-Muḥāābatān, ed. Mūḥiyy, Cairo 1329/1972, vi, 398, no. 8647; al-Wāṣīlī, 799–800). Aslam, along with Shī'ār, Muzayna and Djiyhuayn, were pointed out by the Prophet as surpassing in virtues the mighty tribes of Tamīm, Asad, ʿAmīr b. ʿAṣṣā and Ḥaṭṭālān (al-Kaṭṭākīlīlī, ʿIrīdāl al-ṣāliḥī, Cairo 1327, ii, 11–13; Ibn Ḥadīdār, Fāṣl al-bālībīl, Cairo 1301, vi, 395–7). Commentators of hadīth are unanimous in saying that this high position was granted to them because they hurried to embrace Islam.

The attitude of the Muṣṭālīlīk, another branch of Kuṭa'āqīs allied with the Banū Muddīlīlīk of Kūhānīn and included in the Ablābīlī organisation linked with Kuraysh, was however quite different towards the Muslim commonwealth of Medina. Their leader, al-Rāhibī b. Abī Dirāf, gathered the forces of his tribe for an attack against Medina. The forces of the Prophet attacked the Muṣṭālīlīk at Murāysh in 5/627, defeated them and took captives and booty. The Prophet married the captured daughter of the leader, Djiyhuaynīya (al-Wāṣūlī, 404–3).

Another branch of Kuṭa'āqīs, the Ka'b b. ʿAmr, played a decisive role in the struggle between Mecca and the Prophet. The dissensions and clashes between the Ka'b and their neighbours, the Bakr b. 'Abd Manât, led the Ka'b b. 'Amr to opt for an alliance with the Prophet in the pact of al-Hudaybiyya, whereas the Bakr b. 'Abd Manât allied themselves with Mecca. A group of the Bakr b. 'Abd Manât sided clandestinely by some leaders of Kuraysh attacked the Ka'b b. 'Amr al-Wāṭir and killed some of them. The orator of the Ka'b, 'Amr b. Sālim, appeared at the court of the Prophet in Medina and addressed him, reminding him of the alliance of the Ka'b with 'Abd al-Muṭālīk, pointing out the killing of the Ka'b at al-Wāṭir, and urging him to revenge his allies. The Prophet responded and promised aid for victory (nāṣa). The request of a man from the ʿAmīr b. ʿAmr, the brethren of Ka'b b. 'Amr, to be included in the assembly was answered by the Prophet's remark that Ka'b and ʿĀdī are one corporate body (wa-ka'b ʿĀdī t̲a'āfūlū il-lālātū bi'l-nufra).
When the Prophet went out against Mecca, he was accompanied by the tribesmen of Ka'b who stayed in Medina; the main troop of Ka'b joined the forces of the Prophet in Kudayt. The troop of the Ka'b, numbering 500 warriors, had three standards carried to fight the Banu Bakr. In 9/630 they were permitted to fight the Banu Bakr b. 'Abd Manat against the Ka'b b. 'Amr al-Talabi, Tafshi', ed. Shibli, Cairo 1958, xiv, 158-62 (nos. 16953-16957); it is noteworthy that the Prophet permitted the Ka'b to fight the Banu Bakr b. 'Abd Manat against the Ka'b b. 'Amr al-Talabi, Tafshi', ed. Shibli, Cairo 1958, xiv, 158-62.

It is evident that the ten- 

| Kamal | 6.o, fol. 85b; al-Tabarani, al-Mu'jam al-

| aqari', ed. 'Abd al-Rahman Muhammad Uthman, Cairo 1388/1968, ii, 73-5). It is evident that the tendency of this tradition is to establish the position of the 'Adi b. 'Amr in the Prophet's invocation and to stress their role in the expedition against Mecca. Whether the Ka'b b. 'Amr were already Muslims when they applied for help is disputed by scholars (Ibn Suyuti al-Nasi, ii, 182, penult. says that they were unbelievers; al-Kal'bi, al-Tasrif, ed. Musafo, 'Abd al-Wahid, Cairo 1389/1969, ii, 288, that they were Muslims; and see Ibn Hisham, op. cit., iv, 36, n. 4). According to some commentators of the Kur'an, vv. 23-15 of Qur'an 60, fol. 85b; al-Tabarani, al-Muttakl al-Hind, Hyderabad 1385/1965, xiii, 55, no. 316). The Kur'an is said to have been revealed to the Prophet in Kudayt. The Prophet permitted the Ka'b to fight the Banu Bakr. In 9/630 they were permitted to fight the Banu Bakr b. 'Abd Manat against the Ka'b b. 'Amr al-Talabi, Tafshi', ed. Shibli, Cairo 1958, xiv, 158-62 (nos. 16953-16957); it is noteworthy that the Prophet permitted the Ka'b to fight the Banu Bakr b. 'Abd Manat against the Ka'b b. 'Amr al-Talabi, Tafshi', ed. Shibli, Cairo 1958, xiv, 158-62.

It is evident that the tendency of this tradition is to establish the position of the 'Adi b. 'Amr in the Prophet's invocation and to stress their role in the expedition against Mecca. 'Abd Manat against the Ka'b b. 'Amr al-Talabi, Tafshi', ed. Shibli, Cairo 1958, xiv, 158-62.

AL-KHUZÂMÂ (A.S.) "lavender" has for a long time been considered as the origin of the name of Ahwâzmas, on the coast of the Rîf of Morocco, and this etymology is still given in ESP (art. ALHUCEMAS). Since the problem raised by this toponym has not yet been satisfactorily resolved, and since moreover Ahwâzmas has now, since Morocco's achievement of independence, been "arabised" to al-Husayna, it is under AL-HUSAYMA that an article on the place will be found in the Supplement.

KHZÎSTÎN, a province of south-western Persia, and the land of the Hzâ-/Hzâ/Hzâ (Hâsâl/Kussa), the Ogygia/Thall of Strabo and Pliny. The province of KHZÎSTÎN corresponds more or less to the ancient Elam and to the classical Susiana, and the names of its present capital, Ahwâz (q.v.), its ancient capital, Susa (q.v.), and the town of Hâvâza (q.v.), all reflect the name of its inhabitants in Elamite times.

Essentially, the province consists of alluvial fans formed by the Karkhâ and the Kûrân (q.v.) rivers and situated between the Zagros mountains and the sea; near the Persian Gulf, partially saline mudflats merge into a zone of tidal marshes, and the coastline is pierced by deep tidal estuaries known as khor. The province is bounded on the west by the Irano-Iranian frontier, on the north by Lâstân (q.v.), on the south by the Persian Gulf; and on the east by the river Hindiyân or Hindîkhî (q.v.). The chief towns are: Abâdân (see 'ABADÂN); Ahwâz (q.v.); Khurrarnu'îrân (q.v.); Dasht Mishân; Dîzîf; and Shâgîtar (see SHAGHAT). The population of the province (1,044,526 in 1966) is mainly hybrid Arab-Persian.

The climate of KHZÎSTÎN is hot and, in summer, so humid that water drips from the trees. Both the Greek and Muslim geographers speak eloquently of the heat. Strabo, quoting an unknown source (Near-choros?), says that in Susa at mid-day lizards and snakes could not cross the streets quickly enough to avoid being fried, and that the air spread out in the sun jumped as though it had been placed in an oven (Geography, xv.1.10). There was general agreement that snow rarely fell in KHZÎSTÎN, and water rarely froze. The great heat is accounted for by: (1) the lack of elevation (average altitude in southern Khuzistân = 20 metres/66.80 feet, rising to 100 metres/328 feet in central Khuzistân); (2) the southerly inclination of the land, which exposes it to the maximum effect of the sun's rays; (3) the hot winds in summer from the Syrian desert and Arabia; (4) the clayey nature of the soil, which retains the heat; (5) the lack of open water, snow-covered mountains or forests to the west to moderate the heat of westerly winds. Because of its climate, KHZÎSTÎN did not have the good reputation as a place in which to live; the Hudîd al-Aslâm, tr. Minorsky, 136, describes the people of Ahwâz as "yellow-faced", and quotes a popular belief that whoever establishes himself in Ahwâz becomes wanting in brains, and every aroma that is carried there loses its scent on account of the climate". Despite this, the province was noted for a perfume manufactured there from violets (B. Spuler, Iran in früh-islamischer Zeit, Wiesbaden 1952, 386).

Despite the disadvantages of its climate, KHZÎSTÎN from earliest times was noted for its prosperity. Unlike the regions of the Iranian plateau, KHZÎSTÎN has never lacked for water, which is provided in abundance by the Karkhâ, Dez and Kûrân rivers and their tributaries. The province was the handmaiden of the Achaemenid empire. Strabo states that "Susian abounds so exceedingly in grain that barley and wheat regularly produce one hundredfold, and sometimes two hundredfold" (Geography, xv.3.12). In Sasanian times, extensive urban settlements, and cultivated lands watered by large-scale irrigation works, were protected from the destructive raids of the bedouin by a defensive ditch known as shandâl Sîbâr. In the 4th/10th century, KHZÎSTÎN had a monopoly of the sale of cane-sugar throughout Iran, 'Trak-i 'Arab and Arabia. Other important crops included citrus fruits, dates, melons, cotton and rice. The waters of the Persian Gulf provided abundant fish. The other basis of the province's prosperity was trade; from early times, Ahwâz had been the centre of an important road network and a recognised crossing-place on the river Kûrân.

Under the two great pre-Islamic Iranian empires, that of the Achæmenids and that of the Sasanîds, KHZÎSTÎN was firmly under the control of the central government. To the Achæmenids, it was the province of Uvâja, and Susa was the administrative capital of the empire; for the Sasanîds, it formed part of the "super-province" (pâhârân) of Nîtâwâ (the South), and was divided into seven kârâs. In 122/638 the Muslim Arabs, after a reconnaissance raid across the Kûrân, launched a major attack on KHZÎSTÎN under 'Utba, captured Ahwâz, and completed the subjugation of the province by 19/640. In the 3rd/9th century KHZÎSTÎN, and particularly the city of Ahwâz, suffered as a result of the Zandî (q.v.) rebellion, and considerable damage was done to the irrigation systems. During the succeeding four centuries, KHZÎSTÎN was governed in turn by the Bûyids [see BuwâYûd], the Sâfâwîs (q.v.) and the Khânîâns (q.v.).

In the 9th/10th century, following the onslaughts of Timûr on the Iranian world, a local Arab Shî'î dynasty, the Mushâshâ'î (q.v.), established itself at Dâvîzâ, on the old course of the Karkhâ river on the western edge of KHZÎSTÎN, and enjoyed about seventy years of independence. In 835/1430, however, Shâh Ismâîl and the Sâfâwîs (q.v.) overran the province under 'Utba, captured Ahwâz, and completed the subjugation of the province by 19/640. In the 3rd/9th century KHZÎSTÎN, and particularly the city of Ahwâz, suffered as a result of the Zandî (q.v.) rebellion, and considerable damage was done to the irrigation systems. During the succeeding four centuries, KHZÎSTÎN was governed in turn by the Bûyids [see BuwâYûd], the Sâfâwîs (q.v.) and the Khânîâns (q.v.).

Like the rulers of other petty states along the Ottoman-Sâfâwî border during the 16th/16th to 17th/18th centuries, the Mushâshâ'î sultanats played one side off against the other, often very much to their own advantage. As a consequence of Mushâshâ'îs rule, the western portion of KHZÎSTÎN became known, from early Sâfâwî times, as 'Arabîstân. In later Sâfâwî times, the title of "sâli of 'Arabîstân" was conferred on the Mushâshâ'î sultans. In the Sâfâwî administrative system, the sâlis were the highest in rank of the four categories of usurâr-yi sâravân, or "owners of the marches", and, of the four sâlis, the first in rank was the sâli of 'Arabîstân, who was "higher and more honoured than his colleagues, on account of his belonging to a sayyid family, his valour and the number of his tribes" (Tâdâkhût al-mulûk, tr. Minorsky, London 1943, 44). When the Afghans invaded Iran in 1115/1702, the Mushâshâ'î sultans threw in their lot with the invaders. In 1120/1707 KHZÎSTÎN was temporarily occupied by the Ottomans, but in 1142/1732 Nâdir Khân Afghâr [see...
KUHSISTAN – KHVVARSII

SABIN GHAH reoccupied the province and made the Mushaghia's subjects his vassals.

In the course of the 15th and 16th centuries, the Mushaghia dynasty steadily lost ground to Arab tribesmen of the Banu Ka'b and Banu Lamin (p. 436). The former had begun to migrate in large numbers from central and southern Arabia into southern Mesopotamia and southwestern Iran during the 12th/13th century; at the height of their power, in the latter part of the 12th/13th century, their sway extended from Basra to Bihbifin (in the province of Fars, just east of the Khuzistan border). The Banu Lamin were nomads inhabiting regions along the lower course of the Tigris, and between 1258 and 1264 some 17,450 families from this tribe moved into Iranian territory. These immigrants lived a life that was neither completely settled nor truly nomadic, but gradually a sedentary way of life became the norm. The Banu Ka'b not only intermarried with Iranians, but adopted Shiasim and wore a compromise style of dress consisting of Persian tunic and trousers under an Arab kahf. Still later Arab arrivals, however, the Muntakib (p. 437), who in 1621 migrated to Hawiz and ousted the Ka'b from that area, have remained Sunni. As a result of this great influx of Arabs, the name of 'Arabistan was, by the 17th century, usually applied to the province as a whole. In the 15th century, control of the province virtually passed from the hands of the central government into those of the Shaykh of Mushaghia (Khurramshah), and it was not until 1654 that Rida shah Pahlavi (q.v.) overthrew the Shaykh of Mushaghia and restored the proper name of Khuzistan.

After the collapse of the Safavid dynasty (1523/ 1722), the prosperity of Khuzistan sharply declined. A number of factors seem to have been involved: (1) hostility between Iranian and Arab elements; (2) the extensive damage to agriculture and to the settled communities caused by both the recent Arab immigrants and by the indigenous transhumant tribes like the Lurs and Bakhtiyari (see Lambton, Lurid and pastoral in Persia, Oxford 1955, 177-8); (3) the constant raiding of trade caravans by the Banu Lam'; (4) the breakdown of the authority of the central government, which led to general neglect and maladministration, and the instability caused by frequent changes of governors; (5) oppression by tax-collectors, under whom the Arab shaykhs levied taxes five or six times a year (see Lambton, op. cit., 267). It was only after the discovery of oil at Masjidi-Sulayman in Khuzistan in 1908 that the economy of the province began slowly to recover, and this trend was accelerated by the completion of the Trans-Iranian Railway in 1938; the line ran through Ahvaz, and its southern terminal was Bandar-Abbas.

In the last twenty years, Khuzistan's prosperity has increased exponentially. Many large oilfields are connected by road and pipeline with the refinery at Abadan and with the terminal at Bandar-Abbas (formerly Bandar-I-Mahshahr). Abadan, a virtually uninhabited site fifty years ago, is now Iran's fifth city (estimated population, 1975, 250,000). In 1964, the deep-water tanker terminal on Kharg Island was opened. The construction of the northern Mushaghia's Rida Pahlavi dam on the Dez river (1962) has not only provided the province with hydro-electricity but with water for the large-scale development of market-gardening and other agricultural projects, including the resumption of the cultivation of sugar-cane; oil-rainds are planned. Khurramshahr is now one of Iran's principal ports-of-entry on the Persian Gulf. More recently, the development of the natural gas industry has taken place on a large scale; in 1973, 8.7 billion cu. m. of natural gas were exported to the U.S.S.R. The petrochemical industry is expanding at a great rate. The rapidly developing Djamshidpur University at Ahwaz now has over 8,000 students. The words of the author of the Naddid al-Salam (written not until one thousand years ago, now once again hold true: "This province is more prosperous than any province adjoining it. Great rivers and running waters are found in it. Its countryside is flourishing and its mountains are full of utility" (vii:50). Bibliography: In addition to the references in the text, see A. H. KHVARSII (self-designation, Kodsas hikwa, Khouni, KHVARSII in Russian, KHVARSII in Russian) an ethnic group in the Caspian whose language forms part of the Avar group. Among the Khvarsis, however, the Dido and Khvare were the Dido group of the north-eastern Terek-Caucasian languages.

According to the 1926 Soviet census, there were 1,019 ethnic Khvaresis, of whom 1,018 gave Khvaresi as their maternal tongue. They formerly lived in five aulas (including Khvaresi and Inkhorari) on the upper course of the Or-Uzbeks, a southern affluent of the Andi-Koyun in the south-west of the Bagul district of the Dagestan ASSR; in 1944, they were resettled in the district of Vefeco in that same republic. They lived originally in an isolated region of high mountains, which long preserved them from any marked degree of outside influence and allowed them to retain their patriarchal customs. They are Semites of the Sharrf legal school. Their traditional economy was based on sheep-rearing, with a system of transhumance, and also on terraced agriculture and various crafts; their present-day economy is essentially similar, with the added element of cattle-rearing.

Khvaresi is purely a vernacular language; Avar is used as the first literary language, and also as the second (sometimes first) spoken language, since it is used as the medium for primary education. Russian is the second literary language. Both linguistically and culturally, the Khvaresis are now being assimilated to the Avars [see further Avar, Dagestan, Dido, Al-Kaib].

To Allâh; when they say these words, perform our soldi...
In the mosques the direction of the salat is indicated by the mihrib (q.v.); in classical hadith, this word does not occur and kibla is used to mean the wall of the mosque towards which one turns. At a kibla outside a mosque, a suara (q.v.) marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the kibla (Lane, op. cit., 228). It should be noted that many mosques are not accurately but only approximately oriented (according to the shari'a, see below). It sometimes happens that this error has been later corrected by the drawing of lines or the stretching of threads. This is, for example, the case in many mosques of Indonesia where the faithful at the salat take their direction not from the mihrib but from such indicators.

The laws relating to the kibla are here given very briefly only and according to the Shafi'i school as laid down in al-Shirki's Kitab al-Tantab (ed. Juyboll, 20). The adoption of a kibla is a necessary condition for the validity of a salat. Only in great danger and in a voluntary salat on a journey can it be neglected. But if one is on foot or can turn his steed round, it should be observed at the thariq, rukba and suqi'id. One should turn exactly in the direction of the kibla, and one who is near it can do so with certainty. According to others, when one is on foot only the general direction (fur'a) is obligatory. Outside of Mecca one turns towards the mihrib within a mosque; when not in a mosque one follows the direction of Mecca one turns towards the mihrib. According to others, when one is distant only the general direction (fur'a) is obligatory. Outside of Mecca one turns towards the mihrib within a mosque; when not in a mosque one follows the direction of Mecca and as such it was usually treated by the mediæval

---

**Mathematical Solution:**

The determination of the kibla was an important problem for the scientists of mediæval Islam. Although essentially a problem of mathematical geography, the determination of the kibla can also be considered as a problem of spherical astronomy. Thus most Islamic astronomical handbooks or sigils, of which close on 200 were compiled during the millennium beginning in 750 A.D., contain a chapter on the determination of the kibla. In addition, several dozen mediæval manuals for timekeeping deal with the topic. In contrast, the number of treatises dealing specifically with the kibla problem is quite few.

**The Kibla:**

The kibla at a given locality is a trigonometric function of the local latitude, the latitude of Mecca, and the longitude difference from Mecca. The derivation of the kibla in terms of these three quantities was the most complicated of the standard problems of mediæval Islamic spherical astronomy, and the solutions to the kibla problem proposed by the leading astronomers of mediæval Islam bear witness to the development of mathematical methods from the 3rd/9th century to the 8th/14th centuries and to the level of sophistication in trigonometry and computational techniques attained by these scholars. Already in the 3rd/9th century Muslim scholars had derived exact solutions using the construction of Greek mathematics known as the analemma (in which the various significant planes involved in a specific problem are either projected or folded into a single working plane, whereas a geometrical solution can be derived graphically or the trigonometric solution can be derived by plane trigonometry) or using the classical Theorem of Menelaos for the complete spherical quadrilateral. Later kibla methods included trigonometric solutions based on projection methods or on the simpler corollaries of the Theorem of Menelaos. Certain Muslim astronomers contented themselves with approximate solutions, which were adequate for practical purposes. The final mathematical solution to the kibla problem was the table compiled by the 8th/14th century astronomer al-Khalli, displaying the kibla for all latitudes and longitudes.

**The Mathematical Problem:**

Fig. 1 shows a locality P and Mecca M on the terrestrial surface. The point N represents the north pole, and the meridians at P and M are shown as NPA and NMB, where A and B lie on the equator. In mathematical terms the kibla at P is defined by the direction of the great circle through P and M. In mediæval Arabic the angle $q$ between the arc PM and the local meridian NPS was called sihrid al-kibla, and the complementary angle between BM and the east-west line through P was called samt al-kibla. If $q$ and $r$ denote the latitudes of the locality and of Mecca (= PA and MB), and $L$ denotes their longitude difference (= AB), then $q$ is a function of $p$, $r$, and $L$, and can be determined by spherical trigonometry. The modern formula, which can be derived from an application of the spherical tangent rule to $\Delta NPM$, is:

$$q = \cot^{-1} \frac{\sin q \cos L - \cos q \tan r}{\sin L}$$

The exact solutions proposed by the mediæval astronomers are less direct but ultimately equivalent to this.

Although the problem of determining the kibla is a problem of mathematical geography, it is mathematically equivalent to the astronomical problem of determining the azimuth or direction of a celestial body with given declination for a given hour-angle, and as such it was usually treated by the mediæval
astronomers. Indeed, the kibla problem may be transferred to the celestial sphere simply by considering the zenith of Mecca rather than Mecca.

Fig. 2 shows the zenith of Mecca M on the celestial sphere for a locality O. The local horizon is NESW and the local meridian is NP2S. EOW is the celestial equator, P is the celestial pole, and ABC is the day-circle of $M$. PMTR is the meridian of Mecca. Now:

$$\text{PN} = q, \text{MT} = q_m, \text{and QT} = \Delta L,$$

and the problem is to determine the azimuth of $M$ measured from the meridian by the arc $SK = q$. Most medieval methods involve first finding the altitude of the zenith of Mecca above the local horizon, measured by the arc $MK = h$. This is equivalent to finding the complement of the distance between the two localities. Thus the problem of determining $q$ (or $q_m$, $\Delta L$) is mathematically equivalent to determining the azimuth $q$ ($\delta$, $\ell$) of a celestial body with declination $\delta$ (measured by MT) when the hour angle is $\ell$ (measured by QT) and the local latitude is $q$ (measured by PN). Indeed, several Islamic kibla methods state simply that if one faces the sun on the day when the solar declination is $q_m$ at the time when the hour-angle is $\Delta L$ (before or after midday, according as the locality is west or east of Mecca), then one is facing Mecca.

In the sequel a selection of methods is presented to illustrate the variety and sophistication of some of the few medieval kibla determinations that have been investigated in modern times. The notation has been modified in order to relate to that used in Fig. 2. For the details of the original constructions the reader is referred to the secondary literature listed in the bibliography. Those methods that are trigonometric in character are represented by means of trigonometric equations; in the original texts the relations are written out in words. The capital of trigonometric equations; in the original texts the

Certain Muslim astronomers also used tables based on the formula and displaying values of $q$ ($\Delta p$, $\Delta L$) for each degree of both arguments from $x^\circ$ to $20^\circ$. A feature of these tables is that the entries for $\Delta p = \Delta L$ are all $45^\circ$. Another approximate solution to the kibla problem is outlined in a treatise related to Al-Khwarizmi (fl. Baghdad, ca. 215/830). Here the formula

$$q = \sin^{-1} \left( \frac{R \sin \Delta L - \sqrt{\sin^2 \Delta p + \sin^2 \Delta L}}{\sin \Delta L} \right) = \tan^{-1} \left( \frac{E \sin \Delta L}{\sin \Delta p} \right).$$

with the trigonometric functions to base $R = 150$ rather than $R = 60$, is outlined in words. The table displaying $q$ ($\Delta p$, $\Delta L$) that accompanies this treatise was rather popular with later Muslim astronomers and exists in several manuscript copies, some of which are of Syrian, Yemeni, and Turkish provenance. Yet other approximate kibla tables based on non-trivial formulae are found in the Aṣḥāfīṣī fiq of the Persian astronomer Sayf-i Mundż̄al (fl. ca. 710/1310), the Zādi of the Persian astronomer Shams al-Munadidjim al-Wabīlfawi (fl. ca. 725/1325), and
Exact solutions

Four exact solutions to the kibla problem are outlined below. The first and second illustrate the application and mathematical elegance of the analemma construction, and the way in which it can be used to derive complicated formulae of spherical trigonometry from a plane figure. The third and fourth illustrate the application and mathematical elegance of the Theorem of Menelaos and its corollaries. Al-Khalil’s kibla table, which is perhaps the most sophisticated trigonometric table compiled in the mediaeval period, illustrates the competence of an 8th/14th century scholar in the algebra of functions and computational techniques.

A geometric kibla construction proposed by Habash al-Jāsib (fl. Baghdad and Damascus, ca. 235/850) involves an analemma in which the working plane is considered consecutively as the meridian, equatorial, and horizon planes. Habash’s method may be summarised as follows (see Fig. 4). On a circle centre $O$ and radius $R$ mark the cardinal directions NWSE, and then draw arc $WQ = \phi$, arc $QB = \phi_m$, and arc $QT = \Delta L$. Draw the diameter $QOR$ and the parallel chord $BC$ with midpoint $G$. Mark the point $M$ on $OT$ such that $OM = GC$ and draw the perpendicular $M_M$ onto $BC$. Next draw $M_I$ parallel to $WE$ and $M_IJ$ parallel to $SN$ to cut $WE$ in $J$ and the circle in $J$. Finally, construct the point $M$ on $M_I$ such that $OM = IJ$ and produce $OM$ to cut the circle at $K$. Then $OK$ defines the kibla.

This construction may be explained as follows.

Firstly, $QOR$ and $BGC$ represent the projections of the celestial equator and the day circle of the zenith of Mecca in the meridian plane. Secondly, $M_I$ represents the projection of the zenith of Mecca in the equatorial plane. If we then imagine the equatorial plane to be folded into the meridian plane, $M_I$ moves to $M$, which is thus the projection of the zenith of Mecca in the meridian plane. Moreover, $M_IJ$ is the projection in this plane of the almucantar through the zenith of Mecca, whose radius is thus $IJ$. Also $M_IJ$ and $IJ$ measure the distances from the zenith of Mecca to the prime vertical and the line joining the local zenith to $O$, respectively. Finally, we consider the horizon plane the working plane; by virtue of the construction, $MP$ is the projection of the zenith of Mecca in this plane. Thus $OK$ defines the kibla.

From such a geometric construction a trigonometric solution for the kibla problem can be derived with facility. Indeed, from the analemma construction for the kibla proposed by Ibn al-Haytham [q.v.] (fl. Cairo, d. 430/1039) a single formula for $q (\phi, \phi_m, L)$ equivalent to the modern one can be derived directly. Ibn Yūnus [q.v.] (fl. Cairo and Fustar, d. 359/969) proposed the following trigonometric solution to the kibla problem. Firstly from the quantity

$$h = \sin^{-1} \left\{ \frac{\cos \phi \cos \Delta L}{R} \right\} \cos \phi_m + \sin \phi_m \sin \phi \right\},
$$

and then the kibla is defined by

$$q = \sin^{-1} \left( \frac{\sin \Delta L \cos \phi_m}{\cos h} \right).$$

Ibn Yūnus offered no justification for this procedure, but his formulae can be derived from an analemma construction such as the one proposed by Habash.
successively the arcs TR, SR, MK and KS in Fig. 2, as follows. Firstly, find TR using
\[ \frac{\sin PS}{\sin SQ} = \frac{\sin PR \sin TE}{\sin RT \sin EQ}, \]
that is,
\[ \frac{\sin (180^\circ - \phi)}{\sin \phi} = \frac{\sin (90^\circ + TR) \sin (90^\circ - \Delta L)}{\sin TR \sin 90^\circ}, \]
Secondly, find SR using
\[ \frac{\sin PQ}{\sin QS} = \frac{\sin PT \sin ER}{\sin TR \sin ES}, \]
that is,
\[ \frac{\sin 90^\circ}{\sin 90^\circ} = \frac{\sin TR \sin 90^\circ}{\sin (90^\circ - 9) \sin TR \sin 90^\circ}, \]
whence ER and SR (= ER - 90° - ER). Thirdly, find MK (= h) using
\[ \frac{\sin SP}{\sin SQ} = \frac{\sin PR \sin MK}{\sin RM \sin KZ}, \]
that is,
\[ \frac{\sin (180^\circ - \phi)}{\sin \phi} = \frac{\sin (90^\circ + TR) \sin MK}{\sin TR \sin 90^\circ}, \]
Finally, find KS (= q) using
\[ \frac{\sin KS}{\sin SR} = \frac{\sin KZ \sin MP}{\sin ZM \sin PR}, \]
that is,
\[ \frac{\sin q}{\sin SQ} = \frac{\sin 90^\circ}{\sin (90^\circ - \phi) \sin (90^\circ - \phi)}, \]

Al-Biruni [19. v.] ([f.] Khwarazm and Ghazna, d. after 421/1030) proposed several different methods for finding the kibla, based on a variety of different procedures. In his work on mathematical geography, the Ta'bid al-nihayat al-amknin, al-Biruni derived the longitude difference between Mecca and Ghazna mathematically using the distances between staging posts on the major caravan routes, and then derived the kibla at Ghazna using four different methods, including spherical trigonometry (using Menelaus' Theorem), solid geometry (using procedures equivalent to those standard in solving timekeeping problems), and the analemma. Al-Biruni's solution to the kibla problem in his major astronomical work al-Kanti al-Mas'ud, compiled after the Ta'bid, is more elegant than his solution by spherical trigonometry in the earlier work. It was also proposed about thirty years previously as an alternative solution by Ibn Yunus. Al-Biruni proved its correctness by spherical trigonometry. Ibn Yunus presented it algebraically with no justification, but he appears to have derived most of his formulae for spherical astronomy by projection methods rather than by spherical trigonometry. Al-Biruni's treatment of the problem illustrates the progress made by Muslim scholars in spherical trigonometry during the tenth century. Whereas his predecessor al-Nayrizi had laboriously used Menelaus' Theorem, al-Biruni used its simpler corollaries, the spherical Sine Rule and the "Rule of Four Quantities".

Al-Biruni first outlined an algebraic procedure for finding q using four auxiliary arcs which we call \( \theta_1, \theta_2, \theta_3, \) and \( \theta_4. \) Since he used \( R = \pi \) rather than \( 60 \) his trigonometric functions are the same as the modern ones. First find \( \theta_1 \), "the distance on the day circle", thus sin \( \theta_1 = \sin \Delta L \cos \omega. \) Then find \( \theta_2 \), "the local latitude adjusted for the horizon (of Mecca)", using sin \( \theta_2 \cos \theta_1, \) and \( \theta_2 \), "the correction to the latitude", using \( \theta_3 = \phi \cdot \theta_2. \) Then find \( \theta_2 \), "the distance between the two localities", using cos \( \theta_3 = \cos \theta_2 \cos \theta_3. \) Finally, q is given by
\[ \sin q = \frac{\sin \theta_2 \cos \theta_3}{\sin \theta_4}, \]

Al-Biruni's justification of this procedure is equivalent to the following. In Fig. 5, which is essentially the same as the diagrams in the manuscripts of the original text, the base circle represents the horizon, with N and S the north- and south-points. The local meridian is SZPN where Z is the local zenith and P is the celestial pole. M is the zenith of Mecca and GLJ and MPL are respectively the horizon and meridian at Mecca. ZMK is the altitude circle of M and MGJ is a great circle with F as pole. Thus FN = \( \phi, PL = \phi, M, \) and MFZ = \( \Delta L, \) and it is required to find SK (= q). Al-Biruni observed that (by the spherical Sine Rule).

\[ \sin MP = \frac{\sin \angle MPH}{\sin \angle MFP}, \]
whence \( F = \angle PFL \) is known. Thus \( \theta_2 \) is the complement of \( F. \) Similarly

\[ \frac{\sin \angle F}{\sin \angle PLF} = \frac{\sin PL}{\sin PF}, \]
whence PF is known.

Thus \( \theta_3 \) is PF. Thirdly, since \( FN = FN - PF = \phi - \theta_2, \theta_3 \) measures FN. Fourthly, al-Biruni states that by the "Rule of Four Quantities"

\[ \sin \angle G = \frac{\sin \angle F}{\sin \angle H} \tan \theta_1 = \frac{\sin \angle G}{\sin \angle H}, \]

(note that \( \cos \angle G = \cos \angle FGN = \cos IQ = \sin ZJ \)) so that \( \theta_4 \) measures \( G. \)

Finally, he points out that (by the spherical Sine Rule)

\[ \sin \angle G = \frac{\sin FN}{\sin \theta_1}, \]
\[ \sin \angle F = \frac{\sin \theta_2}{\sin \theta_3}, \]
whence \( q = SK = \theta_3 - 90^\circ - GN. \)
Al-Khalli (9. Damascus, ca. 705/1365) compiled a kibla table based on an accurate formula and displaying \( g(\phi, \Delta L) \) for each degree of \( \phi \) from 0° to 56° and each degree of \( \Delta L \) from 1° to 60°. Al-Khalli's table contains a total of almost 3,000 entries, and the kibla is computed to degrees and minutes. The vast majority of the entries are either correct or in error by \( \pm 1 \) or \( \pm 2 \) minutes, a remarkable achievement. Table 1 shows a section of Al-Khalli's table.

</table>

Al-Khalli does not describe the way in which he compiled his kibla table. However, in his introduction to the table he expresses his approval of the kibla method of al-Marrakushi (fl. Cairo, ca. 679/1280). This involved first finding \( h \) using

\[
\sin h = \sin (\phi + \phi_M) - \cos \Delta L \frac{\cos \phi_M \cos \phi}{R^2},
\]

and then applying the standard Islamic formula for finding the azimuth from the celestial altitude, namely

\[
g = \arccos \left[ R \frac{\sin h \tan \phi - R \sin \phi}{\cos \phi} \right].
\]

Both of these formulae can be derived from Fig. 4. If al-Khalli did use precisely this method to compile his kibla table, it may be that he also used his universal auxiliary tables (al-jadwalal-imdabi) to facilitate the computation. These tables which were specifically designed for solving all of the standard problems of spherical astronomy for any latitude, display the three functions

\[f_1(\theta) = \frac{R \sin \theta}{\cos \phi}, \quad f_2(\phi) = \frac{R \sin \theta \tan \phi}{\cos \phi}, \quad f_3(\phi) = \cos \phi \]

The procedure for finding \( g(\phi, \Delta L) \) would be to first find \( h(\phi, \Delta L) \) using the simple formula of al-Marrakushi and then to use the auxiliary tables to apply the formula.

Al-Khalli also computed the kibla for 44 localities in Palestine, Syria, and Iraq. These are likewise very accurate. Mediaeval latitude determinations depended on the geographical data that he had at his disposal. Mediaeval longitude determinations, based either on simultaneous observations of lunar eclipses in different localities or on measuring distances between the localities, were generally not very accurate. Mediaeval longitude determinations,
Cairo face this direction, which was favoured as the rising sun at the winter solstice. Several mosques in Islamic architecture as well as the history of science for Cairo. No survey has yet been made of the computed mathematically using mediaeval geographical tables. Likewise, in early Muslim due west, respectively. Likewise, in early Muslim meridian altitude, were generally more accurate. This explains why mediaeval mathematicians.

Even so, the most popular values used by Muslim astronomers for the latitude of Mecca were 21°, 21°50', 21°30', and 21°40', whereas the accurate value is 21°26'. This explains why mediaeval mosques may be incorrectly oriented even though their minbars were erected in a kibla direction computed by competent mathematicians.

Another reason why mosques may be incorrectly aligned is that their kiblas were not computed from geographical data at all but were inspired by tradition. Thus, for example, mosques in the Maghrib and the Indian subcontinent generally face due east or due west, respectively. Likewise, in early Muslim Egypt, the kibla adopted was the azimuth of the rising sun at the winter solstice. Several mosques in Cairo face this direction, which was favoured as the kibla of al-suhaba but which is about 16° off the kibla computed mathematically using mediaeval geographical coordinates and about 25° off the true kibla for Cairo. No survey has yet been made of the orientation of mediaeval mosques. Such a survey would be of considerable interest for the history of Islamic architecture as well as the history of science.

**Bibliography:** Several of the following secondary sources contain descriptions and analyses of mediaeval kibla methods. There are numerous Islamic astronomical works containing kibla methods that have not been investigated in modern times. On the kibla method of Ulugh Beg (962) ([J. Samarkand, d. 853/1449]), which is none other than the method of Ibn Yûnis and al-Birûnî, see L. A. Sédillot, *Proélégomènes des tables astronomiques d'Oulagh-Beg: traduction et commentaire*, (Paris 1853), 116-21. In the approximate methods of al-Battani and al-Djâhâni, see C. A. Nallino, *Al Battanî sive Albadhûni Opus Astronomicum* (Milan and Rome 1899-1907), 1, 316-9, and ii, p. xxvii; and G. Rudloff and A. Hochheim, *Die Astronomie des Mahârûdî ibn Muhammad ibn 'Omar al-Gâmiûn*, in *EDMG*, xxvii (1893), 213-79 (esp. 271-2).

The first serious investigations of Islamic kibla methods were conducted by C. Schoy (see his article kibla in *EP*). The methods of Ibn al-Haytham and al-Nayrizî were discussed in his *Abhandlung der al-Hassan ibn al-Hassan ibn al-Haytham [Alhazen] über die Bestimmung der Richtung der Kibla*, in *EDMG*, lxxv (1924), 24-53; and in his *Abhandlung von al-Fa'âl ibn al-Nayrizî über die Richtung der Kibla*, in *SB Bayr. Akad.*, Math.

Al-Khlilî's kibla table is analyzed in D. A. King, *Al-Khlilî's Qibla Table*, in *JNES* (1975), which also contains references to other mediaeval kibla tables and a discussion of the determination of the kibla using a quadrant. Ibn Yûnis's table displaying the solar altitude in the azimuth of the kibla is discussed in idem, *In the tables for determining time by the sun*, in *Archive for History of Exact Sciences*, x (1973), 342-49 (esp. 368). Considerable additional information on kibla determinations is contained in the forthcoming publication by idem, *Studies in astronomical timekeeping in mediaeval Islam*, ii. A survey of mediaeval Islamic tables for regulating the times of prayer.

Several lists of geographical coordinates of cities and the corresponding kibla values, taken from Islamic astrological tables, are given in R. T. Gunther, *The astrologers of the world*, i, Oxford 1932, esp. 24-6. On mediaeval Islamic longitude determinations, see Schoy, *Die Astronomic des Mabmûd ibn al-Haytham*, in *EDMG*, xxvii (1924), 3'.

(D. A. King)
shored of the Dead Sea and in the neighborhood of Jerusalem (see also Mukaddash, 184), in fact the deposits of brimstone to be found in clay, mixed with gypsum and calcite carbid, on the right bank of the river Jordan at a mile from the Dead Sea (see C. Hitzig, Handbuch der Mineralogie, I/2, Leipzig 1901, 68 ff.). Abü Dulaft Al-Khazrafil (al-Rixla al-Damiya, ed. V. Minorsky, Cairo 1933, 22, tr. 34-5, ed. P. Bušgalov, Moscow 1960, 34) mentions already a sulphur spring on Mount Damavid (q.c.) around which brimstone (al-irid al-dhuq) was collected, together with immense deposits of brimstone. The same author (ibid., 43 = Yâkût, ii, 169) knows also the sulphur springs of Daurash (q.c.) in Khirîstân.

In general, four sorts of brimstone are distinguished: yellow, white, black and red (see WKAS, i, 336). Muhammad b. Zakariyâ' al-Râzî, K. Al-Asrâr (ed. M. T. Daniel-Fazbâh, Tehran 1964, 3), however, differentiates these even further into: 1. pure, massive, yellow brimstone; 2. pure, granular, yellow brimstone; 3. white, ivory-coloured brimstone; 4. white brimstone mixed with soil; 5. black brimstone, adulterated with stones; and 6. red brimstone. Description of Al-Kazânî's book (ibid., 171) go:

kibrît dâhâlî "golden brimstone", kibrît shaker "male brimstone", kibrît hahrî "brimstone of the sea", kibrît nahrî "brimstone of the river", etc. are also found. These descriptions indicate the various modifications and qualities: brimstone deposited by springs is mostly fine-grained and yellow-white, elementary brimstone is often contaminated with bitumen, solonium and arsenic. These various descriptions, however, were of course not used by the Arabs to indicate a strict classification.

A special case was the "red brimstone" (al-kibrît al-dhâmâr). According to Aristotle's Stone-book (ed. J. Runke, Heibeberg 1912, no. 26, p. 261 = Ibn al-Baytar, K. Al-Djumaâ, iv, 49) it shines by night over a distance of many parasangs, as long as it is left in its place of occurrence. Others maintained that red brimstone was a mineral to be found in the valley of the ant, marched through by Solomon (Ibn Samadân, in Ibn al-Baytar loc. cit.). These are fairy tales. Al-Râzî (K. Al-Asrâr, loc. cit.) knew already that "red brimstone" does not exist as a mineral, and this scepticism was wide spread. Al Djibâlî (Risâla fi l-Dja'ma wa l-Ha'l, ed. P. Kraus, Cairo 1943, 931 ed. Hârin, Cairo 1964, i, 271) remarks that "red brimstone" is easier to be found than a trustworthy friend, and the caliph al-Harith b. Hâshîm (737-852/950-1047) said that two things exist only in name: the phoenix (fâkid mughrûb) and al kibrît al-dhâmâr (Bâkîn, Djamâhîr, 154). In this sense is also to be understood al-Ma'dîyânî's proverb "more costly than red brimstone" (see Freytag, Arabum proverbum, i, 18, 293, 140) and Bilawhar's saying (ed. D. Gimaret, Beirut 1966, 134). The gold of the Dead Sea and in the neighborhood of Hulwan [q.c.] in Irâq, which avail against mania, is stuck in the chest, and against asthma. If a woman is fumigated with brimstone, she will have miscarriage. Leprosy, cutaneous eruptions and other skin diseases are treated with brimstone, which, if mixed with natron, dissipates itching. Finally, brimstone is used with salpetre and charcoal, to make gunpowder.

The curative property of sulphurous water is often praised: Abû Dulaft Al-Khazrafil (op. cit., ed. Minorsky, 12, tr. 43, ed. Bušgalov, 27, Yâkût, ii, 347) mentions the sulphurous springs in the neighborhood of Hulwan [q.c.] in Irâq, which avail against manifold diseases. According to Aristotle's Stone-book (no. 26, pp. 266, 175) bathing in sulphurous springs is good for open wounds, tumours, itching, scabies and fever. Baths in sulphurous water avail also against trembling (sidjâgî) (Philagris, in Râzî, Hârij, i, 44, see Galen, De tremore et palpitalione, vii, 600, Kânûn), Finally, sulphurous water is curative of arthritic pains (Râzî, Hârij, xi, 195), hemiplegia (fâlidy, *All b. Râbban, Firdaws, 197) and elephantias (qatâmâh, ibid.).

To the many palliatives which were recommended for expelling venom from houses there are always included fumigations with sulphur (Râzî, Hârij, xix, 320-35), which was also used in magic as an ingredient of talisman (Pseudo-Magrîfî, Qâsiyat al-bahîm, 434-6, German tr. by Ritter and Pflessner, London 1962, 254-8).

Sulphur played a prominent part in alchemy (see Al-Khûnâyîn). Distillation of sulphur and the action
of sulphurous vapour on metals gave occasion to many observations and conjectures. Since sulphur is liberated in the distillation of most materials, it was believed to be a fundamental part of all minerals. In particular, it was assumed that the metals consisted of quicksilver and brimstone. If the parts of both materials are in an ideal ratio to each other, gold originates (see Dimashki, Nukhla, 50 ff.). Sulphur is therefore also called "the mother of gold" (mun al-habab, see K. al-Kanz, ms. Berlin 4191, f. 512).

The alchemists invented many pseudonyms for sulphur, like "the yellow, red or white bride" (al-arus al-safra, etc.), "the red soil" (al-turba al-khabur), "the colouring spirit" (al-rub al-sabiq, "the saltiron" (al-saffara), "the divine secret" (al-sir al-shakh). The breath-taking smell of burning brimstone gave it the name "the soufector" (al-khammab). Because brimstone combines quicksilver, it was also called "the felter of the volatile" (bayad al-shib).

Conversely, the term kibrit was also used in various combinations as pseudonym of other substances, e.g. kibrit al-ja'darh, "incombustible sulphur" (see WZKM, ii, 49, 168) designates the elixir of gold. (For the problem of the pseudonyms, see J. R. Räthel, Die natur- und chemische Bezeichnungen im arabischen Allgemeine der Chemie, Beiträge LXVI, in SPME, iv, 1944-5, 20-33 = E. Wiedemann, Aufsätze, ii, 599-612; A. Siegel, "Dschehnamen in der arabischen Literatur, Berlin 1931).
trying to break away from the central government. In the circumstances, a governor's sole concern was simply to squeeze the maximum taxation from the subjects, not only to pay the necessary dues to the central government, but also for his personal enrichment. The depletion of the resources of the country was also often aggravated by low Nile floods and the spread of disease and plague.

The worsening of the economy meant heavier pressure and exactions for the Copts. The results of this situation were three-fold: many Copts fled to the desert monasteries to escape the poll-tax from which clerics were exempted, although this privilege proved to be ephemeral; some turned to Islam for the same reason, although wholesale conversions did not take place because the caliphs usually discouraged them in order to safeguard their revenue; and some rose in revolt, not infrequently reinforced in their insurrection by Muslim settlers.

Perhaps the Bashmuric Rebellion of 214/829-30 in the marshlands of the lower Delta was the most serious of those local insurrections. The caliph al-Hakim bi-Amr Allah, who came in person to Egypt to fight the Bashmuric rebels and to pacify the Copts. The outcome of a steadily deteriorating situation was a neglect of the irrigation system, the blocking of canals with sand and silt, and the ruination of the Nile dykes. In addition to a decline in the number of Coptic farmers, the steady shrinkage in the arable land and irrigation reforms which ultimately improved doubling it without mending the cause of its decline. Realising that the cause of this deficit was the decline of agriculture, Ibn Tulun introduced land and irrigation reforms which ultimately improved the revenue. Even with exemptions, the revenue rose to 4 million dinars before Ibn Tulun's death, in addition to accumulated savings of 10 millions in the treasury and the execution of an extensive building program. With the help of Ibn Kathr al-Firgani, an accomplished Coptic architect, he constructed the Nilometer at the southern end of Rawda (Roda) Island [see myyas] and his famous mosque with its external spiral minaret. Muslims commonly destroyed churches in order to use their materials and pillars in building mosques. To save the churches, Ibn Kathr promised the governor to construct the mosque of Ibn Tulun without having to utilise pillars from churches. Thus the new pillars were built of massive masonry supporting pointed arches long before their use in Gothic art in Europe, and only two small marble pillars were placed on the flanks of the abwa. The mosque still stands as a testimony to the architectural genius of the builder and the return of the country to affluence.

During the years of stability in the rule of both these dynasties of governors, the Copts enjoyed a great degree of tolerance and prosperity. It is recorded that Ibn Tulun cultivated the habit of retiring to the al-Kesaryar monastery near Cairo to recuperate and the first Ikhshidid, Muhammad b. Tughdul (323-346/935-69) used to participate in the celebrations of the Coptic Epiphany, according to the contemporary 4th/10th century historian al-Mas'udi. Both dynasties entrusted the Copts with key positions in government.

The really favourable position of the Copts, however, was still to come, viz. under the Shii Fatimid dynasty (358-607/969-1171), if we except the reign of al-Hakim bi-Amr Allah (386-411/996-1021 [y.r.], who ended by persecuting Copts, Jews and even Muslims. Hence the Copts, whose religious freedom had been undisturbed and who had occupied the highest positions in the administration during the reigns of al-Mustazir (358-607/969-75) and al-Afdal (365-86/975-96) now faced forced apostasy or persecution by the unbalanced monarch, and many of their churches were levelled to the ground. However, towards the end of his reign, al-Hakim apparently fell under the spell of a priest named Abu Sabouni during his visits to the monastery of al-Kesaryar on the Helwan road south of Cairo, and eventually began to wear a monks' garment, while his atrocities ceased.

During the caliphate of al-Zahir (411-27/1020-36), the re-building of churches was again authorised, and Christians who had been forced to apostasise were permitted to return to their faith. Nasir al-Mu'azzam [s.v.], who visited Egypt in the reign of his successor, al-Mustansir, remarked that nowhere in the world of Islam had he seen Christians enjoy as much peace and prosperity as did the Copts. The strongest Fatimid vizier, Badr al-Dinwali [s.v.], and his son al-Afdal, both Armenian converts to Islam, favoured the Copts and relied on their service. Ultimately, the sixty-sixth Patriarch Christodoulos (1046-77) decided to move his seat from Alexandria to Cairo in order to be within easier access to the central government.

Only towards the end of Fatimid rule, when internal disorder grew, did Copts and Muslims alike suffer in the ensuing broils and confusion, and the fate of the Copts was further aggravated by the outbreak of the Crusades. It would therefore seem that the Copts reached the height of power and prosperity, but also latterly some of their worst tribulations, during the Fatimid era.

The advent of the Sunni Ayyubid dynasty (564-648/1169-1250) re-established internal stability and
eliminated the confusion of the age of the last Fatimid caliphs, but these times proved rather a mixed blessing for the Copts. In the course of his fighting the Crusaders in the Holy Land and the Christian kings of Nubia in the south, Salih al-Din's suspicions led him to dismiss the Copts from government service. It was probably on this occasion that Zakariya 3 Abi 'l-Malik b. Mammad (a corruption of the Coptic Makadi) of Assyut, a Copt who held the joint secretariacy of the Sultan's Office and the Treasury, decided to apostasize with his family and become a Muslim, in order to retain his high office for himself and his descendants. His son as-Asad inherited his father's office, and compiled one of the few cadastres of mediaeval Egypt (al-Ra'iyy al-Salabih), leaving a record thereof in his Kitab Kanadma al-dawla. Salih al-Din's brother, Shams al-Dawla, who led the Nubian campaign, destroyed in the years 567/1172-3 the monastic settlement of Bawiti in Middle Egypt, the Coptic city of Kuf, which sank into insignificance thereafter [see cpr], and the important Convent of St. Simeon (Anba Hidra) across the Nile from Aswan. Salih al-Din found it expedient to pull down the magnificent building standing on this site, and the Copts tried in vain to ransom this church. It would however be erroneous to accuse the Ayyubid sultans of continuous intolerance and persecution of the Copts. One of their first deeds was to suppress Ibn al-Mudabbir's substitution of the lunar for the solar calendar in order to shorten the year and thus get more taxes. They left most of the Coptic churches standing, and generally refrained from interference with religious freedom. Salih al-Din himself granted the Copts an imposing monastery adjacent to the Holy Sepulchre, which they own to the present day as Dayr al-Staql. Salih's successes against the Crusaders and the recapture of Jerusalem in 583/1187 seem to have terminated his early apprehensions about the Copts. The Copt Saif al-Din b. Abi 'l-Malik, nicknamed Ibn Sharaf, became his private secretary. Two Coptic architects, Abu Mansur and Abu Maghkur, were employed to repair and extend the fortified walls of Cairo and to build the Cairo Citadel on the Mufkatam hills overlooking the capital, Salih al-Din's most enduring monument which became the fortified seat of successive governments and dynasties.

In the reign of Sultan al-Adil Sayf al-Din (596-65/1196-1200-18 [g.v.]), the Saphadin of western chronicles, a Copt by the name of Ibn al-Makat assumed the administration of the War Office. In the Crusade of Daniabella 7 in 1218, the Coptic inhabitants participated in the defence of the city and with their clergy suffered greatly at the hands of the Latins. Again in the Crusade of St. Louis in 564-59/1172-3, notable Copts were to be found in the Sultan's camp. A number of Fatimid and Ayyubid sources show that numerous Copts earned some of the highest titles of honour in the state such as al-Reizi, Hisat Allah, al-Andadl, al-Asaad, al-Shaykh, Nabid al-Dawla, Tadi al-Dawla, and Fakhir al-Dawla. The Church historian Yahya Nakhla Rufaya collected as a sample some 30 Coptic names bearing these titles.

Two important processes were in progress since the Arab conquest, the Islamisation of Egypt and the Arabisation of Egypt, and these two processes should not be confused. That there should be a measure of conversion to Islam under early Arab rule was inevitable. The apparent kinship between Coptic monophysitism and Islamic monotheism might have played a role in a still amorphous body of doctrine, but the vexatious fidya or poll tax, increasing at a steady rate, left the impecunious Coptic taxpayer only one way to escape, sc. that of Islam. It is known that most caliphs discouraged wholesale conversion, in defence of a depleted influx of revenue to the treasury. How can we explain, therefore, the eventual numerical superiority of Muslims as against the numerical pre-eminence of the Copts in Egypt? E. L. Butcher impossibly ascribed it to the popularity of the monastic life and called it "suicide of a nation". The Muslim social historian, Aly Mazaheri describes this phenomenon as "ethnic exhaustion", and discards the assumption of wholesale conversion. It does not seem that a single, facile answer can be given here.

The Arabisation of Egypt, on the other hand, is a more transparent process. A study of the papyri indicates that at first the Copts conducted the administrative records in Coptic, and that the Arabs, who did not know the native language, accepted their procedures. This is also the inference of the Ayyubid sultans, ending by seizing power from the Copts, hastened to master the language of the new rulers, and the clerics persisted in the use of bilingual protocols in the papyri. As to the use of Arabic in public life, this must have been a slower process, although we may note the compilation of Coptic grammars and Coptic dictionaries in the 13th century, which is probably to be regarded as an indication to national Coptic efforts to keep the torch of the Coptic language burning amongst those who were fast losing it. Nevertheless, it would be a mistake to assume that Coptic was completely extinct at that early date. The same century produced eminent Coptic writers such as Ibn al-Asal (g.v.) and other members of his family, who were perfectly conversant with Coptic, Greek and Arabic. As late as 673, the traveller Vansleb reported that he met the last Copt who really spoke Coptic; and Benoist de Maillé, an 18th century French consul in Egypt, stated that he found whole villages in Upper Egypt whose residents spoke Coptic. In the present century, Werner Vycichl is quoted by the Coptologist William Worrell to have discovered Coptic-speaking communities at Zanla and other isolated villages in Upper Egypt. Of course, the liturgy was still celebrated today in Bohairic Coptic, together with Arabic, in Coptic churches. The Arabisation of Egypt is an undisputed reality, but the total extinction of the Coptic language is still a debatable problem.

The later Middle Ages brought difficulties for the Coptic communities. The Mamluks (648-922/1250-1517) who were originally slave soldiers bought by the Ayyubid sultans, ended by seizing power from them, and they then continued to reinforce their army by more slave purchases. They were therefore men of varied ethnic and religious origins and had nothing in common with the Egyptians except the bond of Islam; and it is doubtful whether any of them was fully aware of the doctrines of their faith or the language of the Coptic people. Internal insecurity and increasing poverty and isolation now began to drive the Coptic populace into desperation. Skilled Copts continued to work in the Muslim administration, but as soon as they rose to wealth and power, the Muslim mob tended to clamour for their dismissal from office and to start a wave of
church destruction. As mob fury became overpowering, the Mamluk sultans had often to yield to public pressure and unseat the Copts and condone the assaults on their religious foundations. Yet after a short period, confusion usually supervised in the government machinery, and the sultans were constrained to reseat the Copts in office once more.

On one occasion, a group of exasperated Copts decided to retaliate against Muslim oppression. In 1740/1532, a number of Coptic monks from Dayr al-Baghl ("The Monastery of the Mule") south of Cairo, formed a secret pact to use arson against mosques and Muslim quarters in the capital. Once when the city was ablaze, four of these monks were seized carrying naphtha and other incendiary substances. The Sultan ordered them to be burnt and the Copts were again dismissed from office. The infuriated mob continued their destruction of more churches. From 678/1279 to 851/1447, forty-four churches are reported to have been levelled to the ground in Cairo alone. The Patriarch Yohannes X (1636-9) was summoned by the Baqri Mamluk Sultan al-Aghaft Sha'ban (764/1364-76), and he and the archons or elders of the Coptic community were subjected to abject humiliation and confiscation of property, partly to appease the populace and partly to raise funds for waging war against the Cypriots.

As mob fury as in Mamluk times. In fact, they suffered occasional, temporary dismissals from service, they were not goaded by the outbreaks of mob fury as in Mamluk times. In fact, they suffered, together with the Muslim inhabitants, from the depredations of the Arab nomads who used to descend on villages in the countryside for looting. The land became isolated and its inhabitants sank into lethargy and ignorance until the French Expedition of 1798-1801 arrived under Napoleon and opened Egypt to western influences.

Perhaps the most significant Coptic document after the route of the Mamluks and the settlement of the French was a petition submitted to Napoleon by a notable Copt, Girgis al-Djawharti, imploring him to lift Coptic disabilities, in keeping with the principles of liberty, equality and fraternity proclaimed by the French Revolution. However, the French, whose leaders feigned conversion to Islam in order to court favour with the Muslim majority, decided to overlook his plea and thus avoided the semblance of partisanship. Nevertheless, they did not hesitate to select the best candidates for the administration irrespective of religious considerations. Hence the same Girgis al-Djawharti became the head of the taxation department. They also nominated a commission of twelve to administer local justice. Six of these were Copts and the chairmanship fell to Mu'allim Malaij, a Copt about whom we possess no documentary evidence. But the real hero in Coptic annals emerged in the personality of Mu'allim Ya'qub Hanna (1745-1802), whose meteoric career began in the predominantly Coptic city of Asyût in Upper Egypt.

Originally a humble civil servant under Sulayman Bey, a Mamluk amir in charge of Asyût province, he learned the equestrian art and the rudiments of Mamluk warfare from his master and even participated in Mamluk hostilities against the Turks. Later, when the French attempted to conquer Upper Egypt under Desaix, he played a prominent role in saving the French expedition from collapse. Then after the disastrous naval battle of Abukir, which gave Nelson and the British command of the sea, Napoleon left and Kéler succeeded him with an empty treasury, while Turkish infiltrators played upon religious sentiments and incited the Muslim population of Cairo to rebellion. It was in these precarious circumstances that Ya'qub, with the approval of the French authorities, recruited a Coptic legion of 4,000 Coptic youths to be trained by professional officers under his own command, first as Colonel, then in 1802 as General.

Still more spectacular in Ya'qub's career was his dream of Egyptian independence from both the Turks and the Mamluks. The documents pertaining to this chapter in his biography were discovered and brought to light by an eminent Muslim historian, the late Professor Shafik Ghurbai. The departing French made the stipulation that any native desirous to leave with them should be permitted to do so. Thus the General, together with a few companions, left Egypt with the French on the British ship Palais, in the hope of convincing the rulers of Europe.
that the only solution of the Egyptian question was the independence of Egypt. Ya'qub died on the high seas on 16 August 1802 leaving the fulfilment of his mission to his accompanying delegation. Apart from his secret deliberations with the captain of the Potamos Joseph Edmonds, preserved in the memoirs of his interpreter Laszaro, a Knight of the Order of Malta, his correspondence was communicated or signed by proxy and addressed to Bonaparte and his foreign secretary Talleyrand (25 September 1801) as well as to the British Lord of the Admiralty, Earl St. Vincent (4 October 1801).

Curiously, the man destined to realise Ya'qub's vision was Muyammad 'Ali (1805-49), the Macedonian soldier who came to Egypt as the head of a Turkish force and succeeded in founding the dynasty in Egypt which did not end till 1953. Under the new régime, the enfranchisement of the Copts went a long way. With increasing security and acceptance, it became less necessary for them to congregate in fortified quarters for self-defence, and they began to scatter all over the big cities side-by-side with their Muslim compatriots. They even took courage to fight for the removal of a few remaining disabilities in the Coptic Congress at Asyût in 1911, clashing with a counter-movement in the Muslim Congress in Alexandria. Both, however, were confined to a war of words and were discouraged by the Khdive 'Abd al-Hamid (1862-1914); eight years later both sides were engaged within the Wafd Party in the struggle against the British protectorate over their common homeland. The only causes of violence in contemporary history have consisted of localised incidents of arson against churches by the Muslim Brotherhood [see AL-MAIMAN AL-MUSLIMIN], whose organisation was officially established by the 1930s [Gamal] 'Abd al-Nasir [itv. In Suppl.] in 1966.

In recapitulating the story of the status of the liberated Coptic community in modern times, we should not forget two 19th century movements. The first was an educational and cultural one sponsored by the Patriarch Cyril IV (1854-64), known as the Father of Coptic Reform. He founded public schools including the first girls' school in Egypt, and imported a printing press, the second in the country after the Bulak press. On the international scene, he carried out with success a conciliatory embassy in 1856-8 with the Emperor of Ethiopia on behalf of the Khdive Sa'id (1854-63). But he did not live to realise his grand dream of an eccenmical union with the Greek Church, the Russian Church and the Anglican Church; it is said that this enterprise disturbed the Muslim authorities and hastened the visionary Patriarch to his grave. The second movement was a natural corollary to the first, for western education created a Coptic elite who strove in the pursuit of establishing a more democratic system of government in community affairs and in the management of church property. This met with staunch resistance in the clerical conservatism of the age of Cyril V (1874-1927), and the project of a Community Council (Ma'dfis Mi'lli) has been in abeyance ever since.

Within the framework of the Islamic legal structure, the Copts made several gains of capital importance. The abolition of the jussiya came to pass in 1865 during Sa'id's reign, and this was coupled with the acceptance of the Copts into military service. At his accession, the Khdive Tawfik Pasha (1879-92) publicly proclaimed the principle of equality of all Egyptians in every way, irrespective of their ethnic origin or religion; this was later formalised in a decree of 21 July 1913 and again in the Constitution of 1922.

In a period of more than thirteen centuries of Islamic rule, it seems that the density of population of Egypt has varied from time to time. At the Arab conquest, judging from the papyrus tax returns, the Copts must have been at least 12 millions. Owing to many hardships, occasional failures of Nile floods and diminution of cultivable soil, recurrent plagues, conversions to Islam and flight to the desert monasteries, we must assume the existence of a downward trend in the number of Copts throughout the Middle Ages and Ottoman Turkish times. We note that their number sank to approximately one million souls. However, the latest three official itemised censuses of the population reveal the following figures:

<table>
<thead>
<tr>
<th>Year</th>
<th>Total</th>
<th>Muslims</th>
<th>Copts</th>
<th>Jews</th>
<th>Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>1947</td>
<td>18,956,767</td>
<td>17,399,645</td>
<td>1,508,323</td>
<td>65,639</td>
<td>1,547</td>
</tr>
<tr>
<td>1960</td>
<td>25,984,101</td>
<td>24,068,252</td>
<td>1,905,182</td>
<td>8,561</td>
<td>2,106</td>
</tr>
<tr>
<td>1966</td>
<td>29,943,810</td>
<td>27,919,238</td>
<td>2,018,395</td>
<td>3,493</td>
<td></td>
</tr>
</tbody>
</table>

It is difficult to accept the above figures unhesitatingly. This is largely due to the fact that Coptic villagers have always shown a reticence in divulging the real size of their families. The newly-founded Census Department in the Institute of Coptic Studies in Cairo has been working with the local country priests in assessing the Coptic population; suggestions of a Coptic population from four to six millions in the year 1974 have been put forward.

The basic causes of the survival of the Copts are both internal and external. Internally, the Copts cling to their Church as a cementing element in their private life. Coptic ethnicity and faith became a profound faith, a way of life, and an intangible doctrine of ethnic consciousness. Externally, it is fair to admit that Islam shares in the credit of this survival. Under the aegis of Islamic dynasties, there came dark times when the violence of the majority could well have exterminated minority groups with the concurrence of the rulers; yet this did not happen, despite such difficult periods as the reign of the Fâtimid Caliph al-Hâkim in the 10th/11th century.

Bibliography: All chronicles and source material on medieval Egypt contain many references to the Copts; see especially Makrizi, Khdîf, Bulák 1270; Suyûtî, 'Iyân al-muḥaddara fi aḥbâb Miṣr wa 'l-Khânîn, Cairo 1347; and 'All Bâhî Muslimâk, al-Khâtâf al-Tawâfîyâm, Bulâk 1904-6. Equally, bibliographies of Egypt under Islam cannot be overlooked. On the Copts proper, see W. Kammerer, A Coptic bibliography, compiled in collaboration with Elinor Huisman and Louise Slier, Ann Arbor 1950; and the monumental work of G. Graf, Geschichte der christlichen arabischen Literatur, 5 vols., Vatican City 1953. Some of the books cited below also contain additional detailed bibliographical material on special subjects.

1. Primary sources. Perhaps the most important primary source is Sawiris b. al-Mukaffâ's History of the Patriarchs of the Egyptian Church, ed. C. F. Seybold (to 567 A.D.), and T. Evets (to 849), in the Patrologia Orientalis. The remainder to 1200 was jointly edited with an English tr. by Yassa 'Abd el-Muisîl, O. E. H. Burmester and A. S. Atya in 4 parts in the publications of the Society of Coptic Archaeology, Cairo 1943-55. An other chronicle,
KIBT [See ČENGANE].

KIDAM (a.) In the technical vocabulary of philosophy and theology denotes eternity. It must be distinguished from asal and from abad [q.v.]. Al-Tahhanawi writes: "Azal is the constant duration of existence in the past, as abad is its constant duration in the future." As opposed to temporal origin (bdal), it is the fact of having been preceded by nothing else (al-la-mashabiyah bi-la-qayr): asal implies a negation of the first beginning (wafy al-anwajilayya); it is therefore a case of eternity of a partition, and abad is eternity of a point. Asal and abad are essentially identical in God (inna abaduhu sai'at asaliyya), for they mean the two negative extremities which are the beginning and the end, and are both "cut off" from God (nefali 'al-farayiya al-tdafiiyya al-sani'ah). For Him they are negative attributes (cf. F. B. al-Din al-RAZI, commentary on the Most Beautiful Names of God, sura VII, 180; asal and abad are classed among the real and negative attributes. First, asal is regarded as real, accompanied by relationship and negation (sifa hadilayya isqa 'al-farayiya al-qayriyya). It is eternal, in the sense of asal, that which is not preceded by nothingness, that which is in existence before any rational conception of a first beginning (khabba its'a'bul al-anwajilayya), and in the sense of abad, that which persists beyond any rational conception of an ultimate term (ba'da 'itsa'bul al-ka'iriy)....

KIBT (See ČENGANE).

KIDAM (a.) In the technical vocabulary of philosophy and theology denotes eternity. It must be distinguished from asal and from abad [q.v.]. Al-Tahhanawi writes: "Azal is the constant duration of existence in the past, as abad is its constant duration in the future." As opposed to temporal origin (bdal), it is the fact of having been preceded by nothing else (al-la-mashabiyah bi-la-qayr): asal implies a negation of the first beginning (wafy al-anwajilayya); it is therefore a case of eternity of a partition, and abad is eternity of a point. Asal and abad are essentially identical in God (inna abaduhu sai'at asaliyya), for they mean the two negative extremities which are the beginning and the end, and are both "cut off" from God (nefali 'al-farayiya al-tdafiiyya al-sani'ah). For Him they are negative attributes (cf. F. B. al-Din al-RAZI, commentary on the Most Beautiful Names of God, sura VII, 180; asal and abad are classed among the real and negative attributes. First, asal is regarded as real, accompanied by relationship and negation (sifa hadilayya isqa 'al-farayiya al-qayriyya). It is eternal, in the sense of asal, that which is not preceded by nothingness, that which is in existence before any rational conception of a first beginning (khabba its'a'bul al-anwajilayya), and in the sense of abad, that which persists beyond any rational conception of an ultimate term (ba'da 'itsa'bul al-ka'iriy). Through these various definitions there come to light two conceptions of pre-eternity and post-eternity. The first is that of endless duration (la-nihdyt laya) which extends either towards the past, or towards the future (in which case it is also known as al-la-saali, that which does not cease to be). This scheme (cf. below) raises many difficulties in the solution of the problem of the creation of the world, since it introduces the concept of an infinite time before the moment of this creation. The second is more philosophical: the two eternities are nothing more than negative conceptions, to which contemplative thought has recourse in order to grasp the idea of eternity in relation to time, but which do not correspond to the reality of an infinite time in the two senses: they are relative to the mode of thought belonging to the human spirit, which as al-Razi points out (cf. below), cannot conceive of itself outside time. The reality which is hidden behind these imaginary concepts is that of God and of His subsistence through His essence (badu 'ahu bi-yaqtii) that is, of a being totally unaffected by time and temporality.

So what does hidam denote? Etymologically, the term should be associated with the Hebrew, it is a root expressing the idea of anteriority. The LA says it is exactly the same as al-Tahhanawi says of asal: "It is the contrary of temporal origin (nashri al-yaqtii)". Ibn Manuzzi also explains it through the roots saba and sabaka ("to precede in a race"). It should in fact be noted that the idea of anteriority in time or space is linked to that of superior worth, as would appear from the substantive badam and from its Kurânic use: badam is a word (X, 2) which al-Zamakhshari interprets as sabiha rea-fud wa-mansala raayta, a priority, a higher abode that God is preparing for the Believers. Another explanation is that in advance a gift has been prepared for them on the part of God (bad sahaba sentham an Allah khab), which unites the two ideas of anteriority and of the excellence of the divine gifts. It may be noted further, with regard to hidam ("step"), whence the fact of being a step ahead of the others, of precedence) that the LA, as well as al-Kurtubi in his commentary, quotes verses of Dhû 'l-Rumûn (q.v.) where the expression of Bedouin mentality may be seen: badam is associated there with high nobility and acts of splendour (maqâkhir). Since the qualities of Bedouin ethic were in general transferred by Islam to God, it may reasonably be supposed that the root K-D-M served not only to convey the anteriority of God, but also His ontological pre-eminence over all things, while it must be made clear that this is not an anteriority and a pre-eminence relative to others, as in the case of maqâkhir which implies rivalry, but qualities that are transcendental and absolute. It is in this sense that the LA says that God is maqâkhir (because he precedes all things yahuddin al-agayy), and He puts them in their place (yadab'uhu fi mansul firs). But the terms badam and hidam in the sense of eternity and the
Al-Tāhāwī adds that essential eternity is more particular (aṣhāṣ) than temporal eternity, which in its turn is more particular than relative eternity or antiquity. Thus necessary Being, which is ḍādīm, is also eternal according to a temporal point of view, since it is preceded neither by nothingness nor by that which is other than itself. But the converse is not true: thus the attributes of eternal Being, which are not preceded by nothingness since they are concomitants of its eternal essence, are not eternal in themselves and so do not have ḍādīm. The same could be said of the world which is ḍādīm of another according to the fulāṣṣa, but which is not however ḍādīm ḍādīm, because it depends on its cause, which is other than itself. As for ḍādīm ḍādīm, it is not co-extensive with ḍādīm ḍādīm. In fact, the past time of an existence may be greater compared with that which subsequently occurs for the first time. This applies to the father who is ḍādīm in relation to his son, but who is not thereby ḍādīm ḍādīm, because he is born of parents. So if we compare the world to a man, both of these have a history made up of successive events. In relation to one of these events, the past of the world and of this man extend over a time greater than that of the new happening. Each of them will therefore be called ṭādīm in relation to it. They are both ṭādīm ṭādīm. But the world is not only ṭādīm in this context: it is so in itself, because there has never been a time where it did not exist. Man is only ṭādīm in relation, for example, to the event of his paternity: doubtless he preceded it, but precisely according to the antecedence which is only relative to it. On the contrary, in the context of origins, it is ḍādīm ḍādīm which is the most particular; then comes ḍādīm ḍādīm and finally ḍādīm ḍādīm. It is this because everything whose existence in the past covers a lesser time-span (ahāl) is therefore ḍādīm ḍādīm and ḍādīm ḍādīm. A fortiori, it is ḍādīm ḍādīm. This analysis has clearly been influenced by the thought of philosophers who tend to associate eternity with the ontological necessity of the wajīb al-wujūd and ḍādīm with continuity. Theologians simply understand by ḍādīm that which is not preceded by nothingness, or in the vocabulary of al-Tāhāwī, ḍādīm ḍādīm.

To what does the notion of eternity apply? ḍādīm relates first to the essence of God. On this point all the philosophers and religious scholars are in agreement. On the question of the eternity of the attributes of God, there are differences of opinion among the muṣtaḥalimīn. God is eternal because He is not subject to an origin, and being, cannot be other than muḥdād or ḍādīm. If God were subject to origin, in order to exist He would need another being to create him, a muḥdād. But the question would apply to the latter too and so on to infinity. So one must affirm the existence of God as eternal Creator, as it is expressed by 'Abd al-ḌāIRRār (al-ṢāÕīr al-Ḥaḏīm). This argument, which bears a philosophical mark, is not the exclusive property of the Muṭashīlīs. It is found in the same or similar terms in the Kitāb al-Tashkhīl of al-Bāḍīlīnī, in the chapter where he shows that the real being which is subject to origin (fīl al-mukdatta) cannot itself be the fruit of an origin. It is found in the Kitāb al-Ṭabrān of al-Duwaynī, where he proves that the existence of the Eternal "does not inaugurate itself" (waṣṣāṣ ṭādīm ḍādīm nisfis); in the same place he gives an interesting and precise observation on the concept of an existence that has no beginning: does this not imply an infinite succession of moments? He replies...
that the moment of a thing is defined by the fact that it is contemporary with other things. Now God is not contemporary with any other thing. So the eternity of God is implied by his uniqueness.

The Ash'ari school admits the eternity of the divine attributes. On the contrary, the Marubis express the major principle that "God has no co-

ternal" according to the formula of ‘Abd al-Djabbār in the Sharḥ (la ḫadima ma‘ al-Dībā). Nevertheless, they recognize as eternal four attributes: existence, life, knowledge and power. In fact, according to al-Djabbār and the majority of the learned men of the school, these four attributes necessarily belong to God through his essence, therefore they are also eternal. His knowledge is His being in acts of knowledge (la mmu ‘dīnē mientras) and the same applies to the other sifāt. Or furthermore, He knows through a knowledge which is Himself (Abu ʿl-Haḍhāη), etc. They do not say that He possesses eternal knowledge, but that he has not ceased to be in acts of knowledge (lam yatal ‘asmd‘īhi wa-fijatihi), etc. ‘Abdāb b. Sulaymān refused to say that God possesses knowledge, any more than He possesses eternity (kidām); but it may be said that He is eternal (ḥadim). Contrariwise, Ibn Kullāb thought that God is in acts of knowledge through a knowledge belonging to Him, and so on. To say that He is eternal, is to assert that He has not ceased to be in His Names and Attributes (lam yazal bi-asma‘ihi wa-yāsfihi; Makbālid). The essence of God alone is eternal, not in the sense that it is stripped of all attributes, but on the contrary, clad in all that belong to God. Some of his disciples claimed that God is eternal through an eternity (ḥadim bi-ḥadim), others that He is eternal, but not through an eternity (ḥadim bi-ḥadim). We here deal here within two subtleties of language, as in the distinction between the two expressions "God has not ceased to be" and "God has not ceased to be through the eternal attribute of eternity." A passage from the Makbālid deserves notice, however: "The supporters of the theory of attributes (aṣṣāb al-sifāt) differ in opinion concerning the attributes of the Creator: are they eternal or have they had an origin? Some say that they are eternal. Others declare: "If we say that the Creator is eternal in His attributes, we do not need to say that His attributes are eternal; so we say neither that they are eternal, nor that they have had an origin." According to al-Tahānawi, Abū Ḩāṣim added a fifth eternal attribute to the four above-mentioned: holiness (al-lābīyya), which is distinct from essence. This is reminiscent of the divinitas of the 12th century theologian of Chartres, Gilbert de la Porre. It is no doubt to this thesis that ‘Abd al-Djabbār alludes when he writes that, according to Abū Ḩāṣim, the attributes belong to God necessarily, and by virtue of that to which he confirms in his (li-ma ḫuca ‘alayhi fi ḫattāḥī). So it is through divinity that these attributes are eternal. For Sulaymān b. Dartr and other Ṣifātīyya, the attributes belong to God necessarily through "notions (li-ma‘dīn) which can be qualified neither by existence nor non-existence, nor by origin nor eternity" (Sharḥ). It is the concept of notional attribute (ṣifā ma‘nawiyyya), a term that has been translated variously as "mercurial", "qualitative", or even "excitative". It is nothing other than the qualification made necessary by the notion that one has of God. Ma‘ndā is always a notion signifying cause fundamento in re. The attribute ma‘nawiy therefore is not essence; neither is it a "thing" in God. It is that which the reality of God demands that one says of God. But, here too, that which is eternal is God and his essence, and the ṣifā ma‘nawiyyya escapes all ontological alternatives. Nevertheless, according to ‘Abd al-Djabbār, certain disciples of Ibn Kullāb ratified the ma‘nawiy and considered it to be eternal; for them the four aforementioned attributes are fitting to God by means of the ma‘nawiyyya, which may be translated by "eternal entities". (We may note with ‘Abd al-Djabbār that here azālit has the sense of ḫadim, as often happens.) The ḫadīsi points out however that these Kullābiyya did not dare employ this formula in its absolute sense, so as not to run counter to the unanimity of the Muslims over the denial of co-eternal attributes.

From the same root as kidām is the 5th form masdar, tabaidūn, which occurs in a very interesting commentary by Rāzi on the Qurʿān, LVII, 3: "He is First and Last". The word tabaidūn (antecedence) has several meanings: (1) al-tabaidūn bi ‘l-badī‘, where the antecedent exercises an influence over the consequent, for example, the movement of the finger entails that of the ring; (2) al-tabaidūn bi ‘l-badī‘-ma‘zūn, based on the need which the consequent has of the antecedent; thus the number one is anterior to the number two without being its cause; (3) al-tabaidūn bi ‘l-sharaf, according to worth; thus Abū Bakr has precedence over ʿUmar; (4) al-tabaidūn bi ‘l-martaba, according to a hierarchical order, either sensible, such as the place of the imām in prayers before the faithful who pray; or rational, such as the place of the genus in relation to the species; (5) al-tabaidūn bi ‘l-zamān, temporal antecedence or kalīyya; to which al-Rāzī adds (6) "But I think that there is a sixth division which is the antecedence of certain parts of time in relation to others; this antecedence is not temporal, otherwise it would be necessary for time to develop another time, to the point of infinity, Thus the present would be within another present which would be within a third present... and all these presents would be present at the present moment (kulluhu ḫāṭira fi ḫāṭira ‘l-ʿān). But the ensemble of these moments would be posterior to the ensemble of past moments, to the extent that there would be another time for the ensemble of times (masdar bi-ṣamān al-ṣamān), which is absurd, for, being a time, it would have to enter into the ensemble of times. Consequently, it would be both within and outside this ensemble, which is impossible. "Furthermore, this antecedence of parts of time in relation to one another is not an antecedence according to causality, nor according to need, otherwise they would co-exist; evidently it is not according to worth, nor according to space. It is therefore a sixth kind of tabaidūn. Now the Qurʿān shows that God is First (Primus, not prior) for all that is not Him, and al-Rāzī shows here that this qualification only fits the necessary, first and unique Being, for all that is not Him is possible (muḥmīn) and the possible exists only through origin: it is muḥbūth. But what is the nature of this divine antecedence? It is not owed to an act of influence, for the agent and the patient are relative one to another and co-existent. It is not a priority founded on need, since the precedence here is absolute. It is not a precedence owed to worth, for it cannot be said that God is more worthy or more noble (adār) than possible existence? He is not comparable (although in one sense, necessary existence implies a fullness of being besides which the existence of the possible is deficient). As for antecedencies according to time or space, they have no meaning for God, because time and space are possibles which depend on an origin.
God, being anterior to the totality of times, is not anterior according to time, otherwise the divine anteriority would have to enter into the ensemble of times, since it would be a time; but it would have to be exterior to it, because it would contain them all and that which contains is other than what is contained. This would be an absurdity. Apparently al-Rāzī is proposing, in so far as concerns God, a sixth kind of anteriority which is not without analogies to the anteriorities of parts of time in relation to one another. However, these are not identical and that is why al-Rāzī, when introducing his sixth division, does not say it is, but only that it is like ... In conclusion, we know that God is First in a universal manner (‘alad sabbt al-ṣiyām), not in a detailed manner (‘alad sabbt al-luṭfī). As for grasping the reality of this priority (sama‘khfīyya), human intelligences have not the means, since they cannot escape temporal forms. We may note that a similar division of ṭabaddum is to be found in the Maḥbūb al-falāshīfī of al-Ghazzālī, except that the ṭabaddum bi ‘l-hadījaha is called ṭabaddum bi ‘l-fa‘āb, in a case where the antecedent is not suppressed by the suppression of the consequent, but the consequent is suppressed by the suppression of the antecedent (as with a series of numbers), and except that ṭabaddum bi ‘l-lu‘tffī bears the name ṭabaddum bi ‘l-dhāt (in the relation of cause to effect).

The doctrine of the eternity of the world (see arānt) was upheld in Islam only by the ṣalāṣa, directly following the systems of thought of the Greek philosophers: Plato, Aristotle, Philo of Alexandria, Proclus, and John Philoponos the Grammarien. The two Takaddūf of al-Ghazzālī and of Ibn Rughd deal with it in a detailed fashion. The fundamental argument is that it is impossible to conceive a temporal beginning to the world, a moment of time in which it was created, in such a way that an empty time preceded the creation. In fact, if, as Aristotle maintains, time is the numerical measurement of movement (a theory taken up by the ẓalāṣa, see mārkā), movement demanding a mobile thing, moving bodies, the physical world and in particular the stars, then it is impossible for time to have existed before the existence of the world. Furthermore, if it existed, it would be eternal or created. But eternity does not conform with time that is changing and elapsing (takaddūf); each of its parts is new in relation to the preceding part, and time renews itself (yadalāddad) in every one of its instants. If time is hadīt in each of its parts, it has all the more reason for being so in its totality. So it is created: but then the process arises: is it created in time and did a time exist before that? That is absurd. This is the argument as taken on the part of the world. On the part of God, given a temporal creation, what did the Creator do before creating? Was He inactive? That is not his nature and it is written (II, 255) that "Neither weariness nor sleep take hold of Him". Besides, if He was first inactive, then active, a change would have taken place in Him, which is inadmissible. What would have induced Him to create at the moment when He undertook His creation? A muraddidījī, something which could have turned the helix in the enigma of creation? But this muraddidījī is eternal or created. If it is eternal, the world must also be eternal, unless some other thing could prevent this muraddidījī from acting; this is known as tark al-muraddidījī. This tark in its turn will be created or uncreated. If it is eternal, there must have been, for creation to have taken place, the intervention of a tark tark al-muraddidījī, and so on. If now the muraddidījī is created, the question applies to it as to the world.

For their part, the theologians who believe in the creation of the world in time object on the grounds that if the world is eternal, it has no beginning, it has never ceased to exist and consequently it has existed for an infinite period of time. Now, according to an Aristotelian principle, it is impossible to traverse an infinite time. If there is an infinity of instants to traverse in order to arrive at the present instant that exists, it is impossible to arrive there and it does not exist. This is a contradiction. The same reasoning is made in considering the infinite chain of causes: the effect that exists at present could not possibly exist. The difficulty arises from the assimilation of eternity to an infinite time. But it may be said that the world is eternal is to affirm that while remaining in the interior of the world and of the time which is linked to the world, one will never find a moment which could be its first beginning. One will need to go back indefinitely, but not to infinity. In other words, we are dealing here with an indefinite, or in the language of Aristotle, with an infinity in power, not an infinity in action. In short, the objection signifies that the expression "not having a beginning in time" means "having a beginning in infinite time." Besides, an infinity may be traversed if it is contained; between two points on a line, an infinite number of points is traversed. Ibn Sīnā seems to have held this view with regard to the problem of the first cause, analogous to the problem of the first beginning. If one considers the ensemble (jianfala) of causes within this world, it is clear that each one of them is at once cause and effect. Therefore, one cannot insert into this ensemble a first cause which would be without cause. "Every ensemble of which each unit is an effect caused demands a cause exterior to these units." In such a hypothesis of a causal chain "every series composed of causes and effects, whether finite or infinite, shows itself, if it contains within itself only caused effects, to need a cause that is exterior to it, but is definitely in continuity with it, as with a limit (lataṣṣa bihā jarada‘a‘na)." If the components of this ensemble are infinite, we are then dealing with a limited infinite ensemble. That is to say, that in the search for the first cause, it will be seen to stand out as a limit to the infinite which thought can never reach and towards which it strives. But its action does not need to traverse the infinite discontinuity of causes and effects in order to act his et nunu, for, as Ibn Sīnā points out "every cause of an ensemble which is not one of the units of that ensemble is in the first place cause of these units and in consequence cause of the ensemble." Such is one of Ibn Sīnā’s points of view on this question, according to the ṭabaddūt. Another objection to the theory of the eternity of the world is based on astronomy. We have an example of it in the Fīsāl of Ibn Ḥaẓm. Having declared that to an infinite time one can add nothing, and having thus shown that the infinity of centuries to come adds nothing to the infinity of centuries passed, Ibn Ḥaẓm writes: "In its circumscribed orbit Saturn passes one revolution in three hundred years and it has never ceased to turn. The greatest sphere, in these thirty years, makes approximately 11,000 revolutions, and it has never ceased to turn. Now beyond any doubt, 11,000 revolutions is greater than one alone. Consequently, that which is infinite will be approximately 11,000 times greater than that which is infinite, which is absurd." This is a
crucial variation on the same theme: the assimilation of eternity to an infinite time. The reasoning of Ibn Hazm is ingenious, but it ignores the powers of the infinite.

And what of the end of the world? Plato apart, the philosophers held the view that that which has a beginning has an end, and correspondingly that which has no beginning has no end. From a creationist perspective, one could, however, admit that God will not destroy that which He has created, in such a way that the world could have been created, but eternal a parte post. For the philosophers, the universe cannot perish, but a part of it may disappear. For the theologians who believe in the end of the world, there remain Paradise and Hell which are eternal in the sense of abadi; in fact, it is written that the Chosen and the Damned shall dwell there eternally (hum fiha khalidin, as the Kur'an says in a number of places). But on the basis of the verse where God describes Himself as the Last, Djinah b. Salwân supposed that Paradise and Hell shall also have an end, and he found a confirmation of his theory in verses 207 and 208 of Sûra XI, "To dwell there eternally as long as the heavens and the earth remain". Thus God will find Himself as absolutely alone in post-eternity as he was in pre-eternity.

KIFT, KIFT, KIFT, ancient Coptos, a small town of Upper Egypt situated where the Nile approaches its closest to the Red Sea (some 40 km. north of the ruins of Thebes, and about 2 km. to the east of the river). In Pharaonic times it was connected with the exploitation of the minerals in the hills between the Nile and Red Sea and with trade through the eastern part of Egypt, and enjoyed its greatest florescence in the Greek and Roman periods. Strabo describes the organisation of traffic up the Nile to Coptos, then by caravan across the desert to the Red Sea, and calls it a "town inhabited by the Egyptians and the Arabs together". In fact, it was a centre of attraction for the peoples of the eastern desert coming to trade there, above all, for the Bedja (q.v.), who doubtless received from there their Christianity; a bishop of the Bedja resided at Coptos-Kift. It formed the centre of a pagarchy, then of a baîra, but then the position of Kift as a starting-point for tracks to the Red Sea (in 132/750 some members of the Unayyad family fled there temporarily, probably with the intention of escaping) lost importance when the mainstream of oriental trade started using the Persian Gulf instead.

The tribes of the Nile-Red Sea deserts started attending the Nile valley; Kift was plundered with impunity in 242/859 by the Bedja, who were still Christian, and not till 243/862 was a rampart constructed to protect the settlement. In the first half of the 4th/10th century, al-Mas'ûdî wrote that Kift was the last important town to be severed from the ancient trade routes.
consisting of a list of the techniques which it comprised, according to places and periods. It is such a pragmatic definition which may be drawn from the Arabic documentation reckoned to preserve pre-Islamic traditions.

But in the mediaeval era, with the impact of Greek and Hellenistic philosophical thought, there was born, among the Arabs and the Islamized Iranians, a taste for theoretical definitions and methodological classifications. Already, in the works of a polylogistic like al-Mas'udî (d. 349/960) there are recorded a number of attempts at theoretical definitions which have been summarised by T. Fahd in *La divination arabe*, 43-5; cf. Muraḍî, iii, 347 ff. = §§ 1233 ff. Some philosophers, such as Ibn Sīnā, al-Qazâlî, Ibn Ruhān and Maimonides, have tackled this problem and attempted to elucidate it (cf. *La divination arabe*, 51-53). Then came Ibn Khādîn who put together all these speculations (ibid.; 45-51). He emphasised that as a branch of prophetic practice, divination constitutes the lowest echelon. Like prophecy, it is a divine gift entrusted to a privileged group, men and women. In fact, according to al-Kazwînî, there exist illuminated and celestial souls which possess the faculty of knowing the names of the spirits. These are the souls of prophets and saints; they are also the souls of physiognomists, of soothsaying genealogists and of those who can see the future by means of past and present events. "As for the souls of the soothsayers", he continues, "they receive spiritual knowledge and see through it the contingencies of beings which appear in dreams and in other manifestations" (i, 317-22; *La divination arabe*, 50-52).

So, divination is seen to be theoretically legitimised by inclusion in the mainstream of prophecy (on divination and prophecy see *La divination arabe*, 63-90). But, for practical purposes, it was necessary to strip it of all that was obsolete and too closely linked to paganism. From that point was born, in Islamic literature, a detailed inventory of divinatory practices, with precise definitions of the techniques listed. In their taste for the classification of knowledge, encyclopaedists and bibliographers finished by conferring upon the concept of divination an epistemological quality. We shall begin with the most detailed classification, that of al-Ḥājīdî Khâlîsî (i, 34-5), who draws the data of his inventory from his predecessors, from Ibn al-Nâdir (Fîhrist) to Tâshkîrîzâde (Mîṣfâh al-wâdīda).

Islamic divination, a legacy both of ancient Semitic divination and of Hellenistic divination, is divided into three categories:

1. *Irâsâ* [q.n.], or physiognomancy, and its ramifications. Under this heading, eleven sciences are listed:
   1. *ilm al-shamâl wa l-ḥâlîn "beauty-spots and birthmarks" (see *Kâfîh* and *La divination arabe*, 398-9).
   2. *ilm al-şārīs, "charomancy" (see *Al-Kâfî* and *La divination arabe*, 393-5).
   3. *ilm al-khâfîf, "conspicuousness" (see *Al-Kâfî* and *La divination arabe*, 393-5).
   4. *ilm ḥiyâfat (read ḥiyâfat) al-ṭarîq "observation of footprints (on the ground)" (see *Kîyâfâ* and *La divination arabe*, 370-5).
   5. *ilm ḥiyâfat al-ḥâsir, "divination by morphoscopic and genealogical lines" (see *Kîyâfâ* and *Kîyâfâ* and also *La divination arabe*, 370-99).
   6-7-8. *ilm al-ḥîdâdâ fi l-ḥâfîdâ wa l-ḥâfîr, "the sense of orientation in deserts"; *ilm ismâbâl al-mâḍâdîn "the detection of minerals"; *ilm al-ḥiyâfat, "the detection of wells". These three categories may be put together under the heading of "divinatory observation of the ground" (see *Kâfîh* and *La divination arabe*, 403-6).
   9. *ilm nûrûl al-gâyûd "the knowledge of (signs foretelling) rainfall". This consists in meteorological divination with its various techniques: nomancy, capnomancy, anemomancy, phyllomancy, brolomancy, etc. (see *Kânîh*, *Mâdîmâna* and *La divination arabe*, 407-17).
   10. *ilm al-ṣâfâ, "knowledge of the future by means of past events". This definition suggests that it is a case stricto sensu of inductive divination, although actually ṣafâ implied a certain intuitive, and consequently ecstatic, awareness (see *Kânîh* and *La divination arabe*, 403-9).
   11. *ilm al-ṣâhîddîlî, "palmonancy" (see *Kîhîfâh* and *La divination arabe*, 397-402).

II. *Sihr* [q.n.] or magic, and its ramifications.

12. *ilm al-khâšîn, "divination" (astrological divination, involving incantations and invitations to the stars). Thus the influence of Hellenistic ideas led to the division of divination into two types, traditional divination or ṣafâ and astrological divination, which underwent a great expansion in the Hellenistic period and which the Arabs came to know through the many translations of Greek, Syriac, Pahlavi and Hindu astrological writings (see *Kâfîh* and *La divination arabe*, 478-97).

14. *ilm al-khârîhûs, "knowledge of the properties of divine names (al-ismâ al-khâsrî), of prayers (daʿâdî), of numbers (see *Dârâf* and *Kâfûrâ*) and various other special things" (see *Kâfîh* and *Kânîh*; *La divination arabe*, 214-45; *Le monde du sorcier*, 175-6).

15. *ilm al-rûșîyâ, "sympathetic actions or sorcery" (see *Kâfû* and *Le monde du sorcier*, loc. cit.).

16. *ilm al-ṣâfâ, "conjurations of demons or incantations" (see *Sârâ* and *Le monde du sorcier*, 164-5).

17. *ilm al-ṣîrâdâ, "the evocation of spirits in physical force" (see *Kîhîfâ* and *Le monde du sorcier*, 170 ff.).

18. *ilm al-dârît al-hâlûsîrî "the invocation of (the spirits of the planets)" (see *Kâfû* and *Le monde du sorcier*, 189 ff.).

19. *ilm al-fâriṣrîrî (mâšîyâtârî), "the art of making phylacteries" (see *Kâfû* and *Le monde du sorcier*, 172 ff.).

20. *ilm al-ṣâfâ, "the art of making oneself instantly invisible" (see *Nîhrî* and *Le monde du sorcier*, 184 ff.).

21. *ilm al-ḥîyâl al-sâbînîyâ, "the art of trickery and forgery" (see ibid.).

22. *ilm al-ḥaḍîr al-daḥâ, "the art of disclosing frauds" (see ibid.).

23. *ilm al-ṣâfâ, "conjuration" (see ibid.).

24. *isl al-tâlîb al-ḥâbî, "charms" (see *Kâfû* and *Le monde du sorcier*, 172 ff.).

25. *ilm al-ṣâfâ, "the art of employing the properties of drugs" (see *Nîhrî*).

III. Judicial astrology (see *Nîhrî* and its ramifications.

26. *ilm al-ṣâfîyârîdî, "hermeneutics and melanologies" (see *Kîhîfâh* and *La divination arabe*, 483-8).

27. *ilm al-ṣâmîrî, "geomancy" (see *Kîhîfâh* and *La divination arabe*, 195-204).

28. *ilm al-fâlî, "omens" (see *Fâl*; *Kîyâfâ*; *La divination arabe*, 431-519).

29. *ilm al-mâkî, "râphâdomancy" (see *Kû*; *La divination arabe*, 214-19).
30. *Sim al-fira*, "orichomancy" (see FAT, \*YAPA; *La divination arabe*, 431 ff., 498-516). As can be seen, in this inventory, Islamic divination avails itself of methods belonging to magic and astrology. A single term embraces all these arts: *Sim al-fira*, "the art of apprehending the invisible". Any method permitting the acquisition of supernatural knowledge or assumed to do so is considered as relevant to divination.

IV. The disciplines omitted in this inventory.

31. Divination by dreams (see TA\'A\'IN AL-KU\'RA\'A; *La divination arabe*, 247-57, 258; Fahid, *Les songes et leur interpretation selon l'Islam*, in *Sources orientales*, ii (1959), 127-53). The absence of oniricism among the divinatory techniques is justified by the fact that it occupies in Islam a higher place than that of divination in the sphere of religious inspiration. It is closer to prophecy, of which it constitutes a true survival. This is the case in the forty (or forty-six) parts (cf. Wensinck, *Concordance*, i, 343), while divination is the lowest echelon.

32-4. Among chernomantic practices, only rhapsodomancy and geomancy are mentioned. (32) Belomancy (see *La divination arabe*, 181-8). (33) Lithoboly (see RAYY AL-DUMAR; *La divination arabe*, 186-95), (34) mayor (see AL-MASIR; *La divination arabe*, 204-14).

The absence of these practices in the above inventory is due to the fact that they were associated with pagan culture and they were thus prohibited in the Kor\'an. (35-41. The use of the oracle (in its various forms: chad, radja, hafit [q.e.v.], ventriloquism, and necromancy; see, *La divination arabe*, 128-9), which was still popular in pre-Islamic Arabia, (36) exspisapny, (37) hepatoscopy, (38) teratomancy, (39) medical diagnoses, (40) lecanomancy, (41) ordeal, manic disciplines much used in ancient Mesopotamia, are present only as vague survivals in Islamic divinatory literature (cf. the index of techniques and ideas in *La divination arabe*, 591-3, and J. Nougayrol, *La divination babylonienne*, *La divination*, studies collected by A. Caquot and M. Leibovici, i, 28-81).

If the diviner ceased officially to exist in Islam, divination survived, but considerably changed, adapted progressively to the taste of the period and enriched by new Hellenistic, Persian and Hindu practices, to which were added the local practices of the conquered territories. At the end of this period of adaptation and enrichment, Islamic divination progressively lost its primitive oracular nature to become a techne, an art or a science (*Sim*). It is thus, for example, that to beomancy, condemned by the Kor\'an because of the its connection with paganism, there succeeded *Sim al-kurra* or rhapsodomancy, *Sim al-qasr* and *Sim al-kurri* or onomatomancy, *Sim bhawas al-Kur\'an*, a combination of rhapsodomancy and onomatomancy, *Sim al-nam* or geomancy and *Sim al-majdiya*, a sort of machine for producing emblems. To onomatomancy, in the sense of dream-messages received directly from the divinity by a man or by his substitute and often expressed in explicit language, there succeeded *Sim al-ta\'at* or oneirocricism. To *biya\'a* or physiognomy, there succeeded *Sim al-firdasa* or physiognomy and the ramifications indicated above. The sphere of fari or emblems was enriched by the transition of the Arabs from a nomadic to a sedentary culture, while preserving nevertheless, its original structure, especially where onomatomancy was concerned (cf. *La divination arabe*, 525-6).

Islamic divination resembles a crucible in which the divinatory practices of Semitic and Hellenistic antiquity were fused. The rich divinatory literature written in Arabic, Persian and Turkish conveys us an imposing heritage the study of which will contribute to a better understanding of ancient and mediaeval religious beliefs.

(T. Fahid)
rians and geographers, but it is very probable that Kalat marks the site of mediaeval Kizkahan or Kikan, judging by the latter's position in the itineraries; it seems to be the K-kiangna of the early 7th century Buddhist pilgrim Hiuenstang (see Marguarit, Eranomâr, iv. 273-5). Kikan and Balak were raided by the Arab commander Sûman b. Salmâz al-Mughâfîl and then by al-Munfihir b. al-Dîrâbî al-Sâbî as early as Mu'awiyah's caliphate (Bâlîbhûr, P. 433-4). In the 14th/15th century, Kalian Khân Khan was named as the residence of the ruler of the region of Tûran (on which see Minorsky in El i. 820), Ibn Hawâlî b. 324, tr. Kramers-Wiet 378-7, calls Mu'tazz b. Ahmad, adding that he recognized the 'Abbûsids in his khâla (a point probably made by Ibn Hawalâl because the adjacent province of Sind at this time acknowledged the Fâtimids and the Ismâ'îlî imâmâtes). However, the capital of the region was located not long afterwards at Kúsâd, modern Khuzdâr, 30 miles to the south of Kizkâhân/Kalat (see کشنا). In the early Ghânawid period, it is recorded that Mas'ûd b. Mahmûd went on hunting in the district of Khânân (Bayhaâl, Târîh-i Mawdâlî, ed. Ghari and Fâyvûl, 126). Shortly after the end of the 12th century, Kalat has been in the hands of Brahyûls from the Kâhârân tribe, from whom the later Ahmadzây Khân of Khânân was descended. In the 13th century, the Khânns recognized the suzerainty of Nâdir Shah Afshâr and Ahmad Shah Durrânî (sq. sq.) during their Indian campaigns, and their power in Balûhistân grew. The greatest of the chiefs of this period, Nâsîr Khân b. 'Abd Allâh, tried to shake off Afghan control, and though Ahmad Shah defeated him in battle, the latter was unable to take Kalat town from Nâsîr Khân, despite three attempts (1772/1758). It was Nâsîr Khân who built the citadel of Kalat, known as the Mirî, which became the Khânî's palace. We possess descriptions of Kalat during the first half of the 19th century by travellers such as H. Pettinger (1826), who mentions the mud-brick defensive walls pierced with gun-holes and the ample water supply from a spring, which also turned several mills.

Kalat, in the southern part of the Khânân, is a spur of the Karljan-Dugh Mts. Kalat-i Nâsidr is located not long afterwards at Kusdst near the Irano-Soviet border, on a spur of the Kârdhâr-Dîgh Mts. Kalat-i Nâdir consists of a high valley (altitude 2,500-3,000 feet), some twenty miles long and running west-east, which is converted into a natural fortress by walls of the northern rampart is even higher. These walls have been in the hands of Brahyûls of the Kambarânîs ever since the 12th century, and the Brahyûl territories were now returned to the Khân, and with the annexation of Sind in 1843 and the Panjab in 1845, British influence was brought right up to the frontiers of the Khânân. The Khânns themselves suffered several decades of disputed authority and tribal turmoil, till in 1876 the Government of India was compelled to intervene, and Capt. (later Sir Robert) Sandeman negotiated an agreement between the Khân and rival chiefs, making Kalat a protected native state, with a British Political Agent to be henceforth stationed at Quetta. The northern borders of the Khânân, Quetta, Nushkân and Kahruân were leased to Britain in perpetuity, to form British Balûhistân, and the right to levy transit dues at the Bolân Pass commuted for an annual subsidy (see T. H. Thornton, Colonel Sir Robert Sandeman: his life and work on our Indian frontier, London 1895, 39-87, 128-8, etc.). Even so, further intervention was necessary in 1893, when the tyrannical Mir Khudâlî k. Mîhrân was deposed from his Khânêtî under the Government of India.

The earthquake of 1893 affected Kalât badly, as well as Quetta and Mustang, demolishing most of the old town and causing widespread economic damage through destruction of the irrigation System (see کوشکر). In 1909 strained relations and clashes between the Khan of Kalât and the chief of Kharân (sq.) to the south-west of Kalat, were regarded as a threat to the foundations of Kharân as a separate native state under the control of the British Political Agent. Early in 1949 the Khan of Kalat acceded to Pakistan and his Khânate became part of the Balûhistân States Union, with the Khan no longer an independent ruler but enjoying a privy purse from the central government.

(2) The province. This included by the 15th century the districts of Saravan, Dzhalwan, Kachch and Makrân, and the tributary states of Las Bêla and Kharân. In 1555 all the provinces of West Pakistan were merged into one unit, and Kalat became a separate District under a Deputy Commissioner, whilst Kharân, Makrán and Las Bêla formed separate Districts. Kalat District is today the biggest in area of all Pakistan, covering 30,932 sq. miles in area and with a population, made up of Brahûls, Bâlîs, Jhâts, etc., of 34,420 (1966 census).

(C. E. Bosworth)
It became of especial strategic importance to site for the treasure-house in which he deposited during the Crimean War, but finally demolished by occupation by a French force on 17th January 1853 by Turkey at the settlement of Kükü Kaynarjia.

The Ottomans when the Russians started descending the Dniepr. The Russians with the garrison of Orik (Otrakof) opposite to it, in the rivers to the Black Sea, and major reconstructions were accordingly undertaken in 1709 and 1710. Within the Kâlbûrun promontory is an inner isthmus slender as a single hair (kil). It lies at 2 sea miles’s distance from the fortress of Özi or Oczakof, and at the tip of the cape was a fortress built by the Ottomans.

Kâlbûrun came into prominence at the beginning of the 18th/19th century as a result of the Cossack invasions towards the Black Sea coastlands (Kâlbûrun Celebi, Fedâilâhe, Istanbul 1825, ii, 79, 107), hence Kâlbûrun, against Cossack raids (Poechi, Ta’rifk, Istanbul 1823, ii, 252). The one constructed at Kâlbûrun had a staff of 193 persons (Blâbokân). Kâlbûrun had a staff of 193 persons (Blâbokân).

In 1153/1741, Nâdir ibn al-a’lâm, son of Sulaymân b. Kutlumush [ nhớ; second Sâldât prince of Asia Minor. At an early age, he was in Antioch when his father was killed in battle fighting Tûsùh [ nhớ; and he was handed over as a hostage to Malik Shâh [ nhớ; who conquered Syria in 1086. On the death of the latter (1092) he managed to escape, and arrived in Nicaea, his father’s former residence, where he seems without much difficulty to have found a refuge.

Alexis Comnenus had in effect brought his Turks far beyond the edge of the Anatolian plateau at Dorylaeum. These victories of the Christians enabled Alexis Comnenus to regain control of the entire Aegean coast of Asia Minor; but the Crusaders did not stay in Asia Minor, and the Turkish forces, who being still semi-nomadic in character had been repelled but not destroyed, returned behind the lines of the Crusaders. The danger had furthermore led to a temporary reconciliation between Kûlûk Arslan and Dânîshmend, which Dânîshmend, it is true, played the more significant role; the latter, at the head of his troops, threatened on all his frontiers, sought to use against his other opponents those of the Turks whom he hoped gradually to assimilate or to neutralise.

Kûlûk Arslan was especially anxious to maintain relations with the Turkish East, which other Turks, in particular the Dânîshmendids [ nhớ; were threatening to cut off. In summoning his father to Nicaea, Alexis Comnenus had in effect brought his Turks far in advance of what then was still the principal zone of Turcoman population.

It was in these circumstances that the Crusades intervened, enabling Alexis temporarily to abandon the task of dealing with the Turks. Kûlûk Arslan crushed the Peasant Crusade of Peter the Hermit, but was subsequently forced to give up Nicaea, along with his harem, to the Barons’ Crusade, and was later beaten by the Christians again on the edge of the Anatolian plateau at Dogrylaeum. These victories of the Christians enabled Alexis Comnenus to regain control of the entire Aegean coast of Asia Minor; but the Crusaders did not stay in Asia Minor, and the Turkish forces, who being still semi-nomadic in character had been repelled but not destroyed, returned behind the lines of the Crusaders. The danger had furthermore led to a temporary reconciliation between Kûlûk Arslan and Dânîshmend, which Dânîshmend, it is true, played the more significant role; the latter, at the head of his troops, deprived the Franco-Armenians of the strategic centre of Malaya, vital to Kûlûk Arslan’s links with the East. Also, when Dânîshmend died in 1104, Kûlûk Arslan, who had become reconciled with the Greeks to the point of sending them contingents to fight other enemies (1106), came and occupied the place.

From there he was able to control Upper Mesopotamia, where the lieutenants of his Eastern Sâldât cousins were in conflict with one another. When the enemies of Sultan Muhammed b. Malik Shâh [ nhớ;
appealed to him for help, he confronted the army of the latter on the Khabur, and was killed (1107). This was for a long time the last intervention by the Saljūqs of Rûm in the East, and the roughly-constituted Turkish state was definitively enclosed within Asia Minor proper.

**KLİDİ ARSLAN II**, son and successor of Mas'ūd I, and one of the most important sultans of Rûm (1155-92).

Mas'ūd had, in dealing with the Greeks, succeeded in restoring the position of the Saljūqs in relation to the Dānghemzids who were divided by quarrels over the succession. Klidlj Arslan at first maintained this policy, and carried it to the extent of offering the Byzantine Manuel Comnenus at Constantinople in 1162 a form of allegiance which, in concrete terms, cost him nothing. He was then able to make himself master of a portion of the Dānghemzid possessions, and he would have taken them all had he not been confronted by the powerful ruler of Muslim Syria, Nūr al-Dīn. The latter, champion of the Holy War against the Christians, pretended indignation at Klidlj Arslan's relations with the Greeks. The two princes in fact were alternately allied and at odds, Klidlj Arslan helping Nūr al-Dīn to deprive the Franks of their possessions on the Syro-Anatolian frontiers with the object of sharing them with his rival, and Nūr al-Dīn extending his power over this territory as soon as the Saljūq sultan withdrew. The conquest of Egypt by Nūr al-Dīn's lieutenants Shā ḥūk and Śalāḥ al-Dīn crowned his glory, and Klidlj Arslan's enemies persuaded Nūr al-Dīn to undertake an expedition into Asia Minor which forced Klidlj Arslan to recognize what remained of Dānghemzid rule. On the death of Nūr al-Dīn, he annexed them (Malatyā in 1177) thus accomplishing, from the Byzantine territories in the West almost to the furthest limits of the East, the political unity of Asia Minor.

He no longer needed to deal with the Greeks, and on his side, Manuel Comnenus, though strengthened by the general success of his foreign policy, was uneasy at the growing power of the sultan, and decided that he must put an end to it. In 1176, at the head of a powerful army, he advanced on the Anatolian plateau, but was crushed at Myrsokêphalos. This was, after an interval of a century, a replica of Mantzikert, which showed that henceforward the power of the Saljūqs of Rûm was not comparable to that of Khusraw III, the young son of the sultan of Rûm Rukn al-Dīn, who reigned only a few months (1204-5), after which the majority of the amirs, worried at the general dangers inherent in the rule of a minor, deposed him in favour of Kay Khusraw IV (q.v.).

**KLİDİ ARSLAN III**, the young son of the sultan of Rûm Rukn al-Dīn, who reigned only a few months (1204-5), after which the majority of the amirs, worried at the general dangers inherent in the rule of a minor, deposed him in favour of Kay Khusraw IV (q.v.).

**KLİDİ ARSLAN IV**, better known by his ḥabūd of Rukn al-Dīn, one of the sons and successors of Kay Khusraw II (1246). It was at the beginning of the period of the Mongol protectorate that, the three sons of the late sovereign all being minors, the senior amir, in order to safeguard the unity of the state, sought to install, under their own executive power, a sultunate shared jointly between the three young princes; Klidlj Arslan was sent on a mission to the Mongol chief Batu to persuade him to accept this solution. This very mission alone established a special relationship between Klidlj Arslan and the Mongols, and for many years two opposing parties were in conflict: the one, taking him as its figurehead, believing that the only possible course of action was to make a treaty with the Mongols, the other, relying behind his brother Izz al-Dīn, seeking to organize resistance with the aid of the Turcomans of the West and in alliance with the Byzantines. Successive schems resulted, leading on each occasion to a division, temporary at first, between the territories in the east, triouing the Mongols who were close by, awarded to Klidlj Arslan, and those of the west, left to Izz al-Dīn. United for the last time in 1260, the two brothers participated in the last time in 1260, the two brothers participated in the Crusade of Frederick Barbarossa; the latter, an enemy of the Byzantines, had established diplomatic relations with Klidlj Arslan who, indifferent to Syro-Palestinian affairs, was inclined to promise him free passage. But Izz al-Dīn's Turcomans attacked the Germans, who converged on Konya (1190). Shortly after, the old sultan succeeded in escaping from the semi-captivity in which his son was holding him, and took refuge with another of his sons, the son of a Greek mother, who was established on the western borders. It was there that he died, at the age of seventy-seven.

**Bibliography:** Sources include the Byzantine writers Cinnamos and Nicetas Choniatus, the Armenians Matthew of Edessa and Gregory the Priest, Michael the Syrian, and the Arab authors cited in the preceding Bibliography. References to modern works are given in the works of Cahen and Tiran cited in *ibid.* and in N. Blissfield, Nūr ad-Dīn, Damascus 1968. (CL. CAHER)

KILIFI, headquarters of Kilifi District in the Coast Province of Kenya, in lat. 4° S, is a small port and capital of an independent town of about 15,000, including the present Kiool, Kitoka and Mnarani. The large Friday mosque, the wealthy déor of the adjacent tombs, and the walls and gatehouse, show that Mnarani was the chief amongst these settlements in medieval times. The cemetery is noteworthy for eleven inscriptions in 15th century Arabī script. Excavations by J. S. Kirkman in 1954 showed that the site was occupied from the end of the 14th century until some time in the 17th century when, as Capt. W. F. W. Owen recorded in 1835, it was destroyed by Galla tribesmen. The Sultan of Kilifi sent an ambassador to greet the Turkish commander Abd Allah at Mombasa in 1588, and in 1590 joined him against the Portuguese in Mombasa. Following a long feud with Mallindi, Kilifi was razed by the Portuguese with local allies in 1592, but recovered. It was to Kilifi that Sultan al-Hasan b. Ahmad of Mombasa withdrew in protest against the Portuguese Captain of Mombasa’s actions in 1612.

(G. S. P. Freeman-Grenville)

KILLAWRIYA, Calabria (in Yâkut is found Killawriya, and in Ibn Dīnawar Rihla, Kalawriya, both of these close to the Byzantine Kalawriya, Kalavria, in Italian Calabria). It is very likely that the Arabs, coming probably from Spain, launched attacks across the sea against certain coastslands of Calabria even before Abd al-Furar (263) landed in Sicily in 229/847, thus providing the Muslims with a base for military operations against the Italian mainland, mainly the Marches.

According to Ibn al-Azhâr b. Idrīs, 158, cf. 168) refers to somewhere which he places to the north of Aleppo between the two rivers ‘Airīn and ‘Ayn al-Aqabāt. This place is apparently known to the Assyrarians, since a letter in cuneiform script (Harper, no. 1037, Brit. Mus. K 13073, obv. 3) mentions a town Killiz b. Nīkār. In Roman times, Killiz was called Killi or Killi, a town in the region of Samosata. In the mediaeval period it seems to have been of no importance. It is mentioned by P. Demys of Tell-Mahre at the time of the revolt against the Patriarch Dionysius in 872. One should read Killiz instead of Kalaz or Shalaz in Bar Hebræus, Hist. eccl., ed. Abbeacus-Lamy, 4, 329, 342, and Killiz instead of Half in Michael the Syriac, Chron. syr., ed. Chabot, iii, 11, 23.

The Arab geographers do not seem to mention Killiz. Yâkut is somewhat confused. His Killiz (iv, 158, cf. 168) refers to somewhere which he places near Sumaysat or Samosata, but his Killiz (iv, 299) really does mean our Killiz, a town in the nākhash of al-Azâz (A’azāz) between Aleppo and Antich, and he believes that it should be written Killiz. The place in the region of Samosata is probably not Killiz but al-Kallis or al-Kalis, which Kudama lists among the frontier settlements of Dīyār Bakr and which Ibn Hawshal, 156 (1st edn., 157) places on the May-

KILIZ, a town of northern Syria, situated to the north of Aleppo between the two rivers ‘Afrin and Kuwayk, north of A’azâz and on the road from Aleppo to ‘Ayntab. It was apparently known to the Assyrarians, since a letter in cuneiform script (Harper, no. 1037, Brit. Mus. K 13073, obv. 3) mentions a town Killiz b. Nīkār. In Roman times, Killiz was called Killi or Killi, a town in the region of Samosata. In the mediaeval period it seems to have been of no importance. It is mentioned by P. KILLIZ — KILWA

which stretched from the Rutifi River to Sofala in mediaseval times and was the greatest of the Islamic trading states in East Africa.

Barros, Da Asia, 1532, preserves an anonymous abbreviated Chronica dos Reys de Quilwa, composed perhaps before 1507; an independent 16th century Kiliz al-Sulha fi Adbilh Quilwah, by an anonymous 5th author, survives only in B.M.ms. Or. 2666, dated 1562. Neither survive examples. A 15th century Swahili History is of little value. Currently the rulers are certain, and with them, Ibn Bațtuta and Muhammad al-Fāīl sustain the historicity of the documents. After 1500, numerous accounts occur in Portuguese and French sources. In 1560-5 H. N. Chittick excavated the chief buildings.

The chronology is controversial. Chittick's definition from the text of Barros of some fifteen rulers must be regarded as unacceptable. He dates the earliest occupation to ca. 800. The finds agree well with the documentary sources as they stand. They describe a dynasty of "Shīrat" settlers from the Gulf established ca. 957. The founder, Ali b. al-Husayn, bought the island from the preceding pagan ruler, carrying his wealth and two towns of slaves. The expanding trading centre was often at war with neighbouring islands. In the 15th century it acquired the monopoly of Sofala's gold trade with its hinterland; its former governor, Dāwūd b. Sulaymān, was Sultan of Kilwa ca. 1311-70, and "master of the trade" of Pemba, Zanzibar, Māfīa and the mainland. Essentially, it was an entrepôt serving Arab Indian Ocean routes, in gold, ivory and some slaves, against imported textiles, beads, and Near and Far Eastern ceramics. Under Sulayyān b. al-Husayn, ca. 1370-85, many important buildings were erected in a new style. Ali b. al-Husayn, otherwise unrecorded, issued the first coinage in the late 14th century. About 1394 Mubarrad al-Fāīl succeeded the original dynasty, possibly by female descent. Ibn Bațtuta visited Kilwa in 1351: the people were black, orthodox Shī'īs, and devoted to 任期 against mainland unbelievers.

Vasco da Gama sailed past Kilwa in 1498. In 1500 Pedro Alvarez Cabral was the first Portuguese to levy tribute. Francisco d'Almeida took it by storm in 1505. Contemporary accounts attest its wealth. A Portuguese fort controlled it until 1512: its economy was ruined by the Portuguese seizure of the Sofala trade in 1505. A population of perhaps 10,000 in 1500 had already dwindled to about 4,000 by 1587, when marauding Zimba massacred 3,000 inhabitants. Kilwa never recovered. After the Umān capture of Mombasa from the Portuguese in 1598, Kilwa also was made tributary to Umān. In the 18th century the slave trade developed greatly, but Zanzibar was the main entrepôt. Zanzibar finally absorbed Kilwa in 1840, depriving the last sultan. When Germany acquired the mainland in 1886, some surviving royalties threw their records in the sea, lest they fall into infidel hands.

al-Kili, also al-Kila, according to Abu 'l-Hasan al-Libyani also al-kayfa (see al-Dinawari, The book of plants, ed. B. Lewin, Wiesbaden 1974, 170, § 643); the word is derived from aramaic *katlal, potash, potassium carbonate (K₂CO₃), but also sodja, sodium carbonate (Na₂CO₃) (both materials were not clearly distinguished, therefore the Arabic term is kept in what follows). Al-Kili thus indicates the salt which is won from the ashes of alkaline plants, but is also confusingly used for the ashes themselves and the lye. As synonyms are given *shabb al-‘usfur and *shabb al-asbaflja (Ibn Maymun, Shahr aṣṣṣīl al-‘ajāb, ed. M. Meyerhof, Cairo 1940, no. 345). The plants or families of plants *rimafl (Haflyzxon articulatum Cav.) and *barm (Chenopodiaceae) serve as the standard plants employed. According to Abu Hanifa al-Dinawari (op. cit. 104, § 67 = LA, s.v. *kayfa = Ibn al-Baytār, Dā’imī, IV, 31) the best potash is won from al-burul (Atrhemum c.q. Siedlitza), the so-called *potash of the dyers (*kayf al-ḥabbīna). The other sorts sufficed for the manufacture of glass. The extraction of *kayfa is concisely but accurately described by al-Layth, the editor of the K. al-*ṣṣīl of al-Khallī b. Ahmad al-Farāḥī (ed. ca. 170/786): the plants al-qhādā (Atrhemum c.q. Salicornia) and al-*rimta are burnt while giving; the ashes are slaked with water which then consolidates into *kayfa (see LA, s.v.).

A prevalent part is played by al-kili in the manufacture of glass. It is melted together with sand and magnesia and thus produces the *substance of glass (*qaynak al-suflal-dājīn, Masūdi, Murādī, ii, 407). Above all, it happens that the glass easily absorbs the various colors (see Dimasqī, Nubket al-dahr, ed. Mehren, 80; J. Ruska, Das Buch der Alten und Salze. Ein Grundwerk der spätiranischen Alchimie, Berlin 1933).

Because of its burning, burning and purifying effect al-*kili is used in medicine to treat skin diseases like vitiligo (*habba), leprosy (*bara), seakles (*djarāw) and also wounds and sores (*dirāh, *burāh). Morbid growths are also stiched with it (Masīh al-Dīnawari, who lived in the time of Ḥarūn al-Raṣīl, in Ibn al-Baytār, iv, 31; *All b. Ṭabban al-Ṭabarī, Fīridas al-Iṣna, Berlin 1928, 322; Pseudo-Ṭabrī b. Kūsa, Kīlawa, Al-Dīnawarī, ed. G. Sahnū, Cairo 1928, 114; Ibn Sīna, Kūsin, Rāmān 1993, i, 248; The medical formulary of al-Samargandi, ed. M. Levey and N. al-Kharidy, Philadelphia 1967, 148; Kayma, 244-245, 253). Many people apply al-*kili and vinegar on scorpion stings (Ibn ‘Urayba, *Uyun, ii, 102).

KIMAR — KIMAR

KIMAR, the name given in Islamic geographical and travel literature to Kîmar or Cambodia. The geography and political organisation of South-East Asia early became of interest to Islamic scholars because of trade links with Further India and China, and information was brought back by, inter alios, Arab and Persian merchants and navigators. Some of this information relates to the Khmer kingdom, to which there is a passing reference in the Kitâb al-mushtâq fi ʼl-Khitaṭ, al-ʻAdâf of al-Sharîf al-Idrîsî, Lektern 1960, 29, 142.

The Hudūd al-ʻAlamat (372/982), tr. Minorsky, 86-7, mentions three great kingdoms of South-East Asia, i.e., Kâmarûpa, Assam (see ASSAM and KAMROJ), Sânt (Campâ, southern Annam or South Vietnam) and Kîmar, and it states that two of the most precious products of Kîmar were elephants' tusks and aloes wood. The aloes wood of Kîmar (Wd-kîmar) is much mentioned in Islamic sources, as is that of Campâ (Wd-panji), but there is considerable confusion in the sources about the origins of the different kinds of aloes wood stemming from eastern India and South-East Asia, with a particular uncertainty over the wood of Kîmar and that of Kâmarûpa. Moreover, Ibn Baṭṭûṭa, iv, 240-1, 241-2, when speaking of Diâwa (possibly Sumatra), since Sumatra and Java were frequently confused or even regarded as one island by the Muslims) mentions Kîmar as part of that land (mīn bâl-bâl biḍḍâhâ) and the Kîmârî variety of aloes wood as being particularly fine.

In regard to these problems, the discussions about the various varieties in Yaḥyâbî, Buldûn, 367-8, tr. Wiet, 236-9; and also Maqbul Ahmad, op. cit., commentary, 212-5, and J. Marquart, Indochine et Indonésie* (in addition to the references given in the article), see Hudūd al-ʻAlamat, commentary, 240-1; Minorsky, Sharâf al-Zamān Tâhir Moorvâsî on China, the Turks and India, London 1942, text 39, tr. 51-2, commentary, 132-4; G. Ferrand, Relations de voyages et textes géographiques arabes, persans et turcs relatifs à l'Extrême-Orient du VIIIe au XVIIIe siècles, Paris 1913-14, i. 229-30 (= Abû Dulaf al-Khârazmî's information on Kîmar), and index s.v. "Kîmar".

KIMAR is the most common Islamic term for gambling, which is strictly forbidden according to Muslim law. The prohibition goes back to the references to musâfîr (see) in Kûran, II, 179/180, and V, 109/112. Musâfîr was expressly equated with kîmar in general, supposedly already by ʻAbd Allah b. ʻUmar (cf. al-Bukhârî, al-Adâf al-musfîrî, Cairo 1375, 325). Voices querying this assumption, and the assumption that the Kûran had the legal classification of "forbidden" in mind, were rarely raised, and then only for the sake of argument. For all we know, the Muslim ban on all gambling has existed since the time of the Prophet in the same form as later on, and has remained in force throughout. Gambling was conceived as a transaction in which property changed hands arbitrarily and unproductively, something falling also under the injunction of Kûran, IV, 29/32, against frivolous and worthless (bi̇-du) business transactions. Economic theory, and economic realities, tended to favour a strict view of what constituted gambling.

According to Muslim sources, universal and reckless gambling was endemic in pre-Islamic Arabia. Although the Muslim attitude toward the Dîjudîlya no doubt contributed to this view, gambling was probably widely practised, and in a variety of ways, among which the drawing of arrows and the stake racing of horses and camels were the most prominent. The actual musâfîr game, as painstakingly reconstructed from stray verses of poetry by later scholars, principal among them Ibn Kûtabî, al-Musâfîr wa-l-bîdâh (Cairo 1345), is presented to us as a kind of ceremonial lottery organised for charity.
Several gambling stories lead into the time of the Prophet. Thus, wagering with unbelievers by Abu Bakr "before gambling was forbidden" is mentioned in the Kur'an commentaries in connection with Kur'an, XXX, 14-15; it appears to be a rather old story, though hardly historical. Another, no less famous story, reported in connection with the battle of Badr, that of Abu Lahab gambling with al-'A'ishah, may also be old, but its connection with gambling can be shown to be mostly a later elaboration. The Kur'an clearly indicates the social and religious undesirability of gambling: it is something causing quarrels, and it interferes with the performance of worship and prayer. However, the commentators were at a loss to cite any particular occasion for the prohibition. While there is much room for speculation, no convincing historical explanation can be offered, unless there is some significance in the fact that the as-sahih literature credits a contemporary of the Prophet, al-Maghrib b. Habis (q.v.), with being the first to forbid gambling.

In spite of its being prohibited, gambling, or what was considered as such, seems to have always flourished everywhere in the Muslim world and at all levels of Muslim society. Lotteries proper appear to have been unknown in Islamic times. Wagering on chance events is not much attested (cf. for instance, al-Raghib al-Ishash, al-Mukhtasar (al-asba'ah), Bulaq 1887-91869-70, i, 127, 147). Favourite cutlets for the gambling instinct were, among board games, backgammon (nard (q.v.), played with six-sided dice, and, among sports, horse racing (see PURUQYA). Other board-games, such as merals (sahra' and "fourteen" (shahara'dar/sahara'at sahirata), could involve stakes; chess (shaharaq (q.v.) and draughts (see KHARCA), when played for stakes, fell into the category of gambling. Important sports suspected of being devices for gambling were archery (rumsy al- Mudallal (q.v.) and pigeon flying (see MAMRAN), as well as competitions such as footracing, swimming (tikhab), or, more significant as an organized activity, wrestling (mukhabara'). Fighting games of animals looked upon with disapproval on the basis of the Prophetic warning against inciting animals against each other (tabhib, Concordances, i, 445b, 64-66) and humanitarian principles, included cock (see kalb) fights. Playing cards (hadanija (q.v. in Suppl.) are attested since Mamluk times (cf. L. A. Mayor, Mamluk playing cards, ed. R. Ettinghausen and O. Kurz, Leiden 1971). All these activities, of course, could be, and were, undertaken and enjoyed for their own sake without any accompanying gambling, and the gambling habits connected with them differed considerably. According to Ibn Taymiyya, Faidawi (Cairo n.d. 1584-6), iv, 398, nard was mostly played for stakes, while chess usually was not. The gambling that did take place was commonly in the form of stakes put up by the participating players themselves or, in the case of sports competitions involving animals, by the owners of the animals. However, although our information on this point is most deficient, it is clear that spectators, too, engaged in gambling on the outcome of the games and sports they watched.

While gambling by outsiders was clearly and indubitably illegal, the main problem for jurists was the determination of what constituted gambling by virtue of the manner in which the stakes were put up. The bi'dah expressly permitted competitions with camels (khaff), horses (hafir), and arrows (mish) (Concordance, i, 480a, 16-18), and there are stories establishing precedents set by the Prophet. Later jurists were inclined to deny the legality of stakes in connection with any other kind of sports contests and, in particular, board-games (of which nard was often declared illegal, even when played without stakes, because of its dependence upon dice). However, the permissibility of the legal sports was rationalized on the ground of their usefulness for military preparedness, an argument which, in practice, could be extended to other sports, even though jurists were usually hesitant to do so. The crucial question of how stakes, where they were at all admissible, could be legally established, was considered under three basic aspects: the establishment of stakes by a non-participant such as, for instance, the government, by one of the participants, and by both (or all) participants. The first two cases were legal (with some doubts in the second case as to what is to be done with the stake if the donor himself is the winner). The third constituted illegal gambling. In order to make it legal, the presence of a "legaliser" (mudallal (q.v.) was required, i.e. the participation of someone who did not contribute to the stakes. There exists a bi'dah to this effect (Concordance, ii, 402a, 15-17, etc.). However, the legality of this procedure was debated. Malik personally did not admit the device of the mudallal, with the consequence that later Malikis differed in their attitudes. The Hanbal Ibn Taymiyya and his followers rejected it forcefully. Legal attitudes towards potential gambling games in general can be said to cut across social lines. Shafi'ism, whose basic text on games was Kitab al- Umm (Bulaq 1934), vi, 273, was sometimes attacked, with little justification, for its alleged somewhat more lenient attitude. It should also be noted that by and large the legal literature paid comparatively scant attention to gambling, the reason being not so much the scarcity of gambling activities as the clear-cut stand of the law as to its illegality. Occasionally we come across interesting statements, such as the one by the Hanafi Kadi Shihab, Fathali (Calcutta 1851), iv, 587, suggesting that a Muslim could legally gamble with non-Muslims in non-Muslim territory.

The official handling of gambling offenders was determined by the peculiar nature of the circumstances under which gambling took place. Sporting events were mostly held in the open, but much other gambling went on in private. In the larger cities, there were gambling casinos (dar al-bim, kina-dakha, and other terms), where gambling was encouraged even to the extent of tempting losing gamblers with offers of loans (cf. Ibn Sa'id, Muqtid, ed. and tr. K. L. Tallqvist, Leiden 1899, 3063). Ordinary taverns, as later on the coffee houses (see KANWA), also had the reputation of allowing gambling (in connection with board-games) on their premises. If one could, it was also possible to do so. However, unless public annoyance resulted, or complaints were lodged, the legal authorities, presumably represented primarily by the office of the mutalbas, had little power or incentive to interfere with voluntary activities undertaken by mutual consent in the privacy of the home. If brought before the authorities, gamblers were liable to discretionary (ta'sir (q.v.) punishment. Jurists considered habitual gamblers as having forfeited their ta'dil and their capacity to function as witnesses, thus decisively downgrading their social and legal standing. Social degradation was commonly associated with gambling, at least in literature and theory. In real life, this probably affected only those who were unable to afford the losses incident to their gambling.

Excessive gambling, though evidently not un-
common, is not frequently attested. We hear about the gambler in moderate circumstances who brought ruin upon himself and who neglected his family (cf. Ibn 'Abba, *Umud al-fáid*, al-Najdi 138/1992, 210), or the poet al-Tallu'atari (q.v.), whose compulsive gambling made him a liability in court circles and kept him from advancement, or the—fictitious—Safi who intentionally freed himself from all worldly possessions by gambling them away (cf. F. Ritter, *Das Meer der Säule*, Leiden 1955, 202). Most gambling probably involved the minor losses that the losers were somehow able to absorb. It lies in the nature of gambling activities, especially where they are illegal, that reliable statistics with respect to them are unobtainable, and we have, of course, nothing to go on.

In addition to the legal injunction against it, the social stigma it carried, and its unsuitability for the Muslim Middle Ages. We can only guess that gambling as such, common as it was, was nevertheless in no way a major economic factor or disruptive social force.

In the way of statistical information for the Muslim world no information is available, and we have, of course, nothing to go on.
say, The origins of alchemy in Graeco-Roman Egypt, London 1970) date a number of writings disseminated under the names of Hermes, Thoth, Agathodaimon, Cleopatra, Moses, Solomon, Mary, Jesus, Democritus (or Democrats), Zaraathustra, Astanes etc. At the beginning of the 4th century these pseudographs are joined by the writings of Zosimus of Panopolis (+ A.D. 229), the genuineness of which is better vouched for. In the 6th century the Stoic philosopher Alymiodorus and emperor Heraclius wrote also on alchemy. A not inconsiderable amount of these Greek writings were translated into Arabic, but we have no exact information about times and places of these translations. It seems however that the first were made towards the end of the 2nd/8th century and that the greater part of these writings came to the Arabs in the 3rd/9th century (D. M. Dunlop, in JRS (1974), 5 ff., makes it clear that the assertion according to which a work of Zosimus was translated into Arabic already in 38/659, is false). It is possible that in some cases there may have been intermediary translations in Syrian (for Syrian alchemy, see R. Duval in M. Berthelot, La Chimie au moyen âge, ii, Paris 1893), but it is not clear which of these (if any) and his pupils took part in the work of these translations. Most of the Greek writings have only been preserved in very poor and fragmentary way. The oldest codex is Marciarius 299 dating from the 11th century (see M. Berthelot and Ch. E. Ruelle, Collection des anciens alchimistes grec, i-iii, Paris 1887-89; J. Bidez, F. Cumont et al., Catalogue des manuscrits alchimiques grec, i ff., Brussels 1927 ff.). Since the Arabic translations are thus two or three centuries older, and the Arabs at that period still knew an essentially greater amount of Greek writings than we do at present, the oriental tradition is of the greatest importance. It is certain that the study of Arabic alchemical literature will bring to light Greek works which have been lost in their original language.

Unfortunately, Arabic alchemical literature has remained until now still a moles indigesta. Very many manuscripts have been preserved, but only an extremely small part of their contents has been disclosed through catalogues or published. Consequently, it is not yet possible to sketch out a history of Arabic alchemy. In particular, the beginnings of this science in the 2nd/8th and 3rd/9th centuries are still largely wrapped in darkness. It may however be stated that already in the period in which the Corpus Gabriulianum (end of the 3rd/8th—beginning of the 4th/10th centuries) and the works of Muhammad b. Zakariyya al-Badr [969] were compiled, an important literature must have come into being, whose authors might have been Greek, Jewish, Christian, Persian or Indian wise men and philosophers. This pseudographic literature uses to a great extent the same names that served early Greek alchemy as designations. Some writings are in fact translations of Greek works; others were composed directly in Arabic but were imitations of Greek examples. It should however not be assumed that all sentences of Greek wise men, quoted by the Arabs, are taken from specific writings which are ascribed to these wise men. It seems rather that some of them originate only from zoological collective works.

Nevertheless, a great number of Greek notions are found in these writings. The etymology of the terms al-khimya, al-sab' a al-tahdhibiyya etc. have already been mentioned above. The metals are called al-adibat, corresponding to τά σιδήρα, quicksilver and sulphur are al-arab ah tā nuqumata. Elixir, al-khâs is the loanword to ἴχθος, the distilling apparatuses al-nilât and al-awsîh are derived from τό αὖδανον and ὅ ἀμβλέα, the processes tâbad, tâzidd, tâshm, tâsharr, etc. are adaptations from λοχέων ὑλῶν, ἰγκρήσεως, τωσ. In the same way a number of pseudonyms are imitations of Greek models, e.g. τίθας ἱερος from ὁ ἱερος ἔνοικος, zahhâd al-hanwar from ἀρχισελήνη, laban ba l-ladi'irâs from ὁ θεὸν ἐρμόνων and laban al-sâdhirâs from γόλα παραγων [for other pseudonyms formed with laban, see WKS 4, ii, 25 ff.]. To these are added whole theorems: al-litâfah al-nâshir bi-I-litâfah is the innumerably repeated ḥaflâna ṣaḥîhâ tâkàrah, and lam l-tâf al-litâfah ṣi̇fâta \(\text{litâfâta l-litâfâta l-litâfâta} \) corresponds to ḥaflâna ṣaḥîhâ ṣaḥîhâ ṣaḥîhâ. All this shows without any doubt the origin of Arabic alchemy.

We thus possess a great number of Arabic writings, fragments and quotations in great number which in our attention is caught by the names of Pythagoras, Arcelaeus, Socrates, Plato, Aristotle, Porphyry, Galen, Democritus, Zosimus and Theosebeia, Secundus "the silent philosopher" and many others. Often Hermes Trismegistus [see marâs] is mentioned, who in the opinion of the alchemists was the first to speak about alchemy ([ilm al-sa'da, see Flinders, 381]). The writings attributed to him, al-Risâla al-salafiyya al-bulbul, Risâlat al-Sirr, Tadbir Hirmis al-Harmisâ, al-Dahkhira al-iskandariyya, etc. have introductions in which in a legendary way is described how these texts were found in temples, caves and sepulchral vaults. The "Emerald table", a brief text full of symbols, was considered to be the key to the ultimate secrets of nature (see J. Ruskâ, Tabula smaragdina. Ein Beitrag zur Geschicht der hermetischen Literatur, Heidelberg 1926; M. Piessner, Neue Materialien zur Geschichte der Tabula Smaragdina, in IS., xvi (1947), 27-73). Sentences by Hermes are to be found in almost every Arabic alchemical work (see e.g. H. E. Stapleton, G. L. Lewis, F. Sherwood Taylor, The sayings of Hermes quoted in the Mi' al-Wafa of Ibn Umail, in Ambix, vii (1949), 69-90). Apollonius of Tyana [see râatîs] is considered to be the intermediary of the hermetic wisdom. Under his name a big commentary on the "Emerald table", the so-called Kitâb Sirr al-khalîlah, an allegorical book on the seven metals, the Kitâb al-'Aynâm al-sabba, and other writings were disseminated. Agathodaimon [see al-ghâthiyya] is also associated with Hermes. In the Risâlat al-ḥadîr he communicates before his death to his pupils the secret of alchemy. Finally they are joined by Cleopatra (see M. Ullmann, Koopatra in einer arabischen alchemistischen Disputation, in WZKM, tâlîf-hâv [1921, 192-73]. Mary the Jewess, the Persian wise men Dyânsâliyâd and Qântâs, Mani, the Indian cabbala, the Syrian Akhâmâd, Ar-Râzî, al-Khâfî, and many others, whose writings and sentences became known to the Arabs at a relatively early period. This largely still uninvestigated complex of the pseudographs was enlarged by the Arabs since the 3rd/9th and 4th/10th centuries and rendered even more opaque by stamping as alchemists the Umayyad prince Khâlid b. Yazid, the son-in-law of the Prophet, All b. Abî Tâlib, the 'Imâm Dîa'âr al-Sâlik [99-0] and the mystics al-Hasan al-Bâgri, Sûfîyân al-Thawri, Dhu 'L-Munâ al-Mîjri and Abu 'U-kâism al-Dînayy [99-0]. The alleged writings and doctrines of all these Greek, Persian, Jewish and Arabic authors form the groundwork for the two large alchemical corpora which came into being at the turn of the 3rd/9th and the 4th/10th centuries, namely the Corpus Gabriulianum and the writings of
Muhammad b. Zakariyya\textsuperscript{a} al-Rāzī (the mutual relation of these two cycles has been discussed by J. Ruska and E. Garbers, \textit{Vorschriften zur Herstellung von schwarzen Wässern bei Gebirr und Rāzī}, in \textit{Isl., xxx} (1930), 1-34). Dāhib b. Hayyān \textsuperscript{[q.v.]}, who may have died ca. 196/812, is considered to be the author of the first work. Meanwhile, F. Kreuss has proved that these writings cannot have originated before the second half of the 3rd/9th century and that a team of authors must be involved in their production (see also F. Rex, in \textit{Isl. xlix} (1972), 305-10; idem, \textit{Deutsche Orientalistik aus Beuteck Tübingens}, Tübingen 1974, 86-9). Accordingly, the writings of the so-called Ibn Wābah, the Muṣḥaf al-dījama\textsuperscript{a}, whose Latin translation carries the title \textit{Turba philosophorum}, may have originated at the turn of the century. In the \textit{Turba} a congress of alchemists is pictured, in which Pythagoras takes the chair and Archelaus records the minutes, while nine pre-Socratic philosophers present their doctrines (J. Ruska, \textit{Turba philosophorum. Ein Beitrag zur Geschichtc der Alchemie}, Berlin 1931; M. Plessner, \textit{Die österr. Umschreibung des Hieroglyphenschatzes}, in \textit{Zeitschrift für die Geschichte der Alchemie}, Berlin 1923, xi). They introduced a process which leads via Arnold of Villanova, the Latin "Geber" and Paracelsus to Robert Boyle (1627-91), Joseph Black (1728-99), Joseph Priestley (1733-1804), Antoine Laurent Lavoisier (1743-94) and finally to the miracle of modern chemistry. But they also gave important impulses to European cultural history; it may suffice to mention Jachet Böhme, the \textit{Vorschriften und Geschichten der Alchemie}, Goethe, the alchemist. A study of alchemical symbolism in \textit{Goethe's literary and scientific works}, Cambridge 1952.

This concise historical survey makes it clear that Arabic alchemy holds a key-position in the development of chemical thinking as a whole. However, in glaring contrast to its importance, it has been regrettably neglected by research until now. Most of what historians of science have written on the Arabic alchemists is second-hand, based on obsolete literature and disfigured by gross errors. A vast and fertile field lies here open to research; access to it, however, is not easy.

Alchemy is an extraordinary complex phenomenon which combines many divergent trends. Muhammad b. Zakariyya\textsuperscript{a} al-Rāzī in his \textit{K. al-Asrar} exerted himself in particular to build up a sober system. As a whole, it was a natural philosophy \textit{as a "natural, spiritual, divine science"} (\textit{Futuhat}, ii, 337) can indicate alchemy to It, however, is not easy.

Science and depth-psychology have therefore bound to happen that the "Aufklärer" rendered the writings apparently abstruse. It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy (J. Ruska, \textit{Das Buch der Alume und Salze. Ein Grundzüge der spätmittelalterlichen Alchemie}, Berlin 1925, xi). It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy (J. Ruska, \textit{Das Buch der Alume und Salze. Ein Grundzüge der spätmittelalterlichen Alchemie}, Berlin 1925, xi). It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy (J. Ruska, \textit{Das Buch der Alume und Salze. It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy (J. Ruska, \textit{Das Buch der Alume und Salze. Ein Grundzüge der spätmittelalterlichen Alchemie}, Berlin 1925, xi).
smoothed the way for a more justified and significant explanation of alchemy, J. Evola, C. G. Jung and M. Eliade in particular have rightly shown how alchemy is dominated by mythical, mystical and gnostic ways of thinking. There remains, however, the task of decoding the Arabic texts through exact historical-philological studies, and thus laying foundations which will no longer permit rash conclusions and approximate assertions.

Until now it has not been possible to say much about the theoretical foundations of Arabic alchemy, and even this little only incidentally. The way theories are built up differ considerably from one author to the other, and even in the corpus of writings known under the name of Ḥābir b. Hayyān and thus claiming unity, they show quite varying concepts. Hence only a few basic notions can be given here, which cannot be generally applied.

Transmission is possible because the various sorts (anwād) of metals form only one single species (djinns). They are differentiated only in accidents (fard al-ṣawād, or occasional) (sardiyāt). The accidents, however, are not stable but changeable, as can be seen in nature. Indeed, the metals grow in the bowels of the earth over long periods. In a sort of maturation process they change from base into precious metals until finally they become gold. According to some scientists, this conversion comes about under the influence of the stars. The alchemist is able to hasten this process in his retorts and to achieve by his skill in one day that for which Nature needs a thousand years. The literature gives hundreds, even thousands of recipes for making gold. Basically three methods can be distinguished.

The first method is based on the quicksilver-sulphur theory. In quicksilver water and earth are present; sulphur contains fire and air and thus both substances together hold the four elements. When the particles of sulphur and quicksilver are mixed and enter into a close compound, the heat generates a process of maturation and cooking which result in the various kinds of metals. If the quicksilver is clean and the sulphur pure, if the quantities (makādār) of both substances stand in ideal relation to one another and if the heat has the right degree (ludūl), pure gold (dhahab ibris, ṣafūq) comes into being. If before maturation coldness enters, then silver is formed. If dryness, then red copper. The more disturbing factors enter, the more low-grade the metals become: thus originate tin (kāfšat kāzā), iron (hadid aswad), plum-bag (ṣura) and antimony (kūh), see al-Khwārizmī al-Safi, Beirut 1957, ii, 106 ff.; Kāzānī, "Adhūdīs, 204 ff. The alchemist, then, exerts himself to imitate nature. He tries to discover how much sulphur and how much quicksilver is contained in gold and how great the heat must be to bring about the maturation process. If he succeeds in establishing these conditions, he is able to synthesise gold. It should perhaps be added that "quicksilver" and "sulphur" did not necessarily mean for the alchemists the chemical elements Hg and S, but that by these terms they understood rather the basic principles of fluidity and inflammability (they speak of ṣibaḥ ṭajārijā and ḥibbā muḥlrāh).

2. The second method is based on the doctrine of the relations of quantities (ṭil al-anwād) propagated by the authors of the Corpus Cabrianaum. The alchemist tries to establish the mutual relation of the metals according to volume and weight (hājīm wa-wasām) and to construct on the ground of these data a body with corresponding volume and weight (for details of these strongly speculative doctrines, see P. Kraus, Ḥābir b. Hayyān, ii, Cairo 1942, 187-303, ch. "La théorie de la balance").

3. The most important and most recommended method, however, consists in projecting an elixir [see Al-Ṭaṣṣal]. An elixir can be made from metallic, but also from vegetable and animal matter. It is thrown upon a base metal which precociously has been transposed into the passive (or black i.e. without any quality) condition; it permeates it like yeast pervades dough, and transmutes it into gold which is more valuable than mineral gold.

All these theories were based on premises which could neither be proved nor refuted. Therefore no real progress could be recorded in the dispute of the Muslim scientists about the possibilities of alchemy. It was significant that among the arguments advanced against the alchemists the reference to the de facto failure of all endeavours played only a small part. The alchemists admitted the difficulty of their undertaking, but emphasised that it must be possible to rediscover the secret of making gold, undoubtedly known to the wise men of old. The dispute was above all enacted in the theoretical field. Philosophical and theological arguments were put forward and conclusions based on analogy were often drawn.

'Amr b. Buh īr Dājīb's [gu] standpoint towards alchemy is not completely unequivocal. He is sceptical, but poses the question whether once in five thousand years it could be possible to make gold, when the various factors, like the quality of the elements, the right period, the correct position of the stars etc. would coincide accidentally (R. al-Ḥaṭwānī, Journal für prahistorische Chemie, xxv-xxvi, 1956-57). It should be pointed out that it is possible to make glass from sand, but that it is impossible to transmute brass and quicksilver into gold and silver, although quicksilver more resembles molten silver than sand does pharosian glass.

Yaḥyā b. Ishāq al-Kīndī composed the K. Ihbāl al-waṣīf 'l-musādla 'l-dhahab wa 'l-fidūs min ghayr maḏānim, a refutation of those who pretended to be able to win gold and silver otherwise than from ore. According to him mankind is unable to achieve acts which are reserved to nature. This polemic writing was immediately contested by Muṣannaf al-Zakariyyā' b. Ṭāhāb and al-Fārābī (d. 339/950). Was of the opinion that transmutation of metals is possible because, according to Aristotle's [see also the Latin translation of P. Kraus, La thdorie de la balance, c. 93], the various sorts (anwād) of the metals belong to only one single species (djinns). But it was indeed extraordinarily hard to realise the transmutation, and a thorough study of logic, mathematics and natural sciences was a prerequisite. The alchemistic texts were rightly veiled by pseudonyms and symbols, because otherwise, anybody might be able to find out the secret of making gold, and gold would become useless as means of payment. This economic argument was repeated again and again by later authors (L. Wiedemann, Journal für prahistorische Chemie, clxxii (1907), 125-235; A. Sayili, Fībdīsān 'l-dhahāb wa 'l-wasām, in Turk Tarih Kurumu, Del belen, xv (1951), 65-79).

The geographer al-Hamālī (d. 334/945) worked with obvious analogies taken from metallurgy, of which he possessed a thorough knowledge. In the same way as iron and steel could reach various degrees of good quality and pureness through metallurgy, i.e. through the skill of man, in the same way man is able to make in an artificial way gold that otherwise matures in a natural way in the bowels of the earth
The theoretical expositions and speculations of the alchemists were partly complete in themselves, and partly completed by experiments in the laboratory. The experiences gained in such experiments gave again rise to new writings and theories. It is probable that alchemy had a greater part in the development of experimental science than medicine, pharmacology, physics and astronomy (see L. Thorndike, *A history of magic and experimental science*, i-viii, London-New York 1929-39). An important experimental achievement was the oxidation of quicksilver which had been exposed continuously to a very slow fire for forty days. Pseudo-Majidi describes the process in his *K. Rutbat al-hakim* and emphasises that the weight of the matter was the same before and after the experiment (E. J. Holmyard, *Makers of chemistry*, Oxford 1931, 70). The furnishing of a chemical laboratory is very impressively pictured by Ibn Shihāy (382-426/992-1035) (see J. Dickie, in *Andalusi, xix* (1964), 243-310). There were many apparatuses: the *ugdāl* (Latin *aludē*), used to distil and to sublimate, the *gāf* (*curusel*), a receiver over which was placed an alembic (*al askāb*), distillation-pots (*bādak*, *bādak*) or timber, *lūṭa* (*lūṭa*), *khums* (*tāmsīr*, *pl. tāmsīrats*), *Latin aether* to generate high temperatures, phials (*bima*), thezez (bīdr, *tablīg*), pans (*suburjūgā*), and mortars (*lāwīm*). Many apparatuses are named after their alleged inventors, like *al-ṭaḥīr* (*Fīhāghūrās*), the "oven of Pythagoras", the *bār* "Zāsim", the "pit of Zosimos" and the *hammūn Māriya*, the bain-marie (see A. Sigel, *Verzeichnis der Apparate und Geräte, die in arabischen alchemistischen Handschriften vorkommen*, in *Deutsche A. d. Wiss.* zu Berlin, Institut für Orientforschung, no. 1, Berlin 1950, 92-100; E. J. Holmyard, *Chemical equipment*, in Ch. Singer ed., *A history of technology, ii*, Oxford 1955, 731-52).

With such apparatus, vessels and ovens the procedures (lādābir) of certain chemical processes, were achieved. The methods of these procedures were essentially the same as those of Greek alchemy, and most of the Arabic termini technici are translations of Greek notions. The "solution" (lādābir, *lāmūc*) of a matter is achieved by water, acids or lyes; the "putrefaction" (lāfīn, ṣafīqūc) is a process of decomposition furthered by water. Distillation and sublimation are indicated with lādābir and lādābir, calcination with *talū* (*talū*. A substance is consolidated and fixed by water and heat. "Blanching" (*lādīyīd, *tānūcīgūr*) indicates the making of silver, "reddening" (*lāfīt*) the making of gold. Many alchemists, however, use these and many other expressions only symbolically or in a completely different meaning for fear that they might reveal their secret. Thus the understanding of alchemical texts is made extraordinarily difficult. Since the alchemists were obliged from the earliest times to keep their esoteric knowledge secret (see *Papyrus Leidenensis*, ed. C. Leemans, Leiden 1843, 1, 10, 9: ἀλεξάνδρου ἔγγει Περσον οὐκ ἔχεται, *Platos* *Timaeus*), they used innumerable "pseudonyms", not only for the processes but also for the matters and elixirs. The same matter was often indicated with dozens of different names, and conversely, one and the same name was used to designate different matters. These pseudonyms also have a Greek tradition. Thus the names of the planets serve as designations of the metals: *al-gams* is gold, *al-kamar* is silver, *al-mirtīg* is iron, etc. Certain words contain the characteristics of a matter: *al-fartār* "the fugitive" is quicksilver, *al-gābar* "the reddish" is copper. Often names of animals are used: *al-wūhīb* "the eagle" may designate sal-ammoniac, *al-ṣabāb* "the scorpion" and *almal al-bayyya* "the snake-neck" can stand for sulphur, *al-farīb al-barī" the peacock of the Egyptian temple" for copper. The
meaning of such pseudonyms varied from one author to the other and from one workshop to the other; they had no general validity.

The first endeavours to solve this lexical problem were undertaken by the Arabs themselves; they composed glossaries or added to bigger theoretical works lists in which the meaning of the pseudonym was explained. But the value of these lists is small.

Only careful critical editions and competent lexicographical revisions of the sources may enable us to travel further in this thorny field, but in not a few cases it will probably be impossible to uncover now the original meaning of the alchemical recipes.

BIHAA [see RUNA].

KINALIZADE, 'ALĀ? AL-DIN 'ALI CELEBI (916-6 Ramadan 975/1510-22 January 1572), Ottoman scholar. His grandfather, 'Abd al-'Lādi from Isparta, was one of the tutors of Mehemmed the Conqueror, while his father was the Kā'īmi Amīr Allāh, known also as a poet. His grandfather used to dye his beard with henna, hence was by-named *binnālī* (*"the one with henna"*). This nickname was applied to other members of the family as well. Kinalizade 'Ali was born in Isparta in 975/1570 where he had his elementary education. His first tutor was one of his relatives, the Kāftā-tashar Kadır Efendi. Then, he went to different madrasas and completed his education under such scholars as Mālīl Ṣūrī, Sīnār, Ṣanībāb, Ṣūrī Allāh, and Ghiyaṭī Mubārak al-Din. In 983/1574, he was assigned by the Shaykh al-Talīm Abu 'I-Su'ēd (Ebusius'od) to the madrasa of Husam al-Din (the Husamīyya) in Edirne as *muallāri*. He next taught in the madrasa of Ḥamza Beg and Wali al-Dīn-oghlu Ahmed Pasha—both in Bursa—and in the two madrasas of Rūstam Pasha, one in Kütahya and the other in Istanbul, and in madrasas of Khājahī and Sāmānīyya, also in Istanbul.

In the year of 996/1589, when the construction of the madrasa of the Sīleymaṇīyya Mosque was completed, he was assigned to one of them as *muallāri*, thereby reaching the highest of the academic ranks. In Dhu 'l-Hidjja 997/July-August 1598, he was appointed as *hāji* of Damascus to succeed Kūrā Celebi. He remained in Damascus nearly two years, after which he was assigned to Cairo and then to Bursa. Two years later he was appointed *hāji* of Edirne, after which he became *hāji* of Istanbul. Shortly afterwards, in Muharram 1000/June 1597 he became Kāftā-tashar of Anatolia. This same year, while in Edirne with Selim II, he died (6 Ramadān/22 January 1572) from an attack of gout, a complaint he had contracted during his earlier residence in Edirne. His funeral, attended by many of the statesmen and scholars of his time, took place at the ʾEsāl Djinān, and he was buried in the so-called Nāẓir cemetery on the road to Istanbul. In his youth, 'All Efendi was famous for his memory and knew by heart numerous *šahāds* and poems in Arabic, Persian, and Turkish. He was versed in most of the branches of the liberal studies and most of the sciences, such as astronomy and rhetoric; and while in Egypt his mastery of the Arabic language was admired by all.

His son, Ḥasan Celebi, informs us that he wrote marginal notes to the *Kashf al-Bayyānī* on alchemy and that he corrected other versions of these manuscripts. According to his son's *Tadhkira al-sa'ādar*, *'Atāyū's Dīwān al-Shāhak and Qumārāt min al-šīrīn li-l-bayānī*, his works may be summed up as follows: (1) the *Abāhha-i 'Alāt*, his most famous work and an important source for the study of Ottoman culture. He completed this work on 23 Safar 973/21 September 1565 when he was the *hāji* of Damascus and dedicated it to *'Alī Pasha*, the Beqerisiyya of Syria, hence its title *'Alī Pasha, *CABY* (For an analysis of the work and its sources, and in particular for its dependence on the *Abāhha-i Naṣīrī of Naṣir al-Dīn Tūsī, cf. the article by A. Ahmad-Advari in *IA*, iv, 710-11). (2) His *Dīwān*, which includes his poems in Turkish, Arabic, and Persia; (3) the *Hājiqāt-i ṣadīrād*. He taught ṣadīrād when he was *muallāri* at the Ḥamza Bay Madrasa at Bursa, and wrote these marginal notes at that time; (4) *Hājiqāt-i Durar u ghurar ta niṣfī*, the *Kutāb al-Kuntūl min al-Hidjja*; (5) *Ridālāt al-ḥāj al-mu'ājīf*, written as a reply to Shīh Mehmēn Celebi who had criticised one of his poems when *'Alī Efendi* was *hāji* of Edirne; (6) the *Eṣāf*; (7) the *Ridāl al-sayyīfyya wa l-ıbānīyya*; (8) the *Hājiqāt-i Ḥasan Celebi* ii *Shāh al-Mu'āfī* (10) his *Miṣgār...*
Abd Manat was a strong group, the latter was further reckoned a separate tribe; Milik (or Malkin); Asad. There were six main subdivisions of the tribe, TihSma on the south-west, where they were next to sulfdns, ghuz&de and the third to though more are sometimes mentioned: al-Nadr (or Hudbayl, to the north east where they bordered on territories of Kinflna were around Mecca from the logically related to Asad (b. i&uzayma) fa.p.j. The his work a particular value.

For these by Sehl, La (if I, *Ahdl and 'Ashlfc Celebi. Though, ESB CELEBI was known as a supporter of 'All, and is incorrectly alleged to be the founder of Arabic grammar. In 230/844 5 al-Tabari mentions some Kinflna as still of the movements of Kinflna after this. A prominent member of the tribe, Abu 'l-Aswad al-Du'ali [g.o], is known as a supporter of 'All, and is incorrectly alleged to be the founder of Arabic grammar. In 230/844 5 al-Tabari mentions some Kinflna as still near Mecca but apparently weak. They are also recorded in the Hawrin, and, in the 5th/6th century, in Upper Egypt and the western delta.

KINAYA (A), a technical term of rhetoric corresponding approximately to "metonymy" and meaning the replacement, under certain conditions, of a word by another word which has a logical connection with it (from cause to effect, from containing to contained, from physical to moral, by opposition etc.). Etymologically, this term implies a sense of dissimulation found also in the word basra [g.o], which is considered by such a grammarian as al-Mubarrad (Kamil, 677) to be derived from kina"ya. Kina"ya constitutes a particular type of metaphor (siyās [g.o]) and it is distinct from trope (madjdaz I, q.d) in that the latter is only to be understood if taken in its figurative sense (e.g. ra'sayn 'l-thaykh "we have caused the rain to feed", where ghayth can only mean the grass appearing after a fall of rain). For some theorists, kina"ya covers allusion (of which the various forms are called ta'sir, ta'khb, raml, imla and igkdax), but this is not so because, if it may be
taken both in its proper and its figurative sense, it demands, if it is to be genuinely understood, an effort of imagination on the part of the listener, who may otherwise turn a deaf ear; after al-Thuqaili, Ibn al-Athir saw fit to put together kindiya and taridj in mawadda, al-Mahdi al-Sufi, so as to condemn the errors made by his predecessors in this regard and to make plain the differences which exist between the two concepts. On the other hand, euphemism, antiphrase and other methods of dissimulation of a more popular nature are to be included under the heading of kindiya.

In general, if we are to follow Ibn al-Athir, kindiya describes a word or a group of words which may be interpreted either in their literal or figurative sense and are used to replace other words which are to be rejected, sometimes simply for considerations of style, sometimes out of respect for decency, avoiding the use of words likely to shock or judged to be of bad omen; a logical relation must however exist between the literal and the figurative, the kindiya and the makbu tanak.

This is not the place to examine the other definitions proposed by the theorists and to take into account their disagreements regarding classification and nomenclature. We will simply observe that al-Sakkak distinguishes three types: (1) tamthi or assimilation of one thing to another (e.g. nabi al-thabeb “clean of clothing” meaning “ exempt from moral vice”, (2) irdaj “implication”, a term which Kucama (Nabed, 88) invariably uses to the exclusion of kindiya (e.g. tawil al-matjud “with long crossbelt”, meaning “tall in stature”, because the one cannot go without the other); in certain cases it is by a series of implications, more precisely of ridjd “pillow-riders” that the intended sense is reached (khallir al-rumoud “having a great quantity of ash” to express generosity, hospitality: in fact the abundance of ash implies succession abundance of fire, then of wood and of cooling for a large number of guests). (3) mudjatandra “proximity” or “association” (e.g. the container for the contained: sudjddia “bottle” = “wine”).

Studies and chapters devoted to kindiya contain first a number of quotations from the Kur'an and from hadith which may be interpreted as metonimies; thus LXXIV, 4: wa-thiyaba ha fahshir and your clothing, purity where thiyaba may be understood as meaning the soul, behaviour etc. Another characteristic example is provided by XXXVIII, 22/23: la-hdi isiwa wa-tistiwa na’dla 0 na’dla 0 na’dla na’dla which is translated as “he has ninety-nine sheep and I have only one sheep”, but where some, influenced no doubt by popular usage according to which the wife is called na’dla (al-Di’shi, Bukhald, 23, ir. Pellat, 40; Haydn, I, 221), see a kindiya.

There seems little purpose in providing extensive examples of the ways in which the followers of allegorical interpretation (awatd) can take advantage of this concept of kindiya in order to justify all kinds of daring interpretations.

It must be said that the fahshir themselves are sometimes obliged to take it into account where they have to use verses directly concerning the Shari’a. This is the case for example with IV, 146/34, 76 where two kindiyas appear: wa jala ahdad = min al-guwar min al-lanauma l-knsed “if one of you has come from the place hidden from view or if you have touched women”, then washing is obligatory; ghul comes to mean latrines, then excrement, and lanauma may be taken in a literal sense of “touching” or in the figurative sense of “having sexual relations with a woman”. So this verb is of a type which provokes discussions. Another notable example is the text which demands, for the application of the legal penalty to the fornicator, the presence of witnesses testifying that they have seen al-nil f’l-mushaka “the needle in the container for Ich”; but here the context leaves no doubt as to the true sense of the expression.

In these last examples it is a case of euphemisms whose purpose is to “palliate the ugly” (fahshir al-abhd), as al-Tha’alibi says (Kindiya, 53), and it is the examples of this genre that the authors most often quote, borrowing them from the Kur’an, from hadiths, from poetry; generally they concern woman, the sexual organs, defecation, various forms of uncleanliness and everything which is of bad omen. Some kindiyas testify to great finesse, notably quoted by al-Mas’udi (Munfudh, vi, 350-4 = § 2550), where, in a letter addressed to al-Rashid, the word Mayyadim “bamboo”, but also the name of the caliph’s mother, is replaced by bukhah. Others however are criticised, notably the use of Aba Asw to describe a stone (hadjar), because the father of Aws was called Hijja (al-A’si, Kindiya, 97). There was thus an ample scope for the making of puns, and the humorists did not hesitate to take advantage of this.

In the introduction to the Kitab Mufkhdharat al-dayar tawadd, al-Di’shi makes fun of the hypocrites who cover their faces upon hearing a crude word, recalling that the most pious of the Muslims and the Prophet himself did not hesitate to use such words, and he adds that these words were created in order to be used and that it would be necessary to withdraw them from the Arabic language if one were not allowed to speak them. In the Kitab al-Maywak (I, 33), he notes the unwillingness of his contemporaries to use the specific term for excrement and their habit of utilising a number of euphemisms to describe latrines: mshdhir, mshdb, khall, kindya, Kindyal, mutadda and, and excrement: rajif, sibi, ahdal; others could be added to this list. An anecdote probably invented for specific purposes figures in several sources (al-Mas’udi, Munfudh, VIII, 350-3 = §§ 2490-2; al-Tha’alibi, Kindiya, 32; al-Shafi’i, Sahib, ed. Cairo 1374, ii, 270-1; al-Ibrahim, Munfudh, ii, 125-6; etc.): a man is the victim of a joke in bad taste, in that he is asking for the latrines and appealing to a group of singing girls who pretend not to understand him. He tries one by one about eight different terms supposed to belong to various regions of the Arabic-speaking world (but the variants are too numerous to permit the drawing up of a linguistic map on the basis of this anecdote); to the words quoted by al-Di’shi we may add here at least karn, mustardh and mshdhr.

In this regard, W. Marais (Euphemismes, 355-6) comments that in classical Arabic “the plurality of nomenclature sometimes contrasts with the simplicity of the items described. If the latter are by nature liable to shock, one’s tendency is to attribute this discrepancy between means and ends to the practice of euphemism.” It is quite possible in fact that, independent of dialectical variants, the abundance of synonyms is sometimes due to the listing, by the lexicographers, of euphemistic terms whose origin is not indicated. It is thus for example that Ibn Manzur lists, according to Ibn Khallawayh, eight verbs meaning “to menstruate” (s.v. root j-y-x): hadat can in fact be replaced by nasifust, darasat, famlah, da’bat, akbarat and jamat. It is not impossible that certain of the euphemisms which figure in the dictionaries belong to the language
of slang, but it is not always easy to determine the degree of decency of such and such a term of which the satirists make considerable use. In this connection, we quote only one epigram of Dhit (‘Abd al-Karim al-Ashtar, Shïr‘ Dhit, Damascus 1384/1964, 204) where the sixth verse contains the word khesibi‘, “cucumber” the sense of which is all the more readily understood because of the appearance in verse four of ihšîn “ninetly which means the ants. This last kindiya is borrowed from dactyloonomy (štáb al-‘išš), which supplies a large number of less obscure examples (e.g. “91” or “90” = miseur’); see now Ch. Fellut, Textes arabes relatifs à la dactyloonomy, Paris 1977, 21-2 and passim.

As a result of its undeniable expressiveness, to which the numerous examples cited by rhetoricians bears witness, the kindiya preserves all its force in colloquial Arabic, for not only do slang expressions abound here, but also convention demands a strict caution in circles where superstitions continue to be strong. To antiphase (šfr “clear-seeing” for “blind”, already found in the name of Abū ‘All al-Baṣir [see al-Baṣir], who lost his sight; with this may be compared Kūrân, XI, 95-97; inuwa-la-anî ‘l-kaltum ‘l-baghd, “you must be interpreted in the contrary sense”), to designation by a verb without subject: loudû ayuda lâyka “the situation was lamentable”), by an adverb or a pronoun (and-hā hindik “she is having her menstrual period”); cf. in a verse of Abū Nuhkhaya, Agðhi, xx, 382, barrakü-hu, where the pronoun refers to an obscure word not expressed (likewise adh-‘u-hu, in Yūkât, Irkād, XVI, 209, I. 3 from bottom), and to euphemism pure and simple (in Moroccan, fâšr “glorious” to describe coal (fâšr because of its black colour), there are to be added voluntary alteration (tashî́d [tawûd] “you shall be happy” for the number “nine” because tawûd also means “you shall be a beggar”), borrowing from other languages (the Turko-Persian, gishkâ “for the latrines”), the refusal to specify (“those who are not to be named” — the djinn) and other procedures.

On this subject, one can only refer to W. Marçais, Nouvelles observations sur l’épithéminé dans les paroles arabes maghrébin, in Ann. de l’Inst. de Philol. et d’Hist. Or. et Slaves of Brussels (Mélanges Isidore Liéry), xii (1953), 331-98. For Berber, see E. Destaing, Interdictions de vocabulaire en berbère, in Mbl. Revue Berbère, Paris 1928, 1, 177-277.

**KINDA**, a South Arabian tribal group, whose descent, real or imaginary, from Kahlûn correctly identifies them as Arabs and distinguishes them, as it does the Azd, from Himyar and other non-Arab inhabitants of South Arabia. The tribe spread all over Arabia in the 5th and 6th centuries A.D., from the south to the centre to the north, and played a decisive role in the military, political, and cultural history of the peninsula before the rise of Islam.

1. **The pre-Islamic period.**

From Kinda (a štáb, nicknane for Thawr) are descended Mu‘awiyah and Aqbar, and from the latter are descended al-Sakân and al-Sakâsîk. The more distinguished branch was Mu‘awiyah, and within Bana Mu‘awiyah, the house of Hudîr, nicknamed Akit al-Murâ, became the most illustrious.

It was this Hudîr who, in the second half of the 6th century and supported by the power of Himyar, moved into central and northern Arabia, and assumed supremacy over the Arab tribes of Ma‘add. One of the celebrated Ajyâm, battle days of the Arabs, Yahwâ, which was in disarray, that Byzantium sent its two diplomats, Julian and Nonnosus, 530 A.D., to ldimyar, where the power of Kinda was killed. Then the tribe of Asad rose against Kûjûr and killed him. It was at this juncture, after the violent death of al-Hârîth when the power of Kinda was in disarray, that Byzantium sent its two diplomats, Julian and Nonnosus, ca. 530 A.D., to Himyar, Ethiopia, and Kinda for an alliance against the Persians. The services of Kinda were indispensable, and Byzantine diplomacy was finally able to compose differences between the Himyarâls and the Kindâls by withdrawing Kâys (probably the son of Salama) from central Arabia and arranging for the division of his dominion between his two brothers, Yazîd and ‘Amr. Kâys visited Constantinople and was given a command in Palestine.

In the second half of the 6th century, the power of Kinda in central and north Arabia was clearly disintegrating. In addition to the fratricidal wars among the sons of al-Hârîth in Nadjî, the Banu
...branch in al-Yamānā allowed themselves to be involved in the inter-tribal feuds of Tamim and 'Amir; these resulted in the two battles of Shīb Diabala and Dhā Nadjar, which proved disastrous to the Banu 'l-Dhawān. So precarious had the position of Kinda become that the tribe, according to the sources, decided to go back to its original home in Ḥadramawt.

A century or so of rule over such a vast area in the Arabian peninsula calls for an assessment of the role of Kinda in Arab history: (1) The dominion of Kinda represents the first attempt, however forcible, to impose unity on the tribes of central and northern Arabia, but this unity could not have been achieved without the support of Himyar. (2) Kinda brought from the Himyarī South a tradition of sedentary life; it ruled the Arabs from such urban spots as Ghamr Dhi Kinda, Bāṭaʿ Akil, and Haḍjar. (3) The house of Aḥjīl al-Murār adopted Christianity, and must have been an important factor in disseminating it in central and northern Arabia. The most important Arabic Christian inscription of pre-Islamic times, commemorating the erection of a church in al-Hīra, is that of Hind, daughter of al-Ḥārith. (4) Kinda in al-Hīra and to have taught it in Mecca,

The Arabic sources corroborate the Sabaean inscriptions on the importance of Kinda in pre-Islamic Arabia. Through Al-Simt b. al-Aswad, a member of Muʿāwiyah, vividly aware of his Kindi background, it is clear from the many personages listed in the pages of such works as Ibt Hamzah’s Dījarara. They appear at critical junctures in the history of Islam, displaying the same unalloyed spirit of independence that had characterised their tribal ethos in pre-Islamic times.

A century or so of rule over such a vast area in the Arabian peninsula calls for an assessment of the role of Kinda in Arab history: (1) The dominion of Kinda represents the first attempt, however forcible, to impose unity on the tribes of central and northern Arabia, but this unity could not have been achieved without the support of Himyar. (2) Kinda brought from the Himyarī South a tradition of sedentary life; it ruled the Arabs from such urban spots as Ghamr Dhi Kinda, Bāṭaʿ Akil, and Haḍjar. (3) The house of Aḥjīl al-Murār adopted Christianity, and must have been an important factor in disseminating it in central and northern Arabia. The most important Arabic Christian inscription of pre-Islamic times, commemorating the erection of a church in al-Hīra, is that of Hind, daughter of al-Ḥārith. (4) Kinda in al-Hīra and to have taught it in Mecca,
finally beaten at the battle of Dayr al-Djamal in.

It was, however, in the Islamic Occident, in far-away Spain and as late as the 5th/11th century, during the period of the Malikite Isma'ilis, that the Kinda were potent and rebellious as they achieved various illustrious victories such as Ibn al-Asyutih in the Orient had been unable to achieve, namely, the carving out for themselves of an independent political existence, however shortlived this proved to be. The Tuğjibdis settled in Sarakusta (Saragossa), Darawsha (Daroca) and Kal'at Ayubih, in which cities they ruled, as they did also in al-Martya (Almeria), if the Banu Sumudid were indeed Tuğjibdis, as is probable. Claims made by such historians as Ibn Khalid in that the Dhu 'l-Nu'ans (Far. of Toledo and the Attakids (Far.) of Badajoz were Tuğjibdis, do not seem to have been substantiated by recent research, which affirms them rather to a Berber ancestry.

Appendix. The relations of Kinda with Saba and Himyar.

Pre-Islamic Sabean inscriptions furnish us with some useful references to Kinda in its epigraphic South Arabian form Kal. Unfortunately, one of the earliest of those references is not at present securely dateable, since the precise chronology of the Sabean texts is still in dispute; however, a date in the 3rd century A.D. seems possible. This text, Ja 570 (published in full by A. Jamne, Sabean inscriptions from Mahram Bilqis, Baltimore 1962), according to a recent re-interpretation offered by A. F. L. Beeston (Notes on Old South Arabian insciptography VII, in Le Musée, xxxvi (1973), 448-51), depicts us in a situation in which Malik king of Kinda was head of a conference in which a certain Imam al-Kays b. 'Awf, called "king of the KHUST" was a subordinate member; the latter committed an act of aggression against Saba, as a result of which the king of Kinda and his dayâws were forced under duress to surrender the person of the actual offender, to pay an indemnity, and to give hostages to the Sabaeans.

In two other texts of approximately similar date (Ja 660 and 669) we find Kinda and Madhbîdîb together with other bedouin groups, placed under the overall control of a Sabean official with the title "labbir of the Arabs of the king of Saba, and Kinda, and Madhbîdîb etc.", and evidently acting as bedouin auxiliaries of the Sabean army. In an inscription published by Sharafaddîn (Yemen, Ta'if' 1961, 44. bottom left), a mixed force of Sabaeans, Kindi Arabs and other elements, was commanded by two individuals bearing the title "wâsh of Saba".

In the early 5th century A.D., the Himyarite king Yâsul (Far. of Nuwask [q.v.]) was similarly employing Kinda, together with members of the Murâb and Madhbîdîb tribes, under the control of a Sabean commander belonging to the Yâzân (Far. in Islamic sources Yazen) family, as auxiliaries in his campaigns in central Arabia; see Ry. 508.7. (G. Ryckmans, Inscriptions sud-arabes XIX ser., in Le Musée, xxxvi (1953), 296) from Kawkab, an isolated rock north-east of the Kâra mountains and on the edge of the Empty Quarter.

In the mid-6th century, the Himyarite king Abrahân (Far.) claims to have installed a certain Yazlî b. Ka'bân as "his bâlî over Kinda"; it appears that this Yazlî later revolted, but was defeated by the Himyarites and forced to renew his allegiance in the year 653 of the Himyarite era (Corpus inscriptionum semiticarum, iv, 514). Five years later, in 659 of the Himyarite era, Kinda was again campaigning in support of the Himyarites, this time being given the particular mission of pinning down the 'Amir b. Sâ'â/a tribe (Far.) while the king was engaged on military operations elsewhere (Ry. 306, op. cit., 277).

(A. F. L. Beeston)

AL-KINDI, ‘ABD AL-MAŠIH (Far. of Iskân, the name given to the author of a defence of Christianity presented in the forms of a letter written in response to that of a Muslim friend, named 'Abî Aldân b. Isâmî al-Hâshîmî, who invited his correspondent to embrace Islam. The names of these two characters are supplied only by the Abî 'Aliî [Far. after 441/1050 (Far.)] in a reference that he makes to this defence in his Chronology (ed. Sachau, 205). In fact, the author of the two letters, who states in the prologue that he does not wish to mention the names of the correspondents ("for a certain reason", speaks only of a Hâshîmî and a Kindî. But it should also be noted that the headings of certain manuscripts supply the name of Yaqûb b. Iskân al-Kindî, not to be confused with the name of the first Muslim philosopher (d. 258/870 (Far.)).

The authorship of this defence is the object, among orientalists, of serious disagreements concerning his period and his sect. Taking as evidence the historical data supplied by the text, mention of the caliph al-Ma'mûn (186-210/903-39), of the sack of Mecca by Abu 'l-Sârîbî (190/805) and of the revolt of the Banû Khurram (204/818), W. Muir believes that the date of the composition of the letter can be fixed at 214/830. But L. Massignon believes the composition to be later than the year 300/912, seeing that the author has borrowed from al-Tâbâtabâ (d. 210/923) his criticism of an opûnion of the Hanbîlî al-Barbâhâî (d. 329/941), similarly, observing a parallelism between certain criticisms contained in the letter and in a work of the Muslim heretic Ibn al-Râwání (d. 298/910), P. Kraus concludes that the Christian author borrowed these criticisms from the latter and therefore the letter can only have been composed at the beginning of the 4th/10th century.

As for the sect to which the author of the apology belonged, the majority of orientalists make him a Nestorian, as is moreover indicated explicitly by his Muslim friend in his letter. The fact that he himself mentions the convent (mawârîn) of al-Kârkh, a suburb of Baghdad, and Sâkût al-Mudâla'în, near Sevilâ-Cresphion, confirm this idea. But Massignon, considering that the distinction between the essence and
the attributes of the act is an "adaptation to Christian theology of the tenets of Islamic kalām," is led to identify the author with the celebrated Jacobite philosopher Yahyā b. 'Adī (d. 364/974). Similarly, M.-Th. de Alverny, on the basis of a passage in the Latin translation which treats the Nestorians as heretics, makes the author of the letter a Jacobite philosopher who, according to a concluding passage figuring only in the Latin version and a Karshūl manuscript (Paris B. N. syr. 204), must have composed a work against Arīsūn.

Now the multiplication of the work of a Jacobite theologian of the beginning of the 6th century, Abū Rāśīl Ṣāliḥ b. Abī Ḥāmid, shows that, contrary to the opinion of Massigun, this distinction between the divine attributes dates from a period considerably before that of Yahyā b. 'Adī, since it is found in the work of Abū Rāśīl, from whom the author of the letter borrowed it, as well as the whole of the philosophical-theological section dealing with the unity of God (ed. G. Graf, SCSCO, xxx, 5-70).

As for the fact of a Nestorian author borrowing from a Jacobite a discussion of the unity of God, this is not surprising, since there was no difference of opinion between them on this point.

Similarly, the publication of the Latin version has shown that in this version, conforming to the original Arabic, the Muslim tells his correspondent that of all the Christians, the Jacobites possess the worst doctrine while the Nestorians, his friends, are closer to the Muslims (379); and it is clear that the passage in the Latin version which describes the Nestorians as heretics (413), and which is nowhere corroborated by the Arabic text, arises from the fact that the translator has "revised" the text in a "Catholic" manner (408); as for the concluding passage where there is mention of a work against Arīsūn, it seems, judging from its content and style, that it does not belong to the original text, and that it is a later addition.

Finally, it should be noted that in a Karshūl manuscript (Paris B. N. syr. 203), the text of the letter of the Muslim has been revised in manner favourable to the Jacobites; the name of the Jacobites being replaced by that of the Nestorians and vice-versa, and the writing of the name of Cyrilus being distorted (fol. 3b).

Presented as the work of a Nestorian Christian, a senior official at the court of al-Māmūn, this defence of Christianity is also a refutation of Islam, the East as well as in the West, in the polemic between Christians and Muslims.

**Bibliography:** Given in the article, and Brehbheim, 1, 135 ff.; 1, 239 ff; Sezgin, i, 358; Nasan A. Mahmoud, *al-Kindi al-mu'taṣīlī*, Cairo 1971 (F. Rosenthal).

**AL-KINDI, ABū Yusuf Ya'qub b. Ishākh.** "The philosopher of the Arabs" whose distinguished genealogy is obligingly given by the bio-bibliographers, was born before the end of the 2nd/8th century and died in about the middle of the 3rd/9th (perhaps approximately 285-292/805-66).

An eminent universal scholar and philosopher, he lived in a period of intellectual ferment in the sphere of the sciences as well as in that of *halām*; the period of the translations, and of the controversies concerning Mu'tazilism.

He was a companion of the caliphs al-Ma'mūn and al-Mu'tasim. To the latter he dedicated notably his *On first philosophy*, and to his son Ahmad, who was a pupil of his, he dedicated a number of other treatises. His association with these two sovereigns, plus the fact that he fell into disfavour during the reign of al-Mutawakkil (and was even deprived temporarily of his extensive library), lead one to suspect at least a tendency towards Mu'tazilism on his part. This hypothesis is supported by several passages from his known works (where there are references to the negation of the divine attributes or to the excellence of the works of God), as well as by the titles of works which are known only from the bibliographies. The latter show the extent and the variety of the work of al-Kindi; almost 250 titles (according to the *Fihrist*) concerning all the sciences cultivated in his day (these include astrology but not alchemy, which he regarded as a form of trickery), also technical subjects of particular interest to the ruling classes with whom he was associated: the manufacture of glass, jewellery, armour and perfumes.

It is impossible to give a complete account of al-Kindi's thought because of the relatively small number of documents which has survived (less than 40 extant titles, as many of them philosophical as scientific; the task of editing and evaluating a number of unpublished ones is as yet incomplete).

In the meantime, one can sketch the general outline, or at least note certain significant features, on the basis of the available texts.

His general philosophical position is best expressed in the introductory chapter of *On first philosophy*. Besides certain definitions and technical statements concerning philosophy, etc., the principles of philosophy, the four "causes", the four "scientific questions", there is to be found there what is in effect both an advertisement for, and a defence of, philosophy (it should be remembered that this treatise is dedicated to the caliph).

Taking as his inspiration, and sometimes borrowing literally from, the opening of a book of Aristotle's *Metaphysics*, of which he quotes a passage (without, however, acknowledging his source), al-Kindi describes the progressive accumulation of true knowledge which has come about in the course of time, thanks to the efforts of the philosophers; from this he infers that "the truth must be acquired, from whatever source it comes", and the statements of the philosophers must be re-examined and completed. He violently criticises the opponents of philosophy who attack it in the name of religion, while they themselves, he says, are without religion.

The content of "the science of things and their true nature", that is to say philosophy, is identical to that of the message of the prophets: the science of divine sovereignty and divine unity, the science of morality and ethics. Finally, a brief quotation from Aristotle's *Protevístik* (again not acknowledged), according to which it is logically impossible not to be a philosopher, is followed by a prayer invoking the assistance of God in the pursuit of knowledge.

Thus al-Kindi sets forth an intellectual orientation doubly opposed to that of the traditionalists; according to him, knowledge can come from various sources and can still be expected to develop; but equally, he claims to respect the prophetic message. In precisely the same spirit his epistle Concerning the number of Aristotle's works compares human knowledge ('ilm insānī) with divine knowledge ('ilm ilāhī); whereas the first depends on prolonged effort and preparation regulated according to a precise scheme, God inspires the prophets, when He so desires, and without them having recourse to the methods of "human knowledge", with a type of revelation condensed into a few phrases whose sense the philosopher can only explain at the cost of a lengthy process of elucidation.

This position of al-Kindi's, with regard to the sciences and to philosophy, derived from various sources on the one hand, to revelation and religious speculation on the other, emerges also in some ways from the information supplied by the bio-bibliographers. These emphasise that al-Kindī had an unequalled acquaintance with the ancient sciences (Ibn al-Nadīm), that he of all the Islamic philosophers was closest to Aristotle (Ibn al-Dīdīlū), that he studied in depth the various branches of Greek, Persian and Indian wisdom (Kīfī); but also that he combined in his works the principles of the Law and those of the rational sciences (Bayḥākī) and that he wrote an essay on *Tanbih* according to the methods of the logicians (Ibn al-Dīdīlū). Also, in a schematic list of his works such as is first to be found in the *Fihrist*, one notes the section of "books of dialectic" or of "controversy" (*altaf al-halāl al-ilāhīya*), many of which must have dealt with specific problems of *halām*, such as prophecy, *tākitā*, divine unity, the creation of the body, of the atom, etc.

As regards the Greek philosophers, al-Kindī mentions by name Plato and Aristotle and hardly any others. We know on the one hand that he used the *Treatise on the heavens* of Aristotle, that he commissioned a translation of his *Metaphysics* and revised the translation of the *Theology* which was attributed to him. But careful scrutiny of his works shows that he must have been acquainted, directly or indirectly, with certain others, such as Epictetus, Proclus and probably John Philoponus; we find also echoes of the last phase of the teaching of the school of Alexandria as it is expressed notably in the writings of David. These various references to other authors and implied borrowings pose many problems, both historical and critical, which are far from being solved. Without doubt there are questions still to be asked.

The variety of these borrowings poses in addition a philosophical problem, which could only be solved by examining the entire corpus of works of our author and his precise chronology, and examining the con-
sistency and the development of his thought, and his vocabulary as well.

Without attempting to enter into the details of the philosophy of al-Kindi as it is known to us, we can say that he adopted from the Aristotelian tradition a certain number of concepts (the four causes, the categories of change etc.) and of propositions (the finiteness of the world, the impossibility of a corporeal infinitude as an act, the mechanics of intellectual perception etc.); from the Platonist tradition, he takes speculations on the soul in its relationship with the body and with the divine light and on its ascent to and beyond the heavens. Parenthetic and semi-mystical in this last case, his style and method are by times extremely precise, very abstract, strained, proceeding freely and methodically by means of axioms and deductions of a geometrical regularity.

On the other hand, al-Kindi, who ceases to follow the Greeks where they are in disagreement with the Qur'anic revelation (i.e. with regard to the creation, and the life-span of the Universe), is interested in establishing or formulating agreements between certain philosophical ideas and certain articles of the Islamic faith, even Mu'tazili ones.

Thus the On first philosophy; after some reflections on the ‘one’ and the ‘many’, where we detect echoes of Proclus, concludes that it is to say, the first part of the book, which is all that has survived, concludes with a kind of philosophical ta'addad and with criticism of those who give attributes to God (the same theme is used in the essay On the unity of God and finite nature of the world). The epistle Concerning the number of Aristotel’s works contains a philosophical commentary on verses 78-82 of Sura XXXVI and the epistle On the lowest prostration of the body another on verse 6 of Sura LV.

There are other detailed references to other works which could be quoted. It would appear that al-Kindi uses the same method in his choice of language where certain words or verbal roots are common to the vocabulary of religion and to that of the Greek tradition (as he refers to God by the name al-wahid al-bah, which is both Qur'anic and Neo-Platonic; he uses the word rabihbiyya, which belongs to the language of religion, in the title of the Theology attributed to Aristotle). It is important to analyse these various agreements and differences at this early stage of the history of falsafa.

In so far as one is able to judge from the bibliographical lists and the few treatises, of various lengths, which have survived, the scientific work of al-Kindi follows the same scheme as his philosophical work, sc. to revise and develop the findings of the ancient scholars in the light of new interests. He writes essays on Euclid, Archimedes, Ptolemy, on the astrolabe and on Hippocratic medicine; he also draws inspiration and the development of his thought, and his vocabulary as well.

ished up to the Mongol invasions of the 7th/8th century. At about that time, most of the Saltık remains were destroyed by fire, and there seems to have been virtually no building on the site from Iğniş or Timurid times, and little under the Safawids and Qajars.

In general, the Islamic geographers refer to Kangavar as the habitat of al-Luṣūf ("Robbers' Castle"). Al-Tabarî, i, 2649, says simply that it acquired this name because the Arab army on the way to meet the Persians at Nihâwând (2/642) had some of its baggage-animals stolen there. Centuries later, this reputation of the people of Kangavar still prevailed: Ḩamd Allâh Mustawfî, Nushâ' al-buhîh (ed. M. Dabîlî, Tehran 1335/1957) states that they were "first-class thieves" (Le Strange's translation in Hamd Allah Mustawfî, Nusha, 107, is inaccurate). From the name Kangar al-Luṣūf derived the nisba "Kâsrî" (see Barbier de Meynard, Dictionnaire de la Perse, Paris 1851, 450).

KENNASRÎN, an ancient town and military district in Syria; the name is of Aramaic origin and appears as Kenassarîn in the Syriac texts. Composed of inînîd "nest" and nasîn "of eagles", it is mentioned in the Babylonian Talmud in the form Composed of "of eagles", it is mentioned in the Babylonian Talmud in the form hinnd nasrin and appears as Kenneshrîn Li the Syriac texts. In the Middle Ages called the area Canes trine. A distinction was made between the town and the junkîn.

1. The town. At the present day, Kinnasrin is nothing more than a little village surrounded by ruins, a day's journey to the south of Aleppo, on the right bank of the Kuwayk which flows into the Euphrates. The Arab geographers place it in the fourth climate. Yâhîyâ, who gives various explanations for the origin of the name, says that the place was already populated in the period when the Amalekites, coming from the south, sought refuge there, and that the town had once been prosperous and strongly fortified, but that in his time (beginning of the 7th/8th century) it was nothing more than a village, owing its survival to its position in the centre of a district where a number of highways converged. In ancient times the town, founded by Seleucus Nicator, was called Chalîcis al-Belum, and gave its name to the Syrian-Arab times.

In the 4th century A.D. Kinnasrin was a commercial centre and a prosperous agricultural market-town. Set at a highway intersection and with a much-frequented khalîf, the town occupied an important position in the defensive system of the Syrian frontier from Antioch to the Euphrates and from the junkîn toward Tadmur. It played a strategic role of some importance for the Byzantine empire and at the end of the 6th and the beginning of the 7th century A.D. it came under attack from the Persians.

After their victory on the Yarmûk [q.v.], the Muslim Arabs went on to conquer northern Syria. At Kinnasrin, the garrison of local militia offered some resistance to the troops of Ħubayra, [q.v.] and in Shâ'âbun 17/August-September 658, the town was taken. Under the reign of Yârîd b. Mu'âwiya, the town's defences were dismantled. Evolving from the experience of the Byzantines, the Umayyads, in their turn, installed a military headquarters at Kinnasrin, which rapidly became the capital of the rich agricultural region of which it was the centre.

Until the 4th/5th century, the history of the town was not marked by any event of importance. In 537/945, it was one of the most solidly constructed localities of the region. Two years later, in the spring, the Ḥamdânî prince Sayf ad-Dawla, was defeated there by the troops of the Ilkhan of Cilicia. In the second half of the 4th/5th century, Kinnasrin became the object of contention in the struggle between the Byzantines and the Ḥamdânîs. At the approach of the Byzantines, in 554/963, the inhabitants fled into the marshes, and in 557/968, when the Ḥamdânîs reached the town, after the Byzantine period, Kinnasrin began to decline to the benefit of Aleppo. In 558/966, when Nusephorus Phocas advanced against Aleppo, Sayf ad-Dawla fell back upon Kinnasrin, but being unable to defend it, he evacuated the town and the Byzantines came and burned the mosques. Part of the population settled to the East of the Euphrates and the rest took refuge in Aleppo. Shortly after, the town was repopulated, but in 589/998 it was burnt down and reconstructed once again. In 622/1030, it was again sacked by the Byzantines. Rebuilt at the end of the 5th/6th century by Saltâyân b. Kûlmûnî, the town was destroyed by his enemy Tâdîl ad-Dawla Tâtûshî, [q.v.] brother of the sultan Malik Shâh [q.v.]. It remained virtually uninhabited. Near Kinnasrin, passing that way in Radjîh 438/January 1947, saw nothing but a poor village.

In the period of the Crusades, Kinnasrin was to play only a strategic role and was scarcely populated at all. In Muhammîr 513/April-May 1119, without occupying Aleppo, Bâghîrî installed himself in Kinnasrin, made it a depot for military equipment and made raids against Бâhîn, the Rudi and Dâbâl Surma'a.

Some years later, Tabûqîn of Damascus joined forces with Asânkarî and together they attacked Aleppo, Sawâr, anîr of Aleppo in the name of Zâln, made Kinnasrin an operational base. In 529/1134-5 Pons of Tripoli laid siege to the place, which was relieved by Zankî, arriving in haste from Hûmûn. The traveller Ibn Dîbâyîr (end of the 5th/6th century) describes the town as being in a state of abandonment and rain.

From the time of the Ayyûbîd period (7th/8th century), Kinnasrin is no longer mentioned as a town, but its khalîf is noted as being a halting-place for caravans journeying from Aleppo towards the south, and, beyond the crossroads of al-Âshârib ______ towards the west. Pilgrims continued to make their way to Tell Nabi 'îsâ, one of the hills of the town, to the torab (maṣlûn, habû) attributed to the prophet Šâhî [q.v.], which is in fact the burial-place of the anîr Šâshî b. 'Abd Allâh b. al-Âshârib. In the Ottoman period, Kinnasrin was nothing more than an impoverished village, bearing the name Eski Hâlîb. At the present day, it has returned to its original name.

2. The junkîn. Around Kinnasrin there extends a
t uncertainties of northern Syria, with the aid of irrigation, cisterns, fruit trees and vines are cultivated. In 375 Saint Jerome, visiting the province where at that time monasticism and asceticism were developing, testified to its agricultural prosperity. On the horizon, there are visible to the south the Diabal Zawiyah, to the west the Diabal Barfeha, to the north the Diabal Sam'an and the plain of Marj Dabik punctuated by tella, while to the east there are the shining salt-marshes of Diabull. The Arabs penetrated at an early stage the territory of Kinnasrin, which corresponded to one of the Byzantine administrative divisions of Syria, representing the Roman "Syria Prima" of which Antioch was the capital. In the 6th century, Arab tribes were encamped in the eastern part of the region between the Euphrates and Kinnasrin. Among the battles which took place on this territory, one may note the victory won in 554 A.D. near the source of the Udghaya by the Ghassanid al-Harith over the Lahghmid al-Munghfeh al-Hira. After the Muslim conquest, Syria was divided into four ajdads: the ajdad of Urdunn, that of Filasin, that of Dimashq and that of Hims. The creation of the ajdad of Kinnasrin is attributed by some (al-Tabari and al-Dimashki) to Mu'awiyah, who installed refugees from Ba'qra and Kufa there in 32/643, by others (al-Baladhuri, Yildef) to Yazid b. Mu'awiya, who detached some districts from the ajdad of Hims. In the 'Abbasid period, following the conquests of Harun al-Rashid (170-92/786-809), the ajdad of Kinnasrin paid 350,000 dinars while that of Damascus paid only 120,000. In the mid-4th/10th century, the ajbad of Kinnasrin was deprived, to the west, of the territory stretching from Antioch to the coast, to the east, of the region lying between Aleppo and Manbij, and to the north, of the Diabull, districts which were to constitute the region of the Awadh (q.v.). The ajdads of Kinnasrin, therefore, was then limited to the area lying to the south of Aleppo. This was the end of its period of military importance, but economic activity continued, as is shown by the increases in taxation and in the tribute paid to al-Mafarr. In the 3rd/9th century, the ajdad of Kinnasrin paid 350,000 dinars while that of Damascus paid only 120,000. In the mid-4th/10th century, the ajdad of Kinnasrin paid 350,000 dinars of kharaj, the same as Dimashq, and 370,000 of simayia (q.v.). The capital was then Aleppo, and the principal cities Antakya, Kinnasrin and Manbij. Its limits were to the west, the coast from Lahghiya to Bayas, to the north, Marash and the Ajwad, to the east the Euphrates between Sunayyat and Babis, and to the south, the region of Hamah with Shayyar and Rafa'inyaya, a region claimed by both Kinnasrin and Hims. In 349/662, Nicephorus Phocas attacked the region of Aleppo; he returned two years later to sow the ruins, and the population went in search of refuge elsewhere. The intervention of the Basileus led to the disappearance of the Ajwad, to the advantage of the Byzantines who occupied Antakya. The reconstruction of northern Syria under the Saljukys scarcely touched the ajdad of Kinnasrin. In the 12th century, the latter came under pressure from the Franks of Antioch, especially in 495/1002 when Bohemond demanded tribute. In Safar 557/Dec. 1158, Fulko of Jerusalem and the armies of Antioch attacked the territory of Kinnasrin and imposed a truce with the addition of tribute upon Sawar, the Aleppo representative of the Al-Abbe Zanki. At the end of the 7th/11th century, the ajdad, which retained its name in spite of the dominance of Aleppo, retrieved from the Franks the province of Antakya and the lands of Sarmin. Under the Ottomans, in the mid-11th/18th century, Hadiji Khalifa still speaks of "the province of Kinnasrin of which the capital is Aleppo". Later, the ajdad of Kinnasrin disappeared and was integrated into the liwa of Aleppo.

KINTAR [see MARATIM].

KIPÇAK, a Turkish people and tribal confederation; usually also written Kipchak or Kitchak; the forms Kizhák, Kizhach, Kitzhach and Kitchoch are also found. The etymology of the name is uncertain: the origin of the Old Turkish word kipçak (kipčak), which is known only in the form kipčak "hurt" is "unlucky" (Claswion, An etymological dictionary of pre-thirteenth-century Turkish, Oxford 1972, 581), is conjectural, as well the connection with the Saged word kipčak "irate, hot-tempered". The proper name Kipcak is recorded in the Uyghur texts, See Radiofi, Versuch einer Worterbuch des Türkischen, St. Petersburg 1893, ii, 843-5. In later popular and learned etymologies (Iafat in Raghial al-Din, Diwan al-Dawr, ed. Beccari = Trudv Vest. Osl. Arkh. Obhø, vii, 23, later in Abu 'l-Ghazal, ed. Desmoulin, x), Kipcha is connected with kobbuk or kobli and explained as a "hollow tree trunk"; at the same time a legend is told of the birth of a boy from a hollow trunk; the boy is said to have been adopted by Oghuz Khan (ct. Kizak) and to have been given a separate territory as a fief. The relation of the tribe Kipčak, emerging in the Western Siberian steppes, to the other Turkish tribes is unclear. Garež (text in W. Barthold, Občh v pozadí v Šediny u Ani,
The Kipčak (Kuman) language is the Codex Cumanicus. From the Kipčak Mamluks, several linguistic monuments are known. From the Armenians in Poland and in Ukraine, speaking a special Kipčak dialect, several literary and other documents have come down to us. One section of the Turkish languages, according to the ethnic and historical relation of these peoples to the Kipčak tribes and regions, is also called Kipčak. The Kipčak are no longer mentioned after the Mongol period; like many other early names of peoples (Karlaḵ, Uyghur, Nayman etc.) the name Kipčak is found as the name of a family or of a minor tribal unit among the Bashkirs, Nogai, Kipčaks and Uzbek. The Kipčaks are particularly associated with Farghāna in the modern history of Central Asia, cf. M. Korad.

transportation, the term *kira* is used for these last and for immovable property. Hence in practice, *kira* may be a contract for transporting something. According to Ibn 'Arafa, it is in this case the sale of the beneficial use of an animal or of something else like a ship for purposes of transport. But the transporting of objects must be distinguished from the transporting of persons. Malik sees there a locatable ageris. Other Māliks pronounce in favour of a hiring out of services. The Shafi‘is consider this contract as a hiring out of objects. But in any case, the hiring out of beasts or burden and ships (*kira* al-rudhāl wa-l-su’un) is perfectly admissible, whether the beasts are individually determined or not.

Hiring out can cover land (*kira* al-arḍ), and the leasing of rural properties existed before Islam, under two forms: (a) *kira* involving payment of money; and (b) *kira* involving the making over of a proportion of the produce of the property (*mushahdama*). This last form must have been the commoner one, in view of the scarcity of coinage.

The last type of hiring out of an object is *kira* mu‘abād or *khirāt prospeus*, the lease referred to for a quit-rent of ancient French law. It is the equivalent of our emphyteusis or emphyteutic lease. In Egypt, this institution is known under the name of *mudād* ‘awlia, in Algeria as *tani*, and in Morocco as *kira* kar‘a 1-i-i-bābiya; all these names indicate the idea of a perpetual lease.

(A. M. Delcambre)

**KIRA**, reading. Applied to the *Kurān*, *kira* also means recitation. In the present article the term *kira* is used as follows: 1. in the general sense of the recitation (a) of single parts of the *Kurān*, as prescribed for the ritual prayer (*salāt*); or the recitation (b) of the entire *Kurān*, which has become, in the course of years, an accepted spiritual exercise (*kira* = recitation); 2. to indicate a special reading of a word or of a single passage of the *Kurān* (*kira*, pl. *kira* = variant); 3. to indicate a particular reading of the entire *Kurān* (*kira* = reading). In the third case one speaks of the *kira* of Ibn Mas‘ūd or of the *kira* of the people of Kūfa as opposed to the *kira* of other authorities or to the recitation authorised by ‘Uthmān.

The recitation of texts proclaimed by Muhammad as revelation played from the very beginning a prominent part in the Muslim community. This is already evident from the fact that the collection of these revelations was designated as *Māhān* (recitation). However, the *Kurān* had not yet been collated at the death of the Prophet and the form of Arabic letters used to note down single parts of it and later on the whole collection was very incomplete; in a group of consonants a choice between two or more readings was possible. Consequently, disagreements soon arose on exactly how to read the revealed text. The promulgation of a canonical reading of the *Kurān* under the third caliph ‘Uthmān (soon after 30/650) was intended to remedy this evil. Copies of this rendition were sent from Medina to Kūfa, Basra and Damascus, the most important cities of ‘Irāq and Syriā. After a relatively short period, this rendition seems to have been generally accepted as the official text, finally even at Kūfa where Ibn Mas‘ūd (d. 33/653), the distinguished Companion of the Prophet, who maintained a “reading” of his own, had at first called upon his followers to resist.

On the whole, the text of ‘Uthmān had a strong unifying influence, which was felt to an increasing extent. But a really uniform *kira* was not thereby guaranteed. During recitation, which was essentially based on oral tradition, readings deviating from the official text were mentioned to be followed. Thus thematic renditions were sent to recognised authorities of the early period and to trustworthy witnesses, they were also noted by commentators on the *Kurān* and philologists, and turned to exegetical or linguistic account. Thus variant readings of Ibn Mas‘ūd, Ubayy b. Ka‘b (d. 29/649 or 34/654) and other early “readers”, which deviated from the official text, were transmitted in early scholarly literature and have therefore come down to us, at least in extracts. The *kira* of al-Hasan al-Baṣrī (d. 110/728) was later even inserted among the “Fourteen readings” (see below).

Further development was on characteristic lines. The untramelled freedom with which the text had been treated in the earliest times was followed by a period of systematic opposition and the possibilities of the “readings” which the consonant text and the oral tradition offered. However, complete unification was not achieved. People neither would nor could simply set aside the power of tradition. Thus the free choice on the *kira* was limited, but not entirely forbidden. While reading the officially accepted consonantal text (already in itself constituting a limitation), the “reader” could still make a choice between a certain number of authorities. In its detail the history of *Kurān* reading is very complex. The scanty and sometimes unreliable sources leave much uncertain. In general, however, the course of development is clearly recognisable, thanks in particular to the penetrating studies of G. Bergsträsser (in collaboration with O. Protsa) and E. Beck (see *Bibl.*). In this article only the essential aspects will be briefly mentioned.

Important progress in the standardisation of the “reading” was achieved by differentiating the letters *b*, *t*, *th*, *n*, *y* etc. by means of strokes (later dots) and by introducing vowel signs. The recitation of ‘Uthmān, being officially recognised, gained in importance by this clarification. With the passage of time, other differences were gradually eliminated. Such a levelling seems at first to have been accomplished within single cities (*umār*) and later on through the influence of one city on another. Majority readings tended to prevail over minority readings, thus lending towards a general consensus. In the first half of the 4th/10th century, Ibn Mudjāhid (d. 343/956), the influential ‘Imrān of the “readers” in Baġhdād, publicly and with governmental support brought this process to its logical conclusion. He imposed further use of the *kira* of Ibn Mas‘ūd and other uncanonical readings, such as those of Ibn Shanabādūh, a contemporary and fellow-reader of Ibn Mudjāhid, complied with this ban only after he had been arraigned and flogged. In addition, Ibn Mudjāhid declared the reading of the ‘Uṯmānī consonantal text, standardised by tradition and consensus, to be obligatory, and compelled Ibn Mīkṣun, another fellow-reader, to renounce the claim which he had maintained until that moment that he could decide for himself on the punctuation and vocalisation of the text. As authorities on the traditional reading of the ‘Uṯmānī text, Ibn Mudjāhid recognised seven “readers” belonging to the 2nd/8th century, among whom were *Aṣīm* of Kūfa (d. 283/895) and Nāmil of Medina (d. 269/885), whose readings have both remained authoritative.

(A. M. Delcambre)
to the present day, that of ʿAsim in the east and centre of the Islamic world, and that of Nāfiʿ—
with some exceptions—in North Africa from Egypt westwards. To the seven "readers" recognised by Ibn Mūjahid were added later on three others, and afterwards another four, but these never attained the same standing as the first seven. Furthermore, since Ibn Mūjahid, in mentioning ʿAsim—one of the Seven—had often named two others, Abū Bakr Shuʿba (d. 208/823) and Hafs (d. 190/786), who transmitted ʿAsim's readings independently of one another, it became customary to add also the names of two other traditionalists to each of the other six and of the Three after the Seven. Thus originated the bewildering number of names in the list of readers recognised as canonical (Gesch. des Qor., iii, 165-6; Blachère, 118-19; Bell-Watt, 49 ff.).

After the readings had been limited to the "Seven" recognised as canonical, and to the other "Three after the Seven" and "Four after the Ten", all the others were eliminated in the practice of recitation. The "readers" henceforward had to keep exclusively to the canonical readings. This however did not completely rule out the uncanonical "deviant" (ṣawādād) readings. They were later added as useful evidence in the practical interpretation of the Qurʾān and in the elucidation of linguistic problems. Besides his "Book of the Seven" (Kittāb al-Saḥā, ed. Sh. Dayrī, see Bibli.), Ibn Mūjahid also composed a "Book of deviant readings" (Kittāb al-Ṣawādād), which is not extant. The debate on the uncanonical kirdāt was carried on throughout the centuries in a scholarly literature of growing importance. Ibn Abī Dawūd al-Sigjistanī's (d. 316/928) taktiik—ta'dlw (tartil, a rapid and a moderate tempo

—had often named two others, Abu Bakr Shuʿba (model), forms of the pause (kaft), pronunciation, including the theory of assimilation (tdākm [q.v.], tdākhlim), the modification of a into e (imla), extension (maṣlīn), and the conservation or alteration (labīl) of hamma

(1) Pretzl's analysis of a typical treatise on the ṣawādād, in Islamica, vi (1934), 236-53). The time required for private oral instruction is greatly increased by the fact that, since Ibn Mūjahid, several different Imāms and Schools of Readers have been officially recognised. According to a distinctive method known as "assembling" (ṣawādād) the Qurʾān verse is divided into small fragments, each one of which is recited as often as there are variants of it, each time with another variant (see the instructive passage, "Koranlesungsuntersicht", by Bergsträsser, in Isl., xx (1932), 38-42). When the whole of the Qurʾān is recited, the separate readings must be considered as self-contained units; the "readers" are thus not free to combine the text of their recitation from different ḥarāt (Bergsträsser, loc. cit., 20 ff.). However, these are details which concern only an elite of "readers". The great mass of the "readers", consisting largely of blind men, would in any case limit themselves from the start to the study of a single reading (Hafs or ʿAsim, in the west Warṣ ʿan Nāfiʿ). In general, the originally large number of readings has given way in the course of centuries to a far-reaching uniformity both in the practice of recitation and in the theoretical ʿim al-bīrāt.

The history of the text of the Qurʾān and of the ʿimāl has also been studied by European and American orientalists, notably Nöldeke and Goldziher, followed by A. Jeffery, G. Bergsträsser, O. Pretzl and E. Beck (see Bibli.). Important sources have been published, and separate stages of development reconstructed. Jeffery, and likewise Bergsträsser in association with Pretzl, planned an apparatus criticus for the Qurʾān. Bergsträsser and Pretzl had begun a systematic collection of photographs of early manuscripts of the Qurʾān in the hope of discovering variants not registered in the literature. Because of their untimely death (1933 and 1941), this research came to a standstill. Jeffery also died (1939) without having realised his vast project. The task, however, remains to evaluate the known and still unknown variants for the study of old Arabian dialects and in general for a future historical grammar of Arabic. Whether much will emerge to the profit of the historical interpretation of the Qurʾān remains to be seen. The harvest so far obtained by Bergsträsser and Beck is rather meagre and promises no new results of any importance. During the last part of his life, Pretzl himself had apparently "retreated from the generally high appreciation of the manuscripts and readings of the Qurʾān", August Fischer, who noted this in passant in a posthumous article (Isl. xxviii (1948), 5 ff. n. 4), also cited a passage from Spitaler's obituary of Pretzl (ZDMG xcvi (1947), 163 ff.). In Fischer's opinion the Qurʾānic textual variants "for the most part (emphasis by Fischer) consist of no more than attempts at emendation made by philologically trained Qurʾān specialists on difficult passages in the "Ulmicmic" reduction".

a commercial arrangement in which an investor (ṣāhiḥ al-nādī) or group of investors entrusts capital or merchandise to an agent-manager ( yawmi, mukārib, mudāhir) who is to trade with it and then return it to the investor with the principal and previously agreed-upon share of the profits. As a reward for his labour, the agent receives the remaining share of the profits. However, in case of a loss resulting from an unsuccessful business venture, the agent is in no way liable for the return of the lost investment. He loses his expended time, effort, and anticipated share of the profit, while it is the investor who exclusively bears the direct financial loss.

The bihād combined the advantages of a loan with those of a partnership ( sharī'a) and while containing elements characteristic of both contracts, cannot be strictly classified in either category. In all Islamic legal writings, it is treated as a distinct and independent contract with a separate section or book ( Kitāb) devoted to it. As in partnership, profits and risks in the bihād are shared by both parties, the investor risking capital, the agent his time and effort. However, in the bihād, unlike a partnership, no joint capital is formed and the investor does not become directly or jointly liable with the agent in transactions with third parties; instead, third parties need not ever be aware of the investor's existence. As in a loan, the bihād generally entailed no liability for the investor beyond the sum of money or quantity of commodities handed over to the agent; and in the event of its successful completion, the agent returned the capital plus a share of the profits (the latter, corresponding to the interest in an interest-bearing loan).

The agent's complete freedom under normal trading circumstances from any liability for the capital in the event of partial or total loss and the disjunction between the owners of the capital and third parties are novel and distinctive features of the bihād which made it a particularly suitable instrument for long-distance trade.

Although commercial arrangements resembling the bihād were known in the Western and Mediterranean world from the earliest times, it appears very likely that its direct origins were indigenous to the Arabian peninsula, having developed in the context of the pre-Islamic Arabian caravan trade. With the Arab conquests, it spread to the Near East, North Africa and ultimately to Southern Europe. Its introduction in the form of the commenda in the Italian seaports of the late 10th and early 11th centuries A.D. was germinal to the expansion of mediæval European trade. The bihād was the subject of lengthy and detailed discussion in the earliest Islamic legal compendia (late 2nd/3rd century). Its legal treatment in these early treatises bears the hallmark of long experience with the bihād as an established commercial institution. Although not mentioned in the Kur'ān, numerous traditions attribute its practice to the Prophet and his leading companions (e.g. Sbīrīn, Mūqāṣṣ al-muṭāfāid, ii, 309; Sārāqīs, Muṣaff, xxiii, 18-19; Shāykhān, 'Aṣī madarašt, fol. 421).

From the sparse indications available, it appears that this form of commercial association continued through the early centuries of the Islamic era as a mainstay of caravan and long-distance trade in one of the very few mediæval Arabic treaties of commerce, Dimashqī's The beauties of commerce (probably 5th/6th century), the bihād is cited as one of the three methods by which trade is carried out;
Gharâl lists it among the six commercial contracts, "the knowledge of which is indispensable to anyone seeking gain in trade" (Iṣâd, ii, 65). The documents from the Cairo Geniza (9th-11th/10th-13th centuries) are replete with numerous examples of commercia agreements which account for a considerable share of the commercial activity reflected in these documents. Thus we may conclude that not only in law, but in practice as well, the kâriḍ constituted one of the most widespread instruments of commercial activity.

Three Arabic terms are used to designate this contract: kâriḍ, muddâraḍa, and muddâraḍa and the terms are interchangeable with no essential difference in meaning or connotation among them. The divergence in terminology was probably originally due to geographical factors. The terms kâriḍ and muddâraḍa apparently originated in the Arabian peninsula, and the term muddâraḍa was of 'Irâd provenance. Subsequently, the difference was perpetuated by the legal schools, the Mâlîks and Shâfi'is adopting the term kâriḍ and, to a lesser degree, muddâraḍa, and the Hanafis the term muddâraḍa.

As in the case of several other commercial arrangements, Islamic law justifies the liberty of the kâriḍ contract on the religious grounds of traditional practice (usûna), the consensus of the community (iżma') and, more interestingly, on the practical grounds of its economic function in society. After quoting a series of traditions describing the bird's use in trade by the Prophet and his companions, Sarâkhût adds that it is also allowed: "Because people have a need for this contract. For the owner of capital may not find his way to profitable trading activity, and the person who can find his way to such activity may not have the capital. And profit cannot be attained except by means of both of these, that is, capital and trading activity. By permitting this contract, the goal of both parties is attained" (Sarâkhût, Mabstî, xxii, 19).

Sarâkhût's summary of the kâriḍ's economic function highlights one of the most important aspects of this contract's role in Near Eastern commerce, and helps explain its widespread use in mediavial trade. For the investor, the kâriḍ served as a means of hiring trading skill, and for the agent-manager, as a means of hiring capital. Since, in the mediavial commercial contract, profit should be realised only by the combination of capital and trading activity, the kâriḍ, especially for the purposes of long-distance trade, became an ideal instrument to attain a profitable goal.

**KIRÁN, in Islamic astrology "the conjunction"**. Without further qualification, this refers to the mean or true conjunction of Saturn and Jupiter. The conjunctions of these two planets were combined, apparently by Sasanid astrologers, with the Hellenistic doctrine of the triplicities to form the basis of one of several methods of predicting the course of history available to medieval astrology.

The four triplicities were associated with the four subbinary elements as follows:

<table>
<thead>
<tr>
<th>Fire</th>
<th>Earth</th>
<th>Air</th>
<th>Water</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aries</td>
<td>Taurus</td>
<td>Gemini</td>
<td>Cancer</td>
</tr>
<tr>
<td>Leo</td>
<td>Virgo</td>
<td>Libra</td>
<td>Scorpio</td>
</tr>
<tr>
<td>Sagittarius</td>
<td>Capricorn</td>
<td>Aquarius</td>
<td>Pisces</td>
</tr>
</tbody>
</table>

Mean conjunctions of Saturn and Jupiter occur once in about every 20 years with a longitudinal increment of about 242°; for twelve or thirteen conjunctions, then, or about 240 or 260 years, they stay within the same triplicity, and it takes about 360 years (i.e. approximately a millennium) for the conjunctions to return to the triplicity in which the cycle started. The return of the conjunctions to the triplicity of fire (to Aries) in about a millennium was thought to indicate the appearance of a new prophet; the transfer of the conjunctions from one triplicity to the next in about 240 or 260 years was taken to signify a possible change in the dominant dynasty; and the occurrence of each individual conjunction was believed to portend lesser shifts in political, military, or economic status. The details of these predictions depended upon the horoscopes of the beginnings of the solar years in which the conjunctions occurred.

This theory of conjunctions usually appears in consort with various other elements of political astrology, all of which seem to have originated in the Zoroastrian millennarianism of Sasanid Iran. These other methods are: the revolutions of the worlds; the cosmic cycles—i.e. the mighty, big, middle, and small varieties of the kîsma, the intîlîd, and the fardars of the planets; the mighty years of the planets; and the planetary lords of the millennia, centuries, decades, and single years. These elaborate systems for predicting religious and political change, together with the related theory of the conjunctions of the maleficient planets, Saturn and Mars, in Cancer every 30 years, appealed strongly to dissident groups in the early 'Abhâsid period and later, and especially to those with Iranian connections; in particular, one may mention the Karmâjans and the Ismâ'îlîs. Many leading astrologers wrote expositions of the significance of the conjunctions, especially Mâhâlîbâd and Abû Ma'shar; through their writings, this form of political astrology was transmitted to Western Europe, where it became extremely popular during the Renaissance.

**Bibliography:** References to the earlier literature and descriptions of some of the numerous Arabic texts on kîsma will be found in D. Pingree, *Historical horoscopes*, in JACOS, lxxxii (1962), 487-
in the bosom of Islam, in spite of categorical refutation of "monkey", but representing in fact, among some of the builders of the tower of Babel; their Sanhedrin in the minds of men the legend, of Talmudic origin, which was still going on, causing grave annoyance to the inhabitants.

In spite of a fundamental quality of mischief, encouraged by captivity and a sometimes extreme lawlessness, stigmatised by the usage of the term "rascal monkey", the Arabs recognised in the monkey qualities lacking in other animals, such as a concern for cleanliness expressed through a continuous and methodical process of defecating, its extreme agility, its astonishing ingenuity and above all its exceptional talent for imitation; these qualities were defined in proverbial expressions such as: "As a monkey is more cunning than a baboon", "aknas min hadhafa "more sly than a she-monkey", "amalab min rubah "more pleasing than a baboon", "ahhaba min hir "more imitative than an ape", and they summed all of this up in the antithesis al-hird habib ibninanu maith "rascal though he is, the monkey is agreeable!"

The maritime trade of slavers and of Arab and Persian merchants in the Indian Ocean made known to the Muslim world a number of new species of cercopithicus and a considerable trade in monkeys developed in the ports of the Red Sea and the Persian Gulf. The hunters, sea-farers from the coastal region of the Jazan peninsula, went by preference via the island of Socotra to the coast of East Africa (the country of the Zanj and the country of the Swahili) in search of the magnificent genera celebes (Colobus abyssineus) with its fine black pel, an item of great luxury, exported at that time as far as Central Asia and Europe. Al-Idrisi (Nuska...), in his work, section 7) speaks of an "Island of Monkeys" (al-atassar al-hurid), in the Indian Ocean (perhaps the island of Pemba or that of Mafia?), where the hunters from Khurj Muria and of Socotra went to trap monkeys (that is to say, the green monkeys Cercopithecus callithrix, the vervets Cerc. pygerychus, the mousacks Cerc. cephus, the grivets Cerc. aethiops and the nisas Cerc. pyrochrous) with the aid of small boats propelled by the tribute of the coast by the tide and the currents. These boats contained delicacies for bait and on the gunwales
there were towing ropes manoeuvred by cords attached to the ship. Attracted by the food, the quadrupeds soon crowded together in the boats and it was necessary only to operate the recovery ropes to bring on board the teeming cargo; depending on the species, some were killed and their pelts sent to the fur market, and others, with collars on their necks, were sold at a high price either to merchants or to aristocratic collectors of rare beasts or to itinerant animal showmen.

It is known, from the chroniclers, and al-Ma'sūdī (Murādī, 1, § 485) confirms it, that princes of India and of China kept trained monkeys, whose role was to detect poison in food and drink; the 'Abbasīd caliph al-Mahdī was advised by Chinese ambassadors to avail himself of the same precaution. But, a century earlier, the Umayyad caliph Yazid b. Mu'āwiya already had his monkey which accompanied him in processions, mounted on an ass (al-Dāmarī, op. cit.). The 'Abbasīd caliph al-Mutawakkil received, from a king of Nubia, two monkeys, of which one could sew and the other model in clay. On the other hand, the sea-farers of Sicily and of 'Umān, maintaining commercial links with India, the islands of Indonesia and China, were the principal source of information on Asiatic fauna and flora, information exploited by Arab geographers and encyclopaedists from the 3rd/9th to the 7th/13th century; these hardy adventurers brought back, on their return, specimens of quadrupeds native to these regions, such as rhesus macaques (Macaca mulatta) and crab macaques (Macaca irus) and semnopithecines or langurs, including the hanouman entellus (Presbytis entellus), all of these being untouchable beasts to the Indians. Certain of these monkeys were offered, at the beginning of the 4th/10th century, by the amir of 'Umān, to the 'Abbasīd caliph al-Mu'taṣimbid biliith to complete his menagerie (Murādī, 1, § 467); with hunting dogs and falcons, monkeys were regarded as princely gifts and they were to figure among the presents sent by Hārūn al-Raschīd to Charles the Fat on the occasion of the two exchanges of ambassadors between the two sovereigns (181-5/797-801).

For its part, the Maghrib was well acquainted with monkeys through the numerous colonies of apes, known as Barbary macaques (Macaca sylvanus) in the Atlas. Very tame and friendly animals, they are a tourist attraction in the valleys of the Chiffa, in Algeria, and it is well known with what vigilant care the British keep their few specimens imprisoned on the Rock of Gibraltar.

The monkey has always and everywhere had, with its grimeas its mimicry, its mischief and its agility, the power of amuse crowds; among showmen and jugglers, the exhibitor of monkeys (karrad, karradīt, karradhīt) was assured, in the Islamic countries, of success in the company of strolling players, in public places, at fairs and in markets. Yemenis and Somalis were the experts in this profession, which, while relatively lucrative, was held in considerable contempt by the upper classes; so, according to Ibn al-Faḍl, Khālid b. Sa'fāwī, in the course of an oratorical contest between the people of North and South Arabia, threw this insult at Tibrīhī b. Mağhrama al-Kīndī: "You other Yemenis, you are nothing but exhibitors of monkeys..." In spite of this disapproval of public entertainers who were, it must be said, in many cases rogues, the mass of the people, both rural and urban, were attracted to open-air entertainments and to exhibitions of rare and "clever" animals, whether these were monkeys, dogs, bears, or goats. As trained quadrupeds were a source of hilarity, the people readily abandoned the term kīnd to designate them, substituting expressions of a happier psychological effect; thus, in Syria and in Lebanon, the monkey was called qandān "lucky charm" and his trainer became the sa'dādī, while in Iran, 'Irāk, Turkey and Egypt it was nāmiynī nāmān "fortune" which prevailed and which by a coincidence perhaps not fortuitous could quite well be linked to the Greek μυάς "ape" from the verb μοιάομαι "imitate, mimic". In the same spirit, the entire Maghrib instinctively adopted, in parallel to the classical substratum, karradīg (pl. karrādī, karrādīd, grradī, grradās) and the Berber ibn (pl. lkkdrin) and idā (pl. idādwin), the archaic Persian adjective shādī (pl. shāvda, shāvda, shāwādī) "gay, joyous" which must have been introduced by the Turks and which 'Irāk also made its own. Also in the Maghrib, the popular negro Bā Sa'dīyāyya, parroting black magicians, to the terror of small children, is often accompanied in his acts by a trained monkey, which he makes dance to the sound of the tambourine or of the gīfūrī [gūrī].

Arab authors have said very little about the tricks which the exhibitors of monkeys trained their pupils to perform. Al-Ma'sūdī notes simply that the Nubian grivet exhibited in the fairs astonishes the audience by his surprising agility in climbing to the top of a spear fixed in the earth. As for al-Dūṭāyī who, as an objective naturalist, enquired into the behaviour of monkeys employed by the aṣhād al-ḥirāda (Hayawan, passim), he makes no mention of the kinds of acrobatics that were displayed in public. It is nevertheless easy to imagine them for anyone who has witnessed the displays given in Morocco by the wandering troupes of the Ulūd Sīdī Ajmed b. Mūsā, the native showmen of the Sun, with their performing monkeys, and this on the occasion of local patronal festivals like that of Laila Kasaba (see E. Locut, Noms et cérémonies des jeux de foire, in Hesperis (1921), 44).

In addition, the ambience of these travelling shows with their dense crowds of curious onlookers has been finely caught by Hārūn al-Zāmīn al-Haḍāmī [g.v.] in his delightful maḥāmārī ḫirādīyya (Maḥāmāt, Cairo 1923, 104-6; Fr. tr. S. de Sacv, Christomathii Cairo 1923, 104-6; Fr. tr. S. de Sacv, Christomathii Paris 1953, 240-1). In Itrīkiya, under the Aghlabī dynasty, the ḫādī, in his zeal for ḫādī [g.,] enjoined upon Jews and Christians the care to brand those whom they were attacking; this was

In Islam, as elsewhere, to liken a man to a monkey was one of the most degrading insults. Among the Muslims of the Far East, in periods of friction between the communities, while the pig and the dog were used as epithets for the Christians, the name "monkey" was generally reserved for the Jews, in reminiscence of the Kur'anic verses quoted above (see H. Pērēs, Pērēs undacuas, Paris 1953, 240-1). In Itrīkiya, under the Aghlabī dynasty, the ḫādī, in his zeal for ḫādī [g.,] enjoined upon Jews and Christians the care to brand those whom they were attacking; this was
done by the Andalusian Ishaq al-Hasani in referring to the famous *Amur al-Mansur* Iba Abi ʿAmir (Pèrs, op. cit.), as was done before him by Abi Nuwas, proclaiming his hatred of the Barmakids [see *Barunma*] in this opening *verso hādāh namāni l-kurādī*... "This is the age of the ape..." ([Dīzāin, Cairo 1953, 552; Beirut 1962, 475].

Under the scheme of Kur'ānīc law, eating the flesh of the monkey is forbidden, since the animal is omnivorous and has canine teeth; an additional and fundamental reason for this prohibition is the instinctive revulsion, which is natural to the primitives, the family to which the human race belongs, for the idea of devouring another member of the same family.

For the evolved human being, eating the meat of the ape would be close to cannibalism. Nevertheless, ancient medical opinion held the flesh of the monkey to be an effective preventive agent against elephantiasis (*djūghān*). Certain other parts of the animal, such as the teeth, the hair and the skin, possessed "specific qualities" (*bawādī*) (see ʿAl-Darnī, loc. cit.), which modern science has relegated to the rank of absurdity.

Finally, regarding the term *bird*, it should be noted that in astronomy the astrotomic ζ, λ Canis majestis and ζ, η, ζ, μ, λ, α, *colubras* is wrongly called *Al Kurūd* "the Ape" in some treaties, a mistake arising from a misspelling of *Al Kurūd* the *Hermits* (see A. Benhamou, *Les mons arabes des étoiles*, in *ATEO*, Algiers, loc. cit., in 1861).

With *bird*, there has not so far been any reference to other than colobids and cercopithecids; it might also be asked what conception the Arabs had of the large anthropomorphic, or anthropoid, apes. These number no more than eleven species world-wide, seven gibbons, two chimpanzees, one gorilla and one orang-outang; none of these species exists in the first clime, (Nutha, *Rihla*, section 8) adds that their movement through the trees is accomplished by means of the arms alone.

**Kird**

In fact, in historical times, the Arab peoples, having never encountered this fabulous *nasnds* in their own countries, quite naturally applied the term to all the small long-tailed flat-faced African monkeys with which the missionaries brought back from their explorations two authentic *nasnds*, but nothing further is known of the episode.

Modern philologists, like P. Anastase-Marie, have gone so far as to see in the term *nasnds* the Greek *mous* "mouse" (see ʿAl-Darnī, *Majāmul al-Kurūd*, Cairo 1953, s.v. *Ape*...); it cannot be denied that the two words have the same sense and one would thus be led to see, in the origins of *nasnds*, besides the gibbon, a human pygmy. Al-Dīhīzī, while not believing in them, lists a number of these fabulous beings which really existed in the popular imagination, and, this being an interesting fact, he assimilates the *nasnds* to the *wāh-madj* and to the people of Gog and Magog (*Fayyāsīn, i, 189; vii, 178). Now the Arab geographers recognised three countries jointly said to be the land or the island of the *Wāh-Wāh* (or the *Wāh-Wāh*), the first situated below the country of the *Zand* (*pl.*). beyond *Sulfā* "of gold" (Mozambique); the second in the most eastern islands of Malaysia (the Philipines, Celebes, the Moluccas); and the third in the extreme north of the Sino-Asiatic continent; it is found that these three countries correspond quite closely to those inhabited by anthropomorphic apes observed by sea-faring Arab merchants of the Indian Ocean, and only the gibbon (Hylabates lar), found in Malaysia, Indochina, Burma and the Himalayas, corresponds fairly accurately to this description. Iba al-Pākhbī, who is quoted by al-Kazwīnī (*450*), in the margin of *al-Darnī*, op. cit., i, 191 and Muhammad b. Zakariyyā al-Rāzī (*pl.*); say, with reference to Sumatra (*Qisrāt al-Rāzī* = Lambri), that "there are found there human beings of both sexes, who go bare-footed and without clothing. Their speech is incomprehensible and they live in the tree-tops. They are entirely covered with hair and they live on a diet of fruit; they constitute an innumerable people who flee at the approach of man... these beings are four spans in height, their language is a kind of whistling and their faces are covered with russet-coloured down..." Al-Īrūsī (*Nūrān, 1st edition, section 8) adds that their movement through the trees is accomplished by means of the arms alone and no use is made of the feet, which gives the impression that they are flying from one branch to another. In the 8th/9th century, Ibn Bāṭīṭa (Rīkī, ii, 136) writes of the colonies of siamang gibbons (Symphalangus syndactylus) with black fleece and white mask which he encountered on the southern coasts of the Indies. As for the recently-discovered Asian *orang-outang*, the gorilla and the chimpanzees of Africa, they remained on the peripheries of knowledge until the 13th/14th century. Besides, in so far as they were known, their height, greater than that of man, meant that they could not be identified with the half-man which the *nasnds* is, by definition; the root n.-s.-m.-s. evokes in fact the idea of smallness and weakness. The reports of those who saw gibbons were rapidly distorted by the imagination of those who transmitted them to the point where the *nasnds* became a monstrous semi-anthropomorphic creature, one-eyed and one-legged, running with successive bounds at a tremendous speed, in times past hunted for its meat in the Yemen. With the *gībb*, another half-human monster, the *nasnds* is not without analogy with the *monocolus* and the *stātwus* of Pliny. Understandably, sceptical minds demanded visual proof of the existence of such phenomena and to this end the ʿAbbasīd caliph al-Mutawakkil, according to al-Maqdīṣī (*Muṣāf*, i, § 491), instructed the famous doctor and translator Ḥunayn b. Ḥishāk (*pl.*; to find for him some of these curiosities; it seems that the scholar brought back from his explorations two authentic *nasnds*, but nothing further is known of the episode.

**Kird**
familiar (see al-Danø, op. cit., ii, 353-4), and modern systematic practice has simply ratified the von populii in retaining the name ‘tinsas’ and applying it to the Somalian Ceropithecus pygerythrus. In conclusion, having been born out of confused images of the gibbon and a pygmy in travellers’ tales, to become subsequently a monstrous human mutation, a pygmy in travellers’ tales, the name has finally been placed, by common logic, in one of the families defined by ‘Gibbini’.

KIRENSUN (see omor-wôk).

KIRGIZ, a Turkish people, mentioned as early as the oldest Chinese accounts of Central Asia (from the 2nd century A.D.) under the name Kien-Kuen, which according to P. Pelliot (J.A., Ser. 6, vol. xvi, 137) goes back to a Mongol word, singularшибн. The lands of the Kirgiz are not exactly defined in these sources; according to a very reliable source, the land of the Kien-Kuen lay north-west of the land of the K’ang-Kiu, i.e. of Sogdiana. The name Kirgiz first appears in the Orkhon inscriptions of the 8th century; at that time the Kirgiz (as the contemporary Chinese annals also tell us) lived on the Upper Venisei (Turkic Kem), north of the Kög-men or Sayan mountains. The same name (Kükimân) is also mentioned in Gardîzi (W. Barthold, Oldei o poedte o Sredneyas Azii, 86 = ed. Abd al-Hâvy Jabibi, Tehran 1347/1928, 262); according to this source, the capital of the Khan of the Kirgiz was 7 days’ journey north of these mountains. There is also said that the Kirgiz had red hair and a yellow colour of skin (surbût-i miy wi sapist-i piist), which is explained by their alleged relationship with the Slavs; the same anthropological features, of which there is no longer any trace among the modern Kirgiz, are mentioned in the Chinese T’ang-shu, linguistically, the Kirgiz were in those days already Turkicised. They did not come to the fore politically until about 850 A.D., when they succeeded in conquering the lands of the Yughur in Mongolia. Nothing was known in Muslim lands of this event; Marquart’s endeavoure (Osteuropäische und ostasiatische Streif- sçige, Leipzig 1903, 91-2) to connect with this the story in Dâhûl of the defeas of the Toghzaghus, can be utterly rejected; like Kudâma (ed. de Goeje, 262, l. 13) Dâhûl only refers to the hostility between the Toghzaghus and the Khabûlû (Karakul, […]). Istakûr (ed. de Goeje, 9-10) and others mention the Kirgiz (Khirkhû) as eastern neighbours of the Kimâk (see kîmâk) and as northern neighbours of the Kharûlû and Toghzaghus; in the east their lands are said to have stretched to the ocean. The most important article of export for trade with Muslim lands was musk. The ethnic and historical continuity between the Kirgiz and the people living today under the same name in the USSR is supposed but not proved. The Kirgiz were probably driven out of Mongolia in connection with the foundation of the empire of the Khân in the beginning of the 12th century. See GANSA UNGA. The Mongol peoples; on the other hand, a body of Kirgiz must have migrated as early as this century northwards to the present abode of the genuine Kirgiz (Kara Kirgiz); according to the Hudûd al-halâm (f. 17b, tr. Minorsky, 98, comm. 203-4, even the town of Pândîl (the modern Aksu in Chinese Turkestan) was in possession of the Kirgiz. The Kirgiz are not mentioned again in this region till the 16th century; what the Chinese C’ang-Te, who was there in 1259, records of the Kirgiz (especially on the use of dog-sledges, cf. Breu Schneider, Material, recherche, i, 129), he had only been told, and did not see himself, and these stories probably do not refer to the people of the land he had passed through. The main body of the Kirgiz had probably remained on the Upper Venisei; the Kirgiz Khan when driven out of North China had to fight with these Kirgiz during their trek westwards. In the fertile region of the modern administrative district of Minusinsk the Kirgiz gradually adopted agriculture and a settled mode of life. According to the Hudûd al-halâm (f. 17b, tr. Minorsky, 97, comm. 286) there was only one town among the Kirgiz, called Kanimgî, where their Khan lived, and no other towns or villages, but only tents; on the other hand, Rashîd al-Din says (ed. Berezin, Trav. Orient. Odd. Archh. Obgh. viii, 168-9) that the Kirgiz had “many towns and villages”. From these and similar statements Rashîf has drawn the conclusion (J.A., Ser. 6, vol. II, 328) that the present state of Kirgiz culture is much lower than it used to be.

In the 16th century the Kirgiz on the Venisei had to submit to the Mongols under Cîngî Khan […]. Negotiations for their submission were already begun in 1507, but it was only settled in 1518 when the last rebellion was put down. After the decline of the empire of the descendants of Cîngî Khan the Kirgiz had sometimes to be under the yoke of the Mongols, sometimes of the Kalmucks, and sometimes of the Russians; in 1607 they recognised the suzerainty of the Kazakh; but by 1609 we find them killing a tax-collector sent by the Kazakh. In 1642 they said they were described by the Kalmuck Khan Bâtur as Kalmuck, in 1646 by the Russian plenipotentiary Daniîl Arabînskî as Russian subjects. In 1703 they were transferred by the Kalmucks, by arrangement with Russia, southwards to the region of the modern Semirechye; they are then said to have numbered 3,000-4,000 tents. As mentioned above, a portion of the Kirgiz had migrated at a much earlier date; shortly after 1544 a certain Muhammâd is mentioned as being invested as Khan of the Kirgiz by Sâîd Khan the ruler of the Mongols (Turîhî : Rashîd, tr. E. D. Ross, London 1895, 141); in the 16th century the Kirgiz were for the most part under the rule of the Khân of the Kazakh. The Kirgiz were called Darut by the Kalmucks; they were nearly all driven out from Semirechye to Farghâna and Karatêgin; it was only after the destruction of the Kalmuck empire by the Chinese (1758-9) that they returned to their old settlements in the southern part of Semirechye. At this date the name Kirgiz was transferred to the Kazakh by the Russians; to distinguish them from the latter, the true Kirgiz were called Kirgiz.
Black Kirghiz (Kara Kirghiz). The term “Kara” was never adopted by the people themselves and is now definitely repudiated. Prior to the 17th century, the Kara Kirghiz, or “White Kirghiz”, were the inhabitants of the western steppes from Orenburg to the Caspian Sea. Their name is derived from the white horse, which takes its name from the principal hero Manaa, the wars against the Kalmucks are described as wars of religion. Unlike the Kazak, the Kara Kirghiz had neither princes or nobles; the elders, called monap, were not chosen by any kind of election but owed their position entirely to their personal influence. Owing to the continual state of war, the tribes of the Kara Kirghiz did not break up into small subdivisions as was the case with the tribes of the Kazak; an aul (camp) of the Kara Kirghiz comprised the members of a whole tribe and therefore occupied a much greater area than an aul of the Kazak. In the 18th century authority over the Kara Kirghiz was exercised by the Chinese, in the 19th first by the Cossacks in Farghana and later by the Russians; the first establishment of Russian rule dates from 1864. The prosperity of the Kara Kirghiz has been seriously affected by the Russian colonisation and particularly by the rising of 1916, when a considerable portion of the people migrated to China; the Russian government resolved—but nothing came of it owing to the revolution of 1917—to take from the Kara Kirghiz all their grazing grounds except the valley of the Terek and to throw these lands open for Russian colonisation.

Until recently in both Russia and Western Europe the name “Kirghiz” meant particularly the Kazak; they are sometimes called also “Kirkiz-Kaisak” (Kaisak, corrupted from Kazak, to distinguish them from the Russian Cossacks). On the separation of the Kazak from the Qbash, cf. “kau” or “qashak” and war. The whole of the Kazak people was for long under the rule of one Khan who therefore had a considerable military force at his disposal; Khan Kasim (d. 924/1518) was particularly powerful. In spite of several defeats from the Mongols allied with the Cossacks in the 16th century, the Kazak still had a strong nomadic kingdom at the end of this century—under the rule of Khan Tawakkul, who, during the last years of the reign of Khan Abul Allah, the successor of Khan Kasim, was able to make a successful incursion into Mā warâ al-Nahr, and later still even held the town of Tashkent. In the 17th century the power of the Khans only rarely extended over the whole people; but about this time Tashkent and Farghana were usually in the possession of the Kazak, sometimes under nominal rule claimed by the suzerainty of the Khans of the Cossacks. At this time must have taken place the division of the Kazak into three “Hordes” (called by the Kazak themselves djas “hundreds”); the great horde (masludja) occupied the most easterly, the little (kbsli djas) the most westerly part of the so-called “Kirghiz steppes” and between the two the central horde (orta djas). Towards the end of the 17th century this division was already an accomplished fact. Khan Tyawka, celebrated as the law-giver of his people in 1694 a Russian embassy was received by him in the town of Turkistan and in 1698 one from the Kalmucks, still ruled all three Hordes and had a representative in each of them. In 1737 unsuccessful negotiations for the submission of all three Hordes to Peter the Great were conducted; in 1725 the towns of Sayram, Tashkent and Turkistan were conquered by the Kalmucks. For a short period after this, the suzerainty of the Khan of the Little Horde was recognised by all the Kazak and the agreement embodying this was sealed by the sacrifice of a white horse; but the treaty had no practical results. In 1730, Abu ’l-Khayr negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the 18th century; but it was not till the 19th century, especially after 1847, when the Russians were firmly established on the southern frontier of the Kirghiz steppes on the Sir Darya, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from Orenburg; regulations for the government of the Siberian Kazak were published in 1822 and again in 1858. Even after the abolition of the Khan’s authority, the descendants of Cingis Khan or “Sultans” exercised a considerable influence over the people as a nobility (among the Kazak called “white bones”, and again in 1882). The last popular leader of the Kazak was Kenesar, who fought against the authorities in Siberia and Orenburg from 1842 in the mountains of Alma Taï; several risings were stirred up until 1873 by his son Sadik (so-called by the Russians, properly Şiddiç). Another son, Ahmad, later wrote the life of his father Kenesar and of his brother Sadik, entitled: Sultan Kenesar i Sadik, Biograficheskije ocherki sultan Allah-Verdi Kenesariu, Obratotno dil ralel i snableno primenljami E. T. Smirnovim, Tasjicent 1889 (review by V. Rosen in Zap., iv, 222-3).

The most southern part of the Kirghiz steppes was conquered in the 17th century by the Cossacks of Farghana and Khiva and partly colonised; the advance of the Russians in this part was therefore assisted—by the Kazak. After the foundation of the general-government of Turkestan (1867) and the general-government of the Steppes (1882) (Semireči belonged at first to the latter, but was later again united to Turkestan), the government of Kirghiz steppes had less unity than before. On the other hand, after the Revolution an administrative unit was established called at first by the Russians the “Kirghiz Republic” and by the people themselves “Kazakstan”. Today the Kirghiz form one of the Union Republics of the USSR. The number of the population in the Kirghiz Socialist Soviet Republic was 3,145,000 in 1953 (43.6% Kirghiz, 24.2% Russians, 10.7% Uzbeks, etc.). The whole number of Kirghiz living in the USSR was 11,332,000 in 1970. The number of Kirghiz living in China and Afghanistan is over 100,000. The Kirghiz language belongs to the western (Kipchak) group of Turkic languages.

The peninsula, inhabited by the Scythians. From the 6th century B.C. onwards, Greek colonies existed on the coasts. Around 480 B.C. these formed the Bosporan State, whereas in the 1st century B.C. they belonged for a short time to the Pontian kingdom. From 63 B.C. onwards, the Roman Empire wielded supreme rule (see Faustus Realeszympolide der klassischen Altertumswissenschaft, new ed. by G. Wissowa, vii. Halbband, Stuttgart 1899, cols. 2254-69; E. G. Gundel, Die Krin im Alterthum, in Das Gymnasium, 1942, 117-58). In the 4th century A.D. the Byzantine Empire held the Chersonese (Old Russian Korsun?), while the main part of the peninsula belonged to the territory of the Khazars [q.v.].

During the latter's reign, Samuel had gained a firm footing among the Tatars of Khir, like among the rest of the Golden Horde. From Egypt shortlived influences of the fatimids [q.v.], asserted themselves.

Next, there existed at old also Jewish settlements, but little is known of them in these centuries except from tombstones. Karaites or Karfit [q.v.] were found at Cuit Kail, and the Orthodox Christians had a bishopric of Gothia at Old Khir. Western or Latin Christianity, supported mainly by the Franks, was represented by the Genoese until the downfall of the latter in 1475. Already in 1261 a Latin bishop is mentioned, and in 1328 the bishopric of Kaffa was erected at Old Khir (also Sollchal/Sevastopol) and at present there is also all kinds of industry.

(Mamuliks) were sent to that country, while all kind of goods (fine shawls, perfumes and the like) found their way from there to Krim, and further to the Volga along the road of Sughdak, Old Krim, and Perekop. Trade with Anatolia was also important. The traffic was later taken over by Trebizond, which had remained Byzantine until 1462. The Genoese brought European goods (linen and ceramics) to Krim and to further on. In the 15th century especially, the commercial highway ran along the bank of the Bug via Lutsk and Lemberg to Breslau.

Both in Old Krim, the peninsula's seat of government in these centuries, and in Eski Yurt, many goods were warehoused. The currents of trade manifested themselves also in the artistic construction of buildings and in ceramics. These showed influences from Saray, Sadjak Asia Minor, Egypt and the Genoese colonies, as we know since the excavations of 1924-6. Besides trade, a part was played by the manufacture of salt, the gathering of honey (which went as far as Ksara and grapes, and by horse-breeding and tanning.

Despite all the activities, all these developments, Krim remained until the 15th century only an amanuensis of the Golden Horde and occasionally sought refuge for ambitious claimants in their struggle for power, like Nokhay in 1329 and Manay in 1339. Around 1341-5, 85,000 persons allegedly fell victim to the Black Death, and in 1395 the peninsula was ravaged by Timur. Attempts of the double kingdom of Poland and Lithuania to push further to the Black Sea and to endanger also Krim were foiled in 1396 by the victory of the “mayor of the palace” Edigii (Russian Yaghier) on the Vorskla. The latter had his base here during his struggle with Witold of Lithuania, until he died in 1449.

During the civil wars which ravaged the Golden Horde from 1399 onwards, princes of the Mongol ruling dynasty who were descendants of Chingiz Khan and his grandson Togha Temir (the son of Jochi), had settled on various occasions in the peninsula. At the beginning of the 15th century they had apparently adopted the family-name of Giray (q.v.) or Kerey. Relying upon the noble family of the Shirin, Devlet Berdi had established himself in Krim after 1426, and in 1427 he tried to enter again into relations with Egypt. But he (and since 1427 also his brother Hadjji Giray (q.v.) encountered opposition from the ruler of the Great (until then, the Golden) Horde. In August 1449 Hadjji formally declared himself ruler of Krim. With the help of the Turkish sultan and the Polish-Lithuanian king Casimir IV, he was able to hold out until his death in 1466, first in his residence Kik Yer and later in the valley of Bakhchisaray (q.v.). He and his son again and again took in fugitives of the decaying Great Horde and they thus became rulers of the strongest among the Tartar states that came into being. On the northern shore of the Black Sea a strip of land where the Nogays (q.v.) lived, and since 1481 also the Bajgjaks (q.v.), came gradually under the rule of the Krim Khans.

After rather lengthy succession disputes, Mengi Giray I (q.v.), one of Hadjji Giray's eight sons, got the upper hand. He was to become the real founder of the independent Krim state, in spite of the fact that he had to recognise Ottoman supremacy after the conquest of Kaffa in 1475 by the Sultan's troops. The Giray family was then recognised as enjoying in Krim the sole rights of succession and immunity. Since Isfan Giray II (992-6/1584-8) (q.v.), their name was mentioned in the 1469-74 after the Sultan's; they had the right to strike their own coins; and they could grant asylum. They remained independent in internal policy and had at their disposal a richly-ranitied officialdom which followed more and more the Ottoman Turkish pattern. Under the continuous political preponderance of the Sultan, co-operation between the two states generally passed off without too much friction, in spite of many dangerous tensions at times. Joint military expeditions were regularly organised; in 1476 and 1538 into Moldavia, in 1495 for the first time into Hungary. From the time when the Turks had conquered Kilia and Ak Kirmar (1484) and the Poles had been defeated in Moldavia (1497), the khanate of Krim was in direct contact with the Turkish dominions in the Balkan peninsula. In the north-east the Cerkesi (q.v.) and Kabadars (q.v.) were subjects of the Krim-Khans, and thus the Black Sea became until 1739 a Turkish-Tatar inland sea.

Relations with the Christian powers in the north changed when, from 1479 onwards, Casimir IV decided to co-operate more and more with the Great Horde. The Krim Khans turned to the Grand Dukes of Moscow, who between 1468 and 1574 were excluded from paying tributes. With certain fluctuations in details, both states remained loyal to this alliance until the fall of the Great Horde in 1502, and even extended it, while the kings of Poland-Lithuania in 1580 and later repeatedly neglected their commitments to the Horde. From that period onwards, this double kingdom was exposed to attacks from both the Muscovites and the Krim-Tatars, who again and again invaded Podolia, Volhynia and Galicia and more than once laid Kiev, Cernigov and other towns under contribution (for the Tartar incursions between 1474 and 1569, see J. Ochman, Organizacja obrony przed Tartarami w Wielkich Księstwach Litewskich ("The organisation of the defence against the Tartars in the Grand Duchy of Lithuania"), in Studia i materiały do historii zjednoczenia ("Studies for the history of the army"), v (1960), 349-98, esp. 352-4). Under these circumstances, the Krim Khans had to struggle against great difficulties, especially after the death of Khan Ahmad in January 1481. Until the very end of this state, officers, soldiers and even princes of the ruling house continued to desert to the Krim-Khans (see M. Malowski, Kaffa: Helenina genicka na Krymu i problem wioseki w latach 1453-1475 ("Kaffa, the Genoese colony in the Crimea and the eastern problem in 1453-75"), Warsaw 1947 [Prace Instytutu Historycznego Uniwersytetu Warszawskiego ("Publications of the Historical Institute of the University of Warsaw"), 10]. Even after a temporary treaty of peace between the Grand Dukes of Moscow and Lithuania in 1493, the latter's contact with Krim remained to close ties. The Khans were able to maintain in 1497 for the establishment of relations of the Turkish Khans, Turkish relations, initially in the main for commercial reasons (see V. B. Sverkozhevsky, Pasi i nasledstvo Moldavii s Krimom na russke xv-i yu toka ("Ways and relations of Moscow with the Crimea at the turn of the 16th century"), in Inzixiya Akademii Nauk SSSR, ii (1932).

When in June 1502 the Great Horde was finally defeated to the east of Kiev and close to where the Desna joins the Dnieper, and their last Khan was forced to flee to Lithuania (where he was executed in 1503), the Krim Khans, in accordance with his claim, assumed the rights of the former Golden Horde and demanded tribute "without subterfuge" from Moscow and Lithuania. To the Grand Duke of Lithuania he offered a treaty "after straightening
out relations". In addition, Mengli Giray felt himself responsible for the security of the khanates of Kazan (q.v.) and Astrakhan (q.v.) and thus ran into increasing difficulties with Moscow (K. Peulecki, "Mengli-Giray (sic), chan Turanov persakschik" ("Mengli-Giray, Khan of the Perekop Tatars"), Warsaw 1882). Under these circumstances, a treaty with Sigismund I of Poland and Lithuania was of great importance to Mengli Giray. But the negotiations had not yet been concluded when the Krim Khan died at a great age in 1515 (J. Fajerski, "Projekt przyjmowania polsko-tureckiego za Zygmunta Augusta" ("A project of treaty between Poland and Turkey under Sigismund Augustus"), in Tygodnik Kresowy, 1935).

Under Mengli Giray I, Krim reached its cultural zenith. The area was opened up to Ottoman Turkish culture. Artists from the Islamic cultural environment and also Italian, often Genoese, artisans who had remained in the country after 1475, such as Augustino da Garbaldi and Vincenzo da Zugli, found work here, especially as architects and stone carvers. Intellectual and literary circles came also into being. Of special artistic importance was the Kham's palace at Mihhe Sarsky (q.v.), whether Mengli Giray had transferred his residence from Old Krim. It is actually in ruins today, but the Zendjiri Madrasa has been preserved.

In view of the position of power which Mehmmed Giray I (1517-24 [q.v]) had inherited from his father (V. E. Syroyeckovskii, "Muxammad-Giraj i ego vasaloi" ("Mehmed-Giray and his vassals"), in Uchenye Zapiski Moskovskogo Gosudarstvennogo Universiteta, iv (1940)), the new Khan also aspired to the position of the Golden Horde and wanted to unite all Tatars under his rule. His son Shahb Giray (q.v.) in 1521 succeeded in driving away a Khan of Kazan who was friendly to Moscow and, in spite of the resistance of Astrakhan, in incorporating his territory into that of his father. Having become Khan (1523-52) after his father had been murdered and Ismail Giray I (q.v) had been put aside, he did not however succeed in holding out after a defeat inflicted on him by Moscow on the Oka in 1531 (O. Gökbelgin, "Turk-İ Sahib Giray han (1532-1552)," in Ataturk Universitesi yayinlari 212). On the contrary, Ivan IV the Terrible (1532-84) who had been the title of Tsar since 1547, carefully collected his forces for a campaign which brought under his control Kazan (q.v.) in October 1552, and Astrakhan (q.v.), firstly in 1554 and definitively in 1556. Thus the Volga valley was opened up to Russia right down to the Caspian Sea, the waterway to Caucasus and the north coast of Persia lay free and the Russians got an extensive new region for settlement. Dawlat (Dewlet) Giray I (1551-77 [q.v]) finally saw himself confined to the Krim Khanate and its northern hinterland. After the manifold disturbances of the preceding decades he tried to collaborate again with Poland-Lithuania, which saw itself more and more threatened by Moscow and both of which merged into one single state in the Union of Lublin in 1569 (O. Gökbelgin, 1532-1577 yilların anınnda Kırım Hanlığı'nın ışıması durumu, Ankara 1973 [Ataturk Universitesi yayinlari 289]).

However, the Khan was dissatisfied, as was Sultan Süleyman II, by the fact that so many Muslims had become subject to Orthodox Christian sovereignty. The two sovereigns entered upon a close treaty of alliance and for the time being supported Tatar revolts against the supremacy of Moscow; these revolts are echoed in the legends around the bright star Sadr (Sadr, Cora Batyr, Elne Legende in dobudradas-tatarischer Mundart, Cracow 1935). Dewlet Giray attempted to relieve them by marching against Russia in 1555. But his fear that the Sultan might enlarge his influence in Khan by stationing his own troops there and undermining the position of the Krim over Ottomans effectively. Thus the Sultan received little help from the Krim Khan for his attempt to conquer with a canal the Volga and the Don, at the place where they draw the nearest to each other (near modern Volgograd). He could rely only on the Nogays (q.v.). Consequently, when in the winter of 1559 the Turkish troops were defeated between Astrakhan and the Sea of Azov, the enterprise of Selim II fell through. He had hoped to establish in Krim a base for his campaign against Shi Safawid Persia, and to activate from there economic relations with Central Asia (H. Inalcik, Osmanlı-Rus rekabetinin merkezi ve Don-Volga kanalı toplulukları (1559), in Billetten xii 145 (1949), 349-402; Eng. text in ACDICFD (1967), 47-106; A. N. Kurat, Türkiye'nin batı boyunca daimi bir kınanıte, Ten-Ili kázélav xvi-xvii yüzyılı Osmanlı-Rus mınasabaltarı, Ankara 1966 [ADTDY Yayınları 151]), P. A. Sadikov, Pojed Tatar i Turk na Astrakhan v 1569 godu ("The campaign of the Tatars and Turks against Astrakhan in 1569"), in Istoricheskiye Zapiski, xxii, Moscow 1947, 132-66. When in 1571 the Turkish fleet became decisively weakened by the defeat at Lepanto [see Avn-a-Dagirli], any plan of a Turkish advance against Russia had to be abandoned.

On the other hand, Krim was thus freed from the dreaded guardianship of the Sultan, although it also lost his direct protection.

The Khan availed himself immediately of this freedom at his rear to march against Moscow. In 1571 the city fell for the last time into Tatar hands and was burnt down. The Tsar was forced to declare himself prepared to resume paying tribute ( Fitzgerald ). It was only Peter the Great who was able to free himself decisively from this obligation. At this point, the Tsar was unable to counter-attack, as a result of his military engagements in the west in regard to Livonia.

Kazan and Astrakhan thus remained in Russian hands. In order to change this situation, Khan Mehmmed II, the Fat (Semiz; reigned 1577-84) made new endeavours (Kurum Abdulla oglu Hasan, Khane Mehmmed Giraj Han' Kham Mehmmed Giraj II, in Azerbaycan Yurii Bilgisi, ii (1934), 1). Since Turkish help failed to come because of the war with Persia (1578-90), the Kham sought an alliance against Moscowl Poland, Lithuania and even with Pope Gregory XIII. He held out a prospect of conversion to Roman Catholicism, which caused the Poles to send several ambassadors between 1571 and 1583. A Krim embassy was honourably received at Vilna in 1579 (Stanislaw Kryczynski, Niósuna misja katolicka wśród musulmanów litewskich w XVI w. ("A failed Catholic mission among the Lithuanian Muslims in the 16th century"), in Preglad Islandski (1935), 3. 14-14).

But not even in this way could Mehmmed Giray II achieve a real success. He was forced to put at 5,000 soldiers at the disposal of the Sultan for the war against Persia. When the successor to the throne, the Kalghay (q.v.), was taken captive by the Persians, the Khan himself interfered in the war against the Shah. This led to friction with the Subitime Porte and in the course of the ensuing unrest in Krim, the Khan was murdered in 1584.

The new Khan, Châzî Giray II (1568-1608) [q.v],
got the upper hand after lengthy disturbances. He also came forward as a poet (H. Ertaylan, Gazi Geyre Han, hayat ve eserleri, Istanbul 1936; C. M. Roste
teger, Gazi Giray II, Khan of Crimea, and Ottoman policy in eastern Europe and the Caucasus, 1388-1594, in The Slavonic and East European Review, xlv/102 (1966), 139-66). His attack against Moscow in 1591 failed, and during the Turkish campaign against Hungary of 1592-1566 he had, in the same way as his predecessor, to provide troops for the Sultan, which on various occasions led to friction (B. Kocowski, Wyprawy Tatares na Wegrzy przez Pa
ał 1594 r., Lublin 1946; M. A. Klokberi, Borba Ukrainskago naroda protiv tsatskago agressii v storoz polovine XVII pervoy polovine XVII rechov ("The struggle of the Ukrainian people against the Turkish-Tatar attack in the end and half of the 17th and the 1st half of the 17th centuries"), Saratov 1961).

During these various wars, Kırım itself remained free of military incursions, and so the administration there could follow its own course. Public roads and lanes were secure, and documents which survived the conflagration of the Khan's palace (in 1735) testify to well-organised archives and the regular proceeding of the Islamic law concerning justice, inheritance and marriage. Customary law ("Kuda [q.v.]") also played a rôle. The horse trade and rates of exchange of foreign currency were officially supervised. As in other Islamic countries, the dinar [q.v.] was the supreme coin of justice. There were 48 judicial regions in the lowlands and 29 in the mountains, where, except for the infliction of the death penalty, convictions could be pronounced without right of appeal "insofar as the conviction was in accordance with the laws". However, in the administration of justice, corruption as always played a rôle that could not be disregarded.

The Tatars enjoyed personal freedom and, as in earlier centuries, passed for a friendly and hospitable people. Women were entitled to personal property, and took part now and then in public life, diplomatic negotiations or even in military expeditions; and occasionally they devoted themselves to poetry and literature.

Until the age of fifteen, the education of children of the ruling house was often left to Cerkes [q.v.], who taught them riding and the use of weapons. (Up to the 17th century other Caucasian peoples, including the Ossetes, also had their children brought up by Cerkes.) The hardships thereby endured were supposed to influence many khans up to their old age and to counterbalance Ottoman urban culture. In the course of time, however, rulers and high officials turned more and more to Istanbul for the education of their children; also, many a Giray prince lived there as a hostage. Thus Turkish cultural influence became more and more important during the 17th and 18th centuries. Ottoman Turkish gradually began to supersede Kırım Tatar as the written language; Turkish melodies (played on drums, clarinets and later also violins) may well have merged into local musical tradition; but confinement of women in harems increased.

In this way, the ties with Turkey were strengthened, but they also reinforced dependency upon the Sultan, who more and more intervened, by depositing, and occasionally reinstating, many a khan. Thus the stability of the regional government was undermined both by the power of Istanbul and by the growing independence of the Beks, who possessed wide powers within their fields and fought out among themselves many a personal feud. The noble families, the prominent ones being the Khrim, the Kuljuk, the Birm, the Mangur and the Sulish, enjoyed tax freedom. The state revenues consisted largely of certain customs duties, payments by individual governors, indirect taxes (mainly on salt) and an annuity of the Sultan. Direct taxes, as far as they were levied, consisted (at least officially) of the skhur [q.v.] and askal [q.v.].

The interventions of the Sublime Porte bound Kırım the more closely to Turkey because no other policy of alliance was now possible with any power to the north (B. Baranowski, Polska a Tatarszczyzna w latach 1624-1629 ("Poland and Tartary in 1624-49"), Lodz 1948). Bad harvests in the Crimea, whose agriculture normally assured the subsistence of its inhabitants, may have caused the Tatars to plunder again and again the south-western regions of Poland and Lithuania (W. Czapski, Sprawa najazdów tatarskich na Polsce w pierwszej połowie XVII w. ("The problem of the Tatar incursions into Poland in the first half of the 17th c.")), in Kwartalnik Historyczny lxxix (1963), 723-26; M. Horn, Studia ekonomiczne najazdów tatarskich z lat 1625-1633 na Red Carnown ("The economic consequences of the invasions in 1625-33 in Red Russia"), Kraków 1964; J. Coldberg, Chronologia i aszaj najazdów tatarskich na ziemię Ruska,polskiej w latach 1602-1649 ("Chronology and reach of the Tatar invasions into the land of the Republic of Poland in 1600-47"), in Studia i Materiały do Historii Wszechświeta, vi/l (1937). Proper speaking, these incursions had no political motivation, but they were to such an extent prejudicial to relations with the neighbours to the north-west that there could be no more question of combined action against the common enemy, Moscow, which now became more and more threatening to both parties; also, the Kırım Khans themselves suffered repeatedly from the unrest of the nomads. When at the treaty of Pereyaslav in 1654 the Cossack hetman Bohdan Khmelnytski, who had been supported by the Tatars, changed sides and joined Moscow, the Tatars became a direct neighbour of the Crimean Khans. Now at last the Polish-Lithuanian king sought alliance with Istanbul Giray III (1644-51 [q.v.]). They undertook a common military expedition against Moscow, which ended in 1655 with the victory of Ochmatów (J. Rypka, Aus der Korrespondenz der hohen Pforte mit Buhlan Chmelnytschi, in Festskrift für Jar. Bidlo, Prague 1948; idem, Weitere Beiträge zur ... , in Archiv Orientalní, ii (1939); idem, Daijah přesvědčené korespondence Vysoké Povstí s Bohdanem Chmelnychym ("Further contribution to the correspondence.")."

Among themselves many a personal feud. The noble

were to fall to the Crimean khans. Both peoples

took part now and then in public life, diplomatic negotiations or even in military expeditions; and occasionally they devoted themselves to poetry and literature.

Until the age of fifteen, the education of children of the ruling house was often left to Cerkes [q.v.], who taught them riding and the use of weapons. (Up to the 17th century other Caucasian peoples, including the Ossetes, also had their children brought up by Cerkes.) The hardships thereby endured were supposed to influence many khans up to their old age and to counterbalance Ottoman urban culture. In the course of time, however, rulers and high officials turned more and more to Istanbul for the education of their children; also, many a Giray prince lived there as a hostage. Thus Turkish cultural influence became more and more important during the 17th and 18th centuries. Ottoman Turkish gradually began to supersede Kırım Tatar as the written language; Turkish melodies (played on drums, clarinets and later also violins) may well have merged into local musical tradition; but confinement of women in harems increased.

In this way, the ties with Turkey were strengthened, but they also reinforced dependency upon the Sultan, who more and more intervened, by depositing, and occasionally reinstating, many a khan. Thus the stability of the regional government was undermined both by the power of Istanbul and by the growing independence of the Beks, who possessed wide powers within their fields and fought out among themselves many a personal feud. The noble families, the prominent ones being the Khrim, the Kuljuk, the Birm, the Mangur and the Sulish, enjoyed tax freedom. The state revenues consisted largely of certain customs duties, payments by individual governors, indirect taxes (mainly on salt) and an annuity of the Sultan. Direct taxes, as far as they were levied, consisted (at least officially) of the skhur [q.v.] and askal [q.v.].

The interventions of the Sublime Porte bound Kırım the more closely to Turkey because no other policy of alliance was now possible with any power to the north (B. Baranowski, Polska a Tatarszczyzna w latach 1624-1629 ("Poland and Tartary in 1624-49"), Lodz 1948). Bad harvests in the Crimea, whose agriculture normally assured the subsistence of its inhabitants, may have caused the Tatars to plunder again and again the south-western regions of Poland and Lithuania (W. Czapski, Sprawa najazdów tatarskich na Polsce w pierwszej połowie XVII w. ("The problem of the Tatar incursions into Poland in the first half of the 17th c.")), in Kwartalnik Historyczny lxxix (1963), 723-26; M. Horn, Studia ekonomiczne najazdów tatarskich z lat 1625-1633 na Red Carnown ("The economic consequences of the invasions in 1625-33 in Red Russia"), Kraków 1964; J. Coldberg, Chronologia i aszaj najazdów tatarskich na ziemię Ruska,polskiej w latach 1602-1649 ("Chronology and reach of the Tatar invasions into the land of the Republic of Poland in 1600-47"), in Studia i Materiały do Historii Wszechświeta, vi/l (1937). Proper speaking, these incursions had no political motivation, but they were to such an extent prejudicial to relations with the neighbours to the north-west that there could be no more question of combined action against the common enemy, Moscow, which now became more and more threatening to both parties; also, the Kırım Khans themselves suffered repeatedly from the unrest of the nomads. When at the treaty of Pereyaslav in 1654 the Cossack hetman Bohdan Khmelnytski, who had been supported by the Tatars, changed sides and joined Moscow, the Tatars became a direct neighbour of the Crimean Khans. Now at last the Polish-Lithuanian king sought alliance with Istanbul Giray III (1644-51 [q.v.]). They undertook a common military expedition against Moscow, which ended in 1655 with the victory of Ochmatów (J. Rypka, Aus der Korrespondenz der hohen Pforte mit Buhlan Chmelnytschi, in Festskrift für Jar. Bidlo, Prague 1948; idem, Weitere Beiträge zur ... , in Archiv Orientalní, ii (1939); idem, Daijah přesvědčené korespondence Vysoké Povstí s Bohdanem Chmelnychym ("Further contribution to the correspondence.")."
The alliance between Poland-Lithuania and the Crimean khānate came to an end when Mehmed Giray was deposed in 1656 and the announcement of Andranouso, between Poland-Lithuania and Moscow, was confirmed. The political situation changed again when Peter Dorošenko (1655-70), the hetman of the Cossacks of the left bank of the Dnieper, submitted to the Sultan out of dislike for the equalising policy of Moscow. (D. Dorošenko and J. Rypka, Hjajtan Petr Dorošenko a jeho turotska politika ("Hetman P. D. and his Turkish policy"), Časopis Národního Muzea, Prague 1935: Ch. Hilbert, Osteuropa 1648-1662 bei den Zeitenössischen osman. Historikern, typewr. thesis, Göttingen 1948.

At the instigation of the Turks, Khan 'Adil Giray (1669-71) had to collaborate with the Cossacks and therefore fell out with Poland-Lithuania. The ensuing war made Podolia in 1672 into a Turkish province, and thus the Sultan's empire reached its greatest expansion ever to the north of the Black Sea. Attempts by Khan Selim Giray I (1671-73) at mediation failed because of the Sultan's uncompromising attitude (J. Wolinski, Południowa tatarstwo wojna polsko-turecka 1654-1675 r. ("Tatar mediation in the Polish-Turkish War 1654-55"), in Polityka narodów IV (1954):4). The new Khan, Murad Giray (1678-83), tried to free himself from subordination to Turkey and wanted to replace the Shari'a by "the Law of Çingiz Khan" (Ture, Yuna), a daring enterprise which naturally angered the 'Islamî. In accordance with his political principles, he remained aloof during the Turkish march against Vienna in 1683, and his army corps did not take part in the battle of the Barren Mountain Kahlenberg. As a punishment, he was banished to Bulgaria (Kurum Abdullah oğlu Hasan, Viyarna anında Kırım swarileri, in Asıbaycan Yurt Bilgileri ii (1935), 21-2, 348-51). Nevertheless, relations between the Tatars and Poland-Lithuania remained close until the Peace of Carlowitz (1699 [see KARŁOWA].

The Tatars availed themselves of this dissension. After the Cossacks of the left bank of the Dnieper had come again under their control, two Russian armies marched against the Crimea in 1686 and 1687. While Khan Selim Giray (who reigned for the second time in 1684-91) succeeded in defending the peninsula itself, Azov was lost to Peter the Great in 1699, and thus the khānate was divided for several years into two parts, i.e. the peninsula and the region towards the Caucasus. In order to counterbalance Azov while it was in Russian hands, the fortress of Yeidl Rače was founded near Kerč (E. H. Sumner, Peter the Great and the Ottoman empire, London 1949).

During this turbulent period, the cultural significance of the khānate declined. Artistic creativity was small, although Islamic influences from the Crimea and from Turkey are clearly recognisable in contemporary Poland (T. Mańkowski, SATUH Islamu w Polsce w XVII i XVIII wieku ("Islamic art in Poland in the 17th and 18th centuries"), Cracow 1933; F. K. Spuhler, Seidene Repräsentationsteppiche der mittleren bis späten Safawidenzeit: die sog. Polenmatt-, doctoral thesis, Berlin 1965).

The victory of the European coalition over the Sultan in the great war of 1689-99 was of serious consequence for Kırım. Pressure from the north made itself more and more felt. The planned cooperation with the Swedish king Charles XII (1697-1718) and with the hetman of the Cossacks Ivan Stepanović Mazapec, in which Gazi Giray III (1704-7) was very interested, failed owing to the Russian victory near Poltava in 1709. It is true that the allies succeeded in forcing Peter the Great, hemmed in by Turkish troops near the Pruth, to retrocede Azov, but this was all that could be achieved: a protest of Khan Dwiet Giray II [who reigned for the second time 1708-14] remained unsuccessful (A. N. Kurat, Prut refer or lacer ("The Pruth campaign and peace"), Ankara 1951. More and more the Tatars began to fear and reject the adversary from the north (G. Veinstein, Les Tatars de Crimée et la seconde élection de Stanislas Leszczyński, in Cahiers du monde yugoslave 10 (1970), 7-10), especially when the Russians invaded Kırım in 1737 and 1738, destroying many cultural monuments, among them Bâghîe Saray [q.v.]. In 1739 the Tatars and Turks had to abandon Azov definitively to the Russians (T. Veselî, Turecko-tatarskij traktat ob osmanskim krepost'î yakh severnoj Pričernomor'ya v xalq XVI veka ("A Turkish treatise on the Ottoman fortresses on the north coast of the Black Sea at the beginning of the 18th century"), in Vostochnye istoshiki po istorii narodov yugo-vostočnoy Evropey 1, Moscow 1960: 98-136). As in Poland-Lithuania, the strength of Kırım was diminished by the heavy toll of human life, the demonising defeats, the increasing interference of the Porte in Crimean affairs, the manifold struggles among the princes of the ruling house, and a fairly protracted revolt of the Noghays (F. J. Obice, Us den Aufzeichnungen des Süßî Giray Şah. Eine zeitgenössische Quelle zur Geschicht der Chanats der Krim um die Mitte des 18. Jahrhunderts, Freiburg i. B., 1972). An attempt at a new alliance between Poland-Lithuania, Kırım and Turkey remained without further result during the 18th century (W. Konopczyński, Polack a Turece ("Poland and Turkey") 1683-1792, Warsaw 1936; D. Oljaniyn, Odesănna ukраїnskî yuropî v struktu ("A treaty on the trade between the Ukraine and Kırım 1754-1769", Lemberg 1913). An offer of peace made by the Crimean khān by Frederick the Great in 1761, at the most difficult moment of the Seven Years' War, led to no result either (H. Schelm, Ein Schreiben des Krim Giray Khan an den Fürsten Heinrich, den Bruder Friedrîchs des Großen, in Jean Deny Armajani, Aklara 1958, 253-260).

On the other hand, the devastations of the war years stimulated the zest for living of the Crimean Tatars which, during the last decades of their freedom, flowered into a second cultural bloom, and which found its most important expression in the reconstruction of the khānate's palace at Bâghîe Saray in 1740-3. The Sultan made a present of a valuable library, and in 1763 a new state room (Duma) was erected, richly decorated with paintings and sculpt-
But already in 1771, Russian armies had again marched into the Crimea. Khan Salim Giray III (second reign 1770-71) tried to make a stand against them, in vain, because the Sultan himself pressed hard by a war (1768-74), against the Tatars of the Crimea, was unable to render effective help. Many people perished and many places were destroyed. The Russians marched as far as Kaffa and the Khan had to fly to Istanbul (A. Matanov, "Amerikan v Rusiya se'arelnamesi *76) 75, 599 (with continuations in later issues); Mubadcle. An Ottoman-Russian exchange 0/ ambassadors (1773-75), annot. and tr. by N. Itzkowitz (second reign 1770-74); F. A. Unat, "Istanbul ve 'Uskudar'" in Tarih-i Turlsi 11 (1944), 599 (with continuations in later issues); Mubadcle. An Ottoman-Russian exchange 0/ ambassadors (1773-75), annot. and tr. by N. Itzkowitz). Thereupon the nobility decided to appoint a khan who was friendly to the Russians and to accede to the Russian occupation of the fortresses of Kerch, Yehei Kaffa and Kaffa. Thus the independence which the Sublime Porte was forced to grant to the Khan at the peace of Kuchuk Kaynardjije (1774) in 1768-74; F. A. Unat, Kirson tarih ve iktisadi ifade edenin Rusya se'arelnamesi 1768-73, in Tarih-i bagdatlar i (1944), 599 (with continuations in later issues); Mubadcle. An Ottoman-Russian exchange 0/ ambassadors (1773-75), annot. and tr. by N. Itzkowitz). In the place of all these people, came first Russian newcomers, and then also Czechs and Serbs, with the movement of the population on the Crimea (M. Pinson, /Russian newcomers, and then also Czechs and Serbs, with the movement of the population on the Crimea), Izvestiya Akademii Nauk SSSR (1928), 375-405). In the place of all these people, came first Russian newcomers, and then also Czechs and Serbs, with the movement of the population on the Crimea (M. Pinson, /Russian newcomers, and then also Czechs and Serbs, with the movement of the population on the Crimea), Izvestiya Akademii Nauk SSSR (1928), 375-405). In the place of all these people, came first Russian newcomers, and then also Czechs and Serbs, with the movement of the population on the Crimea. The annexation of the peninsula to the Russian empire (first as the Tauris region, and then from 1796 onwards as the New Russia Government) brought about shifting of the population which must be mentioned here. Already in 1779 the Orthodox Christians of the Crimea, for centuries subordinated to "the Bishop of Gothia", had been removed to Southern Russia at the latter's instigation: 31,280 people from 6 towns and 60 villages settled around Mariupol' (A. L. Bertihler-Deigurde, K istori krimskikh tatars v Turtsiyu (the history of Christianity on the Crimean peninsula) in Zapiski Imperatorskago Odeschago Obshchestva istori i drevnostey, xlii (1883), 132-35). The Russians were only fictions, the more so because Kert and Yefikyan were at that time already directly subject to Russia (V. D. Smirnov, Shkernik tarih ve iktisadi ifade edenin Rusya se'arelnamesi 1768-73, in Tarih-i bagdatlar i (1944), 599 (with continuations in later issues); Mubadcle. An Ottoman-Russian exchange 0/ ambassadors (1773-75), annot. and tr. by N. Itzkowitz and M. Mete, Chikag-London 1970). Even the Russian concession at the treaty of Aynaul Kavak in 1779 to declare the Sultan "in his capacity of caliph" to be the head of all Muslims could not prevent Crimean independence from coming to an end. Already two years earlier, the successor to the throne, Shalim Giray, had succeeded as Khan with the help of the Russians and the Nogays (F. F. Lashev, Shagid-Girey, postoldny krimsyh khans ("Sh. G., the last Crimean Khan") in Kiyevskaya Starina, Sept. 1886, 36-80). He was educated in Salonica and Venice, had become acquainted with Russia while living there as ambassador, and was open-minded to European and especially to Italian culture. Like the last Polish king, he thought about reforming the state, mainly after the Russian example. He thus transferred the capital to Kaffa, on the sea coast, probably after the example of the Russian transfer of their capital to St. Petersburg. He invited foreign instructors to train his army of 6,000 troops, limited the uahfa (fiefs) [q.v.] while indemnifying the "landlords" with a pension, and introduced under foreign supervision a new silver coinage. A council of ministers consisting of 12 members was created, and finances were set up anew by introducing financial registers. These reforms burdened the country with considerable debts, and Russia availed itself of the ensuing discontent. Besides, the khanate became upset by a new revolt of the Nogays in 1781 and a rebellion of two brothers of the Khan, who saw himself forced to flee to Grigory Alekseevich Potemkin, the governor of the regions newly conquered by the Russians in the south (the Ukraine). After the Khan had returned to his country with Russian help, Catharine II pressed him under deceitful promises to abdicate. Shalim Giray saw no escape from giving in to this pressure and from abandoning his country to Russia, to which it has belonged ever since (A. W. Fisher, The Russian annexation of Crimea 1772-1782, Cambridge 1970; N. Dubrovin, Prisodineniye k Rossii Krimsy. Reskripfi, pis'ma, relatsii i doneseniya ("The union of the Crimea with Russia. Rescripts, letters, accounts and notes") i-iii, St. Petersburg 1855; idem, 775 (1779-1783); F. A. Unat, Kintn tarihi toya Necah ("Selection of the most important reports and official documents from reference to Turkey, Russia and the Crimea"), St. Petersburg 1855, bearing mainly on the period 1758-74; F. A. Unat, Kirson tarih ve iktisadi ifade edenin Rusiya se'arelnamesi 1768-73, in Tarih-i bagdatlar i (1944), 599 (with continuations in later issues); Mubadcle. An Ottoman-Russian exchange 0/ ambassadors (1773-75), annot. and tr. by N. Itzkowitz and M. Mete, Chikag-London 1970).
De moribus Tartarorum, Lithuanorum et Moscovium, Basel 1615 (written in 1550); H. Ortekin, History of the Crimea in Jagellonian history (in Polish ed. Warsaw 1930); A. Z. Soysal, The Ukraine and the Crimea in their interrelations (in Polish ed. Warsaw 1938); V. Dubrovsky, Barakat Türkleri, in Istanbul, ixxviii (1936), 235, 269). The Byzantine name of Kirk Kilise was apparently Sarante Eklekia, and the name Kirk Kilise must mean the church of forty saints and not forty churches (F. W. Hasluck, Christianity and Islam under the Ottomans, Oxford 1929, ii, 392-2).

The later writers Käthi Celebi (Dörtlün-nâmé), Rumeli section, Topkapı Sarayi Müzesi, Hazine küttübhanesi, no. 443, f. 17b) and Münnedjdje-Bashli (ii, 295), record the date for the conquest of Kirk Kilise as 770/1368-9 (see Feridun Bey, The conquest of Edirne (1361), in Archivum Orientalium Et Orientales, i (1927) and idem, Antiq. and... in the 18th c.), St. Petersburg 1896; idem, Kanunun Sultan Suleyman Mişrileti, Istanbul 1890; A. A. Vasiliev, Karaimi w slubie u chason krymskich (“Karaites in the service of the Crimean Khans”), in Myjit Karaitamska tii, 4, 1905, 5-22.

During the 9th/10th-15th/16th centuries as “the city of Edirne” in 1226/1807. Nomads (yörügs) brought to western Anatolia were settled in the region of Kirk Kilise, and were during the 9th/10th-15th/16th centuries known as “the Tatars in the Crimea”. (M. Tavty CötlügĐn, Rumeli’di yetikler, tatarlar ve edd-ı Edirne, Istanbul 1937, 94, 180 and passim). Kirk Kilise was first attached to the Vize mosque (Eski Djamii), the covered market, the Kâpruşt fountain, and visitors noted the Old Mosque (Eski Djamii), the coffee-house, meeting-place of the learned man, containing 283 households (Tapu defteri, no. 370; this building was in a ruined condition in 1226/1807). Nomads (yörügs) brought to western Anatolia were settled in the region of Kirk Kilise, and were during the 9th/10th-15th/16th centuries known as “the yörügs of Kirk Kilise” (M. Tavty CötlügĐn, Rumeli’di yetikler, tatarlar ve edd-ı Edirne, Istanbul 1937, 94, 180 and passim). Kirk Kilise was first attached to the Vize mosque (Eski Djamii), the covered market, the Kâpruşt fountain, and visitors noted the Old Mosque (Eski Djamii), the coffee-house, meeting-place of the learned man, containing 283 households (Tapu defteri, no. 370). During the 11th/12th century, Kirk Kilise was a small town with a few shops and red tile-roofed houses set among the vineyards, and visitors noted the Old Mosque (Eski Djamii), the covered market, the Kâpruşt fountain, and the coffee-house, meeting-place of the learned man, situated by a fountain (Ewliya Celebi, Seyhâni-nâmé, Istanbul 1315, v. 79-80). For the remaining monuments of the town today, see Süllüname-i vilayet-i...
Ancient Iraq, 247, Loudon 1964, d'Assyr, el'Arch. Or., xxiii (1926), 64, and by Sidney (1880), 267 ff.). This name could have come from rer, in vflf3 mann, raids by the mountain peoples from the north-east, and its surrounding territories were very exposed to 25*. 312, 3x2). From the time of the ancient Babylon¬

...
of Nabû Dâniyil on the slope of the hill of Kirkûk; it was known as the Great Martyrion, but during the Turkish retreat of 1918 it was being used as a powder magazine and was blown up (C. J. Edmonds, Kurds, Turks and Arabs, 267; Fisht, Assyri, ii, 54).

Kirkûk, position as an administrative centre has varied through the ages: “In the 18th century Kirkûk was the chief town of the eyâlet of Shahrûzir which included the modern iitelâ‘ of Kirkûk, Irbîl and nominally of Sulaymânî under a mu'allâ‘îm appointed by Baghdad. With the reforms of Midhat Pasha, edil of Baghdad from 1856 to 1872, the name of Shahrûzir was given to the sanâ‘î of Kirkûk, corresponding to the present-day iitelâ‘ of Kirkûk and Irbîl, whereas the historic Shahrûzir remained outside, in the new sanâ‘î of Sulaymânî. The vilâyet of Mosul was formed in 1859 and Kirkûk remained an important garrison town” (Edmonds, op. cit., 265-6). Under the Turkish régime, the vilâyet of Mosul was divided into three sanâ‘îs or iitelâ‘s: Mosul, Kirkûk and Sulaymânî; in 1918 three baydîs situated to the north of the Little Zab were detached from Kirkûk to form the iitelâ‘ of Irbîl. In the constitution of 1925, the new Iraqi state was composed of four sanâ‘îs: Kirkûk, Irbîl, Cânûmânî and Gilî-Tabî. The iitelâ‘ of Kirkûk was composed of four baydîs: Kirkûk, Irbîl, Cânûmânî and Gilî. Today, the muhâ‘aja of al-Tamâm, with a baydî at its head, includes five baydîs, as follows: Kirkûk, Tur Kharmûtû, Cânûmânî, Huwayîja, and Irbîl. Each baydî has at its head a hâfiz or a muhâ‘ij. The baydî of Kirkûk has five hâfizûn, as follows: Tûm Kharmûtû, Kârî-Hasan, Altûn Köprî, Dîlûn and Sûwâmî, and each hâfizûn is administered by a muhâ‘ij. Kirkûk is the seat of the regional court and of a court of appeal, and it possesses a garrison and an airport. There is also an association of Turcoman writers.

Kirkûk is an important commercial centre and an agricultural market for the cereal and animal products of the neighbourhood. It is well served by good roads to Baghdad through Ta‘balî and Irbîl to Mosul through Altûn Köprî and Irbîl, to Sulaymânîyûn through Cânûmânî with branches to Samânîyyûn and Hamadân in Iran. A narrow-gauge railway links Kirkûk with Baghdad in the south and with Irbîl in the north. The region around Kirkûk is undulating and it is populated mostly by Kurds. The Mesopotamian steppe begins to the west of the town and it is inhabited chiefly by Arabs. The immediately-surrounding district produces much fruit.

The region of Kirkûk abounds in sulphur and bitumen products and it is especially rich in petroleum deposits, extensively exploited even in ancient times. It should be noted that the petroleum had a
of Kirkūk. The drilling programme was formally constructed, water supplies, pipe lines and buildings extracted petroleum were payable. Before the end of 1925, geological work was begun and roads were constructed, water supplies, pipe lines and buildings were installed in the neighbourhood of Kirkūk. The drilling programme was formally inaugurated in April 1927 by King Faysal I, and the first oil gushed forth on 27 October 1927 at Bābā Gurgur, near Kirkūk. The years 1927 to 1931 were given to preparing the whole region of Kirkūk for production by test drilling, scientific observation and arranging the necessary services; production units, reservoirs, workshops, housing etc. were established and at the same time negotiations were conducted with the Iraqi government to extend the period for selecting areas, according to the convention of 1923. In March 1931 the company, which had become the Iraqi Petroleum Company (I.P.C.) in 1929, was able to operate in the whole territory in the north-east of Iraq, on condition that by 1935 they constructed a pipe-line to the Mediterranean with a capacity of 5,000,000 tonnes, with a branch at Hadduja on the Euphrates to Ijayfah and Tripoli, and that they make an annual payment of £4,000 as an overall payment to the government. It was also in 1931 that the operational headquarters of the I.P.C. was moved from Tuz Khurmatu to Kirkūk, and the headquarters for pipe-line operations was established at Ijayfah. The drilling for crude oil at Kirkūk began at the end of 1934 and, from 1935 onwards, the annual production of 4,000,000 tonnes put Iraq in the eighth position among the oil producing countries. In January 1935 the double 16" pipe-line from Kirkūk to the Mediterranean was formally opened, but because of the Arab-Israeli war of 1948, the branch leading to Ijayfah was closed. This caused a loss of almost 7,000,000 tonnes and the corresponding royalties. The Tripoli pipe-line was, however, doubled by a second (16") pipe in 1949 and this trebled the export figure. In 1952 a third (30") pipe-line was brought into service between Kirkūk and Banias (Syria). From then on the world market for Iraqi oil was to increase to 14,000,000 tonnes per year. On 3 February 1952 a new agreement was signed between the Iraqi government and the I.P.C. for the distribution of personnel, production and revenues. A minimum production of 22,000,000 tonnes was expected annually from 1953 and a revenue of £50,000,000, in 1952 to teach £60,000,000 in 1953. The profits gained from the oil workings would be shared equally.

The Iraqi revolution of 1958 did not change the agreements between the government and the petroleum companies. The objective was to obtain exports worth 100 m. in revenue from a capacity of 70 m. tonnes per year. This target was reached in four years, but a few problems of interpretation persisted. In April 1961 negotiations were begun and, after different interruptions, they finally reached deadlock. They were concluded by Law 80 of 12 December 1961 which dispossessed the company of 99.5% of the territories where they had prospecting rights and left I.P.C. with only 22 sites, 12 of them at Kirkūk in an area of about 478.75 sq. kms., 6 at Bay Hassan of about 182.5 sq. kms., and 4 at Dinarbahr, of about 86.5 sq. kms. (Verniers, L'Irak, p. 435). New installations were planned between May 1964 and June 1965 and were completed, with future plans taking into consideration the Iraqi National Oil Company (I.N.O.C.) which had recently been founded on 30 October 1964. More new laws were enacted as a consequence: Law 97 (6 August 1967) forbade any new concessions to foreign companies and Law 123 (October 1967) authorised the I.N.O.C. to exploit the remaining sectors, which seemed to put an end to the monopoly of oil production which the foreign I.P.C. enjoyed. On 14 June 1972, the I.P.C. itself was nationalised, and thus Iraq gained for itself all the profits from its rich petroleum deposits. The annual production of crude oil in Iraq has regularly increased from the 47.5 m. tonnes in 1966; by 1975 it had reached more than 110 m. tonnes, 60 m. of which were from the Kirkūk region. In 1973 the Iraqi reserves of crude oil were estimated to be 4,743 billion tonnes.

If the petroleum industry with all its subsidiary operations gave a favourable social status to its workers, for their standard of living is superior to that of other workers in the country, it did not suppress all the other social forms. Several important strikes were called in Kirkūk among the oil workers. The most notable were those of 1937 which coincided with the workers' strikes at the Kīt barrage, the drillers of the B.O.P., the railways, the stevedores at Basra and the weavers of Najaf. These showed a hardening of class-consciousness and the discovery of a new political weapon (Longrigg, Iraq, p. 252). In July 1947 a serious strike aggravated by politicians of communist leanings broke out at I.P.C., and it claimed several victims (ibid. 338).

Other demonstrations have had a more political tone. The more announcement of the Treaty of Portsmouth (15 January 1945) produced a general strike for three days. At Kirkūk the British consulate was attacked, but the most tragic of these events was the so-called "purge of Kirkūk". On the occasion of the first anniversary of the republic (14 July 1959) Communist elements helped by bands of Kurds massacred the Turcomans of the town, for they were considered to be anti-Communist. There were probably 120 killed and about 100 wounded. The participation of the Kurds in the affair was interpreted not as a sign of an antagonistic nationalistic rivalry against the Turcomans, but one of social competition. The Turcomans, who are more socially and culturally advanced, occupied more high-ranking positions in the I.P.C., while the Kurds had to content themselves with more subordinate work (cf. M. Khadduri, Republican Iraq, p. 125).

It must not be forgotten that one of the obstacles to a definitive solution to the Kurdish problem is precisely the claim of the Kurds to the territory and the revenue of the Kirkūk oil-fields, which they would like to see included in the territory of an autonomous Kurdistan. These claims are categorically refuted by the central Iraqi government. In October 1970 a plebiscite was set to settle this point of contention, but it was adjourned indefinitely (E. O'Ballance, The Kurdish revolt, 161 f.). This at least in part provoked the outbreak of hostilities in...
March 1974, just as the Kurdo-Iraqi agreement of 11 March 1974 was being implemented. The law of 11 March 1974, awarding autonomy to the region of Kurdistan defined this region in terms of the 1957 census, carried out under the monarchy. At that time, the Kurds were afraid to declare themselves as such, and thus the census did not give a Kurdish majority to Kirkuk; hence the town and the wālehā fars were accordingly excluded from the autonomous area.

A well-known personality of Kirkuk was the Kurdish poet Shāykh Rūdāl Tašābādī (c. 1840-1910). More-or-less an agnostic character, but at the same time fanatical also, he had gifts of satire and improvisation, and composed poems in Kurdish, Turkish, Persian and Arabic. They were published in Baghdad in 1915 and 1936 and he is remembered as one of the most popular poets of Iraqi Kurdistan (cf. E. B. Sloane, op. cit., 134-5; Edmonds, op. cit., 57-8, 290-5; Edmonds, A Kurdish lampoonist: Shāykh Rūdāl Tašābādī, in JRCS, xxii (1932), 111-27).

J. H. KRAMERS—TH. BOIS

KIRMĀN, the name of a Persian province and of its present capital. The name goes back to the form Carmania, which is found in Strabo (xv, 4, 14), and which is said to be derived from the name of an ancient capital, Carmania (Ptolemy. Geography, vi, 8; Ammianus Marcellinus, xxii, 6, 48. See further Marguer, Œdipe, 58, on the name Carmania, and Browne, Lit. Hist. of Persia, ii, 145, for the later popular etymology of the name).

The Province.—The province of Kirkūn is situated to the south-west: of the great central desert of Persia, the Dasht-i Lut, which narrows to some 100 miles in width where it divides Kirkūn from Sistān. It is bounded on the north by Yezd and Khurāsān, on the east by Sistān and Makrān (Baluchestān), which was regarded by most of the early geographers as separate from Kirkūn, though Ḥamd Allāh Mustawfī states that it paid tribute (kharḍī) to Kirkūn (Nuzhat, 141), on the south by Makrān and Fārs and on the west by Fārs. Its boundaries have varied slightly from time to time. Ibn Rusta states that Fāhrāj was part of the tax district of Kirkūn but that the ruler of Makrān claimed that it belonged to him (386). Khvāsh, which is today included in Baluchestān, and Rīgān were both reckoned by Ḫalīlī to belong to Kirkūn, though the former was, he states, part of the tax district of Sistān (164). Idrīsī, on the other hand, includes Khvāsh in Sistān (417). Shahr-i Bābak was at various times included in Fārs, at others in Kirkūn. In 1268-1269 it was placed, for revenue purposes, under Yezd (Aḥmad All Wazīr, Dīvān-šāhī yā mamluḵāt-i Kirkūn, ed. Muhammad Ibrāhīm Bāštānī Pirzāl, in Forhang-i Irān Zamin, xxv, 1-4, 165). Bālīk, which had earlier belonged to Kirkūn, was also placed under Yezd about the year 1774 (Wazīr, 175), though Kirkūn's inclusion in one of its districts continued to belong to Kirkūn. During the reign of the Saḵḵār mālik of Iran, Arslān Shāh (1943-1950), Kirkūn and Tabās appear to have been under Kirkūn (Aḥmad All Dīn Abū Ḥamīd Kirkūn, 'īdal all-ʿidd, ed. All Muḥammad Ṭāhir Nāṣr, Tehran 1311, 70). Fūr and Tūrūm, both placed in Fārs by the Ḥudud al-ʿulūm (129), were considered by Aḥmad All Dīn to belong to Kirkūn ('īdal all-ʿidd, 75). Ibn Bālīk states that Rūdān, which had belonged to Fārs, was put on the Kirkūn side of the frontier in the reign of Alp Arslān (Farīdun, ed. Le Strange, 121), but according to Idrīsī, although it formed one of the dependencies of Kirkūn, it was under Fārs for tax purposes (140). Hūrmuz (Hūrmūz) was sometimes counted as belonging to Fārs, sometimes to Kirkūn, and has often been in different hands to its hinterland.

According to the Arab geographers, the western part of the province, which included Shahr-i Bābak, Sīrjān, Urūya, Ṭūshī, Sījamī, Ardabīl, Bīrūn, and the eastern part, including Anār, Khūtān (Ḵūtān) Zandān, Gwāshahr or Gwāshār (also known as Bardīr and later as Kirkūn), Rūvār, Khabīb, Rūzān, Sārdūṣa, Bān and Nāsrāzhr, in the fourth tribe, while Hūrmuz, according to Ḥamd Allāh Mustawfī, was in the second tribe (Nuzhat, 141).

In the vicinity of its topography the province is not dissimilar from Persia as a whole. A series of mountain ranges, with a general trend from north-west to south-east, runs through the province. Much is tangled broken country, but there are many fertile upland districts, pastures and mountain valleys with orchards, cultivated places, and many streams. Some of these have a high elevation: Sīftābād, near the site of the old city of Sīrjān, lies at an elevation of 5,000 ft. and Fārs at over 7,000 ft. There are also numerous arid waterless mountain districts and desert tracts. The main desert area is in the north and north-east on the borders of the Dasht-i Lut, and is encroaching on the neighbouring fertile districts. The Lūt is defined in the south by the Bām-Zāhklān road and thus excludes Nāsrāzhr and the desert regions of south-eastern Kirkūn and Rīgān, though physically these belong to the Lūt proper. There are also some stretches of arid land between the south-west highlands and the Dībāl Bāriz which run south-east from Sīrjān to east of Dīfrūt. Salt swamps (hāfa) are found in isolated depressions, notably the Kafā-i Kārū near Sīrjān (for a description of this, see K. E. Abbott, Geographical notes taken during a journey in Persia in 1849 and 1855, in JRGS, xvii (1855), 56-7). In some parts of the province the towns and villages tend to be separated from each other by broad stretches of uncultivated land (cf. Ḫalīlī, 165; Ibn Ḥawwāl, li, 509). Along the nor-
northward littoral of the Persian Gulf and the Gulf of Oman there is a narrow coastal plain.

The most northerly of the mountain ranges stretches from the neighbourhood of Yazd to Khābās (the modern Shahrābād) and south-eastwards towards Sarvistān. The fertile upland district of Kubānān in the north, and, further south, the arid district of Rawār lie along its eastern base. A second range, further west, runs south-eastwards from north of Shahr-i Bābak through Strījān and Bāft, and contains Mount Chīltān (17,000 ft.) Mt. Čahārgūn (13,000 ft.) and Mt. Laíázār (14,350 ft.). A lesser range, with Mt. Čahāhzār (9,480 ft.), lies to the south of Sarvistān, while the Mount Dīūrīl fold of Fars is prolonged in a south-easterly direction to near Bandar 'Abbās. South of Sarvistān and to the east of Dīūrīl, lies the Dīūlīl Barīz range [see Dīūlīl Barīz in Suppl.], which also trends from the north-west to the south-east and rises to a height of about 1,350 ft. in the south. The Dīūlīl Kuφī region of the Arab geographers (see Ḫstampkhā, 164; Yudhāl al-Šam, 124; al-Muqaddasi, 477; Ibn Hawqal, iii, 309-10; C. E. Bosworth, The Kūfīshī or Qūfī in Persian history, in Ittan, xiv (1976), 9-13) probably lies in the south-west of Dīūlīl Barīz, on the borders of Makrān and Rūdbār.

In the upland districts, notably in the Dīūlīl Barīz, there exist remnants of a dry forest, consisting mainly of thin stands of pistachio trees, several species of almond, maple, celtis, juniper and other shrubs; stands of pistachio trees, almonds and other drought-resistant species are also found at lower levels. In the garmīs the vegetation tends to be scattered trees and shrubs with a steppe-like ground cover. The kūnār tree (tībizkhāqānī āshva Cristis) has a wide distribution, as also do several species of acacia, myrtle, tamarisk and oleander. Deforestation from charcoal burning and animal grazing has taken place, and present day cover, though in places still considerable, would appear to be appreciably less than the "forests" of both the early and medieval geographers and the 19th century writers.

There are no important rivers reaching the sea. The largest of them, the R. Mīnāb, rises in the hills of Kubānān (which, he states, had been administered during the year 1874 and 1876, mentions the following districts: Guwāshīl, Kūnār and Kubānār. (which, he states, had been administered during the year 1874 and 1876, mentions the following districts: Guwāshīl, Kūnār and Kubānār. The Kūfīshī or Qūfī in Persian history, in Ittan, xiv (1976), 9-13)
Narmashir; Bâbîr was transferred to Yazd, the district of Khûnamân only remaining with Kîrmân, Pâriz and Rûbûr, which had formerly belonged to Sirdjân and Aţlî respectively, both became separate districts, while Rûdûr was now called Rûdibar and Bashâkhurd (Houtum-Schindler, art. Kirmân in Encyclopædia Britannica, 1912, xv, 756). Under Rûdî Shah the province was divided into six ghâsîs: Kîrmân (which included the sub-district of Zarand, Kûhpâyâ and Kûbûranî), Bam (which included the sub-district of Rûfû, Djirûfîr which included the sub-district of Sardûrî, which in turn included Rûbûr, Bandar Abbâs (which included the sub-district of Rûdhîn, Sirdjân (which included the sub-districts of Pâriz and Bâft, which in turn included Urtûyâ, Rûbûr, Kûshk and Sawghân) and Rasûdîjân (Husaya 'All Razmârâ, Farhang-i ghiyârât-yi Iran, vii).

Agriculture and Livestock.—The Arab geographers describe Kîrmân as a rich and prosperous province. The Persian translation of I斯塔khrî mentions that the province included all kinds of fruit (139). While Yâkût states that it was rich in date palm, cereals, cattle and beasts of burden and that it produced fruits belonging to both the cold and the hot regions in great variety, including an abundance of walnuts and dates (Barbier de Meynard, Dictionnaire de la Persia, 483). The author of the Hûdâd al-USâm notes that Djirûfîr, Bâft and the mountain country between Djirûfîr and Mandalân, known as the Kûhûshân-î Abû Ghânîm, were prosperous and pleasant places (124). According to Mûkaddasî, the last-named district had many date palms (467). Rûdûrî is described by the Hûdâd al-USâm as consisting of woods, trees, and meadows (224). The mountain region between Sirdjân and Bardslîr was also very prosperous and pleasant according to the same authority, and contained 360 populous places. Mûkaddasî mentions a multitude of orchards and an abundance of fruit in Sirdjân (464), and many orchards and citrus trees in Mugghân (467). Aqalîn al-Dîn speaks of the excellence of the pastures of Rûdûrî and states that animals thrived in them (70). He also praises the fertility of Narmashir and states that it produced fruit of both the garmir and the sardîr (72). Mûkaddasî notes the great quantity of fruit belonging to the sardîr and the garmir—dates, walnuts and citrus fruits—in Djirûfîr (466; cf. I斯塔khrî 166). Plenty prevailed in the Dîjîbîl Barzî, which, like the Kûfs Ms., were difficult of access (I斯塔khrî, 164; Ibn al-Hawkal, ii, 310). Bam and Kîshrî had many date palms (I斯塔khrî, 166; Ibn Hawkal, ii, 313), which also grew in great profusion in Hurmuz (I斯塔khrî, 165; Ibn Hawkal, ii, 314) and in the Kûfs Ms. Honey was also produced there (cf. Idrîsî, 249). Indigo and cumin were cultivated in Djirûfîr and the district which extended from Mugghân and Walashgîrd to the neighbourhood of Hurmuz, and also sugar cane (Mûkaddasî, 467; I斯塔khrî, 167; Ibn Hawkal, ii, 312). Idrîsî mentions the excellence of the indigo and states that the inhabitants of Mugghân and Walashgîrd occupied themselves much in its cultivation and took a great deal of trouble over it because it was a source of considerable profit to them (424). Wheat and barley were grown in the sardîr, but in Hurmuz millet was the staple crop and the food of the inhabitants (I斯塔khrî, 165; Ibn Hawkal, ii, 317; Husaya 'All Razmârâ, 124, Idrîsî, 424). Cotton, as well as grain and dates, were grown in Sirdjân and Shahîr-î Bâbîr (Nûshâ, 141). Silk was produced in Bam (I斯塔khrî, 71). Asafoetida and gum tragacanth were found in parts of the province.

In the Middle Ages, apart from a period of prosperity under the Saljûqs of Kîrmân, agriculture suffered a decline. There were temporary fluctuations and local variations, but in general the agricultural recession continued until the second half of the 19th century. At that time a wide variety of crops were cultivated. Wheat and barley, though grown in most parts of the province, were not important in terms of the amount grown and some districts had a deficit. In the province as a whole, the yield was low. Some millet, and a small quantity of rice was also grown. Pulses, roots and edible gums were also produced. Cotton was grown in Rasûdîjân (which was later, in the 1930s, to turn much cotton land over to the cultivation of pistachio trees), Kûhpâyâ, Dârzân (Dârkîn), Bam, Narmashir, Djirûfîr, Sarand and Anâr. Dates were still one of the most important products of the province and came from Bâfîk, Khâbîs, Bam, Dârzân, Rûdûrî and to a lesser extent from Kûshk and Sawghân. Rûwar was noted for its figs, Bâfîk for its apricots and Khâbîs for its citrus fruits. Cumin was grown mainly in Kûshk and Sardûrî, and almonds (mainly from Sirdjân and Shahîr-î Bâbîr) and walnuts (from Sarand, Dârzân and Aţlî) were important products. Sugar and indigo were no longer grown except on a very small scale, though an attempt was made by Wakil al-Mulk to re-introduce sugar cane together with indigo, pepper, ginger and various other Indian plants into Khâbîs (Houtum-Schindler, Reisen im südlichen Persien 1879. . ., in ZG Erztl. Berlin, xvi (1881), 377). Dye plants included henna in Narmashir, Khâbîs, Djirûfîr, and Urtûyâ and madder in Sirdjân, Rasûdîjân, Bâfîk, Kûbûranî, Anâr and Sarand. By 1880 the cultivation of henna in Bam had brought about in some measure a revival of prosperity in that district (Fliriiz MirzA Fârman, Safarnâmâ-i Kirmân ma Bâlûstân, ed. Manşûra Nişân Mâh, Tehran 1963, 9). Silk, though a little was still produced in Bam, Rasûdîjân, Bâfîk, Djîpar, Bâshîn and Kûbûranî, had also lost its importance, though some attention appears to have been given to the cultivation of mulberry trees during the reign of Muhammad Shah (1834-48) (R. C. Watson, A history of Persia, London 1866, 354). Tobacco was grown in Sarand and Bâfîk, and potatoes in the district between Sirdjân and Pâriz. From the late 1870s opium cultivation became important in Mâhân, Djîpar, Narmashir, Sirdjân, Bâfîk, Kûbûranî and elsewhere. Honey came from Aţlî, Dârzân and Sarandî. (See further Wazîf, who gives a list of the agricultural produce of each district (bulûk), and also references in E. Stock, Six months in Persia, London 1882, i, 284-288).

Sheep and goats were important throughout the province. There was much movement of flocks from the mountain districts to the plains in winter. Those from Rûbur, Isfandaka and the neighbouring districts went mainly to Rûdûrî and Djirûfîr. Much wool was produced, including a fine soft wool (burak) produced by a special breed of goat. In Rûdûrî there were also many herds of cattle. Buffaloes were found only in Djirûfîr.

Minerals.—Various minerals existed in the province and many of these were exploited. Ibn al-Fâkhî states that there were mines of gold, silver, iron, copper, sulphur, and zinc oxide (206), but their importance, though some attention appears to have been given to the cultivation of mulberry trees during the reign of Muhammad Shah (1834-48) (R. C. Watson, A history of Persia, London 1866, 354). Tobacco was grown in Sarand and Bâfîk, and potatoes in the district between Sirdjân and Pâriz. From the late 1870s opium cultivation became important in Mâhân, Djîpar, Narmashir, Sirdjân, Bâfîk, Kûbûranî and elsewhere. Honey came from Aţlî, Dârzân and Sarandî. (See further Wazîf, who gives a list of the agricultural produce of each district (bulûk), and also references in E. Stock, Six months in Persia, London 1882, i, 284-288).

Sheep and goats were important throughout the province. There was much movement of flocks from the mountain districts to the plains in winter. Those from Rûbur, Isfandaka and the neighbouring districts went mainly to Rûdûrî and Djirûfîr. Much wool was produced, including a fine soft wool (burak) produced by a special breed of goat. In Rûdûrî there were also many herds of cattle. Buffaloes were found only in Djirûfîr.
of the tuyut makers' as follows: the crude ore was brought out from the mine, moistened and made into bars [mil] one gas long, dried and put into a furnace, the action of the fire then causing the tuyut to form in a thin film (Nusht, 205). Marco Polo, who locates the mines in Kūbānān, gives a somewhat similar account. Mukaddasī also states that there were iron and silver mines in the province (476), the latter present in the Silver Mines which are the main district of Dīrūf (cf. also Ḫudūd al-Salām, 63). The Ḫudūd al-Salām mentions lead, copper and lodestone in the mountains between Dīrūf and Bān (65).

Hamd Allah Mustawfī states that there was a turquoise mine and a lapis lazuli mine in Kūbānān, but that the turquoise were immature and unformed and therefore not of much value (Nusht, 204, 206). Marco Polo also mentions turquoise in the mountains of Kīrmān, while Wazīrī states that there was a turquoise mine near the mountains of Maymand in the Shahr Bābāk district (164). He also mentions lead mines in Sīrdjān and Zaranj, of which the former produced the best quality lead (156, 178).

Abbott records the existence of a lead mine in the mountainous region near the village of Tugrājda and states that the government took 10% of its produce (op. cit., 29). Wazīrī mentions a sulphur mine in Kūbānān, which was in operation when he was writing (172); Le also states that there were copper mines in Sārdāyā (131), a copper mine in operation in the mountains of Baţindjān in Aḥtā' (139), and many disseminated copper mines in the mountains of Rābur (143-4). Salt was obtained from deposits near Khābīš, Sīrdjān, Ra'īn and elsewhere. Curzon mentions coal north of Kīrmān city and in Kūbānān, manganese oil in Kīrār, borax in Shahr Bābāk and asbestos in Kūbānān (Persia and the Persian question, II, 519). Extensive mining operations are being carried on in various parts of the province at the present day. Coal and other minerals are mined in the mountains between Rawār and Zaranj and copper in the Pādrā district.

The cities of Kīrmān. The main city of Kīrmān under the Muslims until the middle of the 4th/10th century was Sīrdjān (the form Shīrjān is also found), which was situated some five miles to the east of the modern town of Sa'dībdāb (Le Strange, Lands, 300). It was here that the governor (edlīf) resided (Ibn Khurraŷāhī, 49). Ibn Rusta describes Sīrdjān as the greatest city of Kīrmān (286), as also does Ibtāfī (167), Ibn Ḥawfkal (ii, 512) and the Ḫudūd al-Salām. The last-named states that it was the capital of Kīrmān and the seat of the king (199), though by the time the Ḫudūd al-Salām was written, Ibn ʿIyās, the Būyid governor, had, in fact, moved the capital to Bardsr. Mukaddasī states that it was the biggest town in the province (although no longer the capital) and more extensive than Shīrāz (464). Ḫāria Abrū refers to Sīrdjān as the second city of Kīrmān (Qaṣaṣiyyā, i, 494), although it had, in fact, been destroyed in 708/1316 (before he wrote) after a long resistance by the armies of Timūr. After the city was laid in ruins, the name Sīrdjān was nevertheless still applied to the district of which it had been the centre. Towards the end of the 18th century Sa'dībdāb was founded near the site of the old city. Abbott, who visited it in 1850, describes it as one of the most flourishing towns in Kīrmān (op. cit., 63).

In Sīrdjān and the Silver Mines were Mandjān, Zaranj and Narmandjān. Many of the towns and villages mentioned by the early and mediaeval geographers have disappeared or have not yet been identified.
Communications.—In the early centuries Sīrjān was the main centre upon which the principal roads converged. This, no doubt, in part accounted for its importance until it was destroyed in the 8th/14th century. Three roads led from it to Fārs, one via Ṣahr-i Bābak, another through Ṣālšīz and a third to Nayrāz. Other roads went south to Furg, Tarūm and Šūrū on the Persian Gulf, south-east to Bālti, Dīruth, Mundūm and Humrūz, north to Unās in Kārdān, north-east to Māshā, Bālān and Kirmān, north-north-east to Māsān, Ḳhābīs and Khuṟūsān, and east to Ṣāmūk and Ḳuṭīn. From Kirmān (Gwāṣāt) two roads went north-west to Yazd, one via Zaraqd, Rāwar, Kūbānān and Bālti, and the other via Rafašīn and Anār. From Rāwar and Kūbānān roads went north-north-east across the Great Desert to Tabas and Khūr respectively. South-east from Kirmān a road went to Māhān, Rāʿīn, Dīrūz or Dārūz, Bām and Nāmaṛūz, where it bifurcated, one branch going to Farādž and Zarand in Sīsīn and the other to Ṣīnān, where it again divided, one road going east to Kahrīsh and the other south-west to Mundūm. From Dīrūz another road went south to Dīruth (see further Le Strange, Lands).

In the late 18th and early 19th centuries communications were still very backward. Generally speaking, the roads were fit for pack transport only. Moreover, many were often shut for months at a time owing to the activity of bandits. In 1901 a convention was signed between Britain and the Persian government for a three-wire telegraph line on iron posts from Kāshān to Bālti, for a discussion of the arrangements for ob¬ taining Carmanian wool. Al-Ṣālīḥ states that swords and cavalry arms in Kirman. Al-Ṣālīḥ also states that swords were made in Kirman (Maṭbāk al-argument, ed. K. Lech, Wiesbaden 1968, 110). In the 17th century pottery (blue and white) was made in Kirman. According to Du Man, the best examples of this were difficult to distinguish from Chinese porcelain (Estai de la Perse, Paris 1890, 197).

There was considerable trade, local and long-distance, in agricultural produce. Indigo and cotton were exported to distant regions (Istāfī, 167; Mukaddasī, 470; Idrīsī, 444). Nāmaṛūz had trade with Ḳhūrūsān and al-Ṣālīḥ and that girths were exported to 'Irāk and Deux sayyids de Bām au XVe siècle, Wiesbaden 1956, 91-2). Idrīsī states that there were leather workshops in Zarand and that girths were exported to 'Irāk and Egypt (432). Marco Polo mentions the manufacture of saddles, bridles, spurs, swords, quivers and other arms in Kirman. Al-Ṣālīḥ also states that swords were made in Kirman (Maṭbāk al-argument, ed. K. Lech, Wiesbaden 1968, 110). In the 17th century pottery (blue and white) was made in Kirman. According to Du Man, the best examples of this were difficult to distinguish from Chinese porcelain (Estai de la Perse, Paris 1890, 197).

ch Mona was reported to be of the south of Persia. Trade report. Notes on the Trade, skins. There was also, included shawls, woollens, wool, opium, lead, soap, henna, indigo leaves, figs, gums and wild ass' skins (Notes on the Trade, etc.). There was also, according to Waziri, some internal movement of wheat from Zarand to Yazd and Rawar and sometimes from Urzuya to Kirman; Shir ij also exported wheat to Yazd and Kirman. Peaches were exported from Gawk to Kirman and other districts, dried apricots and dried mulberries from Bafk to Kirman, and dried figs from Rawar to Yazd, whence they were exported to other parts of the country as anjir-i-yazdi; dates from Khabis to Yazd and Kurusan; peas and lentils from Shah-i Bâbak to Yazd and Kirman; henna and rang from Narmâghir to Kirman, whence they were distributed to neighbouring regions; sometimes henna was exchanged in Sitân for clarified butter and swansdown.

Milk products were an important article of local commerce. Râdbir exported clarified butter (rawgân) to Kirman. Bâdbir also supplied Kirman with clarified butter and hâk (a kind of whey). Shah-i Bâbak supplied Yazd, Râfsindjân, and Shir ij with clarified butter, hâk, and cheese, while Bâbanan exported hâk to various districts beyond the bounds of Kirman. Lastly, wool was exported from Aktâ (a kind of coarse cotton weave) to the surrounding districts and to Fârs (see further Wazir). In 1904-5 a British commercial mission visited south-east Persia in order to encourage British trade in the area. Russian efforts were also made to increase their trade, and Russian trade agencies were established in Kirman, Bâni and Râfsindjân.

Population.—The settled population appears to have been mainly of Iranian stock. Strabo states that the customs and language of the population of Kirman were similar to those of the Medes and Persians (xvi. 2, 14). Idrisi describes the inhabitants of Kirman (apart from the tribal population) as inhabiting a number of tribes as inhabiting Kirman, namely the Kufs, (Kâdijû, Kâd (see kors), Balâs (Balâs, Balî (see balâstân), the Dâbâls, the Kâhâshâ, and the Kâhâshâ, all of whom were harbmed and, to some extent, displaced first by the Muslim armies, and then by the Safâtârs, Bâydâs, Sâmâindâs and Sâlânjûs. When Mas'ûdi refers to Kurs (Akhâd) in the province it is probable that he meant semi-nomadic or nomadic tent dwellers rather than ethnic Kurds. The Kufs were a mountain people, as their name suggests. They possessed herds of cattle (dârâ) and also practised agriculture. Their main occupation was alleged by Muslim sources to be highway robbery. The Kufs mountains in which they lived consisted, according to [Istân], of impregnable fastnesses. They were bounded on the south by the Gulf of Urân on the north by Birkût, Râdbir and the Mountains of Abâ Ghanîn, on the east by Kâhâsh and the desert of Mârân and on the west by Mârân and Hormuz. There were seven different mountains here, of which Bâhân, chief. The early Muslim governments, unable to bring the region under their direct control, gave the Kufs leaders allowances to keep them quiet, but they nevertheless raided the surrounding districts up to Sitân and Fârs. [Istân] mentions that they were reported to

The geographers of the 3rd/9th and 4th/roth centuries mention a number of tribes as inhabiting Kirman, namely the Kufs, (Kâdijû, Kâd (see kors), Balâs (Balâs, Balî (see balâstân), the Dâbâls, the Kâhâshâ, and the Kâhâshâ, all of whom were harbmed and, to some extent, displaced first by the Muslim armies, and then by the Safâtârs, Bâydâs, Sâmâindâs and Sâlânjûs. When Mas'ûdi refers to Kurs (Akhâd) in the province it is probable that he meant semi-nomadic or nomadic tent dwellers rather than ethnic Kurds. The Kufs were a mountain people, as their name suggests. They possessed herds of cattle (dârâ) and also practised agriculture. Their main occupation was alleged by Muslim sources to be highway robbery. The Kufs mountains in which they lived consisted, according to [Istân], of impregnable fastnesses. They were bounded on the south by the Gulf of Urân on the north by Birkût, Râdbir and the Mountains of Abâ Ghanîn, on the east by Kâhâsh and the desert of Mârân and on the west by Mârân and Hormuz. There were seven different mountains here, of which Bâhân, chief. The early Muslim governments, unable to bring the region under their direct control, gave the Kufs leaders allowances to keep them quiet, but they nevertheless raided the surrounding districts up to Sitân and Fârs. [Istân] mentions that they were reported to
have accumulated much wealth. He states that they were lean and swarthy; and that some said that they were, by origin, Arabs (163-4; cf. Ibn Haukal, ii, 310; MukaddasI, 427). The muddal al-Islam add that the government tax-collector (Jāmi‘u sulhun) did not go into the Kufs mountains and that their chief's were responsible for the collection and payment of the government tax, which would appear to have been assessed by a muqtaba's contract. It also states that they spoke a special language (65).

The Balús were, according to IstāfārI, hardsmen and tent-dwellers living along the western base of the Kufs Mountains and were rich in flocks (164; Ibn Haukal, ii, 310; MukaddasI, 427). IstāfārI, writing in the mid-6th/12th century, however, states that they lived at the base of the mountains to the north of the Kufs (429). They were the only people whom the Kufs feared. IstāfārI's claim that they were peaceable and did not commit highway robbery like the Kufs (164) is not born out by the hadith al-Islam (121) or MukaddasI, who couples them with the Kufs in the matter of brutality and bloodthirstiness and in their propensity to raiding the caravan routes (468-90). MukaddasI states that the Balús had been very numerous until the Buγd qādul al-Dawla [9.9.] destroyed them. The language of the Kufs and Balús, according to MukaddasI, was incomprehensible and resembled Sindhi (471).

It would seem that, in general, Muslim writers made no clear distinction between the two groups, and frequently mention them together. Miskawayh states that the Kufs and Balús, together with the people of Manfīqlan, joined Sulaymān b. Muhammad b. Iyās when he attempted, with help from the ruler of Kāturān, to seize Kirmān from the Buγids. They were defeated by a Buγid force in 360/970, with heavy losses, and suffered further casualties when the Buγid forces pushed down to Hurnuz. The Balús, however, did not remain quiet for long. Spreading into the districts of Sīrğān they made All b. Muhammad al-Bāriz their leader, and began to commit disorders. 'Adud al-Dawla then marched against them in person. They retreated into the Djufrūt Bāriz, but were defeated in 361/972 (ii, 298 ff.). Miskawayh states that those who were not killed were removed from the mountains by 'Adud al-Dawla, who replaced them with peasants who received the land on a crop-sharing agreement and with persons who were not well-off (al-akāna al-maslīha wa l-nastārān min aγīda al-ma‘yīya) belonging to various races among his subjects (ii, 300). There is mention of a detachment (dāqiq) of Kufs in 'Adud al-Dawla's army in 360/970 (Miskawayh, ii, 306, and see further C. E. Bosworth, The Kufšūls or Qufs in Persian history, 9-18).

The decline in the power of the Kufs and Balús as a result of 'Adud al-Dawla's operations was only temporary. By the beginning of the 12th century they were again in control of the desert from Djufrūt to the Gulf of Ummān, though, according to Muhammad b. Ibrahīm, their main location was in the Djiubal Bāriz (Jalā‘ al-Dīn, 66; Muhammad b. Ibrahīm, 6 ff.). They were reduced by Khwāja b. Ǧaghib Beg (Ibn Iṣḥāq al-Ǧumshūdī) who was the ruler of Djufrūt (Ibn Iṣḥāq al-Ǧumshūdī, ed. Dr. Mihūst, 1, A.H. 1326, 6 ff.). By the end of the 12th century they were again operating in Djufrūt and the great region of Kirmān (Muhammad b. Ibrahīm, 5 ff., 189; Tārīkh-i Afdu, 5 ff.). There are no references to the Kufs in the later Middle Ages, though there are, of course, many references to the Balús, who were established in Makrān from the 5th/11th century and who may or may not have been the descendants of the Balús (see KALÔQISTĀN).

Waziri claims that the Mihnī tribe were the descendants of the Kufs, but produces no evidence in support of this claim. When he was writing, the Mihnī numbered some 700 families. They had a separate assessment, i.e. they were not included in the assessment of Djufrūt and Isfandārā, where they had their winter quarters—and this, perhaps, suggests that they had at one time been more important. Waziri states that: up to fifty or sixty years before he was writing the Mihnī leaders had enjoyed a considerable degree of independence. In 1259/1843-4, the government seized Fath 'All Khan, their leader, and confiscated the many estates which he held in Isfandārā and Djufrūt (Djufrūt, 56, 112-14, 121). According to a tradition current among the tribe, however, the Mihnī came originally from Kirmān to Isfandārā in Safawid times, when a number of tribes formed a federation under their leadership. This would seem more probable, and would suggest that at most only some of those reckoned as Mihnī today are the direct descendants of the Kufs. Their leaders claim to be descendants of Abū Sa‘īd b. Abī l-‘Khayr (q.v.). In 1260 the Mihnī consisted of the following eleven sub-tribes: the Sūlānīmīn, Lūr (who are alleged to have come to Kirmān from the Mamassān in the reign of Nādir Shāh) or, according to another account, in the reign of Shāh 'Abbās, the Bahr Āṣmān, the Martīk, Muḥṣīl, Sā‘īr Bākhurī, Lūr, Rāḥī Bākīr, Iskandārī, Kāhīrī, Fīghūkīlī, and Mūzafrī. Waziri gives a list of twenty-three sub-tribes (199), which differs slightly from the above list.

The Dijubal Bārizīs, according to IstāfārI, were even worse robbers than the Kufs. They did not adopt Islam until 'Abbāsī times and he alleges that they persisted, in spite of their conversion, in their evil ways. They were eventually pacified by Ya‘qūb b. Layḥā and ‘Amr b. Layḥā and their leaders destroyed. They too had a special dialect (IstāfārI, 164, 167; Ibn Haukal, ii, 310; MukaddasI, 472). Whether as a result of the operations of the Safarīds or because of the movements of the Kufs and Balús, they appear to have been pushed out of the Dijubal Bāriz region. About the beginning of the 19th century the Mihnī Tasawur Anchīsra (tribe of the Dijubal Bārizīs) apparently moved to Bāzinjīn, where they numbered some 4-500 persons in 1960. Waziri mentions Dijubal Bārizīs in Fāriz (199), but whether they were the direct descendants of the earlier Dijubal Bārizīs is not clear. Waziri states that their prosperity and the numbers of their sheep, cattle and horses had decreased, especially from about 1860. They were engaged to some extent in trade, taking ḥārāt, wool and cotton mainly to Bandar 'Abbās for export to India and clarified butter and qāshqā to Kirmān (120). The Gauṭās of Persia records the existence of 50 families of Dijubal Bārizīs in Akbār in 1903 (iv [Calcutta 1910], 338). In 1960 there were a few families of Dijubal Bārizīs who had summer quarters between Bālt and Rabur and winter quarters near Gūshtaghīr (Walaghīr).

The Aḥbār, the fourth of the tribes mentioned by the early geographers, centred on Shāhāb, were said to be semi-nomads. They had camels and date palms and raised their crops in gardens made of reeds (IstāfārI, 168; Ibn Haukal, ii, 313). They are not separately mentioned in later times.

Although there appears to have been some immigration of Arabs into Kirmān before the Islamic conquest (Nöölke, Geschichte der Perser u. Araber, 57)
there does not seem to have been widespread settlement by Arabs in the province during the early Islamic conquests. For the most part, the Arab armies pushed through the areas of Khorasan and Khurāsān. So far as settlement took place, those who settled became, as in other provinces, largely assimilated to the local population. Small groups may have also settled in the province after the period of the conquests. Yāqūt records the existence of descendants of the Banū Azd [see azt] and Banū Muhallab in Dīrūj (Barbier de Meynard, 183). Waziri mentions the survival in Dīrūj of a few families who still spoke Arabic (Dījāghrāfīyā, 119). The village known as Kārayt al-‘Arab, near the city of Kirmān, is believed to have been originally settled by the ‘Abbāsī tribe, who came there from Simnān. In some of the coastal districts, such as Banīdar ‘Abbās, however, much of the population was of Arab origin, though not necessarily Arab-speaking (cf. Hourton Schineller, ‘Reisen im südlichen Persien 1829, 244).

Turkish tribes, Ghuzz and others, came into Kirmān from the 5th/6th century onwards. It is, however, difficult, if not impossible, to trace the changes in their locations and numbers. Whether the Salāqīya, who today are to be found in Rābūr, are descendants of the Salāqīya is extremely doubtful. They do not appear to have any tradition among themselves of such an origin and are now Persian-speaking. They are mainly engaged in trade and for the past forty or fifty years have ceased to move from summer to winter quarters. The Rābūr, centred on Rābūr with winter quarters in Shastflud, whom Waziri reckoned to be fifty families (Dījāghrāfīyā, 195), are related to the Salāqīya. They are so-called because of the Rābūr, the largest of the Ghuzz tribes, known as Rābūr by the ‘Abbāsī tribe, who came there from Sīrjān, to whom they attest their descent. In 1903 (Iv. [1910], 337), but by 1960 they numbered some 2,000 families. Some of their ītras were Turk-comprising, others Persian-speaking, and some of them were settled. The Shīl, who formerly belonged to the Afšār federation, had by 1903 joined the Bušār and numbered some 100 families (Iv. [1910], 338). In 1960 there were some fifty families of Shīl Turks settled near Sīrjān, who claim that their forefathers had come from Fārs at the beginning of the 19th century. The Gazetteer of Persia mentions 150 families of Kārāikūyunī in Aštār in 1903 (Iv. [1910], 337). It is possible that they were descendants of families left behind in Kirmān by the Kārāikūyunī in the 9th/10th century. They appear to have been subsequently absorbed into the Afšār and in 1960 were reckoned among the Afšār ītras.

In the early 16th century a number of Lak tribes moved from Fārs to Kirmān and established their winter and summer quarters in Urdūyā and Aštār respectively (Waziri, Dījāghrāfīyā, 144). They numbered some 2,000 families in 1903 (Gazetteer of Persia, iv [1910], 338-9). Shell put the Aštār īlabī, whom he described as Lak, at 3,000 tents and houses (Note on tribes by Sir Justin Sheil, op. cit., 398). According to Waziri, the Aštār īlabī had cultivated land and cattle in Sīrjān and Shībār; they were Ismā‘īlīs and numbered some 250 families (Dījāghrāfīyā, 157, 156). In 1900 there were some 2,500 Lak in the neighbourhood of Bāshījūn. There are, or were, various other tribes and sub-tribes in the province whose origins are difficult to establish. Most of them are semi-nomadic and their numbers very small.

The internal organisation of these various tribal groups appears to have been broadly similar. Most of the tribes had a ra‘is or leader, whose office appears usually to have been hereditary within a family. Larger tribes or federations, such as the Afšār, had an īlabī. Each tribe was composed of a number of ītras, under a hādīlūd, whose office was sometimes hereditary but more often subject to election by the elders (riṣh sajid) of the ītra. The latter were composed of īlāqāt, i.e. groups of, perhaps, 5-12 families, each under a riṣh sajid. The
number and size of the bānas varied widely with the prosperity of the tribe. Success brought new followers, while failure or weakness caused the dispersal of its existing followers. The collection of taxes from the tribe and the decision of disputes were usually carried out by the a'yān, though not infrequently an outsider became responsible for the payment of the taxes to the government. Thus Muhammad ʿIbrāhīm Khān, the grandson of Zahir al-Dawla, became responsible for the taxes of the Mihni tribe and for those of Isfandāya and Kābor (ibid., 56), while Muhammad ʿAṣār al-Dīn Wazīr was charged with the collection of the taxes in the Afshār of about 1270 and had the title Ḥāqi (ibid., 51). In recent years the tribal structure has largely broken down.

In the present state of our knowledge it is not possible to give a breakdown of the population at different periods. From time to time, conquest brought about a transfer of power from one group to another, redistribution of land and the emergence of new factions, but we are ignorant of the details of these events. It would seem likely, in view of the flourishing trade of Kirmān in the early centuries that the merchants formed a prosperous community, but that their importance declined with the decrease in trade. Aubin in his monograph entitled Bānas sayyids de Bam au XV° siècle has studied the functions and influence of local religious leaders in the Timurid period. Some information on the leading families in the 19th century is to be obtained from Wazīr (op. cit.). In Kirmān, as elsewhere, in Persia, the a'yān were composed of landowners, tribal leaders, religious dignitaries and merchants. The dividing lines were not always clearly drawn. Marriage alliances between them were common. Governors and local officials were also included in the a'yān, and often used their official position to acquire wealth and land. In the 5th/11th and 6th/12th centuries the leading officers of the bureaucracy were rich and influential. It is not always easy to decide what was the basis of a family's influence, whether it was government office, trade, landownership or religious leadership, for all might be combined in one family. But government changed frequently and though there were settled in the province, the government of which they had held, the system did not make for the emergence of families who retained their pre-eminence over a long period. Some of the local sayyids were among those who could perhaps trace their influence back further. Wazīr states that there were families of sayyids in Bam and Narmāghir who had held property there for over 400 years (ibid., 202). One, the Khādi family of Bam, had held the office of hādi there from generation to generation (ibid., 97). There appears also to have been some movement among sayyids. Thus, the Mīrāz sayyids, who came to Bam about 1270, were by origin from Tabrīz. One of their number, Ḥādīdī Sayyid All Khān b. Ḥādīdī ʿAbd al-Wahhāb, was made ḥādi of Bam and Narmāghir by Muhammad ʿAṣār al-Dīn Wazīr al-Mulk (who became governor of Kirmān in 1856) and put in charge of diverse taxation and the khaliṣādārī of Bam. This, however, proved disastrous for the family: he was a spendthrift and was dismissed, and all his estates and those of his nephews were taken in lieu of arrears. But their fall was only temporary, and when Wazīr was writing they were again a rich and respected family (ibid., 100-1).

As elsewhere, it was not uncommon for the religious classes and the merchants to be closely allied, either through marriage or by actual participation in trade, Thus, Ḥādīdī Sayyid Muṣṭafā b. Ḥādīdī Sayyid ʿAbd al-Maʿṣūm, a Rīḍāwār sayyid, who owned numerous villages and hamlets and many herds of camels and flocks of sheep and goats, had agents and partners in Bandar ʿAbbās, Yazd and elsewhere, who traded on his behalf (ibid., 138-9). There was also movement from merchant families and craftsmen into the religious classes. Ḥādīdī ʿAbd al-Muḥammād b. Ḥādīdī ʿAbd al-Wāḥab, who belonged to a merchant family, staked aya and became a mu'ājiz. He owned much property in Rafsanjān and elsewhere (ibid., 44-5).

Two families were especially prominent in Kirmān in the 19th and 20th centuries, those of Zahir al-Dawla ʿIbrāhīm Khān b. Miḥāl Kūh Khān b. Muḥammād Ḥasan Khān Ḥaḍāj Khurānī and Muḥammād Ismāʿīl Khān Wazīr al-Mulk Nūrī, both of whom had been governor of the province. Their fortunes illustrate the ease with which government officials were able to acquire wealth and property and become part of the local a'yān. The first, Zahir al-Dawla ʿIbrāhīm Khān (d. 1240/1824-5), who became governor of Kirmān in 1210/1801-2, settled in the province, where he and his descendants acquired property (ibid., 54 ff.). He himself bought some of the estates of the heirs of Aḥār All Wazīrī (see below) in lieu of arrears due from Mīrzā Husayn b. Aḥār All (ibid., 170). His grandson, Muḥammād Ismāʿīl Khān, acquired villages in Isfandāya and Yūzūrat through marriage to a daughter of Fath ʿAll Khān Miḥānī. He also founded new estates in those regions (ibid., 56). Ḥādīdī Muṣṭafā Khān b. Zahir al-Dawla's daughter married Mīrzā Ḥussain b. Ḥaḍāj Khurānī of the Mīrzā Husayn Khān family. Wazīr alleges that whoever in Kirmān married into the Zahir al-Dawla family tended to become puffed up with pride because of the wealth of his wife (ibid., 69-70). The second, Muḥammād Ismāʿīl Khān Wazīr al-Mulk, whose family came from Nūr in Māzandārān, was sent as ḥādi to Kirmān and Bālūcīstān in 1275/1858-9. In 1277/1859 he became governor of the province, holding office until his death in 1284/1868-8. He exerted great efforts in the development of Kirmān and Bālūcīstān. He made a number of purchases of much hālīṣā land which had fallen out of cultivation or into a bad state of repair. He rented these for a lump sum, which transaction proved extremely profitable. He was also a great builder and made many caravan sarais, hamāmāns, riabāts and other buildings. His son Murtaḍā Kūh Khān Wazīr al-Mulk was governor from 1266/1869-70 to 1275/1878-9 (see further Asad Allāh Nūrī Isfandārī, Tūbīh al-Khānawāda-Isfandārī, Tehran A.H.S. 1329). Both Muḥammād Ismāʿīl Khān and Murtaḍā Kūh Khān acquired extensive estates in the province and established links with the local a'yān through marriage alliances. Muḥammād Ismāʿīl Khān gave one of his daughters to Mīrzā Ḥusayn Husayn b. Ḥaḍāj Khurānī, who owned estates round the town of Kirmān, and Muḥammād Husayn belonged to a family of sayyids originally from Yūzūrat (Wazīr, op. cit., 69), and his maternal grandfather was a sister of Mīrzā Husayn Wazīr (see below).

In the local government offices there was often a hereditary tendency. For example, the office of kalīmatār (q.v.) of Kirmān had been in the Kašfārānī family since the time of Shāh ʿAbbās. From towards the beginning of the 19th century they also held the office of ḥādir of Khābīs and Gawk and from about the middle of the century the collection of taxes of the environs (baḥmān) of the town of Kirmān was also entrusted to them. Muḥammād Zādīn Kašfārānī.
The former apparently died in Shiraz shortly afterwards. Towards the middle of the reign of Fath 'Ali Shah, Mirza Husayn was appointed wāsī of Kirmān, which office he held until about the middle of the reign of Muhammad Shāh. He had many estates in Aḵtā, Urdūya, and Kūshk. The office of māndil (tax-collector) of the districts of Aḵtā, Urdūya, Kūshk and Sawghān remained in his family for many years, and his descendants owned villages, gardens, flocks and herds in these districts. Muhammad 'Alī Khān, Aḵtā's grandson, was 'āmil of the districts of Aḵtā, Urdūya, Kūshk and Sawghān and of the Afghān tribe for over twenty-five years. From about 1870 he bad the title of Shāhi. In addition to the properties he inherited, Muhammad 'Alī founded many villages in Urdūya and Aḵtā. His position as tax-collector enabled him to usurp the estates of his uncle Mirza Husayn Wazir and his cousin 'Alī Muhammad Shāh after their deaths (ibid., 68). His brother, Abu 'l-Kasim Khān also usurped some of the properties of 'Alī Muhammad in Aḵtā and Urdūya. He founded other properties as well and gradually grew into a wealthy man. A third brother, Murtuza Khān, had numerous estates in Urdūya, Aḵtā, Kūshk and Barfār, some usurped, some bought and some founded by himself. He put money cut with merchants and others. He owned herds of horses and flocks of sheep (ibid., 58 ff., 68).

A grandson of Aḵtā 'All, 'Alī Muhammad Khān, married his cousin, Bihtār Kūshk, a daughter of Mirza Husayn b. Aḵtā 'All: their son was Ahmad 'Alī Khan Wazirī, the author of the Dīwān dīvān namālahāt-i Kirmān and the Tābrīz-i Kirmān. Ahmad 'Alī Khan is said to have bought back six fāwā in Sawghān into a flourishing condition (ibid., 72). Ahmad 'Allī Khan Wazirī, unlike his forebears, did not enter government service, but occupied himself running his estates. He appears, however, to have received a government pension (mubārārāt) (Wazirī, Tābrīz-i Kirmān, ed. Bāstānī Pārizī, Tehran 1964, introduction).

Wazirī mentions another old family, the Aḵtā'īs of Anār, who traced their origins back to Bahādur Idrīs Barjās, who had been governor of Kirmān in the time of Timūr. For years this family had held the office of ūsī of Anār, but by Wazirī’s time they had fallen on evil days and become poverty-stricken (Dīwān dīvān, 183). For the rest, most of the families mentioned by Wazirī had risen to prominence in recent times.

In the middle of the 19th century, partly as a result of the increase in the price of agricultural produce and the revival of long-distance and local trade, there appears to have been a revival in the prosperity of the merchant class and also a strengthening of their links with the landowning class. This was notably the case in Raśīndān. Wazirī relates that a certain Hādījī Āḵtā ‘All of Raśīndān had landed estates worth over 100,000 tunmans and partners and agents in Bombay, Yazd, Isfahān, Tehran, Mashhad, Tabrīz and Istanbul, whereas thirty years before he had not owned property worth 1,000 tunmans (ibid., 165-9, 172). Among merchant families in Kirmān city, Wazirī mentions that of Hādījī Muhammad ‘All Amīn al-Raśīndān b. Hādījī Muhammad Ibrāhmī b. Hādījī Allāhvardī Kirmānī, who was the ūsī of the Raśīndānīs of Kirmān. His father and grandfather had built many caravanserais, baths and mosques in the city of Kirmān and elsewhere. He himself had acquired many estates in the district of Kūshk and in Māhān. According to Wazirī, he
showed little care for the poor and the deserving (Ibíd., 78).

Wažirī asserts that between about 1844 and 1874 there was a great increase in the wealth of those holding land, due, he states, to the high prices for cotton and madder which had prevailed for several years in India and for grain in Persia. Persons whose property thirty years before he was writing had been worth 1,000 šāmāns were then receiving an income of 2,000 šāmāns from their estates, and those who had formerly been prepared to sell a hamlet or piece of cultivated land for a song to pay their tax demands would not then sell for 3,000 or 4,000 šāmāns. This was especially the case in Sīrāj Ān, Rāsīndān and Urdānī. He alleges that the condition of agricultural labourers had also improved, so much so that they were better off than had been the owners of hamlets formerly. Many of the agricultural labourers of Rāsīndān had become hādīqīs. Flockmasters, because of the rise in the price of kurkh, had also become rich men (ibíd., 103-9, 125).

Religion.—In Sasanian times, there were in addition to Zoroastrians a number of Nestorian Christians in Kirmān. The bishop of Kirmān was under the metropolitan of Fārs. Conversion to Islam after the Arab conquest was slow. The province was exposed to Ḥ̣aḍirjī influence in the 1st century and some Islamīl activity in the late 5th/6th and early 6th/7th centuries (see below). Mūkaddasī states that the Khawārīd had a Friday mosque in Bām. According to his account, the dominant rite was the Shāfiʿī one except in Ḏūltuṭī. The Šafīʿīs were not numerous; among them were the Šahī al-Ḥadīth who formed the majority except in Ḥumra (408-9). Aṭfāl al-Dīn praises the good religion and orthodoxy of the people of Bārūst. He alleges that Kirmān had been free from every kind of heresy and that the people were either Ḥanafis or Šāfīʿīs. Yaqūt states that the inhabitants of Kirmān were virtuous, honest, and very attached to Sunnism and orthodoxy (483). Under the Shaṭāwīs, Kirmān, like the rest of the empire, accepted Šaḥī ṣāḥī Shāfīʿī. In the 16th century the Shāfīʿīs (q.v.) gained many adherents in Kirmān, as also did the Bābīs (q.v.). The office of šayḥ al-šīʿa in Kirmān was held in the middle of the 12th century by Ṣāhī ḡawā sunyāda, who was Shāfīʿī (Waẓirī, Diwān 33, 52-3). Fratricidal strife between the Shāfīʿīs and Ḍūlqaraš was common. Under the Ḩanūfīs the Niẓāmat Allāhī dervish order, founded by Šayḫ Niẓāmat Allāh Wall (d. 84/1432), gained many followers in Kirmān and elsewhere. Šayḫ Niẓāmat Allāh’s shrine at Māhān, near Kirmān, has remained one of the main centres of the order.

Zoroastrians appear to have maintained themselves as a community in Kirmān city, though in greatly reduced numbers, until modern times. Tavernier puts their numbers at 10,000 in the middle of the 17th century. In the reign of Šah Šulaymān (1077-1100/1667-94) they were removed from the city at the demand of the ‘ulamā’. They built a suburb to the north of the town. They were plundered by the Afghāns in 1133/1720-1 (Waẓirī, Diwān 38; Tārīkh-i Kirmān, 259). Khānīkī states that there were 12,000 Parsi families in Kirmān before its destruction by ‘Aṣṣ Muḥammad Ḵān in 1794. Thereafter, their numbers declined. According to Abbott, there were only 150 families in Kirmān in the middle of the 19th century. Of these some 40 families lived in the villages around Kirmān, and the remainder in the town (‘Notes on the trade’, etc.). Waẓirī put the number at 200 families (Diwān 34, 40). In 1903 the total number of Zoroastrians was said to be 1,700 persons (Gazetteer of Persia, iv (1910), 349). A small community of Hindus from Shīkarpūr appear to have settled in Kirmān some time after 1810. They were engaged in banking and trade with Karakhi, Bānpay, Sīnd and the Punjab (Stack, i, 215; Curzon, ii, 244). The export trade of Kirmān was largely in the hands of the 19th century (W. M. Floræ, The merchants (fuṣūda) in ‘Īrān, in ZDMG, cxvii (1910), 34-11).

History.—Kirmān in many ways developed along different lines from the rest of Persia. It was distant from the early capitals of the caliphate. Its mountain fastnesses could not be easily controlled and local leaders were often able to assert their independence. Thus each of seven mountains which constituted the Ḏībāl Kūfs region had a separate leader in early Islamic times. The Lūt prevented easy access from Khurāsān and Sītān, while the inhospitable country to the north-west discouraged expansion from and into the Ḏībāl. It was ideal country for dissident groups and was one of the regions where the Azārīk (q.v.) carried on their resistance to the caliphate. Its abundant pastures attracted tribal groups, but the inhospitable nature of the country militated against the formation of large tribal kingdoms. Look of communications tended to isolate the province but trade with Central Asia, India and the Far East and with other parts of Persia was, nevertheless, important, though subject to interruption by local outbreaks of disorder.

The Arab conquest of Kirmān as recorded by al-Balḵidjīrī (Fuṣūda, 315, 391 ff.) was begun about 170/688 by al-Raʿībī b. Ziyād, who was sent by Abū Mūsā al-Asghārī (q.v.), then governor of Bāṣra on behalf of the caliph ‘Umar. Al-Raʿībī conquered Sīrāj Ān and made terms with the inhabitants of Bām. Another Arab expedition was sent about the same time by the governor of Bāyrān, ʿUṭmān b. Abī ʿl-ʿĀṣ al-Ṭurāṣī, who killed the ʿArmān of Kirmān in the island of Abarkāwān. The conquest of Kirmān was not, however, completed. In 29/650-6 Fāsūdardabī, the governor of Fārs and Kirman, as also did the Bābīs (q.v.). The office of šayḥ al-ṣīʿa in Kirmān was held in the middle of the 12th century by Riḍāwī sunyāda, who was Shāfīʿī (Waẓirī, Diwān 38, 52-3). Fratricidal strife between the Shāfīʿīs and Bālānsār was common. Under the Ḩanūfīs the Niẓāmat Allāhī dervish order, founded by Šayḫ Niẓāmat Allāh Wālī (d. 84/1432), gained many followers in Kirmān and elsewhere. Šayḫ Niẓāmat Allāh’s shrine at Māhān, near Kirmān, has remained one of the main centres of the order.

Zoroastrians appear to have maintained themselves as a community in Kirmān city, though in greatly reduced numbers, until modern times. Tavernier puts their numbers at 10,000 in the middle of the 17th century. In the reign of Šah Šulaymān (1077-1100/1667-94) they were removed from the city at the demand of the ‘ulamā’. They built a suburb to the north of the town. They were plundered by the Afghāns in 1133/1720-1 (Waẓirī, Diwān 38; Tārīkh-i Kirmān, 259). Khānīkī states that there were 12,000 Parsi families in Kirmān before its destruction by ‘Aṣṣ Muḥammad Ḵān in 1794. Thereafter, their numbers declined. According to Abbott, there were only 150 families in Kirmān in the middle of the 19th century. Of these some 40 families lived in the villages around Kirmān, and the remainder in the town (‘Notes on the trade’, etc.). Waẓirī put the number at 200 families (Diwān 38, 40). In 1903 the total number of Zoroastrians was said to be 1,700 persons (Gazetteer of Persia, iv (1910), 349). A small community of Hindus from Shīkarpūr appear to have settled in Kirmān some time after 1810. They were engaged in banking and trade with Karakhi, Bānpay, Sīnd and the Punjab (Stack, i, 215; Curzon, ii, 244). The export trade of Kirmān was largely in the hands of the 19th century (W. M. Floræ, The merchants (fuṣūda) in ‘Īrān, in ZDMG, cxvii (1910), 34-11).

Under the Umayyads, Kirmān became a theatre for the activities of the Khārījīs. In 58/678-8 the Azārīk fled to Kirmān. About 75/693 they reassembled and under Kāṣīrī b. al-Fūbahī (q.v.) seized Fārs and Kirmān, being joined by a number of the local inhabitants. They extended their activities to Trāk. Harried by al-Mahallab, they withdrew again to Kirmān. By about 79/698-9 they had been exterminated by him. Kirmān nevertheless continued to be a hotbed of rebellions and a favourite asylum for rebels. Ibn al-Asghārī (q.v.) took refuge there briefly ca. 82/701-2 or 83/702-3. In 101/719-20, the rebel Yazid b. Muḥallab, who, during his father’s lifetime had for a period been governor of Kirmān, appointed a governor over Kirmān. After the failure of his rebellion, from about 102/720 the Umayyads (in whose name several coins struck at Kirmān survive) seem to have exercised control over the province, often through the governor of Khurāsān.
who would administer the province through a deputy. In 320/932 Muḥarram b. Mūṣa, a supporter of ʿAbd Allāh b. Muʿāwya b. Dīṯf, who had turned out Marwīn's governors from Fārs, made inroads into Kirmān but was later routed by the supporters of Marwān. In 317/934–5 an Umayyad army set out from Kirmān to oppose the ʿAbbasīd army under Kaḥfaḥ, which had advanced on Ray, and was defeated near Ḫiṣbān.

Under the early ʿAbbasīds, governors were appointed over the province, which continued for the most part to fall under the general control of Khurāsān. ʿAbbasīd coins struck in the province in the year 105/721–2 and 107/723–4 survive. During the reign of Ḥārūn al-Raṣīl rebellion spread to Kirmān when Ḥārūn b. ʿAbd Allāh al-Ṣḥāḥ occupied Harīt in 179/995 and extended his authority to Fārs and Kirmān, where there were still a considerable number of ʿAmīrids, who appear to have recovered from the defeats inflicted on them in later Umayyad times (see further Gh. H. Sadighi, Les mouvements religieux au IIIe et au IVe siècle de l’Hégire, 1958, 34ff.).

Ibn Balḥṭī gives figures for the revenue of Kirmān at this period. In 297/811–12 Fārs, Kirmān and ʿUmān were assessed at 2,600,000 dinārās, a new assessment having been necessary because the registers had been destroyed in the civil war. Another assessment made by ʿAbī b. ʿĪsā in the reign of al-Muḵṭārīd was rather lower, namely 2,311,880 dinārās, of which Kirmān and ʿUmān accounted for 444,380 dinārās. After various deductions the net sum going to the dinārās was 304,380 dinārās (Ibn Balḥṭī, Fārsānān, 171).

A succession of governors, some of whom from the time of al-Muḵṭārīd onwards were Turks, ruled the province until the caliphate of al-Muḥtārīd, when Muḥammad b. Wāṣīl al-Tamlāmī rebelled in 250/864–5 and seized Fārs and Kirmān. Al-Muḵṭārīd on his accession to the caliphate sent an army against Kirmān and when he reached Shīrāz, it appears that Muḥammad b. ʿĪyās returned to Kirmān. He acknowledged the Sāmānīs in the Ḡūbā and received in 348/959–60 a banner and robe of honour from the caliph al-Muṭṭaṣir. Somewhat later, quarrels broke out between Muḥammad b. ʿĪyās and his sons, and he was finally persuaded to abdicate in favour of ʿĪyāsā. In 356/967 ʿAbd al-Dawla took ʿUmān and invaded Kirmān. Bardīr fell in Rāmān 357/968 and ʿĪyāsā fled to Khurāsān. ʿAbd al-Dawla, having received a diploma for Kirmān from the caliph, then appointed his son ʿAbd al-Ḥawsdārī ʿAlwāsī (later Sharaf al-Dawla) governor and returned to Shīrāz. In 359/969–70 an abortive attempt was made by the Sāmānīs to regain possession of Kirmān with the help of Salāyūm b. ʿAbī b. ʿĪyās. In 357/967–55 al-Ḥusayn b. al-Walīd b. ʿĪyās, governor of Kirmān b. ʿĪyās placed himself at the head of a group of malcontents in the garmsir but was defeated and captured (see further E. Bosworth, The Banū ʿIyās of Kirmān (320–57/932–68), in Islam and Iran, ed. idem, Edinburgh 1971, 107–24). The period of the ʿĪyāsā was a time of disorder during which the revenues of the province were dissipated (Ibn Hawsāl, ii, 315). Under ʿAbd al-Dawla the province appears to have been highly taxed compared to the reign of al-Muḵṭārīd. According to Ibn Balḥṭī, the total revenue of Fārs, Kirmān and ʿUmān, together with ʿĪyās, levied at Shīrāz and Miḥrūbān on goods imported by sea (?ʿaqīrī ṣalāḥa-ya ṣalāḥa), in the time of ʿAbd al-Dawla was 3,466,000 dinārās, of which Kirmān, ʿĪyās, and the coastal districts of Fārs (Fārs-ndtna) accounted for 750,000 dinārās (Fārs-ndtna, 172).

After the death of ʿAbd al-Dawla in 373/982–3, his descendants began to fight among themselves for the province and a period of some confusion followed. Malmūd of Ghazna in 407/1016–17 attempted to install his nominee in the province but without lasting success and in 444/1053 Masʿūd b. Malmūd temporarily occupied it (E. Bosworth, The political and dynastic history of the Iranian world, in Cambridge History of Iran, 1, 73; see also KĀHLĀR).

In 431/1040 the Sahābīs defeated Masʿūd at the battle of Dandšākān (q.v. in Suppl.), and some two years later in 433/1041–2 KĀẕWĀR ʿARĀLĪN BENG b. ʿABD AL-DĀWLA, BENG b. ʿABD AL-DĀWLA, and ʿABD AL-DĀWLA, a supporter of ʿABD AL-DĀWLA, and his son ʿABD AL-DĀWLA, assumed the rule over Kirmān and when he reached Kirmān in 432/1043–4 the Sāmānīd amīr, ḪIHĀM b. ʿṢINNGUṯ, who was besieging Muḥammad b. ʿĪyās, withdrew to ʿĪyās and when Muḥammad b. ʿĪyās retired to Khurāsān. Muṣṣī al-Dawla then undertook operations against the Kūf and Balāc, the details of which are variously recorded (see above). In 435/1045 he was defeated by the governor of Baḥrūn, the details of which are variously recorded (see above). KĀẕWĀR, who established his rule in Kirmān, made two attempts to usurp the sultanate. On the first occasion in 459/1066–7, alp Arslān marched against him and defeated him, but reinstated him in Kirmān in his former position (Ibn al-Athīr, x, 56–7). After alp Arslān left the province, KĀẕWĀR went to Balūcfātān, repaired the port of Tīz and appointed governors over Makrān. He also conquered ʿUMĀN, which remained in ŠALĀDĪ hands until the death of Arslān Shīb in 367/977. When alp Arslān died in 465/1072, KĀẕWĀR made his second attempt to claim the sultanate. According to one account, he wrote to Nāʾīl Shīb stating that he was more fitted to succeed on the
grounds that he was Alp Arslan's eldest brother (Sāyid Ṣadr al-Dīn al-Ḥusaynī, Aḥḥār al-dawla al-Salṭaniyya, ed. Muhammad ʿAbdī, Lahor 1933, 36). According to another account, some of Malik Shah's amirs invited him to come (Muhammad b. İbrahim, 22-23). He was defeated near Hamadan and taken prisoner and killed. The Saljuqs of Kirmān did not, however, come to an end with Kāwūr. The dynasty founded by him was to last some 150 years, during which the province enjoyed, on the whole, prosperity and peace.

The Saljuqs of Kirmān had a reputation for justice and caring for their subjects. Kāwūr took measures to ensure security on the roads, and erected pillars at intervals along the Ban-Fahraj road so that travellers would not lose the way; he also built caravanserais and water tanks (Muhammad b. İbrahim, 10-12). Kāwūr, Turān Shāh b. Kāwūr, Arslān Shāh b. Kirmān Shāh and his wife Zaytun Khatība, and Muhammad b. Arslān Shāh were all great builders. The latter had built a library for the 'Turān Shāh gūrās', which contained 5,000 books on different branches of learning. Some of them were also patrons of the religious classes. In the reign of Arslān Shāh b. Kirmān Shāh, the 'ulama' are alleged to have come to Kirmān from far and wide. His son, Muhammad, gave pensions to the 'ulama' and during his reign there was, according to Muhammad b. İbrahim, a spread of learning and a tendency for craftsmen to send their sons to study ʿiḥā (29). Some of the officials and amirs of the Saljuqs were also builders and patrons of the religious classes. Asatār, Muʿayyid al-Dīn Raybān, made many charitable foundations and constituted amāli for their upkeep (Ṭarīḫ-i Afḍal, 30).

Although the Saljuqs of Kirmān were familiar with city life, their existence was closely bound up with the well-being of their flocks. They habitually spent seven months of the year in Bārdisr and five (from Adhār [Nov.-Dec.] to Urḍī Bilāḥ (April-May) in Dhūrūt, their flocks moving with them. Their financial position seems to have been favourable until the end of the dynasty, and Bahram Shāh b. Muhammad, under whom the decline of the dynasty set in, succeeded to a well-filled treasury. Throughout Kāwūr's reign of 34 years the value of the coinage remained stable (Muhammad b. İbrahim, 4). Trade probably contributed to this favourable situation. Kānānī, even towards the end of the period, was still an important centre of trade and was "a place where strangers from Anatolia and India and travellers by land and sea lodged, and was full of wealth" (Ṭarīḫ-i Afḍal, 40). Some of the amirs owned considerable estates. Muʿayyid al-Dīn Raybān appears to have lent his money out to merchants and others, who presumably worked it for him (cf. Ṭarīḫ-i Afḍal, 40). The pay and allowances of the military following of the ruler (kāṣarān) were controlled from the centre (cf. Ṭarīḫ-i Afḍal, 34). The troops were mainly Turks, but there were also some Daylamīs. They received allowances and ʿasābā, mainly, according to Afḍal al-Dīn, in the district of ʿArḍān, where "a great amīr with a large force was always stationed because it was on the frontiers of Fārs" (Ṭalʿal-ʿulā, 74). The total number of the military following of the rulers and their amīrs was not large. Kāwūr, when he came to Kirmān in 433/1042, had, according to Muhammad b. İbrahim, a force of 5,000 or 6,000 (2). The civil groups who disputed supremacy in the province at the end of the period and during the period of Ghuzz ascendancy were on the whole not large. Malik Dīnār is said to have ruled over 20,000 men (Ṭalʿal-ʿulā, 20). Muhammad b. İbrahim credits Kūth al-Dīn Mubārak and Nizām al-Dīn Māhmūd, the Shāhānšāh's amirs, with having a force of 10,000 men, horse and foot, when they came to Kirmān in 596/1199-1200 (797).

Kāwūr was succeeded by his brother Turān Shāh, whom he had appointed to act in his stead during his absence on the campaign against Malik Shah. Sultan Shāh, who had been taken captive with his father Kāwūr, escaped from captivity and was brought to Kirmān. His brother had meanwhile died, and in 467/1074 he ascended the throne in Kirmān. In 472/1079-80 (or according to some sources rather earlier), Malik Shāh went to Kirmān and besieged Sultan Shāh in Bārdisr. After some seventeen days the siege was raised, Sultan Shāh was confirmed in his government and Malik Shāh returned to Ḥamrān. Sultan Shāh was succeeded by his brother Turān Shāh in 477/1085. His reign was on the whole uneventful. In 577/1181, he made an abortive expedition into Fārs. He was followed by his son, Ibrāhīm Shāh in 599/1097. The latter appears to have been won over to the Ḥamrānīs. A number of amirs had recourse to the Shāyḵ al-ʿĀlim, the Ḥāfiẓ Dīmāl al-Dīn Abū ʿAbd Allāh ʿAlī Shāh, who issued a fatwā for his death. Iran Shāh fled, but was overtaken and killed, and Arslān Shāh b. Kirmān Shāh placed on the throne in Ḥamrān in 495/1099 with the joint support of the amirs and the kāddās. He reigned for 42 years and under him the dynasty reached its greatest heights. He married a daughter of Muhammad b. Malik Shāh. He appointed, as had his predecessors, ʿulama over Ḥamrān and attempted also to extend his dominion over Fārs. He defeated Cawī Bilāḥ in 505/1111-12, and on the death of the latter in 510/1116-17, Muhammad b. Malik Shāh appears to have considered the threat posed by the Saljuqs of Kirmān to Fārs to be a real one ( Ibn al-ʿAthir, v, 365). Towards the end of Arslān Shāh's reign, disputes arose between him and the ʿulama over that city for some time. In 537/1142, Muhammad b. Arslān Shāh set his father aside because of his advanced age and seized the throne, in spite of the fact that another son, Kirmān Shāh had been appointed ʿulā. A third son, Salāṭik Shāh, after making an abortive attempt to seize the kingdom, fled to Ḫumān, where he continued to constitute a potential threat to Muhammad. The fact that the Imam Shāh had to have appointed suḥrā ʿulama in the towns within his kingdom and to have had an excellent information service perhaps suggests that there was unrest or hidden opposition to him. However that may be, Kirmān continued to prosper under Muhammad. He extended his rule over Tabas and his successors continued to appoint ʿulama over that city for some years. There was also a proposal by Rashīd al-Dīnār, the governor of Ḫumān, to hand that city over to Muhammad, but the death of both parties in 551/1156 brought the plan to nought.

Muhammad was succeeded by his son Toğrull Shāh, a somewhat frivolous character, and there was during his reign a decline in public morals. However, Kirmān still enjoyed security and prosperity under his rule (Ṭalʿal-ʿulā, 7; Ṭarīḫ-i Afḍal, 30; Muḥammad b. İbrahim, 35). There was a total eclipse in the month of Urḍī Bilāḥ in 557/1161/April-May.
in 575/1180-1 there was a severe famine in Bardsir (Tārīkh-i Afdal 90). In the winter of 577/1182-3, the Ghuzz again set out for the garmirs. Afdal al-Din states that since they had now come to stay, they began to develop and cultivate the districts of Dirlurt and Narmšahr and paid some consideration (murad-i nāz) to the peasants (bādawīy) and from Isfahan, Sistan and Fars goods, beasts and booty which they took from caravans and accumulated in the garmirs and the sardirs. (Tārīkh-i Afdal 95). They also took several fortresses into which the remnants of the Turkish forces had retired. The sardirs, however, to which the nominal rulers of the province were confined, remained in a state of distress. In 579/1184-5 Tūrān Shāh was killed by a group of amirs, who released Muhammad Shāh b. Bahram Shāh from the fortress where he had been imprisoned and placed him on the throne. In 580/1185-6 famine again broke out in Bardsir. In the following year 581/1185-6, Malik Dinār came with some 80 men to Kāwar and Khābās from Kūbānān, intending to join the Ghuzz in Narmšahr. Some 300 men from Bardsir set out to prevent his advance, but did not dare to join battle with him (Tārīkh-i Afdal, 103). In 582/1186 Muhammad Shāh set out for Irāk to seek help against the Ghuzz. The following spring, Bardsir surrendered to Malik Dinār. Muhammad Shāh, who had failed to obtain help from either Irāk or Tekkele in Fars, returned briefly to Bām. He then went to Sistān and from there to the court of the Khwarizm-Shāh Takī. He finally took refuge with Shihāb al-Dīn, the ruler of Ghur and Gharān. In 583/1187-8 an abortive attempt was made to read the kūhba in Bardsir: in the name of a Saljūq princess, Khūţūn Kirmānī, a daughter of Toqtūn (Muhammad b. İbrāhīm, 146).

Malik Dinār, having established himself in the district of Dirlurt, struck coins and read the kūhba in his own name. In Dūrādād I 894/July-August 1186 he set out for Bardsir, but lack of pasture and the ruin of the countryside appear to have prevented him from establishing himself there, and the town remained for some time in the hands of the Saljūq forces until it surrendered on 3 Rābi‘i 583/11 September 1187. During the next two years, Malik Dinār was occupied in extending his power and putting down local pockets of opposition. He then made an expedition to the south, took Mandīrijan and extracted from the district of Harda subsidies from Muhammad b. İbrāhīm, 154). Revenue was also collected from the Makrānī, (al-Mudaffāf, 5). Bām, which had been in the hands of an amir, Sāhil b. Aflāt, did not however submit until ca. 588/1192. In 589/1193 Malik Dinār was again in the south and met the ruler of Kays, who promised him tribute. The death of Malik Dinār in 591/1195 was followed by new outbreaks of disorder. He was succeeded by his son Farāgh Shāh, who rapidly dissipated the contents of the treasury which Malik Dinār had laboriously accumulated (ibid., 164). Unable to establish himself, he had recourse to the Khwarizm-Shāh for help, but died in 592/1196 before this could arrive. Meanwhile, on the one hand the Ghuzz began to commit disorders and pillage on an unprecedented scale while on the other the amirs were rent by faction and dissunity.

The period of Ghuzz ascendancy, was a time of misery and distress for the people of Kirmān. The province was in a small degree the theatre of the ravages of the Ghuzz, but also to incursions by the rulers of Fars and Khurāsān, or their amirs, who from time to time established a temporary ascendancy in different
of plague (?) which spread from the south to Bardsir and was accompanied by heavy loss of life (al-Muḍaff, 80).

Among the amirs of the Khwārezm-Shāh was a certain Abu 'l Fawāris Kūṭlehū Sultan Bārāk Ḥājjīj (see awakhir nāmīs), who had been in the services of the Ġūr Khān of the Karš Khāyīt [q.v.]. He rose to the position of ḥājjīj to the Khwārezm-Shāh ʿAlāʾ al-Dīn Muḥammad and became atabeg to his son Ġiyāṣī al-Dīn Pīr Shāh. The latter, after the fall of ʿAlāʾ al-Dīn, appointed him governor of Isfahān, but he, seeing the disorder into which the affairs of the Khwārezm-Shāh had fallen, set off with his followers for Kīrman intending to proceed to Ḵū드. Having reached Kīrman, he joined battle with the governor of the province, Shu'ayb al-Dīn Abu ʿl Kāsim, defeated him and besieged his son in Bārdūṣr. When Djiṣlāl al-Dīn, who had come as embassies to Kīrman six months later, Bārāk Ḥājjīj requested from him the governor of Kīrman, Djiṣlāl al-Dīn, having little choice in the matter, agreed and gave Bārāk Ḥājjīj the ḥāṣab of Kutlūgh Khān (for which reason, the dynasty which he founded is sometimes known as the Kutlūgh-Khānī dynasty), and went himself to Ṭrāk and Āḏābarbījān. Bārāk Ḥājjīj later apparently demanded and received from the caliph the title of “sultan,” and the sources refer to the rulers of the dynasty as sullān and their rule as sullānad. When Ghiyāḥī al-Dīn subsequently came to Kīrman and sought to establish himself there, Bārāk Ḥājjīj, after first temporizing, finally seized and killed him. He then sent an envoys to ʿOġāḏey offering submission and was in return confirmed in his possession of the province of Kīrman, which he held for fifteen years. He had four daughters, the eldest of whom, Sevīn Khāṭṭīn, was married to Caghatay, while the other three were married into the family of the Atabegs of Yaʿzūl. His son, Rukn al-Dīn Khwāungeonsī, was sent to serve at the Mongol court and was with ʿOġāḏey at the time of his father’s death, which took place on 20 Dhu ’l Ḥajjah 632/H September 1235 (the accounts of these events given by Nāṣīr al-Dīn Munkī Kīrmanī, Sim̱ al-Makāl, ed. ʿAbbās Ḥaẓīḥ, Tehran A.H.S. 1327, 22 ff., Duwāyīn, Diqānūn-gūrgān, and Nāṣīr, Histoire du Sultan ʿOḡāḏey al-Dīn Munkūbūr, ed. and tr. O. Houdas, Paris 1895-8, somewhat vary).

After the death of Bārāk Ḥājjīj, the Kutlūgh sultans, although their status was that of local rulers rather than governors, had no real independence. The Mongol amirs, who had come as embassies to Kīrman six months later, are mentioned at the court of Kūṯb al-Dīn in 655/ 1257 (Sim̱ al-Makāl, 38). All the contenders for power among them appear to have found it necessary to obtain the support of the Great Khān or the Il-Khan for their cause. Many of them made marriage alliances with the Mongols. Bārāk Ḥājjīj was succeeded by his nephew, Kuṯb al-Dīn, who shortly after his accession, married Bārāk Ḥājjīj’s daughter, Kuṯlūgh Terken. However, when Ruḵ al-Dīn, who had obtained a yaṯrīg for the province of Kīrman from ʿOġāḏey, approached the province, Kuṯb al-Dīn felt it necessary to set out himself for the Mongol court to seek support. Ruḵ al-Dīn, having reached Bārdūṣr in 653/1256, took possession of the province and ruled for some fifteen years. Kuṯb al-Dīn, unable to oust his cousin, who was supported both by ʿOġāḏey and Caghatay’s wife, Sevīn Khāṭṭīn, remained for a while at the court of the Mongol Khān, and was finally sent to Muḥammad Yawāḏū, the Mongol governor of Kīrman. In 649/1253, when Muḥammad Kašānī succeeded Ghiyāḥī, Kuṯb al-Dīn obtained a yaṯrīg for Kīrman.
and set out for the province. On his approach, Ru'ik al-Din abandoned the province. After appealing in vain for help from the caliph al-Mustas'in, he went to the wādī of Mengi Kā'ān, where the case between him and Kuṭb al-Din was referred to the Mongol court (yargāh). After examination, Mengi handed Ru'ik al-Din over to his cousin, who killed him and then returned to Kirman. Djuwayni mentions that he saw Ru'ik al-Din in Almāghī in Ramaḍān 651/December 1253-January 1254 (Dhikār-ugāḥ, ii, 217). When Hūlegū crossed the Oūrūs in 654/1257, Kuṭb al-Din came to his camp at Tūa and was given permission to return to Kirman provided he be come back with an army to join the Mongol forces in their march on Baghdād. He fell ill, however, in 655/1257 and died the following year.

Terken Khatūn, Kuṭb al-Din's wife, was put on the throne in Kirman amid general acclaim, and subsequently received, after she had had recourse to Hūlegū in person, a yarlīgh authorising her to act for Kuṭb al-Din's sons, who were still children. him back to Kirmān as governor with a number of other officials. The siege continued for ten months. The defenders were reduced by famine and finally, according to Wassāfī’s account, the city’s defences were destroyed by siege engines brought from Fārs, where they had been made by experts summoned from Mawṣīl, and the city fell. The ringleaders were put to death and Shīrūkhšāh was sent to Tabāzī, where he was executed (Šīr al-Sulṭān, 85 ff.; Wassāfī, 426 ff.). The province was in a miserable condition and the treasury empty. The Karāvān meanwhile renewed their attacks. A substantial remission of taxation was given (Šīr al-Sulṭān, 94), but the ensuing improvement was cut short by the death of Muḥammad Shāh in 702/1303 (Wassāfī gives the date of his death as 1 Jumādā 1 702, 431). Shāh Djiāhān, Shīrūkhšāh’s son, was at the time at Ghāznā’s court, and was appointed to succeed him. At some time during the reign of Ghāznā or Ōdqaytī, Rāshīd al-Dīn’s son Mahmūd appears to have been governor of Kirmān and to have committed extortion against the people of Bām (cf. Mūkdlī, 10 ff., and also 261). On the death of Ōdqaytī, Shāh Djiāhān attempted unsuccessfully to establish his independence. He was dismissed as a reign of some two-and-a-half years, and with him the dynasty came to an end. He was replaced by Nāṣir al-Dīn b. Muhammad b. Būḥān, a descendant of Shīhāb al-Dīn Shīrāzī, in 704/1305 (Kīdūrī, Ta’rīkh-i Ūrgīyān, ed. M. Hambly, Tehran 1960, 45).

Kirmān was ruled for the next few years by Mongol governors until it was taken in 740/1340 by Mubārzī al-Dīn Muḥammad Muqaffārī, who was married to Kutlug Khūn, the daughter of Shāh Djiāhān’s son Nūr al-Dīn. An attempt made by Kūtb al-Dīn b. Djiālāl al-Dīn b. Kūtb al-Dīn to regain the city with the help of reinforcements from Harāk was repulsed and Mubārzī al-Dīn, who had temporarily withdrawn, retook the city in 741/1340. Bām, which was ruled by a governor appointed by ʿAbī Saʿīd, held out and was not captured until three or four years later. Meanwhile, the Ilkhan empire was rent by war and faction. In 743/1342 Abū ʿAbd Allāh Muḥammad Shīh, the Ilkhanid ruler of Ghūzān, attacked Singān and destroyed the town, but left the citadel unreted. After continuing his march on Kirmān, he then retired to Shīrūkhz without joining battle with Mubārzī al-Dīn. During a second expedition, he was defeated by Mubārzī al-Dīn and again retired to Fārs. Meanwhile the Dīnārīs and Ughānān, some of whom may possibly have been the descendants of the Mongol detachment which had been sent to Kirmān in or about 683/1284 under the leadership of Ughān (Šīr al-Sulṭān, 59), were committing renewed disorders in the south of the province. Mubārzī al-Dīn marched against them. The campaign was inconclusive and the Ughānān and Dīnārīs continued for many years to disturb the province, in spite of the fact that they frequently served in the ruler’s army (in which they proved to be an extremely unreliable element). In 751/1352 renewed encroachments into Kirmān by the Ilkhanids were repulsed near Rafsinda. Mubārzī al-Dīn then extended his power over Fārs and appointed his son Shūdūṣ al-Dīn governor of Kirmān in 754/1353-4 (though he did not reside permanently in the province, taking part in military expeditions in Fārs and ʿIrāk-i ʿAṣlām). In 757/1356 Mubārzī al-Dīn was again briefly in Kirmān and undertook a campaign against the Ughānān and Dīnārīs, who had been committing disturbances. Mubārzī al-Dīn’s death in 769/1364 was followed by a period of interminable strife and faction. In Kirmān, the governor Pahlawān Asad rebelled. After an inconclusive battle with Shāh Shujā’ī near Kirmān, Pahlawān Asad retired into the city, but submitted after a siege of several months (Ramādān 775/Radjab 776/March–December 1374). On the death of Shāh Shujā’ī (780/1384), his son, ʿṢalṭān ʿAbd al-Muʾmin, went to Kirmān as governor. In 787/1386-7 he received the title of Ūrgīsh in the name of Timūr. When the latter set out for Fārs in 789/1387, ʿṢalṭān Ahmad repaired to Timūr’s camp, was favourably received and given the governorship of Fārs, ʿIrāk and Kirmān. Intermittent strife, however, continued among the Maʿṣūfarīs in Kirmān and elsewhere, until finally they were overwhelmingly crushed by Timūr in 793/1393 and Idgū ʿBaghdādī was appointed governor of Kirmān (see further, the supplementary chapter on the Maʿṣūfarīs in the Ta’rīkh-i Ṭīmūrān). The province was in a state of disorder, and Idgū had to establish his authority by a series of military operations. On Timūr’s death in 807/1405, he recognised ʿṢalṭān. The province was nevertheless subject to pillage and disorder in the struggles which ensued between the various Timūrid princes. ʿṢalṭān died in 810/1407 and was succeeded by his son ʿṢalṭān ʿAbd al-Muʾmin, who was assassinated almost immediately on the instigation of his brother, ʿṢalṭān Uways. Disorders continued (see further, J. Aubin, Deux sources de Fars au XIVe siècle, 20 ff.). Agriculture declined; ʿHāfīz ʿAbd allāh states in the Ta’rīkh al-awālid-i Baysungīrī that wherever the army of Mirzā Iskandār (d. 818/1415-6) passed through, no building or cultivation was left, and in the Diyarabīyāt he says that wherever Mirzā Iskandār went he sacked everything, destroying buildings, cutting down trees and sending troops into all districts so that there was not a single comer of Kirmān which was not devastated (quoted by Aubin, op. cit., 35-6). In 829/1420 ʿṢalṭān Uways was besieged in Kirmān by a Timūrid army, and in the following year there was a severe famine in Kirmān accompanied by a heavy loss of life. ʿṢalṭān then sent Sayyid Zayn al-ʿĀkhdān to the province to restore agricultural prosperity. He devoted his efforts to the revival of agriculture which had fallen out of cultivation. In the first year 250,000 mātins of wheat were sown. Various tax reductions and remissions were also given to the peasants (ʿHāfīz ʿAbd al-Muʾmin, Diyarabīyāt, f. 77b, quoted by Aubin, 50). On the death of ʿṢalṭān in 830/1424, there was renewed anarchy until Djiāhanābād ʿBārā, ʿṢalṭān Yūsuf, the Kard Koyunlu, sent his son Abu ʿl-Hassan Kāsīm Mirzā to take possession of the province. Conditions showed little improvement (see Aḥūd Bakr Tirmānī, Kīdūrī-i Diyar Bakriyya, ed. F. Sānānī, Ankara 1954, ii, 334 ff., and Aubin, 86 ff.). Heavy taxes and dues were imposed on summer and winter crops and irregular levies made on the peasants; many properties were usurped by the government and wealth revenues seized for the payment of the military (Aubin, 69-70). Abu ʿl-Hassan Mirzā adopted the practice of billeting his followers on the province with all the attendant evils of such a practice (Kīdūrī-i Diyar Bakriyya, 306). On the death of Djiāhanābād, confusion and disorder prevailed in Kirmān until the Ak Koyunlu succeeded in establishing their rule. For a time Kirmān was governed by Zaynal, the third son of ʿUrūn Ḥasan. In 909/1503 the province came into the possession of Shāh Ismāʿīl. Some six years later, Kirmān, was invaded by the Uzbegs and suffered much damage (ʿAṣālāmār-yi Shāh Ismāʿīl, 326 ff., 333). According to ʿAṣwānī, the first Safawīd governor of Kirmān was Muḥammad Khān ʿUstādī (Ta’rīkh-i Kirmān, 265;
In the city and elsewhere in Persia, Ali Khan, though during that period he was frequently absent from the province with the Kirman army on military campaigns with the Shah. During his government he built a number of caravanserais and bazars in Kirman city and elsewhere in the province.

During the reign of Shah Sultan Husayn, Kirman was subject to renewed incursions by the Baloch. In or about 1233/1818 the Kirmanis appear to have appealed to the Afghan Mahmoud for help. He came to Kirman and stayed for nine months, when he returned to Kandahar because of disturbances there. In the following year he came back, but it seems that the people were not prepared to receive him on this occasion and resisted his entry. He laid siege to the city and took possession of it in 1208/1793-4. Akh Khan was alleged, he carried on a secret correspondence with the Baloch, and so he went via Bam and Narmashir to Bandar Behzad, seized Kirman and assumed the title of Shah. From there he went to Faris, where he was defeated. He came back to Kirman, but whatever support he may have had there had disappeared, and so he went via Bam and Narmashir to Bandar Abbas, which he temporarily occupied. Eventually, after further adventures, he was captured by the Afghans and executed in 1218/1803 (Mirdashari Sayyid Alavi, Isfahan, 1240, 12).}

It was not until 1237/1822 that the last Safavids, the last of the Zands, and the Kadjars until 1205/1790, when Lutf Allah, the last of the Zands, marched against Kirman. Its governor, who had been appointed by Akh Muhammad Khan, agreed to submit but refused to come to Lutf Allah’s camp. The latter thereupon besieged the town. Lack of supplies forced him to raise the siege and leave the district. Subsequently, having been defeated by Akh Muhammad Khan near Shiraz in 1206/1790, he fled to Tabas. Offers of support from some of the khans of Narmashir induced him to return to Kirman. He attacked the city and took possession of it in 1208/1793-4. Akh Muhammad meanwhile advanced and laid siege to the city. After some four months, the population were reduced by hunger and a group of the defenders opened the gates on 25 Rabi’ I 1209/24 October 1794. The surrender of the city was followed by a general massacre—the culminating disaster in the long series of calamities which the province had suffered during some few centuries. Lutf Allah escaped, but was captured in Bam and handed over to Akh Muhammad Khan. Meanwhile Akh Muhammad Ta’iz b. Akh Allah (see above) became governor of Kirman and held office until the death of Akh Muhammad Khan.

There appears to have been some fear that the disaffection caused by Akh Muhammad Khan’s brutality towards the people of Kirman, coupled with the failure of the government to control raiding and disorder by the Baloch might give rise to a desire for secession from Persia. Because of this, and partly, perhaps, as a result of the influence of Sunbul Badali, Fath Ali’s Kirmani wife (see above), Fath Allah Shah appointed Ibrahim Khan Zahir al-Dawla (see above) governor in 1226/1809. He held office until his death in 1240/1824-5 and was the first of a number of Kadjar princes to be appointed governor of Kirman. Under him the province enjoyed for the first time for many years a period of security. He repaired the province from Bahrayn, Khurasan, Faras and elsewhere (Shahid Yahya Ahmad Kirman, Farmandhane-i Kirman, ed. Bostani Pirtz, Tehran A.H.S. 1344, intro., 31). He also made a successful expedition into Baluchistan. This favourable situation did not, however, last. His son, Abbas Kuli Khan, who succeeded him as governor, attempted to throw off control, and in the succeeding years there were a number of disturbances and perennial outbreaks of disorder by the Baloch. In December 1835 Abbas Mirza was sent to the province to restore order. His efforts were only partially successful. After he left the province there were more determined disturbances by governors and others, and in 1835 further incursions by the Baloch. Meanwhile, Muhammad Shah had succeeded Fat’h Allah Shah and in 1835 or 1836 appointed Akh Khan Mahallati, the leader of the Isma’iliis, as governor of Kirman. On his withholding revenue from the central government, a force was sent to collect arrears. Unable to resist, Akh Khan fled in 1837 to Bam, where he was besieged by Fath Mirza Nusrat al-Dawla. He surrendered and was sent to Tehran. Later he was allowed to return to Kirman in 1840 and renewed his rebellion. After a number of skirmishes he was defeated, and took refuge in Afghanistan and later India, whence, it was alleged, he carried on a secret correspondence with his supporters in eastern Persia. His brother, Muhammad Bahir, made a movement into Baluchistan in 1844 or 1845 but was repulsed. Baluchistan was
meanwhile gradually reduced by the governors of Kirman, and by the middle of the 19th century Persian control had been extended southwards from Bamčşir over the Makran east of Đišak.

From about 1858 Kirman once more had a period of security and good government, this time under Muhammad Ismail Khan Nuri Wali al-Mulk (see above), first as píghar during the nominal government of Gayarínara Mirza, and then as governor from 1860 until his death in 1863/67-8. His period of office was marked by an increase in prosperity which continued during the subsequent decade.

During the government of his son, Murtaḍa Kuli Khan Bâkâi al-Mulk, Western Kirman, and especially the towns and villages of this part, gradually fell under the control of the Persian government. In 1877 there was an outbreak of factional strife between the Shaykhis and the Bâlesârs, which led to the resignation of Murtaḍa Kuli Khan and the despatch of a force from Tehran to restore order. Towards the end of the reign of Nâṣir al-Din Shâh there appears to have been considerable intellectual activity in Kirman, and when the movement for reform became overt towards the end of the 19th century and in the early 20th century, a number of Kirmanis, notably Mirzâ Āqa Khân Bârdârsî Kirmanî (who became the editor of Akhtar), the Persian newspaper published in Constantinople) and Nâzîr al-Islâm, played an important part (see above).

Meanwhile gradually reduced by the governors of Kirman, and by the middle of the 19th century Persian control had been extended southwards from Bamčşir over the Makran east of Đišak.

al-KIRMANI, AbWAD AL-DIN HAMID b. AbI 'LFAMIR (not to be confused with RuhUN AL-DIN ABWAD) OF MARAGHA in AfgHARABIDJAN who was also called ABWAD AL-DIN AL-IHSANI AND who died in 735/1337-8 was an eminent IRANIAN MYSTIC (cf. HAMD AL-THAB THAMM). His works, TA'RISIqH LYIA, edited, 'AbD AL-HUSAYN AL-NAWR, Tehran 1350/1960, 667-8; DIJAM, NAJAFIjAT AL-UN, ed. MAHMUD AL-THAVDWI, Tehran 1337/1959, 386-92. He was a pupil of RUKN AL-DIN AL-ABHARI AND AL-'ARAFI AL-SAHRAWATI. On his numerous travels, he came to DAMASCUS where he became acquainted with MULYI 'L-DIN B. AL-'ARAFI, who mentions him in his FIhTAbI AL-MAKBIIYA (CH. VIII) and was deeply influenced by his ideas. ABWAD AL-DIN knew SHAMS AL-DIN TABRIZI (CF. B. FURZANDAR, RIJALI DAR TARHIBIAT AL-ASWAL WA ZINDAGI-I MUSLIM AL-DIN MUHAMMAD NASIRI AL-MASHAD, TEHRAN 1313/1935, 33-5), and probably met also DJILAL AL-DIN RUMI, 'UGMAN RUMI, 'SHAD AL-DIN AL-KINAWI AND FAKHR AL-DIN AL-KAUBAB; KIRMANI left many of his works to them in the last present of his life as a well-known MYSTICAL TEACHER IN THE NEIGHBORHOOD OF BAGHDAK AND was honoured by the 'ABBASID CALIPH AL-MUSTANSIR IN 637/1241-1242. He died probably on 5 SHA'BI 652/1351 MARCH 1258. ABWAD AL-DIN BELONGS WITH ABMAH GHAZALI AND FAKHR AL-DIN AL-IRAQI TO THE REPRESENTATIVES OF THE DIVINE BEAUTY IN EARTHLY FORMS, PREFERABLY IN BEAUTIFUL BOYS. THE BASIC CONCEPTS OF HIS MYSTICAL PHILOSOPHY ARE SHARAT (OUTER FORM, IMAGE) AND MANAD (INNER MEANING, ESSENCE), IN CONFORMITY WITH IBN ARABIS KEY TERMS DATH AND BAHA. THE FAMOUS MAHYQI.'IPOEM MAHYQ AL-WISTAL, OFTEN ATTRIBUTED TO HIM, WAS ACTUALLY WRITTEN BY SHAMS AL-DIN MUHAMMAD BADRAlI SUBERI. THE POETICAL HERITAGE OF ABWAD AL-DIN IS MARKED BY SHORT FORMS (I.E. ONLY SOME BRIEF BANDS AND A FEW GHAZALS, BUT A LARGE NUMBER OF MAHYQIYAT WHICH ARE GROUPED INTO 32 CHAPTERS), AND IS OF A Gnostic-Mystical CHARACTER. THE 'RUDI']IYATI, WHICH ARE SOMETIMES INFLUENCED BY 'UNAR KHAYYAM, ARE NOT ALWAYS OF THE LITERARY QUALITY, BUT THEY SHOW A DEEP MYSTICAL THOUGHT AND EXPERIENCE, AS IS FOUND IN VERSES OF DJILAL AL-DIN RUMI, ABMAH GHAZALI, 'AYN AL-KU'DAT AL-HAMGAHI AND FAKHR AL-DIN AL-IRAQI.

AL-KIRMANI, HAMD AL-DIN AHMAD B. 'ABBAS ALLAH, was a prominent dA'I or THE BATTLEMS DURING THE REIGN OF AL-HAKIM BI-AMIR ALLAH (385-412/996-1021) AS WELL AS THE AUTHOR OF MANY WORKS ON THE THEOLOGY OF THE IMAMATE AND ON ISMA'ILI PHILOSOPHY.

The life of al-Kirmani is known only in its main outlines, which can be traced on the basis of statements contained in his own works. Some other details can be derived from unpublished ISMA'ILI sources, as has been done notably by Muqtada GHALIB (OP. CIT., 411) who, however, does not specify these sources. His claims point to his origin from the IRANIAN PROVINCE OF KIRMAN. It is evident from his works that he continued to be in touch with the ISMAILI community in this area. It is not very likely that he was a pupil of the well-known dA'I 'AbD YAZID AL-SHIJFI [G1], as GHALIB states, for 'AbD YAZID was not only al-Kirmanis senior by half a century but there appears to have been a difference of opinion between the two on many doctrinal points. As well, AFRASIABI has come to have been spent in the service of the FATIMID CALIPH AS THE MANSIONARY DISTRICT OF TABRIZ. The title RUSLIJAH AL-IRDAKHA, which is often added to his name by way of an honorific rather than as a designation of his rank (CF. I. I. M. IBN ABBASS, KIRMANI, BOMBAY 1948, 44; W. BADE, OP. CIT., 61, N. 127), implies that this district also included the parts of IRAN known as 'IRAQI-'ADJALI. At least one of his longer works (KU'DAL AL-MADDAH) WAS COMPOSED IN IRAN, while two shorter rUSLAIJAS (AL-HAWH) F.T L-YARL WA L-YAKHAR, DATED 395/1005, and AL-KULLYA F.T RADD 'ANL V-HARIMI AL-HAYNI AL-HASANI WERE ADDRESS TO A SUBORDINATE IN DIRAT (KIRMAN). The title of his KU'DAH AL-MADJA'I AL-BAQADDACIYAH WA E-BASSIIJAH, WHICH HAS NOT BEEN PRESERVED, REFERS TO HIS PERSONAL RELATIONSHIP TO HIS SUPERIOR, GHALIB, AND THE TITLE KU'DAH AL-YARL WA L-YAKHAR, OF TAKING PART IN WINNING OVER THE UQAYLIDS OF MOSUL TO THE CAUSE OF THE FATIMIDS. IN THE EARLY YEARS OF THE 5TH/11TH CENTURY, AL-KIRMANI CAME TO CAIRO, WHERE A SERIOUS CRISIS HAD DEVELOPED AMONG THE FATIMID DAI'S CONCERNING THE NATURE OF THE IMAMATE AS IT WAS REPRESENTED AT THAT TIME BY AL-HAKIM. A FEW OF THEM, AMONG WHOM ARE THE FOUNDERS OF THE RELIGION OF THE DHURU [G2], PROCLAIMED THE DOCTRINE OF THE ABSOLUTE TRANSCENDENCE OF GOD. THE RUSLIJA CALLED MAHASAN AL-BIDJFALI UPON THE TACT THAT THE IMAMATE OF AL-HAKIM WAS, IN SPITE OF ITS EXCEPTIONALLY BLESSED CONDITION, OF AN ORDINARY KIND AND THAT THE THEORY OF HIS DIVINE NATURE WAS INCOMPATIBLE WITH THE ISMAILI DOGMA OF THE ABSOLUTE TRANSCEENDENCE OF GOD. THE RUSLIJA CALLED AL-WAL'IYA F.T MUAFI AL-DN ASHAB AL-HAKIM BI-WASIR AL-LAH (ED. M. KANSI HUSAYNA, IN MAJALLAT KULLIYAT AL-ADAB (CAIRO), AIS/1 (1952), 1-20), COMPOSED IN 408/1017, WAS A REPLY TO A PAMPHLET BY AL-HASAN AL-AKHMAM AL-FARHANI, ONE OF THE SUPPORTERS OF THE EXTREME POINT OF VIEW. APPARENTLY, AL-KIRMANI RETURNED afterwards to IRAQ WHERE HE COMPLETED HIS MAJOR WORK, RUSLIJA AL-FAZI, IN 415/1022-23. THE LATTER DATE PROVIDES ALSO A DATING POST QUMFOR HIS DEATH. WORKS. THE LIFE OF AL-KIRMANIS WORK AFTER HIS DEATH HAS BEEN DETERMINED BY THE FURTHER DETAILED HISTORY OF THE ISMAILIYA. THE LATER WRITERS OF THE FATIMID PERIOD APPEAR TO BE BROADLY INFLUENCED BY HIM, HE LEFT A LASTING IMPRINT ON THE RELIGIOUS LITERATURE OF THE TWELVE ISMAILIYA [G3] WHICH CONTINUED A PART OF THE FATIMID TRADITION IN THE YAMAN AND IN INDIA. THIS INFLUENCE CAN BE TRACED FROM THE TIME OF THE SECOND DAI MU'AYYAD AL-SHAFI AND THE CALIPH OF HIS TIME, UP TO THE PRESENT DAY (C.F. E.G. STRUHMAIER, GENSIS-TESTE DER ISMAILITEN, GOTTINGEN 1943). THANKS TO THIS CONTINUOUS TRADITION OF KIRMANI STUDIES, THE MAIN PART OF HIS WORKS HAS BEEN PRESERVED, ALTHOUGH ALL THE COPIES THAT HAVE BEEN BROUGHT TO LIGHT SO FAR ARE VERY RECENT.

The defence of the THEORETICAL BASIS OF THE FATIMID IMAMATE, WHICH AL-KIRMANI REGARDED AS ONE OF HIS MOST IMPORTANT CONCERNS, WAS NOT ONLY DIRECTED AGAINST THEOCRATIC PRINCIPLES WITHIN THE MOVEMENT ITSELF. HE ALSO ATTACKED THE CLAIMS OF THE 'ABBASIDS IN'MARJAM AL-KUBI, A REFUTATION OF AL-DHABAHS KU'DAL AL-ULG,
and those of other Shi'i pretenders (in al-Kufiya, being a warning against the propaganda of the contemporary Zaydi Imam Abu 'l-Husayn al-Mu'ayyad bi 'l-lah al-Haruni). In his Kitab Tahab al-Hasil wa 'l-mushaddi, the polemics against these opponents are combined with a plea in favour of the authority of the religious books. The work, written without exception, addressed towards the antinomian strain in the Ismaili movement. Its fullest treatment of the theory of the ismami, constructed as a support of the claim of al-Hadi, is contained in the Ma'suddi fi 'l-ghabi al-isma. In the course of his argument, al-Kirmani frequently resorts to Jewish and Christian scriptures, which he quotes in Hebrew as well as in Syrian (cf. Paul Kraus, Hebrosche und syrische Zitate in ismaelischen Schriften, in Isl. xix (1930), 243-59, and A. Baumstark, Zu den Schriftzitaten al-Kirmans, in Isl. xx (1937), 306-15).

Of equal importance in the work of al-Kirmani is his preoccupation with metaphysical speculation, to which his most important works are devoted. In the Kitab al-miyad fi 'l-baham bayn al-sulayhiyya sahhabay al-Isla'am wa 'l-Nu'ma (ed. by 'Ali Tarni, Beirut 1960), he attempts to settle the debate over a great number of philosophical questions which had been going on among the Isma'ili's in Iran during the preceding generations. The starting-point of this discussion was the Kitab al-Mahsuli, a work by al-Nasafi (d. 351/964), to whom the introduction of neo-Platonism in the speculations of the Isma'ili's has been attributed. Al-Nasafi had been criticised on several points, which according to al-Kirmani are of fundamental importance, by Abu Hātim al-Warsamī (fl. about 322-349/934-46) in his Kitab al-Ifāl, but the tenets of the former had been defended by Abu Ya'qub al-Sijde (d. after 360/971) in a work entitled Kitab al-Nu'ma. Kirmani, who on most issues takes the side of Abu Hātim, approaches these problems from a point of view to which he attributes an authoritative weight and which he denotes as "the canon of the guiding mission" (bārān al-daw'a al-adila), see further W. Ivanov, An early controversy in Isma'ilism, Leiden 1948, 115-39, and ed. Bombay 1955, 87-122.

The Kāhāt al-'afl (ed. by M. Kāmil Husayn and M. Muṣṭafā Hilmī, Cairo 2371/1952; ed. by Muṣṭafā Ghālib, Beirut 1967) contains a summa of Isma'ili philosophy written for adepts who have prepared themselves for the study of the fundamental truths both morally, through the fulfillment of the commands of religious law, and intellectually, by the study of less abstract works of earlier Isma'ili authors and of al-Kirmani himself. The subject-matter has been arranged in chapters and paragraphs which have been styled "tafsīr" ("interpretation") and "crossroads" (maqādīr) according to the allegory of a city of gnostic knowledge. By travelling along the fifty-six crossroads enclosed within the seven walls of this city, the searching soul acquires an awareness of the real structure of the universe, which consist of four separate but fully congruent worlds: the world of Divine creation ("ālam al-ḫāli"); the world of the purely spiritual beings, the world of bodily existence or the realm of nature ("ālam al-djinn, dār al-futūb"); the world of religion ("ālam al-dīn"); which is the hierarchy of the Isma'ili da'wa, from the nāfi' up to the lowest delegate (maqādīr); and, finally, the world of the bā'itān where this universe returns to its primordial one-ness in its second perfection (al-kamal al-ḥānī). In complete analogy to this macrocosmic process, the individual human soul, which by origin is only a virtually-existing first perfection, through acquisition of this metaphysical knowledge, can realise itself completely as an intelligent being. The Kāhāt al-ṣalīq is the earliest attempt at a complete and systematic exposition of Isma'ili philosophy. In comparison to other works, and even to al-Kirmani's Kitab al-Riyāḍī, it shows a pronounced influence of the metaphysical theories of the falsafya. This is particularly evident in its concept of the world of creation as a decade of intelligent beings which has come into existence by way of "being sent out" (insābat) from the universal intellect, the first created being (see further Isma'iliyya Doctrine).

Like many other Isma'ilī dānis, al-Kirmani attacked the writing of the arch-heretic Abu Bakr Muhammad b. Zaidariyya al-Rāzī. In the Kitab al-Baqī al-dhahabiyah fi 'l-bib al-naṣfānī, he supported the criticism of his predecessor Abu Hātim on al-Rāzī's ideas about the theory of the mind, espounded in the latter's al-Tifib al-râhānd (cf. P. Kraus, in Orientalia, v 1930), 301; idem, Rasīl falsafiyāliša metapsychica, i, Cairo 1939, 93-13, and the excerpts from the first part of al-Kirmani's Kattāb in the notes to the edition of al-Tifib al-râhānd.

**Bibliography:** The editions of al-Kirmani's works mentioned in the article all contain more or less extensive introductions to his life and work. Surveys of his works and of the manuscripts known to exist are given in W. Ivanov, A guide to Isma'ilī literature, London 1935, 45-8; and ed. Isma'ilī literature, Tehran 1963, 40-5; Brockelmann, S1, 325-6; Mu'izz Jorwalwa, A descriptive catalogue of the Fazyce collection of Isma'ilī manuscripts, University of Bombay 1965, 37-52, nos. 51-65; Sezgin, GAS, i, Leiden 1967, 260-2. Fragments of some of the works of al-Kirmani are contained in the great Isma'ilī compilations of 'Imad al-Dīn Idrīs (d. 672/1276), Kābū 'Uqūs al-adhār, and 'Hasan b. Nāh al-Bahrāl, Qābū al-adhār (written 933/1525), which are still unpublished. Excerpts from his al-Rasāl al-dāmīma fi sawm ḥabar Rāmādān have been edited and translated into Urdu by M. H. Aqā'īl, Nafūt al-sawm 'inda l-Rāmādāniyya, Karachi 1961, 18-60. A work of doubtful authenticity has been edited by 'Aff Tarmi, Arba' rasālī al-dānīfiyya, Beirut 1952, 59-66. On the Khasiat al-adila, which is really the work of a pupil of al-Kirmani, see W. Ivanov, A creed of the Fatimids, Bombay 1936, 10-2. See further: P. Griﬃn, in ZDMG, lviii (1905), 87; H. F. Manhész, in FRAS, lxxxii (1933), 375-7; Idem. and H. S. Mabīnī, al-Sunhūqiyah wa 'l-ḥarakaq al-Falsafiyah fi l-Ya'qūn, Cairo 1955, 258-61, and passim; W. **KIRMĀNĪ, KAMĀL AL-DĪN [see also KIRMĀNĪ KIRMANĪ]**

**KIRMĀNĪSHĀH, a town and province in western Persia. The province is situated between lat. 34° N. and 35° N. long. 45° E to 48° E. It lies to the east and north of 'Irāq and Luristan-i Kūk (or Fugh-i Kūh) and to the south and west of Kurdistan and Asābābd. In the early 20th century the province was divided into sixteen butās. These were Bākādī, Ḩusain, Miyan Darband or Bitawar, Pugh-i Darband or Bāb Darband, Dānvar, Kūlīyā, Shāh, Kanguwar, Asābābd, Haršūn, Camcāmāl, Dūrā Piramān, Maḥdīyā, Hārūnābād, Gūrān,
Kirind, Zuhâb, Aywân and Hulaylân (Government of India, General Staff, Army Headquarters, Intelligence Branch, Gazetteer of Persia, ii, Simla, 1914, 338). At the present day it is bordered by Sanaandâd on the north, Asadibâd on the north-east, Shâhâb on the south, Niânâwân and Tûsirânâd on the east, Khurramâbâd on the south-east, and Kâş-i Shîrin and Rawânshân Dîwânârê on the west, and contains the following districts: Sunkur and Kirîlîbâd; Kanguwâr, Sa’nah, Harshik, Sangîibâd, Gîrân and Thâllâbî (Razmârâ, Farhang-i dinârâfí-yi Írân, A.H.S. 1329-32, v). The town of Kirîmânshâh (also known as Kirîmânshâh, a name which appears to be used first in the 18th/19th century) is situated approximately at lat. 34° 19' N. and long. 47° 5' E. at a height of 1322 m. on the Kâr Dîv River, which runs to the north-east of the town in a south-easterly direction until it joins the River Gâmastiây (Gawmâsâ) (also known as the River Sâyman) which flows into the River Kabû. A series of mountain ranges, trending from north-west to south-east, run through the province. Between them there are extensive plains and valleys, containing pastures and cultivated lands. From Asadibâd, with an elevation of 2,540 m., there is a gradual descent through a succession of pales and valleys to Kâş-i Shîrin, which is at 575 m.

The climate is mild in summer but cold in winter, except in the Zuhâb district and the plains near the Irâkî frontier and in the lower parts of the Kalhur country (in the region of Manâd) where it tends to be hot in summer. Snow on the mountains is heavy in winter and spring rains are normally plentiful. The maximum July temperature of the town of Kirîmânshâh is 37.2° C. and the minimum January temperature -3.5° C. Annual rainfall is 372.7 ram (H. M. Ganji, Climate, in W. B. Fisher, ed., Cambridge history of Iran, Cambridge 1968, i, 247).

Parts of the province in the south, notably districts in Hulaylân, Bîlawar and Gîrân, are wooded. Oak, elm, sycamore and some coniferous trees and walnut trees are found in the mountains; willows, poplars and oriental plane trees and cypress are plentiful in the province; palm trees are found in Sar-i Pal-i Zuhâb and Kâş-i Shîrin. Fruit is abundant in some districts, especially in Kandûla, Harshik and Sa’nah; Kirinda produces excellent seedless grapes, Rîdîbâd is famous for its figs and Gahwârî for its apples. Gum tragacanth was formerly plentiful in the province, but indiscriminate tapping has caused supplies to diminish. Gum mastic (safouh) is obtained from Hulaylân and was formerly exported to Russia (Government of India, H. L. Rabino, Gazetteer of Kirîmânshâh, Simla 1907, 163, 165).

Dry farming is practised in most parts of the province. In the valleys river water is used for irrigation. Kandîs are not numerous. The province is rich in grain land. Formerly, in a normal year the province had a large grain surplus, though from time to time this would be cut by insufficient rainfall, ravages by locusts and other pests, and by disorders. Surplus grain was exported to other parts of Persia, Ottoman Turkey and, later, to Irâk. The proportion of wheat to barley was usually two-thirds wheat to one-third barley. Both are grown as unirrigated crops. Grain land is left fallow in alternate years or in many districts for longer periods. Rice is grown in some of the river valleys, including Rezîyân, Bîlawar, Dînawar, Camcânâl, Zuhâb and Kalkur. It is of inferior quality and mainly consumed locally. Peas (nakhûd) are produced in quantity and exported to other parts of Persia. Sugar beet has been an important crop since the 1930s and is grown especially in Mâhklâsh. Cotton, castor oil, tobacco, saffron, opium, the cultivation of which on a significant scale probably did not begin until the late 20th century (United Kingdom, Foreign Office, Diplomatic and Consular Reports, Annual series, 3189, Report on the Trade of Kirmânsâhsh and district for the year 1903-04, 22, and see further G. G. Silbermann, The Persian Constitutional Revolution: the economic background 1870-1906, unpublished Ph. D. thesis, University of London, 1974, 172 ff.). Indigo, maize, clover, alfalfa, and vegetable crops, such as melons, water melons, cucumbers, egg plants and tomatoes, are, or were, grown for local consumption (see further Rabino, 155 ff.).

The province has rich pasture lands. Transhumance is widely practised. Formerly, nomadic tribes commonly migrated annually across the Ottoman-Persian frontier and later across the Irâkî-Persian frontier. Animal husbandry is of great importance, not only among the nomadic tribes but also among the settled peasants. After grain the most important product of the province is wool. Part of the spring wool crop was formerly exported. The autumn wool was less in quantity and inferior in quality and mainly used for the manufacture of felts (nomads). Formerly, the manufacture of carpets was a thriving industry in the villages and among the tribes, but declined towards the end of the 19th century. By the 20th century it had virtually disappeared. Goat’s hair was made into tents, saddle bags, ropes and yarn. Goat skins were dried and exported and were used for coverings for clarified butter and water skins. The markets of Tîhrân, Hamadân, Kûrmân and Baghâd were largely supplied with sheep from Kirîmânshâh (see further Rabino, 158-9).

Mules and horses were bred in considerable quantities in the 19th century. The horses, which had much Arab blood in them and were well adapted for both draught and saddle, were highly esteemed (cf. J. P. Ferrier, Cazame journeys, London 1856, 26; Gazetteer of Persia, 341). Apart from some tribes near the Irâkî frontier, who are Sunni, most of the Kurdish tribes and Province of Kirmânsâhsh for the year 1903-04, 22, and see further G. G. Silbermann, The Persian Constitutional Revolution: the economic background 1870-1906, unpublished Ph. D. thesis, University of London, 1974, 172 ff.).

The province is mainly inhabited by Kurds, nomadic and sedentary, and Lurs. Most of the tribes have their own winter and summer quarters (see further 11. A. T.). A rough estimate of their numbers in the early 20th century put them at some 60,000 families. Among them were the Kalhur, partly settled and partly nomadic, who were estimated at 6,000 families. They owned large stretches of irrigated land in the fertile plains of Mâhklâsh, Gillân and Kalkh Shâhân, the two last named purchased by the Kalhur chiefs from their Turkish proprietors at the beginning of the 19th century (United Kingdom, Foreign Office, Diplomatic and Consular reports, Miscellaneous Series, 590 (1903) Report on the Trade of Kirmânsâhsh and district for the year 1903-04, 22, and see further G. G. Silbermann, The Persian Constitutional Revolution: the economic background 1870-1906, unpublished Ph. D. thesis, University of London, 1974, 172 ff.).

Apart from some tribes near the Irâkî frontier, who are Sunni, most of the Kurdish tribes of Kirmânsâhsh are Shî’a. All tribes are also...
The town of Kirmānshāh or Kirmānšāh (var. forms Kirmānā, Karmānā, Kirmānšāh, Karmānšāh) as it was known by the early Arab geographers was founded in the Sāsānīd period. Ḥamd Allāh Mustawfī attributes the title Kirmānshāh to the governors of the province of Kirmān (cf. Bīrūnī, 1055), who had acquired the title Kirmānshāh as governor of the province of Kirmān (cf. Nūshā, 1055). The town founded by him was, however, more probably the small town of Kirmānshāh situated between Yazd and Kirmān (cf. Tabarī, in Nūshā, Gesch. des Persen. u. Araber, 74). Another tradition attributes the foundation of Kirmānshāh to Kawāsh b. Fīrūz (488-534 A.D.; cf. sp. Mukaddāsī, 277 ff.). The Sāsānīd kings often resided there, and their example was from time to time followed by later rulers, notably the caliph Hārūn al-Raṣīl and the Būyādīs 'Āqūd al-Dawla, who built a palace there (Mukaddāsī, 399). The province is rich in monuments of the Sāsānīd and Sāsānīd, such as the residence of Tāk-i Bīsān, three miles east of Kirmānšāh, the rock inscriptions at Bīsān (cf. Nūshā, 1055), and various remains at Kangāvar (see Kirmānshāh).

Kirmānshāh was peacefully occupied by the Arabs after the capture of Hīwān in 21/640 (Bagdādī, Futūb, 302). It became part of the province of the Dībāl and was known, together with Dinawar (cf. Nūshā, 1055) as Māh al-Kūfā. Although situated on the great Khurāsān road almost midway between Baḡdād and Hamadān, it was less important in the early centuries than Dinawar or Hamadān. It is likely not to mention it among the best known towns of the Dībāl, though he describes it as a pleasant place with running water, trees and fruit, in which living was cheap, and as having abundant pastures, where numerous flocks grazed, and much water. Many articles of commerce were also to be found there (ib., 359). Later, Kirmānshāh with Hamadān, Ray and Isfahān became one of the four great cities of the Dībāl, though it did not rival them in importance. It was ruled successively by the Būyādīs, the Bāyids, the Ḵurāshīs (see Ḵurāshīs) and the Ḡāzūrūdīs (see Gāzūrūdīs).

In 951/1547-8 Kirmānshāh was laid waste by the Khāvarazmshāh amīr Miḥāliḏuk (Ḵrāndi, Ḵārbāl al-qadār, 398). After the Mongol conquest, the Dībāl appears to have been divided into two unequal parts, the larger in the east being known as Persīn Ṭīfāq and the smaller in the west, which included Kirmānshāh, as Kūrtānī. Ḥamd Allāh Mustawfī states that Kirmānshāh (which, he writes, was known in books as Kirmān) had been a medium-sized town (ḵārīj waṣāṭ) but that in his time it was a mere village (Nūshā, 1055). Camīnḵāl near Bīsān, because of its excellent pastures, was a regular camping ground of the Mongol establishments, and, according to Ḥamd Allāh, ʿΩḏiḏyū b. ʿArghān built a town (ḵābāb) there (ibid., 1107). It would seem from Ḥamd Allāh Mustawfī’s account that there was a decline in production in Kūrtānī as well as in the neighboring provinces after the Mongol invasions (Ṭāhirī-i qanīda, 371).

During the 7th/12th century Kirmānshāh lay outside the main course of events in Persia, but with the rise of the Ṣafawīs Kirmānshāh became a frontier province facing the Ottomans. Many of the Kurdish tribes enjoyed a degree of local independence, and it does not appear that central control was established throughout the region in the early Ṣafawī period. The sources make little mention of Kirmānshāh, though there is mention of Ṣafawī governors in Dinawar—Solugh Ḫusayn Tekkūdī in the reign of Shah Ismāʿīl and Ǧirāb Ṣalāḥ in the reign of ʿAbbās II (Bīḍūlī, Ṣhārašt-nāma, Tehran A.H.S. 1343, 410, 276). Intermittent warfare with the Ottomans kept the frontier regions of Kirmānshāh in a state of instability and often disorder. The town of Kirmānshāh was retaken by the Ottomans in 1136/1723, the province is rich in monuments of the Sāsānīd and Sāsānīd, such as the residence of Tāk-i Bīsān, three miles east of Kirmānshāh, which it occupies at the present day.

About the middle of the 17th/18th century, the Zangāna family began to emerge as the most powerful of the local leaders, and from then on frequently held the government of Kirmānshāh. The Zangānas included Sunqur and from the reign of ʿAbbās II (1098-1197/1687-1787) the province was again occupied by the Ottomans in 1136/1723. The ʿAbbāsīs became governor under printed (in or about 1160/1748) Rūdī Kātī Ḥādī yādī, Rawdāt al-safā-yi Nāṣīrī, Tehran, A.H.S. 1339, viii, 271). Members of the family also held important offices at court, which further strengthened their position. ʿṢayyīk Āl Ḵᵛā contentViewed himself virtual independence. In 1779/1786 Karim Ḵān took the town of Kirmānshāh after besieging the fortress for two years. The defenders were finally reduced by famine. Āl Ṣurūq ʿAll Ḵᵛān was then made governor of Kirmānshāh. (See further Ābū l-Ḥasan b. Muḥammad Aḥmad al-Gulištān, Muqāzāt al-tawdīrī, ed. Muḥammad Ṣadūqī, Tehran A.H.S. 1341.)
In the 19th century the commercial and strategic importance of Kirmanshah increased. It became the capital of Persian Kurdistan. The latter formed a separate province from Ardalan [48]. The capital of Ardalan, which was also known as Kurdistan, was Sinna. Already in 1800, Sir John Malcolm noted the importance of Kirmanshah as a mart for trade between Turkey and Persia (Melville papers, quoted by C. ISSAWI, The economic history of Iran 1860-1914, Chicago 1971, 269). Sir John Macdonald-Kinneir states that it was a flourishing town in 1861, containing about 12,000 houses (Geographical memoir of the Persian empire, London 1813, 132), which would have given a population of some 60,000 persons.

Fath 'Ali Shāh appointed his eldest son, Muhammad 'Ali Mirzā, as governor-general of Kurdistan and Luristan on his way to Karbala and Najaf in 1871, a huge petition was presented to him complaining of the oppression of the governor. It was not answered. Various Kadjār princes held the government of Kirmanshah after Muhammad 'Ali Mirzā. The first was his son Muhammad Husayn Mirzā Highmat al-Dawla, who held office for some ten years. Another of his sons, Isām Kull Mirzā 'Imād al-Dawla, also held the governorship for some twenty-one years under Muhammad Shāh and Nāṣir al-Dīn Shāh. In 1842 relations with Turkey again became critical, and a mixed commission was appointed to delimit the frontier, an operation which was not finally completed until 1914 (see further C. J. Edmonds, Kūrdi Turks and Arabs, London 1957, 115 ff.). When Nāṣir al-Dīn Shāh passed through the province on his way to Karbala and Najaf in 1871, a huge petition was presented to him complaining of the oppression of the governor. It was not answered.

In the last quarter of the 19th century the volume of trade coming through Kirmanshah markedly increased (Gazetteer of Persia, 347-9). With the opening of the Suez Canal in 1869 and the establishment of a steamer service on the Tigris, it became the port of entry for all goods entering Persia from Baghdad, but was forced to abandon his advance on Baghdad, while Ferrier, writing in the early 20th centuries it was estimated that 150,000 to 200,000 pilgrims passed annually through the town. They brought money to exchange or tried to pay their way by selling things, and so gradually also Zayn al-'Abidin, (loc. cit.); and in 1872 floods washed away about one fifth of the populated area with heavy loss of life (ibid.). These disasters, coupled with the rapacity of the governors, reduced the province to a low ebb. Consul Abbott, writing in 1849-50 states that there were some 5,000 inhabited houses (United Kingdom, Public Record Office, F. O. 60: 185, K. Abbott's report on the commerce of South Persia . . .), which would have given a population of about 25,000. Another report written in 1868 estimated the population at 30,000 (Report on Persia, accounts and papers 1867-68, 19, quoted by ISSAWI, 23). By the end of the century there had been some degree of recovery, and in 1914 the population was put at 60,000 (Gazetteer of Persia, 355). This figure, which was probably a conservative estimate, was the same as that given by Sir J. Macdonald-Kinneir rather over a century earlier.

In the last quarter of the 19th century the volume of trade coming through Kirmanshah markedly increased (Gazetteer of Persia, 347-9). With the opening of the Suez Canal in 1869 and the establishment of a steamer service on the Tigris, it became the port of entry for all goods entering Persia from Baghdad, and coming from England and India via the Persian Gulf and the Tigris. By the end of the century the province equalled, if it did not excel, any other province in its general state (Gazetteer of Persia, 336-7). Consul Fries wrote in 1859 that "There are but few towns in Persia which show to-day so flourishing a condition, from a trade point of view, as Kermanshah, and this in spite of oppression by the local Governor, and badness and unsafety of the roads radiating from it" (quoted by Rubino, 206).

There was a customs post at Kirmanshah, which was normally farmed. In 1882 the sum paid was 20,000 kran. For the year ending 20 March 1897 the figure had risen to 480,000 kran and for the year ending 20 March 1899 to 670,000 kran. On 21 March 1899 the customs were taken over by the Belgians (see further Gazetteer of Persia, 350 ff.).

Kirmanshah also benefited greatly from the pilgrimage trade, lying as it did on the direct route from Persia to Najaf and Karbala. In the late 19th and early 20th centuries it was estimated that 150,000 to 200,000 pilgrims passed annually through the town. They brought money to exchange or tried to pay their way by selling things, and so gradually
added to the well-being of the town (Gasulce. of Persia, 344).

In 1914 there were about 200 merchants in Kirmānshāh dealing mostly in Manchester goods obtained direct from Manchester or through Bābdāh, in sugar from Marseilles, and in opium, gums, goat skins, carpets and wool, which they exported. Bābdāh, Eisenach, and Tashkent were the principal centres of these trade. [Abd al-Rahim Waddi al-Dawla, who combined trade with banking and landownership for the career of his father and the rise of the family to wealth and influence, see Silberman, 207]. There were about twenty Ottoman Jews, who had in their hands the greatest part of the foreign and export trade. Kāshī merchants imported from Kāshī tobacco, native silk goods, copper-ware, to a total amount of some 100,000 ráman. They covered by exports to Kāshī of prints and foreign goods received from Bābdāh. Yazd merchants imported henna and Yazd silk from Yazd to the amount of 20,000 ráman, and exported an equal amount of foreign goods to Yazd. Isfahān merchants imported Russian prints and cotton goods, such as hājilamāba, prints, hājdak, šāhā, etc., and carpet and glass from Isfahān, and exported to Isfahān Manchester prints, iron, tea, cowhides, wool and gilma. Their imports came to 100,000 ráman, but were exceeded by their exports. Hamadān merchants imported naphtha, rice, Russian prints, glassware and hardware (coming from Rāz), and exported to Hamadān dates from Mandafl, gall-nuts, grease, glue, raw hides, tea, spices, iron, lead, Manchester goods and window glass. The exports exceeded the imports. Some Hamadān merchants worked exclusively as commission agents for releasing goods from the customhouse and forwarding them to Hamadān (Gasulce. of Persia, 355-9). There were also a few Persian Jews, who lived by small trade and hawking, and a very small number of Chaldean Christians, some engaged in trade and some living by the manufacture of arak.

Kirmānshāh played little part in the constitutional revolution, but in 1917 Sultan al-Dawla entered Kirmānshāh in the name of the ex-shah Muhammad ‘All. In the following year he advanced on Tehran with a force of Kalhurs, Sandjābs and other Kurdistani tribes. He was defeated near Hamadān and government troops retook Kirmānshāh. Operations continued until the autumn, during which time Kirmānshāh repeatedly changed hands. In the first world war Kirmānshāh was one of the centres of the mohājdīn movement. A local committee for national defence was set up (A. K. S. Lambton) and in December 1915 the central committee, which had retired from Tehran to Kūm and Isfahān in November of that year, withdrew to Kirmānshāh. A provisional government had barely been established when the mohājdīn evacuated Kirmānshāh in March 1916 in the face of a Russian advance. Turkish forces later occupied the town but evacuated it in 1917 (see further Yahyā Dawiātābādī, Haydār Yahyā, Tehran, n.d., iii, 53 ff.; Husayn Samī‘ Adīb al-Salāna and Anār Allāh: Ardāfār ‘īz al-Mamālik, Asr al-dawālaīn-i muqaddas-i mūsā, Tehran A.H. 1332, 30 ff., 75 ff., P. M. Sykes, History of Persia, London 1963, ii, 446 ff.).

KIRMĀSTI, chel-lieu of a kada in Anatolia, 15 miles south-east of Miğdāh (cf. J. H. Mordtmann, in ZDMG, lxxv [1921], 101) and 40 miles S.W. of Bursa with about 16,000 inhabitants. The town lies on both banks of the Edremos Cay (Rhyndacus), now called the Mustafa Kemal Paşa Cay. The origin of the name, often wrongly written Kirmāstī, which points to a Greek *Kerma* or *Kermas* is uncertain, nor is it known what ancient town was here. Perhaps the Kirmāstī in the Troas (cf. Pauly-Wissowa, ii, 743) mentioned in Xenophon, Hyst. iv, 8, is to be connected with it. In the Byzantine period Aorata is said to have been here, where the troops of Alexius Comnenus under Kymeles were defeated in 1066 (cf. Anna Comnena, ii, 279 ff.). In any case there is close to Kirmāstī a Byzantine castle in ruins which resembles that 6 miles farther up the Edremos Cay at Kestereuk and presumably was intended with similar defences at Ullab (Lopadium) and Bursa to keep back the advance of the Ottoman army. In the town, which has 6 mosques, including one large very old one with a minaret, and 14 mosques, there are ancient remains (sarcophagi, inscriptions on the walls, ornaments) which do not seem yet to have been studied. The history of Kirmāstī under the Ottomans is quite obscure, as there are no records. Ewliya Celebi (v, 290) and European travellers (cf. W. Hamilton, Researches in Asia Minor, London 1842, i, 77, 80, ii, 93) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmāstī, which did not suffer from the Greek occupation, was in 1923 named Mustafa Kemal Paşa in honour of the Turkish President. Kirmāstī is the birth-place of Seyyid-i ‘Abdu’llah (Abdul Hamid), who combined trade with banking and landownership. One of the most prominent Jews of Kirmāstī was Ḥaḍīri ‘Abd al-Rabbīm Wakll al-Dawla, who combined trade with banking and landownership (cf. W. Hamilton, Researches in Asia Minor, London 1842, ii, 93) and in December 1915 the central committee, which had retired from Tehran to Kūm and Isfahān in November of that year, withdrew to Kirmānshāh. A provisional government had barely been established when the mohājidīn evacuated Kirmānshāh in March 1916 in the face of a Russian advance. Turkish forces later occupied the town but evacuated it in 1917 (see further Yahyā Dawiātābādī, Haydār Yahyā, Tehran n.d., iii, 53 ff.; Husayn Samī‘ Adīb al-Salāna and Anār Allāh: Ardāfār ‘īz al-Mamālik, Asr al-dawālaīn-i muqaddas-i mūsā, Tehran A.H. 1332, 30 ff., 75 ff., P. M. Sykes, History of Persia, London 1963, ii, 446 ff.).

of the Anatolian collateral line of the Saldjukids, the overlords of the town until the end of their power in the so-called Rum-Saldjukids who resided in Konya. However, has not as yet revealed its secrets. The ancient cultivation in the centre of the town, which, how¬
hundris, some 15 km. to the Kesik Kopril, a long bridge over (wildyet)

danisfemandlds of north eastern
the Saldjukids period, indicates the original site of the

Kirsehir is certainly an old settlement, as may be
deduced from the kayeb (a hill indicating ancient
cultivation) in the centre of the town, which, however,
has not as yet revealed its secrets. The ancient
name of the town is not known; the denominations
proposed for antiquity are disputed. So far as is
recorded by inscriptions and architectural monu¬
ments, its history starts only in the early Turkish
(Rum-Saldjukid) period. Then and shortly after¬
wards, from the middle of the 7th/14th until the middle of the 9th/14tth centuries, the town must
have been an important cultural centre. After the battle of Malazgird (1071), the Turks
occupied great parts of Anatolia, and Kirsehir became also Turkish, but the control of the
city changed more than once: sometimes it fell to the
amir of the Danisfemandlds of north-eastern
Anatolia (Sivas and Malatyai), sometimes to a
devil of the Anatolian collatellar line of the Saldjukids, the
so-called Rum-Saldjukids who resided in Konya.
Under sultan Kilit-Adil II, the amirate of the
Danisfemandlds was incorporated (ca. 1273) in the
territory of the Rum-Saldjukids, who remained the
overlords of the town until the end of their power in 1307. Then governors of the Mongol Ul-Khans of Iran started to rule the whole region, including Kirsehir, which served as a place of coinage for them until 1288/1280. In his Viz穐t al-kuliib (ed. G. Le Strange, I. Text, London 1915, 99, 113 11, Jr. Tr. London 1919, 99, 12 ff), Hamd Allah Mostawfi designates Kirsehir as "a big town with high sacred constructions (yraman), which enjoys a fine climate; the revenue of its Danisfendar amounts to 57,000 dinars."
After the disintegration of the Il-Khansid state, Kirsehir again became a controversial issue between independently-beloving governors, like those of the Ertanids (see ERTINA) and other dynasties, until it was taken by the Ottoman sultan Bayazid I. After the latter's defeat near Ankara in 1402, the town was at first added by the conqueror Timur to the territory of the Karamankids (Konya and Laranda), but afterwards changed masters several times until it became definitely Ottoman when Selim I incorporated the principality of the Dulсадde, to which Kirsehir had belonged ultimately. As capital of a livah (sandjak), the town was attached to the eyadet (wildyet) of Karaman.

When the wildyet system was reorganised in the middle of the 16th century, the sandjak of Kirsehir was assigned to the wildyet of Ankara. The town became a wildyet in 1524 when the former wildyet was abolished and the sandjak raised to wildyets. But in 1544 the wildyet of Kirsehir was suppressed; parts of its territory were added to the wildyets of Anlorwa and Vosgd, but the greater part was as¬signed to the newly-formed sanjaks of Nextap and Of.

The heyday of Kirsehir was the late-Saldjukid and Il-Khansid period between ca. 1240-1340. The town must then have been really important; it was in any case an active intellectual life of a mystical-religious character, as may be seen from imposing architectural monuments which have survived until today (see Ali Saim Oleyn, Kirsehri'de Tbr ne asileri, in Vakiflar Dergisi, li [Ankara 1942], 553-61, figs. 1-25; Hafiz Bakti Kunter, Kirsehri hikayeleri, in ibid., 432-36, figs. 4-23; W. Ruben, Kirsehri'nin dikilitasresten zaman tawindiileri. A, in Beilaten, xi [Ankara 1947], no. 44, 603-40, pls. CX-CXCV; idem, B, in Beilaten, xii [Ankara 1948], no. 45, 173-93, pls. XXVII-XLV; idem, Eigenartige Denkmaler aus Kirsehir, in ibid., 254-205; Celal Halko Tarim, Kirsehri limani sierinde ornamalar, Kirsehir 1938; idem, Turbe ve Kirsehri - Gulbahere ve Babaster - Ailesi - Beketiler, Istanbul 1948).
The oldest cultural institution in Kirsehir is possibly the madrasa of Malik Mizaffar b. Bahram- shah, called Malik Ghazi, of the Manggikid dynasty, whom sultan 'Ali al-Din Kaykubad I had invested with Kirsehir as compensation for the principality he had taken away from Ghazi's family. Of the madrasa as built in 644/1246, only the relatively simple portal has been preserved. When the ruins of the madrasa were carried away, the portal was used in 1312/1893 for the reconstruction of the 'Ali al-Din Mosque on the hillock of the town. The still-standing graceful mausoleum of Malik Mizaffar, the Malik Ghazi Kumbedi, constructed by his consort in the style typical for the high-Saldjukid period, indicates the original site of the madrasa.

For the next period, the madrasa of the amir Nur al-Din Djibril b. Baha al-Din Djagha, served as a centre of intellectual life. It belonged to an extensive foundation on which a deed of foundation (malafiyeye) in Arabic and Mongol, dated 670/1272, provides information (see Ahmed Temir, Kirsehri emiri Cacağhlu Nur al-Din Kaykubad'ta tarihi Anka Mozafa vafiyesi, Ankara 1959). Of the constructions belonging to this foundation, only a group of buildings in the centre of the town has survived. It consists of the madrasa, built in 670/1272-3 and presently used as the Friday mosque, its minaret and the town of the founder. The tomb is included in the northern wall, of the same style as the portal of the madrasa.

To the north-west of the Malik Ghazi Kumbedi, at a distance of ca. 200 m. from the Djagha Beg Madrasa, lies the Lala Cami ("Tulip mosque"). A tale has it that its name is derived from a tulip of particular beauty, which the builders received from a pupil of the Djagha Beg Madrasa; proceeds of its sale then allegedly enabled him to build the Lala Cami. The building, which lies in ruins and does not bear any inscription so that nothing is known about its construction and original use, apparently was not a mosque at the outset; during the Il-Khansid period it served as the mint, but was used as a mosque later,
probably still in the 14th century, as is shown by its
in the Imaret ward, lies the tomb of Shaykh Suley-
sect, and one of his followers, Baba Ilyas, had been

I. 7, and in the plural, larifis, meaning "written" papyrus" (Suru VI, 91). Sometimes a genuine Arabic word is used: warab al-basab, "reedy sheet", and warab al-bard, "sheet made of the papyrus plant" (see KASAN, PAPYRUS). The Arabs attribute the invention
of the kirfa, "papyrus", to the biblical Joseph (Ibn Kula$h, Ma'ârif, Göttlingen 1859, 274 etc.). Nothing is said about its production. Only in the Fihrist
of Ibn al-Nadîm (d. 890/900, 21), and in al-Ebrîni's
India, 81, completed in 142/1039, are there two statements: that kirfas is obtained from the reed of the papyrus (basab al-bard), or else from its pulp (ubab al-bard). Only in the 7th/13th century after the termination of the production of papyrus in the
out the split of the papyrus in two parts, cut [the pulp obtained thereby] into strips, put them [crosswise, in two layers] on an even
pad made of wood, spread saw on them which they
got an even [piece].

Kirfas was not usually sold as pieces, but rather as
rolls of pieces stuck together. From these rolls, pieces
could be cut, irrespective of the glued joints which
were usually not visible. The smallest piece used in
trade was a sixth of a roll, which was called a jumaa
(Greek τομάκον) or jumaa kirfa (Greek τομάκον τομάκον)
on the front surface [reco], the strips of the papyrus ran horizontally, hence parallel to the
writing, while on the reverse surface [here], the strips ran vertically. In the early 'Abbasid period several sheets were, sometimes, bound into a booklet [kurı-
rise]. Because of the high price of the material, it
was usual to write on the reverse surface as well as
to wash the written papyrus and write on them again
(thus forming an epitograph or palimpsest). The sizes of the sheets were probably generally the same
as those of the Ancient World. The usual size was
30-40 cm. high and 20-30 cm. wide, but the width
later was increased. The manufactures producing
the different kinds of papyrus were run by the government
and were under governmental supervision; it
means that this governmental control was certified
by an official note on the back side of the first
sheet of a roll.

The word kirfas did not remain confined to

Probably his reading was as little established by its
reader, al-Kisa'I, as were the others by their
readers. This was first done by al-KisiYs pupil
AbG ‘Ubayd
when he compiled 32 bird35t.
As in parallel cases, the Mufradai al-KisaH, which
exists in Ms. Tehran University 4867,1 (M. T. DanishPazhuh, xiv, 3897), could be a later extract from
the Shifibiyya, the Taystr or a similar work (see
R. Sellheim, MaUrialien sur arabischen LiUraiurgesehickte, Wiesbaden 1976, i, 38 f.).
Of al-KisiTs 14 or 15 works enumerated in the
Fihrist, 63 ff., 163—for some of them, see Azhari,
Tahdhib, 13 ff. and Zubaydt, T^ba^ai, 278 (or should
wc read Slbawayh here instead of al-Kisa’I?)—noth¬
ing apparently has come down to us. According to
the titles, they were devoted to questions of gram¬
mar, lexicography and the Kur'Sn, and also of poe¬
try, of which he allegedly dkl not have much know¬
ledge (YikOt. Udato', v, 193; Ibn Khallikan. ii,
457)- According to Brockclniann, 1, xi8, S I, 178,
three other treatises which are connected with his
name and are lacking in the enumeration of the
Fihrisi, have been preserved: Kisalafi lafrii al-ldmma
Th. Ndldeke, ibid., 111-15, *Abd al-‘AzIz al-Maymanl,
Cairo 1925, and R. ‘Abd al-Taww&b, Latin al-'atntna,
Cairo 1967, 111 f.)l Kitdb al-Mutaskabth fi 'l-Kur’dn
(other niss. e.g. in £ihiriyya ('Izzet Hasan, Rurtn,
391], Chester Beatty (A. J. Arberey, 3165,1] or Bagh¬
dad, Awkaf [*A. al-i>iuburl, i, 144, no. 43;]; a remark
on the faliik formula in a verse (British Museum
(Ch. Rieu, Supplement 1203, 12]), preserved in detail
in Zaijgji&I, op. cd., 338-42 (for similar traditions,
see e.g. Marzub&nl, Muklabas, 285, Ta>i*£ Baghdad,
xi, 406).

KISA* (see libAs]
KISAT,
al-DIn Abu ’l-Hasaw, a Persian
poet of the second half of the 4th/ioth century. In
some later sources his kunya is given as Abu Isfc5k.
but the form given above can be found already in an
early source like the Tahir makdla. The Dumyai
al-kaft by al-Bakharr.1 contains a reference to the
"solitary ascetic” {al-mudflahid al-mukim bi-na/sihi)
Abu '1-Hasan CA11 b. Muhammad al-Kis&’l of Marw
who might very well be identical with this poet (cf.
A. Ate?, gmf to his edition of Kildb Tarcuman al
balaga, 97 <•). The pen name Kisa*! would, according
to ‘Awfi, refer to the ascetic way of life adopted by
the poet, but it can also be explained otherwise,
c.g. as a nisba derived from the trade of tailoring.
From the very beginning the title al-Uahim has been
attached to his name.
His origin from Marw is confirmed by the early
sources. It is also certain that he made at least a
part of his career as a poet in that city. In one of his
poems, a lament of old age, he has inserted a precise
dating of his birth: CahArsfcamba, 26 hhawwil 341
(Wednesday, 16 March 953) as well as the statement
that he had reached the age of fifty. From this
poem, the conclusion has been dra vn that he
must have died in or shortly after the year 391/
rooo-x. The actual date of his death is, however,
unknown.
The diwan of Kisa^i was still extant in the 6th/i2th
century. After that time, its transmission appears to
have been discontinued. Hardly any complete poem
has survived. The fragments that have been collected
so far from a great variety of sources are generally
not longer than a few lines. It is, therefore, difficult
to assess the statements concerning the nature of his
work that have been made both by ancient and mod¬
ern writers. It can be regarded as certain, anyhow,
that Kis4*I did enjoy a great reputation as a religious
poet during the two centuries following upon his
death as well as in his own lifetime. *Awfi describes
him in the first place as a poet who practised the
genres of devotional poetry (zuhd) and religious admoniticn (ua'jj. and quotes a few specimens of his
eulogies {nuxndbib) on the members of the House of
the Prophet. The Kildb al-Nahd, an apology of the
ImimI §hl‘a written about the middle of the 6th/
lath century, establishes Kisa*! with some emphasis
as a Shin poet.
The Ismanil poet NA$ir-i jvhusraw (died ca. ±bsl
1072), who cultivated the same genres as KisS^i,
acknowledged his indebtedness to this predecessor,
indirectly, by using u claim to the superiority of his
own poems over those by Kisi*! as a topes of the
epilogue in a number of bapidas. As E. G. Browne
has pointed out, these instances of poetical fakhr
need not be takon as evidence of a sectarian contro¬
versy between these two poets (as it had been sug¬
gested by H. Eth6). The opposite conclusion reached
by Sa(Id Nafi&l—namely, that they both belonged to
the same branch of the $hlca—is equally untenable.
The exchange of poems between KisaT and Nk$ir-i
Khusraw quoted by Rida-Xull Khan Hid4yat from
tiie Khuldfol al-a^dr by TakI Ka-ibl, is an ana¬
chronistic forgery made up from poems that actually
belong to the diwdti of the latter only.
The paucity of the primary sources available now
does not permit us to estimate how far Kxsi^ spe¬
cialised in the writing of religious poetry. It is also
impossible to define the social groups to which he
addressed himself in these poems. It is evident, on


The other hand, that he did not stay slow entirely from the prose frame of practice of poetry. He was patronised by a minister of the Sāmānīd a-mīr Nūḥ b. Mansūr, and in his latter days he wrote at least one panegyric ode to Sultan Muhāmād of Ghazna. Āhwī praises his descriptions and quotes several specimens which show that Kībāt used all the poetical themes current in his age.

**AL-KISĀT, ṢĀHIR KĪSĀT AL-ARABIYA**, unknown author of a famous Arabic work on the lives of the prophets and pious men prior to Muḥāmād. Some minor passages of this manuscript were first edited in 1898 by I. Eisenberg in his thesis on Muḥāmād b. ‘Abd Allāh al-Kīsāt. A complete edition was published in 1922.

In his thesis, Eisenberg tried to prove that the author of the *Kīsāt al-arabiya* was the well-known philologist al-Kīsāt, to whom Hārūn al-Raḍādī had entrusted the education of his sons al-Āmīn and al-Māmūn. But what renders this identification impossible is that Ibn al-Nadīm in his *Fihrist* does not make any allusion to any book of the philologist, the contents of which could have been the legends of the old prophets; furthermore, the name of al-Kīsāt the philologist is Abu 1-Hāsān ‘All b. Hāmūz, and not Muḥāmād b. ‘Abd Allāh, as indicated in the text edited by I. Eisenberg. Thus the identity of the author of the *Kīsāt al-arabiya* remains an enigma.

Moreover, recent enquires into the subject have proved that the legends of the poets as written down in the numerous manuscripts of al-Kīsāt’s *Kīsāt al-arabiya* belong to the popular narrative tradition of medi eval Islam and can be compared with works such as the romance of ‘Antar, so far as the narrative style is concerned. So it would be of little use to search for an individual author al-Kīsāt who could have compiled the *Kīsāt al-arabiya* at a certain date; he is as vague a figure as the narrator al-Aṣmāt in the romance of ‘Antar. The medieval story-tellers (*bīsyyā* [see *Kīsāt*]) apparently held al-Kīsāt’s *Kīsāt al-arabiya* in high esteem; but they were not anxious to preserve one standardised text of the legends. It is for this reason that the manuscripts, the oldest of which date from the early 13th/14th century, differ considerably in size, contents, and even arrangement of the stories.

The legends of the pre-Islamic prophets as related in these compilations under al-Kīsāt’s name, or handed down unto us in many other anonymous manuscripts, must be considered as the vivid expression of the religious feeling of the average medi eval Muslim. It is in this respect that al-Kīsāt’s *Kīsāt al-arabiya* are sources of great value for scholars who want to carry on further investigations of the popular religious life of the Islamic world, a task which has been somewhat neglected up till now.

**KISANGANI**, the former Stanleyville, is a city now of well over 250,000 inhabitants, the third city in Zaire, and the capital of the province of Upper Zaire, formerly Province Orientale. The most important urban centre in north-eastern Zaire, it is situated on the bend of the river Zaire, formerly called Luapula (upstream) and Congo (downstream from the city), just where it turns west and a few miles north of the equator.

In 1877, Henry Morton Stanley set up camp here to rest from the exhausting weeks during which he negotiated the seven cataracts still called Stanley Falls. In 1882, Hamed Muhammad al-Murjebi, better known as Tippu Tith [q.v.], founded a town on the northern shore of the island in the Zaire river that was formed by a creek called the Abibu. The new settlement, about 1500 in number and all nominal Muslims, called their town Kisangani, Swahili for “On the sandbank”. In 1883, Stanley returned with instructions from King Leopold II to found a government station at the upper end of the navigable part of the Congo river. This became Stanleyville, with its centre on the right bank just north of the original Kisangani. By that time the Muslims (called “Les Arabias” by the administration) had settled on the left bank, calling their new town Kisangiti, Swahili for “On the threshold”. Their language of culture and literature is Swahili; their tribal background is mainly Kusu, Teetea and Genia, the Genia (Wagenia) being the original inhabitants of Wangi Rusari and Wanye Lesali, the island of which Kisangani formed part. Stanleyville became an important trading centre, exporting coffee, cocoa, palm oil, timber and ivory. Moreover, Kisangani has a university; it was part of the polity of authenticity of President Mobutu to replace the name Stanleyville by Kisangani as the name for the whole city.
The Muslims flourished with the city. More adaptable to urban culture and more conscious of their cultural dignity than the tribal peoples, they were more self-confident in their attitude vis-à-vis the Europeans, since their religion claimed equality with Christianity. The Belgian Congo government tried to restrict the activities of the Muslim missionaries, but could not prevent Islam from spreading to the country districts south of the city. The Muslims called themselves Waungwana "free men," the name by which all the Swahili peoples once called themselves. Their language is called Kiswahili, a dialect of Swahili (q.v.). This Swahili became the lingua franca of the entire country east of the Lomami river.

Always rebellious against the colonial administration, the Muslims were among the first groups to form a nationalist party about the time of independence, sc. the Mouvement National Congolais, from which the late Patrice Lumumba drew an important part of his support (he was a Tetela himself). No longer isolated, the Muslims in Kisangani, although they number only some 10,000, are in contact with, and receive support from, those in Egypt, Arabia and Pakistan. Two neighbouring states, Uganda and the Central African Empire, have been ruled by Islamic governments until 1979.

**Notes:**

2. Muhammad takes it for granted that the bloodvengence of Arab paganism—in which in contrast to the unlimited blood feud, definite retaliation, although not always on the person of the doer himself, forms the essential feature of the vengeance (cf. Froekobs, *op. cit.*, 6 and n. 5)—is a divine ordinance with the limitation assumed to be obvious, that only the doer himself can be slain: Kur'an XVII, 35; XXVIII, 63; VI, 152 (cf. 6141, i, 1; in these passages only the *justice talionis* can be understood by the right to kill another; already in XVII, 35 the avenger of blood is forbidden to kill any one other than the guilty one); II, 173 ff. (before Ramaçan of the year 2): "To you who are believers the *ki dads* is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone is pardoned anything by his brother, he shall haveendum... pardon is the abandonment as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In *ki dads* you have life, you of understanding..." (the first verse says that a free man can only be slain for a free man, a slave for a slave and for a woman only a woman [but probably a slave or a woman for a free man, but this is not expressly stated and must be deduced], naturally, of course, only the guilty one, and that in all other cases the payment of compensation (*diya*) takes place. This is an extension of what is presumed in the earlier passages: the treatment of the free man in relation to the slave is a matter of course, according to old Arab views, and that of the woman, which cannot be completely explained from them, represents an independent decision of Muhammad's based on them (there is quite a different interpretation of the verse in Froekobs, *op. cit.*, 23 u. 5). The commentators have difficulty in reconciling the passage with later developments (cf. below, 4). Only one explanation, thrust into the background and later completely abandoned, interprets the verse quite correctly, but makes it abrogated by v. 49 (see below). By "prescribed" is meant not a duty but a rule not to be transgressed; pardon is the abandonment of *ki dads* with a demand for compensation instead; the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood-feud of pagan times, because only the guilty one is slain and the life of the innocent thus preserved; v. 49 (after the first encounter with the Medinan Jews, but before the outbreak of open hostilities): "and we have prescribed for you (the Jews) in it (the Torah): a life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and *ki dads* for wounds; but if anyone remits it, it is an atonement for him (i.e. for his sins)..." (this verse of course does not cancel II, 173). In the years 3-5, with IV, 94 ff. there came the distinction between deliberate and accidental killing (cf. 6141, i, 1); in this the application of *ki dads* is excluded. In II, 190 (before the campaign of the year 6), *ki dads* is used metaphorically in the sense of retaliation of like with like (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the *Sira*, the records of the life of Muhammad, are in agreement with this. In the so-called constitution of the community at Medina, which belongs to the early Medinan period, it is laid down that if any one slays a believer and is convicted (proof of guilt in a trial before the authority—Muhammad—is therefore required as a condition for the carrying out of *ki dads*), talion takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the
murderer and must take an active part against him. Here the hikay is brought from the sphere of tribal life into that of the religious-political community (umma), which finds an echo in the law, not however to be taken literally, that believers are one another's blood-avengers for their blood split for the sake of Allâh; but it is also throughout recognised as a personal vengeance, as is also laid down in the case of the Medina Jews, and no-one is to be prevented from avenging a wound. A limitation of hikay, legal from the standpoint of the umma, lies in the fact that the believer is forbidden in the ordinance of the community to kill a Muslim on account of an unbeliever. On two occasions, when Muslims had killed heathens who had however treaties with Muhammad, he did not allow hikay to be made "because they were heathen" (this does not in any way follow from the ordinance of the community), and even paid the compensation himself; his utterance regarding the possibility of hikay a propos of the second of these cases is, however, illogical. On two occasions, also for political reasons, he obtained the acceptance of compensation when the avenger of blood undoubtedly had the claim to hikay, but in one case he cursed the murderer—again an illogical attitude. Muhammad in his turn added the blessing for the murder of heathens, in keeping with the regulation of the ordinance of the community, abandoned his claim to compensation for the slaying of a nephew of his, which had taken place during the heathen period. In this connection, he is said to have laid down the principle that any blood-guilt attaching to a Muslim dating from the period of heathendom was to be disregarded (cf. katti, i, 2). But Muhammad also intensified the operation of hikay, and on two occasions had the murderer executed, when there were aggravating circumstances, without offering the avenger of blood the choice between hikay and compensation; the proscription and execution of murderers who were also mu'addid (v.g.: cf. katti, ii, 5), is however to be interpreted differently; from everything, it is clear that Muhammad also supervised the carrying out of hikay.

Taking the evidence of the Kur'an and the Sîra together, it is evident that Muhammad did not recognise the blood feud, but allowed hikay to survive as personal vengeance. Moreover, he subjected its application to certain limitations and endeavoured to free it from tribal customs of pagan times, all important advances by which it was brought nearer in character to a punishment. That Muhammad at the same time, according to the demands of the individual case, sometimes gave decisions deviating from his own rules, is intelligible.

4. Among the traditions (hadith) is one that must be genuine, according to which Muhammad had a Jew, who had smashed the head of a Muslim hikay (slave girl or young woman) with a stone, killed in the same way, because in this case there was no question of an avenger of blood. At a later period when Kur'ân, ii, 173 (cf. 2. above) was interpreted in a new way, the attempt was made to see in it evidence that a man might be killed as hikay for a woman, without observing that the tradition referred to an unbeliever while the Kur'ân passage was only concerned with Muslims. But this Kur'ânic prescription regarding the woman was very early neglected and interpreted differently; it is true that 'Umar b. 'Abd al-Azîz, al-Hassan al-Basîrî, Qatîb and al-'Itrîna are quoted as representatives of the Kur'ânic view that a man cannot be put to death for a woman (al-Zamâkîshârî's statements on the point are not quite accurate); at the same time it is remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the law-sCHOOLS, the following is important. For the view that hikay could be inflicted on several, on account of an alleged murder, if they had committed the crime jointly, no unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the hikay is to be executed is also disputed; the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muhammad's. There are also varying opinions as to whether a man can be put to death on proof by kasdima (cf. 5. below), and ancient authorities are quoted for both; the historical truth is perhaps that Muhammad wished to apply basâima in a case of bloodshed and when it could not be managed, paid compensation himself; besides it is said (certainly wrongly) that he confirmed basâima as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there was only hikay and no possibility of paying compensation (this is wrongly cited in explanation of Kur'ân, ii, 174) and that Muhammad granted the blood-avenger's request to abandon claim to hikay, laid great stress on forgiveness, and even asked him to do so (cf. above 3.—in these historically certain cases, however, his attitude was influenced by purely political considerations); finally, we are told that he who raises a claim for blood without cause is one of the men most hateful to God. Other traditions agree with the regulations (cf. 5. below), and ancient authorities are marked that traditions expressing the rejected view are not quite accurate); at the same time it is clearly seen in the regulations—disputed in points of detail—prescribed for the case when the avenger in any way mutilates the murderer and only occasionally the idea of punishment by an authority for the sake of justice crops up. (Thus in all cases of culpable, illegal slaying in which hikay cannot take place, a tercer intervenes; the competent authority is therefore regarded as the wali of one who has no wali; therefore anyone who kills a dhimmî, mudâhâd (unbeliever connected with the Muslim state by a treaty) or a mudâhâdîn

Katâda had held the opposite view (ibid.), and the latter opinion prevails in the law-schools without any opposition (al-Zamâkîshârî's statements on the point are not quite accurate); at the same time it is remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the law-schools, the following is important. For the view that hikay could be inflicted on several, on account of an alleged murder, if they had committed the crime jointly, no unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the hikay is to be executed is also disputed; the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muhammad's. There are also varying opinions as to whether a man can be put to death on proof by kasdima (cf. 5. below), and ancient authorities are quoted for both; the historical truth is perhaps that Muhammad wished to apply basâima in a case of bloodshed and when it could not be managed, paid compensation himself; besides it is said (certainly wrongly) that he confirmed basâima as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there was only hikay and no possibility of paying compensation (this is wrongly cited in explanation of Kur'ân, ii, 174) and that Muhammad granted the blood-avenger's request to abandon claim to hikay, laid great stress on forgiveness, and even asked him to do so (cf. above 3.—in these historically certain cases, however, his attitude was influenced by purely political considerations); finally, we are told that he who raises a claim for blood without cause is one of the men most hateful to God. Other traditions agree with the regulations (cf. 5. below), and ancient authorities are marked that traditions expressing the rejected view are not quite accurate); at the same time it is clearly seen in the regulations—disputed in points of detail—prescribed for the case when the avenger in any way mutilates the murderer and only occasionally the idea of punishment by an authority for the sake of justice crops up. (Thus in all cases of culpable, illegal slaying in which hikay cannot take place, a tercer intervenes; the competent authority is therefore regarded as the wali of one who has no wali; therefore anyone who kills a dhimmî, mudâhâd (unbeliever connected with the Muslim state by a treaty) or a mudâhâdîn
Sharfa; and this is the case with a Muslim, for the killing of one, according to Abu Hanifa, in the Shafi'i school. Several may be put to death if he has deliberately slaughtered his descendant, and this view is also admitted in the Shafi'i school. Several may be put to death for the killing of one, according to Abu Hanifa, Malik and al-Shafi'i, if they have done the deed together, provided the part taken by each was such that if he had acted alone, the result would have been the same (Malik alone excluded hadāma [cf. below] on the basis of which, according to him, only a single individual can be put to death). There is unanimity on the point that anyone who has killed several people is liable to hadāma; on the question whether compensation has also to be paid there are different views.

Kifsī can only be applied after definite proof of guilt is brought. The procedure of proof in a murder trial is essentially the same as in another case; in Kifsī fi 'l-nafa there is however also the old Arab institution of the hadāma [cf. hadāma and Goldhauzer, Zeitschr. für vergl. Rechtswissenschaft, viii, 421 ff.; Wellhausen, Reste arabischen Heidentums, 187 ff.], which Islam allowed to survive (cf. above); according to Malik, Ahmad b. Hanbal and al-Shafi'i's earlier opinion, hadāma can be inflicted on the accused (but according to Malik on one only) if the hadāma is performed and the other conditions are fulfilled; according to Abu Hanifa and the later view of al-Shafi'i, which became predominant in his school, he has only to pay compensation (among the Shawfields with the limitation that he may be put to death if in the course of the trial the accuser swears to his guilt twice with fifty oaths each time. If the person entitled to inflict hadāma does so without previous judicial proof he is punished with ta'zir.

The execution of hadāma is open to the avenger of blood, and according to Abu Hanifa consists in beheading with the sword or a similar weapon; if the avenger slays in another fashion he is punished with ta'zir, but not imprisoned. According to Malik and al-Shafi'i, the guilty person, with certain limitations, is killed in the same way as he killed his victim; both views are given by Ahmad b. Hanbal.

Kifsī takes place—among other conditions—only when the rest of kin (soul) of the slain man or the owner of the slain man, if he was a slave, demands it. If there are several (equally nearly related) avengers of blood, all must express this desire; if one of them remits hadīs, the refusal affects all. Views are divided on the case where the avenger of blood (or one of several) can give no definite expression of opinion. The wall, or the wounded man before he dies if the case occurs, is permitted to remit the hadīs and he is even urgently recommended to do so, either in return for the payment of compensation or for another equivalent or for nothing. There are many special regulations on detailed points and many differences of opinion between the schools of law.

6. Kifsī fi-mal dān al-nafa according to the Shar'i'a. If any one deliberately (with 'amal, opposite of hadīs; cf. Kifsī, i, 5) and illegally (this excludes the wounding of one who tries to murder or injure or rob a fellow-man, if it is not possible to repel him otherwise; it is for example permitted to strike someone in the eyes or throw something in the eyes of a man who forces his way into another's house without permission) has inflicted an injury, not fatal, which could be inflicted on the doer's person in an exactly similar way (what is meant by this is very fully discussed in the Fiqh books), he is liable to hadīs on the part of the wounded man, (except that Malik makes it be inflicted by an expert), if the conditions necessary for carrying out the hadīs fi 'l-nafa are present with the following modifications: according to Abu Hanifa, hadīs fi-mal dān al-nafa is not carried out between man and woman or slaves among themselves, but it is accord-
to Málik, al-Shafi’i and Ahmad b. Hanbal; Abū ɻanḍāl and Málik further allow no کیشا = "story", see 51859. Very famous and widely-spread books on this subject were the أردو الكودياس by Abū ɻabd Ahmad al-Tha’labī (d. 427/1036) and the different versions of the کیشا written down in the name of a certain Muhammad b. ‘Abd Allāh al-Kiṣa’ah (see کیشا al-anbiyā’). The origins of this type of literature must be traced back to pre-Islamic Arabia. Knowledge of the stories of the Old and New Testaments and the apocrypha must have been transmitted to the Arabs through the Jewish influence in Yathrib and through Christian missionary work, the effect of which can be ascertained not only in the regions close to the Byzantine and Sasanid empires, but also on the shores of the Red Sea and in South Arabia (see Pfister, in Islamica, iv (1931), 506 ff.; Altheim and Steinhöfel, Die Araber in der Alten Welt, iv, 306 ff.; v1, 316 ff.). Umayya b. ɻ-Salh, a poet of al-Athrī and contemporary of Muhammad, seems to have made use of some of these oral traditions; there are pieces of poetry ascribed to him dealing with Abraham, Isaac, the Deluge, etc., though their authenticity remains doubtful.

It was the Prophet of Islam who gave to these legends an entirely new meaning, finding the events of his own life reflected in them; his vocation for prophecy, his being rejected by his own people, the impending punishment, which might have meant the destruction of his own people. All these psychological implications of the Kur'ānic legends, and their didactic aspects, were studied at length by Khalafallāh in his book on the Kur'ānic art of storytelling. From the Muslim point of view, the lives of the pre-Islamic prophets are awful examples (کیشا) warning against the evil fate of those who are disobedient to God and His messengers. Thus the کیشا al-anbiyā’ became part of universal history, as history in general was often considered as a series of کیشا (cf. ɻabh, ɻilāt, preface and pre-Islamic period).

The edifying character of the legends became even more strongly pronounced; they now served for didactic aspects, for the religious feeling and thinking of the average mediecal Muslim. The historical sources allude to the activities of the کیشا since the first Islamic century, but the oldest manuscripts of the popular legends date from the 7th/8th century. In certain circumstances, the activities of کیشا and the legends of the prophets could acquire a political significance; thus the story about Moses and Pharaoh was used in the anti-Umayyad propaganda, and the early Shīʿīs held that the history of the Muslim community was similar to that of the Israelites during Moses' lifetime, the Shīʿīs being the equivalents of those few who did not apostatise from the true faith when Moses was up on Mount Sinai.

Bibliography: al-Tha’labī, ‘Arōd al-mudālidīs fi ḳiṣaṣ al-anbiyā’, Cairo 1321/1902-8; al-Kiṣa’ah, volved (on the etymology of کیشا = "story", see 51858). Very famous and widely-spread books on this subject were the أردو الكودياس by Abū ɻabd Ahmad al-Tha’labī (d. 427/1036) and the different versions of the کیشا written down in the name of a certain Muhammad b. ‘Abd Allāh al-Kiṣa’ah (see کیشا al-anbiyā’). Kīšāš al-anbiyā'- Kīsh

Kīsh, the later Sādr-ī Sārūsh, a town of mediaeval Transoxania, now in the Uzbeki- stan SSR and known simply as Shahr, but in early centuries given various Chinese renderings of the town's name. (see Dar-ī Amānīn[), which guarded the approaches to the Oxus. Further down the Kījafrākhka Darya lay Našal or Nasāf or Buldūn, (see Kāšān), a town with which the fortunes of Kīsh were often linked.

Kīsh was clearly an important town in pre-Islamic Soghdia, and had its own prince. According to Yaʿqūbī, Buldūn, 299, tr. Witf, 122, at the time of the Arab conquests in the early 8th century, Kīsh was the chief town of Soghdia and was accordingly, by the common process of applying the name of a district to its main urban centre, actually known as Soghd also. It appears in several Chinese sources, e.g. in the travel account of the early 7th century Buddhist pilgrim Hiucn-Tsang as Kie-siang- kaksi, Karšī (see a town with which the fortunes of Kīsh were often linked.

When the Western Turks were defeated in Central Asia by the Chinese invasion of 615-8, the Chinese forces are said to have penetrated as far as Kīsh and London 1888. i, 82, and accordingly, by the common process of applying the name of a district to its main urban centre, actually known as Soghd also. It appears in several Chinese sources, e.g. in the travel account of the early 7th century Buddhist pilgrim Hiucn-Tsang as Kie-siang-kaksi, Karšī (see a town with which the fortunes of Kīsh were often linked.

Haydar Türe, his son Náhir Alláh and the latter's son Múzaffar al-Dín all repeatedly tried to reduce Shahr-i Sabz, and in 1856 temporarily captured it. It only lost its virtual independence in 1870, when the Imperial Russian General Abramov was sent by Kaufmann against it. He besieged Shahr-i Sabz, and captured it after fierce resistance. The Beg fled to Khókand, and the Russians landed over Shahr-i Sabz to the Khán of Búkhárá. See E. Schuyler, Turkestan. Notes of a journey in Russian Turkestan, Khókan, Búhkara and Káldája, London 1876, i, 245 ff., ii, 62-76 (who estimated the population of Shahr-i Sabz at approximately 20,000, and that of Búkhárá 15,000), and F. H. Skrine and E. D. Roso, The heart of Asia, a history of Russian Turkestan and the Central Asian Khanates from the earliest times, London 1899, 314-5, 220-2, 256.

In the 20th century, Imperial Russian and then Soviet scholars have shown considerable interest in the place and its antiquities, and a full-scale archaeological and architectural survey was commissioned in 1947; special attention has been directed to the imposing ruins of Timúr's Ağ Sarày, to a mosque built by Ulugh Beg and to the two buildings known as the Dár al-Siyâd and the Dár al-Tiilâwa. For a detailed description of these and the other surviving monuments, see M. E. Masson and G. A. Fugačenkov, Khâshë Siyâh pri Timûr' i Ulug Šubâ, in Trudi Sredneasiatskogo Geograficheskogo Obshchestva, xlix (Tashkent 1935), 77-96, Eng. tr. J. R. Rogers, in Iran, Jnl. of the Brit. Inst. of Persian Studies, xvi (1976), xvi (1980), and also BSE, xlvii, 557-9.

(C. E. Bosworth)
the name for the Umayyad palace in Jordan. It is presumably that of "winter residence", mushtatta.

In Persian, approximate synonyms to highâh and yâyâh are sarâsâr (in "coast region") and sarâsâr (in "sea region"). But as well as denoting the seasonal pasture grounds of nomads, these Persian words were early used as geographical terms to denote, on the one hand, cooler, temperate highland regions, and on the other hand, hot, desert-type or subtropical lowland climates. Already by the time of the classical Arabic geographers, these topographical terms had been borrowed into Arabic, e.g. Ibn Hawkal and Mukaddasi. Thus the geographers use garmsâr or its arabised form djârm, pl. djârîm, for the hot, coastal region of the Persian Gulf shores and the regions bordering on the great central desert, and sarâsâr, arabised form sard, pl. sardîr and masâîrîd, for the mountainous Zagros hinterland of Fars and Kirman (cf. Le Strange, The lands of the Eastern Caliphate, 249). This distinction is carried further into the realm of their characteristic products, called by e.g. Mukaddasi al-sarâsâr al-mutaddâda "products of the two opposing regions" (cf. A. Miguel, Ahsan al-taâqâm, traduction partielle, Damascus 1963, Glossary 390, 404-5), and of local populations (cf. the Djurumiyya, inhabitants of the part of the former region). Khalîr is mentioned as the name for the Umayyad palace in Jordan, Mufcat, or in Arabic, Diazlra-vi Kishm, in Muharrara 1354/April 1935 to humour the wishes of Rida Shah.

In 1229/1814-5 the Mas'âkat garrison was evacuated from Kishm by the Banâ' Ma'ânî and the Kawâsîm in combination. Subsequently, the Banâ' Ma'ânî joined the Kawâsîm in piratical attacks upon British-Indian shipping, and in reprisal their stronghold at Lâf, on the northern coast of Kishm, was attacked and destroyed in Shawwal 1224/November 1809 by the British expeditionary force sent from India to subdue Ra's al-Khayma and the other Kasîm ports. After the reduction of Lâf, Kishm island was returned to the authority of the ruler of Mas'âkat, now Sa'îd b. 'Alî, and his sons, however, maintained that his father, Sultan b. Ahmad, had acquired title to Kishm by right of conquest, and that the island had passed to him in full sovereignty. It was not listed among the dependencies of Bandar 'Abbâs in the original firmân granting the island to Maskat; nor was it mentioned in any of the annual receipts for the rental of Bandar 'Abbâs. When the British detachment was withdrawn from Kishm—because of the island's unhealthiness and the danger of the detachment's becoming involved in military operations on the Arabian mainland—the sovereignty issue was left unresolved. In Rabî' II 1239/December 1823 a stores depot for the Gulf squadron of the Bombay Marine was established at Basidu, at the western end of Kishm, without protest from the Persian government.

The Mas'âkat: lease of Bandar 'Abbâs and its dependencies was renewed in Shawl 1274/April 1856, shortly before Sa'îd b. Sultan's death. Kishm and Hurnuz were declared to be Persian islands, and were classed as "dependencies" of Bandar 'Abbâs. The lease, which was restricted to Sa'îd and his sons, was terminated in 1283/1866-7 after Sa'îd's successor, Muhammad b. Sa'îd, had been murdered by his son, Sâlim. A new lease of eight years' duration was awarded to Sâlim in Dhu'dhul Hijjah 2, 1285/August 1868, only to be rescinded two months later when Sâlim was overthrown. Despite attempts by Turfî b. Sa'îd after his accession in 1288/1871-2 to renew the lease, it was never granted again.

The British stores and coaling depot at Basidu fell into gradual disuse, and it was finally abandoned in Muharram 1334/April 1935 to humour the wishes of Rida Shah.

S., viii (1858); Selections from the records of the Bombay Government, new series xcv ... the Persian Gulf, Bombay 1856; L. Pelly, Remarks on the port of Lingel, the island of Kishm, and the port of Bandar Abbas and its province of Kishm. See also: L. Pelly, "Kishm", in glass 12, no. 202, March 1858.
KISHN, a small town on the south coast of Arabia, some 40 miles west of Ra's Fartak. Formerly it was the mainland capital of the Mahri sultanate of Kishn and Sukutra (Socotra), which up to 1387/1967-8 formed part of the Eastern Arabian Protectorate. After that date it was designated the sixth governorate of the People's Democratic Republic of Yemen.

The inhabitants of Kishn live mainly by fishing, pastoralism, and trading, the principal exports being frankincense, dried fish, and salt. The ruling family, now dispossessed, was the Bin 'Afrar clan of the Mahra. The reigning sultan, from the senior branch of the family, traditionally resided on Sukutra, while the head of the cadet branch acted as his deputy at Kishn.

Kishn was several times raided by the Portuguese during their operations off the Hadrami and Mahri coasts between 1305/1888 and 1385/1966-7. The period of Portuguese activity coincided with a successful war of conquest by the Khalif sultans of Shibr against the Mahra, which culminated in the capture of Kishn in 952/1545-6. The Bin 'Afrar appealed for help to the Portuguese, who responded by expelling the Khalif from Kishn, reputedly in Safar 953/April 1548.

A revival of Ottoman interest in South Arabia after 1287/1869-70 led the British authorities in Aden to secure an undertaking from the sultan of Sukutra and Kishn in Dhu al-Hijjah 928/January 1876 not to alienate Sukutra or its island dependencies to any foreign power. A treaty of protection followed in Rabi'ah 1288/April 1868, which was extended in Sha'ban 1304/May 1888 to include Kishn and the mainland dependencies. The treaties lapsed when British rule over Aden colony and protectorates ended in 1897/1967-8.

KISMA (a.), Kismet (t.), a term used for "fate, destiny". In Arabic, kisma means literally "sharing out, distribution, allotment", and one of its usages is as the arithmetical term for "division of a number". It later came to mean "portion, lot!", and was then personified to denote "the portion of fate, good or bad, specifically allotted to and destined for each man". It is in this final sense, and especially via Turkish, that kismet has become familiar in the West as a term for the fatalism popularly attributed to the Orient (the first attestation in English being, according to the Oxford English Dictionary, in 1849; see also K. Lochotzki, Etymologisches Wörterbuch der Europäischen ..., Wörter orientalischen Ursprungs, Heidelberg 1927, 95, No. 1187).

As noted by H. Ringgren, the noun kisma does not occur in the Qur'an in this sense (Studies in Arabic fatalism, Upsala-Wiesbaden 1955, 206), but only in its basic sense of "division, appointment" (IV, 98; LII, 22; LIV, 28). In a verse like XVII, 14, the word fā'ar, originally 'bird of ill omen', seems to convey the idea of a man's personal destiny as decreed by God (elsewhere in the Qur'an, this word means rather "evil augury"), cf. Ringgren, op. cit., 57-9; and T. Faud, La divination arabe, Lekden 1966, 218, 434-6, 518. Concerning the more usual terms of early Islamic theology and philosophy for "determinism, predestination", see KAF and AL-KADA' WA L-KADAR; however, it should be noted that kisma makes an appearance in Arabic poetry of the 1st century A.H. (Um'mar b. Abi Rabī'a, Rāmīl) in the sense of "the share of human life allotted to a man by God" (Ringgren, op. cit., 153, 156).

By Ottoman Turkish times, kismet was less a theological and philosophical term than one denoting a general attitude of fatalism, the resigned acceptance of the blows and buffettings of destiny (the same concept being often expressed in Persian and Turkish poetry by words like yağlık, gârdun and târık in reference to the blind, irrational influences of the heavenly bodies of mankind). The climate of popular belief in fate and chance is well seen in many stories of the Thousand and one nights (see e.g. WA-LAYLA) and in much of the Perso-Turkish moralistic literature: thus these attitudes loom large in the stories in chs. v and vi of Sa'di's Bustân, on râdîl "acceptance" and hindarul "contentment" respectively.

Also in Ottoman usage, kismet was a technical term of the hâssâmîh, the official department of state responsible for the division of estates between the various heirs, the military branch of this being the hizmet-i vâkâyîyé meşhârîm. For this service, a fee called the rem-i kismet was exacted; for further details see KASAM.

KISRA, Arabic form of the Persian name Khusrav, derived from the Syriac Késor or Kêrsîr by the 6th century A.D. The consonant and vowel changes occurred because it was used for both k and k in Syriac, and used here for the Persian kh, became k in Arabic. The first f became i by vowel dissimilation in Syriac, and the final vowel became an alf nadžâra by approximation to the jîlîd form. Arabic lexicographers said there was no Arabic word ending in û with damma after the first consonant, so Khusrav was put in the jîlîd form and the k became t to show that it was Arabised.

Although Khusrav occurs in Arabic, Kisra was usually employed for proper names, especially for the Sasanid rulers Kísar Anûshârwan, Kísar Âparwîz (591-628 A.D.) and Kísar Aparwîz (591-628 A.D.). Because these two Khusrav dominated the late Sasanid period and Arab memories of it, their name was identified with the dynasty, Arabs came to regard Kísra as the name (ism), surname or title (lakab) of Persian kings, the Sasanid dynasty as the house of Khusrav (al Khusrav), and crown lands in 'Irak as arû Khisrâ. Women of the royal family were called "daughters of Kísra". By the 2nd/3rd century, the tendency to call all Sasanid rulers Khisra produced the broken plurals akhûsra (the one most commonly used), kâtasra, akásr, and kusar, all contrary to analogy.
Kisra personified Sasanid royalty for the Arabs, who viewed him with an ambivalent combination of envy, awe and fear. They called Ctesiphon Madā'īs, Kisra, the great audience hall there the Jawāl. Kisra, the excessive chit the Khaund, Kisra, spoke of the crown, treasure, dazzling carpet, sword and armament of Kisra, and associated polished manners, lavish hospitality, haum biqini, golden taberware and a mixture of power, with his coat. Kisra provided a symbol for Arab assimilation to Persian high culture, for feelings of common nobility, and represented the Persian monarch in lists of kings of the world and in the murals at Kuwayt 'Amra. He was a poetic symbol of past glory and of fate that overtakes even mighty kings.

Kisra's worldliness contrasted with Muslim spiritual values. Hadith emphasised Muhammad's lack of pretence, his avoidance of royal trappings, and his followers' greater respect for him compared to Kisra and other rulers. Kisra tore up Muhammad's writings, would spend their treasures. In the similar ascription, Kisra is the main enemy of Islam (the head of the hostile bird).

A fictionalised Kisra emerged by the 3rd/9th century as a vehicle for edifying tales, a person who was a poetic symbol of past glory and the destruction of Kisra and Khayr and that Muslims would spend their treasures. In the similar ascription, Kisra is the main enemy of Islam (the head of the hostile bird).

The ensuing article is accordingly divided as follows:

1. The semantic range of ḥisāṣa in Arabic.
2. The novel and short story in modern Arabic literature.

five occurrences out of 23 (XX, 8/9, LI, 24, LXXIX, easily substituted for the latter word in at least "he cited the badUh
lha'n), with a general meaning of "thing, affair" (— but one can point to some examples in the
four terms of very different origins converge here in the sense of "narrative, story, tale". Thus
Aafos out of the 17 in the singular (V, 30/27, VI, 34, VII, athbar (IX, 95/94, XLVII, hassa
in is clearly equivalent to similate it to that of Wf/A. It could be perfectly
but it is perfectly certain that the term's nuance of precision and exactness contained in
3, xxx, XXVIII title and v. 25), has been translated "story" in its five other attestations (III, 55/62, XII, 39/44, 51, X2X/X20, XVII, 99, XIX, 28), by the Kur'än in the derived sense of "to tell a story, narrate," or more exactly, "to give a circumstantial account of some happening, to recount an event by giving all the details successively"; this nuance is usually lost in translation, though it may sometimes be conveyed through an adverb like "exactly". One may note, with repetitions within the same verse, 19 occurrences of this verb; the account is given by God to the Prophet (IV, 16/16, V, 21, VI, 7/7, 9/9, xoi, XI, 200, 121/121, X, 3, 10, 11, 121/121, XVIII, 12/13, XX, 99, XL, 28), by the Kur'än (XXVII, 78/78) and by Moses to Shu'ayb (XXVIII, XXVIII, 25); Jacob tells Joseph not to recount his dream to his brothers (XII, 5); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35);
concerned with such requests (see also Gaudreoy-Demombryes, Le Syrie, p. XLIV; Dossy does not appear to have interpreted the material in the dictionaries relative to the written kiiswa in the same way as we have done, since he includes this term in his Supplement). Al-Kilaaqiband, in Subs., iii, 487-8, does not cite the kiissa-daar but provides some details about the manner in which kiiswa al-ma'adin were treated. Since some kiiswa began regularly to narrate stories which had no religious character at all, kiiswa, without ceasing at the same time to characterise a serious, even a historical narrative (e.g. the 27 ms. called kiisaat ghamaa'il "narrative of the expedition of . . ." Bein catalogue) tended to be applied to any story, sacred or profane, and to become a synonym of hikayya, and secondarily, of kaditi and khabar. As an indication, the above-mentioned catalogue has a total of 276 works beginning with kiisa; that of the ms. in the B.N. of Paris drawn up by G. Vajda has 115 (of which 75 have been restored according to their contents); hikayya appears there 47 times, kaditi 12 times and khabar 4 times. In the group as a whole, there are certainly some edifying stories (e.g. the kiisaat Ahl-al-KhaR), but titles like khasay Sulaayyan na'a Bisils or kisat Tumaddul reveal true romances. In this way, the modern use of the term is to be justified, and this, conversely, has brought about a revival of kiisa, now specialised in the sense of "narration", the narrative genre and the narrative art", leading to the creation of the word kaditi "narrative" (adj.). (Ch. Pellat)

2. In modern Arabic literature.

The modern and technical meaning of this word: "fictional narrative", "novel" has come to be accepted without eliminating the more general, older sense of "story", "account". Furthermore, it should be noted that, in this case as in many others, the neologism has not been immediately accepted and does not cover the same semantic field for all those who use it, even today. From the start, it is seen to alternate with other words.

In an article appearing in al-Ahrdm, on 21 May 1881, where the shaykh Muhammad 'Abdah drew attention, without otherwise developing it, to the taste of his contemporaries for the novel, we find the word ramdryaydl. The definition of the genre remains somewhat hazy since the eminent reformer included under this heading Kalila wa-Dinna and the stories of traditional adab along with the recent translation of the Aventures de Tléménque by al-Tahtawi and the serial stories then published in al-Ahrdm. Besides this borrowed term—which was not long to remain in use—there are words drawn from the Arabic vocabulary which come to mean the same as kiisa. Understandably in the case of works on the borderline of the novel genre, the terminology appears uncertain; the 4 Almsi il-din (1884) of 'Ali Mubarak is presented by its author as a kiisa (story) while Ibrahim al-Muwaylibl gives the title kaditi (talk) to his very interesting musbatm: Hadith wa-hadit (1907). It is all the same curious to note that in 1917 a certain Dhuhran Khalil Dhuhran, suggesting to the editor of the review al-Hilal the holding of a competition for the best story—to promote a genre that has proved its worth in Europe—uses the term kiizada to describe the genre. Little by little, however, kiisa came to prevail, and Taha Husayn was seen claiming back his liberty as a creator and refusing to apply rules whose validity he did not recognise by saying in substance: the kiissa is taught nowhere, and besides, what I write is not a kiissa but a haditi (cf. Said, in al-Mu'adhdhab al-f 1-ard).

In fact, the lack of precision remains, mainly as a result of the differences in length among the various kinds of story. It is possible to account for these without departing from the root k-s-g. For the abstract "narration", "narrative literature" we have kiisa, while the "story" of indeterminate length is called kiisa, the novel being distinguished from the "tale" or from the "novelette" by an adjective (kiisa ilwilla in the one case, kiisa kayf in the other). The range of meanings may be conveyed in a still more precise fashion: a suitable adjective expresses the midway term, the long short story so popular with the British (kiisa mulwatati), while khabar (pl. al-kiyds) denotes the very short story, the short novelette.

But in practice, things are not so simple. The first Arabic story-teller to be universally known, Mahmud Taymirt, published successively two collections of stories, calling the first al-kiyds (al-ahsVs Dini nwa-kiyds al-wad, 1925) and the second kiisa ('Armin Metwali al-kiyds al-wad, 1926). At the other end of the scale, there are some who prefer kisayya to kiisa ilwilla to denote the novel; this neologism was more specifically reserved at the end of the 19th century to denote a "theatrical piece." Without it being an absolute rule, it may be stated that at the present day ukiyds is more frequently used in Syria and Lebanon in the sense of short story, while kisayya is preferred in Egypt with the meaning of novel.

Considerations of length are not the only ones to be of relevance. It should also be noted that some have tried to solve the ambiguity inherent in the word "tale" which exists also in English. If one wishes to differentiate the brief, realistic, truthful or plausible narrative (the short story) from a narrative of the same dimensions but imaginative, extraordinary or extravagant (the tale), one must call the latter by the name kiisa (or wAjifs) followed by an adjective (kiyds or kiydsb, or kiydsb, or wAjfisb, or kiydsb), while being careful not to use the word kif$a in isolation lest it be understood in a non-technical sense and with a pejorative flavour: "a cock-and-bull story".

The birth and evolution of Arabic fictional literature. The modern kiisa owes nothing to Arab tradition. It is linked neither with the folklore of the Thousand and one night nor with tales of chivalry nor with narratives of adab. The tradition of classical musbatm, although taken up by two men of imagination and dual culture (Firis al-Shihhik for al-Sik al-t'aSik, 1853; and Muhammad al-Muwaylibl, cf. above, 1907) has left no legacy. It is from Europe that the Arabs have borrowed this literary genre totally unfamiliar to them, sc. the novel.

The press, which has been remarkably prolific in Cairo and Beirut ever since its first appearance there in the middle of the 19th century, has, in a short space of time put into circulation stories of various lengths translated from French and English. Some periodicals, like Nasibka al-ahdib (founded in Beirut in 1856) publish examples from time to time, others, like al-Qarn (Beirut 1876) regularly devote a part of each issue to such translations, and the same applies to the reviews that the Lebanese resident in Egypt have subsequently launched in Cairo (al-Hilal, al-Mukhabatat, al-Diya'). Even the daily al-Ahrdm founded in Alexandria in 1875 has its serial story. Furthermore, some weekly or monthly
entertainment publications are entirely devoted to them (Silsilat al-fuhūlāt, Beirut 1884; Muntakhabāt al-riwayāt, Cairo 1894). A certain degree of decentralisation has even been achieved with the appearance of Silsilaat al-riwayāt al-thulūmiyya at Tanūt in 1908 and al-Samir at Alexandria in 1911. The second stage is the editing of the translated novels in volumes.

The essential object of this type of literature is to entertain. Publishers and translators search out stories of extraordinary adventures, of unhappy love-affairs, of poignant grief, rather than works of established quality whose authors are universally known. Fidelity to the original text was not regarded as an obligation in the period where the translator most in demand, Tanūt 'Abdūh, a Lebanese who had settled in Egypt, was renowned for the imagination which he put into his work. The tendency was to adapt rather than to translate.

Quite naturally "original" composition has followed translation-adaptation and obeyed the same rules. It has even in some cases been exactly contemporary with it, and there are times when the translator is at the same time an author. This was the case with Salim al-Bustānī, who published no less than five original works in serial form between 1870 and 1884 in al-Djimn, at the same time as he was translating French novels. His sister Alice and her cousin Sa'ld were also involved in the same sort of work. In serial stories of this kind as well as in the copied models there abound songes de théâtre, unexpected meetings, unsuspected relationships, etc. In order to avoid offending a very sensitive public moral sense, the scene of the plot still tends to be exotic, or if the action takes place in Egypt, the whole or the majority of the cast of characters must be foreign (Fatāt al-kehrām by Muhammad Mahūnūt, Fatāt Mīrū by Ya'qūb Sarrūf). Sa'ld al-Bustānī discovered to his cost the powerful force of this unwritten rule: a resident of Egypt for ten years, a friend of Shaykh 'Abdūh, this Lebanese was nevertheless savagely criticised in conventionally-expected libraries, in 1908 and 1891. A certain degree of discretion is thus necessary in adapting French novels; the translator must be foreign to the environment he is trying to recreate, and at the same time as he demonstrates his command of the language and the characters, the significant choice of the plot would serve only to lure the reader; this element seems therefore to be somewhat stereotyped from one volume to another; but at least, the construction is solid and the language clear and precise.

After reason, sensibility. It would be impossible to overestimate the role of Manfāṭī (1876-1924) in this, for his two collections al-Naforat (1910-1921) and al-'Abarī (1915), he superbly arabises French romanticism to the point where, under his pen, translations, adaptations and original creations seem to flow from the same source. Having found a style and a tone, he knows how to stir emotions while dealing, in a context of traditional morality, with the problems posed by the irruption of European civilisation into the modern Orient. At the opposite extreme as regards content but with a similar degree of emotional intensity, is the message of "The American" Djarbān (1883-1931). Tears flow in abundance here too, but the romanticism is noble, protesting at the injustice practised by the powerful of this world as observed in the microcosm of the Lebanese village where the mayor and the priest seem to be constantly united in the effort to prevent the children from loving each other; al-Agīnakha al-multaqasīr (1912) hardly deserves to be called a novel. It is rather a long poem in prose devoted to an unhappy love affair of the author. "Broken wings" and "Tears", these are the two works, of Egypt and the madhjar, which have moved or irritated several generations of Arabs all over the world.

But the first Arab novel owes nothing to Manfāṭī or to Djarbān. It was written in Paris—and perhaps partly in Geneva—by a young Egyptian student. Haykal (1888-1956) was feeling homesick when he wrote Zaumāb (1914), and it is the Egyptian countryside that he attempts to recreate with its poetry, its verve, and also its characters, simple and poverty-stricken. But this evocation is centred around two victims of injustice in Egypt, the peasant and the woman. Even though the first edition is signed under the pseudonym Misrī Follāh, the poverty of the farm worker hardly holds our attention, while the fate of two women, equally unfortunate, illustrates the sorry condition of an entire sex and recalls the courageous protest of Kāsim Amlā at the beginning of the century. The hero ultimately makes his indictment: life has no appeal in a land where youth passes too quickly, where love is not allowed, and where the individual has no time to look at what is beautiful.

Even if the problems of writing and construction are not always perfectly solved, even if the influence of La nouvelle Hélène of Ronsard is too obvious, this rich composition does not only have a historical interest, for it conveys an authentic tone, that of a desperate confession.

In spite of these promising beginnings, other novels were not to appear for a further fifteen years. In the interval, it is only short story writers who make a name for themselves, putting forward within the dimensions of shorter narratives technical solutions borrowed this time from the best European specialists. The stories that they tell, the other hand, always deal with the reality that surrounds them. In "wringing the neck of rhetoric", these young pioneers feel that they are laying the foundations of a new literature. The first of them,—and paradoxically the only survivor—Michīl Fāyāmūn born in 1886—began publishing his short stories at the beginning of the First World War in al-Sā'īk, then in al-Funūn, the two reviews edited by Syrian Lebanese settlers in New York. The best, later collected in an anthology (Kāma ma kāna, Beirut 1937), are striking for their simple language, the transparency of the characters, the significant choice of situations—where ancestral customs like the journey to America play a central role—and perhaps even more for the firmness with which the story is
told, a story where, however, emotion and humour make themselves discreetly felt. On Egyptian soil, slightly later, Muhammad Taymûr (d. 1921) published in al-Sa'â'a some stories from his best-known dates from 1916—an important year for Egyptian nationalism of which this writer was a passionate advocate. Add to this element the interest taken in social injustice and in poverty, and we have the principal source-material of the stories of Muhammad Taymûr and of his comrades-in-arms. This expression is not an exaggeration when applied to his brother Mahmûd, who describes himself as taking the torch from the hands of his brother, dead at the age of thirty. It is without doubt Mahmûd Taymûr (d. 1974), the greatest story writer of the time, who has exerted the strongest influence in Egypt and in the other Arab lands, one of the most prolific of modern Arab writers and one of the most widely-translated too. Following the school of Maupassant—to whom his brother introduced him—he learnt to construct a plot firmly centred on a character who is bizarre to say the least, or on an exceptional incident. But he does not ignore the dominant themes of Egyptian social life, to which the brothers 'Ubayd and Mahmûd Tahir Lâshôt (d. 1955) also come to apply themselves, each according to his temperament and his special talent, Lâshôt being of the three the one whose palette would appear to be the best equipped both for varieties of subject and of resources of expression. Let it also be noted that this writer has written one of the few Arabic novels to appear before the Second World War: Ḥāna'il bîl ʿĀdām ("Even without Adam"). 1934.

Furthermore, it may be appropriate to note that this novel is distinct from the others in that its subject (the pitiable failure of a feminist schoolteacher who believed in love and social advancement) owes nothing to the life of the author, while Tâhâ Husayn (d. 1973) Ibrahim 'Abd al-ʿAlî al-Mâznî (d. 1949), al-ʾAkhkâd (d. 1964) and Tawfîk al-Hâkîm (b. 1902) had written nothing before 1939 but works largely autobiographical in character. What these men have in common is that they are not true imaginative writers, but rather they are part of the Egyptian intellectual elite. It should therefore surprise no-one that they look for material for their stories in their own experience. Besides, for these great thinkers of their generation above all, this is the means of assessing the exact condition of their country, for carrying on, in short, the worried analysis conducted by Haykal in Zaymab. As chance would have it, the year 1929 saw both the second edition of this novel and the publication of the first part of Tâhâ Husayn's Al-Ayyām. The accuracy in tone of this book, written with finesse and modesty, explains its immediate success in Egypt and the rest of the world; one feels that the blind boy struggling in a world that is hostile or indifferent or stupid symbolises more than an individual destiny. Even before the appearance of the second part of Al-Ayyâm, ʿAbd (1935) represents a split in the personality of the author, whose Egyptian half looks on helplessly at the folly and wreck of the European.

The debate between the two civilisations—with their customs and culture—also interests Tawfîk al-Hâkîm in two of his autobiographical novels, while in the two others (ʿAmdâl ʿal-rîb, 1933; Yasamîyât náṭî fî l-ʿurjâf, 1937) we find a number of the elements of the dossiers opened on Egyptian society by the short story writers. Superficially, the enquiry is less emphatic, there are times when the reader roars with laughter, but do not the laughter and careless air conceal a deep disquiet into which the faint-hearted lover and the Deputy Prosecutor are both plunged?

In drawing his self-portrait in Ibrahim al-kâbb (1931), Mâznî speaks of disappointments in love which may be fictitious, but he is most certainly honest when he shows himself irresolute and easily discouraged. As if in spite of himself, he gives us suggestive insights into the three milieux that he sets himself to evoke and, when he does not overstep the bounds, his glibness does not lack charm.

Outside Egypt, a single novelist deserves mention for this period; the Lebanese Tawfîk Yaṣîf al-Sawâlî, who published al-Ragîf in 1939. It is the Lebanon of the period of the First World War, the Lebanon "in the hour of the Turk", ravaged by famine, that we find here, the repression of nationalist movements coming to an end on the gallows of Beirut's Place des Canons. With a great deal of sobriety, a very sure sense of crowd-scenes, a properly romantic conception of history and politics, here is a writer who knows how to give to his narrative a depth which nobody else, Hakîm included, has yet succeeded in obtaining.

Irâk at that time was still at a hesitant stage, with Mahmûd Ahmad al-Sâvyât (d. 1937) publishing from 1921 onwards, in Cairo, stories which are admittedly rudimentary but where the effects of Turkish rule on Iraâî society are succinctly shown; with Anwar Shâbîl (first collection of stories 1930), the influence of Taymûr is clear. In his stories and those of 'Abd al-Majid Latîf (b. 1908), influenced by Tolstoy and Gorky, one feels that the seeds of a promising harvest have been sown in Irâk.

Among the pioneers mentioned above, a certain number have lived on after the war. Their prestige has increased and they have attained immortality. Young Arabic literature has found in them its ancestors, its sponsors, its classics, it could be said. Each of them otherwise remains imperturbably faithful to his style. It is still the same self-centred man dissatisfied with home and love that Mâznî indulgently analyses (Ibrahim It). From an incident of everyday life, the Lebanese Mîkhâl Nuʿaymâ draws the material of an intimate diary (Maṣakkarad al-ʿarâb, 1949), where meditations on good and evil, the solitude of the soul and its mystical vocation, count more than the narrative plot. In the same way that Tawfîk al-Hâkîm hardly descends into which the faint-hearted lover and the Deputy Prosecutor are both plunged?

mentioned above. Reviews have been founded: in Egypt of course, but also in Bahrain, where a literary periodical of this name appeared when the first printing-press was installed in the Gulf (1959), most of al-Adib where al-Adib, founded in 1953, and al-Adib give young writers the opportunity to become known, in Tunis where, since 1944, the review al-Mabahith awards a prize (Bakhadawi) to a writer every year. Henceforward, Arabic fictional literature is sufficiently vigorous and varied to convey trends which are to be noted elsewhere in the world.

The romance. It is clear that romanticism has solid roots at its disposal—it is enough to recall the genre of the first European novels translated, the importance of Manafili, the tone of Zaynab. A younger generation dissatisfied with its condition finds at last the means of expressing its revolt and its dreams. Evidently it is love that polarises all attention. This lyricism is a phenomenon of youth in three senses: the youth of the writer, the youth of literature and the youth of the public. The theme of the impossibility of amorous relationships is treated at length by the Tunisian Rashid Ghali in the short stories that he has published in the review al-Fihr since 1960; an encounter without future constitutes the subject of al-Eabr la ma'feaf, a story which gives its title and dominant tone to a collection published by the Libyian A. Idrisim al-Fakih in 1960; the Sudanese Sabbir (b. 1927) published ten years ago a novel on a small scale: Sair ad-dumal.

It should not, however, be assumed that this type of novel is always attributable to an "indiscr...
al-sildh... wu 1-'hamar (1976). Sometimes one finds them to be too verbose and not sufficiently alive. This is especially the case with the entire output of Mutlû Sufadi (Syria), a real propagandist of the Arab Revolution (Thahir muhtaris; Duhl al-world; Aghbiy afhilj, 1959). On the other hand, an A. H. ben Haddou (Algeria) succeeds in interesting us in the conscience of a man who has just committed a political crime (Zilli gana-rip, 1961). It is the analysis of the social and psychological consequences of the war of liberation which interests him in his first novel appearing ten years later (Rih al-qanad), of which the form catches the attention. His compatriot Tahir al-Wattar also distinguishes himself in his two recent novels by the originality of his vision of guerrilla warfare (al-Ax) or the traumatic after-effects of independence (al-Zailad). Similarly, the Palestinian tragedy is presented, free of forced sentimentality, in fascinating novels by the Lebanese Halm Barakat and the Palestinian Ghassan Kanafani (Ridjal fi 'l-Qums).

Oriental society is evolving to a varied rhythm in its different aspects. Industrialisation, for example, has scarcely been reflected by the appearance of workers in romantic literature. To our knowledge, only two writers have taken an interest in this: H. Mina (Syria) mentioned above, who has made a study à la Gorky of type setters in a printing press, The invisible thread, 1961; and Muhammad Siddî (Egypt), who through the experience of a self-taught man trained in a number of occupations, gives us an insight into the daily life of the working classes (in the collections al-Anfdr and al-Aydil 'l-bahshina, 1956 and 1958).

On the other hand, the number of Arab women writers is already remarkable. Quite naturally, they are interested in problems that are specifically feminine. Since professional involvement of women is still somewhat limited in their countries, it is mostly all "psychological realism" that they aim at. The older one—Bint al-Sihat and S. Kalamaâwi in Egypt, Widad Sakââni in Syria—have born witness to the deep transformation affecting the female mentality. The younger women writers—Sabra 'Azam in Iraq, Connie Subayl in the Lebanon, Sului 'Abd Allah in Egypt—seek to re-establish, with regard to their sex, the truth misunderstood or distorted by men. The Egyptian Layla al-Zayyat does not claim to make any extraordinary revelations in her novel al-Dib al-majarah, 1960, but points out succinctly that the noble protests of the sterner sex are not yet fully convincing.

So as not to distort the perspectives, it is important to draw special attention to the work of three Egyptian novelists whose renown extends over the entire Arab world: Yahya Hashki, Yusuf Idris and Nadib Majhi. The name of the first, who was born in 1905, is linked with the difficult emergence of the Arabic short story in the years around 1925, but he has only become well-known since the war. His first collection Knidl Umân Hâghin dates from 1943. His collection of stories, his short novel (Sahba 'l-nawem, 1954) and his memoirs (Khiladk 'alâ 'l-Hâsh, 1959) have made him known to the public at large as a writer of prose that is firm but not prudish, and one who treats his characters with sensitivity and humour.

As for Yusuf Idris, he has been writing "committed" stories since 1940. With the appearance of his first collection (Arkhas layâlyh, 1954), there is the feeling of a talented writer making himself known. His subsequent works (al-Hadîm, novel, 1959; al-

Ashari al-assad, a short story, 1961, among many others) testify to his dramatic sense, and his condensed style, on the borderline of grammatical correctness, counts as one of the most original of all.

Nadjib Mabûr enjoys an even wider readership. He owes this perhaps to his uncompromising adherence to the classical language but most of all to the seriousness and depth of his analysis and to a remarkably prolific output—some twenty novels and a dozen collections of short stories published to date. His Trilogy (1957, 1958) is considered to be the perfect masterpiece of Arabic realism. It gives us the key to an understanding of the generation of contemporary Egypt through a wealth of passions reminiscent of the Russian novelists, but with a concern for detail that is exclusively his own, and most important of all, from a perspective such that every Arab reader feels himself involved.

The existentialists. In a society in a state of flux, there are some who feel resentful, disillusioned, alienated, and who find in existentialism a philosophy in tune with their mood. The Lebanese Subayl Idris has done much to install this philosophico-literary doctrine in the Orient. He has been the prime mover in a major series of translations that have introduced the Arabs to Sartre and Simone de Beauvoir in particular. But his role has not been limited to that of translator nor to that of editor-in-chief of the major review al-Adîb. He is also the author of a number of novels. In the first [al-Ihayy al-lâsimi, 1953] he too examines the reactions of the oriental to the European way of life, but the analysis is different from one given by Talkîfl al-Hâkhîm in 'Usfîr min al-sharh nearly twenty years earlier. In spite of his love for a European sweetheart—shared this time—the Arab student returns to the Lebanon to place himself beneath the yoke, and perhaps the protection, of the customs of his homeland. His resigned acceptance of the absurdity of life shows that his stay in the Latin Quarter has left deep marks on him.

The Lebanon is thus the favoured land for existentialism. There are some who take pleasure in a type of fiction that is closer to the debate of ideas than to the novel as strictly defined, like Emile B. Abi Nâdir in al-Farîdg (1961). But the more interesting writers are able to bring to light in their plots the ineluctable character of life. A story by George Shânti shows to what extent a personal sentiment, however sincere and profound, is helpless in the face of the tyranny of the family spirit, and another by Djamîl Qjabr (Raâlî, 1961) finds the correct tone for describing, in the first person, an impossible love. The Lebanese novel does not however attain the level of despair except in the work of the woman-writer Layla Bâllabâki; in Arâ ahâlî (1956) and in al-Alihân al-mansîkha (1966) there is a vivid account of the revolt of a feminine sensibility stifling in a male society, made—tobacco included—for men.

Although she has become known more recently, the Syrian Ghâda Sanabî is closely akin to her. One of her collections of short stories (Laylat al-gharâbî, 1966) presents us with a study fundamentally of a single character in a variety of settings: the woman who feels herself involved neither with the family nor with the revolutionary ideal, a "stranger" always and everywhere, her too-clear intelligence and her too-vivid sensibility making of her a person who suffers and sees no other future than this suffering, which she broods over with a kind of masochistic delight.
'Irak shows us another kind of existentialism, less intellectual, more visceral. Among story-writers of talent, the first place belongs to 'Abd al-Malik Nūrī (born in 1922). Between 1946 and 1954 (Naḥīd al-arḍ) he has created a genre: from the first to the last line, his fiction expresses malaise, an infinite despair or a fatal torpor. With Mahfūz 'Isa Şākr and Fūlād Takarīl (al-Wadhī al-İsher, 1961) we are steeped in the same unrelieved black that seems to be the dominant colour of young 'Irākī literature.

The basic problems. During its sixty or so years of existence, Arabic fictional literature has been obliged essentially to cope with two basic problems.

The one, purely internal, concerns language. For obvious reasons, the novelist must choose the type of language that he is to lend to his characters, dialect or fašî. A writer as eminent as Māmūd Taymūr has, to his credit, carefully tried each of the two alternatives and subsequently remained absolutely faithful to the academic language, of which he is besides a perfect master. The no less eminent Yahyā Ḥakkī has shown a quite original attitude, proclaiming everywhere his loyalty to Arabic and wading in a delicious manner in his short stories, the Caroese of his childhood or the Şā'ībān patois dear to his heart. These examples should not be misinterpreted; the question does not only apply to Egypt. Throughout the whole Arab world, from 'Irāk to Morocco, there are novelists who believe that they would be betraying their mission as creators and artists if they were to avoid using a type of language that is natural, living and immediately evocative of the correct sentiment, the spontaneous idea. Conversely, in every Arab country there are today writers who would consider themselves unworthy of their art and traitors to Arabism if they were to adopt—even in dialogues—a language other than "pure" Arabic obeying the rules of declension, more or less modernised in its vocabulary, but effectively unchangeable in its syntax. The question of the two languages has been debated so often since the beginnings of the naḥṣa that there is nothing to be gained by dwelling on it here. The adherents of one or other mode of expression may be confident of finding themselves in excellent company and having no shortage of arguments. In particular, the equation frequently proclaimed in the last fifty years (dialogue in dialect = literature in the service of the people) is no longer put forward today, when the purists too are "committed". At the most, we may attempt a risky generalisation: the tendency to use the spoken "popular" language is more widespread in countries where the literary public is greatest and which, believe, rightly or wrongly, that they have a better-established "Arabic" character—thus in Egypt, rather than in Algeria. Whatever the answer may be to these formal—and important—questions, there is no likelihood of provincialism gaining precedence over a common Arab heritage that is easily recognisable through the entire spectrum of fictional literary production from "the Ocean to the Gulf" and through all the trends that we have attempted to unravel.

The other problem concerns the relationship of the Arabic novel to Europe, the master, in both senses of the word, pedagogic and colonialist. This relationship first applies on the level of content. The dialogue of a flourishing East with a West that is too sure of itself constitutes one of the themes and sometimes the central theme of novels that have become famous. It is natural, with regard to novels, that this ill-fated or violent confrontation should take the form of an amorous encounter between a practical or fickle or dominating European woman and an Arab emigrant, usually a student, convinced that he owns a share of the truth but naive and maladroit. Furthermore, the character of the latter and the general physiognomy of the work change in the course of the years. In Uṣfur min al-Qur'ān by Tawfīq al-Hakīm (Egypt, 1938) Mūsīn is an incorrigible idealist, an incompetent purveyor of working-girls whom the author mocks and admires at once, while the hero of al-Fajr al-Dīnī discovers nausea in Paris, but returns to the fold of ancestral custom in Beirut. The English girl married by al-Dūhār Ibrāhīm by Ḍū 'l-Nān Ayyūb (‘Irāk, 1939) is only the first stage of an ambition which comes to light on his return to his country. If 'Isāfī repudiates his God on leaving Mary's embrace, he finds him again on the banks of the Nile (Yaḥyā Ḥakkī, Kindīl Umam Ḥādīṣī, Egypt, 1949). The experience of Adīb (Ṭāḥa Husayn, Adīb, Egypt, 1935) is at the same time more proflane and more desperate, but that described by the Sudanese al-'Aṭībī Shāḥī in Muṣṭafṣīn al-nāṣrāni ilā 'l-ṣamāl (1966) is violent, and it discoursers because hatred here is unspoken.

Nobody is deceived; whether sex and suffering intervene or not, it is always the impact of a culture that is in question, an invading, besieging, disruptive culture. Two Moroccan novels examine in detail its traumatic aspects: Dafanūsā l-mādī by Ghālīl (1966) and al-Qur'ān by La'r目的地 (1971). Quite naturally, another level of connections with Europe appears. Has this literary technique been learnt, assimilated or, on the contrary, has there been constant re-adaptation to a model which, as time passes, remains indispensable? It is in reality impossible to answer this question. It may simply be stated that this common Arab heritage mentioned above adapts itself well to the most recent trends in universal fiction, that the surrealism of Zakariyyā Tāmīr (Dawwār ‘al-ka’dīf, 1963) and the detachment of 'Ibbīl Bālīn (Lāfrīl, 1966) and with his nightmare universe, takes up and carries to an obsessive and hardly bearable degree, the taboos and desires of a sick society. It is madness—superficially, for what the mastery resides in and regrettably, the flattening compositions of a writer such as Ṭāḥīr al-Wattār; this is taken even further in 'Ībīl, that is in question, an invading, besieging, disruptive culture. Two Syrian novelists who have achieved renown in the sixties. Echoes of such trends arise from elsewhere: from Egypt, of course, where established novelists like Ģūsūf Idrīs and Nūḏūb Mūsīn have begun in the sixties and at the present day to turn towards the short story in preference to the novel, a wild and imitable type of short story, to which the younger writers are also drawn; the Arāhīs, the Ṭūbyās; but Algeria has not lagged behind with the stifling compositions of a writer such as Ṭāḥīr al-Wattār; this is taken even further in Bāybrayn, where ‘Abd al-Kīdir 'Aṣāf sets in motion with al-Nāṣif a series of dream-like sequences that express his continuing anticipation of revolutionary liberation.
multiplicity of devoted talents in all provinces of Arabism, are signs of the flourishing state of the hikay.

Bibliography: Arabic Journals. The literary journals were numerous, and some have only a short existence. Among the most important are al-Edib, al-Adib (Beirut), al-Majalla, al-Maiya (Cairo), al-Mu'mina (Damascus) and al-Fihir (Tunis). Those in European languages include MIDEO, Orient, OM, and Jural of Arabic Literature, and Bulletin d'études arabes of the IPEA of Rome.

For the beginnings of the novel, the general histories of Arabic literature may be consulted (see 'Arabya, b. (VI)).

Anthologies give a very representative picture of contemporary novel writing. The editors give valuable biographical details about the authors covered: Anthologie de la littérature arabes contemporaines, Paris 1962, 1, R. and M. Makkari, Le roman et la nouvelle; Mahmoud Manzalaei, ed, Arabic writing today, the short story, Cairo 1968.

3(a). In Older Turkish Literature

As a general term, hikay in Turkish texts was synonymous with story, tale (hikaye) and legend (menhale, edaice). Fahreddin in 718/1316 called his version of the romances of the Prophet and the Caliph 'Abd al-Rahman and Shihab ibn al-Mahmud, written in 808/1307, says that a copy which he found was old but the hikay (story) was new, and Seyyid ibn al-Mahmud, in the first half of the 13th century, found the mere telling of a hikay (story) no longer sufficient to enjoy (B. Flemming, ed., Fahreddin hisnuye u Sirin, Wiesbaden 1974, vv. 2513-16 and p. 140 f.; S. Yüksel, ed., Mahmud. Isnik-i Ldr, Ankara 1965, v. 404, F. K. Tinurat, Seyyidin Hisnuye u Sirini, Istanbul 1963, v. 156).

Narrative works in verse and prose dealing with epic-religious and heroic themes (see hikay, iii) were often called hikay, the term alternating with dawri. This is true for the 'Antar, Abla Muslim, Salihuk and Qadi Dinhizleng stories (see hikay, iii) of the Tabari and Khiyam. Al-Fahreddin and Mahmud Shah ibn Piruz Shah (see A. S. Levend, Turk edebiyati tarihini, i. Giris, Ankara 1972, 113, and Karamanyama, and Djejj Shah and Djejj Mal Peri (see H. Schwieder, Türkische Handschriften, tei 3, Wiesbaden 1974, 276, no. 326); not a few tales still await examination.

The lives of holy men and great Sufis of Islam such as Ibrahim ibn ad-Dhan (sur.), were treated collectively in the genre called tadhkira, the most famous Encyclopaedia of Islam, V being the extensive Persian prose work Tadhkira al-anbiya? by 'Attar (q.f.), An early Turkish example is the Tadhkira-yi emnye adapted from the Arabic and presented to the prince of Aydin (sur.), Muhammed Beg, by an unknown author (MS. Istanbul, Veliyidin 1683).

In a more restrictive sense, hikay were designated stories of the Prophets before Muhammad, whose own life history gave rise to the sifar genre (q.f.), whereas events of the lives of members of his family inspired other books such as the Xamadu of the caliph 'Ali; the mahabur works commemorated miracles and happenings around the martyrs of the house of the Prophet, particularly his grandsons Husayn (see hikay, iii) especially famous being the Hikayat al-anbiya? by Fudol (q.f.).

In the hikay some prophets were dealt with separately, such as Moses (Hikayat Mosse ve Kibyr, see Levend, op. cit., 120), and Solomon; such works being also known as neme (see hikay, iii) the most voluminous of the Sutaym-nam is the compilation made by "Umar Firdawsi (q.f.); Iskandar (q.f.) was also treated separately (see M. Gütz, Türkische Handschriften. Tei 2, 161, no. 243 and Iskandar-nama, iii).

Joseph or Yusuf (q.f.) was a favourite hero of the histories of Prophets; his ascetic-mystical romance with Zulaykhah, based on the Suraat Yusuf, has been treated in many Turkish mahabur and prose works. The oldest appears to be the Hikayat Yusuf by a certain 'Ali, a work of uncertain provenance supposedly composed in the Crimea in 651/1252 (see N. Peköza, İslami türk edebiyat. I. İstanbul 1967, 77 ff.; Levend, op. cit., 94, 125).

In Anatolia, Seyyid Hanza and wrote a mahabur version (ed. D. Dilip, İstanbul 1949); for Caghatay, Mamluk, A'dharbaydjiyan, and many Ottoman versions see the list compiled by Levend, op. cit., 128-30, for 19th century Kuzak versions, see Fundamantum, ii, 744.

Collectively, the prophets have been dealt with in the Hikayat al-anbiya? (q.f.), which made their appearance in Turkish literature in the 18th century. In 710/1310 Na'fir al-Din al-Rahbuzi, working for a Mongol amir, composed his Eastern Turkish Hikayat al-anbiya? on the basis of a Persian version (Zahezzi) (see K. Grenboch, Copenhagen 1984). Other Turkish authors consulted the Arabic Hikayat al-anbiya? by al-Kisa', the Dar'is al-mujaddid by al-Tha'labi and others (see K. Eraslan, Kisa'iyenl Buca a 'unday ve Kisa'yanl-Emnye adil esi, Istanbul'daki tercumerleri, in TEDD, xvii (1970), 125-32; N. Hacieminoglu, in TEDD, xi (1961) and xii (1962), an anonymous translation in the MS. Burus, Ul Cami 2474; and A. Atar, in TEDD xvi (1958), 93 f., on the Yozgat MS. of the translation made by Isakti (d. 834/146-930).

In 977/1570 an Ottoman writer, Hadi Muhimb, composed a Hikayat-i emny (q.f.), see H. Meredith-Ovens, Traces of a lost autobiographical work by a courtier of Selim II, in BSAS, xviii (1960). Later, much more complex titles were used for the genre, such as Mu'arif-i sifar-i ahbab al-emny by written by Zara Celebi (d. 1668). A highly esteemed educational Hikayat-i emnye written by the Ottoman statesman and historian Ahmets DjevDET Pasha (q.f.) as late as the end of the 19th century, in no less than twelve volumes, is evidence for the tenacity of the genre.

Bibliography: In addition to the works cited in the article, see the relevant articles in Philosophia turcica fundamenta, ii, Wiesbaden 1965; E.
Foreign novels in the best Ottoman inşâa tradition, most of the was translated in a most flowery and ornate style, Paul et Virginia (1870), Voltaire's (from the Arabic, 1864), followed by Bernardin de Saint-Pierre's Paul et Virginie (1870), Voltaire's Micromegas (1871), Alexandre Dumas père's Le增值服务 (1878), Abbé Prévost's Le Roman d'un Jeune homme pauvre (1878), and many others. Except for the Tâlemeaque, which Lurn roman d'un jeune homme pauvre (1830) and many others. Except for the Tâlemeaque, which was translated in a most flowery and ornate style, in the best Ottoman inşâa tradition, most of the rest were rendered in a comparatively simple language, not far removed from spoken Turkish. This translation movement or activity coincided with the emergence of the literary Tangâm school, and the first generation of modernist writers provided the emergence of the literary school, who also wrote short stories of uneven value. Two prominent writers who remained outside the Tâlemeaque school, the novelist Haseyn Rabâî and the essayist Ahmed Râsîm contributed realistic short stories which are vivid sketches of everyday life in Istanbul of the 1890-1920 period.

The restoration of the Constitution (July 1908) followed by the movements of Turcian (see TURKISH LITERATURE), and the New Language (Yerli lisan), sponsored by Diya' Gökâlî (p. 82) and Ömer Seyyid el-Din (p. 82), revolutionised the whole approach to narrative in Turkish literature. Most short story writers (and novelists) switched from the capital (Istanbul) to the provinces and made an attempt to introduce colloquial Turkish into literary language and avoided, on the whole, elaborate psychological analysis for straightforward realism.

The prominent woman novelist, Khâlid Edib (p. 82), wrote realistic short stories mostly based on her own experiences or observations. Ömer Seyyid el-Din (1884-1920), who left ten volumes of short stories (posthumously collected in book form), led the reaction against the precious language of the Tâlemeaque school and wrote in spoken Turkish stories on the reminiscences of his childhood or on episodes of Turkish history. A hasty writer, his essays, even his jocose language is not always polished. But his deliberately direct style, avoiding the "literary", established a new tradition in Turkish narrative. The outstanding essayist and political satirist Refik Khâlid Karây (p. 82), wrote his famous Memleket hikayleri ("Stories from the provinces", 1919), during his five years' exile in Anatolia. These stories on the types and customs of the villagers and provincial townspeople are told with a rare virtuosity of natural style and powerful realism unprecedented in modern Turkish literature.

Most novelists of the period (e.g. Y. K. Kara-Ülümânoğlu, R. N. Gümüşkâ, Peyami Safa, etc.) also wrote short stories. But others excelled in the genre; Memâdûb Şevket Esendal (p. 82 in Suppl.), a politician and diplomat, wrote, at irregular intervals, stories which are different in subject matter, plot and style from the "classical" Mayoûssant-type stories of his contemporaries. F. Diyal it-Din, a psychiatrist by profession, left remarkable sketches and short stories, written in a very personal style, about eccentric types and harmless maniacs of Istanbul, against an authentic "local" setting of the Hâseyn Rahîm tradition. They are character studies or sketches of the moods of ordinary people, with emphasis on women, written in spoken Turkish, without any elaboration or embellishment and imbued with human warmth and optimism. The
novelist Halilkaras Balıklı [q.v. in Suppl] who belongs to the same generation, but who published his work in the Republican period, after the age of fifty, wrote fascinating stories on the life and struggles of the sea folk of the Aegean.

The 1930s inaugurated a new era in contemporary Turkish literature, and witnessed the emergence of two promising but very different story writers: Sağdıç al-Din Şafii (also a novelist [q.v.]), who pioneered social realism, writing powerful stories on the true life experience and hardship of the village and small town communities of Anatolia. Sağdıç al-Din Şafii (1906-54), perhaps the greatest name in the Turkish short story, described, in his compelling stories and sketches, written in a forceful and romantic style, the life and milieu of the simple people, workers, fishermen, vagabonds, etc. of Istanbul, based mostly on his personal experiences, with a deeply human touch. Ahmed Hanç Haşim (q.v.), poet, critic and novelist, and adept of the neo-classicist Yahya Kemal [q.v.], wrote nostalgic, evocative stories where the sensitive psychological frames are the leitmotiv. The playwright and essayist Khâlid Tanmur (b. 1915) writes stories (frainted with humour and social criticism. İhktân Tanur (1907-67), a civil servant, described in his stories the intricacies of bureaucracy in the provinces.

In the 1940s, 1950s and 1960s, most novelists (e.g. Kemal Tahir, Kemal Bilbaşar, Orhan Kemal, Samim Kocagöz, Yaşar Kemal, etc.) also wrote short stories in which concentration is on the plight of the peasantry, provincial townfolk and suburban dwellers (see below). This is particularly true of writers of peasant origin (e.g. Fahir Baykurt, Talib Apaydin, etc.). Aziz Nesin (b. 1913) the great humorist writer of unsurpassed popularity, has been writing innumerable stories and sketches where he uses his art to light social evils and bigotry by ridicule. Oktay Akbâl (born 1923) writes individualistic and romantic stories, mostly based on personal reminiscences, full of nostalgia for things past. Necati Cumâli (b. 1921), poet, playwright and novelist, differs from most of his contemporaries in not concentrating on any one given theme, but writing stories on a variety of subjects in a warm and flowing style.

Contemporary short story writers dwell as a rule on the social, political, economic and cultural problems of Turkey, a society in rapid transformation, linking them to the personal problems of the individual. From several dozen names (some of them also novelists), the following stand out: Mehmed Seyda (b. 1919), the poet E. E. Alâî (b. 1920), Yusuf Atağan (b. 1921), Wilös O. Bener (b. 1922), Mustaffer Eyüburucu (b. 1923), Elige Karasu (b. 1930), Tahsin Yıldız (b. 1933) and Bekir Yildiz (b. 1933). Among women writers one notes Nesibe Meriç (b. 1925), Adale Ataçəgli (b. 1929), Leyla Erbili (b. 1931), Füruzan (b. 1935) and Sovgi Soysal (1936-76) who dwell on the problems of women of all classes in present-day Turkey.

2. The novel.

The outstanding lexicographer and scholar Şems el-Din Sâli (q.v.) wrote the first Turkish novel in the modern sense: Ta'agizâh-i Ta'ahir ve Füna (1872). This is a love story used as a background to criticise the traditional marriage custom, marriage of partners unknown to each other. Nâmık Kemal [q.v.], the great poet and patriot of the Tanüşmâl school, experimented with a romantic (İntihâb, 1876) and a historic (Eşrinâ, 1886) novel. One of his younger colleagues, Sâmi Pogha-Zade Sefâ (1860-1936), wrote an anti-slavery novel (Serçeşme, 1889), while another, Rodâ'î-Zade Ejtem (q.v.) produced a social-satirical novel (Araba sendâsî, "Devotes of the harness cab", 1889, published 1896), which is a forerunner of later novels where the "westernising snob", the blind imitator of European manners and customs, is ridiculed (see below); and Nâhi'î-Zade Nazım (1858-93) wrote examples of realist novels (Kara Sibihi, a long short story, 1890, and Ezârî, 1895).

Outside this literary school of the "élite", the most important representative of the genre was the prolific popular writer, publicist and journalist Ahmed Midhat who flooded the post-1870s period with several dozen novels on subjects of all types: adventure, history, social satire, science fiction, realist and naturalist narrative, etc. He owes a great deal of his narrative technique, his dialogue and his handling of episodes to the traditions of Turkish popular art and literature (i.e. Karançâ (the maddâ, the fâlîrî technique in the Orta eyân and folk tales of various kinds), and also to the French novels of adventure. Many of his novels, particularly Hasan Midhat (1875), Hüseyin菲尔 (b. 1857), Süleyman Muqti (1856), Henûr on yey yazında (1882), Dârîkâ Hâkîm (1882), were enormously popular and read avidly by generations of readers of all classes until the 1930s. His novel Ejîlên Niûf Bey ni Râkîm Ejfenâ (1899), pioneered a series of novels which satirize the alia franca way of life of Istanbul snobs.

In the following period of the Tanüşmâl period, the great representative of the novel is Khâlid Diya. Although as a boy writer, like most of his contemporaries, he greatly admired Ahmed Midhat, there is hardly any trace of the old Turkish popular narrative technique or the influence of the French novels of adventure and entertainment, even in his early novels of the formative period, which were romantic love stories with some elements of realism. He completely broke with traditional methods of story-telling and developed a well-disciplined narrative technique where there is no room for irrelevant digressions or asides to the reader. Khâlid Diya perfected this technique in his later novels (e.g. Mâ'î ve siıyîk, "Blue and black", 1897, and 'Agîk-i memnu' ("Forbidden love", 1900), inspired mainly by the method and style of the French realists. His works remained the best examples of realism in Turkish literature until the mid-1930s. The setting and characters are often chosen from the upper and upper-middle classes of Istanbul, the type of people with whom he came into direct contact during the strict Hamidian régime. He chose, in his novels, to write, like most of his colleagues of the movement, in an extremely precious and artificial language, thus deviating from the trend of the first generation of modernists (the Tanüşmâl writers) who had made an attempt to create a style which could be understood by a larger audience.

As Khâlid Diya dominated the scene in prose, minor writers were hardly noticed. One of them, Mehmed Raüîl (1875-1935), a naval officer, wrote a (probably autobiographical) novel, a poignant story of desperate love: Eyülîl ("September", 1900), which is the only work still remembered of his dozen novels. Hüseyin Rahmi, who did not join any particular literary group, began his career during the time of the Tanüşmâl period movement, and remained one of the most popular novelists from 1890s until the late 1920s. At the beginning, he followed in the steps of his master Ahmed Midhat, but he gradually pol-
ished the elements taken from Turkish popular arts and adopted them to his own purpose, blending them successfully with the technique of the French realists and naturalists, particularly of Maupassant and Zola. With his accurate observations of the life and types of Istanbul lower and lower-middle class families in the period approximately 1890-1920, his penetrating analysis of the burning social problems of his time and his acute sense of humour and satire, Esref Rahmi is perhaps the most original of all Turkish novelists. Like his prominent contemporary the essayist Ahmet Rızaş [q.v.], his work is of great documentary value. He studied meticulously the everyday life of families and individuals and their development within disintegrating Ottoman society and all the social problems arising from the impact of Western ideas and customs. His best novel, Şişpası, "Always in love" (written and partly serialised in 1902, published in book form 1912) is a further development of the theme already treated by his predecessor and himself: a character study of the "Westernising snob".

During this period, two works were the pioneers of the so-called "village novel" (key romanı) which was to develop during the Republican period: Nabî-Zâde Nâzım’s long short story Karâ Çubuk (already mentioned, and Ebübekir Hızım Teşeyer’s (1864-1942) Kuçuk Paraş (1910), which describes life in a central Anatolian village during the last decade of the 19th century.

During the post-1908 era, with the freedom of the press restored and in the midst of warring ideologies (Ottomanism, Pan-Islamism and Turkism), we see that most writers of the young generation gather around a new trend called "National literature" (Millî edebiyatı), led by the sociologist and guiding spirit of the intellectuals of the epoch, Dîyâ Gökalp and his associates (particularly Ömer Seyfi el-Din, see above). In this period, the prominent woman writer Kâhîde Edib’s early novels have considerable autobiographical elements, and with their passion, independence, strong-willed heroines, outline the author’s idea of the emancipated Turkish woman. Under the impact of the Pan-Turkish-movement, she wrote Yedî Türkân, 1912, and her contemporary colleague, a minor woman writer Mütîfed Ferîd (Tek, 1892-1971) followed her example with a similar novel Aydemir, 1918). However, Kâhîde Edib later rejected this ideology and espoused the new nationalism of the resistance movement in Anatolia which she joined in April 1920. She wrote novels on the national struggle and life in Anatolia, based on personal experiences or observations (e.g. Meğden ğemiik, "Shirt of fire", 1922; Füaris habîbey "Strike the whore", 1925). During her long exile abroad (1925-57) and after her return to Turkey, she continued to write, mainly as a self-taught writer, produced in the early 1920s novels which described various characters of the disintegrating Ottoman society, emphasising the clash between the traditional and the new (e.g. Sade Billur, 1922; Maşâyen, 1924; Fâthî-Harbiye, 1931); later she studied cases of psychological stress and crisis and all the social problems arising from the impact of Western ideas and customs. His best novel, which was to develop during the Republican period: Rebahat Nûrî the "Westernising snob".

The best-seller of the early 1920s was Callibaş [Callibaş], eng. tr. The autobiography of a Turkish girl, by Sir Windham Deeds, 1930) by Rebahat Nûrî Güntekin (q.v.), published several similar novels (e.g. Akbaş Rûne, 1926, eng. tr. Afternoon sun, by Deeds, 1951). These were sentimental romances mixed with realistic observations of Anatolian life. With the publication of Yeğil gecesi ("Green night", 1926), where the influence of religious fanaticism in Anatolia is studied, Rebahat Nûrî changed his manner and wrote a series of novels dealing with social change brought about by the reforms of the 1920s (e.g. Yâfeşel dehûnî, 1930). Güntekin perfected the literary language based on spoken Turkish initiated by Ömer Seyfi el-Din and was recognised as one of the masters of modern Turkish prose until the middle of the 1930s, when a profound transformation of the language, style and literary taste began to take place.

The early generations of novelists of the Republican era inaugurated a new approach to the novel which began in the 1930s, and gathering momentum in the 1940s, matured in the 1950s and 1960s. For the majority of contemporary writers, the novel is only a vehicle to convey ideas, to prove a point and to discuss the burning problems of modern Turkey. Except for sporadic cases, for nearly forty years novelists have been concentrating mainly on the following themes:

1) The background and various episodes of the War of Liberation; (2) The plight of the villagers and provincial townspeople; (3) The struggle of the peasants against exploiting land-owners and corrupt bureaucracy; (4) Unemployment in the villages, and peasant migration to labour areas (cotton fields, etc.); (5) The peasant migrations to the cities in search of work and its consequences; (6) Peasants turned brigands as a result of gross injustice; (7) The problems of the peasant populations of the shantytowns (greekondas) in city suburbs; (8) The problems of illiteracy and educating children (particularly girls) in villages; (9) The influence of religious exploitation on the masses in villages and towns; (10) The plight of peasant migrant workers in Europe, and the peasants (Vabun, "The stranger", 1932), a pioneer "village novel"; the life of a young Turk exile in Paris (Dir sârûm, "An exile", 1932), etc. He also experimented with a roman-feuvre, covering the second and the third decade of the Republican era (Panorama, 2 vols. 1933-4).
particularly Germany; (11) Problems arising from long-sojourn of Turkish worker-families in Europe; (12) The exploitation of the defenceless citizens by the nouveaux-riches business classes in the cities; (13) The ravages of partisan politics in villages and provincial towns; (14) The problems of women in general and working women in particular; etc.

In short, all the problems of a rapidly developing and industrialising, once mainly rural, society where a population explosion and a universal yearning for better living defy the dexterity of all government. The days of the "art for art's sake" principle of the 19th-I 20th years are left far behind; the concrete problems of Turkish novelists by no time or earnest for telling stories of personal woes.

Leading names of the modern period are: the pioneer Şâbih al-Dîn Şâlî (1907-48), already mentioned) whose novel Kuvâncâli Yusuf ("Yusuf from Kuyucak", 1939) is a masterly description of life in a small western Anatolian provincial town at the beginning of the century; Orhan Kemal (1914-70), who wrote with a warm and deeply human style the epic of the Turkish "little man"; and Kemal Tahir (1910-73), who spent long years in Anatolian prisons where he collected his material on a series of novels on the life and problems of the central Anatolian peasantry and small towns communities. He also wrote several period novels on episodes of early and modern Turkish history. Further, Samim Kocagdi (b. 1916) wrote on the peasant-lower class relationship in the Aegean area and also related episodes of the Anatolian resistance movement; Vasar Kemal (b. 1922) excels in describing, with an epic style inspired by Turkish folk tales, the life and struggles of the peasantry in the Adana area; and Fakir Baykurt (b. 1920), of peasant origin himself, describes the life and problems of southern Anatolian villages, etc. (The majority of short story writers cited above are also known as novelists, and most of them should be counted in this category.)

Outside this category, there are novelists who belong to previous generations but who published their work in the 1950s or later: The short story writer Memduh Şevket Eşenald (1863-1952), published a remarkable novel Ay işçisi ve Arastular ("The Matchmaker and his tenants", 1934), a powerful study of a group of disparate types during the early years of the new capital, Ankara. Midhat Djemal Kuntay (1885-1945), a minor epic poet and biographer, wrote a single novel, Ýstânlâl ("Three Istanbul", 1936). Planned as a period novel, it is rather a series of loosely-connected sketches on the life and character of Ottoman society and government in Istanbul during the period of decay and disintegration of the Empire (1890-1920). It is a fascinating panorama of events and of personalities, Ottomans, Levantine and foreign, told with a personal, elaborate and, in places, precious style. Şâhi al-Hâjî Şâhişîr (1853-61), who published some poems and critical essays in the 1930s, produced his first novel in 1944: in the age of fifty eight, Fahim Beysi ve his ("Fahim Bay and his son"). a powerful character study of an Istanbul type turned businessman. After the great success of this novel, Hisir wrote several others, all in an anarchonic style which nostalgically evoke the Istanbul of 1900. Lastly, the unusual writer Halikaras Ballikâlah the famous exode of Bodrum (Halicarnassus), must be mentioned, who produced his first novel at the age of sixty (Agâlra, Buruna, Burinala, 1945) and devoted his entire work to the epic of the sea and seamen of the Aegean.

In Persian the term bi Portugal comes with its approximate synonyms hikâyat, afsâna, dâštân covers a number of different literary forms, and while this article must be concerned primarily with the modern application, it is also true that the more traditional manifestations have had some influence on recent developments. One of the earliest uses of the term seems to have been in the sense of "biography". Examples of this range from the hikâyat al-unhûyi, the title given to a number of works, of which one of the earliest and most popular is that by Mawâlî Muhammad Dîwârî, said to have been written in 352/ 963, containing biographies of the prophets from Adam to Muhammed, etc, at the other extreme, the bihasi `ulamâ' written by Muhammad b. Sulaymân Tunakbûnî in 1290/1873 and consisting of accounts of leading Shi'î divines, to which frequent reference is made in E. G. Browne, Literary history of Persia, iv, 354-449 passim. A condensation of this work was published in 1941 by Muhammad al-Dîn Dâmîzâ under the title Kissa-yi hikâyà-yi dâštân.

A second group includes pseudo-biographical works of a largely fictional nature. A classic example of this genre is the hikâyat-i tâsts or Hamasístana, the hero of which was a contemporary of the Prophet Muhammad and the story of whose exploits is said to have been commissioned by a namesake who led a rebellion in Sisân at the end of the 7th/8th century. The story is extant in a number of versions, some parts of which, judging from their style, may well go back to the 9th/10th century. Another example in a slightly different class is the Babûstân-nâmeh, the account of the deeds of a putative descendant of the legendary hero Rustam, said to have been a contemporary of the Sââsid monarch Khusraw Parwiz; the earliest surviving version of this is the Fâdâl al-arâsî, composed (in prose) by Shams al-Dîn Muhammad Dalâ'îlîdîl Marwâst in the 6th/7th century.

From this phase we move by a natural progression to the traditional romance with isaw or no historical or religious overtones. Some of these are by known authors—ranging from the famous mathnawis of classical poets like Nizâmî, Amîr Khusraw Dîhâlah and Djâmi, retelling the stories of Laylâ and Majnûn, Khusraw and Shîrûn, Yusuf and Zulaykâh, and so on—to the works of lesser or otherwise unknown authors, like Gherî al-Ahmar Gurgâdî's Wâli, Râmîn, Ayîqî's Wâlî, and the prose version of Samâh-iâyârî by Farîmârke b. Khudâddâl, all these dating from the 15th/16th century. Many such romances have been handed down orally in more or less corrupted versions, until they finally achieved permanence in manuscript or, most recently, in "chapbook" form. Characteristic examples are the stories of Bussay-i Kürd, Bâhrâm and Gulandâm, Hâtîm-i Tâ, Şîrûn, Fâlânûz and Khûrâshîdârîn,
similar motives in setting their tales in remote out of account such works as (1900), Ddmgustardn, is a mixture of elements drawn indiscriminately by the reign of Cyrus the Great; Ddstdn-i Bastin, Musd N'alhrl, u salfauai, Sitdra-yi Lxdl novels whose common link is their single hero and published in 1909-to, three independent Hurray, are the trilogy by Muhammad Bikir Khusrawi, unmistakable, not only in the clear debt owed to historical periods, but the European influence is the medium of a fictionalised travelogue. The authors and political abuses in pre-Revolution Iran through seini-anonymous authors being to expose social Ibrahim Bayg Masdtik al-inufrsinin Siyikatndma-yi (1905), and it is only in the present century that serious attempts Riydtf al-fitkdyii), and it is only within the present century that serious attempts have been made by scholars and anthropologists, both privately and officially-sponsored, to collect and preserve this treasury of popular literature. This neglect may account for the fact that, when the art of story-telling and novel-writing was revived on the literary level during the early years of the present century, models were sought not in Iran's own literary tradition but rather from the flourishing ateliers of Western Europe. Indeed, it is significant that the Persian language does not yet have a word for 'novel', but still uses the French roman (roman). In making this judgment, we are consciously leaving out of account such works as Roy3-yi sâdâh (1900), Mudafik al-mukâinin (1902), and Siyuh-yi-nâma- yi ibrâîm Bayy (1903-9), since the story element in these is subordinate, the primary purpose of the semi-anonymous authors being to expose social and political abuses in pre-Revolution Iran through the medium of a fictionalised travelogue. The authors of the first novels proper may indeed have had similar motives in setting their tales in remote historical periods, but the European influence is unmistakable, not only in the clear debt owed to the historical novels of such writers as Alexandrine Dumas (several of which had been translated into Persian), but even in the use of European forms of Persian names from the Achaemenid and Sasanid periods. Among the more noteworthy of these novels are Muhammad Bâbir Khusravî, Shams u Tughrâl, Mâsî-yi waqifat and Tughrâl u Humây, published in 1909-10, three independent novels whose common link is their single hero and their setting in the period of the Mongol invasions of the 7th/13th century; another trilogy by Shâhîy Mîsâ Haftî, Tugh u saltana, Siyeh-yi Lâli and Safîvalâd-yi Shahâda Khunwâm-i Bâdbi, published in 1919, 1924-5 and 1932 respectively, and set in the reign of Cyrus the Great; Dâstân-i Bâdbi, by 'Hasan Bâdi', the Achaemenid background of which is a mixture of elements drawn indiscriminately from the Shah-nâma of Firdawsî and the works of Herodotus; and a long series of works by 'Abd al-Husayn Shâhâti-zâda Kirmânî, beginning with Dîmgustârâs, a two-volume novel published in 1931 and 1932 and set in the period of the rebellion of Nasrath and the fall of the Sasanid dynasty, and continuing with stories from such widely separated historical periods as the reign of Shâpür the Great (Dâstân-i Mân-yi nakhâh, 1927), the rise of the Sasanid dynasty (Salâhârr, 1933), the overthrow of the Umayyad dynasty by the 'Abbasids (Siyêd- Chân, 1947), the reign of Rustam dar hîrî-i hizâ and the Sasanid dynasty (al- Hâfiz-i Dîhân, 1956), and even the science-fiction future (Rustam dar hîrî-i bint u da'awur, 1953). Most of these works are noteworthy as pioneering efforts rather than through intrinsic literary value. Their language is literary, and even in the dialogues shows little attempt to adjust style to speaker, let alone to use colloquialisms; they are discursive and rambling, and historically full of inaccuracies and anachronisms. Their inspiration comes from the romantic historical novel of 19th century Europe rather than from any native source. If they do reflect any particular society, it is rather that of the writers themselves, and in this respect at least the novels throw interesting light on contemporary Iran. However, the popular success of these early works encouraged many other writers to follow their example, and a list of such books, of varying merit, have appeared and continue to appear up to the present day. A fairly comprehensive list will be found in Kâmshâd's Modern Persian prose literature, 52-3, and it is sufficient here to mention a few of the outstanding names. The list includes a number of recognised scholars—Sa'dî Na'fî, Vâhây Kârth, Rîdî-zâda Shâfây, Dibbî Bîhrîz—which writing is marked by a greater attention to accurate detail than some of their rivals, like 'Ali Dîfâyî, Rahîmâ-zâda Shâfâwî, Husayn Masrûr, Haydâr 'Ali Kâmîf, Djâwîd Fâjdî, Shâhâpîr Partaw, and others whose novels show almost a tendency to revert to the style of the popular romances. Few writers have ventured into the field of contemporary history. A notable exception is Husayn Ruknâdâd Adâmâyta's Dalîrân-i Tungistânî, first published in serial form in 1931 and recounting an episode in the southern tribal disturbances during the first World War; though it appeared a year or two later in book form, it was subsequently suppressed and only reappeared after the abdication of Rîdî Shâh. However, although contemporary history was too dangerous a subject for most writers, this did not apply to general social criticism, which indeed was quite consonant with the reforming mood of the years of Rîdî Shâh's reign. The theme that attracted most attention, partly perhaps because of the opportunities it offered to less talented and scrupulous writers to exploit sensationalism, was that of the position of women in traditional Iranian society. One of the first novels to take up this subject was Mîshîb Kâzîmîn's Tîrani-i makhîf (1922), a somewhat rambling work woven round the subject of true love thwarted by family greed and social custom. Like a number of his successors, Kâzîmîn devotes a good deal of space to the discussion and the frustrations of youth on the oppression and in particular prostitution of women. The chief merit of these works is the light they throw on Iranian society, particularly of the middle class, under the impact of modernisation and western influences. Otherwise their style is rambling and discursive, with frequent digressions into moralising, while the language is still literary and ponderous.

A few writers of this category deserve fuller
mention. Muhammad Mas'ud (Dhaili), who was assassinated in 1947 in consequence of his editorship of an outspoken and often slanderous newspaper, Masri-i imras, wrote a trilogy in 1932-4—Tafrisal-i ghod, Dar talash-i nurosh, and Aghraf-i mahshid— in which he draws on his own experience of lower middle class life in the provinces and Tehran. These novels were variously praised for their frankness and condemned for their pessimism and ribaldry. A later unfinished trilogy—Gulab-i dar, Jashnaband, and Mirayad (1942) and Bashir-i 'umr (1948)—is in the same vein, but shows a greater degree of maturity and objectivity. All Daghial is also well-known as a journalist and politician, and in addition has achieved distinction as an essayist and literary historian and critic. He earns mention here, however, for his three novels Fama (1943), Dast (1951) and Hindo (1955).

Like the others, these take the position of women in society as their central theme, but here it is the women of the upper classes that are under the microscope, and Daghial's work has been criticised for its concentration on a rather narrow and repetitive stratum of Iranian life. His language, while no better suited to his subject than the others, is enjoyable for his skill in the handling of words and for his admitted sometimes rather forced employment of Arabic first-person forms. Muhammad Hidjay is noted for a series of novels—Humna (1957), Farsiha (1959), Ziba (1936-8), Pavstina (1952) and Sineh (1955)—which also, as the names of the first four imply, have a woman as the central character. Hidjay's view of middle-class society, however, is less satirical and caustic than those portrayed by Daghial and Davail, and sentimental philosophising expressed in high-brow language plays a greater part. Hidjay may also be regarded as one of the pioneers of the art of the short story, which during and since his time has tended in Iran to overshadow the full-length novel, perhaps because of its conciseness and discouragement of diffuseness and prolixity. Hidjay's many short stories are buried in some half-dozen collections of essays and sketches, notably Ayine, Ahradegh, Nafta, published at intervals over the period 1932-60. Other novelists who deserve mention include Mahdi Hamid, for his three-part novel Tekk-i dar-bi-dar (completed in 1946), though he is better known as a poet; Fakhr al-Din Shadmav for the Tahrir wa raagheini (1950); and 'Ali Muhammad Aghfalli for his two encyclopaedic novels Shauhr-i Ahi Khakan (1962) and Shahrnam-i darn-e-kara-ti (1966). The first of these being hailed at the time as a major breakthrough for the Iranian novel, though apart from its length it cannot be regarded as more than a worthy continuation of the tradition set by its predecessors mentioned above.

The true innovators are rather to be found in the field of the short story, and here the first name to be mentioned is that of Muhammad 'All Djamalzada, whose first collection appeared in 1921 under the title Yahl hagd wa yahl nabid. The title itself is indicative of a new approach to the art of story-writing, for it is the conventional phrase used to open the traditional folk-tale ("Once upon a time"). In fact Djamalzada's stories do not owe as much to folk-literature as this might suggest, though at least one of the six in this collection takes its basic plot from a well-known folk-tale (Dhaili-ye Khaza Khris). His contribution to the development of Persian prose lay rather in his insistence on the importance of using language that the ordinary people can understand, and although he does not go quite so far as to employ colloquial and dialect forms, except occasionally, his writings are nevertheless a rich mine of idiomatic and proverbial expressions. Indeed he has been criticised for using this stock rather in the manner of a card-index, instead of attempting to reproduce the tones and rhythms of common speech. Djamalzada, like most writers of his time, indulges in social criticism; but the effectiveness of this is largely discounted by the author's long residence abroad and his consequent ignorance of present-day conditions. After his first volume of stories, Djamalzada published nothing more for twenty years; but then there followed four more volumes of short stories, 'Amol Husayn Ali (1941, extensively revised as Sadr, 1960), Talak, U Sair (1955), Ghayre as Khuda hidak nabid (1961), and Asan and U Risman (1964), and six novels, Dar al-magdaliyin (1942), Sahr-i malghar (1944), 'Uwldhak-i idqen (1945), Rau-i ab-kan (1947), Maslumna-i Sairat (1953), and Sar u lahi yah barak (1955). Djamalzada's literary life of more than forty years has assured him a high place in Iranian literary history, even though the momentum of his original impulsion into the field was not maintained in his subsequent writings.

The credit for changing the direction of Persian prose writing rather goes to a somewhat younger man whose literary career lasted only half as long, as well as to others who associated with him or followed his example. Sadic Hidayat's (q.v.) first published work dates from 1928, when he was only twenty, but his contribution to story-telling began in 1930 when, shortly after his return from studying in Paris, he published Zida bi-gur, a collection of eight short stories. The next four years marked the first fruitful period of creative writing; during this time he was the leader of a group of friends known to themselves and others as the Rabee, the "Group of Four", who included in addition to Hidayat himself Masud Farzad, with whom in 1933 he collaborated on a volume of satirical sketches (Wagh usagi shhah), Budjtab Minuwit, with whom he wrote an historical drama in three acts (Masyar, 1953), and Buzurg Alawi, the only other member of the Four to achieve distinction as a writer of fiction (the other two had noteworthy careers as scholars). From Hidayat's pen came two more volumes of short stories, Sih hakya qhan (1932), Siva-yi rahqan (1933), and a short novel, Alawisya Kharrum (1933), as well as a satirical play, Afajana-yi Afarinaag (written in 1930 but not published until 1946), books and articles on literary topics, folklore and magic, and translations from French. The range of this output shows the fines along which Hidayat was developing. Like Djamalzada, he wanted to write in the language of the people; but he achieved this not by having at his elbow a stock of idiomatic expressions, but through an ear well-tuned to the speech of his contemporaries, particularly those of the lower social classes. Moreover, he did not confine himself to any one milieu or class, but wrote with equal insight of all, though his sympathies were always with the underdog. This period in his writing culminated in an astonishing work, Baj-i har (not published until 1937, and then only in a privately duplicated edition in India—full publication had to wait until 1941). So much has been written about this essay in surrealism that it would be futile to attempt to add anything here, and it is sufficient to say that this one work has established Hidayat as a writer of international calibre.

After the change of régime in 1941, Hidayat began
Cubak and Djalal Al-i Ahmad (9.1* in Supp!).

... shows a strong sense of realism and a profound collection (Vdama-W) and a novel of the other two contributors to which was fajdylat. Anirdn served as a point of pilgrimage and petition for the places scurrilous satire on Iranian society, cast in character with the prevailing trend of his writing. Even for a lime a degree of optimism quite out of articles and translations. lire work of this period 1944, and 1946), as well as a quantity seen only a handful of literary articles and some...

In 1933 he left Iran for East Berlin, whence his establishment. Four years later HidAyat died in Paris by his own hand. His close friend and colleague, Buzurz ‘Alawi, though sharing many of his aims and ideals, differed from him in a number of respects. He took less interest in literature and folklore, and was more deeply influenced by Freudian psycho-analysis and Marxist political theory. This latter enthusiasm led to his imprisonment in 1937 and to prominence in the newly formed Tuda Party after his release in 1941. Prior to that experience he had written only one volume of short stories (Cannan, 1934), apart from a single story contributed to the volume Amirk (1931), one of the other two contributors to which was Hiliyvat. In 1941 he published a second volume of short stories (Wshakhama yi zanddn), and in 1952 a third collection (Nama-ha) and a novel (Cahslam-hayagh). In 1953 he left Iran for East Berlin, whence his output of fiction has been negligible. The fact that his reputation stands so high on such a small foundation is a tribute to the quality of his writing, which shows a strong sense of realism and a profound understanding of character.

The "school" of writing started by the Rab’a attracted a number of imitators and followers, some of whom achieved status as independent writers. Among these must certainly be mentioned Sadiq Cukab and Hadi Al-Abmad (q.v. in Suppl.). Cukab was established with his first book of short stories, Khayma-yi skhabdti, published in 1945, and this was followed by a second collection, Antari ki tabyagh mumda udd (1949). Like his colleagues, he is interested primarily in the lives and characters of members of the lower classes, and he depicts these with a strong sense of realism, which often leads him to use expressions and idioms that shock his elders. He is also one of the first writers to use colloquial language freely throughout. His second volume of short stories was followed by more than ten years of silence, but in 1963 he published a novel, Tanger, set in the Tangistan area of his home province of Fars, which gives a vivid picture of the provincial and tribal life of the south of Iran. Two more volumes of short stories followed, Rist-i ammaal-i skabdt (1965) and Giragh-i Almhr (1968), and finally (for so far nothing else has appeared) in 1967 a long kaliedescopic novel, Sang-i sabhr, written mainly in dialect, and with passages in dramatic dialogue form introducing characters from history, poetry, and so on.

Djalal Al-i Ahmad, who died in 1969, has a wider range of writing than Cibak, being interested in sociology, folklore, and political questions, on all of which subjects he wrote articles and books. In the field of story-writing he has four volumes of short stories, Did i banan (1945), Randg ki simbarim (1947), Stdn (1948), and Zami ziydt (1952). A further five stories were published posthumously under the title Pandy daslan. He also published four novels or long stories, Sarngh-daka-yi kanddn-ha (1954), Mudr-i modad (1958), Ndn nd-khalam (1961), and Nifd-ni zamin (1968). Al-i Abmad’s sociological interests show clearly in much of his work, but this is not a criticism of his writing, which is concise and economical, allowing his characters to develop in their own words (which are usually in their colloquial form) rather than through the author’s description of them, who may be considered as having being influenced by the same school of writing including Muhammad ‘ImanAdz&da (Bib-Aidin), ‘Ibraml Gulistdn, ‘Usbn Tdbat, Rahmat Mustafawi, ‘Sir’Amdadri (Darawd), and Djalal Al-i Abmad’s widow, Smln Ddnshvar. The interest in folklore shown by Sadik Hiliyvat was shared by other writers, some of whom could indeed claim to have preceded him, for instance, Amir Kuli Amtn, Kuli Kirmn, and Șubhl Muhtad. Only the lastnamed, however, ventured briefly into the field of original fiction, with a short novel in folk-tale form, Hiliydt Mulld Zulf ‘Ali (1942). The two threads rejoined in the writings of Samad Bhrang (q.v. in Suppl.) and Ghdin Husayn Sfd. Both these writers, born in Tbrz, use the folk-tale form as a medium for allegorical works commenting on contemporary social questions. Bhrang, who was drowned in 1966, is a writer of a series of ostensibly children’s stories, all published between 1966 and 1969, of which mention may be made of Cldz us kldh-ha, Krdl-i kftr-sa, Afshzn-yi mabbdh, Șadik-i sikh-e hbdh, and Krdz-ha us Krdl-i llano. A posthumous collection of short stories, Tlrghdn, was published in 1970. Sfd, who writes his fictional work under the pseudonym Gwdir-Murad, is best known for his plays, minves and film scripts; his short story collections include Nfmd-ha-yi skbhr-i Rv (1935), Skh-ndndh-yi skbhr-tw (1960), Dnnd (1960), Mwkm-ha-yi blm-ndndh (1967), Tsd u nz c Tdp (1968). Like Al-i Abmad, he is interested in sociology, and is the author of a number of monographs. Other writers in this category include Șadik Humydn, Dmnl Mir-’Sdik, and Șhpbr Krdn.

The latest phase in fiction-writing shows a trend towards a more introspective approach, perhaps encouraged by current political and social conditions, which are felt to preclude open discussion of current questions. The writers of this category choose a somewhat obscure and allusive mode of expression, which leaves the reader free to make his own interpretation; they are also more concerned with inner feelings and psychological states. One of the first writers in this vein was Taki Mudarris, whose novel Ykdbld wu tmdnd-yi uz appeared in 1956. This was followed in 1966 by Sfdn, a novel of the 1930s. Bahman Furd is known chiefly as a playwright, but his collection of short stories, Zir-dk-danddn-i sfg (1964), attracted favourable notice. Two poets, Ma’mr Khly-Nah and Mdhmd...
Two other writers deserve special mention: Hüsân Gâhdîr ([..]) and 1. Schê. These works are generally considered to be of Persian origin; but it is not clear whether the reciters employed by Kishor to produce his Urdu versions were actually translating Persian texts themselves, or using existing Urdu versions which had been passed from mouth to mouth. The language is highly coloured and uses rhymes; but the stories recounted were apparently well-known and appreciated in India. The dastans were tales of chivalry, and, like the mathnawi, contained a strong element of the supernatural. But whereas a mathnawi might have a well-formed story, the dastan consisted of a series of short stories or incidents, with little attempt at characterisation.

In the evolution of the Urdu novel, we find the dastan gradually giving way to the European-style novel. Indeed, in some measure the one gradually merged into the other. But the prelude to this transformation was Calcutta, where, in 1800, the British East India Company established Fort William College, to train British officials in the languages, laws and customs of India. The first Principal, John Northwick Glichrist, assembled a number of Indian writers, whom he commissioned to produce prose works which could be used as text-books for Urdu and other languages. While not discouraging a sense of style and a modicum of linguistic embellishment, he required fairly simple language. Subrawardy (op. cit., in Bibl., 18) describes it as "the first prose classic in Urdu... still read for enjoyment". Like other Fort William products, it is written in reasonably straightforward language, and includes good dialogue and characterization. Amongst other Fort William fiction were Avaidi-na mdhfil by All Afso, and Mirza 'All Rehn's Dawdwa's Shahnazlal, based on the drama by Hali Das. Not all the fiction written for John Glinkhart was published at the time.

Two previously unpublished ones have recently been edited by Ibadat BarfiwI. They are by Mazhar 'All Khan Wali, Haift golsam (Kabahi 1864) is a collection of fables; while Madhdnaul aish Kambalal (Karachi 1869) is a short dastan, in 28 chapters. Finally, mention must be made of another Fort William publication which provides a link with the mathnan — Mir Bahadir 'All Husayn's Nastri binaal (Calculta 1863). It is a prose version of Mir Hassam's Sdir al-bayyun, including verses quoted from the poem from time to time. Strange to relate, of Mir Hasan's... unusual... it was published two years earlier than the mathnan itself.

Whether the fiction produced at Fort William forms a definite stage in the evolution of the Urdu novel and short-story, or was merely an interlude, is a matter subject to dispute. Muhammad Sadiq (op. cit., in Bibl., 212) denies that it was a "formative factor in the development of modern Urdu prose". He adds that, had it never existed, Urdu prose would not have developed any differently. On the other hand, Subrawardy (op. cit., 22) maintains that it not only furthered the simplification of Urdu prose, but also popularized prose romances.

It is certainly arguable that the simpler prose fostered by the Allgarh Movement, and exemplified by the writings of Sir Sayyid Ahmad Khan, and Aftab Husayn Hal, and even Abd al-Hamid Sharar, is at times reminiscent of "Fort William prose". But of those three, only Sharar wrote fiction.

Whatever the merits and demerits of the Fort William products, they were important enough to stimulate controversy as to what features constituted good Urdu literary prose. Many considered the Fort William prose style too simple to be literary. In fact, the first original prose romance in Urdu, Fasana-ya-Azad, on which his fame rests, appeared in this newspaper editor. His gigantic picaresque novel Fasana-ya-Azad, which the proprietor Nawal Khizr appointed him editor. His gigantic picaresque novel Fasana-ya-Azad, or on which his fame rests, appeared in this newspaper in instalments in 1878 and 1879, and was then published in book form in Lucknow in 1880, in four volumes totalling about 1700 double-columned pages. It is more like a collection of short stories and anecdotes than a novel, reflecting both Sarshar's untidy and disorganised way of life and the demands of serialisation, which required him to produce regular instalments with or without inspiration. According to Khursheed (op. cit., in Bibl., 183), the idea of the work arose from a discussion about Don Quixote among members of the staff of the paper, Sarshar's book was a tremendous success, and it was imitated by many subsequent novelists.

The "frame" of Fasana-ya-Azad is that the noble and chivalrous Azad, of the city of Lucknow, falls in love with the beautiful Husn-akhir. In order to win her hand, he has to go and fight for the Turks against the Russians, and his adventures are recounted in the book. He has a companion, Halim Sitarar, who is a figure of fun. In fact, in many ways, the roles of Don Quixote and Sancho Panza are reversed in Azad and Khadil. The work is... rich in characters and scenes that it defies description in a brief account. There are major sub-plots as well as the main "frame", and the incidents described are both numerous and varied, ranging from fighting and flirtation to discussions of poetry. It is notable for its pictures of Lucknow life. But above all, it is full of dialogue, often racy, and suitting the language to the speaker. A Western reader picking it up for the first time might think, from many pages, that it is a drama, with each speaker's name in bold letters at the beginning of the line, followed by "stage directions" and then what he or she says. This method of setting out dialogue was followed by a number of Lucknow novelists—for example, Abd al-Hamid Sharar.

The hero, Azad, resembles the dastan hero—handsome, brave, a great lover and a champion of what is right. The realistic pictures, however, are sometimes reminding us of Dickens; and there is very little of the supernatural. Thus it is a transitional work, between the dastan and the novel; though by the time it was published, three of 'Allgarh Ahmad's novels had already appeared, with their realistic contemporary social themes. However, Sarshar wrote to entertain his readers. The abundant variety of characters, including many from the underworld
and the demi-monde; the wit and humour; the basic realism, despite a veneer of exaggeration—all these appealed so strongly to the readers, that it is said that when it first appeared in serial form, each new instalment was avidly awaited, and people rushed to buy the Amdh sikhār because of it.

Sarshir's Bohemian life-style, especially his addiction to alcohol, seems to have affected his work. Of his later novels, Khsdē'ī jau'ddān is an abridged and adapted version of Cervantes' novel. His Kāmū is his only novel with a Hindu background—which is rather surprising, since he was himself a Hindu.

Nadhir Ahmad (1836-1912) is considered by many to be the first modern novelist in Urdu, especially by those who prefer a novel to be a study of contemporary social life, and who like it to have a message. Strange to relate, he became a novelist by accident. Educated at Delhi College, he worked first as a schoolmaster, then as an inspector of education, and subsequently in various posts in the Revenue Department. His first ‘novel’, Mirāṣī al-sans (‘The bride’s mirror’) (1864) is a direct outgrowth of his own daughters to read privately; it was a moral tale to teach them the qualities required of a good and successful wife. A British Director of Public Instruction saw the manuscript, and urged Nadhir Ahmad to have it published. Because of its educational value and high moral tone, the Indian Government bought a thousand copies. Nadhir Ahmad achieves his didactic aim by describing two sisters and comparing their married life. Akbari is a spoliť girl who proves incapable of running a house; while Aghari is efficient and practical, almost a model of all the virtues. In 1892 he followed it with a sequel, līlāt-al-naṣīq. It subject is girls’ education, but it is more like a series of lessons than a story. Ta‘wīl al-Nasīḥ (1877) is a more ambitious family tale. It tells how Nasīḥ, while ill, repents; and, having previously allowed his children to do as they like, he now tries to reform them as well as himself. Feādā-ī-yi-Muḥtāl (1889) treats of the evils of polygamy. Imd‘ul-wulq (1883) describes the troubles of an Anglicised Indian who shuns his fellow Indians. But when his only British friend leaves the country, he finds himself isolated. All these novels, then, are stories with a moral, and the very names of many of the characters are descriptive of them: thus Nasīḥ (repentant) and Muḥtāl (affected).

These novels struck a new note and have many attractive qualities. They are straightforward stories of manageable (one-volume) size; in uncomplicated yet elegant style; dealing with the contemporary social scene and its problems. Their high moral tone, somewhat reminiscent of Victorian England, made them suitable reading for people of all ages and both sexes; and they were widely read, and frequently re-printed up to the Second World War. Nadhir Ahmad improved with experience, and his later novels are superior to his earlier ones in both character development and plot construction. But his earlier ones remained the most popular—especially Mirāṣī al-sansī and Ta‘wīl al-Nasīḥ. More recently, Imd‘ul-wulq has attracted attention, because of its relevance to the last years of the British Raj.

The main objection to these novels has been on grounds of the domination of the didactic aim; so much so, that it has been suggested that they are not real novels at all, but pleas for social reforms in the guise of novels. There is also a lack of humour in them. Nevertheless, they mark the advent of the social novel in Urdu. Two distinct genres of novels, then, had emerged by the last quarter of the 19th century—the picturesque type of Sarshir, and the social type of Nadhir Ahmad. Both writers were imitated, and there was a burst of activity in both genres. The picturesque type gradually lost its appeal, and though many later examples could be mentioned, none achieved anything approaching Sarshir’s success. The social novel, however, was continued unabated until the present time, and in 1899 an outstanding example appeared—Umrd‘ Dīn Add (by Mirzā Muhammad Hāfīl Ruswā (1854-1920)). Ralph Russell describes it as the first true novel in Urdu (op. cit., 254). It is the story of a retired high-class Lucknow prostitute, whose name forms the title, and who tells her life-story to the author. Like Sarshir, Ruswā tells much of the story in dialogue form, and the book is very readable and entertaining. As Muhammad Sarīq says (op. cit., 335), the didactic element emerges before the end. But what is remarkable in Ruswā’s approach is his sympathetic and perceptive attitude to his heroine. He does not blame her, neither does he condone her way of life which has made her virtually a social outcast. He shows understanding without being sentimental. Ruswā wrote several other novels, but was unable to repeat the success of Umrd‘ Dīn Add.

As the 20th century drew to its close, a third genre of Urdu fiction appeared, the historical novel. Its pioneer was A‘īb al-Hālīn Sharar (1860-1936), a journalist and historian, and a leading figure in the Allāghār Movement. Born in Lucknow, he worked there for 5 years as Assistant Editor of the Amdh ād. In 1887, he started the magazine Di‘ gudā, which he continued, with interruptions, until his death. His earlier novels were first published in serial form; but later ones were published whole, and sold cheaply as supplements to the magazine. The idea of writing historical novels came to him while reading Sir Walter Scott’s Táinistán during a train journey. Struck by the unfavourable light in which Scott depicted Muslims, he decided to try to recast the balance, and produced Mālīk-ī-‘Ashūr wa‘r Wāsdrīn. He had previously published a social novel, Dīkasp. But though he did not completely abandon this genre, the majority of his novels, numbering about 35, are historical. They contain unashamed propaganda for Islam, and paint Christianity in a poor light; but they are vivid and exciting stories of heroism and romance, with brave heroes, cruel villains, and beautiful heroines—the latter often Christians girls who fall in love with Muslims. They achieved enormous popularity, because Sharar knew how to write a good story and sustain interest. His descriptive passages are convincing without being over-long, and there is considerable dialogue. But the drama often deteriorates into melodrama. His denouements are frequently bloodthirsty, and he lingers too long over cruelty and killing for modern tastes. Historical veracity is often lacking, and there are anachronisms. Still, there is no doubt that he could draw characters credibly if not subtly. His language is eclectic and attractive, without being forced; and it still reads well. And though overlaid with Arabic expressions for some tastes, this suits his themes.

His novels span the Islamic world from Spain to Africa, Turkey, the Middle East and India; whilst in time they range from the 7th to the 19th centuries. Fīrād Fīrūsād (1897), a tale of Christians and Muslims in medieval Spain, is regarded as one of his best novels. The heroine, Fīrūz, is the daughter
of a Muslim father who is brought up as a Christian. She is later raped by a ‘patrichar’, whose child she bears, and whom she kills in the end. The story is highly involved, and the swift dénouement which occupies only 33 pages out of a total of 350, leaves almost all the main characters killed. Equally popular was Pirdina-i-harin (1899), which to the present writer, is more convincing. The background to the story is the conquest of the valley of the Assassins (Naqshbandiya) and their fortress of Alamut by Hulagu Khan in 1257. The hero and heroine, Husayn and Zamurrad, have been in the power of the Assassin leader, Khursâb, but in the end they side with Hulagu against him. There is a vivid description of the final battle and the destruction of the “sublime paradise” of the Assassins, with the hero Husayn playing a major rôle. Finally, Hulagu arranges for Husayn and Zamurrad to marry, and they leave together for Mecca and the Pilgrimage. This accords somewhat ill with Husayn’s obvious enjoyment of prolonging the agony of those whom he kills in the final battle. But it is the sort of melodrama which doubtless appealed to the readers of 1899.

It is difficult to single out names of 20th century Urdu novelists who continued social and historical novels among them, like Prêm Cand and M. Aslam, are better known as short-story writers. Rashâl al-Khayrî (1858-1935) was one of the most successful, and though best-known for his social novels, he also wrote a number of historical ones. His social novels, though not without humour, earned him the nickname of Mostaani-i-ghamm (“depicter of sorrows”). The main theme is the position of woman in Islamic society. His trilogy Subhi-i-sindagi, Shab-i-sindagi and Shab-i-sindagi, is worthy of note. Among his historical novels, ‘Alî-rah Barabdâr deserves mention. The “bride” of the title is a Christian widow who feels drawn to Islam, and finally marries ‘Ubayd, a partisan of al-Husayn at the battle. Suhrwardy (op. cit., 116) regards Rashâl al-Khayrî’s historical novels as “poor stuff”, lacking social colour and realism.

The Urdu short story is held by most Indian and Pakistani critics to be an importation from the West, although some of its elements may be seen in stories and anecdotes of the dastân, especially Fustâna-yi-sa’dîk and Fustâna-yi-Âsad. M. Aslam in his introduction to one of his short-story collections, Hâzbânata aur khâyâzat (Lahore 1972, 3) maintains that the reverse is true, and that the Europeans really took the short-story from the Muslims! He goes on to say that the short-story originated in religious literature such as the Old Testament and the Kur‘ân, and attempts to substantiate this from stories in the Kur‘ân. However, there is no doubt that the creator of the genre in its modern sense, in Urdu, was Prêm Cand (real name Dhampat Râj) (1880-1937). Born near Benares, he was a Hindu, and wrote in both Hindi and Urdu; indeed some of his fiction appeared in both languages—or in both scripts, Arabic and Devanagari. He started his writing career as a novelist, then turned to the short-story, which was at that time in its infancy in India. He was a prolific writer, and his short stories were collected in a number of volumes, including Prêm batîsî, Prêm batîsî, Prêm sâfî, Wirdâs and 2âb-i-râb. Prêm Cand is noted for his pictures of village life. He depicts the poor and humble as inherently good, but compelled to do wrong by the pressures of poverty and temptation. They are exploited by landowners and rich employers, and are a prey to fear, superstitions and religious bigotry. For such people little acts or accidents may have dire effects. Prêm Cand, then, was no less a preacher for social reform than Naqshîr Ahmad. But whereas the latter concentrated on the middle class, Prêm described the lower classes, especially in villages. A master of characterisation, style and form, he made the short story his métier, and whilst his novels are now neglected, many of his short stories are acknowledged masterpieces.

Among later short story writers, mention should be made of M. Aslam (Em Aslam), the author of over a hundred books. Many of his short stories are romantic, and he depicts the instability of middle-class society in a period of change. Finally, there have been several brilliant writers of humorous short stories, and essays in story form. They include Shawkat Thaâawî, Mirzâ ‘Asîn Bîg Çughî‘î and Fâtâr Duhkhâr (1858-1956).

A word must be said about the nomenclature of Urdu fiction, which includes Hindi, Persian, Arabic and English terms. Daršân has already been mentioned. Khâdût was used chiefly for tales, anecdotes and short stories. Throughout most of the 19th century, the term fasîna, with its variant, afsdna, was current. Nâqshîr Ahmad’s novels were called bâysa, but as we have seen, he also used the term fasîna. Hîbâyîl (1900) was also common for a novel. The Urdu short story is now usually called afsdna—more properly, mukhta’ar afsdna.

In dictionaries of older Malay, *kisā* is defined as "story, narrative episode". It occurs regularly in this sense in literary words from the 17th century onwards, and, in addition, is used in Malay historiographical works and romances as a kind of pericope marker to introduce a new stage or episode in a longer narrative. It appears in the title of a Malay adaptation of the Stories of the Prophets, *Kisā' al-anbiyyāt* (largely the version of al-*Kišāʻ*) which became popular from the 17th century onwards, and in more recent times was the title of an Indonesian magazine, *Kisah* (Jakarta 1953-8) devoted to the short story. It appears in the title of a collection of short stories, purely western and totally secular in theme and content by Armijın Paně, *Kisah Antara Manusia*. Nevertheless, it did not establish itself as the title of a genre. For shorter length narratives, the Sanskrit-derived *cerita* (story) was preferred, with, in imitation of European usage, the qualifying adjective *pendēk* ("short") made up the two words now being abbreviated to *cerpen*.

The short story is currently the most popular literary form in Indonesia and Malaysia. Its roots are to be found in local fables and animal stories, in short narratives of Perso-Arabic origin, especially those set within frame-collections, and in the flowering of the genre in late 19th century Europe. Although none of the great Arabic collections of stories such as *al-Buhfūdl*, *al-Aḥadi* or the *ilf layla wa-layla* has accompanied the Islamisation of the Malay world, one of the very oldest Malay MSS (ca. 1615) is a fragment of the Persian *Tādāt-nama*: a rendering in Malay of a Persian version of the *Subhasapāl* or "Tales of a parrot". Other frame-stories such as *Kalītī wa-Dinma* and the *Sindibād-nama* established themselves in Malay renderings relatively early. The large number of MSS of such works is a good index of their popularity for all of these stories belong to the popular domain. The composition by individuals of realistic short stories did not begin until the 20th century with the development of a popular press, and the possibilities that newspapers and periodicals offered for the development of such a form of narrative fiction. It established its present popularity in both regions during the 1930s.

In Malaysia, during the 1930s, the authors of short stories were graduates of Malay stream education and religious schools. The majority of their stories were moralistic, concerning such issues as the backwardness of the Malay, the problems of forced marriage, and the need for a reformist understanding of Islam. In Indonesia during the same period the secular stream was dominant. But just as since Malay independence in 1957, the short story in Malaysia has become secularised, in Indonesia some short stories by Muslims have brought a consciousness and sensitivity to the perception of religious experience which is characteristically modern. In many cases, the concern is purely with man as man, and while a religious dimension is suggested, it is not worked out within the dogmatic frame-work of a single identifiable religious tradition. In a few, however, and A. A. Navis (see Bibli below) presents the best example, a religious problem lies at the very heart of the story, and is the reason for its existence. Nevertheless, apart from contributing the word *kisā* to the Malay vocabulary, the Muslim religious and literary tradition has played only a limited role in the shaping of the short story in Malay. The Western secular tradition has been, far and away, the most important single influence.

**Bibliography:**

7. In Swahili. In Swahili literature, the word *kisā* was first used in the context of the *Kisas al-anbiyyā* [q.v.]. The numerous Swahili authors (i.e. writers as well as composers of oral traditions) had at their disposal rather more elaborate versions than those of al-*Kišāʻ* or al-*Tha′fābī* from which to borrow their themes for the prophets' legends, extremely popular in East Africa. Also, several of the Swahili versions of the legends have their parallels in Indonesia; see J. Knappert, *The Qisas 'l-Anbiyyā* as *moralistic tales*, in *Perspectives on the Seminar for Arabian Studies, vi* (1976), 163-76.

In written Swahili literature, the legends of the pre-Islamic prophets are always treated in verse. Full-length epic poems are extant about Adam and Eve, Job (Ayyūb) and Joseph (Yūsuf), but fragments have also come to light dealing with Mūsā, Yāsīḥ, Yūnus, Sulaymān and Dāwūd, Burāshīm (Ibrāhīm), and Zakariyyā and 'Īsā; see Knappert, *Four Swahili epics*, London 1964; idem, *Traditional Swahili poetry*, Leiden 1967, ch. 2; idem, *Swahili Islamic poetry*, Leiden 1974, i., ch. 3. Many of these legends, and especially those with miraculous elements, circulate in oral tradition, see Knappert, *Myths and legends of the Swahili*, London 1970. It is
probable that these tales have come to the Swahili Coast with sailors from Arabia, Persia and India; the latter country in particular seems clearly to have influenced Swahili literature.

From this semi-religious usage, the word kisa (now spelt kisa with purely Swahili plural vissia) acquired an extended range of meaning to that of "miraculous tale in general," "fairytale of the type found in the Alf layla wa-layla collection" (p.202). The connection here is obvious, since many of the latter tales are variations on Kisas al-amiyyah themes or employ their characters, e.g. the tale of the fisherman who found a bottle that had been sealed by King Solomon, a tale well-known amongst the Swahili. These prose stories were not written down by the Swahili themselves, but missionaries with folkloric interests collected them in the 19th century; see e.g. E. Steere, Swahili tales, London 1859, and C. Velten, Märchen und Erzählungen der Swahili, Berlin 1898. These vissia were never composed in verse, until very recently, whereas the hadithi, traditions about the Prophet Muhammad or other holy men, were often composed in verse and written down, in Arabic script of course. As well as the above two genres, traditional Swahili storytellers distinguish also the ngena, an invented tale based on a fabric of Swahili folktales, and the kisa, of the type represented in Islamic literature by Kalila wa-Dinmaw (p.203) and the Anwar-i Shihai (see KAGAIR).

It is only in the last thirty years or so that the word kisa has come to be used in the meaning of the modern novel, though Swahili novels have neither the extended treatment nor sophistication of European-language novels. Indeed, secular Swahili prose literature as a medium for artistic expression is still very much in its infancy. In the earlier, traditional society, prose was the vehicle for the conveyance of factual information, such as topics of history, law and theology. Artistic expression was channelled exclusively into poetry, even for storytellers, and a writer in the West have not been represented in poetry for a century or so, such as theology and the rules of personal behaviour. Fable and fairy tale belonged to the realm of the (often illiterate) story-teller. The short story and novel have only come to the wider public and the masses. The themes and genres are very varied: rhymed versions of Biblical stories or liturgical poems, songs of joy or of lament, eulogies, and panegyrical and hagiographical stories or liturgical poems, songs of joy or of lament about the life of the Kikuyu as

It is written in a special language, comparable to the malatin, a kind of poetic holme in Arabic dialect given literary touches, largely stripped of Hebraisms or outside linguistic influences, and generally to be understood by the Jewish communities of the Maghrib as a group, even though differing from the current spoken language.

As well as the folkloric setting which it describes
and the precious linguistic materials which it represents, the ḥadīṣ reveals on examination deep structures and a content attaching it on the one hand a cultural ambience of the Maghrib but on the other, to universal Jewish thought. A rigorous and minute analysis of the written text or the oral discourse, and of their direct or allusive references, throws light on their literary foundation and on a cultural substratum of great richness.

The present author has given a sketch of all this in various publications (REJ, REJ, JA, ROMM, etc.). Thus L’histoire de Job en judéo-arabe du Maroc, in REJ (1968), 279-315, surveys a considerable number of Jewish, Arab-Muslim, Morisco and Coptic chronicles and legends, the (Greeks) apocryphal text of the Testament of Job, as well as the conflicts and questions concerning the legitimation of its power, as a background to the theocratic opposition to the organs of state and their policies, and by problems of administration connected with the emergence of these scholars and the spread of rag paper [see KAYS] from the end of the 8th century onwards. These scholars and secretaries, calligraphers, etc., and the multiplicity of manuscripts with their countless, often very ornate and flowery in the course of time, consisting of two phrases rhyming with one another (ṣaddūq). Following Christian and Jewish patterns, this form of a codex was generally maintained for the Holy Book since the authoritative reaction done under the name of the Book, or the title page with the author's name. Presumably covers made of wood or papyrus were covered over and kept together with leather and, like contemporary Coptic or later Islamic covers, decorated with coloured wood, bone or ivory.

With the rise of the Abbasid caliphate, books and book knowledge, additional to knowledge of the Qurʾān, became the title page with the author's name. Already in this period, autographs or copies made during a period of ten years. The production of such books and their trade was immense in quantity and was widespread. Titles of books which had in the past been simple and short became ornate and flowery in the course of time, consisting of two phrases rhyming with one another (ṣaddūq). First the titles were given in the prefaces, which usually contained the author's name and which started on a b-page; later the previous page (a-page) became the title page with the author's name. teristic for the respective countries, e.g. regarding the different kinds of workmanship in leather. Moreover, in regard to the arrangement of the areas on the covers, there are, apart from general principles like lines parallel to the edges of the book, features characteristic of certain places or periods, e.g. the treatment of the centre, and the application of innumerable geometrical patterns and ornaments in certain variations by using brasses. The triangular flap to protect the edge and the clasp and eyes, appear at an early period. Asphodelos paste was used in the Syrian-Palestinian area, and paste made of wheat in South Arabia. While rag paper was used for books in general, parchment was sometimes used for copies of the Koran and other de luxe editions. Fine paper imported from China was reserved for books valuable to their owners, like books of seals. These books were not written with the usual ink (see Kitab) only, but also with ink made of silver and gold, and their pages and lines were decorated with coloured ornaments (arabesques \( [\text{q} \text{r}] \)). There were always illuminations (see \( \text{f} \text{r} \text{d} \text{k} \)). The writing surfaces were darker and more shiny; the writing surfaces were framed with lines in different colours or in gold, on the covers, there are, apart from general principles, e.g. the right order of the sheets was controlled by catchwords, which appear early. The pagination of sheets or, sometimes, of pages, is only found later or in modern times; the pagination of sheets was more widespread. Many books ended with a colophon containing the name of the scribe, and often the date as well as, though not so often, the place; but in certain cases, the dates given there are not correct, e.g. when taken from texts which had been copied. For the post-Mongol period, the following features of the books should be noted. The size and the writing became smaller, and the kinds of paper became thinner, stronger and smoother. Coloured paper was used and, from the Ottoman period, imported paper from Europe also, firstly from Italy, and with watermarks. The ink became darker and more shiny; the writing surfaces were framed in different colours or in gold, and an \( \text{m} \text{r} \text{d} \text{m} \text{a} \text{n} \text{a} \) was drawn on the first page of a book. Owner's stamps appear in considerable number for the late period; and bookbinders' brushes with their names shaped like a medallion, can be found on the covers, even on lacquered ones. Splendid, calligraphic specimens of large size, with covers superbly wrought (these being mostly works of Persian poetry, often illuminated by unique miniatures), were produced mainly at the courts of the Timurids, Safavids, Mughals and Ottomans; splendid copies of the Koran were produced also at the court of the Mamluks. The scribe is often identical with the decorator, the "gilder" (\( \text{m} \text{d} \text{b} \text{k} \text{b} \net \)); he came next in prestige to the highranking calligrapher. The bookbinders formed their own guild from the time of Bayazid II (886-918/1481-1512) onwards. Even after the introduction of printing (see \( \text{m} \text{a} \text{r} \text{a} \text{ra} \)), books were written by hand, increasingly by European ink and nibs, and bound in the traditional way until the beginning of this century.

original parchment copies of the two sacred books by bribing the keeper of the books of the Sin'djir in 1904-6; they were written in Kusdirish in a simple transposition cipher. The text written in this cipher shows clearly that it was copied from an original written in Arabic script. The possibility of a fraud was, however, not accepted especially as, stimulated by the interest of European scholars in Yazidí beliefs, sharp guarantors in Mawsil were always endeavouring to discover new texts. Minhana endeavoured to show that a former Nestorian monk of the Alkahsh monastery, named Shahnás Eremia Shánur of the diocese of Kirdik, who died in 1906, forged all the texts published by Chabot, Glanvit, Isya Joseph and Browne, but the authenticity of the Kusdirish text was accepted in Bittner's monograph, Die heiligen Bücher der Jeziden oder Teufelsanbeter, with Nachtrag, in the Denkschriften d. Wiener Akad. d. Wiss., iv, Vienna 1913. The syntax of the text is, according to Edmonds, basically that of the present-day dialect of Salaymání Kusdri. Both Bittner and Edmonds agree that the Kusdirish version is not the original, but must be a translation from the Arabic, as some linguistic peculiarities suggest (plays on words which are unintelligible in Kusdirish).

The Kusdr-i Di'lwa might nevertheless conceivably have been originally written in Kusdir, as the Kusdir text is in many passages more lucid and coherent than the Arabic, while in the Masjdf-rag§, the Arabic text is better than the Kusdrish. According to Sharaf al-Din, the Kusdr-i Di'lwa in its present form could not have been written by an Arab, as the language is modern; there are a number of expressions which are either not used in classical Arabic or only came into use very late. In places also the construction is un-Arabic. These considerations could, of course, be arguments in favour of a recent forgery. The Arabic of the Masjaf-rag§ is even more modern, as it shows undeniably the influence of the spirit of Ottoman Turkish.

So far, we know of at least four versions of the two sacred books: one in the possession of O. Parry in 1853; one in the hands of Isya Joseph, who possessed two versions in addition to the one published in AJS/, xxv; two procured by Father Anastase Maris, one of which, the so-called Sinlenur version, was copied in 1899 by a Sindrían Yazidí for a Yazidí apostate, while the other was copied in 1904 by Anastase himself from the original in the possession of a Mawsilí.

The Kusdr-i Di'lwa (also Kusdr-i Di'lwa, DiÌòa), the original of which according to Joseph was in 1892 still in the house of Moll§ Haydar in Bå'dhriyya, and was taken twice a year to the tomb of Shajk 'Adl, is quite short. In book form it covers 8 pages and has 109 lines. It is ascribed to the reputed founder of the religion, Shajk 'Adl (d. 535/1528 or 537/1529; see 31) and is said to have dictated it to Shajk Fakhr al-Din.

The fact that the Kusdr al-Di'lwa is not mentioned in the Radd s®la-l-K€fâda we-Yas'adinya al-mus'haf£f§in li t-milla al-islâmiyya al-muhamad£yya written in 732/1332 by the well-informed Ibn Djamí (Abu Firsá 'Ubayd Allah) who belonged to the Ephrataz district, nor in al-Makzl in connection with his description of the destruction and burning of the tomb and bones of Shajk 'Adl in 817/1414, makes Sharaf al-Din think its date of composition cannot be put earlier than 725/1325 or 817/1414. As Ewlyá Celebi does not mention the work, this would bring the date even farther down, to 1655.

The above facts seem rather to indicate, however, that the Yazidí have been able to maintain the secret of the book with success. In spite of the advantages which might have accrued to them as adh al-b¥id, they have preferred to deny their possession of sacred books. Only in the Catalogue of the Shajk Mirán Ismãl Bek 'Abd Bek Oghlu Nází Kháshí for the Russian Yazidí there is a reference to "the glorious Di'lwa", Gyunairn, as a source of the tradition.

The contents of the Kusdr-i Di'lwa, the form and text of which are in keeping with its high purpose, are as follows: Melek Táwús who existed before all creatures sent 'Abjáwáz (= 'Abd Táwús = Shajk 'Adl) into the world in order to guide rightly his chosen people, the Yazidí, by oral instruction and later by means of the Kusdr-i Di'lwa which no outsider may read (preface). He then speaks in the first person of his pre-existence and eternity, his omnipotence over all other creators and gods (not "creatures" as in the Arabic), of his omnipresence and providence, the erroneousness of other sacred books and the clear perceptibility of good and evil, his rule over the world and his inscrutable decree, and which in every age we owe the sending of a great man upon earth (ch. 1). Further, he deals with his power of rewarding and punishing, which also allows those who do not deserve it to receive benefits; with the dying of a true Yazdí and the migration of souls (ch. 2); he says that he alone has power to dispose of the creatures and things of the world (ch. 3). He warns against strange doctrines, as far as they contradict his own ones, and against three unnamèd things, and promises his followers his powerful protection if they keep together (ch. 4). He asks that his cult and the orders of himself and his servants should be followed (ch. 5).

The Masjaf-rag§ is more comprehensive. The Yazdí Kusdir original is in the form of rolls and contains 152 lines in cipher. It is much more mundane and banal and less coherent than the Kusdr-i Di'lwa. It is full of contradictions and breaks off abruptly. According to tradition, it was composed about 100 years after Shajk 'Adl (ca. 742/13322) by the great Hasan al-Ba§rI (q.v.). The original was said to have been at one time in the house of the Kahaya 'Ali in Ka's Azz al-Din near Semail on the Tigrí, but it seems now to be in Sin'djir like the Kusdr-i Di'lwa.

Cosmogony. In a very confused fashion, without divisions into chapters, the Kusdr-rag§ deals with the creation of the world in three contradictory versions. According to what seems to be the more original story of the creation, God completed the creation alone. He made a white pearl which he put on the back of a bird Anfar (in many manuscripts, Anglar) created by him and was enthroned on it for 40,000 years. He then created the seven angels of God who are identified with the mystic shaikhs.

On the Sunday, God created 'Arak-i (Azazil, Zazál) = Melek Táwús, who is supreme over everything; on the Monday Melek Dardášl = Shayk Hasan (al-Ba§r). The Yazdí pronunciation is Shekhסin, as the invocation in the chief Yazdí prayer shows (Syedjcin Shekhysin = Sadijdín al-Din Shayk Hasan) (the conclusions which have been drawn from an alleged Shayk Si'în who is compared with the moon-god Sin, e.g. by Massignon, Essai sur les origines du lexique technique, Paris 1925, 200 n. 2, are quite wrong); on Tuesday he created Melek Isrác (Isráّl) = Shayk Shams (al-Din); on Wednesday Melek Mikašl = Shayk Abú Bakr;
on Thursday Melek Dibrâ'î = Sadîqîdîn (Sâdîqîdîn, Sâdîqîdîshd-Dîn); on Friday Melek Şahmâ'îl (Şâhmâ'îl, Şamâ'sîlîmî) = Nâsîr al-Dîn; on Saturday Melek Tiwû'îl (Nûrubî) = Fâghr al-Dîn.

Then he created the seven heavens, the earth, sun and moon, whereupon the last-named angel of God Fâghr al-Dîn took over the rest of the work of creation and created man and the animals.

God now came out of the pearl with the angels and caused it to burst into four pieces with a loud cry. On the sea which was formed by the water rushing out of the pearl, God sailed for 30,000 years in a ship created by him. Dibrâ'î, created in the form of a bird, created from the pieces of the pearl sun, moon and stars, the mountains, plants, fruit-trees and the heavens (cf. on the rôle of the pearl, M. Mokri, *Le symbole de la perle dans le folklore persan et chez les Kurdes Jûtûm et Iûhlî (Ahl-e Haqq), in *JA* [1960], 463*-81*).

Parallel with this is the rather different conception of the seven deities, who arising through emanation, saved the Earth from destruction by the waters of the sea from which it had been formed. They are the seven deities of the Yezidis, ('Azrâ'îl = Melek Tâwûs); Harûn (Harûn-El-Rashid); on Thursday Melek al-Dîn. After them Shabur (Shâbûr) and II reigned as are the statements regarding the descendants of Adam who had as yet no opening in his bowels was driven out of Paradise by Melek Tiwûs induced Adam to eat of the forbidden fruit of the tree of knowledge; Nûrubî (moose): shiit (stream); shârr (evil); mafân (accursed); ilâma (curse) and naft (horsehoe).

Not mentioned in the *Masâfî*, but traditionally regarded as forbidden, are words beginning with *shîn*: also *saratîn* ("carib"); *bâlîn* ("hedge"); *bûstân* ("vegetable garden"); *bûtî* ("duck"); naft ("jump") and others; reading and writing, shaving and complete removal of the moustache are also forbidden, as are the use of combs and razors belonging to others, taking water from sacred forests, the rearing of bastards and drinking from gurgling vessels.

KITAB (a.), inscriptions.

1. Islamic epigraphy in general.

The study of Arabic inscriptions today constitutes a science full of promise, an auxiliary science to be sure, but a science indispensable to the scholarly exploration of a whole category of authentic texts capable of throwing light on the civilization in the context of which they were written. From a very early period, seeing that the first dated Arabic inscription available to us goes back to the year 316/652 and that we are aware of previous inscriptions and graffiti known as "proto-Arabic", there appeared in Islamic circles the practice of engraving, on stone or other hard material, in a more or less skilful fashion, the symbols then used in so-called archaic Arabic writing [see *ESAT*]. This practice subsequently spread, benefiting from the prestige soon to be enjoyed by a writing capable of giving material embodiment to and preserving the very letter of the *Kûr'âna* revelation while responding to the needs of the new society born simultaneously with the Arab-Islamic empire and state. This corpus
of inscriptions drawn up in the Arabic language, disseminated and preserved up to the present day throughout a particularly vast geographical region, that of the Muslim countries where Arabic writing was practised, may today be suitably considered in its entirety, in spite of the difficulties inherent in the massive scale of the regions in question and in the inadequacies of the researches hitherto undertaken.

In its capacity as an original discipline, Arabic epigraphy, in common with the subsidiary sciences which it more or less borders on, like numismatics, egyptic or diplomatic for example, or even those which it partially overlaps, like palaeography *stricto sensu*, was among the disciplines subjected to specific study, at the end of the 19th century, by enthusiastic Western scholars curious about Oriental civilisations. Its methods, inspired principally by those of classical epigraphy, and the first attempts at their application, were owed to their zeal. It enabled various Western Arabist and Islamic scholars to obtain historical and archaeological results which guaranteed its vigour. It was not however until several decades later that it came to be recognised as a science by Arabic-speaking themselves, in regions where the traditional taste for calligraphy had hitherto remained unchallenged but had never taken the form of the searching out or the study of texts of this type decorating the walls of buildings or the surfaces of pieces of furniture; it is in fact no accident that the early Arab sources, anxious to describe the stages in the development of writing and to give the names of its eminent exponents, mention only the names of copyists or scribes distinguished in their use of the pen, while remaining silent on the issue of so-called lapidary writing and refer only exceptionally to the existence of the monumental graphic compositions that are so remarkable.

A modern science therefore by its very definition, Arabic epigraphy saw some of its rules codified as a result of the personal efforts of the Swiss orientalist Max van Berchem. The attention which this passion of enquirers tirelessly brought to bear on the remains of Arabic inscriptions preserved in Egypt and in Syria was in fact accompanied by a detailed consideration on his part of the fundamental principles according to which their study should best be conducted; some spectacular initial progress was marked in his lifetime and under his inspiration by the establishment of the first corpora of Arabic inscriptions.

This progress went far beyond anything that had been previously attempted. They should not, however, condemn to oblivion those earlier efforts which can be set back as far as the 18th century with reference to Tychsen, but which owed most of all, at the beginning of the 19th century, to the personality of J. J. Marcel, the French palaeographer, a member of Bonaparte's expedition to Egypt, who devoted his energies to deciphering, reproducing and annotating in tentative fashion some Arabic inscriptions which he himself accomplished or superintended with regard to Cairo (M. van Berchem, CIA Egypt i, Cairo 1894-1903, Mfm. mission arch. Jr, xix), Tripoi (M. Sobbenheim, CIA Syrie du Nord i, Cairo 1909, MIFAO, xxv), Siwás and Dîwrigi (M. van Berchem and H. Edelsh, CIA Asie mineure, i, Cairo 1910-17, MIFAO, xxix) and finally Jerusalem (M. van Berchem, CIA Syrie du Sud, Cairo 1920-2, MIFAO, xxix-xliv), were followed, after his death in 1911, only by a later supplement on Cairo (G. Wlet, Cia Egypte, ii, Cairo 1929-30, MIFAO, ill) and the publication still later, in the form of posthumous work taken over by other hands, of the results of a survey of Aleppo begun by Moritz Sobbenheim, in the lifetime of Max van Berchem, and subsequently resumed by Ernst Helford and Étienne Combe (Syria du Nord, ii, Cairo 1954-6, MIFAO, xxvii-xxviii).

The terrain prospected on this basis remains, at present, minimal in comparison with that approached by less complete studies. Certainly there are other works of broad scope, undertaken in a different spirit, which also deserve mention. These have striven for example to deal with the question in their own way with regard to countries where Arabic inscriptions attracted attention at a very early stage: the inventories of Michele Amari for Sicily (Le epigrafi arabiche di Sicilia, Iscrizioni editi, Palermo 1875, Iscrizioni secoperte, 1879-81, Iscrizione mobili e domestiche, 1885, re-edited by F. Gabrieli, Palermo 1971) or of F. Lévi-Provençal for Spain (Inscriptions arabes d'Espagne, Leiden 1931), not to mention the various fascicules published in Calcutta under the title Epigraphia Indo-Moslemica. But beside these, of far greater number are studies that are currently out of date, such as the Corpus of inscriptions arabes et turbes de l'Algérie (G. Colin, Département d'Alder, Paris 1901) and G. Mercier,
of the fundamental need for studies conducted on a near Eastern numismatics, iconography, and epigraphy: communication or symbolic affirmation, over legibility (cf. R. Ettinghausen, Arabic epigraphy, in Boletin de la asociacion espanola de Orientalistas, v [1969], 133-90, and M. Sharon, Un nouveau corpus des inscriptions arabes de Palestine, in REI, xlii [1974], 133-91).

As a consequence, the uneven quality of results obtained and their partial insufficiency remain the principal defects of collections made up to the present day. This assertion, banal though it may be, cannot be passed over in silence, even if the reasons for it are easily explained in a world stretching from India to the Pyrenees and from Anatolia to Black Africa, covering an immense territory that is little-known from an archaeological point of view and of which certain parts are particularly difficult of access, and which in any case considerably oversteps the limits assigned today to the Arab world as strictly defined. It is not only that Arabic inscriptions are dotted throughout areas that have since reverted to a desert state and that some provinces Islamised at a late stage, like Anatolia, are not the least rich in hitherto unsuspected treasures; but there is also the fact that these inscriptions that have remained so long outside the canon of research are also distinguished by their diversity of appearance according to the regions, as witnesses to a society where writing, spread broadly throughout all areas, was subject to numerous stylistic variations (see Knabb). The difficulties of decipherment are thus magnified by the effect of these local practices, and the traits and qualities peculiar to Arabic writing itself from the time of its appearance, which have subsequently conditioned its development, continue to be partially responsible for the shortcomings of a discipline where scientific progress is confronted by uncertain readings and by problematic interpretation of scripts, since there are numerous instances where letters are easily confused and uncertainties are further multiplied and complicated by a concern for ornamentation, which in most cases takes priority over legibility (cf. R. Ettinghausen, Arabic epigraphy: communication or symbolic affirmation, in Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles, ed. D. R. Rouynjian, Beirut 1974, 297-317).

Such conditions were hardly favourable to the intensive and systematic publication of documents in the series of Materiens pour un Corpus inaugurated by van Berchem. They were no more favourable to the establishment of the other fundamental studies apparatus envisaged a little later by Etienne Combe, Jean Sauvaget and Gaston Wiet in the form of a Repertoire chronologique d'epigraphie arabe which had the object of assembling, year-by-year and in an approximately geographical order, the texts of Arabic inscriptions already published, accompanied by their French translation and indispensable bibliographical information. To be sure, sixteen successive volumes of this Repertoire (Caire, PIFAO, 1931 ff) have so far appeared and more than six thousand inscriptions have been edited covering the first eight centuries of the Muslim era. But since 1931, the date at which the enterprise was begun, the rhythm of discoveries has been more rapid than the rhythm at which the inventory has been assembled; the latter remains incomplete and today it swarms with lacunae in its most ancient sections, making it a vehicle for defective copies and sometimes of duplications. Even to consult it, in its present state of incompleteness, is to encounter difficulties which are barely alleviated by the publication of the Index geographique to its first six volumes, quite recently brought about through the good offices of the Centre d'Epigraphie Arabe of the Ecole Pratique des Hautes Etudes IVth section of Paris. Even if it may be hoped that forthcoming volumes (vol. xvii prepared by L. Kalus, in press), profiting from experience acquired and designed to respond to more precise critical objectives in an age where our knowledge of Arabic inscriptions has considerably developed, will avoid some of these defects, they will continue to be no less restricted by the inadequacies of the previous publications on which they cannot help being based.

The Repertoire chronologique d'epigraphie arabe is, in any case, the only existing attempt at systematic grouping of inscriptions, in a sphere where the means employed are, to this day, seldom sufficient for the extent of the tasks to be accomplished. Also to be asserted is the almost total absence of studies of Arabic epigraphy constructed on the principle of the series, the non-existence of functional corpora, organised according to material and category for example, the only means permitting a thorough investigation of the limited types of documents which inscriptions are, by definition. It is appropriate to mention in this connection, insofar as concerns the signatures of craftsmen, the inventories, designed to form a Corpus of Muslim artists, with which L. A. Mayer hoped to bring about a re-evaluation of our knowledge concerning the artistic scenes, as well as the functioning of their influences, and the publication of which was, also, interrupted soon after the death of the inaugurator of the collection (see Mayer, Islamic architects and their works, Geneva 1956; Islamic astralists and their works, Geneva 1958; Islamic metalworkers and their works, Geneva 1959; Islamic armours and their works, Geneva 1962).

The bibliographical guides and the synthesised surveys are also inadequate to enable a confident orientation in a mass of studies that are too often indebted to fortuitous discoveries and consequently scattered through the most diverse of volumes, ranging from "epigraphic appendices" accompanying reports of explorations, accounts of journeys or archaeological publications to museum catalogues or monographs dealing with themes such as Islamology, history, paleography or even aesthetics. Such in fact is the variety of subjects covered by Arabic inscriptions of an equally varied interest. Such also is the slow progress of research, which has been principally concerned with a copious proliferation of notes, correspondences and brief articles of an unfortunately uneven quality.

Nor do we have at our disposal, it should finally
be made clear, manuals providing an introduction to Arabic epigraphy and guiding the efforts of those who wish to become conversant with it; familiarity with the works of their predecessors, especially with the articles of Max van Berchem, loaded with methodology (Notes d’archéologie arabe, i and ii, in JÉ [1891], i, 411-493, and [1892], i, 577-607; Recherches archéologiques en Syrie, in JÉ [1905], ii, 463-515; in particular, Inscriptions arabes de Syrie, in Mem. de l’Institut égyptien, iii, 417-520), with the volumes already mentioned of the Matériaux pour un Corpus and the specimen publications of subtly-deciphered and annotated inscriptions offered by some articles of J. Sauvaget (such as his publication of the Décrets mamelouks de Syrie, in BEO, ii [1912], i-32, iii [1933], i-29, and xii [1947-48], 3-60, as well as his Quatre décors selyoukides) remains for the aspiring student the only possible path to follow, apart from various items of specific information provided here or there. More regrettable, however, is the fact that numerous aspects are to be distinguished in a body of inscriptions influenced simultaneously by regional practices and by the disparities between schools marked by the proliferation of dynastic centres. We know in fact that diverse currents presided, according to places and periods, over the drafting of inscriptions. The text of which evolved in parallel with the development and stylistic ramifications of so-called lapidary writing (which has in fact applied to various materials), a writing the history of which is an important chapter of the history of Arabic writing [see KITABAT]. Influences of every kind were manifested here equally in the form of politico-social transformations and historical events which it would be impossible to evoke in this article in the context appropriate to each, geographically distinct, group of inscriptions.

But this continually-renewed variety should not cause one to forget certain traits characteristic of Arabic inscriptions which may be underlined here, in regard to their nature and customary content, and which will enable us to stress the value of the comparison to their Western parallel.

One important feature to be emphasised is the frequency and significance of religious inscriptions, which have sometimes tended to be overlooked in cases where they are not accompanied by documents judged to be of historical interest and which, for this reason, do not figure in their own right in the Répertoire and are only briefly mentioned in the Matériaux pour un Corpus. These are sometimes isolated inscriptions also capable of supplying an ornamental function on buildings, tombstones or even household objects, sometimes elements belonging to texts where in spite of the profane purpose there is an inevitable collection of pious expressions and customary doctrinal preoccupations. Here we shall assemble in particular examples of Kur'ānic quotations, professions of faith, isolated or linked to the texts of epitaphs, prayers, invocations and blessings. These religious inscriptions appeared at the very beginning of the Islamic era among the primitive graffiti which covered a large number of the rocks of the desert (see the bibliographic references of Sourdé-Thomine, Inscriptions et graffitis arabis d’époque umayyade, à propos de quelques publications récentes, in REI [1964], xvi-20). But they were also early situated in ornamental bands forming an integral part of the architectural decor, as admirably illustrated by the interior of the Kubbat al-Sakhra [q.v.]. From this period, their essential theme has been the glorification of the Muslim faith, which could be associated with the personal nature of the testimony left behind by each traveller in the course of his wanderings, as much as with the majestic impassiveness of epigraphic compositions on a grand scale. It would not be enough, however, to say with Max van Berchem, that the dominating feature here is principally the notion of divine power which is one of the two main concepts of the Muslim spirit. Some of these texts, regarded in the most ancient cases as special means of access to the deity, continue to act as representatives of the dominant religious feeling of the period and their formule of praise and trust, varied to a greater or lesser extent with requests for pardons, blessings and favours, for a long time remained free of the constrictions of a stereotyped vocabulary. But even when they obeyed more rigid rules, they still maintained an authenticity enabling them to share in the expression of genuine religious options, and texts of commonplace appearance thus continued to reflect diverse doctrinal tendencies in the bosom of the Islamic community; allusions to sectarian beliefs, in the form of eulogies of a Shi‘i flavour for example; echoes of theological arguments like references to the created Kur‘ān in professions of faith accompanying Egyptian epitaphs of the yarbi’th century; maxims bearing the mark of philosophical wisdom and of mystical self-denial observed for example in Shirūnash at Kazwin at the beginning of the eleventh century. Even the poetic quotations so frequent for instance in later Sicilian texts could concur to the same design, and variations in formula came to be accentuated with the fragmentation, of a religious as well as a political nature, which the Islamic world suffered towards the end of the Middle Ages (note the originality of the theological texts which adorned at that time the sanctuaries of the Twelver Shi‘is conducting the prayers on the basis of a cult of ‘inma’ unknown in other Muslim circles).

A common denominator to all these inscriptions may assuredly be found in the constant use of Kur‘ānic quotations, multiplied to the extent that they sometimes take the place of any other form of devotion. But even here the choice of verses copied in whole or in part obeys specific intentions, which are discernible, if not clearly asserted, and their arrangement is sufficient to indicate the theological or judicial implications of texts which have a doctrinal value for anyone who is able to interpret them. References to hadith, the use of extracts from the Kur‘ān of a recognised prophylactic nature (the ‘Throne’ verse, for example), the insertion of certain types of prayer, also constitute revealing elements [see in this connection, D. Sourdé, A propos des ‘Dix Élus’, in REI, xxxi [1963], 111-14].

It is to be regretted, however, that few Islamic scholars take an interest in material that too often continues to be strange to them, while on the other hand there is a vigorous and widespread school of thought seeking, in the light of illuminist doctrines popular in certain circles of initiates, to decipher every ancient inscription as if it were an esoteric riddle, tinted with ‘traditional’ gnostic philosophy both Shi‘i and Iranian. In fact, besides the intentional use of certain formulae that are legible and loaded with meaning beneath the flamboyant style of the writing—such as for example the remarkable stucco composition in “square Kufic” on the names of the Twelve Imāms preserved in the sanctuary of Pdr-i Bakrān at Lindjan near Iṣfahān—one might hesitate to see a hidden sense in the quasi-mechanical
repetition, on certain monuments, of formulae such as 
_al-mulk_ il-idāh "the power is God's", or, on certain pieces of pottery, of expressions of the _al-'afṣaṣa_ type sometimes evolving towards pseudo-inscriptions. These formulae, reproduced in the manner of respected graphic combinations, doubtless preserved no theological significance more precise than the successes of appeals, such as "fortuna, prosperity, blessing... to him who possesses it" _al-yumna wa l-sāḥā bi wa l-baraka_, etc... It _pihābi_, which at that time were invariably inscribed on manufactured objects. The connections between sign and signified which may still be legitimately read here, are thus shown to be especially typical of a psychological climate peculiar to Muslim society in the sense of a society marked by religiosity, and correspond to the tight liaison that we have already emphasised between the character, Muslim in tenor and ornamental in appearance, of the majority of the inscriptions in this category: these are works of art endowed in this sense with a fundamental ambiguity as means of expression, both aesthetic and symbolic, of the sensibilities of their period.

A second category of inscriptions that is no less copious is subsequently represented, that of historical texts which have the object of commemorating the individual and his acts, whether the case in question is of a senior government official or of the obscure occupant of a village tomb. To this category we may add construction texts fixing the date of a certain building, title deeds and other documentation of private transactions, foundation texts indicating (according to terminology originating with van Berchem and adopted by the _RCEDA_) attestations of pious donations given in perpetuity through the custom of _mawṣa_[..] , funeral texts of all kinds and even the straightforward signatures of master craftsmen and artists which will also be considered here. If these texts partially reflect the notion of "absolute political power" wherein van Berchem saw, according to an insufficiently-qualified assertion, the second major concept of the Islamic spirit, and if their principal gravitation is such that the same epigraphist expressed it, evolving around the names of the sovereign, his titles, his major deeds and his continuing praise, they also contain much more: of the sovereign, his titles, his major deeds and his epigraphist expressed it, evolving around the names of their principal gravitation is such that the same saw, according to an insufficiently-qualified assertion, "absolute political power" wherein van Berchem endowed in this sense with a fundamental ambiguity as means of expression, both aesthetic and symbolic, of the sensibilities of their period.

Besides these epitaphs, marked by a discretion of vocabulary which is maintained up to the time of the royal epitaphs of the Ghurid dynasty (d. 637/1239) or of the Artukid Balas (d. 518/1123), there are other funerary texts which belong more emphatically to the canon of inscriptions intended to celebrate the glory of the sovereign. These are those which, from the 4th/10th century onward, accompany monumental mausolea varying considerably in architectural structure. A greater freedom of composition, already perceptible in the dated and dedicatory epigraphic friezes of the Iranian tower-tombs, is shown when the opportunity offers, notably in the original version of inscriptions specially designed before his death in 607/1210 by "All al-Harawi[...], for the decoration of his tomb.

These texts are as valuable for the history of monuments as they are for that of the sovereigns, officials or military chiefs who chose them for the commemoration of their graves because, they become especially significant when the tombs in question are those identified by popular piety as objects of pilgrimage and supplication, whether in _Shi`i_ circles where the buildings of _mām-rāzā_ [..] were widespread at a very early stage, or to a certain extent throughout the Muslim world from the 6th/12th century, when the practice of _sīwār_[...], developed to the proportions of a veritable "cult of saints" in honour of pious individuals renowned for their posthumous miracles, or of celebrities from the early periods of Islam commemorated now for the first time by newly-built sanctuaries; only inscriptions of sufficient antiquity may in fact give information about the original period of these devotion, inaccurately described in the literary sources, while at the same time supplying the names of rulers or wealthy patrons who promoted them. These data are also useful for the reconstruction of the complex history of the multi-purpose architectural complexes which became numerous around the tombs of saints from the end of the 7th/13th century and which grew up a little later around royal graves, as is proved by well-known Timurid and Marinid examples [see KUBRA, TÖRE].

The formulae employed in this particular category of funerary texts also belong partially to that attested by the innumerable construction texts en-
graved on Muslim monuments since the Umayyad period. These latter texts in fact obeyed from the start strict obligations, which imposed the following elements: definition of the work undertaken, name of the initiator responsible, sometimes located between the name of the reigning sovereign and those of the authorities who supervised the progress of the work, and date of the construction or restoration, the whole incorporated within a series of variable additions: variously distributed pious formulae which included Qur'anic quotations appropriate to the nature of the work, but which most of all were requests to God for reward in respect of the work accomplished in his honour more or less detailed appeals on behalf of the founder and optional complementary notes, including the names of the author-scribe and the architect-mason. This was the constant framework, and the additions made in ensuing centuries were only such as to incorporate subsidiary details affecting in particular the titles of the builder or those of the various authorities on whom he depended as well as to underline the power exercised in the 5th/6th and 6th/7th centuries for example, successive mentions of the caliph of Baghdad, of the Seljuk sultan, of the local sovereign, and the humble figure of the builder is introduced simply as al-labsa al-fasir ila rahmati rahbibi “the poor slave imploring the good-will of his Lord”. Furthermore, such rigidity of formulae provides the exact scheme that may be expected of inscriptions of this genre, texts that are easily reconstructed where there are lacunae in the details of ritual etiquette or in the order of succession of the various elements, but of scope limited by the constraints of their subject. Only on two points are we likely sometimes to be agreeably surprised: their archaeological interpretation, on the one hand, when care is taken to note their precise location in the building, to the dating of which they contribute; on the other hand, their richness in titles, from which one sometimes perceives the reality of Islamic government institutions which continue to pose numerous questions to the historian.

Comparable information is furthermore to be obtained, in the majority of cases, from foundation texts where the list of the titles of the legators obeys the same rules of precedence and is often clarified when account is taken of the more theoretical notions supplied by some Arabic texts dealing with chancellery practices. But the more original data obtained in the disposal of these wakfsfiygas are of a topographical or toponomical order, on account of the large number of localities and regions listed as sources of revenue, or of an economic and social order, relating to daily life, sometimes also to urban life in general, the generous benefactor has decided for example to underline the excellence of his acts by the excavation of hawds [g.v.] or the improvement of some municipal work. The profoundly Islamic character of these arrangements, as well as the attitudes that engendered them, is linked, through the solemn proclamation of the devotional work, to the psychological process according to which the construction of a building took on its true dimension when an inscription text preserved its memory and placed the builder or benefactor in his just position within the Muslim community.

This tendency was superimposed on a concern for the glorification of the individual concerned, which appears to a still greater extent in the inscriptions on material objects, which constitute the final category of Arabic commemorative inscriptions. The texts of these most often consist in fact of nothing more than greetings added to the name and titles which enable the owner to be identified, whether it was a case of a caliph ordering the manufacture of a fašt [g.v.] in a royal factory or of a Mamlık in whose capacity of serving a bronze or a ceramic plate bearing his monogram. The mention that such an object has been manufactured on the orders of a certain powerful dignitary is sometimes the only information to be conveyed, in the form of a motif that is both epigraphic and decorative. But the sense of pride of ownership also sometimes finds an echo in the professional pride of the craftsmen who at an early stage adopted the practice of signing their works, even if in the briefest manner possible (see in this connection the writings of L. A. Mayer mentioned above).

It remains to consider, in the third and final place, the group which, while being definitively the least important, is nevertheless extremely rich in information of all kinds, the group constituted by administrative texts. Linked to the functioning of the machinery of power, they are not designed to glorify, except inadvertently, the holders of this power, but rather to make certain government decisions known. Represented in early times by inscriptions stamped on coinage, or on weights and measures of glass paste which appeared from the Umayyad period onward, they made way somewhat later for decrees of abolition of taxes. Mamlık specimens are among the best known: these are, once again, valuable documents of economic and social history, comparable with title deeds and records of donation, to the extent that they provide precise and detailed information regarding fiscal policy or give accurate descriptions of bureaucratic procedures. But the quaint symbolic notations that they preserve are shown in their turn to be extremely rich when one attempts, as Sauvaget has done, to glean from them certain data on the spot and to deduce from them, especially in the sphere of topographical studies, elements of assistance in the reconstruction of certain aspects of urban evolution.

So here we find once more this golden rule for the utilisation of Arabic inscriptions, which seems to be always to consider them as concrete documents, which are not to be separated, beyond the official formulae and the pious expressions that characterise them, from the local and monumental context within which their most original significance is expressed. Some such epigraphic commentaries, even when they deal closely with the purport of the various texts the principal tendencies of which we have reviewed above, thus remain subordinate to that which constitutes the prime quality of the documents with which they are concerned that of having been composed to occupy a particular location in lasting fashion and to be integrated into the exterior appearance of the objects or the monuments that they accompany. Nor should one neglect those inscriptions which were capable of being enclosed in the interior of the most varied types of framework (panels, scrollas, friezes of all dimensions, the entire surface of an object or a tightly-limited section), entrusted to the most varied materials according to equally diverse processes (stone engraved or sculpted in depth, stucco elaborately worked on several surfaces, experiments with bricks in relief, mosaic, painting, moulded or incised metal, wood, ivory, ceramic, etc.), sometimes reduced to the subsidiary role of motifs underlining with their shapes the principal lines of the architecture or joining with covering linear décor composed of arabesques and
circles or segments of circles—set out on a base line discovered in the archaeological sites of Syria, dating from this period have been and still are being inscribed in all the provinces of the Near East, inscriptions proliferated in all the provinces of the Near East, bilingual (Greek-Arabic), have contributed to our understanding of the ancestry of the Arabic characters, which in the final analysis, derive from Syriac characters and not from Nabataean, as was previously believed.

Bibliography: Given in the article.

1. In Syria

It is in the Near East, the cradle of Arabic writing, and more precisely in Syria (Namara, Zebed, Harran, Umm Djimal), that the oldest known inscriptions written in the Arabic language have been discovered. These so-called proto-Arabic inscriptions, sometimes bilingual (Greek-Arabic), have contributed to our understanding of the ancestry of the Arabic characters, which in the final analysis, derive from Syriac characters and not from Nabataean, as was previously believed.

The privileged place accorded by Islam to writing allowed the latter to undergo a rapid evolution and a rapid diffusion. From the time of the Umayyad era, inscriptions proliferated in all the provinces of the young Islamic empire. Construction texts, religious texts, milestones, epitaphs, and simple graffiti dating from this period have been and still are being discovered in the archaeological sites of Syria, Lebanon, Palestine, Egypt, and Iraq.

The formula of these inscriptions was probably influenced by that of the Greco-Roman inscriptions, very numerous in these regions. It is simple, sober and varies in tenor according to the function of the text. It serves as a prototype for later periods which enriched it, while remaining faithful to its broad outlines. Official texts are generally composed as follows: almost always the name of the caliph followed by the name of the deceased followed by his titles and the expression of a wish for his long reign, then the name of the individual who ordered the fabric, the name of the workshop where it was made and the date of manufacture. For the reasoned study of this body of material, has deprived us of the monumental inscriptions. Official texts are generally followed by the phrase baraka min Allah bi-‘Abd Allah followed by the name of the caliph and his title, and the expression of a wish for his long reign, then the name of the individual who ordered the fabric, the name of the workshop where it was made and the date of manufacture. These inscriptions are executed in archaic, angular characters whose typology corresponds, in broad outline, to that of the characters of the stone inscriptions, the Mason’s art, and as much attention as the formulae of the inscriptions or as the style as revealed by the idiocies of the writing. For the reasoned study of this body of facts, with which, in order to be complete, any survey of Islamic epigraphy ought to begin, is the only means that will enable the scholar to put into their just places, for an introduction to the realities of medieval Islamic civilization, the inscriptions which up to the present day scholars have been content to examine in a fashion that is still too incomplete and inevitably superficial.

2. In the Near East.

In Umayyad epigraphy, the combinations of these geometric elements give two types of characters: tall letters with vertical strokes and short letters with notches or rings, connected by horizontal segments. This double typology constitutes one of the essential elements of the aesthetic quality of Arabic writing. In fact, it provides the artist with two areas where he can exercise his genius differently: the lower register, the more dense, where the artistic effect obtained results in a simple interlacing of characters, and the upper register where the spaces between the vertical strokes provide an ideal place for the artist to indulge his taste for multiple creations.

In the Umayyad period, this upper register was not used, but the stone-masons succeeded, by using the lower register alone, in creating “a harmony at once rhythmic and linear” which makes this form of writing a genuine work of art. The rhythm is obtained by the opposition and alternation of high and low characters, while the linear harmony results from the arithmetical reckoning of the proportions. This reckoning answers a need for equilibrium as much in height (the proportion of short characters to long varies generally between 1/4 and 1/3 of their width). It is to satisfy this latter need that the mason does not hesitate to extend his characters in width, and to lengthen the joining segments. The standard of calligraphy definitely varies according to the type of inscription and it is especially in official texts that fine specimens are to be found. We shall mention simply as examples the inscriptions of the caliph ‘Abd al-Malik in the Kubbat al-Sahra in Jerusalem and his milestones (cf. Pl. VIII, 2 and IX, 3).

During the first two centuries of the ‘Abbasid régime, the Arabic inscriptions of the Near-East underwent an evolution corresponding to that of the socio-cultural development of the entire ancient Baghdad and that of the palaces of Samarra®. The fact that these were constructed of brick, a perishable material, has deprived us of the monumental inscriptions which probably adorn the official buildings and which disappeared as a result of these destructions. On the other hand, we have dating from this period a large number of epitaphs and inscriptions on movable objects, especially on fabrics which benefited from the expansion of state factories (titlab) supplying the needs of the caliphs and their court. The formula of these inscriptions, often found on the edges of the fabric, is stereotyped. It begins with the basmala, generally followed by the phrase baraka min Allah bi-‘Abd Allah followed by the name of the caliph and his title, and the expression of a wish for his long reign, then the name of the individual who ordered the fabric, the name of the workshop where it was made and the date of manufacture. These inscriptions are executed in archaic, angular characters whose typology corresponds, in broad outline, to that of the characters of the stone inscriptions, the Mason’s art, and as much attention as the formulae of the inscriptions or as the style as revealed by the idiocies of the writing. For the reasoned study of this body of facts, with which, in order to be complete, any survey of Islamic epigraphy ought to begin, is the only means that will enable the scholar to put into their just places, for an introduction to the realities of medieval Islamic civilization, the inscriptions which up to the present day scholars have been content to examine in a fashion that is still too incomplete and inevitably superficial.

In this area, undoubtedly the most interesting evidence is provided by the epitaphs, most of them of Egyptian origin, engraved on marble or on sandstone, of which a considerable number of specimens have survived to the present day. The formula of these epitaphs is constituted of different elements of which the combinations vary according to a variety of patterns: the basmala, a verse of the Kur’an, one or more religious invocations, the profession of faith, more or less developed, the dedication of the tomb, the verb introducing the name of the deceased followed by his titles and
profession, the date of his death and an appeal for God's mercy upon him.

These epitaphs provide valuable materials for following the evolution of inscriptions on stone during the first 'Abbasid centuries. The change of dynasty did not immediately change the practices of the stonemasons and the characters of early 'Abbasid epitaphs are similar in outline to those of Umayyad inscriptions. Nevertheless, differences soon appear in the reckoning of the proportions. The characters diminish in length and correspondingly the joining segments between the letters become shorter. As a result, 'Abbasid Kufic presents a more cramped and less harmonious aspect appearance than Umayyad Kufic. On the other hand, this evolution is inclined toward a concern for the ornamentation of characters. This is expressed first in the lengthening of the terminal segments in the form of a bevel which tends to grow larger and larger. In the crude types it is sometimes replaced by a small hook or even a ring. To the development of the bevel there correspond a thickening of the outlines of the letters and a more frequent adoption of the technique of engraving in champlevé (cf. Pl. IX, 1), which allows the adoption of two parallel expressions of the evolution of characters, corresponding to the duality of engraving techniques. Thus, in incised inscriptions, the vertical strokes of the letters are decorated with hooks, simple, double or triple, pre-figuuring the palm-leaf (cf. Pl. X, 5), while in inscriptions in relief, the bevels evolve into foils, double foils or triple foils which later open out into leaves, fleurons and palm-leaves, a style of décor much in vogue in the mid-3rd/9th century (cf. Pl. X, 6).

Various other processes of ornamentation are encountered in this period: symmetrical indentations in the parallel vertical strokes of the alif and the lam, softening of the lines and the appearance of curves (in the lam-alif, the kaf), transformation of the lower appendices into rising tails, fleurons arising from mouth-shaped characters (mim), the intertwining of contiguous lines, (cf. the knot formed by the alif and the lam of the word Allah, Pl. X, 6, l. 2). The indentations and arcs which sometimes adom the joining segments, especially in the word Allah, roses and fleurons at the end of a word, framing in linear décor (braidz, zigzags, moldings, spirals) or in a décor of plant-forms (plant palm-leaves alternated on one side and the other by a sinuous line, leaves and symmetrical fleurons), sometimes an even more subtle composition (an arc delineated by a flat moulding with spandrels adorned by an outline in arabesque), combine towards the embellishment of the script.

With the Fatimid conquest of Egypt in 358/969 and its sporadic expansion in Syria-Palestine, new practices are introduced into the inscriptions of the Near East. The conquest of Syria by the Saljūqs, who imported with them the techniques and the graphical forms used in the eastern provinces of the Islamic empire, was accompanied by the intrusion of a number of the features mentioned in the Fatimid inscriptions, such as knots and right-angled bands in the vertical strokes of certain characters. There was probably a phenomenon of osmosis between these various regions where exchanges were frequent.

The inscription on the cenotaph of Sukayna in Damascus (end of the 6th/12th century; cf. Pl. X, 9) is an interesting specimen of the evolution of monumental Kūfic in the Saljūq period. The inscriptions engraved in the wood of the cenotaph are distributed on three levels, in two bands superimposed and separated by a fine braid. The main inscription occupies the full height of the broadest band, while at half-way up, the second is intertwined among the vertical strokes of the first. The third, quite independent, occupies the small upper band. These three bands stand out against a background decorated by a fine network of arabesques which cover all of the part crudely excised.

Among the specifically Saljūq types of monumental inscription, mention should be made of epigraphic bands with geometric décor where the vertical lines of the characters are extended in the upper area giving rise to the interweaving of stars and polygons. The inscription of Saʿd b. al-Mulk at Damascus is a living illustration of this.

The Saljūq influence is also shown in the evolution of the formulary of inscriptions of small Syrian dynasties of the Saljūq era, which were the repercussions of the techniques become swollen with pomposity (cf. for example the titles of the ʿābd al-Malik sovereigns in the construction texts of the great mosque of Damascus).

It was in the first half of the 6th/12th century that there was effected the most important transformation regarding the evolution of Arabic script in stone, when Nur al-Dīn ordered the adoption of the cursive script in official inscriptions, to the detriment of the angular script, which, without disappearing completely, was reduced to repetitions of ancient types. Some fragments of cursive script are mixed, as an intrusion, in the Kufic inscriptions of the bands of the minaret of the great mosque of Aleppo in 483/1090. There is found also atBusrā in Syria an inscription dating from 482/1090, where the characters, while still crude, are neatly rounded; but it is not until the first half of the 6th/12th century
that there appears the full flowering of cursive writing expressed in stone, with its full and its slender lines, its supple ligatures and the introduction of points and dialectical lines, not used in the inscriptions of angular type. A parallel transformation is effected regarding the base line which loses its rigidity and its horizontal continuity. The ligatures which delimit the bands of writing are not however eliminated, and they continue to compress the lower appendices, the latter being forced to develop below the base line. To remedy this inconvenience, the stone-masons divide the words and engrave the segments thus obtained on different levels, based on an oblique line descending from the centre of the band towards the listel of the base. This procedure permits a freer development of the lower appendices. The base line appears as a discontinuous line reduced to a series of oblique overlapping segments (cf. Pt. XIII, 11).

In the Mamlık period, this technique of engraving reaches its apogee. The characters are so interwoven that their decipherment becomes difficult all the more so as the characters used in the majority of the inscriptions of this period are of small dimensions, thick and squat. It is to this type of inscription that belong the Mamlık decrees, engraved in profusion on the walls of official buildings and constituting precious documents regarding the socio-economic life of the Near East in this period (cf. Pt. XIII, 11).

There exists, moreover, a type of Mamlık naskhī where this dense writing gives way to an elongated graphic style prefiguring the Ottoman script. This last gives the appearance of a transposition on to stone of manuscript writings, in particular the style known as thuluth, which subsequently took the status of the official scripts of epigraphy, while the former lost ground and its use became limited to religious or profane inscriptions of little importance and intended for purposes of general ornamentation.

The Kufic features which appear in the oldest Arabic inscriptions of al-Andalus are virtually the same as those which were used during the last decade of the first century A.H. in all the lands conquered by Islam, that is to say, the symbols originating from the city of Kufa, with scarcely any evolution in design. This Kufic, on account of its clearly primitive nature, is generally called archaic. It was reproduced, with more or less finesse over the years, by the traditional craftsmen of Spain who never succeeded in mastering it fully and in consequence introduced no novelty of design by virtue of which it might be considered characteristic of, or exclusive to, al-Andalus. In the last years of the amirate of Muhammad I, a new generation of rather more arised craftsmen began to turn the more extreme features of Kufic script into stylised plant-forms. At first, this innovation was used very timidly because it applied only to a very small number of letters; nevertheless, little by little it found acceptance to the point where it was applied to all the symbols which permitted it. The craftsmen thus succeeded in creating the Hispano-Muslim version of floral Kufic, while it must be admitted that the development of this variant of Kufic never attained, in al-Andalus, the level reached by contemporary Kufic writing in other Muslim territories.

In the reign of the second caliph of Cordova, al-Hakam al-Mustansir bi-llah, the religious puritanism and stern austerity which characterised the conduct of this powerful sovereign at the head of the government of al-Andalus made itself strongly felt, needless to say, in the epigraphy of the period. Decorative floral additions were suppressed and attempts made to restore the Kufic letters to their primitive and classical design. But this was not entirely possible, because the letter-forms became endowed with a certain elegance which was lacking in them before; this elegance, far from disappearing as a result of this suppression, manifestly increased. Thus there was born a new Kufic with streamlined, elegant shapes, stripped of all ornamental addition, commonly called simple Kufic, which flourished until the downfall of the Caliphate of the West. Previous to this important historical event, there certainly existed a consistency in the style of writing Kufic
in the whole of al-Andalus—as a consequence of the political unity of the region, feebly introduced by the governors and subsequently definitively enforced by the monarchs of the dynasty of the Banû Umayya—and a single cultural centre regulating its art, the metropolis of Cordova. After the downfall of the caliphate, a number of schools of design sprang up, for, with the end of the hegemony of Cordova, each province of al-Andalus followed its own political direction and developed its own artistic practices under influences of very diverse origin. Among the schools the most important were those of Seville, Toledo, Saragossa and Almeria, without counting that of Cordova. At Seville, simple Kūfī continued to be used in inscriptions; but the characters developed in height, which made them extremely elegant and distinctive. At Toledo, the craftsmen returned to floral Kūfī, with forms excessively overlaid with plant-forms alternated with the use of simple Kūfī forms. Of these two variants, two distinct versions appeared: one traditional, firmly Cordovan in origin; the other authentically Toledan, which consisted in adding to characters carved in relief a central groove, giving them considerable force of expression. The Kūfī as it had been more a political than an artistic entity, had a particular importance. It is known today through the inscriptions preserved at the Palace of Aljafuris (al-Djāfariyya), built by the prince-king Abu 'Farid Ahmad al-Muqtādir bi 'llah (438-74/1046-80). It is known that in the building of this monument, originally called Dār al-Surūr or House of Rejoicing, the craftsmen experimented with numerous innovations, architectural as well as decorative; and inscriptions—an ornamental element of first importance in Islamic art—were no exception. They stylised Kūfī characters to an incredible extent, and by sometimes making them slide on a floral base or at other times cleverly interlacing them with geometric motifs, they succeeded in composing epigraphic bands of great beauty and an originality unusual for the period. As for Almeria, principal base of the Umayyad fleet in the Mediterranean, it had been intimately linked with the metropolis of Cordova during the caliphate. Its craftsmen had always represented Kūfī according to the model of Cordova, and they did not change their style when the latter lost its political status. They continued to use the simple Kūfī which was in use at the time of this event; later, this Kūfī evolved very slowly and its most brilliant period, corresponding to the importance and splendour of this naval base, was reached under the aegis of the Almoravids. From the study of the Arabic inscriptions of Almeria, of which a fine selection survives, it may be deduced that the Almoravid invasion brought no change in the shape of the Kūfī of al-Andalus. By contrast, as mentioned above, the Almohad invasion had very significant effects on epigraphy. At first, the latter respected the Kūfī script and used it, as is well-known, in the first building that they constructed at Marrakush; but, when they were obliged to put into practice a policy of reconciliation of the peoples whom they had subdued by force, they very soon realised that the Kūfī script, with its difficulty of interpretation, was not suitable for the development of their policies, and they replaced it with naskh or cursive in all texts relating to new foundations of a public character. For the craftsmen of al-Andalus in particular, this change had the effect of enabling them to acquire a thorough knowledge of the Arabic characters and to distinguish, in each one of them, that which was essential and invariable from that which was secondary and could legitimately be altered according to the taste of the designer. Thus they came to appreciate the true significance of Kūfī forms hitherto reproduced more or less mechanically. They were no longer content with drawing their designs according to the good taste of the Almohads, but little by little they transformed the shapes. First of all, with the idea of making them attractive and graceful, then by building up their upper parts with complicated interloops, while increasingly filling up with stylised plant-forms all the interstices not covered by the letters in the lines of inscription. In the end, they created ornamental motifs of a type which, on account of its incontestable decorative worth, was subsequently copied by the Mudéjar craftsmen, including those who worked in the Alhambra of Granada, thus undoubtedly conferring upon it a long-lasting prosperity. For it is certain that it is by virtue of these copies, made with extreme care and fidelity, that we are acquainted today with the Arabic epigraphy of al-Andalus current in the period of the Almohads, since the original inscriptions of this historical period surviving to the present day are very few in number, and discoveries have not been made on the scale which could have been desired. The most types mentioned above were incorporated into Mudéjar decoration without further consequence, and through incessant use over the course of the years they patently degenerated and became a parody of what they had originally been. On the other hand, their inclusion in the ornamentation of the palace of the Banû Nasr had the effect of inspiring the craftsmen of Granada to the creation and the development to hitherto inconceivable limits of the geometric Kūfī which is admired today in the Alhambra and which is, beyond doubt, one of the finest ornamental creations contributed by Andalusian craftsmanship to the art of Islam. It was also in the Alhambra that the naskh script achieved the highest point of its development within Muslim Spain. In fact, it is known that among the most important elements contributing to the ornamentation of the Nasrid palace there are epigraphic friezes composed in this script and containing the best works of the most prominent poets of the period, Ibn Zamrak and Ibn Dāyāb, which are thereby available to us in "the most sumptuous edition in the world", to borrow the apt expression of E. García Gómez.

of the Almoravid period, was influenced by al-
connected the Muslim East and West. The Maghrib to that of the styles known in Egypt which seems to have constituted the natural link in the chain of the 'Abbásid periods. The evolution of styles in the Near East in the Umayyad and, in particular, the 'Abbásid incised inscriptions and contemporary examples from Egypt and the Sudan is quite striking.

There can be no doubt that the arrival of the Fāṭimid in Ifriqiya and their installation at Mahdiyya, then at Sābara al-Mansūriyya, accentuated the orientalisation of the country. The evolution of Kūfic in the Near East in the 9th/10th century, then in the 10th/11th century, was to be reflected almost immediately in the Maghrib. In the latter as in the former, the problem faced by the artist was how to alleviate the difficulties inherent in Arabic writing, very dense in the lower part of the line of inscription, but leaving important gaps in the upper areas. The solutions adopted consisted in the development of the vertical strokes and in their evolution, sometimes their distortion, in the intertwining of letters, and most of all, was made of stylised floral patterns in decorating the background. These inscriptions are often divided in two parts by a rigid horizontal band, the lower part being occupied by the body of the letter while the upper register is decorated with a complicated floral design against which the vertical lines stand out. At Sīfa, from the end of the 4th/5th century, the letter is seen to develop, the terminal

Andalus, which for a long time remained faithful to archaic forms of Kūfic but which, under the influence of the 'Abbāsīd East, submitted to the prevailing taste. Nevertheless, Muslim Spain was to interpret in its own fashion the styles of writing and their evolution such as were familiar in the Orient in the Fāṭimid period. This piece of the Orient set in Andalusian soil was to influence Morocco, and then with the victory of the Almohads, the whole of North Africa.

The style of monumental inscriptions in the Aghlabid period differs according to whether it is a case of carvings in relief, or incised engravings, on stone or wood, or of painting. The Kūfic carved in relief on stone may well be compared to that of the Nilometer of Rawda (190/807-15), not only on the marble at al-Kayrawān (the capitals and the interior of the mihrāb). It may equally be compared to Tūnī Kūfic, but some of the details characteristic of the West appear to be quite original, for example the aṣīr with a horizontal appendage towards the right in the lower part of the letter. The writing, whose essential value lies in the message to be transmitted, tends gradually to become a part of the ornamentation (for example, the inscription painted on wood at the base of the cupola of the Great Mosque of al-Kayrawān where the inscription in very fine Kūfic characters forms a decorative framework.

The Kūfic of the foundation-plaque of the ribāb of Sebta (206/821) appears very archaic in comparison with these inscriptions.

Funerary inscriptions are mostly engraved; the formula varies little, the main element being a few Kūfīc verses, usually taken from Sūra CXII. These inscriptions perpetuate, in the 3rd/4th century, forms which are more emphatically archaic than those of the monumental inscriptions; this is especially notable in epitaphs on pillars, occasionally crudely executed in spite of some fine creations, and in the fine funerary inscriptions engraved on marble plaques or on tall columns. The similarity between the Aghlabid inscribed inscriptions and contemporary examples from Egypt and the Sudan is striking.

chamber of the vertical strokes opening into floral shapes or curling so as to occupy the empty spaces. The influence of Fatimid Egypt is undeniable. The characters in general affect a refined elegance. The bordering strips contribute to the décor of the façades (Sfax, Great Mosque) or to that of the ma'hrāb (Stax, Zārīd ma'hrāb), mosque of Sāyiḍa at Monastir (beginning of the 9th/10th century). At Constantine (ma'hrāb of the Great Mosque, dating from the 6th/7th century), the epigraphic décor reaches a high degree of ornamental quality, recalling that of the finest Fatimid ma'hrāb of Cairo.

Funereal epigraphy also abandoned the archaism of the Aghlabid period, but after a perceptible delay. Incised inscriptions practically disappeared. The form of the tombs evolved towards prismatic marble steles, notably at Monastir and at Tunis (cemetry of the kūrūsānids). The writing, of refined elegance, recalls, by the development of the letters and by the appearance and proliferation of stylised floral designs, the style of the monumental inscriptions.

As for epigraphy on furniture, we have, in the magnificent masqūra of al-Mu'izz b. Bādis, one of the finest examples of floral Kūfic, with complex inter-twining of letters and a background of plantforms comparable to the Kūfic of Aleppo or to that of Dīyar Bakr.

In the eighth/10th and in the western region of the central Maghrib, very few inscriptions are to be noted before the Almoravid period. That of the Karawīyyīn, dating from 629/1232, is in Kūfic of the al-Kayrawān type, but, with the reign of 'Aī b. Yūsf, there appears the Andalusian Kūfic, characterised by well-proportioned letters with long and curved vertical strokes. However, the writing itself is very sober and stands out against a background flowered with arabesques and fleurons and palm-leaves with deep and multiple radiating divisions (Karawīyyīn, Great Mosque of Tlemcen), or against a background of palms, of pineapples and of half-fleursons divided in two parts horizontally by a straight listel.

The epigraphy on furniture shows, on the contrary, an attachment to the old tradition, whence a surprising conservatism in the Kūfic inscriptions of the mīnbar of Nedroma and of Algiers, and in those of the masqūra of Tlemcen.

But the most important event of this period is the appearance of the cursive script (masāḥhi). This style appears in Ifrīqiya from 490/1096, in funereal inscriptions where it is presented in a very elaborate form (the characters are fine, large and supple and well-proportioned, framed with a border and standing out against a rich floral background of criental type). It is to be supposed that it was by this oriental route that the new alphabet penetrated to the Magrib al-Akṣā in the Almoravid period (the inscriptions of Tlemcen and of Karawīyyīn in about 552/1156-7). It is in fact impossible, in the absence of precise documentary evidence, to propose an Andalusian influence, as it seems that cursive writing did not appear in Andalusia until much later.

Whatever the case may be, the victory of the Almorahids had as a consequence a certain unification of styles in the whole of North Africa with an inclination towards sober, angular Kūfic in the monumental inscriptions and, on the contrary, a preference for cursive in the funereal inscriptions. It is worth noting that no foundation inscription appears in this period in the religious buildings, pious works through which the great caliphs of the dynasty were able to bring honour to themselves.

One consequence of the Ottoman domination of Tunisia and Algeria was a new "orientalisation". The inscriptions lose their decorative quality and adhere to the requirements of the message to be transmitted. They are inscribed in frames or in scrolls in cursive characters, often with diacritical points, sometimes with vowels, on several lines which may overlap. The execution is rather casual, and the use of the Turkish language is limited.

On the other hand, Morocco remained faithful to the Andalusian models and followed their evolution in the period of the Nasrids of Granada. The type of Kūfic script which distorts the letters, twisting and stretching them into wraths and fleurons, is hardly distinguishable from the background, where geometric and floral elements are mixed. The cursive begins to take the place of the Kūfic script in the fine framing strips of the ma'hrāb of the Marinid period. After the disappearance of the kingdom of Granada, Morocco tended to withdraw within itself, apparently shut of from outside influences.

At no time did the artists of the early Middle Ages make so much use of Arabic writing as an element of decoration. It appears everywhere, in religious buildings, in funereal pavilions, in the houses of citizens or in the palaces of kings, on furniture, on table-ware and on the most minor objects of daily life, where the ornamental role is often more important than the meaning of the language. The result is a pseudo-writing without precise meaning, or a constant repetition of a word or part of a phrase, in ornamental friezes, where ease and routine take the place of refinement and, above all, of faith.

5. In West Africa.

Proof is still awaited that any system of writing was in use among the Negro civilisations of West Africa before the introduction of written Arabic. An animal drawing on a sherd found by F. Willst at Old Oyo in Western Nigeria was considered representational rather than pictographic, whilst R. Hau's search for linguistic interpretations of recurrent motifs in the art of Benin proved inconclusive. Gold-weights from Ashanti and neighbouring districts seem to represent a proliferate stage, some of the designs symbolising proverbs and injunctions and others perhaps conveying metrological data. Inscriptions in Pulaar, Cèrèh, Latin or similar Classical languages have not yet been reported from tropical West Africa.

The Saharan Berbers (Tuarèg, "People of the Veil") derived their tifināq alphabet from the Libyan script used in North Africa during the second century B.C. and subsequently (see Berbers vi). Graffiti in tifināq are known to extend from Tibesti and Djado westwards to the Niger bend, and even into Mauretania, Mauny (1954) providing the most convenient survey of the literature. A complication in the reading of these inscriptions is the problem of determining their direction. They may run from left to right.
or right, top or bottom, but within each inscription the direction remains uniform, and clues to the orientation are provided by the alignment of certain asymmetrical characters, and the stereotyped opening phrases. In academic usage texts are conventionally arranged to read from the right.

Two main varieties of tifnagh script are generally recognised. The older (called variously "tifnagh archaïque"); "Saharan ancient" and "Libycoborder" renders by bars certain characters (\(\text{¯}, \text{±}, \text{∥} \)) which in the modern script are represented by dots (\(\text{・}, \text{●}, \text{・} \)). The older script also lacks several characters. A number of the older graffiti were interpreted by Marcy (1937). They contain recurrent formulae, commencing with such words as "I require...", "I pray..." "I need...", and often accompanied by a drawing to illustrate fulfilment of the wish, all designed to have a magical influence. A group of modern inscriptions commences with the word "[|] wak wakk "I...", followed by the writer's name, and a statement of his purpose or wish. Another group, still known only from modern examples, consists of formulae inscribed on the typical Tuareg stone amulets (shakhs), and shields. These were presented to a departing lover to preserve his fidelity. Manifestly Islamic personal names in later inscriptions show that they are relatively modern, but much work has still to be done in the chronology, linguistics, and collection of the older graffiti.

Of Arabic inscriptions from West Africa, at once the oldest and the most important is the tombstone from Gao reported by Sauvaget. It records the decease on 1 Mubarram 494/6 November 1100 of a prince of the older names in later inscriptions show that they are relatively modern, but much work has still to be done in the chronology, linguistics, and collection of the older graffiti.

Further inscribed tombstones from the area of the Niger bend have subsequently been published by Mrs. Viré, including a specimen of the year 499/1009-10 from Gao, and other from al-SÍk (504/1110-11), Bentia (Kukiya, a former Songhay capital on the Niger above Nyamneh) bearing the date 500/1102-3 from Gao, and other from al-SÍk (504/1110-11), Bentia (Kukiya, a former Songhay capital on the Niger above Nyamneh) bearing the date 500/1102-3, and El-Krebi in Mauretania, a place thought to represent the ancient site of Aretenna.
So far some 250 inscriptions have been repored from the eastern coast of Africa lying between Mogadishu, in Somalia, and the mouth of the R. Zambesi, in Mozambique, as well as from the offshore islands, including also the Comoros (see Kumba) and Madagascar. The principal sites of most of the coast have been surveyed and some partly excavated; but very much remains to be done, and quite likely more inscriptions will come to light. Especially is this the case in Mozambique and the KeniBa Islands close to its coast, whose Islamic historical archaeology is still virtually unknown, albeit that the existence of mosques and widespread adherence to Islam is attested by 10th century Portuguese writers. Other than those of the present century, no inscriptions have been reported inland. Only one inscription is known completely in Swahili, even though some Swahili words occur in Arabic inscriptions of the 17th to the 19th centuries of the epitaphs of the petty Sultans of Kunduchi, 17 miles north of Dar es Salaam. With these exceptions and a group of 16th and 17th century Portuguese inscriptions in Fort Jesus, Mombasa, with a solitary one in Zanzibar, all the inscriptions are in Arabic.

The two earliest known inscriptions are an epitaph in the Friday Mosque at Barcaro reported by E. Cerulli, dated 499/1104-5, and a Kufic dedicatory inscription in the Friday Mosque at Kizimkazi, Zanzibar, dated 500/1105-6, which, if not carved in Snafi itself, would appear to have been the work of a Snafi craftsman in Zanzibar [see Kizimkazi]. Apart from these, a small number of inscriptions in Kufic or floriate scripts have been found in small numbers in or near Mogadishu, and at Mendi, Mnarani and Mombasa in Kenya. The remaining inscriptions are all in naskhi or cursive scripts. No comprehensive attempt has so far been made to identify or classify their style or provenance so far as it was not local, but at Kilwa certain decorative inscriptions have been thought to have Pitunid affinities. On these subjects it would probably be wisest to reserve judgment until more is known of the inscriptions of the Yemen and of the Hadramawt. The greatest number of inscriptions found in eastern Africa are epitaphs, very many of them of persons otherwise unknown. Quite exceptional are sixteen dedicatory inscriptions commemorating the foundation of mosques in Lamu between the 14th and the 19th century, which demonstrate the stages of growth of the town [see Lamu]. At Mombasa a number of inscriptions, mostly funerary, illustrate and provide a solid dating for the varying fortunes of the Mazrâ family, of whom a number of members served as walis under the suzerainty of Umnân from ca. 1734 until 1837. At Kilwa there are a number of inscriptions in the Great Palace known as Husaini (Swah. from Ar. Al-husain), but all undated, and on whose date agreement has not yet been reached. A curious piece is a carved ivory horse, with an inscription in Swahili, which has been ascribed to the 19th century; but a reference in the traditional Swahili History of Pence, from which town it came, would suggest, however, that its approximate date of manufacture was ca. 1060-1050.

7. In Turkey.

The Muslim epigraphy of Turkey has not yet been the object of methodical research. It is true that there exist a large number of editions, but most of these are isolated undertakings.

The history of Muslim monumental epigraphy in Turkey does not in fact begin until the middle of the 6th/7th century. There had been building activity in Anatolia before, in the Tarsuian states of the Danishmandids, the Artuksids, the Saltukids and the Mengütekids, but most of the constructions of that time were destroyed as a result of the continuous fighting in the area.

Muslim epigraphy in Turkey can be divided essentially into three categories: commemorative inscriptions, pious inscriptions, and epitaphs. The most important of these, both from the historical and the
artistic point of view, is the former, which includes inscriptions commemorating the constructions or restorations chiefly of foundations for the public good—mosques, fountains, sabils, etc.—and, in later times, also of government buildings (offices, hospitals, schools, barracks, etc.). The pious inscriptions either contain only the names of God, Muhammad or the four rāšidūn caliphs, or consist of hadiths or citations from the Qur’an that suit the purpose served by the object which they decorate. Thus in mosques one may find such Qur’anic verses as IV, 103 or XV, 46; on fountains LXVII, 18 and 22 or the words min al-mūn bāls ṣ不动产 kāhy, from XXI, 33; and on libraries the words fikr kāhī kāhām (XCVII, 2). Pious texts may also serve as motives over commemorative inscriptions. Hence in foundation inscriptions of mosques one may find such sayings of the Prophet as “Whoever builds for God a mosque, even if only like the nest of a sand grouse, for him God builds a house in paradise”. The number of inscriptions surviving on tombstones is very large. Especially in Istanbul very fine ones can still be seen. Unfortunately, the amount of research done in epitaphs is still less than that done in the other Muslim epigraphy of Turkey (see also KITABAT).

The typical Muslim inscription, including that in Turkey, is a rectangular slab with one or more lines of text, which are separated by narrow lines, the whole being enclosed in a narrow frame. In the Seljūk and early Ottoman periods the inscriptions were often also in the form of bands along the borders of porches, or, inside mosques, of mihrabs. Some inscriptions from this time consist of one line in dīnaṣṣ al-thuluth with elongated shafts through which runs a second line in KĀfīf, these together against a background of spiral arabesques. In the Ottoman period the lines (in verse texts, the hemistichs) of most inscriptions are enclosed in cartouches with the left and right extremities elaborated in different manners; these inscriptions are sometimes decorated with such motifs as flowers (either separate or in vases), fruits, arabesques, rossets and, especially in later times, tajhīz and crescent-and-stars. In the relief inscriptions the (raised) letters and decorations may be gilded, and the (sunken) backgrounds painted—mostly green or blue; it is uncertain whether these inscriptions were in the older inscriptions too, because the original paint of these has mostly worn off.

On the tile inscriptions, it is not the relief but the colours that present the necessary contrast between the text and the background. Inscriptions of this kind are mostly of pious content and undated. They are found in buildings from very early times; after the 12th/13th century their number gradually diminishes. Very fine examples of this kind of inscription are found inside the Selimye Mosque (completed 962/1554-5) in Edirne and in the Sa’dat Köşk (11th/12th century) in the Topkapı Palace in Istanbul. Since, under the Great Seljūqs, KāshF was very much used for inscriptions in Iran, it was also in the early Muslim epigraphy of Anatolia. This script, which was employed, roughly, in the period covered by the Seljūk and early Ottoman states, was brought to Turkey by Persian calligraphers in the period of Mehmed II (855-60/1453-81). Nāṣr al-Wḥ, which was brought to Turkey by Persian calligraphers in the period of Mehmed II, became common especially in the commemorative inscriptions and epitaphs made after the middle of the 11th/12th century. (The earliest inscription written in this script is perhaps that of the Mosque of Seljūq Khātūn (dated 860/ 1455-6) in Edirne [Dijkema, No. 26].) This script became so popular because (a) by this time most of these inscriptions were in Turkish verse, which (as is demonstrated in the manuscript diteras) it was traditional to write in nastaliq; and (b), since this script uses far less different auxiliary signs than does ḥiyal al-thuluth, it is much simpler to handle for the stone carver. Such scripts as muhābāt, ḥiyyah and ordinary thuluth are very rare in inscriptions. Ruṣūl was used occasionally in the last period of the Ottoman empire, mostly on buildings of secondary importance.

Little is known about the calligraphers who designed the inscriptions in the Seljūk and early Ottoman periods. Later, the more reputed calligraphers used to sign their works, with such stereotyped formulas as kahabahu 'l-ṣabī al-ṣa'īf or kahabahu 'l-ṣabī al-ṣa'īf ... They might omit their signatures, however, if on the same building there was another inscription written by one of the sultans (as is the case, for instance, in the inscriptions on the front of the two fountains of Sultan Ahmed III in Istanbul).

Under the Rûm Seljūqs and the early Ottomans, the general Muslim tradition was followed of writing inscriptions in Arabic. The earliest inscription in Turkish is perhaps that of the mausoleum of Yaḥyā Celebi (dated 814/1411) in Kutahya (I. H. Uzun9ar?Ul, Kitab-i şefii, Istanbul 1932, 79); later, especially from the end of the 16th/17th century, this came to be the language of most of the commemorative inscriptions and epitaphs, the cause of this rather radical change being probably an increase of the prestige of Turkish vis-à-vis Arabic following the Ottoman occupation of the Arab lands in the 16th and early 17th centuries. The Arabic inscriptions are mostly prose, the Turkish ones usually verse. The wording of the Arabic prose inscriptions closely follows the models of the Mamlāk and earlier Arabic epigraphy of Egypt and Syria. In most commemorative verse inscriptions, both those in Arabic and those in Turkish, the dates of the events commemorated are not expressed in figures or words but hidden in chronograms (see KITABAT). There do exist also Persian inscriptions, but they are very rare.

The redactors and calligraphers of the Muslim inscriptions in Turkey seem to have had a special liking for mystifying the reader—mostly in such a manner, however, that with adequate knowledge one can discover the true meanings of the texts. Not only is there the chronogram and, in verse texts, the often intricate language, but, for instance, in the inscription commemorating the 1282/1865-6 restoration of the Eski Cami (Dijkema, No. 126) in Edirne, some words are written mirror-wise. Calligraphers might add to the intricacy of inscriptions, often already sufficiently difficult to read through the interleaving of the letters, by several means; the inscription of the Muradiye Mosque (dated 899/ 1493-5) (ibidem, No. 7) in Edirne, for instance, contains unusual ligatures of letters; in the inscription of the Mosque of Sitt Khātūn (dated 899/1494) (ibidem, No. 25), in the same town, some letters are written mirror-wise; and in the inscription of the Şehit Most (dated 876/1471) [ed. by P. Wittke in Byantium, xviii (1945-6), 327, n. 2] near Rüstemdil (q.v.) in Bulgaria, letters and words are arranged in an unnatural manner.
Damage or lost inscriptions were often replaced by copies. The student of Ottoman epigraphy can mostly recognize these easily, for they are generally in a better state than originals dated in the same period. Also, the wording may give a hint. Knowledge of the history of calligraphy and decorative art may provide a means to ascertain the period when a copy was made. The foundation inscription of the Dariil-Sa'id Mosque in Edirne, dated 838/1435 (Dijkema, No. 6), for instance, is written in a nastālīk of a kind not used in Turkish epigraphy until the middle of the 18th/17th century.

Bibliography: For a general appreciation of the significance of Turkish epigraphy, see R. Mantran, Italien et perspectives de l'epigraphie turque pour les periodes pre-ottomanes et ottomanes, in Revue d'histoire maghrébine iv (1975), 217-20. For editions of Ottoman inscriptions, see the works of G. Colin, M. van Berchem, Khalif Edhem, J. H. Mordtmann, F. Taeschner, P. Wittke, Ismail Hakki Uzumayracli, Mühürlâ Zihîb, H. B. Kunter, M. Nujjuznowid, A. P. Veklov, A. Zagajewkowski, P. Miyatciw, H.-J. Körnampf, Th. Dijkema (bibliographical details in F. Th. Dijkema, The Ottoman historical monumental inscriptions in Edirne, Leiden 1977, Introd., § 3); some of these editions include also pre-Ottoman inscriptions. Among the editions containing more specifically pre-Ottoman inscriptions, there should be mentioned: C. Huart, Epigraphie arabe de l'Asie Mineure, in Revue semitique, ii (1894) and iii (1895); J. H. Lütyved, Konia: Inschriften der seldschukischen Bauten, Berlin 1907, the numerous articles of Ahmed Tewfik in TOEM, esp. those in Nos. 29 (1930), 83 (1940). 86 and 87 (both 1941); P. Wittke, Inschriften, in R. M. Rieflstahl, Türkische Architektur im sudostlichen Anatolien, Cambridge (Mass.) 1931, 27-116; J. Sauvaget, Inscriptions orieht., in A. Gabriel, Voyages archéologiques dans la Turquie orientale, i (1940), 287-356; W. Hinz, Steuerinschriften aus dem mittelalterlichen Orient, in Bullett, xii (1949), 745-69. The voluminous studies which I. H. Konyah has devoted to the monuments and inscriptions of a number of towns in (mainly western) Anatolia are unmethodical and possess little or no value for epigraphical research. See further the RECA; the sections VIIIc in the different parts of J. D. Pearson's Index Islamici, Cambridge (later London) 1958-; H.-J. Kornrumpf, Dinarische Bibliographie mit besonderer Berücksichtigung der Türkei in Europa, Leiden 1973, 1185-6; the bibliographies of the articles devoted in this encyclopaedia to towns of the Ottoman empire and to dynasties and important families in the area. Finally, many local histories of towns formerly under Ottoman domination contain records of inscription texts, even though this may not always be indicated in the titles.

8. In South-East Asia

Islamic epigraphy is distributed very unequally in South-East Asia, it being understood that islamization, although it did take place, was not accomplished everywhere at the same time or with the same intensity. The survey which follows can give only an idea of the importance of documents from Indonesia (Republik Indonesia) and from the Federation of Malaysia (Persekutuan Tanah Melayu). We shall have only a few words to say about the other regions.

A. Indonesia and the Federation of Malaysia

The majority of epigraphic documents consist of tombstone inscriptions. Next in number are charters and related texts, and finally there are some brief legendary pieces on various subjects. These three groups will be subdivided into four geographical regions, although the exigencies of history will not always allow a rigid separation: (a) Java (b) Sumatra (c) Malaysian Peninsula (d) Eastern Indonesia.

Regarding the Javanese year, since the introduction of the purely lunar calendar in 1633 A.D., it should be noted that the fatter does not always correspond to the so-called "Arabic" system, because of a different distribution of "full" years of 355 days, and also as a result of local variations which are not all known to us. On this typically Javanese chronology (abbreviated Sâkâ Jav. or S.J.) and the theoretical conversion of its dates to the Gregorian system, reference should be made to the article Tijdrekkenings, in ENP, v (= Suppl. I), 72-9, which is accompanied by a table (bibliographical details in F. Th. Dijkema, The Ottoman historical monumental inscriptions in Edirne, Leiden 1977, Introd., § 3; of these editions include also pre-Ottoman inscriptions. Among the editions containing more specifically pre-Ottoman inscriptions, there should be mentioned: C. Huart, Epigraphie arabe de l'Asie Mineure, in Revue semitique, ii (1894) and iii (1895); J. H. Lütyved, Konia: Inschriften der seldschukischen Bauten, Berlin 1907; the numerous articles of Ahmed Tewfik in TOEM, esp. those in Nos. 29 (1930), 83 (1940). 86 and 87 (both 1941); P. Wittke, Inschriften, in R. M. Rieflstahl, Türkische Architektur im sudostlichen Anatolien, Cambridge (Mass.) 1931, 27-116; J. Sauvaget, Inscriptions orieht., in A. Gabriel, Voyages archéologiques dans la Turquie orientale, i (1940), 287-356; W. Hinz, Steuerinschriften aus dem mittelalterlichen Orient, in Bullett. xii (1949), 745-69. The voluminous studies which I. H. Konyah has devoted to the monuments and inscriptions of a number of towns in (mainly western) Anatolia are unmethodical and possess little or no value for epigraphical research. See further the RECA; the sections VIIIc in the different parts of J. D. Pearson's Index Islamici, Cambridge (later London) 1958-; H.-J. Kornrumpf, Dinarische Bibliographie mit besonderer Berücksichtigung der Türkei in Europa, Leiden 1973, 1185-6; the bibliographies of the articles devoted in this encyclopaedia to towns of the Ottoman empire and to dynasties and important families in the area. Finally, many local histories of towns formerly under Ottoman domination contain records of inscription texts, even though this may not always be indicated in the titles.

8. In South-East Asia

Islamic epigraphy is distributed very unequally in South-East Asia, it being understood that islamization, although it did take place, was not accomplished everywhere at the same time or with the same intensity. The survey which follows can give only an idea of the importance of documents from Indonesia (Republik Indonesia) and from the Federation of Malaysia (Persekutuan Tanah Melayu). We shall have only a few words to say about the other regions.

Encyclopaedia of Islam, V
1470 S = 1548-9 A.D. In these two latter cases, the numerals are to be read from right to left, a mode of writing numbers unknown to epigraphy in the Arab lands but found in a number of cases in Indonesia (though rare in Sumatra), which doubtless arises from the system current in the Hindu period of expressing dates through chronograms.

Finally, in concluding this brief survey of the principal Muslim monuments of Java, let us note that in the burial complex of the famous Queen of Japârâ (usual orth. Djapara), Ratu Kali Nyamai, is a chronogram giving the date 1481 S = 1559-60 A.D.

(b) Sumatra. As a result of a systematic survey carried out between 1912 and 1917 in the region of the ancient kingdom of Samudra-Pasai and in the extreme north of the island, in Atchch to be precise, the Archaeological Service of Indonesia possesses a rich collection of photographs and casts of epitaphs, most of which however offer us nothing more than pious texts without historical value. Of the sixty dated inscriptions, wholly or partly legible, which we have been able to examine from Sumudra-Pasai, the majority (more than thirty) are from the 9th/10th century; ten are from the 10th/11th century; four date from the 8th/9th century; and only one from the closing years of the 7th/8th century. Among these tombs, of which about half belong to women, a dozen or so less are of persons of royal or princely rank. Only a few of these epitaphs have been published, and a systematic study has yet to be made.

We may mention among the historically more important, that of the first sultan of Samudra, Sultan Malik al-Sâlih who died in 896/1297, and that of his son al-Sultan b. Malik al-Zâhir Shams al-Dinârâ weラ Din Muhammad b. Malik al-Sâlih, which is of a completely different style and dates from 726/1326. Among the other tombs, we may mention those of a descendant of the penultimate caliph of Baghdad, named 9Abd Allah b. Muhammad b. Abd al-Kadir, who died at Sumudra in 809/1406; that of a queen of Sumudra, great-granddaughter of the first sultan of the kingdom, dating from 831/1428; the epitaph of a princess with a Persian name, Mihrâb, daughter of Khodja Ahmad al-Sultan al-Adil; and finally, the tombs of two individuals, one named Râda Khan dating from 834/1430 and the other, his son, Khodja Râda Khan b. Râda Khân, buried in 863/1450-1.

One tomb, of unique type, is that of a person named Nâmi Khâsim al-Dîn b. Nâmi Amin. As well as conventional texts, the tomb bears a poem by Sâdî and dates from 824/1420.

Of two particularly interesting inscriptions apparently belonging to the same tomb, the one gives us a text in Old Malay written in palaeo-Sumatran characters, the epitaph of a queen whose name is uncertain but who died in 781/1380; the other stone bears an epitaph in Arabic of a princess, with a date almost identical to that of the former, the same day of the week, the same day of the month, the same month, but ten years later, 791/1398. It is probable that there is an error in the dating of one of the two inscriptions. In any case, the text in palaeo-Sumatran characters is very important, since it gives us evidence of the use of this script, which belongs to the pre-Muslim period, in the Islamic era and in the 8th/9th century, a hundred years after the Islamisation of the region.

(c) Federation of Malaysia. Among the tombs discovered here are that of the sixth sovereign of Malaka, Sultan Mansur Shah b. Muzaffar Shah, who died in 865/1464, and that of the first sultan of Pahang, Sultan Muhammed Shah, son of Sultan Mansur Shah the conqueror of Pahang, who was the son of Muzaffar Shah, son of Muhammed Shah. The latter tomb is dated 880/1475, and it is noticeable that the genealogy here goes back further: than in the previous example. The vast majority of tomb inscriptions are in Arabic, but one case is known where the epitaph proper is in Malay. It is that of a step-daughter of Sultan Ahmad, the second sovereign of Pahang; she was in fact the daughter of the seventh sovereign of Malaka and sister of the seventh and last, who was forced to flee before the Portuguese invasion. There are various other royal tombs of the different sultanates, as well as those of eminent individuals dating from the 9th and 10th/11th and 12th centuries.

At Brunei, two tombs from the 13th century A.D. have been discovered. They are totally different from those of the Peninsular as regards the form and the style of the inscription.

(d) Eastern Indonesia. The island of Bali, where there is a small minority of Muslims in the north, has not yet yielded a single ancient inscription. There is one, however, on the tomb of a princess of which roughly half the population is Muslim. This inscription is bilingual: the shahâda in Arabic and a chronogram in Balinese script. The latter has been interpreted by Stutterheim as representing 1326/1722.

II. Charters and related documents.

(a) and (b) Java and Sumatra. On a minbar from the east of Java, of which we have only a facsimile, there is the date 1487 Sâlih/1565-6 A.D. inscribed in palaeo-Javanese numerals; but a chronogram which accompanies it causes difficulty. A small stele on at the centre of the island, in Javanese, bears the date of 1242/1787, which is of a completely different style and dates from 726/1326. Among the other tombs, we may mention those of a descendant of the penultimate caliph of Baghdad, named 9Abd Allah b. Muhammad b. Abd al-Kadir, who died at Sumudra in 809/1406; that of a queen of Sumudra, great-granddaughter of the first sultan of the kingdom, dating from 831/1428; the epitaph of a princess with a Persian name, Mihrâb, daughter of Khodja Ahmad al-Sultan al-Adil; and finally, the tombs of two individuals, one named Râda Khan dating from 834/1430 and the other, his son, Khodja Râda Khan b. Râda Khân, buried in 863/1450-1.

One tomb, of unique type, is that of a person named Nâmi Khâsim al-Dîn b. Nâmi Amin. As well as conventional texts, the tomb bears a poem by Sâdî and dates from 824/1420.

Of two particularly interesting inscriptions apparently belonging to the same tomb, the one gives us a text in Old Malay written in palaeo-Sumatran characters, the epitaph of a queen whose name is uncertain but who died in 781/1380; the other stone bears an epitaph in Arabic of a princess, with a date almost identical to that of the former, the same day of the week, the same day of the month, the same month, but ten years later, 791/1398. It is probable that there is an error in the dating of one of the two inscriptions. In any case, the text in palaeo-Sumatran characters is very important, since it gives us evidence of the use of this script, which belongs to the pre-Muslim period, in the Islamic era and in the 8th/9th century, a hundred years after the Islamisation of the region.

(c) Federation of Malaysia. Among the tombs discovered here are that of the sixth sovereign of Malaka, Sultan Mansur Shah b. Muzaffar Shah, who died in 865/1464, and that of the first sultan of Pahang, Sultan Muhammed Shah, son of Sultan Mansur Shah the conqueror of Pahang, who was the son of Muzaffar Shah, son of Muhammed Shah. The latter tomb is dated 880/1475, and it is noticeable that the genealogy here goes back further: than in the previous example. The vast majority of tomb inscriptions are in Arabic, but one case is known where the epitaph proper is in Malay. It is that of a step-daughter of Sultan Ahmad, the second sovereign of Pahang; she was in fact the daughter of the seventh sovereign of Malaka and sister of the seventh and last, who was forced to flee before the Portuguese invasion. There are various other royal tombs of the different sultanates, as well as those of eminent individuals dating from the 9th and 10th/11th and 12th centuries.

At Brunei, two tombs from the 13th century A.D. have been discovered. They are totally different from those of the Peninsular as regards the form and the style of the inscription.

(d) Eastern Indonesia. The island of Bali, where there is a small minority of Muslims in the north, has not yet yielded a single ancient inscription. There is one, however, on the tomb of a princess of which roughly half the population is Muslim. This inscription is bilingual: the shahâda in Arabic and a chronogram in Balinese script. The latter has been interpreted by Stutterheim as representing 1326/1722.

II. Charters and related documents.

(a) and (b) Java and Sumatra. On a minbar from the east of Java, of which we have only a facsimile, there is the date 1487 Sâlih/1565-6 A.D. inscribed in palaeo-Javanese numerals; but a chronogram which accompanies it causes difficulty. A small stele on at the centre of the island, in Javanese, bears the date of 1242/1787, which is of a completely different style and dates from 726/1326. Abd al-Kadir, who died at Sumudra in 809/1406; that of a queen of Sumudra, great-granddaughter of the first sultan of the kingdom, dating from 831/1428; the epitaph of a princess with a Persian name, Mihrâb, daughter of Khodja Ahmad al-Sultan al-Adil; and finally, the tombs of two individuals, one named Râda Khan dating from 834/1430 and the other, his son, Khodja Râda Khan b. Râda Khân, buried in 863/1450-1.

One tomb, of unique type, is that of a person named Nâmi Khâsim al-Dîn b. Nâmi Amin. As well as conventional texts, the tomb bears a poem by Sâdî and dates from 824/1420.

Of two particularly interesting inscriptions apparently belonging to the same tomb, the one gives us a text in Old Malay written in palaeo-Sumatran characters, the epitaph of a queen whose name is uncertain but who died in 781/1380; the other stone bears an epitaph in Arabic of a princess, with a date almost identical to that of the former, the same day of the week, the same day of the month, the same month, but ten years later, 791/1398. It is probable that there is an error in the dating of one of the two inscriptions. In any case, the text in palaeo-Sumatran characters is very important, since it gives us evidence of the use of this script, which belongs to the pre-Muslim period, in the Islamic era and in the 8th/9th century, a hundred years after the Islamisation of the region.

(c) Federation of Malaysia. Among the tombs discovered here are that of the sixth sovereign of
fractions, with the penalties laid down for each. The date is unfortunately incomplete but we can at least be sure that it belongs to the 8th/9th century. In this text there are very few Arabic words, and even the name of Allah is rendered by an expression Hindu in origin, Dhesa MuSy Rayan. (2) Eastern Indonesia. Especially interesting in this region are texts written in Arabic script but in the language of Ternate, emulating from the sultanate of the same name. They are all recent (19th century), but give valuable evidence concerning this language, which is not part of the Indonesian linguistic family (which henceforward may usefully be called Nounsarian), but which alongside Malay played the role of a lingua franca in the eastern parts of the Indonesian archipelago.

III. Inscriptions on various objects.

1. Cannons.
(a), (b), (c). Indonesia and the Federation of Malaysia. Cannons of diverse origin have been found [of French, Dutch or Indonesian manufacture] bearing inscriptions in Malay or in Arabic. They date from the 18th and 19th centuries. On one of these is inscribed the name Yakhera (variant of Djakarta) written in Javanese letters. It also bears a date, which is, however, problematical.
(b) Eastern Indonesia. A cannon of Indonesian manufacture, dating from the start of the 20th century, has been found at Soulawesi. It bears the name La Patau, the nephew of the famous Sultan of Pnom Penh. The first three lines consist only of inscriptions in Malay or in Arabic. They date from the 17th and 18th centuries. On one of these is inscribed the name of Ratu Kalii Nyamat: P. D. K. Bosch, 0V (1930), 57-8 with plate 12-23; on Sandan Duvur and Gondan Lor: W. F. Stutterheim, 0V (1939), 30; n. 1 and fig. 34; L. C. Darnais, Etudes javanusises I: Les tombeaux musulmans d'Indes de Troubly, in BFFEO, xviii (1937), 351-415 with 20 plates.

2. Other objects.
(a) Java. There are various brief inscriptions on mortars and on carved wooden panels, all of them from the 19th century.
(b) Federation of Malaysia (including British Borneo) and (c) Eastern Indonesia. In general, only books and articles discussing the epigraphic data are listed here.

I. Tomb inscriptions.

a. Java. For the inscription of Malik Ibrahim's tomb at Gresik, see TBRG, index 1932-13, under the name of Ph. S. van Ronkel, Th. J. Bynboll, J. P. Moquette and H. Djadjadiningrat; anon., Gravur, Grissee, in ENP, i (1927), 819; G. P. [konfaer], Liber, in ENP, ii (1928), 579; Moquette, De oudste Mohammedaanse inscriptie op Java, in Verhandelingen van het Eerste Congres voor de Talen- en Volkenkunde van Java, gehouden te Solo, 1901, Weltevreden, 1914, 391-9; P. Ravaisse, L'inscription conjuge de Léran à Java, in TEG, liv (1923), 686-703; D. A. Rinkes, De Heiligen van Java. I. De aalm. van Siech Abdoolmouhny, in TEG, iii (1920), 556-9; idem, De Heiligen van Java. II. De heiligen van Java. III: De heiligen van Java. I, De aalm. van Siech Abdoolmouhny, in TEG, iv (1921), 391-4.

b. Sumatra. The official Reports of the prospecting mission undertaken since 1912 in northern Sumatra will be found in: J. J. de Vink, Uitredeel uit het verslag over de oudheidkundige werken in Sumatra, in TBRG, i (1923), 53-68; R. O. Winstedt, Ein persischGrab an der Küste von Ratu Kalii Nyamat: F. D. K. Bosch, 0V (1930), 57-8 with plate 12-23; on Sandan Duvur and Gondan Lor: W. F. Stutterheim, 0V (1939), 30; n. 1 and fig. 34; L. C. Darnais, Etudes javanusises I: Les tombeaux musulmans d'Indes de Troubly, in BFFEO, xviii (1937), 351-415 with 20 plates.

(c) Java and Sumatra: Moquette, De gravenstenen te Pasg en Grissee vergelijken met dergelijke monumenten uit Hindoestaan, in TBRG, liv (1922), 536-48; Moquette en H. D. [jaadiningrat], Oudheden (Mohammedaanse), in ENP, iii (1925), 201-5; Djadjadiningrat, In Memoriam Jean Pierre Moquette, in TEG, livii (1927), 1-35.

b. Sumatra. The official Reports of the prospecting mission undertaken since 1912 in northern Sumatra will be found in: J. J. de Vink, Uitredeel uit het verslag over de oudheidkundige werken in Sumatra, in TBRG, i (1923), 53-68; R. O. Winstedt, Ein persischGrab an der Küste von Ratu Kalii Nyamat: F. D. K. Bosch, 0V (1930), 57-8 with plate 12-23; on Sandan Duvur and Gondan Lor: W. F. Stutterheim, 0V (1939), 30; n. 1 and fig. 34; L. C. Darnais, Etudes javanusises I: Les tombeaux musulmans d'Indes de Troubly, in BFFEO, xviii (1937), 351-415 with 20 plates.

III. Inscriptions on various objects.

1. Cannons.
(a), (b), (c). Indonesia and the Federation of Malaysia. Cannons of diverse origin have been found [of French, Dutch or Indonesian manufacture] bearing inscriptions in Malay or in Arabic. They date from the 17th and 18th centuries. On one of these is inscribed the name Yakhera (variant of Djakarta) written in Javanese letters. It also bears a date, which is, however, problematical.

(b) Eastern Indonesia. A cannon of Indonesian manufacture, dating from the start of the 20th century, has been found at Soulawesi. It bears the name La Patau, the nephew of the famous Sultan of Pnom Penh. The first three lines consist only of inscriptions in Malay or in Arabic. They date from the 17th and 18th centuries. Darnais, Etudes javanusises I: Les tombeaux musulmans d'Indes de Troubly, in BFFEO, xviii (1937), 351-415 with 20 plates.

2. Other objects.
(a) Java. There are various brief inscriptions on mortars and on carved wooden panels, all of them from the 19th century.
(b) Federation of Malaysia (including British Borneo) and (c) Eastern Indonesia. In general, only books and articles discussing the epigraphic data are listed here.

C. Cambodia

One inscription only has been found in the area of Phnom Penh. The first three lines consist only of pious texts and the fourth, which perhaps contains more interesting details, unfortunately cannot be deciphered.

D. Cambodia

Two tombstone inscriptions have been found at Camplas, in Arabic with Kufic characters. One is from 431/1039. The other is undated, but judging by the palaeography, is of roughly the same age as the first.

Bibliography: For convenience, the sources have been divided in the same way as in the text of the article, sc. in three groups: I. Tomb inscriptions; II. Charters and related documents; and III. Inscriptions on various objects. Each of these groups is subdivided also according to the article proper into (a) Java, (b) Sumatra, (c)
OV, 1922, 70-1, III; T. J. Veithm, Neda di oor de Geschiedenis van het landspark Pidieh, in TJB, lvii (1919), 15-57; Cowan, Een interessant ge-
luigenis betreffende de vroegste Islam in Noord-
Sumatra, in BKJ, xxvi (1942), 410-6, III.

c. Federation of Malaysia and Brtish Borneo:

British Borneo: T. F. Carey, Two early Muslim tombs at Brunei, in JnMflBRAS, xii/3 (1933), 183, III.

d. Eastern part of Indonesia: Stutterheim, Een inscriptie van Lombok, in Dijdo, xvii, 301-10, ill.

II. Charters and related documents.
a. Java: For the older articles, see TJB for 1857, 1864, 1873, 1870 and 1876, under the name of H. H. Th. Friedrich, A. B. Cohen [Stuart], and C. M. Frye. On the stiele of Sutecelal: Bosch, Oudheden in het Zuidwesten bij de Koli Opah, in OY (1925), 148-9 and pl. 33; K. C. Cruco, (Sutecelal), Epigraphische Aanteekeningen, in OY (1929), 267; K. F. Holle, Pijagiem den vorst van Mataram, in TJB, xiii (1864), 492-6; Idem, Bijdragen tot de geschiedenis der Feengau-Regerings-
chappen, in TJB, xvii (1868), 316-317; J. L. A. Brandes, Drie kopien platen uit den Malaearnasche tijd, gedrazen in de residentie Krasang, in TJB, xxxii (1898), 339-62; Idem, Nog iets over een reede gepubliceerden platen van Sultan Ageng, in TJB, xxxii (1898), 361-7; Idem, Nog enige Javaansche pijagiem's uit het Moham-
medansche tijdvak, in TJB, xxxii (1898), esp. 358-65.

b. Sumatra and Bangka: On the inscriptions of Bangka: [anon.], NBG, vi (1868), 30-8 and 41-6; Brandes, Nog enige Javaansche pijagiem's, in TJB, xxxii (1898), esp. 395-9; On the island of Sumatra: J. J. Meeuwen, Een proclamatie van een sultan van Banian [in 1669], in BKJ, x/3 (1892), 222-7; H. H. van der Tuuk, Naar aanleiding van een proclamatie van den Sultan van Banian, in TJB, xxiii (1892), 134-9; Idem, Lampangsehem pijagiem, in TJB, xxix (1884), 191-207; H. C. Humme, Javaansche inscriptie, in BKJ, 4-vii (1884), 1-20; Idem, Nog iets over Javaansche Inscription, in BKJ, 4-vi (1885), 115-8; Idem, Weder een Javaansche inscriptie op Sumatra, in BKJ, 4-viii (1885), 363-9; Brandes (charter of Palabum), in NBG, xxxvi (1888), 177-21; Idem, Nog enige Javaansche inscriptie uit het Moham-
edansche tijdvak, in TJB, 1889-1902; [anon.] (On 'Nanct Agin and Tankaaj, Amerata No. 3 [Dinah Forbians R. L.]), Djakarta 1935, 15, 27, 28, 36; Th. Piggawa, Afbodenningen van Soerat van Banian voor Lampong, in Djodod, ix (1923), 123-55, ill; G. A. J. Hazen, Een beschreven kopier-
plaat van de Lampong, in TJB, xxvii (1906), 11-12; Djadjaminrat, Critische beschouwing van de Sadzchar Banian, Haarlem 1911, esp. 115-30; Idem, Nog iets omtrent de Lampangsche vorheiden over de oorspronkelijke vorheiding tussen Lam-
pong en Banten, in NBG, lii/2 (1920), 48-51; TJB, 1870, 1890, 1907, 1917-19, 1933, 1938, articles of o of van der Tuuk, Palmer van den Broek, L. C. Westeneaka, J. J. Egjanes, van den Berg and Tichelman; [anon.], Mededelingen betreffende de Afghsche Onderkoorheden, in EKJ, ibid. (1920), esp. 166.

III. Inscriptions on various subjects:

b. Sumatra: E. Netscher, (Cannons), in NBG, iv (1866), 274-2, 8; C. A. Gibson-Hill, Notes on the old cannon found in Malaya and known to be of Dutch origin, in JnMflBRAS, xxvii/3 (1953), 158, ill.

c. Federation of Malaysia: Blagden, A XVIIIth century Malay cannon in London, in JnMflBRAS, xix/3 (1941), 122-4; Rentse, Gangan di Kelantan, in JnMflBRAS, xii/2 (1933), 244-4, ill.

c. Cambodia: (anon.), La stile arabe du Phnom Bok, in BEFEO, xii (1922), 160.

(L. CH. DAMAS)

9. Iran and Transoxiana.

Before the advent of Islam, the regions of Iran and Transoxiana had long-established traditions of
literacy. On the one hand, use was made of various scripts derived from the Imperial Aramaic of the Achaemenid chancellies during the 5th and 4th centuries B.C. These employed a largely historical spelling for Iranian words, and combined with this, ideographic writing-elements formed from Semitic roots, but with added Iranian terminations (known as phonetic complements) to indicate the inflexions. On the other hand, in the regions of Balkh, Tukhâristân and Râkahshâd, there had been current the cursive Bactrian script, a slightly modified form of the Greek alphabet, which like its parent employed for this Iranian dialect straightforward phonetic spellings. This survived on the so-called Arab-Hephthalite coins until the coming of Islam. Here and there, among the Buddhist communities, Indian Kharoṣṭhī and even Brahmi scripts had formerly been known; but with these, as with the Rûm Turkish of Eastern Turkistan, and the indeciphered Kushan linear script of Dâsh-tâ Naâvû, we are not here concerned.

To the first group, the descendents of Aramaic, belonged Parthian, Sogdian and Khârazmian, besides a little-known variant of the same type used in Mâzandârân. Sogdian and Khârazmian lingered on, again on coins, well down into Islamic times. More prominent, however, was (Sasanian) Pahlavi, which, in its cursive forms known as Book-Pahlavi, co-existed with Islam for centuries as a vehicle of Zoroastrian and Islamic writings. It is found beside Arabic in bilingual Islamic inscriptions of the Caspian region at Kâdkâ (Neka), Lâdijm and Rasgît (Resgêt), and perhaps was the only method of writing the Persian language in the earlier Islamic period. Until the time of al-Kâdhîkî, in 769/1368-69, Pahlavi had been the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kâshââhâdi, Sudh al-âḏâk, i, 423) converted the chancery script of the eastern Arab governors.

Apart from inscriptions on the coins, the dated Arabic inscriptions of Iran, as at present known, begin surprisingly late. The earliest are a still unpublished series at Bahmîdâz, near the border of Fars and Isfahân Provinces. The clearest text reads 'amarâd Kâdîm b. Muhammad b. Dâshâ (S)āmārī (4 of Kâzîm al-Muqâm, w. 208, 209) and 'âmârâd Kâzîm al-Muqâm, w. 208, 209. Another records the birth of Muhammad b. Yûsuf b. Kâzîm on Monday, 27 Sha'âbân 309. The same site has one poorly preserved Book-Pahlavi inscription, and many other short texts in Arabic. A substantial list of the known Arabic inscriptions of Iran to 600/1203-4 was compiled by Miles. The earliest of consequence among the famous texts of the Bûyûd 'Adud al-Dawla Fânsîr-nâshâ (see fig. 63) in the Tachara at Persepolis, recording the defeat of Muhammad b. Mâkîn in Safar 344/ May-June 955 and the 'Afu's interest in the decipherment of inscriptions. One of the texts has been shown to contain several Persian words (R. N. Frye, The heritage of Persia, London 1562, 251, 250, with fig. 63). Nearby is the inscription of Bahâ' al-Dawla [q.v. in Suppl.] dated 392/1001-2. Earlier in fact than any known Arabic inscription of Iran or Afghanistan is the enigmatic text from the Tachêl Vâlley in Warîstân, now in the Peshâhâr Museum, which is dated Djamâd 1 243/August 857. This seems to contain a mention of "the land of 'Umayr", which, with the early date, could imply a connexion with the Khâzûrigi amirate at Gardiz [q.v.], since judging by the Târîkh-i Sânî, caliphal control could not have than extended so far east.

Decorative varieties of Arabic script were equally slow to appear in the Islamic East. The texts of 'Adud al-Dawla show no more than occasional barbed terminations, and characters linked by small loops beneath the base-line. Filiation of letter-terms seems to have developed first in Egypt, and to have been quickly followed there by Floriation (in which is here understood the use of attached, extended, leaf-decoration, as well as that of circular flowers, either attached or separate). Such features, as Grohmann showed, were known in Egypt as early as 216/834-5, and must have travelled thence to the East; not, as Van Berchem maintained, on the evidence of a restored inscription at Tashkert, from Central Asia westwards. In Iran, strongly floriated Kâfîc often tending to floriation is found in undated (probably 4th/5th century) inscriptions of the Mâdījâl Dîjâmî at Nâyîn. The earliest dated examples of floriation appear to be the inscriptions of Bâd b. Hâsanâwî, a Kurdish ruler in Lûriştân: one at each end of the Pul-i Mûnûllân near Khurramâbâd, alike dated 374/984-5, and another from the Pul-i Kâshâân completed in 399/1008-9, which all record the building of the bridges. Very fine specimens of Floriated Kâfic are those of the minaret of the Pâ-yl Minâr mosque at Zawârân (451/1060-9), and the tomb-tower of Hâznîyârâ at Rasgît (Resgêt). From a reading of its date that was uncertain, Godard sought to ascribe the latter to the 5th/6th century, but its thick, heavy, florid decorations can only be paralleled with the legends of the Khârazm-Shâh coins of the 6th/7th century; and in any event, the closing words can hardly be taken for a date. In fact, the principality of Khârazm had been slow to develop an ornate calligraphy. That region during the 5th/6th century had adopted an austere and elegant style, unusual only for the sweeping curves of the qâf, bâ and bâ, which is exemplified by the foundation-notice of Manîm b. Mamûn (dated 407/1017-18) in lead, from a minaret at Urgânî, or Gurgândî [q.v.], now at Tashkent. With this may be compared the silver tray of the unidentitied prince Taqî al-Urma wa-Strâdî al-Miâlî Khârazm-Shâh b. Ibrâhîm, reproduced by Smirnov. Further to the west in the Zîfrîd kingdom,
the inscription of the Gunbad-i Kâbûs (595/1199-1205) is in a magisterially simple, yet wholly undecorated script. Such austere forms were well-adapted to rendering in the brickwork of the many minarets and domes erected under the Saljûqs in Iran: such, for example, as the plain and elongated lettering of the founder’s inscription of the minaret Nizâm al-Mulk in the sanctuary of the Dînâr at Isfâhân (AMT, vii, 3-5, 83) or that in the name of the Sultan Mûhammad b. Malik Shâh at Gulpâyaglûn.

More adventurous calligraphic developments had meanwhile been taking place in the Sânâmâl territories of Transoxania and Khurasan, no doubt stimulated by the introduction of paper-manufacture from China, and the stimulus consequently given to demand. On the slip-painted “Nîshâpûr” pottery, magniﬁcant lettering is found in black or chalcography over a pale ground, and painted or interlaced letter-frames soon became widespread. In the absence of dated specimens, chronology of the pottery depends on examples in other media. Interlaced letters appear on a dînâr of Nasr b. Ahmad dated 524/1125-6 from al-Muhammadîyya (Ravy), and similar forms are found frequently on subsequent Bûyûd coins of North Iranian mints. Thus Plaited Kufic seems to have been diffused from east to west across the Islamic world, in the opposite direction to ﬂoriation. The most characteristic, however, both at Cistit. and other mints, is in a magisterially simple, yet wholly unornamented script. Such austere forms were well-adapted to rendering in the brickwork of the many minarets and domes erected under the Saljûqs in Iran: such, for example, as the plain and elongated lettering of the founder’s inscription of the minaret Nizâm al-Mulk in the sanctuary of the Dînâr at Isfâhân (AMT, vii, 3-5, 83) or that in the name of the Sultan Mûhammad b. Malik Shâh at Gulpâyaglûn.

The Kufic inscriptions so far discussed are all couched in Arabic. The small number of Persian epigraphs known which were written in this character were discussed by Bombaci in his examination of the long and fragmentary Persian verse-inscription or marble slabs, found in the palace of Mas'ûd III at Ghazna (built in 505/1111-12). He notes Persian verses also on the tomb of an unknown person at Ghazna. However, the earliest example of such a text is on the portal-arch of Rûbâyî-i Malik near Bâlghâr (Pope, Survey of Persian Art, pi. 272B), ascribed to the Karâkhâned Ghâna al-Mulk Yâqûb b. Tamghâq Küfîn Ibrâhîm (471/1078-9). Other monumental Persian inscriptions are at the tomb of Mûhammad Shâhîn at Nâshâvân (N. Khaniîkî, Mémoire sur les inscriptions musulmanes du Caucase, in JI 4 [1862], 113-15); and especially that at the mausoleum of the later Karâkhâned Djalâl al-Dîn al-Husayn ibn al-Jâhân ibn Aflî at Uzgend (547/1152), where the Persian foundation-text is in sinuous Naskhî, and the largely Turkish protocol of the ruler, below, in a rigorously geometrical Bordered Kufic. In unpointed script Persian has always been found extremely diﬃcult to read, and it was only with the advent of fully-pointed Naskhî that the monumental use of Persian became extensive.

In any event, by the close of the 5th/11th century, decorated Kufic was passing out of favour, both by reason of its diﬃcult legibility, and perhaps on account of associations with the Fatîmid dynasty, considered hostile by the Saljûqs. Cursive hand-writings, the rounded Naskhî, and the flowing ligatured chancery hands, had always co-existed with the angular script, and now emerged with full monumental status. A Naskhî text on the tombstone of Mahmûd I at Ghazna contains the date 421/1030, but is often considered a later addition, as are the Kufic inscriptions on the wooden doors from that tomb. Nevertheless, Ghazna played a leading part in the innovation, for the specimen there on a marble panel naming the Sultan Îbrâhîm b. Mas'ûd is unlikely to be later than his death in 427/1034/5, in view of its wording. At Dândâs, a Naskhî text is placed before 406/1017-18. A specimen of Kufic with the angular script, as at the Imam-zâdah Khâned at Mashhad already mentioned, and the mausoleum of Qârâb (Kurwa near Kazwîn, ascribed to 575/1179-80), Arabic manuals of calligraphy, followed by several recent commentators, apply special terms (gulled, mulabbaq, raybâî, nûkî and so on) to varieties of Naskhî script. Yet since the application of these in succeeding periods is inconsistent, and the categories appearing on monuments do not always correspond, it is safer to use only the general term. From the second half of the 6th/12th century, Naskhî inscriptions exist in substantial
numbers in Iran. The best general study, no longer, of course, up-to-date, is that of Kratkevskaya (in F. W. von Bpers, Survey of Persian art, iv, 1770-84). Often the Nashtsh characters stand, without attachment, on an overall background of vegetable scrolls, a convention found also in the latest phase of Kufic. In the period of the Ifghans and later, wide variations are found in the forms of script under the Nashtsh "label". As outstanding specimens, mention must be made of the inscription of Oldjeity in the Djam of Isfahan, and the inscription of the Muzaffari Ahmad at Sehidj, with its massed verticals typical of the Persian style. Yet the fashion for Nisfchi, with its massed verticals typical of the Persian style, is that of Kratchkovskaya (1977). Often mischievously: for example, the Persian inscription at the Qasr-i-Azam at Dihli is probably a lustre plate of a stone, and on crystal and jade [see Bilawr and Vaghi]. The greatest part of the public inscriptions is carved on stone; often of a stone identical to that of the main building material, but not infrequently a specially selected fine-grained stone is used for the inscription and emblazoned into the structure.

Here the question of authenticity must be considered. An inscription may indeed be exactly contemporary with the building on which it appears. But it may also be earlier, preserved through the reverence accorded to the written word or through the inscription to it of some special sanctity, and set into a later unrelated building; or else later, marking the completion of a building project essentially temporary with the building on which it appears.

Here the technique of carving stone inscriptions in Arabi, Persian or Urdu is conspicuously different
from that of inscriptions in other Indian languages, where the characters are engraved into the surface of the stone; in the Muslim inscriptions the outline of the letters is first written on the stone, and the ground between the letters then chiselled away leaving the inscription level with the original surface. A similar technique may be applied to inscriptions on crystal and jade, and also to the larger metal pieces, although on any of these fields the letters may be incised and the grooves filled with another material to leave an inscription flush with the surface; in the case of Dholi ware this is regularly of silver; bar laid into the base metal. Inscriptions in ceramics may be either of letters in a contrasting colour fired integrally in a regularly-shaped tile (haft-rangi; see KHAMRA), or consist of the individual letter-shapes let into a contrasting ground by a mosaic technique. The former ceramic technique is more commonly employed for simple repetitive motifs (e.g. the names Allah or Muhammad), sometimes combined with a moulded base on which the letter-shapes are raised, as on the merlons of Rukn-i Alam's tomb in Multān; mosaic tile inscriptions, which do not appear until the 11th/12th century, are best exemplified in the Mughal buildings of Lahore (see LANGWR).

The language of the earliest inscriptions is invariably Arabic. There are no inscriptional records of the 'Abbasid presence in Sind, although a few were engendered by the Muslim communities which lingered on in Sindh and the Pandjāb, with their occasional offshoots to Kāthth and the north coast of Kāthūwiw [see GURJAR], to which were added the small communities which grew up around the Mahrūzs of individual Shi'ah saints who drifted in to India before the Ghurid conquest, especially in the Pandjāb and the Ganges valley. After the Ghurid conquest of Dholi, dating inscriptions remain in Arabic regularly until towards the end of the 7th/8th century, when they are replaced by Persian; non-historical epigraphs tend to remain in Arabic somewhat longer, and of course Arabic persists up to the present day for Kur'ānic quotations on mosques and tomb inscriptions. This does not, however, actually occur also on coins of the Mughal period [see SIKKA]. Many inscriptions are of a high order of calligraphic excellence, and the names of many calligraphers in many regions of India are recorded.

The information which the inscriptions provide for the historian is sometimes very valuable; at times, they furnish the only sources for doubtful points of dynastic chronology; they supply missing details from the literary histories, or enable confusing points to be resolved where the other documents are in conflict; they enable more complete lists to be made of rulers' families, of the local nobility or court and town officials; and they are a valuable source of information on the history of the buildings on which they are found, subject to the reservation on their authenticity referred to above). Indirectly, too, their location enables the political status of border regions at certain confused times to be determined, such as the regions in dispute between the Mwādi and Diamonpur sultanates (q.v.), or the Raygūr dāsā (see HIND. HISTORY); in many cases, an inscription is the only evidence for a fort or stronghold having been occupied by a particular power at any time. Even when rulers and governors are known from chronicles, the inscriptions often provide essential information on details of their careers, their promotions and postings, their achievements, even on their families. Tomb-inscriptions frequently mention their subject's birthplace, and thereby provide evidence for the extent of immigration and for the settlement pattern of foreign groups.

Administrative and economic details contained in or implied by the inscriptions can also be invaluable: information on details of departments, names of offices, and designations of office-holders; on the imposition or remission of taxes, and their varied application to certain classes or tribes; on the nature and conditions of grants of land, both to...
holders of an ida [g.v.] and to charitable institutions such as mosque or madrasa as waqf [g.v.]; on land cultivation or irrigation (well inscriptions, or records of repairs to tanks and dams, often refer to the amount of land intended to be irrigated); on regional boundaries; on markets. Records on works of public utility may include a schedule of expenses or the wages to be paid to employees. Geographical details, including distances, occur in inscriptions relating to roads and bridges, which also provide information on their builders—besides recording the correct forms of place-names, which seem singularly liable to corruption by copyists of the chronicles. Building inscriptions often indicate the cost of construction as well as details of the architects; an unusual inscription in the tomb of Hâshang Shah at Mându [g.v.] records a tribute by visiting Mughal architects of the family of master-builders who were later responsible for the Tâdž Mahâl. Gun inscriptions, as well as prescribing essential instructions on the quantity of charge and shot required, frequently provide information on gun founding and the gun-founders—often Turcs or Europeans—involved in the industry.

The literary contribution of the inscriptions must not be overlooked. Many inscriptions are in verses composed ad hoc, some of considerable beauty and skill, but it must be admitted that the verse of a lot of inscriptions is no better than doggerel. This is especially the case with verses containing a chronogram, where taste is often sacrificed in favour of ingenuity. There are occasional quotations from well-known Persian poets, but frequently the authors are local poets not otherwise recorded. Specimens of Dakhân poetry are preserved in some Deccan inscriptions. Some prose inscriptions also evince literary merit, and may contain traditions not found in the usual collections of ohdya, such as the saying ascribed to Jesus in the Dâmi' mausd of Jinaybür Sîrî (Persian), or the variations on a tradition (Arabic) in the mosque inscriptions of Bengal, basically: "The Prophet, God's peace be upon him, said 'He who builds a mosque to God, for him God builds a house in Paradise'." Sentiments expressed range from strict and self-conscious rectitude through quietist mysticism to wishful nostalgia.

There is also the linguistic contribution of inscriptions. The occurrence of local words (Hindi, Bengali, Nârâ, Gujârâtî, Urdu and Dakhân in particular) is useful in reconstructing the history (and social conditions of use) of Indian languages. Bilingual inscriptions provide evidence on the extent of use of local languages and their place in communication of official instructions to the public, and the status of a particular local language in a border area; this is especially the case in the Deccan, where Muslim inscriptions in Kannada, Nârâ and Telugu are not uncommon besides the usual Persian and Dakhân.

The Indian sub-continent has been fortunate in the attention which has been paid to Muslim inscriptions for well over a century. Hundreds are recorded in orientalist publications, besides those in specialist journals devoted to epigraphy alone; and India has been well served by highly competent Government Epigraphists appointed specially to oversee Arabic and Persian inscriptions, of whom Ghulam Yârsî and Ziauddin Desai are pre-eminent. The work of exploration, interpretation and publication is still active.

Bibliography: A complete bibliography would be enormous in view of the great corpus of Indian Muslim epigraphs published so far. Inscriptions which relate to particular regions of India are listed under regional articles on History. In the 19th century epigraphs were mostly published, usually with translations and notes, in JASB. From 1907 the invaluable Epigraphia Indica Moslemica appeared, which continued until the independence of India and Pakistan. Pre-EIM inscriptions are listed in J. Horovitz, A list of the published Muhammadan inscriptions of India, in EIM (1909-10). Since the cessation of EIM, Muslim inscriptions of India have appeared in Epigraphia Indica Arabic and Persian Supplement, and valuable comments appear also in Annual Report on Indian Epigraphy. Articles and studies are recorded in Creswell, Bibliography, and its Supplement, and in Pearson and Supplements. Many of the earlier EIM articles collect the epigraphs of individual sultans, but recent discoveries have rendered many of these out-of-date.

V. S. Bendre, Studies in Muslim inscriptions, Bombay 1944, extracts some historical information from epigraphs published in EIM to that date, but since the author knew no Arabic or Persian many significant details were not appreciated, and the work suffers from the limitation of its corpus. There is a special chapter on Arabic and Persian epigraphy in the Deccan by Z. A. Desai in H. K. Sharmi and P. M. Joshi (eds.), History of medieval Deccan, II, Hyderabad 1974. (J. Burton-Page)

KITÂBâ-KHÂNâA [see KÂRÂBÂ]
KITÂMÎYYA [see KÂÎMÎYYA]

KITÎFîR, one of the most common names for the biblical Potiphar in Islamic tradition. It is probably a corruption of Kitîfîr, based upon an early scribal error. Other forms of the name based on confusions of similar letters in Arabic script are Kîftîn, Kîfitîn, and Kîfitîn. The term Kîfitîr is frequently corrupted further to Itîfîr (so generally in Tabari, Thâlabî, Zarnâmchî, Baydâwî, and others), and in some manuscripts Itîftîn. He is given the patronymic Ibn Ruhâbî (also Ibn Ruhâyîb and Ibn Fâhid and others). These are considerable confusion regarding his name, and Tabârî, for example, uses several forms. Itîfîr alone calls him Kîfitîr, which is closest to the original Hebrew. In the Kur'ân, he is merely referred to by his title al-'Azîz (XII, 30, 51).

Kitîfîr was the treasurer of Egypt. Because he is immediately discerned Yusîlî's [q.r.] fine qualities, he is considered one of the three most insightful individuals (afas al-nâs) in the judging of men, along with Shu'a'bî's daughter, who asked her father to hire Mîsî, and Abû Bakr, who chose 'Umar as his successor (Tabari, Thâlabî, Zarnâmchîs, Baydâwîs). Several reflections of the Haggadic Potiphar are found in Muslim legends. Kitîfîr dies after Yusîlî's release from prison. Yusûlî in most Muslim sources marries Kitîfîr's wife and finds her a virgin. This is never explained by the fact that Kitîfîr was a eunuch, as is common in the Judeo-Christian tradition (based on a later interpretation of Bîbî, Heb. sâdîs), but rather that he was a homosexual as in some Jewish midrashic (comp. Tabari, i, 356, with Sûfî, 13b, and Genesi, Rabba, ìxxxii, 3). According to Kîfîs, Kitîfîr had been unable to have sexual relations with his wife because he was an alcoholic (saumû). Yusîlî's marrying Kitîfîr's wife probably reflects the association of Potiphar with Potiphera (Gen. xlii, 45) in the midrash.

Kitîfîr is a minor character about whom little is related in Islamic tradition.

Near East. Angular script, carved out, and with boss which foreshadow palmates. Egyptian stele, 24/857 (Photo. Wiet).

13. Near East. Type of Ottoman script which is still very close to Mamlūk ṣaṣṭḥa. Inscription (942/1536-7) of the Bāb al-Nażīr at Jerusalem (Photo. Van Berchem).
(Lévi-Provençal, Inscriptions arabes d'Espagne, No. 137).
Andalusián cursive. (Lévi-Provençal, Inscriptions arabes d’Espagne, No. 272).

17. Turkey. Inscription over the entrance to the Mosque of Bāyezīd II in Edirne. Engraved on stone and painted. Reportedly designed by the famous calligrapher Shaykh Hamd Allāh. Dated 893/1488.

23. Iran. Rasgit (Resget), Tomb of Hormizdyar. Inscription over entrance.
   Late Floriated Kufic; 6th/12th century. Bismillāh.

23. Afghanistan. Shāh-i Mashhad. Madrasa of Malika Muʿarrama, daughter of Ghiyāth al-Din Muhammad. Late 6th/12th century. Bordered Kufic with geometrical elements. (After C. and Glatzer, East and West, xxi [1971], Fig. 8).

KITHĀRA, KITARĀ, a musical instrument of the lute family. It first appears in Arabic literature on music in the 9th century to denote a Byzantine or Greek instrument of this type. It was made up of a richly-decorated rectangular sound box, two vertical struts fastened together by a yoke and strings which were left free at their greatest width. Ibn Khurraḏīḏibhī in his K. al-Lakw (i, 19) and in his account appearing in the Muruḏ āl-Khābāb al-Mašūṭī (viii, 91 = 1206) says concerning the kīthāra: "They (the Byzantines) have the lūrā which is a rabūb (sc. viol), which is made from wood and has five strings; they also have the bithārā with twelve strings". Al-Khwārizmī in his Mašīfāt as-sulṭān writes that "the lūrā (lyre) is the pānḏū (harp) in Greek; the kīthārā is one of their instruments, and resembles the tāfūb (lute with a long neck)". The approximation of the two instruments in the sources corresponds indeed to reality, because the lūrā and kīthārā were two variations of the same instrument type in vogue since classical times and up to the 17th century in Islam. The lūrā was a smaller instrument played by beginners and by amateurs, whereas the kīthārā was the instrument for professionals who towards the Islamic period used it to show off a virtuosity frequently displayed freely. It is possibly to this that a musical aphorism alludes, "It seems that, at a later period, the term is used to denote a different instrument, the guitar, since this is the state of affairs in the K. al-Indīfā' wa-l-tīmīfī, where the kāṭār is one of the 32 instruments described in the second chapter (ms. Madrid, Res. 210). In the same realm of ideas, we believe that the name of the North African lute, the kītālīr, derives from the interpretation of the kīthārā evolved by the authors of the 9th century who compared it to the tāfūb (lute with a long neck) or to the mūrāḥēbā (lute with a quadrangular sound box).

Kīthārā, Kītārā (see also al-Masīdī al-Kuṭbī in his al-Hillis as-sālihīn, ii 478/1085). His class-mate al-Ǧazārī had gone to Tus to the court of the Sālīḏīk vizier Nīām al-Mulk. From Bayhāk, al-Kītārā went to Baghdad to assume the chair of law in the Shafīʿī Madrasa Niṣāmīyya, a position which he kept until his death in 490/1099-1000. He also taught Šaikh, and one of his pupils in this field was the famous traditionist al-Šafīʿī (d. 570/-1180).

Al-Kītārā was accused of Ismāʿīlī sympathies and was in danger of losing his life, but was saved by a petition signed by notable scholars of Baghdad, among whom his older colleague and sparring-mate in disputations, the Hanbal jurisconsult and theologian Ibn ʿAḍil (d. 520/1125).

Among his works, biographers cite the Sāfāḥ al-muṣaddīndīn, considered by Tādž al-Dīn al-Suhbī as one of the most excellent works in the field of ǧihād; and the Nāḏī muṣarrātī al-Imām Ahmad, points of law on which he differs from Ahmad b. Hanbal. Al-Kītārā was in turn criticised by the Hanbal Shāms al-Dīn Mūhammad b. Kudāma al-Maqdīsī (794/-1390-49), in his al-Rūḍāt us-Sheykh al-Hāfiz al-Indī in al-Bukhārī's al-Ǧazārī, having heard the sounds of a kīthārā, said to his disciple, "Take me along to this musician, and possibly he will give us the benefit of a noble image. But when they came upon him, they heard an unmetrical rhythm and a defective tune. So the philosopher then said to his disciple, 'The sooth-sayers assert that the raven's voice portends a man's death; if this is true, then the sound from this musician portends the raven's death'.

It seems that, at a later period, the term is used to denote a different instrument, the guitar, since this is the state of affairs in the K. al-Indīfā' wa-l-tīmīfī, where the kāṭār is one of the 32 instruments described in the second chapter (ms. Madrid, Res. 210). In the same realm of ideas, we believe that the name of the North African lute, the kītālīr, derives from the interpretation of the kīthārā evolved by the authors of the 9th century who compared it to the tāfūb (lute with a long neck) or to the mūrāḥēbā (lute with a quadrangular sound box).

Kītāmān (see kīratīyāt, tašīyāt)

Kīṭmīr (see asbāb al-kāfīr)
correctness of genealogical lines, the ancient Arabs perfected a technique which permitted them to verify, and, where necessary, to research into, lines of parentage. This technique consisted partly in experience and partly in divinatory intuition. In primitive times, a specialised personnel maintained the practice: but the progressive decline, in pre-Islamic Arabia, of personnel skilled in cultic and divinatory matters led to the accumulation of numerous mantic disciplines in the repertory of the khyafa [q.v.]. But there were numerous individuals skilled in this sphere of activity who were not necessarily khyaf [cf., for example, Ibn Hisham, 149]; certain tribes were noted for their practice of this art (the Banu Muddah, Khtagham and Khuzai'a).

Khyafa, ancestor of the Islamic fiqha [q.v.], comprised two branches:

(i) Khyaf al-bashar, "physiognomancy," which has the object of discovering the lines of parentage between the child of an unknown father and his presumed father, with a view to his legitimation. Thus by virtue of traditional khyafa, Mu'awiyah was obliged to recognise, as his consanguineous brother, Ziyad b. Abih [q.v.]. The principle on which khyafa is based is the necessary resemblance between the infant and his father. Certain parts of the body serve as points of reference, notably the sole of the foot, because, in most cases, the child has the same foot as his father (al-Mas'udi, Murat, iii, 335 = § 1224). But these points of resemblance are not always evident; discovery of them requires a faculty of perception and a perfect memory (a?R3zI, II. 14. 20, § 1). The acute eye for detail possessed by the Bedouin contributed greatly to the perfection attained by the Arabs in this art.

(ii) Khyafat al-athar, the faculty of minute observation which the Arab displays, most notably in the course of everyday life. The examination of footprints permits him to find a stray animal, a fugitive chief, a lost path, etc.; he distinguishes the footprints of a man from those of a woman, those of a young man from those of an old man, those of a white man from those of a negro and with those of a stranger from those of a local resident. He can even tell if the woman is a virgin or not.

This astonishing faculty of observation and deduction extended to the behaviour of animals.

In this work, Sufi al-Turuk al-kikamiyya, his earthquake" and will "yield up its burdens" (qf. XXVIII, 88). We shall, as a whole, the annihilation of all creatures (a?R3zI al-mas'ud), and precede the "judgment" (dini), the "day of judgement" (yawm al-din). This will be the Last Hour (al-sa'a). Al-?ayna, yawm al-kiyama and yawm al-din, may be taken as a whole constitute one of the "necessary beliefs" which determine the content of the Muslim faith. It may be noted that the word magh?r is an equivalent (in the Kur'an) of khyama.

The works of ?im al-hal?am and of falsafa deal with the whole subject of eschatology under the general title of al-mas'ud "the return," a word which appears only once in the Kur'an (XXVIII, 85) in the localised sense of "the place to which one returns." Hence very often, in learned discussions, the idea of resurrection will be expressed by "return." We may add that it would be inappropriate to deal with judgment and its modalities, or with retribution, under the term khyama. In this respect, the present article needs to be supplemented by the articles reserved for al-hisba, "the reckoning," al-mas'ud, al-sa'a and yawm al-din [q.v.]. We shall confine ourselves here to considering (1) the succession of eschatological events which precede and accompany resurrection; (2) the Kur'anic arguments which demonstrate its possibility; and (3) the setting in perspective of the philosophic-theological problems which arise as a result.

I. The succession of eschatological events.

(a) Prophetic signs. Resurrection will be preceded by the end of the world, by "annihilation". The Meccean stas are insistent on this. "Signs" will foretell the end; "the earth will be shaken with its earthquakes," and "flour will yield up its burdens" (Kur'an, NXX, r. 2); the sky will crack, the planets will be dispersed, the seas "poured forth," the graves overturned (C, 9; LXXXII, 2-4; cf. LXXXI, 1-14; especially LVI, 1-6, etc.); the mountains (will fly) "like tufts of carded wool" (Cl, 5), etc. The Khid? of Islam (viii, 179) gives a systematic list of these "signs". Al-Nasafi, in his Akhbar, lists five of them, and the Tafsir of al-Taftazani enumerates ten "major signs" (see the list in L. Gardet, Les grands problèmes de la théologie musulmane—Dieu et la destinée de l'homme, París 1939, 262, n. 6).

(b) The annihilation. On that day "the sound shall ring out, and a second shall follow it" (Kur'an, LXXIX, 6-7). This "sound" will be the "sound of the trumpet" (LXXIX, 8), which according to tradition will be blown by the angel Israfil. Then there will be, not is, it sometimes said, a single living being that does not die—"every soul shall taste death" (XXIX, 37). This is the final annihilation, where God alone remains in His absolute power, for "all shall perish save His countenance" (XXVIII, 86). In the course of time, this vision of an absolute fara? came to be modified. From commentary to commentary, the number grows of the beings who shall escape annihilation: not because they are endowed with natural immortality, but on account of a "principle of permanence" (ftum al-bahd) which the will of God shall concede to them (list in L. Gardet, op. cit., 264-6).
(c) The resurrection. When the “second blast of the Trumpeter” has sounded, the whole of mankind, long dead or annihilated in the “great fana’”, will be revived in body, soul and spirit. “The day when the crier shall cry out from a nearby place, the day when they shall in all truth hear the cry, that will be the day of resurrection” (L, 41-2). Stress is always laid on the suddenness of this “return” to life. Resurrection is a rising up, the immediate passage, without reference to time, from non-life to life.

(b) The gathering (khiyâm). God “shall gather” (L, 44; LIX, 2). He shall gather men together “as if they had stayed (in their tombs) only one hour of the day” (X, 45). He will gather the believers (XIX, 83). He will gather the impious (XX, 102; XXV, 17; etc.). He will gather men and djinn (VI, 130), men and demons (XIX, 68). He will gather the angels (XXIV, 40). This is the universal gathering. Also taking part in this, it is decided at a later stage, will be those protected from fana’ by divine mercy; and even, according to al-Nawawî, pack-animals and wild animals. This will be the “standing” (al-masâwîf) in waiting for judgement. Some traditions maintain that the first who will “rise” and arrive at the place of assembly (al-mahâkî) will be the Prophet of Islam. According to the most widespread beliefs, the prophets, the angels and the virtuous will be spared the terrors of waiting. But human nature in general “will sweat with agony”: they will be drenched in sweat (al-tarâb), which will “bridle” them, as the bit bridles the horse (cf. al-Ghazâlî, Ihkâf ‘ilm al-din, Cairo 1352/1933, IV, 430-7).

The Kur'ânic texts are abundantly glossed by hadîth (al-Bukhârî, ix, 46-61; Muslim, viii, 260-250, etc.). A whole didactic literature is grafted on to this. For example, in al-Ghazâlî, Ibmâ, the last book of the fourth volume, entitled Dhikr al-maut wa-mâ ba’dahu, 382 ff., in particular on the yawm al-khiyâm, 437-9; and the text attributed to the same author (wrongly, it appears), al-Durra al-farîhâ (ed. Cairo 1349/1928). See on this subject, as indicated in EP, Hughes, Dictionary of Islam, 559 ff., taking up the “Preliminary discourses” of Sâlûs, section 4, 759 ff., and placing the latter itself being based on Edward Pococke, Porta Mosis, ii, 23-33 of the Oxford 1645-4 edition, which deals at length with Arabic passages and expressions.

Popular imagery abounds with descriptive details and continually builds on the foundations of tradition. But such imagery is irrelevant to faith. On the other hand, the very fact of the resurrection of the body is a cardinal element of the Muslim faith. A meta-historical and unique fact, linked, as it to an “opposite correlative” (mâdhabî), to the fact, also meta-historical, of creation.

We may further note that the Shi‘i beliefs refer to a first “return” which will precede the universal resurrection and gathering; only the virtuous will take part in it under the guidance of the Mahdi of the last times. This is the fana’ ("return to life"), a kind of messianism. The Râfî‘is, in the early centuries of Islam, insisted on this. It continues to be one of the perspectives of Ismâ‘îlîm, linked to the “return” of the râh al-Mahdi, Muhammad al-Mahdi, the “vanished one” (al-ghâbî), who, with this “first return”, will be al-Râfî‘î, “the riser”. The Ismâ‘îlî “hidden sense” has more than once transposed the foretold parousia on a gnostic and extra-temporal basis.

The Mu‘tazîs opposed the Râfî‘is and declared this first resurrection to be "vain", Al-Khayyâr returns to it in his refutation of Ibn al-Kawnî (cf. al-Khayyâr, Ibtâ‘î, ed. Nyberg, French tr. A. Nader, Beirut 1957, passim, in particular 93-97/118-20). The Aqî‘î reaction no longer held the idea of ragî‘. Sunnî thought as a whole denies or ignores the expectation of a preliminary “return” of the virtuous, a golden age on earth preceding the day of judgement. For Sunnism, the only “return” is that of the last hour which will follow the “great fana’”, sc. that of the resurrection (khiyâm) and of the gathering (khiyâm).

II. Kur‘ânic arguments. As suggested by D. Mason (Kur‘ân, Paris 1967, index, under “Resurrection”), these arguments may be grouped around three themes:

(a) A constant comparison of the creation (khâdi‘) with the resurrection, which then appears to be a "new creation" (Kur‘ân, XVII, 40; cf. XVIII, 48; XXI, 104; XXVII, 64) or the “second creation” (LI, 42). It is the creative power of God which is invoked in reply to the man who would doubt the resurrection (XXII, 3); and to produce a second creation is "easy" for God (XXIX, 15; XXX, 27). He has created man and "formed him harmoniously" (LXXV, 38): “Is He who has done these things not able to bring the dead to life?” (LXXV, 40; cf. LXXXVI, 5-8).

(b) A second "sign" of the resurrection is the analogy of the production of vegetables and of fruits, and the revivification of the soil by water (XXII, 37; LXIII, 11). Thus we restore life to the earth after its death. Observe how resurrection (masâwîf) comes about” (XXXV, 9; cf. L, 41). “God ... brings forth the living from the dead and the dead from the living” (VI, 95; X, 31; XXX, 19): “thus we shall cause the dead to arise” (VII, 57). And resurrection after death is compared to the day that follows the night (XXV, 47).

(c) Finally, the example of miracles with reference to a dead man revived by God (II, 72-3 and 259). R. Bâchârî compares this last account with the Ethiopian version of the Book of Barûn. It should be noted that the Kur‘ân does not speak here, like the Book of Barûn, of a waking after a miraculous sleep (cf. "the Seven Sleepers"), but of a new life after death.

III. Problems posed. The most diverse “propositions of faith” (shahâdah) steadfastly proclaim the resurrection of the body. But very soon problems of a philosophico-theological nature arise. The influence of the falsâfî is predominant. Not only the Tahâfût of al-Ghazâlî, but every Kâtib al-Ma‘âdî of the major treatises of ‘ilm al-kalâm has the intention of refuting them, and, for this very reason, to a large extent adopts their methods of examining problems, and sometimes their vocabulary.

(a) The "punishment of the tomb" (salâm al-kâbîr [gr.]). First question: is there a survival of the soul or of the spirit? Will the predicted resurrection be of the body alone, or of the whole man, body, soul and spirit? The Kur‘ân does not talk explicitly of a survival of the soul or of that spirit after death. Many die, then is recalled to life on the day of resurrection. Three texts, however (XI, 45-6; XL, 11; III, 169-70), are advanced by the mutakallîmûn as evidence for the “punishment of the tomb”; at a later stage, “the pleasures of the tomb" are reserved for the virtuous. In conjunction with these texts, there are many hadîthîs, recognised as authentic (saddîqî), which are quoted, such as “I take refuge with You against the punishment of the tomb” (cf. further, al-Bukhârî, xxi, 87; lxxi, 37-9). The
punishment of the tomb and the interrogation that precedes it, the formulation thereby of a "first judgment" are mentioned in the majority of professions of faith. The Åghā’s accuse the Mu’tazilis of denying them. Abd al-Djazzār, on the contrary, affirms them; he locates them, however, not immediately after the "first death", but between the "two blasts of the Trumpet" (of anihilation, and of resurrection) that will sound at the last Hour.

And his arguments in support of the punishment of the tomb are very close to the arguments habitually propounded by the Åghā’s (cf. Abd al-Djazzār, Sharḥ al-uydl al-khatnas, ed. ‘Abd al-Karīm Uthmān, Cairo 1384/1965, 752-3).

But what is at issue here is not the survival of a separate soul, by nature immortal. What is being discussed is a first and transitory resuscitation, at once corporeal and spiritual, which is not a true resurrection. It is not necessary, say some authors, that the entire body should revive; it is enough that some fundamental part or other, heart, kidney, etc., be animated afresh. Moreover, if the body has been consumed by fire or reduced to ashes, it will not be difficult for God to reassemble it and restore to life a sufficient quantity of matter (cf. al-Ghazālī, Ḥabīḥād, Cairo n.d., 88-9). Besides, this survival of the tomb is brief. After being thus examined and punished (or rewarded), the man experiences "the second death". For a resumé of the question, see al-Djurjānī, Sharḥ al-Ma’ākifīs, ed. Cairo 1325/1907, viii, 378. It is also declared that the prophets and the šahids who have died fighting for God are excused from the interrogation and from the punishment of the tomb.

Under various influences (Mazdean? Christian? The falsāfīs?), or through a simple enoüsomatic development, the belief in a survival of the soul or the spirit is developed: whether in the tomb, with, according to the circumstances, appropriate punishments or rewards; or in other places; or even in Paradise for the spirits of the prophets, of the šahids, and, according to some, of the Muslim children who have died before the age of reason. These spirits, in Paradise, are provided with a temporary body symbolised by "the girdars or green birds". Furthermore, an exegesis that has come to be accepted of Kur’ānic testimony: "The revealed law (ṣūrat al-ma’dīd) maintains, and reason does not deny, that the body also will enjoy pleasures only in physical enjoyments are now found to be irremediably deprived of them; they will be eternally at grips with tormenting and insatiable desires of lust and anger, and will draw from the celestial bodies the view within their imaginations of their torments (cf. Naḍīd, Cairo 1357/1938, 297). Their "hell" is to be barred from joining the higher rewards of Paradise (not that we may take to be the world of separate substances—"where are found supreme happiness and accomplished splendour" (Sharḥ K. Utshibāṭidīyā, published by A. Badawi, in ‘Arisāt ‘al-’Arab, Cairo 1917, 43). It is true, the "humble of spirit" (bāḥil), who have sought: after good, to enjoy a happiness that is subjectively absolute, objectively relative: an imaginative, not purely intellectual happiness, and the celestial bodies, here too, will supply them as if with an additional body. Thus, according to Ibn Sinā, for the mass of humanity, what should hold is that which is said in the prophetic revelation about the judgment of the tomb, about punishments and potential rewards (cf. Naḍīd, 298; parallel texts in the Šufis).

Are these spiritual torments and joys of the life to come connected with the yawa al-ḥiyām, the day of resurrection of the body foretold by the Books? Resurrection is an article of faith too central to Islam to be explicitly and overtly dismissed by the falsāfīs. Their position is nonetheless highly ambiguous.

It is appropriate to set aside Abū Yūsuf Ya’qūb al-Kindī, "the philosopher of the Arabs". He is the only falsāfī who explicitly maintained that philosophical research could be and should be strengthened and guided by prophetic revelation. Consequently, he proceeds, from a specifically philosophical point of view, the fact of the creation in time, and the possibility of the resurrection of the body; the latter is possible, he says, since that is what the creation itself—thus he adopts the major Kur’ānic argument (cf. Rasālī al-Kindī, ed. Abū Rida, Cairo 1369/1950, 1, 372 ff.). In works aimed at the "simple philosophers" (see Anwil al-magāṣībirīyīn, ed. Cairo 1382/1910, 3), Ibn Sinā confines himself to affirming belief in the resurrection on the basis of Kur’ānic testimony: "The revealed law (ṣūrat) maintains, and reason does not deny, that the body also will enjoy pleasures" (or will be plunged into misery and suffering); cf. Ta’bīrasdī, Cairo 1326, 114-6; analogous texts in the Šīfā and Naḍīd. Such is, moreover, approximately the position of Ibn Rushd. It is for the sake of his respect for prophecy and the revealed law that he opposes with such vehemence the accusations of the Tāhlīf al-falāṣīf (Tahfsīf al-falāṣīf, ed. Bouyges, Beirut 1930, 580-1; see translation by S. Van den Bergh, London 1954, notes on vol. ii, 203-5).

But in fact, Ibn Rushd confines himself to a statement of principle, without replying to the arguments and objections of al-Ghazālī. Now it seems probable that the latter was familiar with the esoteric treatise of Ibn Sinā, al-Risāla al-ḥaḍābiyīsī fi amr al-ma’dīd, which was translated into Latin (Libri Machab) by Andre Alpago (Venice 1546) and has been edited recently in Arabic by Sulaymān Dānr (Cairo 1388/1939). In this work, Ibn Sinā attempts to demonstrate explicitly that the resurrection of the body, which he does not mean to deny, should be understood as a symbol or an allegory which has the object of inducing the mass of humanity to persist in virtuous behaviour. In reality "it is known that the true well-being of man is
opposed by the very existence of the soul in his body, and that physical pleasures are other than true pleasures, and that the fact of the soul s return to the body would be punishment for the soul" (Rasîn adhannâyä, 53). We can understand how al-Djûwaynl was able to accuse the falsâfis of not admitting in its explicit sense, and according to all its demands, the teaching of the Kurân concerning resurrection: this is the 20th question of the Tahâfut al-falâsîfls, Beirut 1937, 314 ff.

(c) Responses and attempts at explanation of the Mutakallimûn. Later kalâm was to judge the falsâfis much more by the esoteric treatise of Ibn Sînâ than by their statements of respect towards the religious law. When al-Djûwaynl lists the various attitudes which we or could be adopted (op. cit., viii, 297; cf. Fâhhr al-Dîn al-Râzî, Muðâsasal, Cairo n.d., 269), he seems to assimilate the falsâfis to these "deistic philosophers" who only accept "spiritual return", the nûkhâ, in the sense found in the pseudographic Theology of Aristotle, while the men "with certainty of truth" (muwâkkiîn), like al-Balânî or al-Ghazâlî for example, profess a worldview that is both spiritual and corporeal. It is in this sense that developments of kalâm will tend to prove the rational possibility of the "return", then of the "gathering", and to study its conditions. We cannot follow in detail the whole series of discussions, arguments, objections and responses in all their intricacy and multiplicity (cf. L. Gardet, op. cit., 266-9, and refs.). Nevertheless, we make some comments:

(1) Curiously enough, Fâhhr al-Dîn al-Râzî (Muðâsasal, 170) declares that all the earlier prophets preached only the "spiritual return" and that it is the Kurân that proclaims the return of the body. His opponent, the Imâm Shi*î Nasîr al-Dîn (Mutâjâl al-Falâsîfl, 170) states furthermore that the Gospel does not preach the resurrection of the body, and quotes Matthew, xxii, 30: "they are like the angels in heaven". Ibn Rûhd (Tahâfut, 350) seems to have had a better knowledge of Judaism and of Christianity.

(2) In his Tahâfut al-falâsîfs (loc. cit.), al-Ghazâlî, under the heading of a third hypothesis, and in the form of an argument ad luminem, concedes to his opponents that the soul may be of a wholly spiritual nature and that it is in its own personality may reside (in the same being that was annihilated). No difference between the first creation (ibdâd) and the "return" (nâmâm) is spoken of by al-Ghazâlî (Tâhfât, 37-8), al-Râzî (Muðâsasal, 169-70) and al-Djûwaynl (Sharh al-Mukhtârî, viii, 291, 294). Henceforward, declares al-Djûwaynl (ibid., 293-4), the subject of the first creation and the subject of the return are not at all to be distinguished in terms of their ensemble of determinations and characteristics (nâmâs), but only in terms of the essence (kawâm), which places them within the being. There is between these two "subjects", that is between the thing and itself having "returned", an "interference" (tâhalût) of non-existence, which al-Ghazâlî and no doubt al-Râzî on the one hand, and al-Djûwaynl on the other would explain rather differently. But the consensus continues to rest on the return to existence of the same being that was annihilated.

This dialectic, subtly conducted, and originally devised as a reply to the falsâfis, is characteristic of the procedure of the "modern" mutakallimûn (in the sense used by Ibn Khaldûn, Muðâsasal, Cairo n.d., 326-7, tr. de Slanc, iii, 60, 62), and of the type of problems that they study. Also to be noted is their extreme sobriety in regard to traditional and descriptive data. We have, thus, in Sunni Islam, as it were two lines of development: an expression of popular faith, employed to a large extent in the sermons of preachers and of a type to strike the imagination; and an explanatory effort at rational justification. Elementary manuals of a later period take inspiration from both one and the other. To this could be added various "hidden meanings" of Shi*f traditions. But in opposition to the Risâlà adhannâyâ of Ibn Sînâ and his allegorizing theses, the existential reality of the basic fact of the resurrection of the body has not ceased to be vigorously maintained.

L. Gardet

KIYÀS (ar.), reasoning by analogy, the fourth source of Muslim law.

x. In law.

This word is derived from the Hebrew term hâfîkî, infinitive hâbibîk and from the Aramaic root n-y-kh which signifies "to beat together". It is employed with reference to (a) the juxtaposition of two subjects in the Bible and the demonstration that they should be treated in the same manner; (b) the action of the exegete who applies the comparison suggested by the text; and (c) the conclusion of the reasoning by analogy which relies on the existence of a common characteristic in the "basic case" and the "analogous case" (J. Schacht, Origin, 99).

In a broad sense, kiyâs can indicate inductive reasoning (istidâl) and even deduction (isâbîdîl, istâbîrdîl al-khâbî). It is thus that in kalâm, kiyâs...
al-ghfcb Vola 'l-shahid (Majdnu, i, 339) indicates the syllogistic procedure which consists in induction from the known to the unknown; it is the kiyds sharfi that is inspired by Greek syllogism. While the Mu'tazili Abu 'l-Husayn al-DhibbA retains this meaning for the Kiyds sharfi, his disciple Abu 'l-'Usayn al-Basr1 rejects it (Mu'tamad, ii, 657). In the terminology of fikih, kiyds is "judicial reasoning by analogy." It is the method adopted by the Muslim jurists to define a rule which has not been the object of an explicit formulation: a verse of the Kur'an, a hadith of the Prophet or ijma. It is kiyds fisih or sharif, different from the former in the sense that it "has its own structure and its own complexity. (R. Brunschvig, Valeur et fondement du raisonnement juridique, 92). This specific structure results from the particular nature of the mode of reasoning by analogy; the absence of a middle term in the primitive form of kiyds, then definition of an explanatory principle (‘Ilma) which is not a logical norm, but the prescription of a rule (hukm) established by God or His Prophet, this is the judicial-religious norm. The complexity of kiyds sharfi results from the diversity of cases to be taken into consideration and from the detailed reflections of the usuli on the different procedures that may be adopted in the execution of kiyds sharfi. The elaboration of the major treatises concerning wuqu al-fikih (e.g.) develops the notion of kiyds sharfi in a systematic manner, conferring upon it a very strict and elaborated form. This work leads in the work of an author like al-SarakhsI (d. 505/1112) to a much-expanded concept of the fourth source of law, embracing the perspective of "Greek logic and tradition. A scientific method" among the Muslims (R. Brunschvig, op. cit., 57).

The problem. The establishment of kiyds as a new judicial source responds to the need to find solutions not foreseen in the texts and to define rules applicable to new situations. The problem of kiyds comes therefore to consist in determining "ground of procedure" (basafigh) which respect the spirit of rules dictated by the text. The putting into effect of kiyds sharfi must, in consequence, appeal to principles of analogical deduction which enable the discovery in the rule of the derived case (far') from the grounds which determine the rule of the basis (asf).

Like igenda (e.g.), kiyds was instituted after the death of Muhammad. With the death of Muhammad, the community of the faithful was deprived of the "organ of revelation" and of its political and religious chief. Iġenda was born of the need to ensure the coherence of the nascent doctrine of Islam, in the face of the dispersion of the believers and the proliferation of sayings attributed to the Prophet. The institution of igenda had the purpose of preserving the social and doctrinal unity of the parent-community (umma). In origin and in its "summary and primitive form, kiyds in Irak was employed as a means of giving the force of law to certain hadiths attributed to ‘Ali which had not met with success (Schacht, Origins, 106-7); the extension of this practice may be considered not so much a factor of unity as of divergence. The putting into effect of kiyds would appear more and more to respond to a need for diversification and clarification of the principle. Also, the risk of divergence (shafii, tafsir) was the essential motivation of the Shi'a opposition to the use of kiyds. The partisans of the Shi'a do not accept the rule which considers that every mujtahid speaks the truth (muthib), a rule implied by the practical application of kiyds. Nevertheless, the continuing crop of new cases (hawalid) that the believer is obliged to cope with justifies in the view of the mujtahid recourse to personal reflection, the practice of which is encouraged by the Kur'an and the Sunna (Kur'an, XIII, 3; XVI, 11, 67; XXX, 21; XXXIX, 41; XLV, 12; cf. Ahmad b. Hasan Fazlawi, Usul, iii, 935). The Prophet said: "The study of knowledge (futul al-'ilm) is a duty (farada) incumbent upon every Muslim; and the knowledge that must be studied is that of the rules which shed light upon the divine law" (Sharhxiya: Mughni, xvii, 278). Kiyds is one of the means whereby reflection leading to this awareness may be exercised.

Development. The practice of kiyds thus comes to be established as a means of establishing a judicial ruling not provided for in the texts. However, reasoning by analogy is, in the view of the faithful, to be treated with caution, for the simple reason that it is exercised by a fallible being who is liable to error. Ijamah must therefore intervene to ensure the credibility and the cohesiveness of the opinions of the mujtahids. Only the information provided by the Kur'an and the prophetic tradition is a source of integral truth (bridge). Such is the view provided by al-Shafi'i (d. 204/820), who may be regarded as the first of the usuli. The ruling that consists in believing that every mujtahid speaks the truth (muthib; Risdal, ed. Shakir, § 1330; Mughni, xvii, 277) will authorize the specialist to make a decision according to that which conforms most closely to the divine intention. By means of kiyds, a search must be made, not for certainty (ja'fah) but the proof which will permit the deduction of a peremptory ruling (hukm kafi'). Kiyds must be a determinist in a practical sense (muthib li 'l-'amal; al-SarakhsI, Uso, Beirut 1973, ii, 150; Mughni, xvii, 272). There is thus a need to elaborate a theory of kiyds sufficiently precise for its use to confer upon the specialist's decision the greatest possible integrity. In the practice of the Hanafi, Maliki and Shafi'i schools, kiyds sharfi cannot provide certain knowledge, it amounts only to a "strong putative probability" (azhab al-jama'; al-'Amili, Thabah, iii, 256; al-SarakhsI, Usul, ii, 140; Mughni, xvii, 277).

It was at a very early stage that kiyds sharfi began to be practised. As early as the 2nd century A.H., Hammad b. Sulayman b. Rabta, master of Abu Hanifa and Ibn Abi Layla, and judge at Basra, inaugurated its use. But the first to employ it was practically Abu 'l-Hasan al-Shafii (d. 150/767), for which reason the practitioners of his school are known as those who use reason (azhab al-raj) to distinguish them from pure traditionists (azhab al-hadith). The latter do not accept kiyds except as a last resort; according to them, analogy is like carrion, to be eaten only when no other food is available" (L. Milli0t, 135). Dawid al-ZahirI (d. 270/884) avoided wherever possible reasoning by analogy, preferring the literal content of the Qur'an and of hadith. In the same way that he restricts the notion of igenda, he imposes limits on recourse to analogy, without however rejecting it absolutely. According to him, one must bow the head before the inexorable law, it amounts only to a "strong putative probability" (azhab al-jama'; al-'Amili, Thabah, iii, 256; al-SarakhsI, Usul, ii, 140; Mughni, xvii, 277).
rejected by the Hanbalis and the Shī'is, but adopted by the other schools of law. In practice, it is the Hanafi doctrine which prevails.

In his Risāla on the foundations of law, al-Shāfi’i provides the first stage in systematisation of the theory of kiyās. Having established precisely the role of the Kurān, of the Sunna and of ijmā’, he neatly defines that of reasoning by analogy. It is to him that is owed the fundamental distinction between kiyās (silah) and ma’ṣūra and kiyās shabāb. The first basis analogies on an explanatory principle (silah). This form of kiyās considers a thing according to its original meaning (asl). In this case, there is no need for disagreement. Kiyās shabāb considers the thing in its similarity (shabha) to others; those who employ it may disagree (al-Shāfi’i, Risāla, § 1334). Al-Amidī (d. 631/1233), a Hanbali ‘ulamā’ who went over to Shī’ism, is at pains not to confuse the ruling of the basic case (asl), with that of the derived case (far). The ruling of the former is given by the text of the Kurān or of hadīth or by ijmā’; it is certain. The ruling of the latter is deduced (iḥāṣara nuqūṣ); it is putative (al-kiyās la yafuti ghayr al-asl; Ḥabīb, ii, 264). For this reason, the conclusions of kiyās cannot in their turn provide decisive principles (idnā, op. cit., 277). Analogy on the basis of analogy is not acceptable. Such is not the opinion of the Mu’tazilī ‘Abd al-Djabbār, who adopts the Shī’i teaching and enlarges it. According to him, “there is no difference between the ruling of the basic case which is known through explicit evidence (bi-dāfir) and that which is known through discussion (istiṣāḍ); in fact, it is possible to extract a new ruling from the latter when there is a similarity between the reasons for which each of them is adopted. So there is not, in regard to knowledge (‘ilm), a need to take account of the different means whereby the ruling of the basic case is established. That which is known in an explicit manner may, in fact, be assimilated to that which is known through acquisition (al-daruri fl-ki ka ‘l-muktasab). The explanatory principle (silah) is fruitful; although dissociated from the basic case which has inspired it, it may be taken as operative, for it finds its own guarantee within itself. Thus, God (iv, 25) lays down that the punishment inflicted upon a slave woman should be half that applied to the free woman. As soon as we are aware that the reason for the existence of this hukm is the fact of slavery (riṣāk), we may apply this ruling to the male slave. Similarly when we know that the reason for the prohibition (Kurān, ii, 219; V, 90) of all fermented drink (al-ḥaya) is the existence of wine (nabīḥ), we shall forbid the consumption of wine. For the Mu’tazilī ‘Abd al-Djabbār, kiyās, when applied to scriptural or rational material, is dependent on a similar process, that of intellectual effort (istiṣlah). Here the role attributed to the action of the subject in interpretation of the Sharī’a is predominant.

Foundation. The various objections raised to the practice of kiyās which are known to us through the different treatises of ṭalā’i’ al-fikāb divide into two types of argument: an argument of fact and an argument of law.

(a) The verses of the Kurān and of prophetic tradition which forbid recourse to reasoning by analogy are numerous: “We have presented to you the Book to make all things clear” (XVI, 89), “We have neglected nothing in the Book” (VI, 39), “Your Master is not forgetful” (XIX, 64). Recourse to personal opinion (ra’y) to extract a ruling from it amounts to imputing inadequacy to the Holy Book. The Prophet, in his turn, accuses of aberration and error those who deduce a non-existent rule from an existing rule (Pazdawi, Uṣul, iii, 991; al-Sarāḥsī, Uṣul, ii, 220).

(b) The argument of law consists in denying that legal status (baḥm) may be founded on reason. The “raison d’être of law” (silah) is attained through its erroneously convincing nature (shabha fi l-‘asl). The text (nusuf) has never determined explicitly the “propositions” (nusufat) which might provide a foundation for legal precepts. The latter are obligatory on the grounds that they result from divine decision (al-Sarāḥsī, Uṣul, ii, 122; Abu ‘l-Hassan Pazdawi, Uṣul, iii, 992). Reason has no competence to exact that which only the All-Powerful is entitled to impose. The object of law is beyond reason. The content of a number of divine precepts cannot be subject to personal opinion; these alḥām have no foundation other than divine decision; such is the case with regard to ritual ordinances (ṣiḥād). The practice of kiyās, in substance, far from providing a guarantee of rectitude, can lead only to a misunderstanding of rules (ṣiḥād). In his al-‘alā’i’ on the foundations of law, al-Šāfi’i (Risāla, § 1334) has neglected nothing in the Book. “Your Master is not forgetful” (XIX, 64). Recourse to personal opinion (ra’y) to extract a ruling from it amounts to imputing inadequacy to the Holy

Recorded in the Book to make all things clear” (XVI, 89), “We have neglected nothing in the Book” (VI, 39), “Your Master is not forgetful” (XIX, 64). Recourse to personal opinion (ra’y) to extract a ruling from it amounts to imputing inadequacy to the Holy
With the development of the theory of scient proof of the offence. The basic case is defined by a Kur'anic text which prescribes the execution of the part of the guilty party may be considered a sufficient proof of the offence. When water is lacking, and fresh wind are signs of rain. etc. (al-Amild, 3: 146) employs analogy in authorising abstention with sand (hayyamun) when water is lacking.

It is well-known that the Companions of the Prophet employed kiyas and dialectical discussions (munafarud) and that they practised judicial consultations (muhahharud). In a general fashion, the partisans of kiyas appeal to the hadith where it is related that when the Prophet sent Mu‘adh b. Dja‘bal to the Yemen as a ‘Amm, the former asked: "How will you reach a judgement when a question arises?" Mu‘adh replied: "According to the Word of God"—"And if you find no solution in the Word of God?"—"Then, according to the sunna of the Messenger of God"—"And if you find no solution in the sunna, in the indication of the Messenger of God, nor in the Word?"—"Then I shall take a decision according to my own opinion (al-fiqh-i rai‘i)". Then the Prophet of God struck Mu‘adh on the chest with his hand and said: "Praise be to God who has led the Messenger of God to a solution that pleases him" (Abu Dawud, Abû ‘r al-Andalûsi, al-Andalûs, b. 3; al-Darîmî, Sunan, Introduction; A. J. Wensinck, Kiıyās, in EI).

(b) The person endowed with reason, the mukallalîf, is naturally inclined to assess the invisible (ghebîn) on the basis of the perceptible tokens of experience (hadîr). Cracks in a wall foretell its collapse, a cloudy sky and fresh wind are signs of rain, etc. (al-Amild, 4: 5). Similarly, in matters of religious law, kiyas puts into effect "the cause-norm association" (illa-‘a‘la‘um) to assist the exercise of reflection on two similar cases, the second not being defined by this association.

The nature of kiyas. According to al-Shâfi‘î, kiyas and idjihatâ (q.v.) are two terms expressing a single notion; when the rule concerning a specific case is not dictated by a particular indication (dalâila), this indication must be sought by a means conforming to truth with the aid of idjihatâ. Now idjihatâ is kiyas (Kisela, § 1323). The specific nature of kiyas is not yet detached, it is subjective opinion (râyi‘). With the elaboration of the science of the usul al-fiqh, the concepts are defined and fixed. Kiyas can then be defined as the method which consists in assimilating the derived case (‘illa) to the basic case (‘a‘la‘um) in virtue of their similarity with regard to the raison d’être (illa) of the norm (‘a‘lam). Kiyas is thus a form of reasoning which proceeds from particular to particular, linking a new case to an old case: "It cannot . . . be considered as inductive reasoning, since it does not aim at applying to all cases of the same kind the observations made concerning one of them" (C. Chichaia, Logique juridique et droit musulman, 240). Such is the character of the reasoning which concludes that in a case of fornication, a confession repeated four times on the part of the guilty party may be considered a sufficient proof of the offence. The basic case is defined by a Kur’anic text which prescribes the execution of the part of the guilty party in the presence of the four witnesses. This assimilation (kaskhâl) of ancient origin belongs to a still simplistic concept of ılla. With the development of the theory of kiyas, ılla takes on a more logical quality. Whence the prohibition of lending of dry dates or raisins at interest (ribâ), the ‘illa of the reduction in penalty is slavery. By analogy, this prohibition will be applied to male slaves as compared with free men. Of the same type is the kiyas which prohibits the lending of dry dates or raisins at interest (ribâ), on the basis of the prohibition of lending grain (wheat, barley), with the demand of eleven measures against ten. The reason for the prohibition is that usury is forbidden.

For kiyas to be effective, four elements are necessary: (1) the appearance of a new case which causes a problem; (2) a basic case (‘a‘la‘um) governed by a ‘a‘la‘um defined by a text; (3) a raison d’être of the law (illa) which can provide the ilm (ma‘na djâmi‘i) justifying the assimilation of the derived case with the basic case. This raison d’être is the "sign" (da‘ala‘um) which permits the knowledge that the ruling from a text may be applied to a case not envisaged in these terms. Once this reason is known, the jurist, proceeding by analogy, applies the law thus motivated to the case in which he sees a similar reason to pronounce judgment. This is the ta‘lîf (L. Milliot, op. cit., 139); (4) finally, a result which is the ılla applied to the derived case. Such is the prohibition against striking one’s parents drawn from the prohibition against saying to them "fie!" (XVII, 24). As regards the third condition, "the Hanafis only recognise ılla as endowed with a "transitivity" (ta‘lîf), that is, susceptible to being put into effect in a derived case on the basis of a basic case (al-Sarakhsi, Usul, ii, 161). The Shafi‘is, on the contrary, accept that an ılla may be intransitive (kiyat), intransmissible to a derived case". In reality, the opposition between these two doctrines depends on the different manner in which the ılla is conceived in relation to ılla. According to the Shafi‘is, the ılla of the basic case justifies itself by the derived case (R. Brunschvig, Valeur et fondements du raisonnement juridique, 39-50).

From the point of view of modality, several types of kiyas are distinguished: (i) kiyas ılla or kiyas al-‘a‘la‘um (al-Anîdî separates these two) which consists in associating (djâmi‘) the basic case with the derived case with the aid of the indication of the ılla and the qualifications which the latter entails (cf. Ibn Kayyin, Usul, i, 232). An example is the association of wine (nabîş) with alcoholic drink (kahâm), giving as "middle term" the faculty of upsetting good behaviour.

(b) Kiyas ıla‘um is an analogy by "simple similarity" which requires no intervention of motive or of common indication (min qayara dalîl djâmi‘i; Usul, i, 148). An example is the similarity established between the slave and the free man for the assessment of the diya [q.], when the slave is the responsible for the offence, and that which assimilates his compensation when he is the victim (Mutakallmûn, li, 692).

(c) Kiyas al-‘a‘la‘um is a co-extensive kiyas al-ılla and its contrary is kiyas al-ıla‘um or "reversibility", "reverting to non-raisî → non-’a‘la‘um" (R. Brunschvig, op. cit., 41; al-Anîdî, Ikhâm, iii, 26). Kiyas al-‘a‘la‘um would thus appear with ngâal’ as a decisive criterion for the interpretation of judicial decisions, the basis of the establishment of new rules. But in the extent to which it is a process of reasoning which excludes the possibility of having recourse to a purely logical
norm, $hiyyas$ belonging definitively to personal opinion ($ra'y$), it is for this reason limited in range. From this results the need to resort in certain cases to other methods of reasoning: *istihsan* [gen.], or *benignitas* and *instihsan* [gen.], or *utilitas* publica.

In the modern period, the theory of $hiyyas$ is generally applied in the different schools which adopt it in the spirit of the Hanafi doctrine. Because of the major role accorded to personal effort by the Hanafi $madhhab$, the modern $muqtafiyya$ is generally easier to draw from this the norms enabling him to deduce new rulings; historically, the importance accorded to Hanafitic results from the fact that the Ottoman empire followed the Salafîs sovereigns in imposing it as an official doctrine. This ascendency, which prevailed over a large proportion of the Muslim world, had the effect of conferring upon the $Hanafi$ $madhhab$ an official status in a number of countries "where the majority of the native Muslim population follows another school, e.g. in Egypt, Sudan, Jordan, Israel, Lebanon and Syria" (J. Schacht, *Hanafiyva*, in *EI*, iii, 176).

2. In Grammar.

In grammar, the word $hiyyas$ indicates the "norm", meaning the instrument which enables the grammarian to "regulate" ($hāda$) the morphological or syntactical behaviour of a word, where this is not known through transmission ($nakl$) or audition ($samāf$), on the basis of the known behaviour of another word, by means of a certain kind of analogy: it is synonymous with $miṣyās$ (pl. $miṣyās$). The term is well attested in the $Kāfīb of Sibawayhi$ (cf. G. Troupeau, *Lexique-index*, 179); Sibawayhi does not define it but he says that it may be bad ($rāfi$, $ḵaft$), constant ($muṣla-char, muṣafira$), flowing ($djafir$), stable ($muṣla-makhron$), and that it is indispensable ($ladimin$; he insists that one does not "regulate" a thing on the basis of that which is rare ($kāft$) or exceptional ($ṣadr athāth$), but that one "regulates" its basis on that which is in frequent use ($kaft$). The expression "al-$ṣūla$-$hiyyas$, which he often uses, indicates "according to the norm, normally".

It is the $Mu'tazilī grammarian al-Rumānī (d. 384/994) who supplies the definition of the term, in the *K. al-$ṣudāl* (ed. M. Djaoua, 50); "$hiyyas$ is the combination (ajam) of two things, whence results necessarily their combination in principle ($hukm$)".

Ibn Djinlī (d. 392/1002) devotes to $hiyyas$ five chapters in the *K. al-$ṣudāl* (ed. M. A. al-Nadjīlī, i, 299-337, 357-69, 591-9). He asserts that the Arabs love affinity ($ṣa'dhānu$) and resemblance ($ṣadr athāth$) and that this leads them to assimilate things that are close to one another, and to trace ($haml$) a secondary thing (farā') to a primary thing (asli); he comments that this penchant of the Arabs for assimilation ($ṣadr athāth$) sometimes leads them to trace a primary thing from a secondary thing, and that a rare thing can be the "norm", while more common thing is not. As regards the links between the "norm" and audition and usage ($istiṣnāf$), he distinguishes four cases: (1) which is generalised ($muṣafarīd$) according to the norm and according to usage; this is the optimum; (2) that which is generalised according to the norm, but exceptional according to usage; one adopts the word of most frequent usages; (3) that which is generalised according to usage, but exceptional according to the norm: one adopts which that is commonly heard ($muṣafarīt$), but does not "regulate" anything else according to it; and (4) that which is exceptional according to the norm and to usage; this is faulty ($muṣmūl$) and should be rejected ($muṣmařīf$). Finally, he observes that the grammarians considered that that which is "regulated" according to the language of the Arabs, constitutes a part of their language, even if the Arabs have not used it in speech.

In the *K. Luna* al-$ṣāla $fi usūl al-naḥa, Ibn al-Anbārī (d. 577/1181) subjects $hiyyas$ to a lengthy examination (ed. A. Amer, 44-56). He considers that it is impossible to do without it in grammar, since the latter may be defined as being the science of "norms" (*maqāṣid*) drawn (mumashabha) from exhaustive study (litārīf) of the Arabic language. He defines it as the tracing of a secondary thing from a primary thing, by virtue of a cause (ṣifā) which demands the application of the principle of the primary thing to the secondary thing. He distinguishes three kinds of $hiyyas$, according to its basis upon (1) a cause to which the principle is attached; (2) a resemblance (ṣadr athāth) other than the cause to which the principle is attached; and (3) a generalisation (ljard) of principle. Where the assumption ($liham$) of the cause is lacking in this case, only the two former kinds are utilised by the grammarians.

A. Amrī (d. 911/1503), in the third chapter of the *K. al-$ṣudāl* $fi usūl al-naḥa, classifies all the data concerning $hiyyas$ supplied by previous grammarians (ed. Haydarībād, 38-72). He divides his study into three parts: (1) the primary thing, on the basis of which one "regulates" (maqāṣid) any; (2) the secondary thing, which one "regulates" (maqāṣid); (3) the principle; and (4) the cause that unites them (djāma'ī).

Finally, it should be noted that, in the *K. al-$ṣudāl*, the Zāhirī grammarian Ibn Maṣā' al-$ṣudāl (d. 502/1106) objects to the use of $hiyyas$ in grammar and calls for its abrogation (ed. Sh. Dajīf, 156).

Bibliography: Given in the text of the article. [G. Troupeau]

$Ikīl$ (r.), basically "girl", unmarried female", but often used with the more restricted meanings of "daughter, slave girl, concubine". It is already found in the Orikhone inscriptions in the phrase $ṣīl $oghid $‘daughter’", as opposed to $ur $oghid "son",
and subsequently appears in most Turkish languages. Through Turkmen forms it passed into Iranian languages like Kurdish and Ossetian, and through Ottoman usage into Balkan languages like Serbian and Bulgarian, often via the Ottoman technical expression (for which see below) kılağ ağa (see Radloff, Versuch eines Wortbuchs der Türkisch utterungen, ii, 818-9; G. Doerfer, Türkische und Mongolische Elemente im Neupersischen. in Türkische Elemente im Neupersische, Wiesbaden 1967, 569-70, No. 5801; Clason, An etymological dictionary of pre-thirteenth century Turkish, 679-80).

In mediaeval Islamic usage, one of its denotations was "Christian woman," doubtless influenced by the meanings "slave girl, concubine;" Djawayn, tr. Boyle, i, 257, calls the Georgian King David IV "the son of Kl-Malk," i.e. son of the Queen Rusudani. Under the Ottomans, the term Klolar Ağağlı, "Ağlı of the maidens," was generally used to denote the chief of the black eunuchs in the Imperial Palace, more correctly entitled Dör al-Şa'dul Ağağlı, "Ağlı of the House of Felicity." This officer was in charge of the sultan's harem, and was in practice the principal officer of the whole palace. From the last years of the sixteenth century onwards, he enjoyed the prestige of vizierial rank, as a pasha of three tughra, with the title of Muğlir, coming in order of precedence only after the Grand Vizier and the Şeyhülislâm. After 993/1587 he also displaced the Chief of the White Eunuchs from his control of the ağağlı or pious endowments of the Haramayn, Mecca and Medina (see N. M. Penzer, The Harâm, London 1965, 158 ff.; I. H. Uzunçarşı, Osmanlı devletiın saray teşkilati, Ankara 1945, 172 ff. and index; Gibb and Bowen, Islam in the Ottoman Empire, Oxford 1950, 76-7, 319-31).

The element Ağağlı also occurs in two well-known topographical features in the city of Istanbul and vicinity. First, there is the Klolar-taş "Maiden's stone," the column of the Emperor Marcian (450-7), in the Pätki quarter, so-called from its alleged power to cure barrenness via the "true column" from near the Church of the Holy Apostles was incorporated in the Silãymanîyeh Mosque, which rose on that church's site after 2458; see E. Mamboury, Le tombeau de l'İstanbul, Istanbul 1953, 339-40, 41, and Baedeker, Konstantinopel, Balkanstaaten, Kleinasiien, Archipel, Cyprus, Leipzig 1914, 180. Second, there is the Klz-libesi "Maiden's tower," the signal station and lighthouse built on a rock in the Bozphorus just south of Uskudar in the entrance to the Bosphorus, popularly called "Leander's tower," referring to Leander's death by drowning when trying to reach his beloved Hero (though this occurrence is usually located in the Dananilles between Castor and Abydos). The classical name for this rock was Dalmaî (from the wife of the Athenian general Chares), but the Turkish name is connected with the story of Mehmed II's daughter, allegedly shut up there in a fruitless attempt to preserve her from death by snakebite (see Mamboury, op. cit., 496-7, and Murray's handbook for travellers in Constantinople, Brüa and the Troad, London 1893, 107).

For the social status of women in Turkey, see NAB'À. (G. E. Bosworth)

KIZIL AYMAĐI [see KEPÊNDVÎN OGUÇ].

KIZIL ARSLAN [see ELĐEGIÇ].

KIZIL-BÂŞH (t. "Red-head"). The word is used in both a general and a specific sense. In general, it is used loosely to denote a wide variety of extremist Shi'ite sects [see guvâni], which flourished in Anatolia and Kurdistan from the late 7th/13th century onwards, including such groups as the Alevî (Alevî, see A. S. Tritton, Islam: belief and practices, London 1951, 83).

The Alevîs were closely connected with the Nûzîyarîs [p. 82] of northern Syria and Cilicia, and the tabâhis (tabâhisî, p. vi), in order to protect themselves from persecution by the Ottoman government as schismatics, later "gained the right of asylum under the all-embracing and tolerant umbrella of the Bektâshi organization." (J. Spencer Tringham, The Sûfi orders in Islam, Oxford 1971, 833; see also TERTIIRIVYA). The common characteristics of all those designated as kîzil-bâsh was the wearing of red headgear. Gâplinâri, op. cit., sees the kîzil-bâsh in this respect as the spiritual descendants of early Shi'i shiît groups such as the Khurramîs [p. 82], who were also known as the Muhammîrs from their practice of wearing red hats and robes, and even of pre-Islamic heretical sects of the Sasanî period, especially that of Mazdik (see also Browne, L.E.H., i, 310-13). In its specific sense, the word kîzil-bâsh was a term commonly used (often kîzil-bâšî ašbâhâ, "scoundrelly kîzil-bâsh", etc.) applied by the Ottoman Turks to the supporters of the Şafawî house [see ŞAFAWIDES], and adopted by the latter as a mark of pride.

In Şafawî usage, the term derived from the distinctive scarlet or crimson hat (bişû) with twelve gores (ark) commemorating the twelve Imams of the Ithna 'Ashari Shi'a, worn by the disciples (murîdî) of the Şafawî şaykhîs. According to Şafawî tradition, in 853/1457 Şaykh Haydar [p. 82], instructed in a dream by the Imam 'Ali, devised this headdress (British Museum MS. Or. 3458, f. 21a-b). When Haydar first showed this "Sîfî ûdiî", as it became known, to the Ak Köyunlu ruler Uzun Hasan, the latter kissed it and put it on his head (if the date 853/1457-8 is correct, this story is clearly apocryphal, because it is first cited in 888/1482). His son Yağûb, however, refused to wear it, and this was the origin of the enmity between Haydar and Yağûb which resulted in the breakdown of the Şafawî-Ak Köyunlu alliance. After the death of Haydar, Yağûb not only forbade his subjects to wear the kîzîl-bâš ûdiî, but also tried to prevent the Sûfîs of the Şafawî ūtarîs from wearing it (R. M. Savory, The struggle for supremacy in Persia after the death of Timur, in Isl. xi, 1964, 54 ff.).

Strictly speaking (as noted by Chardin; see V. Minorsky, Tadbirîsr al-malikîs, London 1943, 188 and n. 3), the term kîzîl-bâsh should be applied only to those Turkish tribes inhabiting eastern Anatolia, northern Syria and the Armenian highlands which were converted by the Şafawî šaykhs and became the disciples of the Şafawî šaykhîs at Ardabil. However, the term was also loosely applied to certain non-Turkish-speaking Iranian tribes which supported the Şafawîs, for instance the tribes of Tašk and Kârkûd-dâgh (Siâyê-kâb), and Kurds and Lurs. The great kîzîl-bâşî tribes (oymâdî) were subdivided into as many as eight or nine clans (the list in Minorsky, op. cit., 16-17, is by no means complete). The most important oymâdî included the Üsûddîls, Rûmlûs, Şâmhûs, Dulghâdas [arabic: Dhu 'i-Kadar], Taikalûs, Aslûs and Kâdûs; other tribes, such as the Türkmen, Warâks and Bahûrsûs, are occasionally listed among the great oymâdî. During the reign of Şâh Isâmîî I [p. 82], the Şâmhûs were the most powerful of the kîzîl-bâsh.
view of the khlil-bAsh, the Tadjik or Persian elements did not count for much in the new order of things. Similarly, the shah is commonly referred to as padshah-i khlil-bAsh, again a term which appears to ignore the existence of the Tadjiks altogether.

Initially, the two principal offices of the central administration, that of the wakil and that of the amir al-umara?, were both held by the same khlil-bAsh officer. Under TahmAs I (q.v.), the office of amir al-umara? declined in importance, and was superseded by the office of firas-ibAsh [see 3yf4i], which was also a khlil-bAsh prerogative. The government of the provinces of the Safawid empire during the early period was allotted almost exclusively to khlil-bAsh amirs, who ruled as petty princes in their provinces. The provincial governors held courts which were replicas of the royal court, and the system of provincial administration in many respects resembled that of the central administration. These provincial governments were assigned to the khlil-bAsh amirs as fihs known as 3yf4i (q.v.). The governors, in return for the obligation to provide the king with a stated number of fully-equipped troops when required, were allowed to consume locally the greater part of the revenues collected in the provinces under their jurisdiction; such provinces were known as man4ls or "state" provinces.

After the conquest of KhurasAn in 916/1510, Shah Ismai2I made Harat the second city of the Safawid empire, and it became the seat of one of the Safawid princes and frequently of the heir-apparent. The royal prince was placed in charge of the khlil-bAsh governor-general of Khurasan who, in his capacity as lala or at4ils ("guardian") of the prince, was responsible for the moral and physical welfare of his ward. It was his duty to see that the prince was trained in archery, horsemanship and the like, and also to see that he received his apprenticeship in statecraft.

Since the khlil-bAsh were "no party to the national Persian tradition" (Minorsky, op. cit., 288), their assumption that the principal offices of state would automatically fall to their lot led to immediate friction with the Persian elements in the administration. The Persians, or "Tadjiks" as the khlil-bAsh contemptuously called them, were the "men of the pen" who had traditionally filled the ranks of the bureaucracy in Iran and had provided administrative continuity under a succession of foreign rulers. Arabs, Turks, Mongols, Tatars and Turcomans. In the Persian view, the khlil-bAsh were "men of the sword," and were not expected to have any knowledge of statecraft. On the other hand, in the khlil-bAsh view, "Tadjiks" were fit only "to look after the accounts and dust business. They had no right ... either to maintain private bodyguards or to command troops in the field. If khlil-bAsh were asked to serve under a Persian officer, they consider it a dishonour" (Savory, The qisit-bAsh, education and the arts, in Turcica, vi (1975), 109). Ismai2I attempted to maintain a balance between these two forces by appointing Persians to the all-important office of wakil, but this merely aggravated the tension between them, and the khlil-bAsh brought about the death of three of the five Persians appointed to that office under Ismai2I (see Savory, The significance of the political murder of Mirza Sal4n, in Islamic Studies, Jnl. of the Central Institute of Islamic Research, Karachi, iii (1964), 281-91).

When Shah TahmAs succeeded his father in 920/1514, at the age of ten-and-a-half, the khlil-bAsh took advantage of his youth to assume control of the
state. Their mystical belief in the quasi-divine nature of Isma'il I as their murshid-i kāmil had been shattered by the latter's disastrous defeat at Cāhīrūn [q.v.], and they now reverted to their primary loyalty to their tribe. This led to almost a decade of civil war as the great khlīl-bāšī gūlāms sought for political supremacy, and, between 937/1530 and 942/1533, either individual khlīl-bāšī tribes or coalitions of tribes ruled the state. In 937/1530 the Takkalūhs attempted to seize the person of the shāh, but the other great gūlaṁs rallied to his defence and, in the ensuing fighting, large numbers of Takkalūhs were killed. The survivors fled to Ṭūrāk-i 'Arab; some of them subsequently entered Ottoman service, and one of their chiefs, the renegade Ulama (Ullama), was involved in the rebellion of Aḥkās Mīzāk [q.v.]. These events virtually ended the political influence of the Takkalūh gūlaṁ.

In 940/1533 Sīḥ ī Māhsūr managed to reassert the authority of the crown, and for some forty years remained in control of affairs, but in 948/1540, when he fell ill, there was immediate evidence of disunion among the khlīl-bāšī. The political situation, however, was very different from the situation obtaining in 935/1529, at the outbreak of the civil war between the khlīl-bāšī tribes. The new factor was the introduction of a "third force" to the political scene in the form of Armenians, Georgians and Circassians, who became ghulāms-i khaṣṣa-yi āmarī, "slaves of the royal household". These men, many of whom had been taken prisoner in Ṭūrūmū's campaign in Georgia between 947/1540 and 961/1553-4, or were the offspring of women brought to Iran at that time, adopted Islam, and were given special training to fit them for service either in some branch of the administration of the royal household, or in one of the newly-constituted ghulām regiments. The ghulāms, instead of being paid on a quasi-feudal basis like the khlīl-bāšī, were paid direct from the royal treasury, and their primary loyalty was therefore to the shāh and not to any tribal unit. When therefore there was a fresh outbreak of factionalism in 962/1554, "it was no longer a struggle to determine which tribe could outstrip its rivals in a state in which the Qisībāsh tribes as a whole enjoyed a dominant and privileged position, but whether the Qisībāsh tribes as a whole could maintain their privileged position against the threat from the new elements in Persian society, the Georgians and Circassians" (Savory, Sāfawī Iran, in Cambridge History of Islam, i, 405-7). This struggle was not resolved during the remainder of Ṭūrūmū's lifetime, or under his successors Ismā'īl II and Ṣulṭān Muḥammad Sīḥā [q.v.].

When Sīḥā I [q.v.] was placed on the throne in 966/1558 by the powerful khlīl-bāšī amir Murshid Kūt Khandūs 'Ustādī, he realised that not only his personal future but the continued survival of the Sāfawī state depended on his being able to establish his authority over the khlīl-bāšī as rapidly as possible. The Ottomans, taking advantage of khlīl-bāšī factionalism, had made large inroads into Persian territory in the west, as had also the Ōzbek in the east. 'Abbās's solution of curbing the power of the khlīl-bāšī and increasing that of the ghulāms, though successful in the short term, ultimately seriously weakened the military and political effectiveness of the Sāfawī state. The khlīl-bāšī regarded the ghulāms with contempt, and dubbed them hāndūshī, "sons of black slaves". The ghulāms, though some great commanders emerged from their ranks, did not have a fighting élan comparable to that of the khlīl-bāšī, the only troops in the Islamic world who had earned the grudging respect of the Ottoman Janissaries. Essentially heavy cavalry, the khlīl-bāšī carried a formidable arsenal of weapons—bow, lance, sword, dagger and battle-axe; in action, the khlīl-bāšī were replaced by a helmet with mail check-pieces (Minorcky, Oszbekistan, i, 39); as they charged, they set up a rhythmic chant of "Allāh! Allāh!" (Ṭūrūmū, Iṣlām-i 'Abbāsī, ii, 509). The basis of their fighting spirit, however, was their fierce tribal loyalty (lāyākī-i 'ulūm, lāyākī-i khlīl-bāšīyāt). Sīḥā 'Abbās I was well aware of this, and, in pursuance of his policy of curtailing the power of the khlīl-bāšī, not only reduced the strength of the khlīl-bāšī regiments but also deliberately weakened the all-important attachment of the khlīl-bāšī soldier to his tribe. He did this in a variety of ways: he placed an officer in charge of a tribe who was not himself a member of that tribe; in certain cases, alleging that a particular tribe did not possess an officer worthy of holding the rank of amīr, he appointed a ghulām as amīr of the tribe; he transferred groups of men from one tribe to a district belonging to another tribe. The continuance of these policies by his successors ultimately undermined the military strength of the Sāfawī empire.

In Afghanistan, there exists a substantial Shī'ī minority group of khlīl-bāšī, living mainly at Kābul and in the high valleys of Foiādī on the western edge of the Hazāraḵtū [q.v.]. These people are the descendants of garrison troops left behind by Nādir Sīḥā [q.v.] in 1150/1738 during his Indian campaign. The khlīl-bāšī hold clerical posts in government offices, engage in trade or are craftsmen; in short, they constitute an important and politically-influential element in the population. Estimates of their total number vary from 60,000 to 200,000 (see H. V. Bell, The Races of Afghanistan, Calcutta, 1900, 107; D. N. Wilber, Afghanistan, New Haven, Conn., 1959, 49-50; and V. Gregorian, The emergence of modern Afghanistan. Stanford 1969, index s.v. Khlīl-bāšī).

As recently as 1945, the fact that the name Mūr-bāš still had an emotive power in Ādharbāyjān, the nerve-centre of the Sāfawī organisation in earlier times, was demonstrated by the choice of this name for the regular troops recruited by the short-lived autonomous republic of Ādharbāyjān.

Doerfer, Türkische und Mongolische Elemente im Neu­persischen, iii, Türkische Elemente im Neuturkischen, Wiesbaden 1967, 470-2. (R. M. Savory)

KIZIL-ELMA (or KIZIL-ALMA), "Red Apple" is an expression which occurs in written sources from the 16th century onwards; it also occurs in Turkish oral traditions from Anatolia and Ādharbāyjān as well as in modern Greek, Bulgarian and Rumanian folklore, current to this day. It refers to a legendary city which was to be the ultimate goal of Turko-Muslim conquests, and some versions explain the term from the resemblance between a red apple and the golden dome of a building—in this latter case it refers to a large church situated in the area. In the Ottoman period Kizil Elma tended to be identified with the large cities associated with Christianity—Constantinople, Budapest, Vienna and Rome—which the armies of the Phālāsphār were hoping

Another tradition, which must have developed before the Ottoman one, identifies Kizil-Alma with Daghistan, beyond Demir-Kapu. It has been supposed that this legend originated from the ceremony for enthroning the Shamkhel of Daghistan, in which the claimant to the throne is involved in throwing a "golden ball"; because of this ball, Daghestan was called "the land of Kizil-Alma" (see Farehddin Celik, Kizil-Alma anetleri, in Cunarteri, Jan. and March 1942; Samuil Popov, Kizil-Alma, in Turk folklor arafttrnut/an,

In ancient times, this river marked the boundary between the autochthonous peoples of Asia and those who had come from Europe to colonise the country. Herodotos (i, 72) makes it a frontier between Lydia and Media. It seems to have been known to the ancient Greeks as the river Halys ('AAj$) which was exported in the form of large blocks; to Strabo (xii, 221). The motif of the resurrection of a king is linked with the cycle of pseudo-prophecies at the time of the Ottoman conquests" with that of a Christian king who, having been vanquished and wounded by his own subjects, is waiting for a favourable day to revive and to take his revenge on the Muslims. In this version of the legend, an attempt can be seen at an identification and a localisation, which has been contested in modern criticism and anachronism. The Christian king was called Rum Papa "The Pope of Rome", so Kizil-Alma is thus being identified with Rome. But the narrative also locates the same legendary place at Bce (Vienna), and links this legend with the account of the Ottoman raid carried out during the reign of Sulayman II in 1532 by the historical person Kasmir Vovroyda (see P. N. Borotav, in Annotaire de l'Ecole Pratique des Hautes Études, IV re section, 1966-7, 263-4). The motif of the resurrection of a king is certainly Christian and probably Byzantine. It is linked with the cycle of pseudo-prophecies at the end of the period of Turkish domination (Deny, op. cit.), but later on it must have been integrated into Turkish tradition.

Oral versions of this narrative are still being told today. The present writer has recorded five versions in the villages of Han K and Ak-Dere, Kabile (the material in this book dates from 1962); (2) H. L. Erginol, in Gedii, No. 33 (1944)—cf. P. N. Borotav, in Journal de la Société des Africistes, xxvii (1958), 16; (3) Kurt Bittel, Legenden vom Kirknen-Dag (Kapadokien), in Orca, xii-xiv (1960), 33; (4) a version noted by Borotav in the villages of Hac Nisy and Alc-Dere (Ayfo province) in 1950; and (5) a version noted by Ogas Tansel in the village of Myrec (near Bokar, Konya province). The two last versions are part of Borotav's own manuscript collection and are unpublished. A Greek version from Asia Minor has also been recorded; it comes from a village in the region of Epihous (see Dido Sotiriou, D'un d'art d'Antioche, a novel translated from Modern Greek, Paris 1965, 22). For an Arabic version, see Yakoob Artin Pacha, Seize hadoutas, contes populaires rec¬

Bibliography: A full bibliography is provided by J. Deny and E. Rossi in their articles. Apart from works cited in the article, see for the motif of the Kizil-Alma Elmas Yilmaz, Kizil-Alma efanesi in Türk folklor anatolileri, No. 146, Sept. 1961.

KIZIL KUM ("Red sand"), a desert between the Sir-Darya and Amu-Darya rivers (piv, v., and also KAR-kum), falling within the modern Uzbekis¬

Bibliography: All Dewald, Dugunaysa bugalt, 603; Hadii Khallia, Dujhan-nimul, 626; Ch. Texier, Asia Mineure, 535; V. Quinet, La Turquie antique, i, 19, 272, 639; iv, 433 Fr. Spiegel, Erdnische Alterthumskunde, i, 183 ff.
Kum becomes more and more inhospitable as one goes southwards. The region called Adam-Külüm (["where man perishes"]) between the Āmū-Dārāy and the cultivated region of Buktará, consisting of sandhills (bāldān), is considered especially uninviting and dangerous. In summer, there is absolutely no life in the desert; in the winter, there is vegetation, such as the saksand shrub, and a few springs and wells are visited by Kazakh nomads. Schuyler noted that "Kirlīkha" (or Kazakh) nomads crossed into the Külüm from north of the Āmū-Dārāy on the river ice and returned in the spring when there were still ice floes in the river. Moreover, the medieval Islamic sources show that the winter, when the desert was carpeted with snow, was normally the time for military and other movements across the Külüm. Thus the Ghaznavid historian Bayhaḵī noted that it was the absence of snow which prevented the Oghuz ruler of Diand, Sīhā Malik, from re-establishing the rebel in Kirlīkha Hārān and his Seldūq allies from invading kūrānik in spring 426/1035 (Ṭayyib-Ja Marūf, ed. Ghant and Ṣayyād, 683-4); and in the 6th/12th century the raids of the Kirlīkha Seldūq to Diand and against the Kūtīyāt were always made in winter (see grumb in Suppl.). At the south-eastern extremity of the Külüm lay the Katwān Steppe, to the north of the Samarkand-Khujand road, where in 536/1141 Sultan Šaṁdjar was defeated by the Ṣafrāḵī (q.v.). In recent times, the desert sands have encroached on the cultivated fringes, and in the later 19th century several villages on the lower course of the Zarafşān river became buried in the sands.

**Kīzīl-Uzēn** (q.v. Azēd Turkish "Red River"), the ancient Amauros, a river which flows through Aḏār bāwāyān and enters the Caspian Sea forty miles east of Sefīd-Rūd, "White River," at its junction with the river Sīhā-Rūd at Mendjīl. Its source lies in the province of Arslān, and it begins by crossing Trāḏ Adjamī towards the north; its right-bank tributary is the Šāḏān, on the left it receives the Kāra-gūl at Miyaṅ, then it runs through the southern slopes of Elibzūr, describing a great arc 125 miles long and crossing this range through the defile of Rūdābād and the narrow valley of Rastam-ābād, a kind of couloir through which rush violent winds from the south in winter and from the Caspian in summer. That is known as the "Arabs as Nahr al-Aḥdāy White River" (tr. of the Persian Sefīd Rūd) (cf. Dināḵf, Cosmography, tr. Mehrān, 145); at one time the Turks called it the Hūlān (Hāḏilā Khālija. Dziḵān-nom, 304).

**Kīzīmkāzi**, in full, Kīzīmkaś-Dimbān, a small hamlet in south-west Zanzibar situated in lat. 6° 210 S, which possesses the earliest datable mosque in East Africa. Its miḥrāb has a dedicatory Kufic inscription recording its foundation by Šaybān Aḥb Īmām Mūsā al-Ḥusayn Muhammad in 500/1106-7. This is flanked by Qur'ānic verses and two inscriptions in roundels, all of great elegance. The nearest analogy is with a grave cover found at Ruft: the ensemble was either imported from there or executed in Zanzibar by a Śīrafī mason. This Persian connection accords with traditions of trading relations attested by inscriptions in Sumālia and by the Kilwa histories. Otherwise, the mosque is an undistinguished rectangular structure. H. N. Chittick excavated it and the adjacent site in 1960. The hitherto settlement dates from the 11th century or earlier: a ruined stone house and defensive enclosures are probably 18th century, when, as is commemorated by another inscription dated 1183/1772-3, the mosque and miḥrāb were largely rebuilt, the earlier inscriptions being incorporated into the fresh structure. An oral tradition claims that it was the capital of Bakari, a 17th century Swahili ruler of southern Zanzibar, but this seemingly conflicts with the archaeological evidence; the fortified residence and the rebuilding of the mosque are more congruent with the 18th century development of the eastern African slave trade.

(G. S. P. Freeman-Grenville)

**Kīzŭkāhān** (see Kūlar).

**Kīzlar Aqhaši** (see Ghāz).

**Kūč Hišār**, a name of several towns and villages in Asia Minor, derived from Kūča- Hišār; compare such names as Ḫūč Hišār, Koyun Hišār, Koyul Hišār, Kekl Hišār and Toklu Hišār. Confusion is often prevented by the addition of the name of the nearby provincial capital or of another word, e.g. Cankird Kūč-Ḥišār. See Kīzlar, Kūč, Aqhaši. For the same reason, the toponyms of places with this name have been changed in recent times.

I. **Sefrēli Kūč Ḫišār** (in modern usage Ṣefrēli Kūč K同时还, centre of an il (previously kāhd) formerly called Ebd-kegān, in central Anatolia nowadays within the Īl [wilāyet] of Ankara (formerly of Konya), 8 km east of the northeastern shores of the Tur Göl (q.v.). The town is situated on the road connecting Ankara with Adana via Aksaray, nowadays a major line of communication. The countryside around it is watered by a mountain stream and yields a varied agricultural produce; there is also sheep-raising. Since ancient times salt has been produced at Kūč inna on the lake. In 1590 Sefrēli-kočhāsār town had a population of 4,458 and the
The present ruins of the Ulû Dârîmî are a monument of that period (ca. 600/1204-3). At the time of Sultan Selîm I’s campaign against the Safawids, an Ottoman army commanded by Bîyyûlî Mehmed Pasha, beglerbeg of Diîyû Bârak, defeated a Persian force under Karâkhân Ustâjîdâd near the town in 1512/1516. Afterwards the whole region came under Ottoman rule, with Mardin as a sanîçâh (= sanjak) of the new eyâlet (beglerbegî) of Diîyû Bârak. Köbîsir was a part of the sanîçâh of Mardin in 1914/1918 and remained a subdivision of that district, being a sanîçâh of the sanjak of Mardin during the 19th and 20th centuries and a sanîçâh of its wilayet. The town was under the Republic was founded.

In 1966 the well known traveller Canîssîm Nieuwhoor visited Köbîsir: (“Rodje hissar” in Arabic “Gunûzî” or “Dunaysar”), finding five minarets still standing (cf. Reise naar Arabe, Amsterdam-Utrecht 1776-80, ii, 366-7."

V. Köçûnsar also Köçû Hisar, identical with the Byzantine fortress of Trîocolokia in the Sakarya region to the south-east of İznik (g.v.). This place was conquered by Sultan Orkân (g.v.) in 708/1308 (713/1312).

**KOC BEG,** also called Görgeldî Köçû Meştafa Beg, Ottoman writer of treatises on statecraft.

Koc Beg was a native of Görgeldî (Gorç, Koryzta) in Mardin. He entered the Palace service as a hafiz (m. 20) during the reign of Ahmed I and served under successive sultans until his retirement to his native place in the early years of Mustafa IV’s reign. He seems never to have served in any capacity outside the Palace. He gained the especial confidence of Murad IV and Tûlûhîm, and it is for his memoranda to these sultans that he is famous. He was also tutor to the historian Naşîrî (g.v.) (for a full biographical account see M. Çeçatalı Ulûcuy, i. Art. Köçû Beg).

Koc Beg’s best-known work is his Risâle, presented to Murad IV in 1639/1640, where he analyses the causes of Ottoman decline and suggests remedies. There are several printed editions of the work: Ahmed Vefîk Pasha (ed.), Köçû iu risâlîsî, London 1290/1872-3, Istanbul 1909/1898-96; A. H. Askut, Köçû bey risâlîsî (in Latin script), Istanbul 1939; German translation by W. F. A. Benndorfer, in ZD MG, xvi (1861), 272 f., with comments by Fleischer in ZDMG, xvi (1861), 277 f. The work is summarised in J. von Hammer, GÖ, v, 292. A second Risâle attributed to Köçû Beg was apparently compiled from memoranda submitted to Sultan Ibrahim on that Sultan’s order. There is no critical edition of the work. The first published version is an incomplete but fairly full
German translation by Behrmnauer, entitled Das Nasthainâmé, in ZDMG, xviii (1864), 699 ff., based on manuscripts now in the Nationalbibliothek, Vienna (Mixt. 477, A. F. 183, Hist. Osman. 150). The translator states that the author is anonymous. The second published edition is in A. K. A. Sitk, op. cit., 28 ff. (in Latin script), based on a manuscript in Miliet Library, Istanbul, no. 474. In a third published edition, based on a manuscript in Nurusman Library, no. 4550, the editor attributes the risâle to the Grand Vizier Kemânikchê Kara Mutsâfâ Paşa (F. R. Unat, Sâdrezam Kemanheş Muhsüf Pasha ikiyânası, in TV, ii, no. 6, 443 ff). There are divergences between the published versions and between them and other existing ms. (for details and discussion, see M. Çegâtay Uluçay, Köçî Beg'i Sultan İbrahim'in nehirin etliği risâle ve araları, in Z. V. Togan'a arşandım, Istanbul 1950-5, 177 ff.).

The contents of Köçî Beg's risâle presented to Murâd IV resemble those of an earlier analysis of Ottoman decline, the anonymous Kitâb-i müstefi, (ed. Yaşar Yücel, Ankara 1974) and are entirely conservative in outlook. The spread of corruption, he argued, had brought about a decline in the old institutions and bred disrespect for the Şari'a and old laws (bânûn [p.1]). Remove corruption, restore respect for the Şari'a and bânûn, and the Empire would return to its former glory. In the old days before the reign of Süleyman I, the sultan had attended the Dâirat personally. Süleyman had abandoned this practice. Before the year 982/1574-5 the Grand Vizier had been independent, with no intermediary between him and the sultan. The sultan's favourites (mülêtem) had never interfered in affairs of state. Bribery was unknown and beg-its were never unjustly dismissed. There was strict control over the emoluments of Palace officials and they never received lands whose rightful use was as timars or abatim (p.2).

After 982/1574-5 Palace officials and Sultan's favourites were able to engineer the dismissal of Grand Viziers, beşerbegis and sanjâb begis and acquire lands rightfully allocated to timariots, as fiefs (mülêtem) or fief-holdings (paštâm) or other form of tenure. Only beşerbegis should appoint timariots. They should make a roll-call (oylamada) of present incumbents in their provinces (oylalik), renewing the bâriûs of qualified timariots and removing the unqualified. Bâkus with high pay should receive şaebâmets, thus creating a warrior's field (bikid) and removing a burden from the treasury. Able-bodied timariots should serve on campaigns with the number of their retainers (gâhelîs) which the old bânis specify. This would produce 400,000 to 500,000 troops and provide a counterbalance to the influence of the kapblâhus. Similarly, all innovations (bâdiyet) in the Janissary and other kapblâhu corps which contravene the old bânis should be abolished. There should be a graduation (bînma) from the Palace once in every seven years, and at these times the kapblâhu corps should receive only enough recruits to replace dead members. Officers (âbiyy) of these corps should never be unjustly deposed.

Köçî Beg's second risâle is a straightforward description of various state institutions and governmental practices, interspersed with political maxims. Its purpose was to guide the new and totally inexperienced Sultan, İbrahim, and its language, in accordance with that ruler's mental capacities, is extremely simple (see M. Tayyib Gökdilgin, İA, art. İbrahim, vol. ii, 154 ff.).

Babinger,
KÖHAT (p., "mountains"), a directly-administered District of what was the North West Frontier Province of British India and of Pakistan till 1955, covering some 2,594 sq. miles and with its administrative centre at the town of Kōhāt. The District is bounded by the Khyber Agency [see KHYBAR PASS] on the north, by the Kurram and North Waziristan Agencies in the west, by the Bannū District [q.v.] on the south, and by the Indus River and the Ḥisb Khāl islāḥ of the Panjābī on the east.

The terrain of the District is that of a rugged tableland lying at an average of 2,000 ft., with low ranges of arid hills which rise to 3,000-4,000 ft., and with more fertile valley bottoms in which agriculture, sometimes by irrigation, is possible; the climate shows considerable variations in temperature and rainfalls, averages only 15 inches per annum. The region is connected with the Kabul River valley and the Khyber region by the Kōhāt Pass, called locally the Darra (2,866 ft.), whose control was in British times much disputed by the local Afrīdī tribesmen; the area round the Pass, a strip of unadministered territory, has for long been the site of a flourishing Afrīdī gun-making factory. An important commodity of the Terī village neighbourhood of Kōhāt has always been rock salt, of which there are extensive deposits at Bahādūr Khālī; until recent years, these were owned by the Nawāb or titular head of the Kōhāt tribes. The Government of India's increase of the tax on Khālī salt in 1896 to a level with that on Īsādūr salt was one of the pretexts for the tribal rising along the Frontier in 1897.

The population of the District is essentially Pathan, mainly of the Bangāsh in the western parts, the Khātak [q.v.] in the eastern tracts down to the Indus shores, the Orakzāy and Adam Khālī Afrīdīs in the northern parts, and the Nīzāls along the Indus in the south of the district; of these, the Bangāsh speak the northeastern or "hard" variety of Pashto, and the Khātak and Nīzāl the southwestern or "soft" one [see PSHTO. The Pathan language].

The Khātak seem to have moved into Kōhāt from the west in the 8th/9th century, whilst the Bangāsh entered the district in the following century as allies of the Khātak against the Orakzāy. The Mughal adventurer Bābur [q.v.] made his first foray into India in 1506-07 down the Kabul River valley to Peshawar, then into Kōhāt and Bānnū and through the Dera Shāfī to the Indus; he scattered the local Pathans, and built towers of skulls of the slain in Kōhāt [Bābur-nāma, tr. A. S. Beveridge, 303-5]. In 1629-30 the Mughal Emperor Ḥābdūn's general Māḥāt Khān [q.v.] campaigned in Kōhāt against the Rūshāniyya sectaries [q.v.] amongst the local Pathans.

In the early 19th century, Peshāwār, Kōhāt, Bānnū and the Dera Shāfī came under the control of the Sikh ruler of the Panjābī, Ranjīt Singh, although Sikh authority was contested by the local tribes. The British envoy Mountstuart Elphinstone passed through Kōhāt in early 1806 on his way to the Durrānī court in Kābul, and waxed lyrical about the green valleys and the fruits of "Cohont" [i.e. account of the kingdom of Caubuli", London 1842, ii, 49 ff., ii, 50-1]. After the downfall of the Sikh empire
and the annexation of the Panjshir in 1849, the British penetrated through the low Khasht hills and Kohat to the Kuruwum River valley at Thal. The regions of Pejshwar, Kohat and Hazara were then briefly placed directly under the Board of Administration for the Panjshir. In 1876 these three northern regions of the Frontier were formed into the Commissionship of Pejshwar. Then after the frontier tribal wars of the late 1870s and in the Viscountcy of Lord Curzon, the North-West Frontier Province was formed in 1901 as an administrative unit separate from the Panjshir, with Kohat as one of its four trans-Indus districts; Kohat District itself comprised the three takis of Kohat, Teri and Hangu. A road was made in 1901-2 connecting Pejshwar and Kohat via the Pass, and a narrow-gauge railway was also begun to connect Khasht-Abzali on the Indus with Kohat town, Hangu and Thal, thereby stimulating local trade with Teri and Kafuel. Kohat town had already become an important garrison centre from which control was exercised over the turbulent Pathan tribes, and Sir Louis Cavagnard, who for more than a decade had been Deputy Commissioner in Kohat, had built himself a fine official residence there.

During the inter-war period, Kohat was, with Pejshwar and other parts of the Frontier, the scene of disturbances caused by the political movement of the Kaimqutshan or "Redshirts" of 'Abd al-Chaff Khan. The postpartition position has not been greatly altered since British days. The District continues to be divided into three takis, with the names Kohat, Hangu and Karak; Kohat town is an important military base for the Pakistan Army and there is also a military airfield. A plan for a barrage across the Tui River, the "Banda Tanda Dam", in order to harness flood waters, has long been mooted. The 1901 census enumerated a total population of the District, including the attached tribal areas in the north, of 627,795, a 43% increase since 1851, with a population for Kohat town and cantonment of 75,000.

became an Apostolic prefecture, on 28 April 1920 an Apostolic vicariate, and on 15 September 1935 an Archdiocese. The diocese contains 13,400 Roman Catholics in 1965, two-thirds of these in the capital. The strength of Islam is easily discernible from these figures. The main fariba there remains that of the Kédiriyya, which resisted the penetration of the Tijaniyya in the 19th century under the double influence of the aâwiyah of Touba and of the Senegalese auxiliary troops of the French who adopted Muridism. These last built a mosque on the island of Tumbo, still called the Senegalese mosque.

Despite the efforts of Malinka scholars, Wahhabism has remained only embryonic. One should further note a certain persistent strain of animism among the Bagas population, characterised till 1963 by the custom of gong, on the isthmus of Tumbo, cut down then to allow the building of the People's Palace at the expense of the People's Republic of China.

KONG, corruption of Kpon, name of a place in the northern part of the Ivory Coast near to the watershed between the basins of the Comé and that of the Niâ which flows into the Bandama. Kjon was founded in a very ancient period by the Senoufo of the Falafala tribe. It is said that they have retained their predominant rights over the land, while playing now only an unobtrusive role.

Kong is an illustration of the advance of the Malinka towards the south and towards the regions producing gold and cola. This immigration took place in the period following the 16th century and those Dioula who supposedly came from Macina founded Bobo Dioulasso on their way. Having established themselves in Kong they were reinforced at the beginning of the 18th century by contingents of Sobondji Malinka pagans, with whose help they were able to police the trade-routes. There can be no doubt that it was at the end of the 18th century that a Malinka chief, Sekou Ouattara, whose family was linked with the inhabitants of Borou on the Bandama, united a group of Malinka families coming from the north. From Macina he passed through Dé near Bandiagara, Téwélé near Bobo Dioulasso, then Teningué near Kong where he ousted a red-haired chief named Lassiré Gombéde, taking his place and establishing Islam. Lassiré Gombéde would no doubt have been a Mandé, ruling over the autochthonous Falafala and the Paraha (Koulango).

Sekou Ouattara established his twelve sons so firmly in the villages that when his brother Famarha attempted to gain power, the resistance offered by the sons forced him to leave and to settle in Bobo Dioulasso, opening a long series of quarrels between the two cities.

From the city of Kong the power of this Dioula aristocracy spread throughout the neighbouring country, largely as a result of the superiority of their arms, which were themselves of a supply of remounts, they founded an Apostolic prefecture, opened a long series of quarrels between the two cities.

I wanted to try the power of this Dioula aristocracy spread throughout the neighbouring country, largely as a result of the superiority of their arms, which were themselves of a supply of remounts, they founded an Apostolic prefecture, opened a long series of quarrels between the two cities.
lighting interminable campaigns against the L6a, tempted to conquer Lobi and spent several years. This treaty was signed on 10 January 1889 in the presence of Binger, who had occasion to return to Kong in 1892. Although Mungo Park had heard tell of Kong, it was Binger who, on 20 February 1888, arrived in the town and stayed there until the 11th March. In December of the same year, Trench-Laplène made the sovereign of that time, Karamoko Oule Wattara, sign a treaty placing Kong under French protection. This treaty was signed on 10 January 1889 in the presence of Binger, who had occasion to return to Kong in 1892.

Two years later, Kong was visited by Captain Marchand, Kpahie Bo (= "feller of the forest"), who had heard of the threats made by Samori against Kong. It was then that Lt.-Colonel Montell was recalled to the area; he had been preparing to attempt a regrouping of forces on the Upper Nile. Mustering at Grand Bassam in August 1894, the column encountered the utmost difficulties in making progress. Joining battle with the armies of Samori in March 1895, it was forced to retreat and on 15 May 1897, Samori raged the city to the ground and massacred those of the inhabitants who had not succeeded in escaping towards Bobo-Dioulasso.

In January 1898, a French detachment established a post there, which was soon laid under siege but was relieved by Commandant Caubrelle. With Samori captured, and peace re-established, the French administration invited the refugees to return. Some accepted, but the majority remained in Bobo-Dioulasso. Kong was never to regain its former eminence.

KONYA (Arabic and Turkish orthography, Konya), known in antiquity as Leonium, an important town lying on the edge of the Anatolian plateau, on a diagonal line connecting the Dardanelles with the Taurus passes leading into Syria.

I. History.

Konya was, during the centuries of Arab invasion, a Byzantine military base which the attackers seem for this reason to have more or less deliberately avoided and circumvented, in preference either for Tarsus [see Tarsos] to the south or especially for Cappadocia by the northern routes; this would seem to explain the fact that the town is seldom mentioned in military histories. It is probable, however, that Konya, like other towns, had suffered previously in the Persian invasion, and that it occupied only a section of its former territory. It is difficult to describe with certainty its history in a period for which no archaeological investigation has been performed, but the common and widespread re-use of older materials in the Saljuk monuments would seem to indicate that many buildings were in ruins and the town only partially reconstructed. It reappears, however, in a better light at the time of the Turkish invasions of the 5th/11th century and at the time of the Crusaders who passed that way in 1097. The latter found no serviceable fortifications there, but were able to derive benefit from the gardens in the vicinity of the town.

It was the Saljuk régime which marked the zenith of the history of Konya. The site, well irrigated in contrast to the neighbouring desert, commanded the southern route at a time when the Dünümendids [g.v.] denied the Saljuks access to the northern route to the Dardanelles, and it must have found favour with the new masters when they became aware of the need for a secure political and military base as a focus for their still semi-nomadic peoples. The real development of the town dates from the reign of Malik 1052-65 (1118-25), who resolved to make Konya a capital, built a mosque there and other monuments which his successors must have completed. It was already a city of note when in 1190 the German army raised in Cologne by Frederick Barbarossa passed through it. The progressive unification of Turkish Asia Minor under the rule of the Saljuks evidently contributed to the prosperity of the capital. Besides the principal mosque, from about 1190 onwards the city possessed a number of smaller ones, as well as madrasas, khânsâhs [g.v.], flourishing markets and reconstructed ramparts. The development of the power of the sultans in the first half of the 7th/12th century was also reflected in the town, where apparently social hierarchy was judged by the importance and height of houses rather than by the allocation of separate quarters to the various ethnic groups. In Konya there were evidently Greeks (with their monastery, reputedly dedicated to Plato), Armenians and some Jews; the records make few references to Turks, a term reserved in this context for the Turcomans of the plains, but rather speak of Muslims, a designation normally embracing both indigenous Turks, who in a town of this kind were largely Iranised, and Iranian immigrants, arriving especially in the period following the Khâraman and Mongol invasions, who, besides their involvement in craftsmanship, were sometimes promoted to the most important civil posts of the régime. Three social groups deserve special attention, the idîgî, the akbas and the
Şûfiis or dervishes. The idşâş were a kind of militia recruited among the half-breed sons of indigenous fathers converted to Islam and married to Turkish women; the adârâs [q.v.] were a Turkish form of the Muslim jûdârâs [q.v.], and were to play an important role especially in the period of the Mongols and their immediate successors; as for the Şûfiis, there were a number of different orders, but, from the middle of the 7th/13th century the prestige of Jâddâl al-Dîn Râmî must have drawn numerous disciples to him, although this was not an organised order (that of the Movlesîns or Mawlawîyas, from Movlânâ Mawlânâ) until the 8th/14th century. Naturally, Konya also had a military garrison, composed to a large extent of slaves of Byzantine stock captured on the north-western marches of the kingdom. The sultans lived in the palaces which they had built in Konya and the surrounding area. The remnants of the town had been extended and strengthened in the time of the great sultan ʿAlâ al-Dîn Kay Kûbâb [q.v.] with the compulsory co-operation of the senior ansârs of the region. The buildings erected in this period are studied below, but the abundance and importance of the mosques, madrasas, hânîkâs, hospitals, hanças, caravanserais, etc. testify to the considerable development of the Sâlîqân capital, which the present-day remains continue to evoke, in an original and compelling style.

The progressive establishment of the Mongol protectorate over Sâlîqân Anatolia in the second half of the 7th/13th century was naturally prejudicial to the importance of Konya, although in a slow and partial fashion. The rivalry between the judicial to the importance of Konya, although in a half of the 7th/i3th century was naturally pre

Contiguous with the enlarged mosque and now entered from it is the duodecagonal mihrab named after İlyas Arslan and dated 673/1273. The cenotaphs are covered in white inscriptions on deep cobalt blue grounds. Except for Kayalıboğazi, buried at Sivas, from 1220 onwards this was the mausoleum of the dynasty.

Externally, the courtyard wall is monumental, with two marble portals in a style developed from that of 12th century Zangid Damascus. The İliği Camii, 1220-30, was first rebuilt in 733/1332, but the mihrab survived. The central nave has three domes, and the three on each side are vaulted. The mosque is now the museum. The Larendra or Sahip Ata Camii, 656/1259, has lost its second brick minaret in the Iranian or Central Asian style. The stalactite porch, incorporating detritus from Christian monuments, is 13th century workmanship at its apogee, which was increasingly heavy and flamboyant. The fine faience mihrab and semi-domed farin survived rebuilding. It is united with the kapan of (the four-faience type retaining some original decoration) by the family tomb in a manner suggestive of ancestor worship. This mausoleum is of the domed farin type with a crypt, where the cenotaphs retain some of their faience-work. The inscription on the mosque to the master Kâlîk b. 'Abd Allâh (reading provisional) makes this his only dated building. The Sadreddin Konevi Camii, 673/1273-4, has lost two deeply-carved shutters to the Türk ve İslam Eserleri Museum, Istanbul.

Kayalıboğazi [q.v.], as patron of Di'âlî al-Dîn Kömi [q.v.], created Konya's greatest spiritual memorial, which is expressed materially as the Mevlevi complex and museum, to which the mosque of Seljuk origin, the Amurath Camii, 626/1231 (Mehmècke, 342; Konyali, 650), but the earliest tomb which contains the cenotaph of the poet is dated 672/1273-4. Its scalloped dome was recovered in Kütahya tiles externally in 1818, 1909 and 1949 (Konyali, 64) and the wooden cenotaph, 674/1277, completely covered in inscriptions, is hidden under the gold embroidered velvet cloth donated by *Abd Hamid II. A second dome was built over the tombs of the successors of the Mevlana, but the complex is largely 16th century in date. Bayazid II restored the mausoleums and added three domed units together with a typical Ottoman minaret in 910/1504, while Selim I installed the garden fountain, 928/1522. Suleyman I rebuilt the mazid and sanâh-i hâna, 973/1565, and Selim II the 'sanaî, now destroyed. The cells of Murad III were transformed in the 19th century. Important repairs were affected by Murad IV, 1044/1634, and 1048/1639, and by Mehemmed IV, 1060/1650. Four typical Ottoman türbes in the garden court are dated 934/1527, Khüreim Pasha; 987-9/1579, Sinân Pasha; 994/1585, daughter of Kutûbî Murad Pasha; 1006/1597, Şaykh Khâlid. The museum houses textiles and other treasures of the order which is active again. The Selimiye Camii, begun by Suleyman I and completed by Selim II, has a seven-domed portico earned on six Byzantine limestone columns. Its plan is based on that of the Fatih mosque in Istanbul, but without a mihrab apse. Erroresquely attributed to Sinân, it is typical of the stark style that preceded his appointment as mihrabe bagi. Beside the mosque is the library of Yusuf Agha, 1209/1794. Pir Paşa Camii, ca. 926/1520, is a typical Ottoman mosque, but with a türbe incorporated into a corner of the portico. Şerifeddin Camii was founded 1220-30, rebuilt by the Karamanoglu İbrahim II, 848/1448, and transformed in 1496/1683 into an imitation of Kılıç Ali Pasha mosque, Topkapi, Istanbul. Fragments of 13th century ceramic work are seen in the mortars, and there are patches of brickwork amid the ashlar. Heavily restored, 1249/1832, the interior painting is in the 19th century faiground manner and includes a typical folk art representation of the Süleymaniye Camii, Istanbul, over the mihrab. Kapı Camii, 1060/1650 (Konyali, 429), owes its light, open style to the repairs in 1226/1812*, Abdüllaziz Camii, mimbar 1293/1876; also replaces an older building, and its flordi Ecole des Beaux Arts appearance is likely to be the work of Sarkis Balyan of the 19th century dynasty of court architects.

Colleges or madressas. The Sirçah Medrese, 640/1242-3, is a partially-ruined two-faience type. The outstanding faience mihrab is set in an faïence which retains a quantity of its décor. The carving of the portal is also notable. Inscriptions include those to the founder Bàrî al-Dîn Mu'âdî and the master Muhammed b. Muhammad b. Uğûnâm al-Tâbî. The Karatay Medrese, 649/1251-2*, ruined, but retaining its famous marble portal, was an Anatolian variant of the Damascus style [see: Sedaeddin Camii], and also the star-shaped dome which is visible over the pool of the court-hall supported by deep fan-shaped tiled pendentives. This monument now houses a collection of Seljuk ceramics. Only the faience remains of the Küçük Karatay Medrese nearby, 649/1250-3.

The Ince Minareli Medrese, ca. 663/1264-5, built by Kalîk (Rebek) b. 'Abd Allâh, heavily-restored, lost two-thirds of its brick minaret in 1317/1899. It was a foil to the poet's giant inscriptive bands developed out of simple established decorative forms more appropriate to wood. Overweighted decoration which masks structure was the Achilles heel of later Seljuk architecture.

Mazidu. These include Beşparebey Medesk, 616/1213 (inscription disputed), and Abdulaziz Medesk, 642/ 1214-5, both rebuilt with fragments of original ceramics remaining, as with Sefiûrûs Medesk, 672/1275*. The Tâş (Stone) or Haci Ferruh Medesk, 612/1215 (Konyali, 364), has an inscription to the master Râmiân and idiosyncratic carved stone porch and mihrab. The Hatunîye Medesk, 673/1273-30*, retains most of its thick Güdük Minaret, built of glazed brick. The Bulgarian Tesleî Medesk 1240-50, still has its plain, hexagonal dado tiles, as does the Karatay Medesk, 646/1249-5, but the Sirçah Medesk of the same date retains its brick minaret and its renowned mihrab. The mihrab of the Beyehkun Medesk, 1290-80, is now in the Städtische Museum (Islamische Museum, Cat. No. 81), Berlin. Both the Karasen and the Tahir ibn Zähê Medeskes, ca. 1280, have restored mihrâb. Of many later examples, the Kadi Mursel Medesk, 829/1425, has lost its dependencies which once were distinctively Karamanî in style, including the mihrâb.

Lesser monuments. The Hasbey Darlıbûlûk, 824/ 1221* built by Karamanoglu Mehmed Bey, has a traditional ceramic mihrâb. The marble panels have fallen from the façade below the sixteen-ribbed dome. A rare, extant namazgâh is the Musella, 916/1514.

Among several, a typical faience type türbe is the Gömeç Hatun, 694/1297-98, built of brick above ashlar with an ornamental tile façade and crenellations. It has two triangular buttresses and double stairs raised over the sepulchral vault. Fakihede Türbe, 824/1421-50, built of stone is transitional in style.
Of the fountains, Kapu Çeşme rebuilt in Ottoman times has claim to Seldjuk origins. A standard Ottoman example is the Akşems, 968/1558. The Balkh Çeşme incorporates a Byzantine plaque depicting two fishes.

Monuments in the vicinity. The large, pillared mosque at Meram of Karamanoğlu Mehmed Bey, 805/1402, stands beside the hamam of Ibrahim Bey, 837/1434, which is fed by the Irine springs.

Local mid-13th century caravanserais each with portal, court and hall and all partially ruined, are Kandemir (Yazanöö) Han, 602/1206; Kiz Üren Han, ca. 601/1205; Dohtuzun Han, 607/1207; Altunba (Altunapa) Han, early 13th century. The Zaza (Sedaddi) Han, 633/1235-6, is in better repair and noteworthy for the extensive re-use of classical material and early Christian tombstones.

I. Köprüli Mehmed Pasha (1866-1907/1758-1605), the Ottoman vizier who gave his name to the family. If, as his contemporary, Hıdırlük Mehmed Aga says (ibid, in the near-by village of Kârrail, 1928, 1, 226), he died at the age of 80, he must have been born in ca. 968/1378 (for other estimates of Mehmed Pasha's age, see Defterdar Şarif Mehmed Pasha, Zâtât al-arâkāli, 4-17; Kâlimânîyya, Suleyman-ı Esad Ebêli, 2382; Râşid, Târîkhi, Istanbul 1284/1865, i, 6; 'Atî, Târîkhi, Istanbul 1291-3/1882-6, ii, 69; Ahmad Rûfîdd, Köprüllîier, Istanbul 1337/1919, 91; Usuncârî, Osmanlı tarihî, iii/1, Ankara 1951, 420 in Albania (see above). Brought to Istanbul in his youth, he was taken into the palace and by 1823 was a cook in the palace kitchens. He secured the backing of Köşeser Aga [see Köşeser Pasha, Bosnağî], then in the Mâdâşa-âla, and entered first the bâyûk eda, then the kâzîm-ı osâfi. His quarrelsome and dissatisfied led to the termination of his career within the palace, and he went out to the provinces as a sipahi; it was thus that he first went to the town of Köprül in Anatolia where he settled and married 'Ağha Khârlêm, the daughter of the vaivode of Köprü, Yusuf Aga, from the Kayâkıd ejîfsh in Hava. During Köşeser Aga's tenure as âga of the Janissaries, Köprüli again entered his service, and when Köşeser became Grand Vizier (1037/1628) Köprüli became his treasurer (Khâsimâde). Following Köşeser's execution (1041/1632), Köprüli served in certain provincial posts, as vaivode or âga, probably in or near Köprü: according to Hüseyîn Hüsâm al-Dîn, for example, he was sandıcâbegi of Amâçâî for some eight months in 1044-1634-5 (Amâçâî târîkhi, iv, Istanbul 1928, 61). He subsequently came again to Istanbul where he held a variety of posts such as that of Inspector of the Guilds (Hâbiqâā ağaçalî, Inspector of the Arsenal (Tophâne-âla), Commander of the Sipahîî of the ali bûlûk; Sipahiî ağaçalî and Commander of the Armourers (Djebeşi-bashi). Taking part as sandıcâbegi of Corum in the siege of Baghdad (1048/1638), in which he was wounded, he was attached to the Grand Vizier Kemânêkî Köru Maştaş Pasha and was appointed Kapâlîlar-khêbudüd and, later, Mîr-âla. In 1053/1642-4 he held the post of sandıcâbegi of Amasya a second time, for some five months. Köru Maştaş Pasha's successor, Sulûn-zade Mehmed Pasha, gave Köprüli the governorship of Trabzon with two jûgâs. How long he remained in that post is unknown, but he later revisited it in Köprü and then, in 1057/1647, became miştetâîîm for the eyâlete of Damasuk when that province was given to the seventh Meşrûf as a basbâsrûliî by Sultan Ibrahim (Naîmaî, Târîkhi, Istanbul 1281-9/1674-5, iv, 243; Silahdarî, i, 223). While in this post, he was ordered to campaign, acting as beglerbegi of Karamânî, against the rebellious
on Istanbul. Having fallen prisoner to *AH Pasha in

days. Having tried persuasion, Koprulu caused their
in Istanbul and who attempted to provoke such a
quarrel after Koprulu had been in office only eight
long his considerable abilities came to be widely
acquainted. Among his first acts was to deal with the
Kadizade, who, since the time of Murad IV,
been engaged in troublesome sectarian quarrels
in Istanbul and who attempted to provoke such a
quarrel after Koprulu had been in office only eight
days. Having tried persuasion, Koprulu caused their
ringleaders to be banished to Cyprus (see Kadi
1557, 332-4; Na'im, vi, 227 ff.; Sildhabr, i, 57-9.
Koprulu continued his efforts to bring peace and
order to Istanbul. Along with causing the executions
of certain individuals, among them Adbas Ahmed
Pasha, accused of laviety in the defence of Bozja-ada
which he had surrendered to the Venetians, and the
Orthodox Patriarch Parthenios III, who was ac-
cused of seditions activities, he succeeded in quelling
a rebellion of the sipahi dissidents (sorbis) and
purging their number (16 Rabii' 1 1067/January
1657: for details, see Ta'rikh-i Ghilmani, 44 ff.; Na'im,
vi, 246 ff.; Sildhabr, i, 62 ff.).
Koprulu then set about preparations for a cam-
paign to end the Venetian threat to the Straits and
in particular to recover Bozja-ada and Limnos.
Having sent the fleet out first, under the Kapudan
Pasha Topal Mehmed Pasha, he himself set out, as
commander-in-chief, on x Ramad-an 106/13 June
1657. The Ottomans faced badly at first in the
clashes at sea, but their fortunes changed when, on
19 July, a ball fired from the Anatolian shore struck
the powder magazine of the flagship of the Venetian
admiral Mocenigo, destroying it and throwing the
Venetian fleet into confusion (Ta'rikh-i Ghilmani,
44 ff.; Na'im, vi, 279 ff.; P. Rycaut, The history of
the Turkish empire from the year 1667, London
1869, 54 [Mehmed IV]). Koprulu rewarded the
successful gunner and others who had fought bravely
but executed a number of him responsible for the
earlier failures. This action disquieted even his supporters in Istanbul and led to
agitation for Koprulu's removal by Kara Hasanzade Huseyn Aga, an influential member of the
Janissary corps: his efforts were in vain, however (Na'im, vi, 295 ff.). The Grand Vizier meanwhile
continued his efforts to take Bozja-ada, which goal
his forces achieved on 21 Dhul-1-Ka'da 1067/
31 August 1657 (for a letter sent by Koprulu to the
Kister-aghah Mehmed Aga, see Ta'rikh-i
Ghilmani, 47 f.: for other details, see Na'im, vi,
289 ff.; Silhadbr, i, 69 ff.), an event which caused
great joy in Istanbul. In an imperial rescript sent
to Koprulu, the sultan ordered him to remain until
Limnos was taken, and Koprulu's existing forces
were strengthened by timarots from Borse and
other sanjaks. Having repaired, supplied and garrisoned Bozja-ada, Koprulu dispatched Topal
Mehmed Pasha to Limnos. After a 60-day siege
from both sea and land, the defenders surrendered
the fortress on 8 Safar 1068/15 November 1657
on condition that those in the fortress be allowed
to leave with their goods.
Having countered one danger to the state by
opening the Straits and recovering the two islands
lost to the Venetians in his predecessor's time,
Koprulu went to Edirne (25 November 1637) where
he had been summoned by the sultan on account of
pressing problems in Transylvania (see mndel).
The ambitious George Rakoczi II, prince of
Transylvania since 1648, had, as a result of an
agreement made with the King of Sweden in December
1656, marched against Poland with Transylvanian
forces; and when he incited the begs of Wallachia
and Moldavia to act with him, in defiance of the
Ottomans, the imperial divanh felt it necessary to
take measures against him, deciding that a campaign
should be undertaken, first by the Khan of the
Crimea, and later under the command of the Grand
Vizier: (for details, see Szilagyi Sándor, Erdély es az
eszakkeleti labdarú, Budapest 1891, ii, 244 ff.).
The begs of Wallachia and Moldavia were also replaced
(N. Iorga, Histoire des Romans et de la romanité
orientale, Bucharest 1940, vi, 226 f.; Na'im, vi,
321 ff.). Koprulu left Edirne on 22 Ramad-an 1068/
23 June 1658 and went to Belgrade. His army
was strengthened by Crimean and Cossack forces, by
the provincial forces from Buda and Silestria, and
Encyclopaedia of Islam, V
by a force of 12,000 men sent by the King of Poland. Entering Transylvania, he moved first against Yaneva (Kis Jenő), a key point taken in Károly Süleyman’s time but subsequently lost, and received the surrender of the fortress on 31 August. Rakoczy, who, under Ottoman pressure, had been replaced at the end of 1657, had returned and driven out the Ottoman-backed prince and re-established himself (see Saliyyâ Aro and Saliyyâ Sânî, Török-Magyarhorû állam-ölelménysé, Pest 1870, ill, 442 ff.; Homan Balint and Székfi Gyula, Magyar történeti, Budapest 1935-6, iv, 60; Dönt-Gökkül, I4 art. Erdül). After the taking of Yaneva, Köprülü caused the Crimean and Cossack forces to plunder Erdül Belgrad (Pókivár), the centre of government, in order to seize Rakoczy, but the latter was under¬stood to have escaped to a fortress on the Austrian frontier. Köprülü’s desire to punish him was thwarted by a summons from the sultan because of a revolt in Anatolia. He therefore appointed Akos Barcsay as prince on condition that he pay kharâjim and that he hand over the areas (muhâkât) of the fortresses of Sebeg and Lugoj, together with the cannon and munitions within them; and at the same time he charged the beglerbegi of Buda, Kenâm Fascha, with the oversight of that area (for the appointment of Akos Barcsay, see Üz-arî, Ebej Barçayyan Erdül huâlûgma yâmını hâvârî bir huc vesihâ, in Beleden, vili [1943]; idem, Barcsay Akop'un Erdül huâlûgma idi bân originel vesihâlar, in Tarihler, iv [1935-3]; Naîmî, vi, 354 ff.; Şîlâdârî, 1, 126 ff.). For some time a revolt of serious proportions had been building up in Anatolia. To the long-standing causes of unrest there added the uncertainty and fear inspired in many sipahîs and commanders by Köprülü’s harsh behaviour. The leader of the dissidents was the beglerbegi of Aleppo, Abaza Hasan Pasha [q.v.], who realized that his past actions constituted a cause for the sort of punishment which Köprülü had meted out to the serbs in the capital. With him, in Konya, gathered a number of command¬ers, among them the wali of Damascus, the victor Tayyar Pasha-zâde Ahmed Pasha; the beglerbegi of Anatolia; and some fifteen other active or retired beglerbegis who, fearing for their lives, sought to replace Köprülü with Tayyar Pasha-zâde Ahmed Pasha.irst replying to the summonses from the capital to join the Transylvanian campaign, with excuses, they subsequently openly declared their rebellion, saying that they could not join a campaign with Köprülü, who had caused the deaths of so many Janissaries and sipahîs (Naîmî, vi, 354 ff.). Ignoring an imperial command that they should either disperse to their several places or engage in the defence of Baghûdâ, the rebels came as far as the vicinity of Bursa. Summoned by the sultan, Köprülü arrived in Edîrne on 24 Phaire 1069/21 October 1658 and was present at an ayâk dwâwî three days later in the sultan’s presence at which the fateâd given by the Shââykh al-Islâm for the punishment of Abaza Hasan was read out. Though a punitive force under the beglerbegi of Diyar Bakr, Muradât Pasha, was already on the field, it was decided that Köprülü himself should campaign; and, accompanied by the sultan, he crossed to Edûdar on 23 November 1658. Abaza Hasan, meanwhile, using the pretext of the distribution of pay to the army in Istanbul, dispatched some 7000 sipahîs to Edîrûdar, ostensibly to collect their pay but in fact to assassinate Köprülü. The latter, however, apprised of the plot, removed the names of 7000 sipahîs from the rolls and executed about 1000 who were caught. The unrest caused in the army by this fresh show of force led him to abandon the campaign and leave the matter to Muradât Pasha. Although Abaza Hasan defeated the latter near İlin (15 Rabû I 1069/11 December 1658), he was compelled to winter in ‘Aynâm. Muradât Pasha, having received reinforcements, pressed the rebels closely from Aleppo, depriving them of provisions and other necessities. When Abaza Hasan’s forces began gradually to desert to Muradât Pasha, the rebel leaders went to Aleppo to submit to the govern¬ment, only to be deceived and executed (13 Dümidà I 1069/10 February 1659: Tâhâbî-i Şîlâdârî, 51 ff.; Naîmî, vi, 376 ff.; Şîlâdârî, 1, 132 ff.). Following this outcome, Köprülü had himself with the solution of internal problems like the local barb soldiers in Damascus who had been acting disruptively for some time, whom he struck from the rolls and replaced with five asas of garrison Janissaries from Istanbul; and the revolts of Cemal Mehmed Beg in Egypt and of Mustafa Pasha, known as Kır Beg, in Antalya. Coming to Bursa with the sultan (19 July 1659), Köprülü instituted a sweeping attempt to bring order to Anatolia by summoning Ismâ‘îl Pasha, who had been left as reîm-mahbûm in Istanbul, and charging him with carrying out investigations (tafliz) throughout Anatolia, “from Uskûdar to ‘Arâbistân”, specifically to seize and punish any whom he found to have been involved in the Đâlîl revolts (see Naîmî in Suppl.), whatever their rank or status; to restore to râ‘îsîâ status those falsely claiming to be naskhs; to deprive those unable to prove their claim to be sayyîds of their distinctive turbans; and to seize and send to the imperial arsenal any arms or weapons found in the possession of the râ‘îsîâ (Naîmî, vi, 415-6). But during these years he was also guilty of certain injustices such as bringing about the execution of the famous Deli Hüsnû Pasha (see Huşnû Pasha Delî), in spite of the opposition of the Shââykh al-Islâm, by concocting false complaints (Rabû II 1069/December 1658); and of Seyyid Ahmed Pasha (1071/1660-1), long in state service and most recently active in the continuing struggle in Transylvania (for the defeat and death of Rakoczy in this period and for the conquest of Orâdea by Köse ‘Ali Pasha (Dîvân-ı-‘Ilhâmî, 1073/1660, 1660; see I4, art. Erdül). Köprülü, in his illness greatly weakened him, and while journeying between Edîrne, to which he returned with the sultan in November 1659, and Istanbul. Age and illness greatly weakened him, and while journeying with Mehmed IV to Edîrine in July 1661, Köprülü recommended, and the sultan agreed, that his son, Fâül Ahmed Pasha, should succeed him in his death. Ahmed (Köprülü-zâde) was immediately brought from Damascus and made reîm-mahbûm in Istanbul. When his father’s condition worsened, he was summoned to Edîrine and acted as reîm-mahbûm for his father for 48 days until Köprülü’s death on 7 Rabû I 1074/31 October 1661. His body was brought to Istanbul and buried in the mausoleum near the dîr al-bâlih which he had built near Çemberlî Tâsh (Şîlâdârî, 1, 229 ff.). During his five years in power, in a period when confusion reigned in all the institutions of state, Köprülü succeeded in calming the prevalent spirit of rebellion and disorder through harsh and merciless acts. On the latter count, certain historians have characterised him as cruel and bloodthirsty (Şîlâdârî, i, 226; ‘Oâihmîn-zâde Tâsh, Hadîtht al-unwarâ, Istanbul 1377/1854, 166); but while he was not
guiltless of unjust acts, such judgments must be tempered by the recognition of the disabling turmoil which had afflicted the state since the death of Murad IV and of the great services which he performed in office (Ata, li, 69 ff.). In fact, historians like Mehmet Kâllife, 'Abdil Pasha, Namânî and Rashid are united in praising Köprüli. When Köprüli came to the Grand Vizierate, he said to those around him that the state expected service, not show from him, and he remained true to this principle to the end of his life (cf. the relation of Durrüsh Efendi, the kâthî of the Dür al-sâ'âde aghâh, to Rashid, i, 18).

Köprüli caused the straits at Canakkale to be strongly fortified (see Efendi, i, 300 ff.). His benefactions, estates, and endowments are to be found in a great many places: for example, a mosque, a school and shops in Yanova; a mosque and school in Rudnik; and a mosque and a school in the town of Tarakîli in the sahâng of Bolu (see further the listing in 11t, art. Köprülîzâde [Gökselînî], vi, 897 ff.). His sons-in-law, Kâliche Mustafâ Pasha, Kaplan Mustafâ Pasha, Kara Mustafâ Pasha, Kara Mustafâ Pasha (Merzifonlu) (g.o.) and Süleyman Pasha, all held high positions during his own son’s Grand Vizierate.

II. Fâtih Ahmed Pasha, a dâhid-i Âbbâsî (1645-87/1635-76), the elder son and successor of Köprüli, was born in Köprü in 1635. Brought to Istanbul at the age of 7 by his father, he studied under the leading learned men of the period, first under 'Oğûmân Efendi, later under Kara Celebi-zâde 'Abdil-â'zîz Efendi (see Kara-zâtân, i, 87 ff.). Through the influence of his father he was, while only 16, appointed a nâdîrlîs, first at îdârî, then at dâhid-i level. Now known as Paşa-zâde, his lessons proved popular, and in 1657 he was raised to the sahâng-i thâmân. Shortly after, however, upset by gossip amongst the high ranking, he abandoned the learned profession and took up an administrative post. In 1658/59 he was, at the request of his father, appointed to the government of the eyâlet of Erzincan with a vizierate. One year later he was transferred to Damascus. Then his father’s death increased his popularity by causing an imperial rescript to be issued removing two taxes, called dâshâsh and varîba, which his predecessors had levied on the people of Damasc and which had sometimes risen as high as 3-4 million akças. Under orders from the central government he moved against the Durûz (g.o.) and defeated the Ma'ûnis and Shâhâbids, thereby securing the payment of a tribute of 500 purses and the abandonment of the brigandage in which they had been engaging for some time. He also caused to be made into a beglerbegîth the region where the Ma'ûnis and Shâhâbids lived together with the areas of Suya, Bayrût and Surad which till then had been governed by a vali (1660: for details, see Dâwâshir al-tawthîch der âbbâsî Fâtih Ahmed Paşa, Silâymanîye-Esât Efendi 214, fol. 1: Silâhîder, 1, fol. 16). Although he was later appointed beglerbegî of Aleppo, he was summoned to Istanbul as kâthî-mahâhâhî before he could take up the post and subsequently succeeded his father as Grand Vizier (see above).

Amongst the new Grand Vizir’s first concerns was the continuing unsettled situation in Transylvania. Some measure of order was established there, however, without Köprüli-zâde’s direct intervention, by the victory in January 1662, near Sighisoara, of the beglerbegî of Yanova over Rakoczey’s successor, János Kemény, which ensured the control of the Ottoman-supported Mihály Apafi. Though a campaign against Venice was mooted for 1663, this was abandoned in favour of a campaign against Austria, which had constantly been attacking Ottoman frontier forts and outposts and which was seen as the more dangerous enemy. The army moved out from Edirne on 5 Ramadan 1073/13 April 1663. During discussions in Belgrade and Osijek with Austrian ambassadors, Köprüli-zâde demanded the destruction of a newly-built Austrian fortress (Zervânî) facing Nagymamza in western Hungary; the withdrawal of Austrian troops from Transylvania; and the restoration of the annual 30,000 florin tribute which the Austrians had paid from the time of Suleyman I until 1605 (later, in Buda, modified to a demand for a single 400,000 ghurûsh payment like that agreed at Zsitva-Torok in 1609). The Austrians were unable to accept the last of these conditions, and Köprüli-zâde set off from Buda against the fortress of Nové Zámky (21 Dhû l-Hijjah 1073/30 July 1663; see Kâthî Mustafâ Zuhdi, Ta’âhirî-i Uyûsî, Istanbul University TY2488; Rashid, i, 23 ff.; Dâwâshir al-tawthîch, which to which he laid siege on 17 August and which finally surrendered on terms on 21 Safar 1074/August 1663 (22 September in Montecuculli, Mémôres de Montecouucou, Paris 1712, 332 ff.). Having deputed subordinates to take several other fortresses among them Neugrad and Nitra, Köprüli-zâde returned with the army to winter quarters in Belgrade, intending to move out from there against the Austrians in the spring. The campaign by the Hungarian commander Zrinyî and General Hohenlohe in January 1664, during which Berzence, Babosca and Pesz were occupied (Magyar történeti, iv, 168), led the Grand Vizier to move toward Osijek; but on hearing that the local commanders had gained control of the situation, he returned to Belgrade (28 February 1664).

The fall of Nové Zámky, regarded as the last major block to the Turkish advance into Europe, had aroused great anxiety in Europe and led to contributions of men and money to the Habsburg cause from the Papacy, Spain, some of the German princes and even France and to the formation of a sizeable force under the command of the Duke of Mantua. A Christian force laid siege to Nagykanizsa, in response to which Köprüli-zâde advanced on that fortress. The siege having been lifted at his advance, he took and destroyed Zervânî (6 Dhû l-Hijjah 1074/30 June 1664), the building of which had been one of the ostensible causes of the present campaigns, and then moved northward, his forces taking Kisimomor (14 July), Egerseg, Egervár and Kemendâv (Dâwâshir al-tawthîch, fol. 82 ff.) and advancing to the river Raab (Raab). Here, near the village of St. Gotthard, they came face to face with the imperial forces under Montecuculli. Though Köprüli-zâde was actively engaged in peace negotiations with the Austrian ambassador, he decided to cross the river and engage the enemy. The bridge proved inadequate, however, and only a part of the Ottoman forces got across. In the battle which ensued (8 Muharram 1075/August 1664), these at first had some success but were ultimately driven back, both sides suffering heavy losses (for details, see Montecuculli, 416; Hammer-Purgstall, Histoire, xi, 181 fl.; Ahmed Muhîlîh, Sen Gohárda Oltâmndî ordîsî, Istanbul 1346/1928).

This defeat, though by no means decisive, forced a more defensive policy on the Ottoman army, which had previously moved as it will (Dâwâshir al-tawthîch, fols. 90 ff.). But within ten days the two sides had signed the Treaty of Vasvár (17 Muharram 1075/10 August 1664) which largely satisfied Ottoman
aims and, in particular, left them in possession of Nové Zámky and assured their influence in Transylvania (for a Hungarian view of the treaty, see Magyar forint, iv, 169; for the treaty, see Baron de Testa, Recueil des traités de la Porte Ottoman, ix, Paris 1868, 50 ff.; Tarihk-i Qhidirî, 90 ff.; Sihâbdîr, i, 364; Râşidî, i, 78 ff.). After advancing to the area of Nové Zámky, which he had heard was to be besieged, Köprülü-zâde received there the confirmed copy of the peace treaty from Vienna and therefore returned to Belgrade where he wintered in order to oversee the implementation of the treaty. He returned to Edime only in July 1665, and from there to Istanbul, inspecting the terms of the Dardanelles in company with the sultan and the vizir.

At a consultative assembly in December 1665, Köprülü-zâde proposed a major effort to take Kandîya [q.v.] in Crete, the siege of which had for years been the cause of heavy losses; and it was agreed that preparations for such a campaign should be put in hand. Departing from Edime in Dhu ‘l-Ka‘da 1076/26 May 1666, Köprülü-zâde crossed from Monemvasia, chosen as the mainland base for the campaign, to Canea in early November. The fleet was strengthened during the course of the winter and spring, and on r Dhu ‘l-Hijja 2725 May 1667 Köprülü-zâde convened an assembly of the leading commanders in which the plans for the conduct of the siege were laid (Djawdhir al-tawdrîkh, fol. 121; Defterdar Şarî Mehmed Pâsha, Zubdat al-wakîl, Suleymanîye-Efendi 1856, fol. 41 ff.; Râşidî, i, 164 ff.). The siege was pressed vigorously, with varying fortunes, until mid-November when Köprülü-zâde, who had lived in the trenches from the beginning of the siege in order to encourage the troops, suspended operations for the winter. During this period Köprülü-zâde received Venetian commissioners and was in correspondence with both the Doge of Venice and the Venetian captain-general Morosini with regard to negotiations about the fate of the fortress (Djawdhir al-tawdrîkh, Köprülü Fazî Abî Hâmet Pâsha, 231; Râşidî, i, 185 ff.). Both sides gathered reinforcements in the spring and, with Köprülü-zâde entering the trenches once more on 12 Muḥarram 1079/22 June 1668, the issue was again hotly contested through the summer (for details, see Jawdhir al-tawdrîkh; Râşidî, i, 208 ff.; Hammer-Purgstall, Histoire, xi, 511 ff.). Knowing that Köprülü-zâde was in the city and the surrender of Kandîya, the Venetians approached the sultan, then in Yâshihbûr [Larissa], in Thessaly, for more favourable terms, as a result of which Mehmed IV demanded to know of the Grand Vizier the situation, warning that it would be impossible to raise men and supplies were the siege to last another year. At an assembly convened by Köprülü-zâde on 8 Râdja‘î 12 December 1668, it was agreed that the fall of Kandîya seemed close at hand, and arrangements were made to winter in the trenches (Râşidî, i, 178 ff.). Friction amongst the Venetians and their allies led to the withdrawal of the allied fleet at the end of August 1669, which left the Venetians little chance but to surrender. After six days of discussion, terms were agreed on 8 Râbi‘ II 1080/5 September 1669 (see Râşidî, i, 240 ff.; Mu‘âṣâ‘âdî Mu‘âṣâ‘âdî, ii, 141 ff.; Norerdoungâhî, Recueil d'actes internationaux de l'Empire Ottoman, i, Paris 1857, 134 ff.). Köprülü-zâde supervised the evacuation of the site of the Kandîya fortress on 27 September. He remained through the winter to repair the fortress and to have a new land survey (mâbar) made in the Mediterranean islands. He also pacified the Mainotes with a letter which he sent, and he forgave their outstanding taxes (for details, see Jawdhir al-tawdrikh, fol. 122 ff.; Köprülü-Mehmed Âsm Anbey 724, fol. 235 b; Bayyekalât arjîvî, tabir dextertîrî; Eviyâ Celebi, Sâhîh-nâmê, viii, 498 ff.; Sîhâbdîr i, 538). Returning by way of Tekirdâg, he arrived in Edime in mid-Şârâ‘i 1671/early July 1670 and surrendered the sacred standard to the sultan.

For diplomatic relations with France in the early 1670s, leading to a renewal of the capitulations on 5 June 1673 (19 Şâfâr 1084), see J. Chardin, Voyages en Perse et autres lieux de l'Orient, Paris 1814, iv, 168 ff. (for the return of a Venetianologist, see L. d'Arvieux, Mémoires du châtelain d'Arvieux, Paris 1735, iv; Hammer-Purgstall, Histoire, xi, 341 ff. See also intirîyârîî the Ottoman empire, esp. at p. 1254a).

In 1672 a campaign was undertaken against Poland on behalf of Peter Doroshenko, hetman of a group of Ukrainian Cossacks, who had accepted Ottoman suzerainty in 1669; and on 7 Şâfâr 1084/5 June 1672, Köprülü-zâde left Edime with the army, accompanied by Mehmed IV, who was to take an active interest in the campaign (for correspondence between Köprülü-zâde and the King of Poland in May 1672, see Râşidî, i, 486 ff.). The principal object of the campaign, the fortress of Podolody [see samandos] was taken on 3 Dinâmâ 1085/15 August 1672 after a nine-day siege (Nâbî Yuâsî, Tarihk-i Kamâmîn, Istanbul University Târikh-i Tûrîq, i, 285 ff.; Jawdhir al-tawârikh, fols. 122 ft.; Köprülü Mehmed Pâsha, Şîhîh-nâmê, Suleymanîye-Halî Efendi 615, Topkapî Sarayi-Bağdat köşk-i 217). The rapid Ottoman advance in Poland, and particularly the siege of Lwów, compelled the Polish King, Michael Winoziwicz, to sue for peace; and terms were agreed at the recently-taken fort (palmanka) of Buchach (18 October 1672: 'Abdî Pâsha; Râşidî, i, 284 ff.; Norerdoungâhî, i, 52). The harsh terms of the treaty, which included the loss of Podolia and the Ukraine and the payment of tribute, made it unacceptable to the Polish Diet. Their refusal to ratify it and implement its terms led to further Ottoman campaigns in the following years, of which Köprülü-zâde, once again accompanied by Mehmed IV, directed those in 1673 and 1674. In the main action of the former year, Köprülü-zâde was appointed commander to save Köthîn [q.v.] from the attack of John Sobieski, but the fortress was lost before he could arrive. The latter year saw a successful campaign into the Ukraine (Köthîn having been retaken by the Khan of the Crimea) in response to Russian incursions. Köprülü-zâde, now in poor health, returned to Edime with the sultan on 22 Şâbâ‘î 1085/21 November 1674 (see Râşidî, i, 375 ff.), and the campaigns of 1675 and 1676 against the Poles were left to others.

In his last years, Köprülü-zâde’s illness worsened through his addiction to drink. Although he followed the sultan when the latter left Istanbul for Edime with the army in early Şâbâ‘î 1085/22 October 1675, he was too ill to get even as far as Edime and died on the Kara Biber đilîgï, near Ergene köprüsi (between Çorlu and Kâzâkîran), on 26 Şâbâ‘î 1087/3 November 1676 at the age of 41 (‘Abdî Pâsha), his death resulting from acute
dropsy brought on by drink (Silahdar, i, 659). His body was brought to Istanbul and buried in his residence (formerly that of Wisha Sultan, later that of Mehemmed Pasha). Köprüli-zade saw to the completion of two or three longest in Ottoman history. Tall and stout, with a round face and large eyes, he is described as dignified and inspiring respect. Especially significant is the high praise accorded his virtues by Silahdar (i, 659) in view of that historian’s harsh judgements on Köprüli Mehemmed Pasha. Köprüli-zade saw to the completion of pious foundations begun by his father, such as a half-finished hünkâr and mosque in Rumeli, and also of his foundations in Cemal Teşhi in Istanbul (Dinâşâbîr al-taşârûfi, fols. 438; and, as evidence of the great value which he himself placed on learning, one may cite the library which he established near his residence (formerly that of Şâfiye Sultan, daughter of Sultan Ibrahim and wife of İnpâş Şahâ) in the vicinity of Aya Sofya (Uınumamî, Osmanlı tarihi, iii/2, 438) and which he enriched with many very valuable books acquired both while as müdtessir and in later times. The wasfiyya for the library, which was drawn up two years after his death, in 1091/1678, and which makes provision for students and the teaching of certain subjects there, is now in the Köprüli library (no. 4 of the wasfiyyas of the Köprüli family; M. Gökmen, Küttâfîneurûmiden notlar, Istanbul 1952, 52; Şahîâvi, Wâbinâ’eh al-fudâlā, Istanbul University TY81, fols. 621). His other foundations include a mosque in Kandıya (for a copy of the imperial grant of the land (mutkâr) given him in Kandıya, dated Rabâ‘ II 1081/August-September 1670, as well as other documents demarcating boundaries, see the above collection of Köprüli manuscripts, nos. 11 and 12), a mosque in Nevâ Zâmyk and Karmeti, and an uncompleted hünkâr (later completed) in İzmir (Silahdar, i, 659).

Fâdîl Ahmed Pasha was also the patron of a number of men of learning and the arts, among them his private secretary (müdtessir), Hasan Ağha, author of the Dinâşâbîr al-taşârûfi, which is based on the documents committed to his charge (there exists in the Nationalbibliothek, Vienna, a Latin translation of this work, made in 1680 and entitled Annales gemma, author Hasarana . . . . . C. A. Galland, Journal, tr. N. S. Öřič, Hattâlilâr, Ankara 1949, 197, n; Büh linger, 216-17); M. A. Dina, who was with him throughout the siege of Kandıya; Nâhi, Zubûll, the author of the Tafris-i Ûsdân; the retîn-ûl-hakâflâ Tâlib Ahmed Efendi; the poet Fânnî; and Huseyîn Hürerîmî [4.7.; cf. Safêt, Tâfris-i Ell ül-beynân, Istanbul University TY323, fols. 190 ff., 242 ff.; Şahîâvi, fols. 680-95].

III. Fâdîl Mustafâ Pasha (1047-1102/1637-91). Ottoman Grand Vizier, the younger brother of Fâdîl Ahmed Pasha. Born in Kopri in 1047/1637, he began medrese education together with his elder brother. Whether he received a medrese appointment is not known, but in 1070/1660 he is seen to have received a şâzâmed and to have entered the ranks of the sultan’s guards as a müftü (Silahdar, Osmanlı tarihi, iii/2, Ankara 1934, 431). In view of the fact that he was in Crete, together with his mother, for the whole of the final siege of Kandıya (1666-9), that he was at Fâdîl Ahmed’s side when the latter died and that he bore the Grand Vizier’s signet ring to the sultan (for the kâdir granting him a şâzâmed at this time, see Beyveliâket ârâdî, Ali Emírı tarihi, period of Mehemmed IV, 229), one may suppose that he spent most of his time with his elder brother, on campaign. On 25 December 1090/20 June 1680 he became seventh vizier at the instigation of his brother-in-law, the Grand Vizier Merzifonlu Kara Mustafa Paşa (see KARA MUSTAFA PASHA, MERZİFONLU). The next year he was served as governor (muderris) to the Wâhidî Sultan and the princes Sileyman and Ahmed when they went to Edirne; and he performed the same function the following year, now as sixth vizier, when they remained in Edirne after the departure of the army for Istanbul (Rabâ‘ I 1681/March 1681) following the conclusion of peace with Russia. At the time of the army’s departure on the Austrian campaign of 1683 (Rabâ‘ II 1684/April 1683) he remained in Edirne as guard (muderris) to the Wâhidî Sultan, with the posts of fifth vizier and 礌림-مطاوام of Edirne. He was later appointed to the governorship of the eyalet of Siliistra with the addition of Nicopolis (i.e. the Îzî mubâhâflûrîk) and became commander at Babadagil (q.v.). With Kara Mustafa Paşa’s dismissal and execution (December 1685) following the failure of the second siege of Vienna, and on the report that John Sobieski, King of Poland, was making preparations against Kârnedes and Moldavia, it was decided to replace Fâdîl Mustafa with a more experienced commander: he was summoned to the capital as kâdir attî vizier, but kept the estates (kâdiratî) he then possessed (Rabâ‘ II 1684/March-April 1684; Silahdar, ii, 127). Reaching Edirne in mid-May, Fâdîl Mustafa occupied the position of third vizier in the divân; but before long he chose retirement, no doubt grieved by the enmity of the new Grand Vizier toward the Köprüli family. One year later, as the war with the Venetians in the Morea intensified, he was appointed commander (mubâhîf) of Chios (according to Silahdar, ii, 222, transferred from the Úsdân of Boghâz Köprilî zo), subsequently being transferred to the command of Boghâz Hüsîr on 4 Rabâ‘ 1102/28 February 1686 (Silahdar, ii, 230).

On 30 Dhu ‘l-‘Hâdîd 1098/1687, shortly after a rebellious army had made his brother-in-law, Siyavuş Paşa, Grand Vizier and begun a march on the capital, Fâdîl Mustafa was summoned to Istanbul as second vizier and  rakîm-mêdâtûm. Though Mehemmed IV had some hope that Fâdîl Mustafâ might help him save his throne, some slight by the sultan made Fâdîl Mustafa unsympathetic, and the latter was in fact closely involved in the deposition of Mehemmed IV (2 Muhamarram 1099/November 1689). He soon fell out of favour with the army, the instruments of the deposition, however, through resisting their demands for douâtives and attempting to establish discipline; and though his position was once saved by the new sultan, Sileyman II, he was subsequently effectively exiled by being appointed again to the command of Boghâz Hüsît (7 Rabâ‘ II 1100/16 February 1688: Silahdar, ii, 318 ff.; Zubâtul-mudfrîlât, fols. 87 ff.; Râchîlid, ii, 23). He was spared a worse fate by the refusal of the Şâhîâvi al-Islâm to sanction his execution. A little later he was moved to the command of Canea, then to that of Kârdiya, then, in Safêt 1103/December 1688, to that of Chios.

With the war against the Holy League going badly for the Ottomans in 1688-9, particularly on the Austrian front, it was agreed by the ulamâ to recommend to the sultan the appointment of Fâdîl Mustafa Paşa to the Grand Vizierate, and he was accordingly summoned to Edirne (11 Muhamarram 1101/25 October 1689). His first act was to issue a declaration (bâyi-nâme) designed to restore morale and to encourage the willing performance of military service. He also took steps to ease the lot of the tax-paying
subjects (re'dâyi) by removing a number of onerous extraordinary taxes such as the *re'sar-i khisar ve 'arab, a recently-imposed tax on drink which had led many Christian subjects in Rumeli to make common cause with the enemy (cf. *Zubdat al-wâlîyâh*, fol. 122). During the winter he was engaged in preparations for a campaign which he himself was to lead; and on 6 Shawwâl 1101/13 July 1690 he left Edîmen. He succeeded in recovering Pirot (10 August), the fort (pâlâka) of Mûsâ Phâshu, and, after a 23-day siege, the important stronghold of Nîjâh (9 September). Despite the isolation of the season and the opposition of his commandment, Fâdîl Mushtakh determined to march to Belgrade. Sannindzâr fell after a three-day siege, on 23 Dhû 'l-Hijjâ 1107/27 September 1690, and Belgrade after an eight-day siege, on 4 Muhamarr 1102/8 October 1690 (Sîlahdâr, ii, 509 ff.; *Zubdat al-wâlîyâh*, fol. 369, 174, 175; Râşhîd, ii, 123 ff.; cf. I. H. Dânîvânçî, *Ishâk Osmanî: tarîkhລromoxogî, İstanbul 1947-55, iii, 470). Detachments sent out from Belgrade succeeded in taking Boghûr-delen (Sabac) and re-establishing control over the Danube at Orçoâva but failed to recover Osîlek. Having seen to the repairing and supplying of Belgrade, Fâdîl Mushtakh set out for Istanbul (4 November 1690). During his return he was mindful of the re'dâyi, sending prisoners to their death and withdrawing the imperial larder whereby expediture was cut off. He spent the winter of 1690-1 dealing with matters such as uprisings in Egypt (by Ibn Winî) and the rebellion of the Danube (by Fâdîl Mustakh demobilized troops to recover Osîjek. Having seen to the repairing and supplying of Belgrade, Fâdîl Mushtakh set out for Istanbul (4 November 1690). During his return he was mindful of the re'dâyi, sending prisoners to their homes at the treasury's expense and also restoring lands and goods and providing the means of agriculture to those who had lived between Nîjâh and Belgrade but had been moved across the Danube by the Austrians and now wished to return. He spent the winter of 1690-1 dealing with matters such as uprisings in Egypt (by Ibn Wânî) and routine in the Janissary Corps, the imperial larder and the imperial larder whereby expediture was cut off (Sîlahdâr, ii, 559-60).

Though Fâdîl Mushtakh proposed that he remain in Istanbul in 1691 in order to oversee all fronts during the year and that another commander be sent to Hungary, it was thought best that he lead the campaign. By the time the army was ready to move (Shâbâb 1102/May 1691), Suleyman II was near death, and a faction opposed to Fâtîl Mustakh was making efforts to restore Muhammed IV to the throne. When the sultan died, his brother, Ahmed II, became *mutawallî* of the Kapriülû Mehmmed Pasha—see 'Amâjî-Zâde Husâyîn Phâshu (nephew of Köprülü Mehmed Pasha)—see 'Amâjî-Zâde Hüsâyîn Phâshu.

N. 'Unum Phâshu (1768-1771/1767-1770). Ottoman Grand Vizier, the eldest son of Fâdîl Mushtakh Phâshu. Born in Istanbul, he studied under Demir-Kapûl Fâdîl Suleyman and Kayserîli Hüfîrî As-Sayyâd Ahmed Efendi, among others, and became *mutawallî* of the Köprülü ağaî after his father's death. While Muhammed II was preparing for his second campaign against the Austrians, in 1696, he decreed that Nûmân, like the administrators of other rich foundations, should take part in the campaign, providing 150 infantry. In Muhammar 1112/July 1700, Nûmân Beg became sixth vizier and was betrothed to Arîsa Sultan, a daughter of Muhammed II (Sîlahdâr ââyî). He became begorbegî of Eruzum in Ramadân 1121/17 March 1702 and then, in Dümâdân 1114/October 1702, of Anatolia. His marriage to Arîsa Sultan, set for the spring of 1703, was delayed in the confusion surrounding the uprising known as the *Edirne wakeâlî* which led to the deposition of Muhammed II (9 Ramadân 1114/22 August 1703), who was replaced by Ahmedî III. Following this event, Nûmân Phâshu was appointed commander (muflâtî) of Erzège (Eroea), and by June 1704 he had become muflâtî of Crete, being charged with making a land survey (âlabîr) of the fiefs on the island (Râşhîd, iii, 137). Transferred to the command of Boghûr Hijârî on 26 Shawwâl 1117/10 February 1706, he was shortly after returned again to Crete. Though...
the marriage ceremony with Aisha Sultan was celebrated in Muḥarram 1220/April 1708, it was still to be several years before the marriage was consummated.

Appointed again to Eğdiböz in 21 Nīmadā II 1221/August 1709, he was summoned to Istanbul four months later (Ramādān 1221/December 1709) to consummate his marriage (Rāshid, iii, 317 ff.; cf. ibid., iii, 273-8, however, where the consummation is said to have occurred in Muḥarrām 1220/March 1709). He was made beglerbeg of Bosnia on 8 Shawwāl 1220/1 December 1709 but was then appointed to the command of Belgrade on 3 Dhū l-‘Khāḍa 1221/4 January 1710 (Rāshid, iii, 313 ff.); Uznargil, Osmanlı tarihi, iv/2, Ankara 1959, 297, where this appointment is given on 17 Rabī‘ I 1222/May 1710). On 18 Rabī‘ II 1222/June 1710, Nūr-i Pāsha was transferred to the Grand Vizirate in the hope that he would be more resolute against the Russians and better able to handle the problem of the supply of Swedish king, Charles XII, than his predecessor, Cōlūli ‘All Pāsha, had been (see ‘All Pāsha Corleve, Akses Namet Kurat, İnci Korat Kuri XII: Vĕn Türkeviđe haliş . . . , İstanbul 1943, 227, 229); his appointment was met with general satisfaction. Despite a strong movement in the government to concentrate attention on the Black Sea and the Polish question, Nūr-i Pāsha, trying to maintain peace with Russia, continued himself with announcing simply that a large army would see the Swedish king to his own country in the spring (see Rāshid, iii, 327; Ahmed Reftī, Mandal-ī Dīnāmiyye ‘d-Develmārā Shāhī, İstanbul 1932/1932/14, 30 ff.; A. N. Kurat, op. cit., 232 ff.; idem, XVIII. yıla boyunca Avrupa umumuh hürriyедин Türkiye’nin tarif- siğitliti, in Billetten, vii, 1943, 288 ff.; ‘St-Priest, Mémoires, 120-1).

Disappointed in his position of both external and internal affairs, Ahmed III removed Nūr-i Pāsha from the Grand Vizirate on 21 Nīmadā II 1222/17 August 1710; he was subsequently appointed mukālib of Eğdiböz (Silādār Ḍayyīl; Rāshid, iii, 320-1). For a complete bibliography on his wish to resign from the Grand Vizirate, see Behji, ʿTvārgiš-sulṭān-i Köprülü). In the nine years before his death he held administrative and military positions continuously in various parts of the empire. He became muḥāfāz of Canea in Shawwāl 1222/December 1710, and of Kandiyah in Dhū l-‘Khāḍa 1223/December 1711, while on 19 Shawwāl 1223/November 1713 he was given the sandal of Yanya (Ioannina) as an arpaḵīl (Silādār Ḍayyīl). The next year he was given the eydel of Bosnia together with the military command of the Karadağ (q.v.) area. While in this post he moved against the rebels of Karadağ, who were receiving aid from the Venetians, hunted them down and drove those who escaped to take refuge with the Venetians (Shawwāl 1226/October 1714; Rāshid, iv, 22-3. For the decree sent to him about this problem, see Bayvekalet arşivi, Iba‘ilumān, dāḥiyā, 4242).

Following this success, he moved to the command of Belgrade (January 1723; Silādār Ḍayyīl), where affairs were at a delicate stage; but under him, as in his predecessor’s time, disorder in this frontier fortress increased, as did desertions from the local levies and the kōptuļuļu soldiery. Dismissed because of this in Rabī‘ II 1227/July 1725, he was transferred to the governorship (muṭlaqar-rīl/lij) of the sanjūṣ of Tīl and Muṭlaqar and given the task of following the activities of the bandits who were profiting from the absence on campaign of the viziers and beglerbegs of Anatolia (Rāshid, iv, 237, 420 ff.). In Shawwāl 1228/September 1727 he was made beglerbeg and muḥāfāz of Cyprus (Silādār Ḍayyīl); and three months later he became commander (ṣarār) in Bosnia while retaining the governorship of Cyprus (for part of the firman of appointment, see Uznargil, Osmanlı tarihi, iv/5, 264, n. 1). During the period when the Austrians gained Belgrade (Ramādān 1227/August 1719), Nūr-i Pāsha beat back the enemy attack on Bosnia and forced the raising of the siege of Izvornik (October 1719). He remained active in the defense of Bosnia until after the signing of the Treaty of Passarowitz (29 Shawwāl 1228/July 1718), (see Rāshid, iv, 383; and for a copy of a decree sent to him in mid-Ramādān 1230/August 1718, see Bayvekalet arşivi, Iba‘ilumān, dāḥiyā, 2436) and was then transferred at his own request to the governorship of Creta in Ramādān 1230/August 1718. Falling ill as soon as he reached the island, however, he died in Kandiyah on 16 Rabī‘ I 1231/February 1719 and was buried beside the mosque of Fāḍil Ahmed Pāsha.

Nūr-i Pāsha was accounted an honest and pious man of the type upon whom one author remarks that he would have been better suited to the office of Sāyḥah al-Īṣlām than to that of Grand Vizier (Charles de Ferriot, Correspondance du Marquis de Ferriot, Antwerp 1820, 120). He is said to have having nothing from the estates attached to the various offices he held, but rather to have had his expenses exclusively from the income of the estates which he had inherited from his father (Behji). Both his younger brother and, of his sons, particularly Hāfīz Ahmed Pāsha (d. 1323/1795) made a mark in public life, as well as other descendants of the family down to the present day (see Köprülü Mehmed Fuad).

**Bibliography:** For further details and a more complete bibliography, especially of archival materials, see ʿAṣr kāt Köprülü, by M. Tayyib Gobedgin, on which this article is based. (M.K.-R. C. Repp)

**KÖPRÜLLÜ, Mehmed Fuad, until 1934 Köprüllü Mehmed Fuad (1890-1966), prominent Turkish scholar and the pioneer of Turkish studies in the modern sense in Turkey. Born in Istanbul, he was the son of İsmail Fazıl Bey, a civil servant, a descendant of the sister of the famous Ottoman grand vizier Köprülü Mehmed Pasha (q.v.) who married Kbildel Mustafa Paşa, one-time vizier of Mehmed IV. His mother Kcheidija Khâinm was the daughter of Ārif Kikem Efendi, a member of the ‘ulama of Isfīymie in Rumell (Sīlven in present-day Bulgaria). He was educated at Ayşapasha junior high school (rīzāghiyāvi) and at Mardrān high school (rīzāghiyāvi) in Istanbul. Later, for two years he attended the School of Law (Mekteb-i İhābı), which he left in 1909, but he was mainly self-taught. After teaching in various schools, he was appointed in 1923, with Dıyā (Eyle) Gökals support, to the chair of Türkiye tarih-Cografya Fahiiltesi (where he covered Ottoman history and institutions). He served for eight months as under-secretary at the Ministry of Education in 1924 and was elected deputy from Kars in 1936. After 1939 he settled in Ankara and joined political life. In January 1946 he became one of the four
founders of the Democratic Party [see Democrat Parti]. Following the 1950 elections he became Foreign Minister (1950-5) and Minister of State in 1956, but resigned from the party on account of a rift with the other leaders. Following the revolution of 27 May 1960, he was arrested and briefly detained on Yassuda (in the Sea of Marmara) where all Democratic Party leaders were being tried, but he was acquitted on all charges. In 1961 he founded the short-lived Vepi Democrat Parti ('The New Democratic Party') and soon afterwards retired from political life. He died in Istanbul on 28 June 1966 as a consequence of an earlier traffic accident in Ankara.

Fuad Köprülü started his career as a poet and literary critic. His name began to appear towards the end of 1908 in various papers and periodicals particularly in the Theres-i Feynim (vol. 1). As a poet he belonged to the Fejri Ali group [vol. 1], an extension of the Theres-i Feynim school. In 1912 he mainly contributed to the daily Hâkik and its literary supplement. He gradually switched to research and in 1913 he published in ‚Lâri-gâ’irâ hâkiti‘ (Ziya Gökalp) [vol. 1] and of the Turkish movement which he led [see Türk œikû], and contributed many articles to Türk yurdu (1928), the organ of the movement and to the daily İhâlây where he serialised a study on folk poetry (February-June 1924). In 1915 he founded the journal Millî tarihîvelîler mecmuâsî ("Journal of National Research"), where he published some of his early important study on ‚Hâkim poetry (1, 5-46). In July 1917 Gökalp founded the famous Yeni Mejmû-ә’si ("The New Review") which gathered together all the leading young writers of the period and where Fuad Köprülü published his new-style poems (in spoken Turkish, syllabic metre and on "national" topics as required by the new Millî edebiyât trend) and his articles of literary criticism and research. After the publication in 1918 of his epoch-making monograph on "Early mystics in Turkish literature" i.e. Ahmed Yesevi and Yûnis Emre (Türk edebiyâtında ilk müstehbât), and of the first two volumes of his monumental work entitled Tarih-i Millî (The edebiyâtî tarîhî, i, 1920 and ii, 1921), Köprülü concentrated his research on the origins and development of classical Turkish literature and culture in Anatolia; the evolution of Turkish Islam and Ottoman institutions; the Turkish legal system; and the development of Turkish literature in other literary dialects e.g. Azeri and Chaghatay. His work shed new light on the formative period of Turkish literature in Anatolia; very little research had been carried out in this field before him. But his greatest contribution is to have treated the evolution of the many branches of Turkish literature and culture as one unit and to have studied its development as a whole. In 1922 he founded in Istanbul University the Institute of Turcology (Türkçülîyät Enstîtûsû) and its organ the Türkçülîyät Mejmû-ә’si. Apart from his many articles (some of which are independent monographs) published in various scholarly journals, particularly *Hâkim*, Türkçülîyät Mejmû-ә’si, Edebiyât Edebiyâtîleri Mejmû-ә’si, Belleten, Türk külah ve ihtisâl tarîhî mecmuâsî, and the Turkish edition of the *Encyclopedia of Islam* (İslâm Ansiklopedisi), Köprülü is the author of the following major works: *Türkçülîyät Tarîhî*, i ("History of Turkey"), Istanbul 1923 (covers the period up to the settlement of the Turks in Anatolia); *Bugünkü edebiyâtı* ("Literature of today"), Istanbul 1924 (collection of early articles on literary criticism and book reviews); *Türk edebiyâtı tarîhî*, i, Istanbul 1926 (revised and enlarged edition of the two parts published in 1920-1); *Millî edebiyâtı dergiyanâhî sîlî mihtebehileri* ... ("Foresrunners of the national literature movement"), Istanbul 1928 (contains selections from the 10th/17th century poet Edemir NaNm who experimented with "pure Turkish"); *Türk Âli ve edebiyatı sûsûrında azaflarîmalar*, Istanbul 1934 (a collection of research articles and book reviews); *Les origines de l’empire ottoman*, Paris 1935; and another collection of research articles and book reviews); *MiUt edebiyya*, Istanbul 1938; *Bilgi Medeniyeti*, 1956, but resigned from the party on account of a rift with the other leaders. Following the revolution of 27 May 1960, he was arrested and briefly detained on Yassuda (in the Sea of Marmara) where all Democratic Party leaders were being tried, but he was acquitted on all charges. In 1961 he founded the short-lived Vepi Democrat Parti ('The New Democratic Party') and soon afterwards retired from political life. He died in Istanbul on 28 June 1966 as a consequence of an earlier traffic accident in Ankara.

Fuad Köprülü started his career as a poet and literary critic. His name began to appear towards the end of 1908 in various papers and periodicals particularly in the Theres-i Feynim (vol. 1). As a poet he belonged to the Fejri Ali group [vol. 1], an extension of the Theres-i Feynim school. In 1912 he mainly contributed to the daily Hâkik and its literary supplement. He gradually switched to research and in 1913 he published in ‚Lâri-gâ’irâ hâkiti‘ (Ziya Gökalp) [vol. 1] and of the Turkish movement which he led [see Türk œikû], and contributed many articles to Türk yurdu (1928), the organ of the movement and to the daily İhâlây where he serialised a study on folk poetry (February-June 1924). In 1915 he founded the journal Millî tarihîvelîler mecmuâsî ("Journal of National Research"), where he published some of his early important study on ‚Hâkim poetry (1, 5-46). In July 1917 Gökalp founded the famous Yeni Mejmû-ә’si ("The New Review") which gathered together all the leading young writers of the period and where Fuad Köprülü published his new-style poems (in spoken Turkish, syllabic metre and on "national" topics as required by the new Millî edebiyât trend) and his articles of literary criticism and research. After the publication in 1918 of his epoch-making monograph on "Early mystics in Turkish literature" i.e. Ahmed Yesevi and Yûnis Emre (Türk edebiyâtında ilk müstehbât), and of the first two volumes of his monumental work entitled Tarih-i Millî (The edebiyâtî tarîhî, i, 1920 and ii, 1921), Köprülü concentrated his research on the origins and development of classical Turkish literature and culture in Anatolia; the evolution of Turkish Islam and Ottoman institutions; the Turkish legal system; and the development of Turkish literature in other literary dialects e.g. Azeri and Chaghatay. KÖPRÜLÜ — KORÇA

KÖPRÜLÜ — KORÇA, modern Turkish Körçe, Greek Korytsa, Ottoman Gërgëje, all from the Slavic toponym "Gorka", the only urban centre of importance in southeastern Albania, situated at the edge of the homonymous plain at the foot of the Moravë Mountains, which constitute the natural barrier
between the Korča plain and Macedonia. Korča was one of the most important towns founded by the Ottomans in Albania. Throughout the Ottoman period (late 14th century till 1912), Korča was a local administrative centre (nâhîye, kâhîfîle), and latterly the capital of a sanjak in the vilayet of Manastir (Bitola) and a small Islamic centre.

The Ottomans annexed the eastern part of the present-day Albania in the last decade of the 14th century and established their regular administration there, with the castles of "Görđije" and Premedi (Fërnet) as bases. A terminus ad quem for the conquest, not recorded it seems by the Ottoman chroniclers (Fâshikspahâzâde, Orôt, Anonymous-Giese, Neshri, Sâd al-Din), is the church of the village of Mborje 3 km. east of Korča on the first spur of the Moravë, which church was, according to its well-preserved inscription, built by Bishop Niphon in the year 1390. Throughout the entire 15th century the name "Görđije" seems to have been used for a castle on the spur or the Moravë between the village of Mborje and the place where the town of Korča lies today. The Ottoman documents from the early period use "Em부voye" (from Imperator) and "Görđije" indiscriminately. A fragment of a lânmûr register from Safâr 886/April 1488 mentions a lânmûr of an "Ishâk the Albanian" situated in the "nâhîye of Görđije". This lânmûr included eight small villages (mostly with Slavic names), of which one numbered six Muslim households and two households of Christians. (Sofia, National Library, Orient. Dep., No D 649, p. 26). The document is an indication for the early start of the Islamisation of the district of Korča, an Islamisation which was not solely restricted to members of the old native nobility. The castle of Görđije was maintained throughout the 15th and the first half of the 16th century. When it disappeared is apparently not recorded. A lâmpûr defter (Bâsbakanlik arşivi [= BBA] T. D. 709, p. 257), written in 923/1519 (mentions a djemâ late of Christian müsitlenen of the castle. The village of "Enbovë, dependent on Görđije" numbered, according to the same document, 18 households of Muslims, 7 Muslim bachelors, and 86 households of Christians as well as 10 Christian bachelors and 11 widows. According to a lâmpûr defter of 935/1529-30, the same village numbered 15 Muslim households, 4 Muslim bachelors, 4 people with a boro, 1 sipâhi-âdâ, and 101 Christian households and 25 Christian bachelors (BBA, T. D. 167, p. 172). The same document states that there was a djemamâ late of Christian müsitlenen in the castle of Görđije consisting of 22 households and 9 bachelors. These müsitlenen were freed from ispena, savundur and tepetâtî in exchange for the fulfillment of the duties of repair and maintenance of the castle. Besides these privileged Christians, there was a djemâ late of 3 Christian families in the castle who had to deliver yearly 7,500 arrows, for which service the state freed them lrom paying the sandak and the various lekdiifal. The djemamâ Aydin, son of Dimitri, thus a recent convert, was freed from kharidi, ispena, vanundur and tepetâtî and forfeiyve for the service of keeping the water supply of the castle in good order.

The actual town of Korča is an Ottoman foundation, intentionally founded in order to form a Muslim urban centre in the district. The history of the foundation of Korča can be reconstructed with help of some Ottoman documents. In 929/1525 the Master of the Imperial Stables (Minâbûr), Ilyas Beg, received from Bayezîd II the village of Bostocte (Bâsocte, 7 km. south of Korča), dependent on Görđije, as full possession (Gökîbilgin, Edirne ve Paşa Înâs, 428). In 941/1536 the same person constructed a mosque and some other buildings in the village of Piskopolye near Görđije. In 950/1543-4 Ilyas Beg drew up the waâfiyye for his mosque in Istanbul, (the former Studion Basilica near Yedi Kolâ) and for his foundations in Piskopolye: a mosque, an imârât (in the sense of a building for the distribution of food to the poor), and a mu̇salâmühâne. For the upkeep of these foundations, he allotted the tax revenue of four villages in the district of Korča (including Bostocte and Piskopolye), the revenue of a village near Premedi, a hamamâ and seven shops in Istanbul, and another hamamâ and a mill in Janinnâ (Yanya) in Epirus (extract of the waâfiyye by Gökîbilgin, Paşa İnâs, 427-8). The full extent of the foundations of Ilyas are not known, with certainty. According to a late 15th-century source, the Hadîdîl al-kitâbâmûr, Istanbul 1030/1624-5, I, 196, Ilyas Beg founded "benevolent works like an imârât, a mosque, a madrasa, and a tekke" in Korča. The Kâmîs al-kâmîn, (v. 3919) mentions: "a blessed mosque, a madrasa, an imârât and a tekke." Local tradition also attributes a hamamâ to Ilyas Beg. The Kâmîs states explicitly that the Beg "laid the foundations of the town" by building the above-mentioned objects. It is possible that Ilyas Beg, or his sons, added to the foundations of 921/1514-5, at a later date.

The Kâmîs further states that Ilyas was one of the dignitaries of the time of Mehemmed Fâtih and tutor and mirâdîh of Bâyezîd II. The Hadîdîl notes that he was an Albanian by birth and that he was buried in Görđije. In a waâfiyye of 924/1519-10 (see Gökîbilgin, Paşa İnâs, ii, 212), he styles himself "Ilyas Beg b. 'Abd Allâh." He was thus of local Christian origin. Ilyas Beg was married to the Ottoman princess Hündî Khâtûn, daughter of Murad II and Umm Kılıkham Khâtûn. The place where he erected his buildings, Piskopolye, explicitly styled a "village" in the giû waâfiyye, must have been the seat of a local bishopric in pre-Ottoman times. The Kâmîs states that Ilyas Beg constructed his buildings on the site of a destroyed old monastery. The title of "Görđije," sc. Korča, came to be used for the new urban settlement which developed around the nucleus formed by Ilyas's buildings. In the Istanbul Taḥâṣir of 935/1525-6, edited by Barkan and Ayvârcî, (Istanbul 1970, 375), the buildings of Ilyas are situated in the "hasaba of Görđije." The new settlement thus supplanted the old one and probably absorbed its population, as it did with that of Mborje or Enbovë 3 km. away from the new centre. The latter sank down to a hamlet of a few houses around the preserved Byzantine church of 1390.

The development of Korča in the 16th and 17th centuries cannot have been a spectacular one. Hâgdiî Khalîfî, (tr. Von Hammer, Rumeli ve Bosna, 172) mentions it in the first half of the 17th century as an administrative subdivision of the sanjak of Ohrid. Ottoman lists of the Hâgdiîs of Rumeli from 1009/1608-9 and 1201/1788 mention Görđije as the seat of a hadîlî of one of the lowest orders (Çarîce, Ushâçars保险公司, Anâncî, 1970, 265, 309). Neither Muhammed-i Șâhî nor Rûâyîya Çelebi describes Korča, nor does Marie Bizzî or other travelers, without doubt because it lies almost 60 km. off the Via Egnatia, the main road through the country.

In the second half of the 18th century, the development of the town received a strong impetus from the immigration of inhabitants of the Walachian trade metropolis of Voskopojë (Moschopolis), 20 km. due west in the mountains. Between 1768 and 1779 this
large urban settlement fell prey to the disorder which at that time reigned supreme. The French consul of Thessaloniki, Félix Beaumour, and the British traveller Colonel Teake, both writing in the first decade of the 19th century, describe Korçë as a place with 400 houses and a population of 3,000 souls. After that time the development of the town increased in speed. J. G. von Hahn (Albanische Studien, Jena 1854, 55) spoke of “dem rasch aufblühenden Gortsha.” Other sources mention 10,000 inhabitants in 1859. In the eighties of the last century, Sami Bey describes the town in his Këmbët e-tllën as a place with 18,000 inhabitants, 727 shops, 23 hellas, two mosques, one medrese, one tekke, one imaret, two hamamart, a clock tower and four churches. At the end of the century the town was burnt down in a great conflagration. It was rebuilt under Ahmed Eyyub Pasha according to a new and modern plan with wide and straight streets which crossed at a right angle, a plan which still characterises the place. Between 1887 and 1902 Korca possessed a special Albanian school, the very first school where lessons were given in the Albanian language. As such, the place played a role of first importance in the development of Albanian nationalism.

From the sixties of the 19th century, Korçë was the capital of a sizeable sandjak which comprised much of south-eastern Albania and a part of present day Greek Macedonia. Around 1900, Heinrich Gelascher counted 9,027 houses in Korçë, of which 1,420 were inhabited by Muslim Orthodox Christians, 275 by Vlachs and 905 by Muslim Albanians (Vom Reden der Berge und aus Macedonien, Leipzig 1904, 200). Other sources also mention population two-thirds Christian and one-third Muslim. During the upheavals of the Balkan Wars (1912-13), the town suffered particularly from the struggle between pre-Greek Albanian-speaking Christians and Albanian nationalists, both Muslim and Orthodox. During the French occupation, in 1916, a short-lived “Republic of Korça” was proclaimed. After the First World War, Korça remained within the frontiers of the new Albanian state. According to a French census of 1916 it numbered 22,23,000 inhabitants, of whom 17,779 were Orthodox and 5,464 were Muslim, all Albanian-speaking (Justin Godart, L’Albanie en 1922, Paris 1922, 94). The total number in the district of Korça was 39,533 Muslims and 17,571 others. At present, the number of inhabitants of the town has passed the 50,000 mark.

Korçë is the native town of the “Ottoman Montagues”, Korçë Beg [q.v.]. His family lies buried in the yard of the Mirakjor Mosque. The famous man himself rests, according to Bursulj Mehmed Tahir’s Oğmazıl mırelisi, in the graveyard along the Manastir Road, but according to Babinger (Geschichtskreis, 185), in the yard of the Korça mosque itself. The family of the famous viscount of Egypt, Muhammad Ali [q.v.] also came from Korça.

Korçë is today a modern industrial centre, manufacturing textiles. The mosque of Mirakjor Ilyas Beg remains standing and is, together with the türbe of the Beg, an officially-recognised Monument of Culture. It lost its tall minaret during the fury of the Albanian Cultural Revolution of the spring of 1967. The mosque is one of the best examples of early classical Ottoman architecture in the country, a building which contributed considerably to the formation of Islamic architectural forms in Albania in the succeeding centuries.

KORDOFAN (Kordofán) a region of the Democratic Republic of the Sudan lying west of the White Nile roughly between lat. 10° and 15° N. and longs. 29° and 37° E.; it is now divided into two provinces, Northern and Southern Kordofan, with a population of 3,103,000 (1973 census). The name, often pronounced locally and earlier written as Kordóñ, is said to come from a small hill some ten miles south-east of al-UBayyid (lat. 15° 21' N., long. 30° 57' E.); before the present century the name referred to the central settled area rather than to the whole region.

1. Geography and Ethnology

A vast (about 147,000 square miles) open plain, forming a segment of Africa’s Sudanic Belt, Kordofan may be divided into a number of ecological zones; the semi-desert in the north, a central gđđ (stabilised sand dune) zone and the Nuba Mountains of the south-east. The mean annual rainfall ranges from less than 100 mm. in the far north to between 6 to 800 mm. in the south; the human ecology reflects this transition from camel and sheep nomadism in the northern zone which itself merges into the Baydja Desert, to mixed hoe agriculture and pastoralism in the central zone and cattle nomadism in the south. Only in the Khayra depression north of Eları is irrigated agriculture practised.

The ethnography of Kordofan is complex, being historically the result of an Arab or Arabised component immigrating and intermarrying with a diverse indigenous population; Arab nomads and semi-nomads, predominantly Kabdhah, Dar Hamed, Hamar and Bidaariyya live in the north and centre, while in the south the cattle nomads (Bakhdhah), Misfiriyya, Hijum and Hawazma, form but a part of the “Bakhdhah belt” that stretches west to Lake Chad and east across the White Nile. The towns, established in the 18th century mainly by Dā’aliyya and Dālqūla immigrants from the Nile Valley, are found in the central zone, al-UBayyid, Bārā, Umm Rawba and al-Rahad, an area of rain-fed agriculture which produces Kordofan’s main export, gum arabic from the bakhdh tree (Acacia senegal). The Nuba Mountains are inhabited by a medley of ethnic groups, whose generic name, Nuba, conceals a linguistic and ethnic diversity which defies generalisation; at least thirty languages belonging to several different language groups are spoken. In the 20th century, partly because of colonial policies, the Nuba have increasingly moved their settlements down from the mountains onto the plains below.

2. History

Neither the name nor any certain information about the region appear in the mediaeval Arabic geographical literature; nor can anything very certain be said of the early peopling of Kordofán or of the course or chronology of the Arab immigration. A letter from the ruler of Borau dated 794/1392 to Sultan al-Qahir Barkūk of Egypt may imply the penetration of Ḩudham and other Arab nomads through Kordofan and beyond to the Lake Chad region (al-Kalkashandl, Sīh al-‘aṣra, vii, 718-18; Yūfuq Fadl Ḥasan, The Arabs and the Sudan, 165), but of the two possible directions from which the original Arab nuclei of the modern Bakhdhah tribes might have come, North Africa seems more likely than the Nile. The Bakhdhah tribes in their present formation probably do not go
back beyond the 17th century. Oral traditions remember the existence of an Arab nomad confederation, the Fazzara, in Northern Kordofan in the roth-11th/16th-17th centuries; recent research has discovered references to Egyptian merchants trading with merchants from Har al-saladin-fanara ca. 1530. The Kababish of Kordofan and the Zayyadiyya of Dar Fur [p.4] appear to have emerged out of the debris of this confederation. In sum, it would appear that the earliest Arab penetration cannot be dated much before the 8th/9th century, probably following the collapse of the Christian Nubian kingdoms of the Nile Valley.

Funj, Musabba'At and Fur rule. Following the break up of the Islamic Funj [p.4] sultanate of Sinnar at the beginning of the roth/17th century, Kordofan experienced a secondary wave of Arabisation and Islamisation through commercial and political influences from the Nile Valley and the missionary activities of itinerant fakih. The spread of Islam among the indigenous inhabitants is illustrated by the emergence of Takall, a small Islamised kingdom, whose foundation at least as a Muslim state is traditionally ascribed to Muhammad al-Din'ali, a fakih who came from the north in about 930/1520. Occasional glimpses of this spread of Islam may be found in the biographical dictionary of Wad Dayf Allah; in the early 11th/17th century Taji al-Din al-Bahari from Baghdad visited Takall. Later in the century the fakih Ibn al-KaddAl visited Kordofan; he taught a local fakih, Djeddaat Allah, whose son Mukhtar was killed by Djanjal (see below) (Muhammad al-Nur b. Dayf Allah, KtddAl al-Takall, ed. Yusuf Fadl Hasan, Khartoum 1971, 127-9, 87-8, 130, 345-6).

In historic times Kordofan became a "buffer territory, now the prey of its eastern, now of its western neighbours" (MacMichael, Kordofan, 5), that is, between Sinnar and the rising Dar Fur sultanate (established ca. 1620). Badi II of Sinnar (1634-92/1645-1682) invaded and subdued Takall, and Sinnar and occasionally recruited Nuba as mercenaries. Thereafter Sinnar exercised an informal overlordship over central and eastern Kordofan through their proteges, the Chudiyay, living to the south of al-UBayyid, some of whose chiefs appear in Funj documents with the title shaykh Kordofan.

Sinnar's overlordship was disputed in the late 17th and 18th centuries by three generations of Musabba'At (sing. Musabba'Ati) chiefs, who attempted to carve out a kingdom for themselves in Kordofan. By origin from Dar Fur, Djanjal, Hazal and Hahim, grandfather, father and son, attempted to play off Sinnar and Dar Fur against each other. Although the Musabba'At succeeded in ousting the Funj, in about 1760/1755-6 Hahim's activities provoked an invasion by Sultan Muhammad Tayyib (ca. 1665-1720/1755-6 to 1786-8) from Dar Fur. Thereafter, despite Hahim's attempts at resistance, Kordofan was ruled by Dar Fur. Among Dar Fur's governors (mahadim pl. mahidimm) in Kordofan, Muhammad Kurra and Musallim al-Tardjihf encouraged trade in gum, ostrich feathers and slaves, granted land to fakhis and others around al-UBayyid and Bahr, and curbed the nomads.

Turco-Egyptian rule 1821-85. In 1821, as part of a wider invasion of the Northern Sudan, Muhammad 'Ali Pasha [p.6] took Kordofan with an expedition of 3-4,000 troops and an artillery battery under his son-in-law, the dafardar Muhammad Bey Khusraw, to conquer Dar Fur and Kordofan (al-Djabarti, 'Adizah al-KtddAl, iv, 318). After successful

fully crossing the desert, the dafardar's army destroyed the Dar Fur garrison and killed the mahidim Musallim at Bahr on 20 August 1821. Khusraw was prevented from invading Dar Fur by a fierce revolt along the Nile. Al-UBayyid continued as the capital of what was now a province of the Turco-Egyptian Sudan, although the actual administrative arrangements fluctuated greatly (the governors are listed in R. L. Hill, Rulers of Sudan, 1820-1885, in Sudan Notes and Records, xxxii/i (1957), 85-95).

Muhammad 'Ali had conquered the Northern Sudan to obtain slaves and gold; Kordofan yielded both, some alluvial gold from Djabal Shaybun in the Nuba Mountains and slaves from those owned within Kordofan or captured by Bakkara raids upon the Nuba and other southern peoples. As in other parts of the Sudan, the authorities themselves organised slave raids to the south; Rustum Bay (governor 1628-33) on one raid in 1826 seized 1,400 captives. Despite prospecting by W. P. E. S. Ruppell, J. von Russegger and others, the hopes of substantial gold deposits proved largely chimerical. For most of the Turco-Egyptian period neither the Bakkara nor the Nuba were ever brought under an effective administration; Djabal Takall put up a particularly prolonged resistance.

The Mahdiyya 1883-98. Kordofan was the scene of the first and final acts of the Mahdiyya (see MAHIYYA). In the Sudanese Mahdiyya. Although its history belongs to the wider history of the Mahdist Sudan, events in Kordofan contributed decisively to the success of the Mahdist Revolution. Thus, among the Dja'dalyyin settled in the province, a bitter conflict had developed between two factions led by Ilyas Pasha Umm Birayr and Ahmad Bey Dafa Allah al-Awardi. The former was appointed Governor of Kordofan by C. G. Gordon, but was dismissed following a revolt by the Chudiyay instigated by his rivals. It was with Ilyas and others, embittered with the Turco-Egyptian regime, that Muhammad Ahmad, the future Mahdi, made contact on a visit to al-UBayyid, probably in 1879.

Following his manifestation (zukur) on 29 June 1883 and initial successes against the Turco-Egyptian authorities, the Mahdi, following prophetic precedent, made his withdrawal (hijra) into Kordofan to Djabal Kadlr in the Nuba Mountains. It was in Kordofan that the Mahdi found the support and won the victories that firmly established his rule; on 19 January 1885 al-UBayyid finally capitulated and the destruction of the Hicks Pasha relief expedition at Shaybun, south of al-UBayyid, on 3 November 1885 gave the Mahdi complete control over Kordofan. In the context of these victories, Gordon's proposal that the Mahdi be made "Sultan of Kordofan" was disdained.

During the Mahdist period, Kordofan was basically administered from al-UBayyid by a deputy-governor (wakil), but for most of the period was combined with Dar Fur to form one great province of the West (Simdat al-sharh) under Umman Ahmad (1888-91) and Mahdun Ahmad (1894-96). Not everyone in Kordofan accepted the Mahdiyya; the Kababish under their Shayki, Sibii Fadl Allah Salim, who was in touch with the Anglo-Egyptian authorities, resisted until he was killed in May 1887. A revolt of a different nature was the mutiny of the gudkilayya, slave troops armed with rifles, at al-UBayyid in 1885; they marched off to the Nuba Mountains killing the provincial governor, Mahdun 'Abd al-Kadlr, when he attempted to stop them.

In late 1886, under the threat of the Anglo-Egypt-
riot advance, the Khalifas' Abdallahi ordered Mahmut Ahmad to march east with the bulk of the forces of Kordofan and Dar Fuir. After the defeat at Karrat (Omdurman) on 2 September 1898, the Khalifa withdrew into eastern Kordofan to Shirkaya; he was hunted down and killed at Umni Dhibaykarit, near Kosti, on 24 November 1899.

Condominium rule 1898-1956 and independence. At the outset of Anglo-Egyptian Condominium rule in the Sudan, Kordofan was in a state of chaos; bands of Mahdist supporters roamed unchecked and the tribal order had largely disintegrated both as a result of the deliberate policy of the Khalifa and through the loss of herbs and slaves. Order was gradually imposed by punitive patrols, the Nuba under their mohibs (chiefs) and hejads (ritual experts) forming particularly strong pockets of resistance until the 1920s. By 1911 the railway joined al-Ubayyid to Khartoum and the gum trade was revived.

Kordofan since independence (1 January 1956) has largely transferred power from the tribal leadership to the elected representatives of the tribes like the Kababish under a strong leader, Sir Ahmad to march east with the bulk of the forces of the Khalifa. With the modernization of the region, the Khalifa's successor, Sir Tahirir on 34 November 1899.

Condominium rule 1898-1956 and independence. At the outset of Anglo-Egyptian Condominium rule in the Sudan, Kordofan was in a state of chaos; bands of Mahdist supporters roamed unchecked and the tribal order had largely disintegrated both as a result of the deliberate policy of the Khalifa and through the loss of herbs and slaves. Order was gradually imposed by punitive patrols, the Nuba under their mohibs (chiefs) and hejads (ritual experts) forming particularly strong pockets of resistance until the 1920s. By 1911 the railway joined al-Ubayyid to Khartoum and the gum trade was revived.

Since independence (1 January 1956) Kordofan has been one of the most prosperous and peaceful regions of the Sudan, although the rapid encroachment of the desert has become a major threat. Provincial and local government reorganization in the early 1970s has largely transferred power from the tribal leadership to the administrators and locally-elected committees.

KORITZA [see koreca].

KORKUD b. BAYAZID, Abu 1º-Khayr Muham¬
med (974-995/1567-253), Ottoman prince and elder of the two brothers of Ahmed and Mehemet III. He was born in Buyukhissar where his father was governor (Lafti, Ta'shikha, 66; Nishandji Mehemet Pasha, Ta'vish, 181; Cf. Kerem-pasha-zade, Ta'vishik-i al-i Othman, Millet nes. 32, f. 23 etc., and Huseyin Hüsedemeli, Amasya tarih, iii, 226). He spent his childhood and had his early education in the Old Palace at Istanbul in the care of his grandfather Mehmed II, after whose death in 889/1482 he was briefly placed on the throne, for some 17 days, by the Janissaries until his father returned from Amasya to assume power. Later, Korkud returned to Amasya and in 905/1502 was appointed governor of Sarukhan. His request to have the governorship of Bergama instead of Manisa was refused by his father, and perhaps upon the suggestion of his brother Abmad, governor of Amasya now, he was transferred to the governorship of Tekke and Antalya in 907/1502. Shortly afterwards, the sanqah of Hamid with a kâyas of 14,936 akdc and the se`mat of Lakhiryye, amounting to 200, 72 akdc, were added to his personal kâyas of 83,791 akdc (see the fernûn of Div-i-Ka'da 908/May 1503 in Topkapu Saray arşivi E. 6356).

The fact that his father and the leading state dignitaries, headed by the Grand Vizier Khâdîm aI Pasha, favoured Abmad as heir to the throne offended Korkud, and cause him to withdraw into seclusion on the island of Cephalonia (Mubarram 914/May 1505; see 'All, f. 153), but did not feel that he was wholly welcome (details in TKSA, various letters (for details, see 'All, f. 153), but did not feel that he was wholly welcome (details in TKSA, various letters in dossier No. 6684). However, it is clear from the Mamlik sultan's letters to Bayazid II that he was pleased to welcome Korkud, but after a month was able to convince the latter to return, in the light of "a son's obedience due to his father". Korkud was able to get through to Antalya and to send a warning letter to Sawaydi Yûnis, who was coming on later from Egypt with baggage, to postpone sailing in order to avoid attacks by the Knights (TKSA, letter in dossier No. 6684). It is recorded that his health deteriorated on his return and that he asked for treatment from the physician aIî al-Din (letter to the Viziers in ibid.). Meanwhile, he was dismayed to hear of the appointment of his younger full brother Selim to Sarukhan (TKSA E 5587 in ibid.), and he immediately left Antalya for that province (Div-i-Hicâja 916/March 1512). His sudden departure from Tekke brought about the outbreak of a Shi'î-inspired rising under Shah Fuli in that province, and the Grand Vizier Khâdîm aI Pasha had to be sent to suppress it.

Meanwhile, Korkud was being informed of Selim's movements, and sent a letter to the latter adjuring him not to act precipitately (TKSA dossier 6584). At the same time, he was aware of Abmad's ambitions for the throne. Certain of the court officials, aware of Bayazid's intention to proclaim Selim the heir, invited Korkud to the capital. He travelled to Istanbul in Egypt, and won the young prince's confidence. The Janissaries, seeking their support in a bid for the throne. Although they held him in respect, they considered him less capable as a potential ruler than Selim. Selim arrived at Istanbul on 22 Mubarram 918/19 April 1512 in order to forestall Abmad (for details, see bayazid i), and ascended the throne on the abdication of his father. He then gave Korkud the governorship of the island of Midilli, together with Sarukhan again (Sa'd al-Din, Tadj al-tawarih, ii 204). But Korkud also demanded the sanqah of Aydin, Manisa and Tekke, so that Selim, considering him a threat to the throne's stability, marched secretly to Manisa and surrounded Korkud's palace there. Korkud managed to escape with his confidant Piya§e, disguised, but was betrayed by the governor of Tekke Kâsim Bâg and caught near Antalya. He was strangled in his sleep by the Kâmi§i§h Si§n Bâg's men at Ergi§ot on the way back to Bursa, and was buried near Orkhan Çâ§ir's tomb in Bursa (Mubarram 919/March 1513; Sa'd al-Din, ii, 230 ff.).

Korkud was highly educated, and skilled as a poet and musician, being able to play many types of musical instrument (Sehi, Ta'shikha, 18). His verses, written under the pen-name or ta'khibûs of Hamidi, were collected into several works in Arabic, including commentaries and qa§is. His extant works include: (1) Wayyat al-akhbâr (dated 15 Safar 915/4 June 1509, autograph in Aya Sofya 3529); (2) Hall i§hâl al-akbâr fî hll ammul-âlbâb (Aya Sofya 1146); (3) Da'wan al-maj al-alâ'ika ila l-am'dal-palâka ila Kita'b al-Harmi fî l-tawarîh (thus in the ms. copy of R. Yelkenli, in Aya Sofya 1793); this is simply called Kita'b fî l-tawarîh); (4) Sharh al-clus hasr al-Harmi fî l-tawarîh al-am'âl (Aya Sofya 1278); (5) Korduk aya or Fardvay-yi Korukhânsîsâ (see the Korduk aya, i, 28); and (6) Divîna (Millet 1514).

(M. TAYIR GÖKÇILGIN)
KORKUD DEDE [see DEDE KORKUD].

KÖROĞLU, a rebel of the Anatolian Djelâl movement [q.v. in Suppl.] in the 10th/16th century and the hero of a popular romance. The real Köröglü came from the region of Bolu, and is probably the same person as the soldier-bard of that name who is said to have taken part in the campaigns in the Caucasus and Arhabârdâyân of Çadeniroglu Pasha in the years 992/1584-5.

Until fairly recent times, Köröglü remained a legendary personality, whose exploits were chanted by bards and storytellers in Anatolia, Arhabârdâyân, Turkeymenistan and Uzbekistan. Manuscript versions, and later on, lithographs and prints, circulated in Turkish-speaking lands, and more or less extensive episodes of the great epic-romantic cycle even passed into the story-telling repertory of peripheral Turkish-speaking communities like the Kirgiz, the Kazaks and the Tatars of Tobol, as into that of non-Turkish peoples like the Armenians, Kurds, Georgians and Tâdžiks.

The historicity of the figure of Köröglü was nevertheless asserted by writers as far back as the 18th/19th century, Ewilîa Celebi speaks of him—without giving a precise date—as an honourable bandit whose exploits were still remembered in the mountainous parts of northwestern Anatolia; and Arakel of Tabriz cites him as a Djelâl chief whose adventures, together with those of his companions, formed the core around the early 11th/17th century of a "romance" chanted by the minstrels of the lands bordering on the Ottoman empire and Persia. Towards the end of the 19th century and at the beginning of the present century several attempts at identifying him were made, some people basing themselves on contradictory local traditions, and others putting forth hypotheses about the hero's historical prototype or about the origin of some feature or other of some legendary motif of the romance concerning him.

The discovery in 1942 of Ottoman archival documents has firstly confirmed Ewilîa Celebi's information, and secondly allowed us to date his exploits as a Djelâl rebel. We have here a series of imperial orders from the years 988-90/1380-2 addressed to the Bey of Bolu and the head of Gerdes concerning a Djelâl called Körögülî Rûşneh. Now Rûşneh is also the forename of Köröglü in several oral versions, Anatolian and Arhabârdâyân, of the legend of our hero. Moreover, even in the cultural environments most distant from Ottoman territory, tradition has retained, in versions deformed in varying degrees, the name of Bolu Beyi as one of the hero's opponents, as well as allusions to the Ottoman sultan. Finally, several of Köröglü's companions are mentioned with the same names in the Ottoman archival documents as in the different versions of the romance.

The ideas evoked by the name Köröglü "son of the blind one" have contributed to the attracting around the genuine exploits of the bandit-hero-legends of diverse origin, some of them going back to a long way in time, on the theme of the "hero, son of a blind father", who rises up against the masters who had mutilated his father.

(P. N. Boratav)

KORON (Ottoman Turkish Köroğlu; Venetian Koron; in modern Greek Kórogu), a fortress in the south-west Peloponnese [see morea] and on the west coast of the gulf of Koron, situated some 15 miles by land from the fortress of Modon [q.v.; modern Greek Meletavel], with which, in the period of Venetian and Ottoman rule, its history was linked and which, to some degree, overshadowed it. The Byzantine fortress of Koron, "un luogo di maggiore difesa... di forma triangolare, posta in mezzo d'una lingua di terra" (P. Garzoni, Istoria della Repubblica di Venezia in tempo della Sacra Lega, Venice 1703, 100-1) passed, with much of the Morea, under Frankish rule in 1204, but was seized by Venice two years later and was ceded to her in 1206. Koron remained a Venetian colony for nearly two centuries, serving as a vital provisioning station for the Venetian fleet and becoming, with Modon, "the chief eyes of the Republic" (W. Miller, The Latin in the Levant, London 1905, 59, 152).

As early as 1228 Koron was attacked from the sea and pillaged by the Ottomans, and after 1249, when Mehemmed II completed the conquest of the Greek principalities of the Morea, its territories were contiguous with those of the sultan. It was not, however, until the Ottoman-Venetian war of 905/1499 to 909/1503 that Koron fell to the Ottomans: in 908/1506, after Modon had been taken by storm and its defenders massacred, Koron and Navarino "yielded themselves by composition"—i.e. une ille—to Bayazid II (Kozellos, Generalle Historie of the Turkes, London 1603, 160). This event took place on 31 August 908 (M. Sanudo, I diarii, iii, Venice 1880, 827-8). Bayazid II installed in Koron a garrison of 500 Janissaries and 1000 'sâbîb troops (ibid., 820-1).

In 918/1512 Koron was retaken by the Genoese admiral Andrea Doria while Sulayyânî I was engaged in the Guns campaign. In the spring of 929/1533 Koron was besieged by the Ottomans by land and sea, but without success, and was once more relieved by Doria. It was this setback which precipitated the sultan's summoning the North African corsair chief Khajîr al-Dîn Barbarossa [q.v.] to Istanbul, from where, having kissed the hand of the sultan and received an appointment as dîyerî begëregos, he was sent with a naval force against Koron in mid-August. According to Bayazid II's jeth-nâmâ for Modon and Koron, addressed to the inhabitants of Chios, and written at Koron on 23 August (M. Sanudo, I diarii, iii, Venice 1880, 827-8). Bayazid II installed in Koron a garrison of 500 Janissaries and 1000 'sâbîb troops (ibid., 820-1).

On 19/31532 Koron was retaken by the Genoese admiral Andrea Doria while Sulayyânî I was engaged in the Guns campaign. In the spring of 929/1533 Koron was besieged by the Ottomans by land and sea, but without success, and was once more relieved by Doria. It was this setback which precipitated the sultan's summoning the North African corsair chief Khajîr al-Dîn Barbarossa [q.v.] to Istanbul, from where, having kissed the hand of the sultan and received an appointment as dîyerî begëregos, he was sent with a naval force against Koron in mid-August. According to Bayazid II's jeth-nâmâ for Modon and Koron, addressed to the inhabitants of Chios, and written at Koron on 23 August (M. Sanudo, I diarii, iii, Venice 1880, 827-8). Bayazid II installed in Koron a garrison of 500 Janissaries and 1000 'sâbîb troops (ibid., 820-1).

In 938/1532 Koron was retaken by the Genoese admiral Andrea Doria while Sulayyânî I was engaged in the Guns campaign. In the spring of 929/1533 Koron was besieged by the Ottomans by land and sea, but without success, and was once more relieved by Doria. It was this setback which precipitated the sultan's summoning the North African corsair chief Khajîr al-Dîn Barbarossa [q.v.] to Istanbul, from where, having kissed the hand of the sultan and received an appointment as dîyerî begëregos, he was sent with a naval force against Koron in mid-August. According to Bayazid II's jeth-nâmâ for Modon and Koron, addressed to the inhabitants of Chios, and written at Koron on 23 August (M. Sanudo, I diarii, iii, Venice 1880, 827-8). Bayazid II installed in Koron a garrison of 500 Janissaries and 1000 'sâbîb troops (ibid., 820-1).

In 938/1532 Koron was retaken by the Genoese admiral Andrea Doria while Sulayyânî I was engaged in the Guns campaign. In the spring of 929/1533 Koron was besieged by the Ottomans by land and sea, but without success, and was once more relieved by Doria. It was this setback which precipitated the sultan's summoning the North African corsair chief Khajîr al-Dîn Barbarossa [q.v.] to Istanbul, from where, having kissed the hand of the sultan and received an appointment as dîyerî begëregos, he was sent with a naval force against Koron in mid-August. According to Bayazid II's jeth-nâmâ for Modon and Koron, addressed to the inhabitants of Chios, and written at Koron on 23 August (M. Sanudo, I diarii, iii, Venice 1880, 827-8). Bayazid II installed in Koron a garrison of 500 Janissaries and 1000 'sâbîb troops (ibid., 820-1).
In the reign of Sülayman I, according to a lahirir defteri utilised by M. T. Gökbilgin (Selçuk, xx, 280, 327), Koron was the seat of a hâdî with a revenue of 155,877 akçe per annum, in the sanâях of Modon, lâdîna of Mora. The fortress and its dependent territories formed an imperial fiel (hâdîn-i hümâyûn) which yielded 162,011 akçe revenues: these revenues, according to Th. Spandugino, Commentarii, 78, were bestowed with those of Modon by Bayzid II on Mecon.

Later in the 15th/16th century (by 991/1582: cf. Gökbilgin, loc. cit.) the hâdî of Koron was annexed to the sanâyah of Meostra (Mistra). At this time the town contained 300 Christian and 70 Jewish households; the entire Muslim population of garrison forces formed an imperial fief (khâsî-i hümâyûn) of Modon, liwâ of Modon, akies per annum, in the reign of Sülayman (1556-1684). What it appears to have remained in succeeding centuries (cf. the testimony of Eviľâyl Ceğeli for the late 17th century and Leake for the early 19th), i.e. of akies status.

Herban travellers apart, Koron was visited in 1040/1630 by the Ottoman historian Peçevî (Târîhî, Istanbul 1833, i, 172) who recalls the events of a century previously, and, later in the century (1668) by Eviľâyl Ceğeli, who has left a description of the fortress and its inhabitants (Seyvâhat-nâme, Istanbul 1341/1866-7 to 1938, viii, 260-3; cf. Ulrich Wolffart, Die Reisen des Eviľâyl Ceğeli durch die Monar, Inaug.-Diss., Munich 1970, 59-60).

In the Sacra Liga War of 1065/1654 to 1101/1669, Koron was the first fortified place to fall to Venice in the course of her reconquest of the Morea, despite a vigorous defence and attempts to relieve the garrison by land. (Djjâmâd 'l-Askîrî 1065/25 June to 9 August 1665: cf. Silâhabdî, Târîhî, Istanbul 1958, ii, 218 ff.; Pietro Garzoni, op. cit., 107-27; Aleksandr Liosati, Ročnîti istoriiâ della Veneia guerrî in Lustrî ... 1664-94, Colonia 1692, 124-38, 158.

Koron was recovered for the Ottomans by the Grand Vizier Çorîlu, 'Ali Paşâ in Şahîbîn 1127/ August 1725. In this last phase, the town and its trade insensibly declined. Leake, in 1805, found that the export of silk and olive-oil, which down to the 1770s had supported four French merchant houses, was no longer flourishing; the harbour, blocked and ruined already at the time of Bernard Randolph's visit in the late 17th century, offered only an insecure anchorage, while the town itself was much affected by the depredations of the 'Franks', ending up with what was certainly a force numerically superior to Baydju's. However, with a new edition of Mâqûdî, F. Tavvetoglu as Enis Behâç Kuryûrek, 'Misir ve Güney'in Bilimi', Ankara 1971. During the last years of his life he was subjected to depression and wrote in a style pseudo-mystic poems of noedole quality supposedly inspired by a 12th/17th century sâ'âdeh, Varîdar-i Sulayman, Ankara 1940.

KÖSE DÂGH, a land-corridor some 50 miles/ 80 km. to the north-west of Siwâs where there took place in 641/1243, probably on 5 Shawwâl/25 June, the decisive battle which opened up Asia Minor to the Mongols and sounded the knell for the Seljûk sultanate of Rûm. The first contacts of the Mongols with Seljûks went back to the last years of 'Alî at Dîn Kaykûbâd I (q.v.), but at that time Anatolia was too well-protected in relation to the conquests already effected by the Mongols for the latter really to have any plans for conquering it. It was only under Kaykhusraw II (q.v.) that the threat took definite shape, without one being able to ascertain how far the invaders intended to advance. However, after the Great Khan Ögedey's death, the new Mongol head of the Caucasian region, Bayduj, seized Erzerum in the midst of the winter of 1242, and thus opened up the way into Asia Minor for the following spring.

The sources give few details about the campaign and the battle. Kaykhusraw seems only very late to have fully realised the seriousness and imminence of the danger. He summoned forces together, comprising his allies or vassals, even including Armenians, Greeks and "Franks", ending up with what was certainly a force numerically superior to Bayduj's.
But the impatience of his young commanders prevented him from awaiting the complete grouping of the Saljuk forces. The Mongols, almost all cavalrymen, had recourse to their customary and invariably successful tactic of a simulated flight and then an unforeseen return to the attack against disorganised pursuers. The sultan lost his head and fled, and only the initiative of his vizier Muhasilhab al-Din, combined probably with the Mongols’ own prudence, allowed him to keep his throne as a vassal. In reality, the process now began which led to a de facto Mongol protectorate.

The weaknesses of the Saljuk state at the time had often been stressed; this was true, but the Mongols, partly by the terror which they inspired, had overcome many other powers. It is hard to maintain that, even without these weaknesses, the course of history would have been any different.

KÖSE MIKHAL [see mikhaleghlu].

KÖSEM WÂLÎDE or KÖSEM SULTAN, called MAHÂVÂYAN (ca. 1589-1651), wife of the Ottoman sultan Ahâmed I and mother of the sultans Murâd IV and Ibrahim I (g.w.). She was Greek by birth, and achieved power in the first place through the harem, exercising a decisive influence in the state during the regency of her two sons and of her grandson Mehmed IV.

The views put forward concerning her origin and her first name—Nassy being derived from Anastasia (Ahmed Refik, Kadîlar sultanîâlî, Istanbul 1834, 42-9, 8, deriving information from Gür, Mecâus us musica des Turcs, Paris 1747, ii, 474, see also Pétis de la Croix, Abrégé chronologique de l'empire ottoman, Paris 1768, ii, 74)—do not seem to be reliable. According to Pietro della Valle, Voyages, Rouen 1645, i, 94, she was given the nickname Kösem because of her smooth and hairless skin (köse = “hairless, beardless”). However, the epithet köse/kösemân could also have been given to her on account of her ability as a leader and virtual ruler (for the meanings of kösem in Ottoman, see Huseyin Kizim, Insan ve sûret, Istanbul 1940, iv, 279, 290, 315, 319). He subsequently came under the influence of other palace women, and Kösem Walide therefore lost her ascendancy and left the Sarây-i Divanî-i ʿÂmirî to live in a summer house outside Topkapî. When Ibrahim learnt that his mother was plotting with the Grand Vizier Sâlih Pasha to dethrone him, he moved her to the Iskandar Celebi garden in Florya and hanged Sâlih (Wedîhî, Taʾrîkh-i ʿAbî, Istanbul Univ. Library Turkish ms. 2343, fols. 429, 329b). Ibrahim’s weak rule caused a deterioration in affairs, whilst the Cretan war was dragging on and creating feeling against him. The chiefs of the Janissary corps, under Kara Murâd Agha, Mustufâ al-Din and Bektaş Agha, killed the Grand Vizier Ahâmed Pasha Hazârpare and decided to depose Ibrahim. The new Grand Vizier, Sofu (or Koqâ) Memhûd Pasha, ʿAbî al-Rahîm Efendi, together with other leading officials, obtained Kösem Walide’s consent after a meeting with her at Topkapî, dethroned Ibrahim and put in his place his eldest son, the seven-years-old prince Memhûd on 18 Radja 1048/8 August 1638 (Naʿima, iv, 314, 315; Kara Celebi-zaďe ʿAbd al-ʿAziz Efendi, Rawdat al-adâr dâyî, Istanbul Univ. Library Tunisîc ms. 2615, pp. 9 ff.; Memhûd Khalife, Taʾrîkh-i Ğazîzînî, Istanbul 1340, 22 ff.; Murâd Bey, Taʾrîkh-i ʿAbî ʿL-Fârîkh, Istanbul 1329, iv, 48). Ten days later, Ibrahim was strangled by the executioner Kara ʿAll, for fear that his partisans might attempt a restoration, with the consent of his mother and with a fanât from the Shaykh al-Islâm (Kara Celebi-zaďe, op. cit., 27-30, 57 ff.).

With Memhûd IV’s accession, Kösem Walide’s power started to revive, and she was given exalted titles like Bûyûk Walide “Grandmother of the Sultan”, Walide-ye Muʿassama, Umâ al-Muʿasîma, Şâhibat al-Mašākîn, Walide-ye ʿAtîba, etc. (see Wedîhî, ed. 144; Kara Celebi, ii, 357, 376; Naʿima, iv, 279, 290, 317, 319-21, 415, 418, 450, v, 200). However, her influence was not unbounded. 

KÖSE DÂGH — KÖSEM WÂLÎDE or KÖSEM SULTAN

After Ahmad I’s death on 22 ʿAdhâ ʿL-Kaʾdî 1026/23 November 1637, she supported the succession of his brother Muḥâmed I, under whose feeble rule she was able to exercise effective power in the state. Muḥâmed’s deposition three months later was a setback for her, and she was relegated to the Old Palace (Eski Saray) at Bâyesîl under Ahmad’s young son ʿOmar II, but she came to the fore again when ʿOmar was deposed and executed and Muḥâmed briefly restored (9 Radja 1031/20 May 1642). Her full influence now became apparent when her minor son Murâd IV ascended the throne in 1034/1623 and she thus became officially the Wâlidîe Sultan, ruling as regent for five years till her son was old enough to take up the reins of power himself (Kâtip Celebi, Felûkî, Istanbul 1587, ii, 226; Von Hammer, Gor, quoting a Venetian report). Even thereafter, Murâd greatly respected his mother’s opinions, and she took a close interest in state affairs when he was away from the capital. Thus the Shaykh al-Islâm ʿAbârî (Husayn Efendi’s disapproval of Murâd’s hanging the bâbî of Fazîl was communicated by her to the sultan, then on his way to Bursa; he immediately returned to Istanbul and hanged Abârî’s half-brother, Ahmed, as an act of retribution in 1631). She became the most powerful woman in Ottoman history (Kâtip Celebi, op. cit., ii, 260; Naʿima, iii, 189). She saved the Ottoman dynasty from extinction by preventing Murâd, who had executed his other brothers, including Sülâyman and Kâsim, from killing Ibrahim (Sagredo, Histoire de l’empire ottoman, Amsterdam 1732, vi, 147; Vanel, Abrégé nouveau de l’histoire générale des Turcs, Paris 1689, ii, 454; Histoire des grands veins, Paris 1766, 34; Du Loir, Voyages, Paris 1654, 117; von Hammer, Gor).

Together with the Grand Vizier Kara Mustafâ Pasha (g.w.) she became most active in affairs when İbrahim succeeded to the throne after Murâd’s death on 16 ʿAwrîm 1049/9 February 1640 (Naʿima, iii, 429), especially as her son gradually became more and more involved with his courtiers, the expenditure involved having disastrous repercussions on the treasury (Kâtip Celebi, op. cit., ii, 309 ff.). She subsequently came under the influence of other palace women, and Kösem Walide therefore lost her ascendancy and left the Sarây-i Divanî-i ʿÂmirî to live in a summer house outside Topkapî. When İbrahim learnt that his mother was plotting with the Grand Vizier Sâlih Pasha to dethrone him, he moved her to the Iskandar Celebi garden in Florya and hanged Sâlih. (Wedîhî, Taʾrîkh-i ʿAbî, Istanbul Univ. Library Turkish ms. 2343, fols. 429, 329b). İbrahim’s weak rule caused a deterioration in affairs, whilst the Cretan war was dragging on and creating feeling against him. The chiefs of the Janissary corps, under Kara Murâd Agha, Mustufâ al-Din and Bektaş Agha, killed the Grand Vizier Ahâmed Pasha Hazârpare and decided to depose İbrahim. The new Grand Vizier, Sofu (or Koqâ) Memhûd Pasha, ʿAbî al-ʿAzîz Efendi, together with other leading officials, obtained Kösem Walide’s consent after a meeting with her at Topkapî, dethroned İbrahim and put in his place his eldest son, the seven-years-old prince Memhûd on 18 Radja 1048/8 August 1648 (Naʿima, iv, 314, 315; Kara Celebi-zaďe ʿAbd al-ʿAzîz Efendi, Rawdat al-adâr dâyî, Istanbul Univ. Library Tunisîc ms. 2615, pp. 9 ff.; Memhûd Khalife, Taʾrîkh-i Ğazîzînî, Istanbul 1340, 22 ff.; Murâd Bey, Taʾrîkh-i ʿAbî ʿL-Fârîkh, Istanbul 1329, iv, 48). Ten days later, İbrahim was strangled by the executioner Kara ʿAll, for fear that his partisans might attempt a restoration, with the consent of his mother and with a fanât from the Shaykh al-Islâm (Kara Celebi-zaďe, op. cit., 27-30, 57 ff.).

With Memhûd IV’s accession, Kösem Walide’s power started to revive, and she was given exalted titles like Bûyûk Walide “Grandmother of the Sultan”, Walide-ye Muʿassama, Umâ al-Muʿasîma, Şâhibat al-Mašâkîn, Walide-ye ʿAtîba, etc. (see Wedîhî, ed. 144; Kara Celebi, ii, 357, 376; Naʿima, iv, 279, 290, 317, 319-21, 415, 418, 450, v, 200). However, her influence was not unbounded. The
authority of the Janissary agas was wrong, and Turkhân Sulân, Mehemmed's mother and Ibrahim's widow, became her rival; this rivalry, and misunderstandings between the state officials and the Janissaries (Na'Ima, v, 7), caused disturbances in Istanbul and Anatolia. Kösem Wâlide and her supporters were opposed to Empress Mehmed with his brother Sâlaymân, whose mother Dîâlahû Sultan was regarded as unlikely to interfere in state matters. But Turkhân Sultan learnt of these intentions (Na'Ima, v, 108), took the initiative, and had Kösem Wâlide strangled with a curtain-string by the Palace Janissaries (Na'Ima, v, 111); her executioner was someone called Rûcûk or Rûchû Mehmed, see Rycaut, *Histoire de l'état présent de l'empire ottomane*, Paris 1670, 63; Na'Ima, v, 109, 112, 137; von Hammer, *GOR*. Her body was taken from Topkapî to the Eski Saray and then buried in the mausoleum of her husband Ahmad I (Weggüden, loc. cit.). Kösem Wâlide had exercised power in public affairs for nearly 30 years. She left much wealth and estates (Na'Ima, v, 122; Kara Çelebi-Zâde, 20), and most of her income was devoted to charitable and other humanitarian works, such as the hospital *Sancak Kapısı* at Çekadî, completed in 1066/1656 (Aynâmâyê-ye Huşâyûn, *Hâdle-i al-dajââm*, Istanbul 1231, ii, 184-5) and the Wâlide Kâlin in Istanbul, built in 1056/1646 (Elyâkhê Çelebi, *Seyyâhat-nâmê*, Istanbul 1344, i, 325; Thévenot, *Relation d'un voyage fait en Levant*, Paris 1664, 46) (this latter building collapsed in March 1826). Also from these revenues she financed irrigation works in Egypt and provided relief for the poor in Mecca. In fact, she left behind in the popular Turkish mind a reputation for magnanimity, generosity, and high intelligence.

**Bibliography:** Largely given in the article, but see the general histories of Von Hammer and Zinkeisen, which utilise both Turkish and European sources, e.g. the reports of the Venetian asigni, Muzaffer, *Hermes*, 29, 190 ff. There is a detailed article in *IA* by M. Cavid Baysun, of which the above is a shortened version. See also Muzaffer Ilgür, *KoSem Sultan sin avâyâyên*, in *Turk Dergisi*, xi/21 (1966), 33-94. (M. Cavid Baysun)

**KoSem BEGI,** predeceaser to KoSem Eski, title of high officials in the Central Asian khanates in the 16th to 19th centuries. There are two different etymologies and explanations of the term: (1) from Turkish *bûg* "bird" and *beg* [q.v.], thus *bûg-begi* meaning, presumably, "commander of falconers"; (2) from Turkish *bûg* "detachment of nomads or troops, esp. on the march"; "nomadic and military camp" (see Radloff, *Wörterbuch*, ii, 653 ff.), thus *bûg-begi* meaning "commander of the *bûg* (field) camp" "quartemaster". The first explanation is found in an administrative manual made in Bukhârâ in 1322/1906, where it is stated that the *bûg-begi-i kâlen* (see below) in Bukhârâ was chief of the royal hunt (see fascimile in *Fûsânînîye gümâyûntî ve yokta* 1928, Moscow 1970, 50). The etymology, however, remains dubious, because in this case one should rather expect *kosh-begi* (or *kosh-baği*) from *kosh* "falconer" (the latter post actually existed at the Central Asian courts, as well as in Iran, but the chief of the hunt had the title *mûr-ghâhâr*). Significantly, Iskandar Mûhîr [q.v.] in his *Târîh-i ilâm-ân-î Avâbî* (ed. I. Aşhûr, i, 486) mentions the post of *bûg-begi* (manap-î *bûg-begi-garî*) and, in another place (ii, 1040), the post of a falconer (*ghâd-mîr-i kosh-begi-garî*), who became later the head of the royal hunt (*ta-manâb-i mûr-ghâhâr sar-âfesî gûhâr*). On the other hand, many historical references to *bûg-begi* in the Uzbek period show them as high military commanders, mentioned among the most high-ranking Uzbek amirs, which, apparently, makes the second explanation of the term more plausible. The European Turkologists who visited Central Asia in the middle of the 19th century also transcribe the term as *bûg-begi* and explain it, in the first place, as "Chief of the Dianes or the Beamenzirkels der Fürsten" (H. Vâmberî, *Cagatayische Sprachstudien*, Leipzig 1857, 318), or "Lord of the household" (R. B. Shaw, *A sketch of the Turkish language as spoken in Eastern Turkey*, Calcutta 1878, 156); see also Radloff, loc. cit.

The title *bûg-begi* is not attested in the Golden Horde and its immediate successors in the Eurasian steppes in the 15th century. The *Bâyâr-nâmê* (ed. Beveridge, 274b) mentions a Turkish amir as a *bûg-begi* of Sûltân Hussâyûn Mirzâ [q.v.], but nothing is said about his duties. Frequent references to *bûg-begi* in historical sources appear only in the late 16th century. The title *kosh-begi* (or *kosh-begi-yi kaidn*) is first mentioned in the *Bâyâr-nâmê* (MS of the Leningrad Branch of the Institute of Oriental Studies, D 88, ff. 332a, 338a, 339b, 340b etc.) mentions a *kosh-begi* among the chief commanders of the army of Bukhârâ. In the 17th century *bûg-begi* did not apparently play an important role in the khanate of Bukhârâ. The *Bahr al-âsrâr* by Mahmûd b. Wall (second quarter of the 17th century), in a description of the ceremonial at the court of the Astarâkhânids, only mentions the *bûg-begi* among the servants closest to the *khan*, and his place was the second after that of *bûrûl-begi*, commander of the body-guards (see V. V. Bartold, *Seçenentik*, ii/2, 301, 306). The rise of power of the *bûg-begi* in Bukhârâ took place at the beginning of the 18th century, with the decline of the Astarâkhânids. In 1011/1600 Ñu§ayyûn Kâlah established the *bûg-begi* as "the upper Kâlah", because he had to live in the residence of the amir, the *ark* (citadel), situated on a hilltop; there was also "the lower Kâlah", *bûg-begi-i piyâdân*, whose residence was at the foot of the *ark* and who held the post of *zâfîkâh-i kâlah* (head of the collectors of *sâhî* [q.v.]). The "great *bûg-begi*" under the late Astarâkhânids and the Mangûts were usually of mean origin, mostly former Kalmuk and Persian slaves. Besides the general supervision of the state affairs and, especially, the administration of finance, they were also governors of one or more provinces (provinces), especially of Bukhârâ itself.

Different development took place in Khiva [q.v.], where the local historian Mûhî (early 19th century) mentions for the first time the title *bûg-begi* without defining his duties, when he tells about the administrative reforms of Abu'l-Ghâzin Khân (died in 1024/1614 [q.v.]). It seems, however, that *bûg-begi* did not play any important role in Khiva in the 17th century. Only under the Kungrat [q.v.] dynasty (from the last third of the 18th century) did the *bûg-begi* become one of the highest officials in the khanate, but he shared power with the *muhter* (Fers. *miktar*) [q.v.]. The latter was the head of the civil administration, had the title *maşr-i a'zâm* and belonged to the hereditary bureaucracy recruited from among the Sarts [q.v.], while the *bûg-begi* always belonged to the Uzbek nobility, the *amirs* (and sometimes was a relative of the *khan*), and was in charge,
mainly, of military affairs. Besides that, the kosh-begi governed the northern part of the khanate of Khiva inhabited by nomadic and semi-nomadic Uzbeks, Karakalpaks and Turkmens (that is, he mainly supervised the collection of taxes in this region), while the wahan governed the southern part inhabited by sedentary Sarts. This division of authority seems to be a continuation of the administrative practice of the Timurid period.

In the khanate of Khokand [q.v.] in the 17th century, the title kosh-begi is also attested by the local sources, but evidence about his duties is still unavailable; in any case, he had a lesser status than in Bukhara (the highest official in Khokand in the 17th century was the mung-begi); according to V. V. Vel'garnin-Zernov (in Trudy Vostochnogo Otdeleniya Imp. Russkogo Arkheologicheskogo Obshchestva, ii [1853], 321), kosh-begi was here a honorary title given to the governors of main towns and provinces. In the Caghatayi state of Eastern Turkestan, at least in the 17th century, the kosh-begi was supreme military commander or commander of the right wing (tirff-i koghbegi), and had the rank of the senior amir (amir al-ummar), but the civil administration, apparently, was in the hands of a sazir (see Shah Muboyod b. Mirza Fadil Curash, Tavvij, ed. O. F. Akhunzhon, Moscow 1976, text, 24, 32, 33, 76, Russian tr. 170, 176, 200, 218). Thus this system was probably similar to that which existed in Khiva.

**KOSHMA**—SOSHMA

KOSHMA is originally a general term for poetry among the Turkish peoples. In the later usage of the word, it was applied to the native Turkish popular poetry, in contrast to the classical poetry taken from the Persian and based on the laws of the Arabic 'arad [q.v.]. The term corresponding in Eastern Turk to the Western Turk koshma is köşhaps or köşbaş.
Many of them, like 'Ashlkh Qom, 'Ashlkh Kerem, 'Ashlkh Gharib, Doscili and Dasciiweli, obtained great fame, and the collections of their songs or life stories are among the most popular books among the Turks (cf. KépruHüza de Mehmed Fu'ad, Türk edebiyatiindan 'Ashlkh Qomunun tarihi uye-tehminimi, in Milli tektebiler medenii-i, 1, idem, 'Ashlkh Dieberiyere 'Ashik iki wethila in the periodical Yedi Meqma, No. 84; G. Jacob, Türkîsâde Volksliteratur, Berlin 1901, 17-18). There were even singers of popular songs in the corps of Janissaries; cf. J. Deny, Chansons des Janissaires turcs d'Alger, in Mélanges René Bassot, Paris 1925, III, 33-175.

The term koShma (but not the kind of poetry to which it was applied) seems to have fallen out of use, and if the Adhardbavdîn poet Dawa'd, who died in the first decades of this century, called his collection of songs Koshtna, this is probably simply to be explained by an archaizing popular movement in modern literature. The name has survived in the form koshto in the Altai Turks (Tatars). The Altai koshi (on them, cf. W. Radloff, Uber die Formen der gekundten Râde bei den altsachen Tâtaren, in Zeitschr. f. Völkerpsychologie und Sprachwissenschaft [1896], iv, 85-114, and Kowalski, Études, etc., 140-51) are very important in so far as from their structure and name we can make a definite deduction regarding the original meaning of the words koshma, koshuk, etc. They are pairs of strophes connected by a close parallelism between the two in form and content. From this we see that kesh, from kesh “to join together”, kashi “two and two”, etc., refers to the parallelism in thought and syntactical structure, which originally formed the essential feature of Turkish popular poetry.

The keshma poetry has not been without influence on more artistic forms of literature. The modern Turkish poets, for example, have taken many of their forms from popular poetry.

Finally, one should note that the term koShma applies also to a folk-musical form, which varies in different parts of Anatolia and Adhardbavdîn, but which contains typically an instrumental introduction, followed by a vocal recitative and melody. This would be the normal setting for the koShma as a literary form.

(T. Kowalski)

KO5OWA, KO5OVO, the name of an upland plain of the Balkans, in upper Macedonia or southern Serbia, and the scene of two significant battles in the struggles of the Ottomans and the Christian powers of the Balkans for hegemony there. In the last quarter of the 19th century, it also became the name of an Ottoman administrator or province.

The Scarth Slavonic expression Ko5onopolje means “plain of the blackbirds” from hos “blackbird” in Old Slavonic, Czech and Bulgar. Ottoman Turkish
KOŠOVA, KOSOVO

The Kosova plain lies at an altitude of some 500-600 km., and is 14 km. wide and 84 km. long, covering an area of 502 km.². It is surrounded by high mountains, and has a north-west to south-east orientation. From this region, streams flow westwards to the Adriatic via the Drina, southwards to the Aegean via the Vardar, and northwards to the Danube via the Ibar and Morava. During medieval times, it was a meeting-point of several trade routes; today it forms part of the Novo Brdo-Kopavnik mining region of Yugoslavia.

The Kosova plain originally formed part of the Byzantine dominions, and Slav peoples were settled there at the beginning of the 7th century. During the 10th century it changed hands between Serbs, Byzantines and Bulgars. For the names of the Serbian bosses who were active in the Kosova region, see V. Radovanović, Kosov Polje, in Narodna Etn. Sepško-Hrvatsko-Slovenaša, Zagreb 1926, ii, 434-8. After the victory gained over the Byzantines in 1268 by Stephen Nemanja, prince of eastern Serbia, Kosova passed under Serbian control, and the name became applied to the whole plain region. It now remained within the resurgent Serbian empire, with its zenith under Stephen Dušan (d. 1355), but Serbian grasp on the region became relaxed under his weaker son and successor Dušan V (1355-71), and thereafter, the Serbian princes were unable to offer any united opposition to the increasing Ottoman Turkish pressure.

The defeat of Serbia at the hands of the Ottomans at Kosova took place according to the Serbian and Albanian sources, on 4 June 1389 at the dawn of the battle, a Serbian noble, Milojk Kobilja, contending for the name of the Serbian boss, who was active in the Kosova region, see V. Radovanović, Kosov Polje, in Narodna Etn. Sepško-Hrvatsko-Slovenaša, Zagreb 1926, ii, 434-8. KOTOKO—KOTOKO

which is in fact the name of a northern group of Kotoko, first known to visitors coming from Bornu. Makari is the most important dialect among the northern Kotoko, as Lagwane (often spelled Logone) dialect is in the south. The linguistic diversity of the Kotoko reflects their political division, as the extent of each dialect is almost identical with the area of one principality. The particularism of each group is so strong that even under modern conditions no one dialect prevails, and almost all the Kotoko now speak the Arabic dialect of the Shawa. The Kotoko dialects belong to the central sub-group of the Chadian languages. They are distinctly related to Hausa, which is classified in the western sub-group of the Chadic languages (J. H. Greenberg, Studies in African linguistic classification, New Haven 1955, 43-62).

The Kotoko are considered direct descendants of the So or So people, to whom the historical traditions of Kanem [g.s.] and Bornu [g.s.] refer as the early inhabitants of the area around Lake Chad. Those So who had not been assimilated or exterminated by the Kanembus and the Kanuris sought refuge in the less accessible flooding area of the Shari and Logone rivers, where they gave rise to the Kotoko. In the second half of the 18th century, Bornu under Idris Alfa extended to the south. The northern Kotoko principality, Makari and Afade, were brought within the political ambit of Bornu and under the cultural and Islamic influence of the Kanuri. Because of the imperial and dynastic connections with Bornu, Islamisation among the Kotoko began chiefly in the courts. The southern Kotoko had been for a long period subject to the harassment of Bagirmi [g.s.]. Towards the end of the 18th century, the south was consolidated under the authority of the ruler of Logone-Birmi, who was converted to Islam at about that period. Logone was visited by Major Denham in 1814 and by H. Barth in 1824. In between these two dates, probably ca. 1830, Logone became a tributary of Bornu. The Kotoko often saw their territory invaded by their more powerful neighbours. It was the battleground for Bornu's wars with its rivals in the 1830s. It was invaded by Bornu in 1853 and 1890 it was overrun by Bâbîh [g.s.] and his successors.

The authority of the Kotoko chiefs was circumscribed by a council of high officials and by Bornu's representative, the alifâ (from Ar. aliffu'). The chiefs were also bound by pre-Islamic taboos and by the obligation to consult "the protecting animals" through their priests. The Kotoko chiefs, referred by the colonial administration as sultans, are Muslims but they must respect old traditions. Muslim imams live in their courts with traditional priests. Mosques were built near traditional shrines, whereas pre-Islamic customs and rituals are performed during Muslim festivals. Most of the Kotoko are now considered Muslims, and the number of those more fully committed to Islam grows steadily. Thousands of Kotoko are to be found in the towns of Chad and in the Sudan along the routes to Mecca. The Kotoko, who had emerged as people in refuge, away from the Muslim states of the Central Sudan, are gradually becoming integrated into the world of Islam.

Bibliography: The most important study on the Kotoko is by A. M. D. Lebeuf, Les principauté Kotoko, Paris 1959. Other sources and studies: Denham, Clapperton and Oudney, Narrative of travels and discoveries in North and Central Africa, London 1826, 222-47; H. Barth, Travels and discoveries in North and Central Africa, London 1865 (Centenary Edition), ii, 425-60; G. Nachtigal,
KOTONOU or Cotonou, capital of the People's Republic of Benin (formerly Dahomey). It had long been the economic capital and rival of the administrative one Porto Novo, and since independence Cotonou has established itself definitively as the capital of the republic, even if certain services still remain at Porto Novo.

The village founded by the Aizo of Allada was called Donukpa ("near the hole"), i.e. "near the lagoon"). An envoy from Abomey was struck by the reddish colour of the trees growing along this lagoon and thought that this was the result of blood. It was then believed by the Fon of Abomey that the spirits of the dead came down to Ouidah towards the lagoon and the sea; each dead person crossing the lagoon left behind a little blood which reddened the tree bark, whence the name of Ku Tonn ("deaf person", tonn "lagoon") given to the village. However, the gradual advance of the French army and the passage of armies from Dahomey in the 18th century led to the evacuation of this latter village. It was Yékpé Zinsou, a slave dealer who had made the Pilgrimage to Mecca in 1906 via Lagos, Las Palmas and Marseilles. He had connections with the booksellers of Algiers, Kaddouz Koffi (Kaddi Kudus!), who succeeded by a Hausa, Yekpe Bako, but after the latter's death there was a division between the two main Muslim communities, the Yoruba and the Hausa, with the latter reproaching the Yoruba for retaining animistic practices, of drinking alcohol, of having more than four wives and of not fasting at the same time as other people. On 31 August 1966 the Muslim Union of Dahomey was formed, bringing about the pre-eminence of the Muslim community of Porto Novo; the President of the Union was in fact al-Hadjidi All'Aref. If the meetings of the Muslim community of Benin take place at Cotonou, it is nevertheless the Islamic north and Porto Novo who have benefited from these arrangements and from aid coming from the Arab world's communities.

KÔTWAL (Persian orthography, kottwâl), commander of a fortress, town, etc. The word is used throughout medieval times in the Iranian, Central Asian and Muslimalvar times in the Iranian, Central Asian and Indian Muslim context, e.g. Mahmud of Ghazna's bestowal of the kottwâl of Nandana in the western Pandjab on one of his commanders in 405/1015 (Gardizi Zayn al-abâhhar, ed. Naqrâm, 72, ed. Habibi, 381), and the frequent appearance in Bayhaq's Târîh-i-Mas'udî of a commander Bî 'All Kôtwâl, the local governor of the capital Ghazna. On the other hand, it does not appear in Kishâhî. Gradually, the word became general throughout the eastern Islamic world, passing into Turkish languages, into Pashto, and into Indian vernaculars like Prachalî, Dangali and Sindhi. In Persia of the Mongol, Timurid and Safavid periods it was the term used for the local governor of a town or citadel, as is attested by western travellers like du Mans (1660). Cf. Doerfer,
The term kōtwal was especially used in Muslim India under the Mughals and, after the collapse of their empire in the mid-18th century, in British India for approximately a century more. But in fact, this office, in the sense of "official responsible for public order, the maintenance of public services etc., in a town" (something like the Sibāl al-Shurā [q.v.] of the earlier caliphate), existed before the Mughals, e.g. in the territories of the Delhi sultanate and in the provincial sultanates which arose in South India and eastern India during the post-Tughluq period. Cf. I. H. Qureshi, The administration of the sultanate of Delhi, Karachi 1958, 172-4, and Majumdar, Ed., The history and culture of the Indian people. vi. The Delhi sultanate. Bombay 1960, index s.v. The accounts of Portuguese adventurers in India, from Vasco da Gama onwards, speak of encounters with the Čatūrā or royal representative in the towns where they disembarked (thus also in Camaénos, The Lusíadas [completed 1572], vii, viii, passim).

In the Aṣīn-i-4 kharī of Abu 'l-Fadl ʿAllāmī [q.v.], we find a classic exposition of the duties of the kōtwal. His multifarious responsibilities included the maintenance of law and order, with the pursuance of criminals and robbers (for the recovery of whose depredations the kōtwal was personally responsible); the keeping of a register of houses and streets; maintaining an intelligence system in the town, including observations of the incomes and life-styles of the populace, the results of which espionage to be reported to the central government; the enforcement of a curfew; the supervision of weights and measures and fair market practices; the upholding of the standard of coinage and the calling-in of bad coins for re-minting; the oversight of public water supplies; the appropriation for the state of intestate properties; the care that widows did not make the sacrifice of sati against their wills; the allocation of separate quarters in the town for nuns and despised trades like those of butchers, corpse-washers [see grouk and chassal in Suppl.] and sweepers; etc. One notes the correspondence of many of these duties with those of the classical Islamic muḥāsib, whose office is certainly known in pre-Mughal India under the Delhi sultans and their successors [see Raja bāṭ in the Indikṣṇa. The Indian subcontinent); it seems that the purely secular, semi-military kōtwal now largely replaced the muḥāsib. But in many ways, the wide range of the kōtwal's responsibilities is an echo of those of the nāgarah or Town Prefect of Mauryan times; cf. Kaučuč, Arthaśāstra, ch. xxxvi. Abu 'l-Fadl's whole exposition has, however, a somewhat theoretical cast, and should probably be interpreted as a blueprint for the ideal administrative system for Akbar, rather than a delineation of actual practice; amongst other duties of the kōtwal mentioned is responsibility for seeing that the festivities of Akbar's Dīn-i Ilāh and the new Ilāhī era [see akhārī] were observed (Aṣīn-i-4 Akbār, ii, tr. H. S. Jarrett, Calcutta 1949, 45-5; cf. also Mīrāz Muḥammad Fāsān, Mīrāz-i Āḥmadī, ed. Syed Nawab Ali, Baroda 1947-8, i, 165 ff. [compiled in Gudjarāt, 1755/1764], section on the duties of officials charged with the safety and good governance of the state).

More definitely in accordance with contemporary Mughal practice are the reports of European travellers within India at this time. Thus F. Bernier speaks of the Čotoual or "grand Prevost de la campagne" as sending soldiers all through his town when the Mughal court passed through it, and these blew trumpets in order to scare away males (Travels in the Mogul empire A.D. 1656-1668, tr. A. Constable 1801, repr. Delhi 1972, 188, 169). N. Mannoni's personal observations are especially valuable. Describing the situation in the latter part of Avarangbī's reign, he tells how the kōtwal stopped the illicit distilling of arrack and spirits, and the practice of prostitution, and how he sent intelligence reports to the court based on the information gathered in private houses by the scaveγceres, ulạcer (= bāhtīhār). He also saw that ferry tolls, abolished by the Emperor, were not illegally exacted. At his disposal, he had a force of cavalry and infantry, with detachments for each quarter of the town, and vetements of justice, on the other hand, he was under the orders of the kāfīf, and carried out his written orders, such as sentence of death (Storia do mogor, or Mogul India, 1653-1706, tr. W. Irvine 1907-8, repr. Calcutta 1967-9, iv, 240-1). In fact, we know that towards the end of Avarangbī's reign, kōtwals in the newly-conquered, peripheral regions like South India, managed to achieve considerable freedom of action, away from the central government's control; this was the case with the kōtwal and fādjī ʿAlī of Haydārabād, the most important city of the eastern Deccan, see J. P. Richards, Mughal administration in Golconda, Oxford 1975, 83-5.

When a new police system was introduced into British India after 1861, the office of kōtwal disappeared from most of the subcontinent, and his duties were taken over by Inspectors or Sub-Inspectors. In the North-West Frontier Province, however, the term continued in use to designate the chief police officer of the larger towns and cantonments.

(G. E. Bosworth)

KOUMANDÉ, at present a regional capital of the People's Republic of Benin, was founded by a clan of Bariba hunters, the Tossó, specialists in the cliffs of elephants, who provided a tribute of ivory tusks to the sovereign of Nikki. This settlement of hunters must have been ancient (perhaps in the 16th century), but a prolonged dynastic quarrel at Nikki brought to Kouamé considurable numbers of young warriors who must have used this city, every dry season, as a raiding-base.

The prince Chabi Gada of Nikki, having killed one of his pregnant wives, was expelled and took refuge at Birni Maro at the court of the Tossounon (chief of the Tossó) who offered him in marriage his eldest daughter, Gnon Birso (in about 1762). Accepting the succession to the throne of his father-in-law, he renounced all allegiance with regard to Nikki. He had, moreover, carried off with him some of the ritual objects that were the property of the king: six kakaśicer (trumpets), silver and bronze stirrups, ceremonial sabres and lances, harness and bridlebits as well as the rings which were used as a tribute of young princes on the day of the ceremony of Gnon Koui, which marked the passage from childhood to adolescence.

The death of Gada (in about 1780) led to a quarrel over the throne between Onaoro Ouati, known as Tabounouf ("wearer of the ear-ring"), a prince born at Nikki, and Onoort Kpassi, son of Gnon Bīrī, princess of Bīrī. The latter was victorious and took
the title of Tossounos while Ouarou Ouari moved from Birni to Kouandé.

The foundation of Kouandé. With an army of sixty-six horsemen Ouarou Ouari arrived in the region of Kouandé where the Bariba Seko had been installed for several generations. Ouarou Ouari was well received by the Kouandé, who gave him a vast area of land at the foot of the hill and died soon afterwards. A few days later he received the regalia brought from Nikiki by Gada, and the following Friday, to the sound of the six royal trumpets, he accepted the homage of the Bariba and Seko chiefs. He took the title of Bangana (“buffalo”) and appointed another Kouandé as his colleague and chief minister, and extended his authority over Birni, Pably, the region of Oussoua (Tobré and Pêhounce), an area of some 10,000 km².

On his death, his brother Simé Verina succeeded him, taking the name Ouarou Sourou (“the Saint”). He took the young princes to task, demanding that they abandon their extortions “at once”, thereby acquiring the nickname Baba Tantani (“Papa at once”). To provide a diversion for the troublesome young princes, he mounted expeditions against the Berba, the Tangua goes to the tree on which his ancestor used to rest. This tree lies at the southern end of the village of Kouandé and is called Bouro (“good luck”). The king dismounts from his horse, leais against the throne and appeals to his ancestors for aid and protection.

A superstition holds that the man who picks up the pebbles under the tree will have his wish granted if the pebbles are of even number.

The Islamisation of Kouandé, at the beginning of the century, was very superficial. Only the community of foreign merchants was Muslim. Alfa Sabi, known as Aloufa, who was born in Kouandé in about 1853, supervised a Koranic school attended by a number of pupils. Since then, the influence of the Tijani order has developed considerably.

(R. Cornevin)

KÖY, the word used in western Turkish (e.g. in Ottoman and Crimean Tatar cf. Radloff, Versuch eines Worterbuches der Türk-Dialekte, ii, 124) for village. It is the form in which Turkish has borrowed the Persian koy (cf. Bittner, Der Einfluss des Aramäischen und Persischen auf das Türkische, in SB Al. Wies, xiii, No. 3, 103), or perhaps more correctly köy (Vullers, Les lexions; Bahçe-1 köy, 759) for a small city (or even a street). In the toponymy of the Ottoman empire we find many place-names compounded with köy, like Boghaz Köy, Ermeni Köy, etc. It seems that these names are not found before the end of the Sultans period; the word does not occur, for instance, in Köşghart Köy in the sense of an open village as opposed to habsaba meaning a small town. In eastern Turkish place-names we always find the word kend (itself a loan-word from Soghdian) used for a village. Sometimes this last word seems to have been replaced by köy (cf. e.g. Ritter, Erdhundert, S1, 1221 ff; Kâdi Kend, near Al-Mawali, becomes Kâdi köy).

(J. H. Kramer*)

KÖY ENSTITÜLERİ (T. “village institutes”), a Turkish educational institution of 1940-54, founded to combat the high illiteracy in rural areas by training and equipping village boys and girls for the special requirements of each region and using them as teachers in distant or under-developed areas where city-born teachers have been reluctant to work. They were the brain-child of Ismail Halil Tengü (q.v.) a prominent educator, and were put into operation by Hasan Ali Yıldız (q.v.) the reformist Minister of Education (1958-60) under President Ismet İnönü (see İŞME TENGÜ İNÖNÜ in Suppl.). From the early years of the Republic the problem...
of mass education, particularly that of village children, was of great concern to Mustafa Kemal (Atatürk) and Turkish educators. During this period, nearly 80% of the population of over 13 million (1927 census) lived in some 40,000 villages unevenly scattered throughout war-devastated Anatolia and Eastern Thrace. Less than 20% of village children (mostly boys) attended for the most part inadequate schools, where the majority of teachers had had little or no proper training. Early experiments in setting up village teachers' training colleges, first under the young pioneer minister of education Mustafa Nadir (1894-1909), and later during an attempt at collaboration between the Ministries of Education and Agriculture, failed owing to poor planning and inadequate funds. In 1936, during the ministry of Saffet Arıkan (1935-8), a new project was developed. A selected number of villagers who had served in the army as corporals and sergeants were sent to special courses called eğitim kursu (Turkish, "instructor, educator" from the newly-coined neologism eğitim "to educate" and eğitim "education"), trained as teachers and appointed to village schools. To facilitate their settlement there, the eğitimler were given land, agricultural equipment, tools, seeds, young plants, etc. In the meantime, the idea of village-teachers' training colleges was revived, and three colleges were set up in the İzmir, Eselişehir and Kastamonu areas (in Kırşehir, Mahmoudiya and Gölköy respectively). The new minister, Hasan Ali Yüreğ, gave Tonguç full authority, and the latter was able to put into practice extensively his long-cherished project, elaborated in his many works (particularly in Cemlanırdılaşak köy, Istanbul 1947). On 17 April 1940 the law No. 3803 on Village Institutes was passed, and with the law No. 4274 on 19 June 1942 they were fully organised (for the texts of these laws, see Distler, Öğretmen İktisadi, İzmir 1946, 692-7 and xxii, 1942, 1575-6 respectively). The Institutes were put under the direct control of Tonguç and after a survey of local conditions and requirements, 20 of them were set up in the following regions of Turkey (the nearest provincial centre is shown in brackets): South-East: Dicle (Diyarbakır); East: Pulur (Erzurum), Cilavuz (Kars), Ahmet Kadi (Isparta); Central Anatolia: Hasanoglan (Diyarbakır); with a three years' training course consisting mainly of "cultural subjects" (Turkish, history, geography, civics, mathematics, physics, chemistry, a foreign language, military science and art) for 22 hours per week; agricultural subjects (farming, gardening, fruit growing, poultry farming, bee-keeping, fishing, etc.) for 11 hours per week; and technical subjects (metal working, carpentry, building, tailoring and dress-making, etc.) for 11 hours a week. The curriculum was mainly functional and was based on the essentially concrete and practical, with special emphasis on skills needed in the peasants' daily lives in a particular region. The aim was not merely to train village school teachers, but also to equip them to participate in the leadership of the community by developing their sense of personal responsibility and their ability to cooperate with villagers (specific aims which so far was only city-born and trained teachers had been unable to realise). In 1943 a special teachers' training college was set up in Hasanoglan near Aksaray (Hasanoglan Yüksek Öğretim Dairesi) with a three years' training programme. Up to the school year 1946-7 these Institutes trained more than 3,000 village teachers and 700 health officers.

With the ending of the single party régime (1945) and the authoritarian rule of the Republican Peoples Party (RPP, see DEMOKRAT PARTI), the Village Institutes began to be subjected to violent attacks both by the conservative wing of the RPP and the newly-founded (January 1945) Liberal Democrat Party (DP, see DEMOKRAT PARTI). They were accused of fostering an unruly, subversive, anti-traditional generation and being the hotbeds of Marxist indoctrination. This campaign was waged mainly by the great landowners in and outside Parliament, and their mouthpieces in the press. The campaign reached such dimensions that President İnönü replaced the Minister of Education, H. A. Vezik, with the conservative Regat Şemseddineddin (1946), who in turn removed I. H. Tonguç, the brain behind the Institutes, from office, closed the Hasanoglan Teachers' Training College and changed most of the staff of the Institutes. Under the ministry of Taşkin Banguoğlu (1948-50), the gradual liquidation of the Institutes continued and was completed by Tevfik Ileri (1951-61), the second Minister of Education (appointed August 1950) of the Democratic Party, which won the general election of May 1950. Ileri put an end to the co-educational system in the Institutes (1951) and reformed their curriculum to bring it into line with classical teachers' training colleges of the cities. Their abolition was officially registered when their name was eventually (1954) changed to Türkiye'deслужители

KOY, KOIL, a town of northern India situated 75 miles south-east of Dihl and coming within the United Provinces in British India, now Uttar Pradesh in the Indian Union. The more modern town of Allâghâ (s.w.) has expanded out of a suburb of Koil. In 1590/91 the commander of the Ghûrids, Kûth al-Dîn Aybâk (s.w.), captured Koil on a raid from Dihl, and henceforth there were usually Muslim governors over large Rûd-jut rulers, such as Kûtûk Ahi under Bâbur (932/1526) (Bâbur-nâma, tr. Beveridge, 176). Ibn Bâtûtâ visited Koil on his way southwards from Dihl to the Deccan and Malabar, and speaks also of a noted shaykh of Koil (as he writes the name), one Shams al-Dîn b. Tâj al-Arifîn, whom Sultan Muhammad b. Tughluk did to death (Râbi’a, iii, 307-9; tr. Gibb, iii, 704-5, and iv, 6-7). The minaret of Koil (now destroyed) had on it an inscription of the Slave King Nâsir al-Dîn Mahnûd Shâh from 632/1234 (see C. Vaidyan. The inscriptions of the Turk Slâvins of Delhi . . . in Epigraphia Indica Mesopotamica, 1913-14, 22-3). Koil is listed in the Ârin-i Aksâr, tr. Blochmann and Jarrett, Calculata 1939-40, ii, 197, as a zarûh in the âgâr subha of the Muğhal empire, with a revenue of 55 million damu.

In ca. 1572 Koil was captured by the Jâhâ’i jãb*/hartî Mal and then in 1590 by the Aghlânîs, its strategic position on the Dihl-Agra road giving it importance. It was re-named Allâghâ "the high fortress" by Nadjâf Khân in 1776, when he rebuilt the citadel. All the upper Dâhâm passed into British hands in 1804, but with Koil/Allâghâ only captured from the Marâchâs after a prolonged siege. Native troops there mutinied in May 1857, but order was restored in August by a British force after internal strife between the Jâhs and Radjouts. For the town’s subsequent history, see pp. 1050ff.

KOYLU HISÎR (KOYUN ULISîR), modern Koyluhisar, centre of an îce of the province (il) of Sivas in the valley of the Kelkit River along the old route from Nîsisar to Şâhinnâzar-i Erzurum in the so-called "left wing" (îcel sîby) of Anatolia within the framework of the Ottoman road and postal system. The site has changed a few times within the framework of the Ottoman road and postal system. The site has changed a few times.
The origin of the Közan-oghlu dynasty and its name is uncertain. According to Ahmad Djewdet Pasha, the family came from the Arif tribe, one of the Warsak (Farsab) tribes which settled the Taurus Mountains in the 13th century A.D., and its name originated with an ancestor from the village of Közan near Aynab (Teğerhis, III, 106-9). The family had gained leadership of the tribe by 1689 (Ahmet Rejik [Altunay], Anadolu'da Türk aşiretleri, 89) and went on to control the entire area and exercise the functions of government in virtual independence of the Ottoman administration. Only in 1865 were the Ottomans able to defeat, capture and exile the derebeys, settling the tribes on which their power had depended and establishing normal administration. Közan was of concern once again in 1878 when Közan-oghlu Ahmad Pasha tried to re-establish its control, but with his defeat the area ceased to be of special importance.

**Bibliography:** The most detailed accounts of Közan and the Közan-oghlu are those of Ahmad Djewdet Pasha in Mağtuda, in TTEM, x (87), 278-82 and Teğerhis, III, ed. Cavid Baysun, Ankara 1953, 107-15, 117-19. A general description of the area as it was in 1830 is given in V. Quinet, La Turquie d'Asie, ii, Paris 1852, 90-7. Selected documents concerning the Közan-oghlu are found in Ahmet Rejik (Altunay), Anadolu'da Türk aşiretleri: 984-1790, Istanbul 1950. On the Taurus tribes, see Feruk Sümer, Çukurca tarihsine dair araştırmalar (Fethiye XVI. yüzyılın ichtisatı ve tarihi), in AUDTCFD, i, 70-93. The most recent study of this area in the nineteenth century is A. G. Gould, Paschas and brigands: Ottoman provincial reform and its impact on the nomads of Southern Anatolia, 1840-1885, Ph.D. thesis, University of California, Los Angeles 1973, unpublished.

(A. G. Gould)

**KÖZAN-OĞHULLARI, a family of derebeys[1] in Ottoman southern Anatolia, with their centre of power in the 19th century in the sandjak of Közan [2] (i.e. western Közan) and the hadia of Közan, in the plain of the Taurus Mountains which lies between the Taurus and Cilician plains.**

The Közan-oghullari claimed descent from a Tärkmen tribe which had entered Cilicia in the middle years of the 13th century A.D., the ancient capital of mediaeval Little Armenia (see V. F. Büchner, art. Sts, in EPr), which was also concerned lest the Slav and Armenian influence be extended to Cilicia. The Közan-oghlu family was, however, rent by internal rivalities in the middle years of the 19th century. In 1865 the central government was able to reduce the power of the Cilician derebeys by the despatch of the military "Reform Division" (Fırka-yi İlahiyye) to Iskenderun; various members of the Közan-oghullari went over to the government side, and after some attempts at resistance, the family finally submitted. Several of them were given official posts in the Ottoman administration, and others brought to honorary exile in Istanbul; after a final local rising in 1878 just after the Russo-Turkish War, the region of Közan was substantially pacified.

**Bibliography:** see A. G. Gould, Lords or bandits? The derebeys of Cilicia, in JMMES, vii (1976), 491-505, with references to the sources, and a kinship table of the family as it was in 1865 at p. 492. (Ed.)

**KRJ [see xika].**

**KRIZ (Russian designation, Kral [from the awl, Krala]), a small Caucasian ethnic group, forming with the Khaput [gou] and Dzhek the Dzhek subdivision of the Samurian group (Lezgin, Agul, Rutul, Tsakhur, Tabasaran, Budukh, Dzhek), of the north-eastern Ibero-Caucasian language family.**

According to the 1926 Soviet census, ethnically there were 5 Kriz, and linguistically 4,343 (including speakers of Dzhek and Khaput dialects). According to a 1954 estimate, there were some hundreds of Kriz living in a single awl, that of Kriz, located in the basin of the Kur, in the Khachalan area (Konak-kef district, Azerbaijan SSR). The Kriz are Sunni Muslims of the Shafi'i rite. The traditional economy of the Kriz was based on sedentary animal husbandry, agriculture, and horticulture. The Kriz language is only a variant of Dzhek (as is Khaput), which is a purely vernacular language; Azeri is used as the literary language. The Kriz are being culturally and linguistically assimilated by the Azeris.

**KRJUJE, a town in northern Albania, lying around the foot of a picturesque rock, a spur of the steep Krjuje range, with the fertile plain of the Isha river to the south and west.**

Under the Ottoman administration the town was officially known as Aş Hoër [71]. It was the chief administrative centre of the vilayet and after 1466 of the hadia of this name. For most of the second half of the 19th century the hadia was part of the vilayet and of the sandjak of Skutari (cf. Th. Ippen, Beiträge zur inneren Geschichte Albaniens im XIX. Jahrhundert, in L. von Thälmann, Illyrischen Forschungen, Vienna-Löpiz 1922, i, 381). The hadia comprised a nahiye, an area north of the river Mat, known as Öhleri i vogël (cf. F. Seiner, Die Gliederung der albanischen Stämme, Graz 1922, i), which was inhabited by the Kithella tribe (cf. Detailbeschreibung von Albanien, i. Theil: Nord-albanien mit den angrenzenden Tiethen Dalmatiens und Montenegro, Vienna 1960, 110 ff., 130 ff.). At the time of the Austro-Hungarian occupation of Northern Albania in 1916, the hadia of Krjüjë functioned as part of the administrative district of Matja and Öhleri (cf. F. Seiner, Ergebnisse der Volkszählung in Albanien in dem von den österreich-ungarischen Truppen 1916-1918 besetzten Gebiete, Vienna-Löpiz 1922, x). In the independent Albanian state the area of Krjüjë became a sub-prefecture of the prefecture of Durres (cf. Albania. Geographical Handbook Series, Naval Intelligence Division, Oxford 1945, 196). After 1949, the position of the town was affected by various administrative changes; cf. Die
York 1958. 294) - New administrative purposes (cf. S. Skendi, Albania, which Albania had been subdivided by the order for Shkodër. These constituted one of the sir zones into which the town itself, which is known for the characteristic architecture of its buildings (cf. Koco Zheku, La Kullë (manoir) de Krüjë, in Deuxième Conférence des Etudes Albano-Logicques, ii., Tirana 1970, 263-8 (text), 269g (illustrations)), amounted to about 7,000 souls (cf. Zheku, ibid., 263).

Throughout the 19th and early 20th centuries, the region of Krüjë was the scene of various anti-Ottoman rebellions, mainly in response to the imposition of new taxes (cf. Luan Bajo, Faqe nga Lutfa t këuktav, Tirana 1937, 61). First, King of the Albanians, in the quarter of the town of Krüjë where it took place—named after the quarter of the town of Krüjë where it took place—the battle of Tallajë—named after the quarter of the town of Krüjë where it took place—was fought between peasants from the Krüjë area and Ottoman forces under Shemsi Pasha (cf. Luan Bajo, Mbi "Lufte e Tallajes" në rethnin e Krüjes në vitet 1906-1907, in Studime Historike, vi [1969], 147-30).

Accounts of these events as well as of the revolts against local landlords belonging to the Toptan family, within which the office of këuktav briefly [q.v.] had become a hereditary position, are preserved in local oral tradition and were collected, studied and analysed by G. Komnino, Expeidia folklorike t Krujes, in Buletin për shkencat shqipore, iii [1955], 235-61.

During the general insurrection of 1922, which led to the proclamation of Albanian independence, the region of Krüjë was one of the major centres of anti-Ottoman activity (cf. F. Bartl, Die Albanischen Muslimen zur Zeit der Nationalen Unabhängigkeitsbewegung (1878-1912), Wiesbaden 1968, 180, and for a more detailed account, L. Bajo, Mbi krye ngritjen e pergjithshme e vitit 1912 në rethnin e Krüjes, in Studime Historike, viii [1971], 1, 131-54; and in 1914 it was the centre of the Essadist movement, which was partly pro-Turkish and directed against the Albanian sovereign Wilhelm von Wied. The town was captured by anti-Essadist troops of Mati tribesmen under Ahmet Zogu (cf. C. A. Dako, Zogu the First, King of the Albanians, Tirana 1937, 62).

The population of the kulla was predominantly Muslim and the town of Krüjë was inhabited by Muslims exclusively (cf. Seiner, Volkszählung, 14). The majority of its inhabitants belonged to the Bektaşî order (see BEKTASHIYA) which had several shrines in and around the town and a tekke in the plain below Krüjë (Fushë e Krüjes), which was visited and described by F. Babinger in 1928 (F. Babinger, Bei den Derwischen von Kruja, in Mitteilungen der Deutsch-Türkischen Vereinigung, ix [1928], Heft 38, 128-9; Heft 10, 164-5; and idem, With the Derwishes of Kroosa, in The Sphere, xxvii [1929], no. 1525, 63).

For photographs of the tekke, see E. Rossi, Credenza ed usi dei Bekiacci, in Studi e materiali di storia delle religioni, xvii [1942], 60-80. Until 1907, the tekke was the seat of a gjirok (grandfather) who had under his jurisdiction the prefectures of Tirana, Durrës and Shkodër. These constituted one of the six zones into which Albania had been subdivided by the order for administrative purposes (cf. S. Skendi, Albania, New York 1938, 204).

KUBAČI, self-designation, Urbreg; Russian, Kubantsi; Arabic and Persian, Zirülgarān), a people of the eastern Caucasus. The Kubāči inhabit the single asl of Kubai, located in Dakhadav rayon, DāğHESTĀN. They are a Caucasian people whose language belongs with Kāytāk and Dargin to the Dargino-Lak (Lak-Dargwa) group of the Ibero-Caucasian language family. Kubāçī is now regarded as a dialect of the Dargin language, and they are considered in the Soviet Union as a sub-group of Dargi rather than as a distinct ethnic group. The Kubāči use the Dargin literary language, and they are being assimilated by the Dargins. In 1926, according to the Soviet census, there were 2,232 Kubāči.

The first mention of the Kubāči appears in Arabic sources of the 14th/15th century from Darband (see BĀR AL-AWĀR). Although the Kubāči maintained patriarchal clan divisions and had a strong self-rulling free society, they paid tribute both to the Sultanate of Kārkšān (4th/8th/10th-14th centuries) and the Umayyad of Kāytāk (9th-10th/15th-16th centuries). The asl of Kubai was part of the Gārgsī free society, a division of the Umay-Dargā, a Dargin federation. The Kubāči are Sunni Muslims of the Shāfi‘i school. They, along with the Dargins, accepted Islam in the 6th/12th century.

Since the middle Ages, Kubāči artisans have been renowned as gold, silver, and coppersmiths, and as makers of fine jewelry and weapons. So famed were they as makers of daggers, sabres, and chain-mail that they were, and are, called Zirīguārān ("makers of mail"") by the Arabs and Persians. Even under the Soviets today, the Kubāči masters are still famous for their fine jewelry, gold and silver smithing.

(R. Wixman)

KUBĀDĀBĀD, a residence of the Rām Sādādī al-Dīn Kaybūdāb I (616/1219-27) [q.v.] on the west bank of the Lake Beyrāgh, 110 km. south-west of Kōnya. On the spur of the Gūnlüce Dağları, probably in 624/1227 chosen by Kaybūdāb I as a site for its scenic qualities, a palace-city was constructed under the direction of Sādād al-Dīn Kōpe Şek, his Court Architect and Master of the
Royal Hunt (a'mir-i qyldv u mir'vdr). The first palace is said to have been erected in the presence of the ruler according to his detailed indications. But it may have taken longer to erect the buildings of the area, which measures ca. 430 x 200 m. and on which until now there can be identified the ruins of 15 constructions, as well as the outline of a quad and a fenced enclosure perhaps to be identified as an enclosure for animals. Unambiguous evidence for continued building activity is provided by an inscription, dated 639/1240, commemorating the foundation of a mosque by Badr al-Dîn H附加值, governor (may) of Kûbadbâd, later transferred to the mosque at Kûrît Kûyâ, at a distance of ca. 3 km. to the south. The palace was inhabited temporarily by Ghiyâth al-Dîn Kaykâbûdd (r. 655-90/1237-61), but its importance must have declined sharply after the occupation of Anatolia by the Mongols (641/1243).

The ruins were identified in 1949 by M. Zeki Oral, who made limited, trial excavations up to 1951. The systematic excavations in 1965 and 1966 by Katharina Otto-Dorn and Mehmet Onder included a topographical survey of the area, but remained restricted to clearing the two main buildings located at the lake shore. Both buildings are characteristic palaces with central double rooms: a raised iwan, probably a throne-room, preceded by a barrel-vaulted entrance hall. The smaller building of 30 x 29 m. of dressed stone, by a quad and associated with a courtyard, is probably the older one of the two palaces. This is indicated by the stone blocks of the porch, which have been excavated; with its simple, angular, interlocking bands it points to the early years of the reign of Kaykâbûdd. The greater palace of 90 x 35 m., erected probably only slightly later in an isolated position on the northern side of the building area, is a rubble construction clearly less pretentious as far as masonry is concerned. It is, however, distinguished by an outer court and a terrace which border upon the shore of the lake.

The rubble walls of the greater palace, not very notable by themselves, were originally richly decorated. Up to a height of 7.5 m., the inner walls of the main rooms bore a revetment of underglaze-painted tiles mostly arranged in an all-over star and cross pattern, the sight-pointed stars bearing figurative subjects and the crosses fleur-de-lis ornaments. The tiles, datable ca. 627/1230 or a little later, show a variety of iconographic themes side-by-side, apparently reflecting the multiple functions of the building, as a royal residence and as a hunting lodge; on the one hand, there are symbols of power like the sovereign enthroned, eagles bearing the inscription al-walids on their breasts or lions; and on the other, astrological symbols and fabulous creatures, or trees of life which may well be allusions to paradise. Finally there are symbols of power like the sovereign enthroned, eagles bearing the inscription indicated by the stone blocks of the porch, which remained restricted in the chronicle of Karim al-Dîn Mâyînî al-Arûzî; Mus'marât al-ahhâb; F. Iqânî; I. H. Konyali, Kûbadbâd saraylan kazilartnda iân fâsîatur ve hikayeleri (in Ihtifat-i Farkulûcî Dergisi (1955), 177-208; L. A. Mayer, Islamic architects and their works, Geneva 1956, 83 f.; K. KUBÂDHIYÂN, KUWAĐHIYÂN, in medalieval
Islamic times a small province situated on the right bank of the upper Oxus, and also a town, the chief settlement of the province. The latter comprised essentially the basin of the Kubādhiyān (modern Kafirnihan) River, which ran down from the Burtanān Mountains and joined the Oxus at the fording-place of Awzdād (modern Ayvazād); accordingly, it lay between the provinces of Caghāniyān (see on the west and Wālīsh and Khuttal (q.v.) on the east. Administratively, it was most often attached to Khuttal. It now falls substantially within the Tajikhīlān SSR.

The name Kubādhiyān/Kuwaclhiyun seems to appear in the Chines Buddhist pilgrim Huenv-Tsang's travel account as Kuo-ho-yen-na, according to Marquart, Erdnahr, 226, 1913. The 19th-century geographers describe it amongst the upper Oxus provinces of Transoxiana. Its chief seat was the town of Kubādhiyān itself (modern Kabadian), also called in Ibn Hawkal Fazza, but in Mukaddasi B.Y.A. (?); this was a strongly-fortified town on the Kubādhiyān River, smaller however than Tirmidj (q.v.). In the north, on the upper course of the river, lay the fortresses of Wāshgird and Śhāmān, frontier posts against such predatory peoples of the Burtanān Mountains as the Kumādīja (q.v.); indeed, the whole province was well-supplied with rībād and defensive posts. According to Ibn Hawkal, the Śāhū-Barūr or postmaster and intelligence agent [see barracks] for the Sāmānids in Kubādhiyān received the salary for each three months (ṣ̄aqqīniyān) of 200 dirhams. The chief product for exports from the province was saffron, a crop whose marketing was strictly controlled by the Sāmānids (see bibliographic references for the spread of Islam, since several of the Muslim missionaries in Togo have received their religious education there.

**KUBAN** (called in Nogay Turkish, Kuman, in Cerkes, Plęgur), one of the four great rivers of the Caucasus (Rion, Kura, Terek and Kuban). It is about 500 miles long. It rises near Mount Elburz at a height of 3,990 feet. Its three constituents (Kürrüz, Ulā-Kam, Uş-Kulan) join together before reaching the delta through which the Kuban enters the plains (at a height of 1,237 feet). The Kuban at first runs through the wooded upper spurs of the mountains and then, along a westerly direction, flows through the plains with forests on either bank. Its left bank tributaries are the Da'at, Teberda, Zelenčuk, Urum, Loba, Bëšaia, Fëdshib, Pselyup, Afips, Adagum, etc. Its lower course breaks into two branches, one of which (Proloka) flows into the Sea of Azov and the other (the main one) into the Black Sea (although it also sends off a channel to the Sea of Azov). The lower course of the river frequently changes its bed. As late as the 17th century for example, it discharged the bulk of its waters into the Sea of Azov. The Kuban with its tributaries drains an area of 20,000 sq. miles.

The administrative district of the Kuban—before 1918 the province (elazar) of the Kuban Cossacks—also included the valleys, further north of the Baisugh, Celbaš, Ĝasika and the left bank of the Yeya, all flowing towards the Sea of Azov or ending in lakes and marshes. This territory between the chain of the Caucasus and the sea stretched to the north as far as the province of the Don Cossacks and to the east as far as that of the Terek Cossacks. The area of this
great province, which is divided into 7 districts (Veya, Tenmur, Kavtszosti, Ekatorinodar, Maykop [in Turkish: "much oil"], Laba, Batllpashinsk), was estimated at about 30,000 sq. miles.

Klaproth, *Tableau du Caucase*, Paris 1827, 89, estimated the tribes of the Kuban at about 100,000 families. According to the *Russian Encyclopaedia*, the native population in about 1861 was 200,000 men (?), but as a result of expatriations on masse, this number had fallen to 90,471 by about 1883. Russian colonisation, which was begun by the Cossacks in about 1861, had reached 3,500,000 by 1894. In 1912, official statistics put the whole population of the province at over 3,000,000. The number of "highlanders" and "Sunnis" included in this total had also increased and reached 139,000. The native elements indicated by these official terms, which lack precision, included the remainder of the Cerkes and Abaz tribes [q.v.] (related to the Abkhaz, q.v.) and Turks of Kara-Cay. The latter (about 15,000 in 1900) lived in the villages (aul) of Kart-Djurt, Ot-Kulan and Khurzuk, etc. in the upper waters of the Kuban and spoke a northern Turkish dialect (Noghay). They were at one time under the Cerkes princes of Kabarda and in 1822 submitted to the Russians.

After 1920, the territory of Kuban was re-organised on an ethnic basis; besides the Kabarda-Balkar region (on the Terek) (now an Autonomous SSR) two autonomous (within the Soviet system) areas were created on the Kuban: first, the Kara-Cay-Cerkes, east of Urup with its capital Batl-pashinski; it has about 70,000 Cerkes. Both these are now Autonomous Regions.

The basin of the Kuban has been inhabited since the bronze age. The oldest tombs at Maykop go back to the second (according to Rostovtseff, to the third) millennium B.C. Scythian tombs of the 4th-5th centuries B.C. are very numerous (Kelemes, Voroneszka) and Sarmatian tombs from the first and second B.C. to the 1st A.D. The Greeks called the Kuban Hypasus, Varanes and Anteoi. In Byzantine authors we find Koprg, Koprics (Marquart, *Ost-europaische Strenge*, 32). The spread of Christianity among the Adilghe (Cerkes), according to local legends, dates from the emperor Justinian (527-65); cf. M. Nogmov, *Istoria adlgheskago naroda*, Nizhni Novgorod 1922. All the

**Bibliography:** Cf. the articles *Kuban*, *Kerke*, and *Kabarda* in *Archaeology*; H. Minas, *Scythians and Greeks*, Oxford 1931, 634-6 gives a complete bibliography; N. Rostovtseff, *Iranians and Greeks* in *South Russia*, Oxford 1922. All the passages in classical authors relating to the Caucasus are in E. Latschew, *Scythica et caucasica*.
KUBBA, the Arabic name used throughout the whole Muslim world for a tomb surmounted by a dome.

Purpose and significance. The term is applied to the thousands of simple local domed tombs of m. The classical word turba was driven out of use by kubba until it was again popularised by the Turks. Just as we have gumbad for kubba, so we occasionally have turbat for turba in Iran. Tombs of saints which, along with tombs of princes, are almost the only material with which the history of art has to deal, have different names in different countries, and these usually also indicate different grades. The highest is the masjd, which according to its extended meaning, is a place where a shahid is buried. As a rule a masjd is found only as the tomb of a martyr held in particular esteem, indeed of a saint endowed with a semblance of divinity; but then the masjd is not only a grave, but a memorial in the wider sense, which as a place of pilgrimage (maqam) attracts numerous visitors and has certain rites associated with it, that is to say, it is not a burial-place for any Muslim, but a tomb and also a place of worship for saints. The general term in Shi'ih lands for the tomb of a saint is imam-rid or gish shieh. In lands where Arabo is spoken, these domed tombs are called marbili, shayb, wali, naib, and as places of pilgrimage, maqam.

Form, evolution and embellishment. The original form of the kubba is a square building covered by a dome, which evolved from the domed house of the peoples of the desert and became stereotyped as a monumental form. In the process, the very low-lying vaulting of the dwellinghouse, which is only a flat calotte rising from the cube of masonry, was raised. This evolution of a rounded vault into a round dome required the insertion of an octagonal intermediate story, the drum, and led in the interior to that development of the transitions from the square to the round dome which constitute the constructive and decorative charm of all Muslim domed chambers (pictures of round vaulting in Diet, Kunst der islamischen Völker, Berlin 1952, 59). This development began with primitive corbelling, then passed to simple spherical corner arcades or niches and in the end took its own way in West and East, as will be dealt with under the separate countries. Alongside of this typical orthodox normal form of kubba, which is found from the Magrib to the eastern Asiatic steppes and India, special forms, which are described under the different countries, arose in the lands conquered by the Turkish peoples, such as northern Iran, Mazar-and the lands of the Caucasus, Anatolia and Central Asia. The ornamentation of the buildings depended on the material and the systems of decorations in vogue in the different countries. So far and so long as brick predominated, we find also the primitive, probably almost always coloured, stucco covering, with which in Iran, and exceptionally also in Anatolia, is associated glaze, which gradually took the place of stucco. The stone buildings of the Ayyubid and Mamalik periods in Egypt and Syria, as well as in Anatolia and the Caucasus, attained their effects through alternating layers of colour and decoration in relief. The stone domes of the Cairo kubbah covered with geometrical patterns and scrolls rival the brightly decorated glazed domes of Iran.

We shall now deal with the form and development of the kubbah in the various lands.

Magrib. These kubbah or mausoleums of the Magrib are usually of uncertain age. Even the period of introduction of the different types is often difficult to determine. Comparisons with the architectural forms, especially with the decoration of the great dated mosques, sometimes afford a clue. The types of the different countries have their origins in old forms of the sepulchres of the people. The Tunisian type A has derived its octagonal drum from the monumental style; the Algerian type B shows the combination of the original domed circular structure with the later rectangle, with the addition of the pinnacles indigenous to African native architecture; the western type C also found in Spain conceals the dome under the pyramidal roof, which comes from building in wood and thus points to mountain valleys rich in wood and is a parallel phenomenon to the tomb of similar form in Mazar-and the south shore of the Caspian Sea. Type D is found among the nomads of the high Algerian plateau and follows the local style of building in clay of the nomad territory, with the egg-shaped dome and the usually tapering lower structure.

In view of this undoubtedly popular origin of the kubbah, we can hardly agree with the common assumption that the open type of kubbah—a dome on four pillars—as represented in the Cubbah of Palermo, is the oldest in the Magrib (Marçais, op. cit., 352). Several kubbahs of the cemetery of Rayrân might, according to Marçais, date from the same time as the domes of the Great Mosque (Marçais, op. cit., fig. 17). To the same group also appears to belong the kubbah of Sidi el-Mazeri in Monastir which can be dated to the 6th/12th century.

In al-'Ubbad al-Sufi ("the Lower") near Tlemcen, Algeria, there are still several pre-Ma'mu'd kubbahs (i.e.
The oldest buildings of the Kubba type in Cairo belong to the Fatimid period. The oldest is the Kubba of the Marifis in Shali (Chella) near Rabat built up with the preceding type from Tlemcen. Here from 735-801/1336-98 were buried four successors of Abu 'l-Hasan Ali. One of these Kubbas has a quadrangular drum, pierced by four horse-shoe arches, and a dome with twelve sections. The arcades have again the form of semi-pendentives. The mausoleum of Abu 'l-Hasan there, the most splendid of the Marinid tombs, has also a square drum with slightly deformed horse-shoe windows in three sides (H. Bassett and E. Lévi-Provençal, Chellia, une nécropole mérinide, in Bespreis [1922]; Marçais, op. cit., 497). Next to these Kubbas just mentioned the closed Kubba is by far the most frequent. These buildings have only one door, but within, three similarly formed blind niches. This is the form of the Kubbas of Sidr Bâ Medjen, the famous Spanish mystic, in Tlemcen which was already in existence in the 8th/14th century and restored at the end of the 18th century. The dome is divided inside by painting with interwining bands into twelve sectors. The Kubba in Tlemcen now called Sidr Bâlîn was built by Sidr Abû Hamâm Mûsâ II (753-833/1352-60). The interior walls with the usual blind-niches still possess their socles ornamented with glasses and their painted stucco relief. The dome divided into eight parts rests on Magribi arcades in the form of semi-pendentives. These two last-named Kubbas have pillared outer halls for the pilgrims. As elsewhere, in the Magribi, particularly in Tlemcen, mosques and mausoleums were rendered particularly sacred by the inclusion of a Kubba (Marçais, op. cit., 586).

Egypt. The oldest buildings of the Kubba type in Cairo belong to the Fatimid period. The oldest is the Kubba built by Badr al-Djalâmî, the builder of the second wall and its gates, and by his son al-Afdal—the Mashhad of al-Djuyûşî on the Mokattam hills. Amin al-Djuyûşî, commander-in-chief of the army, was Badr's title. The date of the inscription was read as 478/1085 by van Berchem, Notes d'archéologie arabe, I., in JA (1891), 478-9 = Opera minora, Geneva 1925, 144-5. The building consists of a rectangular chamber, roofed by a high arced dome raised on an octagonal drum and five cross-vaults, which opens into a little court with three arcades on which a minaret is built (picture in Glück-Diez, Die Kunst des Islam, Propyläen Kunstgeschichte, 159; M. S. Briggs, Muhammadan architecture in Egypt and Palestine, Oxford 1924, figs. 35-8). The tomb chamber, left of the cupola, resembles the tomb of a famous saint, whom the natives call Sidr Djuyûşî, and to which pilgrimage is made on certain days; van Berchem raises the question whether this is the tomb of Badr himself (Notes, 487-8 = Opera minora, 153-4; idem, Une mosquée du temps des Fatimides, in Méms. de l'Inst. égyptien, ii [1888], 605-9). In the domed chapel is a finely painted stucco mihrab. The transition from square to octagon is done with Persian fashion. There are four small Kubbas of this period in the Karâla near the Kubba of Sidr 'Ukbî called by people as-sab'ûs banât, "the seven daughters" (van Berchem, Notes, loc. cit.). These are small square buildings with octagonal drum and cupolas, originally seven, already mentioned by Makrizi.

A Kubba with tombs of 'Abbasid caliphs situated behind the renovated mausoleum of Sayyida Nafisa in the south of Cairo shows the characteristic forms of the transition to the Ayyubid style (van Berchem, Notes, ii, in JA [1892], repr., 20 ff.). A date 649/1250 in an inscription gives the terminus ante, which in view of the style of writing cannot be earlier than the beginning of the Ayyubid period. Here the transition from square to octagonal drum is also produced through two series of mausoleums (4e) niches which shows Turkish influence. This Kubba, however, still follows Fatimid tradition as a single building and in its stucco decoration. The profile of the cupola still retains its Persian form, indeed according to van Berchem, it is the only cupola of Cairo which still retains this cupola in completely characteristic fashion (Notes, ii, 21). From the Ayyubid period also date the Kubbas of Sulân Šâli Nadjin al-Din Ayyub of 648-8/1250-90 and of his widow Shadjarat al-Durr of 651/1253. These are rectangular buildings of stone with octagonal drum and a thin, egg-shaped cupola with eight rectangular windows shooting up from it. Three keel-arched windows arranged in a triangle pierce each of the four principal sides of the drum. The façades of this Kubba are ornamented with keel-arched flat niches and ogee-shaped and circular shields decorated in stucco in the style of the Akmar mosque (519/1125) and other Fâtîmid buildings. In the interior, the transitions from the rectangular to the octagon are made with squinches and mukarnas, the mukarnas were decorated with ornament and framed above with keel-arched mukarnas in the form of a font (pictures in the volumes of the Comité de Conservation ..., in R. L. Devonshire, Some Cairo mosques and their founders, London 1922, fig. 32 and Briggs, Muhammadan architecture, figs. 72-3).

With the Bahri Mamluks (1250-1370) there began an increase in the height of the cupola by raising the drum, as could be seen in the ruins still standing in the early 20th century of the Kubbas of the family of Sultan Kalâwûn (678-95/1279-90) (Díez, Kunst d. isl. Völker, figs. 187 and 153). The two Kubbas, which were associated with mausoleums, had rectangular sub-structures of stone with an octagonal drum of brick like those of the great mausoleums of Kalâwûn and al-Nâşir Muhammad. The two domes fell in and one was renovated. The interior of the drum had stepped recesses with pillars from ancient buildings, but was otherwise bare. The sub-structures had carved bases of brick with pointed arches set into the stone walls, the fluted frames of which were decorated with stucco. The Syrian stone and the local brick technique here encountered one another. With these ruins the last remnants of the Kubba of the Bahri Mamlûks disappeared. The Kubba of Kalâwûn himself is an exception; he had it built after the model of the Kubbat al-Sahnîra (4e) in Jerusalem, and therefore it is outside of the regular line of development. It also fell in, and was given a wooden cupola. In the
The kubba of Zayn al-Din Yusuf, a Sufi shaikh of the line of the Banl Umayya, of 697/1298, is one of the most beautiful kubbahs of Cairo, unfortunately much damaged in the interior by fire. The outside shows polygonal bevelling of the squash area, a dome full of windows with a richly decorated calligraphic frieze about it, and a dome dome divided into numerous compartments. All the compartments and windows are framed in bands of stucco. The interior of the drum zone is broken up into richly ornamented, formerly painted, muqarnas (picture in Briggs, op. cit., 73). On this rests a dome of 28 segments, the ribs of which are decorated with sprigs of leaves in relief and it is beautifully adorned at top and bottom by inscriptions (picture in Devonshire, op. cit., 42). If the influence of the Central Asian style was already seen in the domes of the kubba just considered, it became more and more powerful in the raising of the cupula, the domes of which were no longer borne by Persian squinches and the cell-work evolved from it, but by Turkish triangular consoles and their numerous interruptions and combinations with muqarnas honeycomb. The internal transition by means of such stereometric structures is henceforth shown outside also in triangular bevellings of the corners of the drum storey. The dome is in the shape of a helmet and is placed like a helmet on the drum. The external decoration of these domes with network patterns of all kinds in high relief carved in glazed stone is one of the peculiarities of Cairo. The older so-called "Tombs of the Mamluks" and the later so-called "Tombs of the caliphs" all belong to the second Mamluk period and are similar.

Lists of the kubbahs of Cairo are given in K. A. C. Creswell, A brief chronology, in BIFAO, xvi, and Devonshire, op. cit., 123-7.

Syria. According to Wulzinger's list, there are still in Damascus and its neighbourhood over a hundred kubbahs, which are there called turba and cell and are usually connected with small madrasas or dawans. The general form is the same as everywhere else: a quadrangular-cubic building with a squash storey, a window storey and dome. Nothing has survived from the Umayyad period. It was only under the Zangids and their successors the Ayyubids that architecture began to flourish again. As, however, the sepulchral dome over the Nur-iyya madrasa, with its clusters of cells shows, architecture on the larger scale under Nur al-Din b. Zangi was still dependent on other lands, and in this case imitated the Mosopotamian form (F. K. Wulzinger and C. Watzinger, Damascus, die antike und die islamische Stadt, Berlin 1924, ii, pl. 4b). Saladin's kubba above the Azziziyah mausoleum is a rather too small dome above the heavy substructure.

From the period of the Bahr Mamluks, 1250-1350, many turba still exist which are described by Wulzinger and Watzinger. Through the Crusaders, the Syrians learned to work in a way suitable to dressed stone. "A touch of Gothic, even in so far as the artistic side, the idea, the aesthetic norm is concerned, becomes perceptible in the time of Baybars, indeed half a century earlier, just as in Egypt. The dome now rises with still greater vigour, the drum becomes higher and the silhouette steeper . . . In particular, the portal niche now becomes high and steep" (Wulzinger and Watzinger, 7). In keeping with this towering tendency, the turba of Rukn al-Din of 621/1224, which has a muqarnas associated with it, has already two transitional storeys on a square substructure, one octagonal with Persian concave squinches and the other 16-sided with windows, and a dome-shaped dome above (Wulzinger and Watzinger, fig. 44, pl. 85 and 9b). Very similar is the turba of Yuz al-Din of 696/1296-7 (fig. 7) (Wulzinger and Watzinger, op. cit., 84, figs. 34, 35; pl. 7b, pl. 10a). A more modest type is represented by the Kilihiyya turba of 645/1247 built along with a madrasa for Sayf al-Din Kilihi al-Nuri. As frequently in Syria, there were originally here two domes separated by a gateway, but of the western one nothing has survived. Here one squinch-arc was sufficient, since with the help of pendentives the transition was made direct from the quadrilateral to the duodecagon, and then by twelve triangular conocones, which are placed in the spandrels of the twelve pointed drum windows, the round base of the dome was reached (Wulzinger and Watzinger, figs. 10-12; cf. also fig. 47). Open kubbahs with four great gate arches are also found in the 7th/13th century (Wulzinger and Watzinger, pl. 7e). As an example of a very inner Syrian form, the tomb of the mufta of Cairo may be mentioned al-Salihiyah turba of the 7th/13th century (Wulzinger and Watzinger, pl. 12).

As in Egypt, so also in Syria under the Curzanian Mamluks, the architectural form rapidly lost vigour, and was replaced by a fondness for decorative detail (Wulzinger and Watzinger, 10). The exterior was brightened, as in Cairo, by the use of stones of many colours, which were also arranged in ornamental patterns. The dome shows a further tendency to increase in height. The Tawhidiyya of 754/1352 betrays a marked slackening in creative power by its two window-storeys directly opposite and externally exactly like one another (Wulzinger and Watzinger, pl. 22b). As the al-Turtel kubba of 828/1424-5 shows, there are no further changes internally in the transition from square to octagon and sixteen-sided figure (Wulzinger and Watzinger, pl. 25a). The rich dome of the turba of 850/1444 is built along with a kubba and a minaret, as in Konya (al-Salihiyah, pi. 22b). As an example of a very inner Syrian form, the tomb of the mufta of Cairo may be mentioned al-Salihiyah turba of the 7th/13th century (Wulzinger and Watzinger, pl. 12).

In Egypt, little of interest and little variety. They are, as the turba of Darwish Pasha of 977/1570 shows, mainly octagonal with two drum storeys in the lower of which the corners are still decoratively rounded off with niches, although they are now functionally superfluous (Wulzinger and Watzinger, pi. 59).

Asia Minor and Armenia. In Saljuk Anatolia more than in other countries, the association of madrasas with the sepulchral domes of the founders was the rule. In Konya and the towns under its influence, such as Aksaray, we find in the open madrasas, as in those with domes courts, at each side of the kubba-tuana in the main axis behind the court a domed chamber, one of which is usually used as a tomb, the other as a lecture room; exceptionally both are tombs (Indge Minareli; cf. masgir, Architecture).

In Konya the transition to the dome is made partly still by fan-shaped trihedral consoles and partly by salient and re-entrant friezes of trihedral consoles (Kara Tep, 659/1262-3, Indge Minareli, 650-684/1253-85, Sirkeci Madrese, 641/1243-4). The earliest, still clumsy, trihedral console friezes shrink in the course of development to narrower, ornamental friezes. This abstract stereometric rounding off of the angles was brought by Turkish architects from Central Asia where they had developed it in wood-
work. In the more eastern Anatolian towns like Nigde, Kayseriyası etc., the system of transition with arcades, most used in Iran and Syria, predominates. In addition to those already mentioned, attention may be called in Konya to the tomb of Fakhr al-Din ʻAli (866/1269-83) which was also built as a mausoleum with two domed sepulchral chambers (cf. F. Sarre, Konya, reprinted from Forschische Baudenkmale). The independent kübbas, usually called turba or gunbad, also minor, forms in Armenia and Azerbaijan a uniform group of tent-like buildings, mainly of stone, polygonal in Asia Minor, round in Armenia, with pyramidal or conical roofs.

A list of the more important turbas, so far as they have been published, follows. In Kayseriyası: Cifte Gümüş, 615/1219; Dünler Gümüş, 655/1256; Sırdje Gümüş, 750/1350; Ali Daʃir 750/1350; Amr ʻAli, 751/1350, all of stone, octagonal with pyramidal roof, except the last named which is square (cf. A. Gabriel, Monumentum turbae et lukiubi). The transition from the polygon to the round dome is here usually effected through rows of pointed arches. The Kış Başar in the same town (740/1340-41) has an octagonal turba standing in its court. The mosque of Lafe Faghi has an octagonal turba of the 8th/14th century built on to it. In Nigde the mosque of Sincr Bey has an octagonal turba of the year 690/1293 added to it. Outside of the town stands an octagonal turba of Kızılabanda (713/1313-14); there are also several undated turbas in the vicinity (Gabriel, op. cit.). In Siwaq is the octagonal turba of Husayn b. Daʃir (629/1230-1) and the square one of Shaykh Hasan Beg (Guduk Miyand) of 718/1318 (cf. van Berchem, Matériaux pour un Corpus ... Asie Mineure, 1, 17 and 39, pl. ii). In Diwirgi are the octagons of Amir Kamal al-Din, 529/1134-5 and of Amir Shâhshâh (Sayyida Maïqua), 529/1134-5, also an anonymous turba (van Berchem, op. cit., 94, pl. xi). In Teke, a village near Zara-Diwirgi, is the undated turba of Shaykh Marzuban. In Bayşehir the Agari Kam Dâm has a square turba attached to it with a conical roof, the inner dome of which is decorated with unguessed mosaic such as we occasionally find in Konya. These stone roofs on the exteriors have bands of relief and in the entrance doorway with mukarnas lunettes. Of the turbas in Akşehir, Sarre mentions that of Sayyida Miyand, 607/1209 (Kleinzeich, 22; Cf. Haurt, Épigraphie arabe d'Asie Mineure, in Revue sémantique [1894-5]).

In Armenia there are several turbas of structural interest by Lake Van. They are cylindrical, like most northern Iranian sepulchral towers, with cement walls faced with hewn stone in the Armenian tradition, and occupy a special position in view of their subterranean tombs. The latter are vaulted on a square base and have concealed entrances. The interior chambers vaulted with pointed arched domes are therefore above the level of the ground, reached by steps and used as chapels. These sepulchral towers have further four entrances facing the four quarters with mukarnas lunettes. The exterior is decorated with arcades in relief and Armenian twin domes, like domes of mud-brick. The combination of Turco-Islamic and Armenian traditions of structure constitutes their particular charm. The three great turbas in Akgâlt date from the end of the 7th/13th century, the small one from 862/1457-8, the turba in Vostan from 718/1318-19 (cf. W. Bachmann, Kirchen und Moscheen in Armenien und Kurdistan, 1925; Dies, Kunst d. isl. Welt, fig. 106 k, 128 f.).

Ottoman Turkey. The building of turbars continued under the rule of the Ottomans without, however, new types of artistic interest being created. The polygonal shape continues. The buildings show a stereometrically clear articulation of the façades, with trilids of windows with pointed arches framed by straight lines. The often too large number of windows and the glazing of the windows make these turbas as a rule look plain and practical. In addition, the inner chambers lost in atmosphere by being too well lit and overfilled with sarcophagi. To give a list of the monuments by name seems hardly worth while here, in view of their large number and uniformity, as well as their lack of significance in the history of art; see on them G. Goodwin, A history of Ottoman architecture, London 1971.

'İrak, Iran and Central Asia. In 'Irak these are the polygonal tombs with mukarnas domes above them, of which the best known example is the tomb of Sayyida Zubayda near Bagdad. Others are al-Najmî, al-Asteb, Imâm Dûr, Imâmâzût Tûlî, etc. This type was also taken to Kûm (figs. in Sarre Horstfeld, Archäologische Reise im Elburs- und Tigris-Gebiet, Berlin 1912; Sarre, Persische Baudenkämmer; Dies, Kunst d. isl. Welt, 100-202; or p. 80, 72-73 and mukarnas). Kvam [q.v.], as one of the holy places of Iran since an early date, still offers, with its 16 turbars still standing, the most fruitful source for the study of this type in Iran. They are almost all polygonal with an inner dome, which is covered over by a polygonal tent roof. With one exception, they are built of red brick and have roofs of blue glass. They date from the 6th/11th to the 10th/16th centuries. They are Şâhâzâde İbrahim, an octagonal domed building with eight deep niches, a Sâlîdî (?), perpetrator of the similar Sâfatî type (Ködîya Rabî); Şâhâzâde İbrahim near the Kâshân Gate of 721/1321 and restored in 808/1402; Şâhâzâde İsmâîl 770/1371; Ali b. Daʃir 740/1340; Ali b. Abî ʻAbd Allah near the Kâshân Gate 761/1361; Ködîya İmâd al-Dîn near the Kâshân Gate 792/1391; Şâhâzâde İsmâîl al-Mâqal near the Kâshân Gate; Şâhâzâde İsmâîl outside the Rây Gate; Şâhâzâde İsmâîl outside the Rây Gate; Şâhâzâde Kâbir 707/1307; Şâhâzâde İsmâîl (Köhî Ferâdî); Şâhâzâde İsmâîl Kâsim; Cihâl Ağaşan 905/1499; Şâhâzâde Hânezâ; Şâhâzâde İsmâîl (A. U. Pope, Preliminary report on the tombs of the sultans at Qu'am, in Bull. of the Amer. Inst. for Persian Art and Archaeology, 6/3 [1953]). The İmâm-zade Kâram in Bûzûn dated 528/1134 east of Isfahân was published by M. B. Smith and E. Herzfeld [Arch. Mitt. aus Iran, vii [1955]]. It contains splendid stucco decoration. In northern Iran along the Elburz chain, much more frequently than the normal kübbas we find in the period of the 4th/9th to the 7th/13th centuries cylindrical sepulchral towers of brick, usually called mihr or gunbadî: Dâridjian, Rayî, Radûn, Dâmûn, Dârband, Khozam, Wârâmî, Nîâbân, Marâgha, Bistâm, etc. (figs. in Sarre, op. cit., Dies, Chur. Eidem, and Kunst d. isl. Welt, etc.).

The type is found with variations beyond Iran as far as Khâvarz (Old Urgench), although the norm in Central Asia is the domed kübbas. These towers are mediæval descendants of the very ancient Central Asian tombs, which were built by the sometimes nomadic, sometimes settled peoples of the steppe for their tribal chiefs and leaders. In form they are to be interpreted as a rendering of the prince's tent of the nomadic peoples in monumental form and sometimes they copy its textile character (cf. Dies, Persien,
KUBBA

islamische Baukunst in Churasan, 1933, 51-5, 73 ff.; R. Hillenbrand, The tomb towers of Iran to 1550, Oxford D. Phil. thesis 1974, unpublished). A particular type which is closer to that of the normal kubbah developed in the province of Mizan-dar-e in the southern shore of the Caspian Sea. These are quadrangular and polygonal brick buildings, with pyramidal tower-arches mainly belonging to the 7th/8th-9th/10th centuries and are undoubtedly of an older native type of wooden building (figs. in Sarre, Persische Baudenkämter; Diet., Kunst d. isl. Völker, figs. 98, 99 or 73.) The kubbah proper was already in use as fire-temples in the pre-Islamic period.

The oldest kubbah in Irâq is, if Herzfeld's ascription is correct, the Kubbat al-Sulaybiyya in Sâmarra, which deserves our attention as the domed sepulchre of the caliph al-Muntasir, in which al-Mu'taz and al-Muntasir were perhaps also buried, as three graves were found; a domed building quadrangular within the interior, which in Sâmarra in the case of the squinch dome, with which, however, it has nothing genetically to do. The few Sâsânid domed buildings of this kind that have survived are simply monumental examples of a much older Iranian type of house (cf. the eastern Iranian, Sâsânid domed building Ribât Sefid in Dizeh, Persien, fig. 2). Domed buildings of the kubbah were probably already in use as fire-temples in the pre-Islamic period.

The building is of colossal dimensions. The square base measured 70 feet long, and was 20 feet thick. It was surmounted by four corner arches rising out of the corners; the inner arches were 30 feet wide, and the outside 45 feet. The entrance was in the middle of the long sides, and 12 feet wide. Its whole appearance has remained much as it was in the 7th/12th century (Zhukovskii, op. cit., figs. 30-31; Sarre-Herzfeld, The Kunst des Islam, 292-3). The kubbah of Sâsânid origin opens the important series of Central Asian-Iranian mausoleum kubbahs of the 7th-8th/13th-14th centuries. If the emancipation of the squinches from the body of the dome and their becoming independent in an intermediate storey was the first step in this development, the second is the emancipation of the gallery storey from the squinches area. We see the process completed in the kubbah of New Sarakhs on the Persian side of the Harî Rûd, which was restored in the 8th/14th century, but probably dates from the beginning of the 7th/13th century (Dizeh, Chur. Bldm., 51 ff., pis. 12-18; Glüeck and Dizeh, Die Kunst des Islam, 292-3). Here the gallery is included in the lower structure which makes the latter, and also the dome, higher. The dome is still resting on a square substructure with an octagonal drum forming a step in the intermediate storey. However, no longer plays an important part in the articulation. It has already disappeared in the kubbah of Tus, the almost contemporary with that of Sarakhs (Dizeh, Chur. Bldm., 55, pis. 19-20; idem, Kunst d. isl. Völker, coloured plate; idem, Persien, Bankh. in Chur., fig. 40; Glüeck and Dizeh, op. cit., 294). In Tus the four interior niches of the square main course have become broader, and these now become broader still. They were also made higher than before and linked up by a common framework with the niches above (cf. Chur. Bldm., fig. 26, section). The four corner arches rising out of the squinches which make the transition from the square to the octagon are now also included by a common framework in the main body of the building, so that they no longer form as before a separate intermediate storey but bring about the change from square to octagon within the main storey. Formally, this is a fusion with combined effect, i.e. a step towards the decorative Islamisation of the interior. The development of the gallery as a factor in shaping the interior was thus more or less brought to an end. As Tus is not dated (8th/14th century?), we cannot fix the time relation of this kubbah with the Western bridging the corners connect the chamber with the gallery. Similar windows pierce the walls in the central axes. The squinches between these eight windows in the zone of transition are decorated with mubarnat. The vaulting of the dome which towers above this is adorned with ribbed arches arranged in fan-shaped and cross-cross patterns in plaster, a method of giving the dome a spheroidal shape, to which in later buildings came to be painted and filled in with tondril patterns (Dizeh, Persien, etc., 93 f.; E. Cohn-Wiener, Das Mausoleum des Sultan Sandjar, in Jb. d. As. Kunst, x/1, 925; idem, Turan, Islamische Baukunst in Mittelasien, Berlin 1930).

In Old Sarakhs on the Harî Rûd in the modern Turkmistan S.S.R. is a kubbah similar in construction, but on a more modest scale (V. Zhukovskii, Rasulpul Storagor Morca, fig. 33). Two others in the region of the Murghâb and Zaraštân oases are Talāqâlân Bâhâ and Mazâr Sultan Israilî in Bûkhârâ, both of the 6th/12th century (Zhukovskii, op. cit., figs. 30-31; Sarre-Herzfeld, The Kunst des Islam, 292-3). Their squinches are still funnel-shaped like the Sâsânid ones and without a gallery. Like the tomb of Sandjar, they are distinguished by their brick ornamentation and are evidence of a native pure brick style of a vigorous character in the Harî Rûd area, of which Cohn-Wiener gives examples in his book. The small size of the building, its brick decoration, and interior belonging to the form of Ribât of Sâsânid origin in Mashhad is probably an outlier of this style on the Iranian highlands (Dizeh, Churassamische Baudenkmäler, 52 f., pis. 12-18; Glüeck and Dizeh, Die Kunst des Islam, 292-3). The kubbah of Sandjar opens the important series of Central Asian-Iranian mausoleum kubbahs of the 7th-8th/13th-14th centuries. If the emancipation of the squinches from the body of the dome and their becoming independent in an intermediate storey was the first step in this development, the second is the emancipation of the gallery storey from the squinches area. We see the process completed in the kubbah of New Sarakhs on the Persian side of the Harî Rûd, which was restored in the 8th/14th century, but probably dates from the beginning of the 7th/13th century (Dizeh, Chur. Bldm., 51 ff., pis. 12-18; Glüeck and Dizeh, op. cit., 292). Here the gallery is included in the lower structure which makes the latter, and also the dome, higher. The dome is still resting on a square substructure with an octagonal drum forming a step in the intermediate storey. However, no longer plays an important part in the articulation. It has already disappeared in the kubbah of Tus, the almost contemporary with that of Sarakhs (Dizeh, Chur. Bldm., 55, pis. 19-20; idem, Kunst d. isl. Völker, coloured plate; idem, Persien, Bankh. in Chur., fig. 40; Glüeck and Dizeh, op. cit., 294). In Tus the four interior niches of the square main course have become broader, and these now become broader still. They were also made higher than before and linked up by a common framework with the niches above (cf. Chur. Bldm., fig. 26, section). The four corner arches rising out of the squinches which make the transition from the square to the octagon are now also included by a common framework in the main body of the building, so that they no longer form as before a separate intermediate storey but bring about the change from square to octagon within the main storey. Formally, this is a fusion with combined effect, i.e. a step towards the decorative Islamisation of the interior. The development of the gallery as a factor in shaping the interior was thus more or less brought to an end. As Tus is not dated (8th/14th century!), we cannot fix the time relation of this kubbah with the Western
Persian one of Sultan Muhammad Oljeytu Khudabanda, 902-6/1501-16 in Sultanhyra. In the interval, a variant had established itself there, the object of which was to transfer the gallery to the outside, an aim latent since the **kubba** of Sangjar. We really have here a type of building of a different, namely octagonal, shape which, as Tchier has already pointed out, was an Indian variant imitated in Iran. The interior gallery with corridor here becomes a series of separate windows which resemble in shape and size the eight doorways below, so that two stories of equal size are created within, which gives the interior an effect of massive calm. On the other hand, a staircase within the wall leads up to a gallery above the window storey, which opens to the outside only and can no longer be regarded as an interior gallery. Equally peculiar are the eight enormous pillars which are placed at the corners of the roof terraces to buttress the dome (cf. the illustrations in **Kunst u. Ges. Völker** and Diculafoy and Sarre's sketches in *Pers. Bildem,*). We shall return to this type of **kubba** in the section on India. Another **kubba**, the only one of its kind in Iran, is the Diabat-i-Sang near Kirman, an octagonal building of cement with dome and drum of brick, which resembles the Syrian turbas (Diez, *Persien,* etc., fig. at p. 79; Creswell, *Persian domes before 1400 A.D.,* in *Burlington Magazine,* xxii [1925], 208, pl. 2). With the sepulchral dome of Oljeytu, the **kubba** in Iran reached the considerable height of 165 feet.

Alongside of this line of development in construction, there was a second which began probably as early as the Saljuk, but certainly in the Timurid period; this aimed at the same object, the raising of the height of the dome, and attained it by other means, namely by a drum and double-shelled dome. In both cases, the aim is not so much to raise the height of the interior chamber as to give a towering effect to the exterior. For the inner shell of the dome makes the interior much lower than would appear from the outer shell. The Kubba-yi Sibz in Kirman is the oldest—at least dating from the middle of the 7th/13th century—sepulchral tomb of this kind (Diez, *Kunst d. isl. Völker,* fig. 115). The models for these domes may possibly be found in the equally towerlike stupas of Afghanistan and the Tumain basin, with domes built one above the other and chambers between them. Timur's **kubba**, the Guri-Mir in Samarqand of 808/1405, the dome of which structurally resembles the Kubba-yi Sibz, is the next monument of this style still standing; after it come the **kubbas** of the Timurids at Shah Zinda near Samarqand and others in Herat and Turkestan (Diez, *Kunst d. isl. Völker,* figs. 116, 119; J. M. Rogers, tr., *V. V. Barthold's article O pogrebenni Tymur* ("*The burial of Timur*"), in *Iran, Jnl. of the BIPS,* xii [1917], 63-87). Guri-Mir has, it is true, a gallery, but this no longer opens on to the interior by open niches, piercing the wall, but only through grilles, which are in the plane of the wall, so that it is possible from the passage within the wall to get a glimpse of the interior, an innovation of decisive importance in the layout of the latter. In and around Herat there have been many **kubbas**, of which only two still exist (Niedermayer-Diez, *Afghanistan,* figs. 153, 154); others east of Herat (figs. 182-4).

The last phase of evolution in Iran was reached in the Safavid period. The very similar memorial buildings of Khosru Rabii of 909/1610-21 near Mashhad and Kadam-gah of 909/1680 east of Nishapur (Chir. *Bldm.,* pls. 23, 39) are octagonal **kubbas** with galleries, which open to the outside in four great corner niches. These buildings seem to have their origin in the Persian garden pavilion, as a comparison with the Hasht Bihisht in Isfahan shows. But the idea of using garden pavilions as memorial buildings again comes from India. We may here mention also the **kubba** of Shaykh Djum which has a court mosque and madrasa adjoining in Turbat-i Shaykh Djum near the Afghan frontier, as an example of a **masar** on a large scale (Diez, *Chir. Bldm.,* 78 ff., pls. 35-7). The largest place of pilgrimage of this kind is the sanctuary of the Imran Rida in Masjhad, with the domed sepulchres of the Immar (Diez, *Persien,* etc., figs. 44-50). In Afghanistan, the **masar** of Khwaja Akasi in Balkh and Mazari Sharif, with domed tombs, may be mentioned (O. Niedermayer-Diez, *Afghanistan,* 64 ff.).

**India.** The first Muslim dynasty to reign exclusively in India was descended from Kubba Aybak [a.v.], a former slave of Muhammad Ghur who was chosen by his master as vicerey in Dihli and on the latter's death declared himself independent (692/1290). It is only with this dynasty of the "Slave Kings" or Sulhhs of Dihli that monumental Muslim architecture begins in India. Nothing has survived of earlier buildings, which were probably built of perishable material. From the 7th/13th century, however, the building of tombs in the Muslim regions of India becomes important, and in keeping with the great expansion of Islam over the vast peninsula there are still in India far more **kubbas** than in the other lands of Islam. The influence interacted with the peninsula were very varied; the main genetetic principle in the style of the **kubba**, as for all Indian Muslim architecture, can therefore only be said to be the combination of foreign and native Arabo-Turkish-Persian and Indian, traditions. The amalgamation of these two traditions, which found expression in material, technique, shape and form, resulted in the manifold variations of the Indian types of **kubba**.

In the course of the general development, we can distinguish some ten different phases of style, or local styles (and when we use the word "local" we must remember the great scale of India). Sir Alexander Cunningham distinguished the following styles (Archaeological survey of India, *Reports,* iii, iv): 1. The Indo-Turkish, which began with the Slave Kings dynasty, with pointed or overlapping arches of controlled horizontal layers, i.e. still using the old Indian technique of vaulting, and with rich decoration in relief in stone: tomb of Sultan Ilutmish in Dihli (*Kunst d. isl. Völker,* fig. 228, 187). 2. The style of the Khiljis of the second dynasty (659-720/1260-1320), or decorated Turkish style with horseshoe arches of radiating layers and rich ornamentation. 3. The Tughluqids, called after the third Turkish dynasty (720-817/1320-1444), with sloping, very thick walls and cusped horseshoe arches. The domes rest on low drums and the walls of red lime-stone are panelled with white marble frames: **kubba** of Tughluq Shah in Tughlikabad (op. cit., fig. 226, 168); also brick buildings lined with glazed bricks: sepulchral dome of Rukan al-Dawla in Multan. Later, we have still thicker walls without arches and inlay but with a covering of stucco, which was probably decorated and painted: **kubba** of Firuz Shah in Tughlikabad. 4. The Afghan style, called after the Afghan dynasties (Sayyids, Lodis and Suris, 817-952/1414-1555) with perpendicular walls; mostly octagonal mausoleums with arcades: tomb of Shih Shah (op. cit., fig. 244, 173), decorated with coloured stucco or with strips of glass: **kubba** of Bahidi Lodi near Cirak-Dihli; the octagonal mausoleums of...
Sikandar in Old Khairpur and others in Mubarakpur-Kotla and Khyerpur. Later, a coating of different coloured stones was preferred to the covering of stucco: mausoleums of Shah Shāh and Husayn Khān in Sahasrāram. 5. The Turkish style in Bengal, an independent provincial style; squat buildings of brick sometimes decorated with minute faience work: tombs in Haddat Pandua (769/1368) and Gawr with curved brick roofs. 6. The Turkish style of the Shaikids in Dewas (705-831/1304-1479) a provincial style similar to (1) and (2): tombs in Dewaspur.

The early Mughal style comprises the buildings of the kings of Akbar and Bahadur (663-1037/1266-1628). With the tomb of Humayūn, finished in 860/1452, the Persian style established itself. In Akbar's tomb it again makes way for the Indian (here the old vilāta type) to reappear in Bahadur's tomb in Lahore—in the faience which decorates it, at least (861/1453). Red sandstone is the material preferred. 8. The late Mughal style under Shah Dādān (1337-868/1919-1957) finds its most brilliant manifestation in the Tījā Muball, which shows the Indian and Persian traditions in perfect mutual harmony.

To this list may be added: 9. The Deccan style, which covers the numerous sepulchral domes and around the old capital on the plateau of the Deccan, although they show as many varieties as localities and are only variations of the north Indian sepulchral domes of the Turkish dynasties which founded Muslim rule in the Deccan. 'Ala'-al-Dīn Muhammad Shāh of Dīlī was the first to establish himself here in 699/1494. Half a century later the Bahmanids succeeded in bringing the northern half of the Deccan under their rule (748/1348-1547). Their capital was Gulbargā. At the end of the 15th/16th century the division of the Deccan under five dynasties: the Imam Shāhs in Bārā (890-980/1483-1574), the Nūrūdīn Shāhs (807-1028/1402-1619) in Bālīr, the 'Adil Shāhs (895-1097/1490-1686) in Bīljāpūr and the Kutb Shāhs (928-1069/1512-1607) in Golconda. The most important sites for the study of the architecture are Gulbarga, the oldest capital, then Bīljāpūr, Bālīr and Golconda; Bīljāpūr, "the Palmyra of the Deccan", stands out from all for the richness and size of the buildings. The shape common to all domed tombs is here as in northern India a square building with a dome. Some of them, like the Ibrahim Rawāja, the mausoleum of Ibrahim II (1087-1056/1679-1657), and the incomplete All II Rawāja of the last 'Adil Shāh in Bīljāpūr, are enclosed by long terraced arcades. Almost all the old buildings in the Deccan are built of hewn stone; in Bīljāpūr and elsewhere we also frequently find a reddish-brown basalt. The transition from the square to the dome here again effectuated from the transition zone with corner arches to a kind of folding of the wall by means of crossing pendentive-like arches which led direct to the round of the dome without an intervening couvre.

By far the largest of these tombs, indeed the largest kubba in the world, is that of Muhammad 'Adil Shāh (1036-90/1626-99), the celebrated Gūl Gumbār in Bīlijāpūr (pictures in Kunst d. isl. Volker, 233 and 171; Die Kunst des Islam, 319 and many other works); a square building with an interior diameter of 150 feet, i.e. larger than the interior of the Pantheon (110 feet). The interior narrows towards the top through a system of intersecting pendentives to a circular basin of about 205 feet in diameter on which rises the dome—entering an inner gallery open—about 170 feet in diameter; the interior height is nearly 200 feet and the exterior 220 feet. The weight presses inwards through the pendentives, but is counteracted by the weight of the dome, so that it was necessary to counteract any outward pressure by massive walls.

In Gulbargā, which was the capital of the Bahmanids (748/1348-1547-1514), still stand the simple kubbās of the early rulers of this dynasty, among them the tomb—here reproduced—of its founder Hasan Gangā 'Allī al-Dīn (748/1348-1537). The kubbās of the later Bahmanids from Ahmād Shāh Wali onwards (825-8/1422-39) are at Bīlār and are already much larger and sometimes richly decorated, especially the mausoleum of Ahmād Shāh. The square building is transformed to the round by keel arches at the corners. The interior walls are brought into rhythm by three flat niches on each of which the central ones on the north-south axis are opened as doors. The central niche on the west is deepened to form a pentagonal mihrāb. The niches are flanked with Indian pilasters. The painting of the interior is undoubtedly of later origin, but the old designs may survive in places. The painting of the dome resembles that of Kohlīa Rabī' (in Khurāsān; see above), as does the form of inscription. Almost as large as that just mentioned, but: without decoration in the interior, is the kubba of Mubadda Shāh II (887-924/1482-1519). To this group also belongs an octagonal tomb without dome, obviously unfinished, which resembles the mausoleum of Khudābanda Shāh in Sultānīya (Persia) and was built for Shāh Khallīl Allāh Husayn, the iconoclast and saint, son of the tutor of Ahmād Shāh Bahman. The tombs of the Barīs who followed the Bahmanids are open kubbās standing on pillars.

The fine city of tombs of the Kutb Shāhs of Golconda lies outside the town in a large walled garden, the kubbās of the last rulers of the dynasty, 'Abd Allāh (1045-83/1635-72) and of Aḥmad 'Alī-Ḥasan (1083-98/1672-82), who died in Mughal captivity, built only up to the dome, outside the walls. The cubic buildings are sometimes surrounded by galleries of arcades as in Bīlijāpūr. The bulbous domes rise out of a lotus pattern (see the illustrations). In the country around are kubbās of prominent families and saints, like the Cāhr Gumbād reproduced here. They belong to the same type. The last group to be mentioned is: 10. The style of Gudjārat, with Ahmadbād as its capital, founded by the second ruler of the sultans of Gudjārat, Ahmad Shāh I (842-49/1241-12); his descendants ruled till 991/1583. Ahmad Shāh's kubba or rawāja in the centre of the town beside the Dīnjā Masdjid, a square building with sides 90 feet long, consists of a domed chamber 35 feet high and four corner chambers connected by covered halls. The preference for rich, pointed ornamentation peculiar to this style finds expression in the marble cornices and fillings of the windows. In kubbās outside the city, as in the mausoleum of Daryā Khān of ca. 857/1452, we again find the Turkish-Persian transition storeys with corner arches and gallery with a dome above built of horizontal layers (Kunst d. isl. Volker, fig. 214, and 182).

The most important groups have been mentioned. For the most notable Mughal tombs, which are only briefly mentioned above, see ḤIND, VII, Architecture, and MUGHALS, Architecture.

Finally, it should be noted that kubba "cover" occurs as a technical term in the construction of scales and balances, where the housing for the pointer (lišān), often used also as a carrying handle (cf. Pedro de Alcalá: cābba = manila del peso), was called the kubba. See J. D. Latham, The interpretation of a passage on scales (mawāra) in an Andalusi manuscript, in JSS, xxiii (1978), 255-7.
KUBBA

KUBBA (now Kuba), a district in the eastern Caucasus between Bakû and Derbend [q.v.]. The district of Kuba, with an area of 2,800 sq. miles, is bounded on the north by a large river, the Samur, which flows into the Caspian, on the south by the southern slopes of the Caucasian range (peaks: Shah-Dagh, 13,951 feet high, Babi Dagh, 11,900) which separate Kubba from Transcaucasia. The history of the district of Kubba, which at first must have formed part of the ancient Caucasian Albania, is mixed up with that of Shahrwan; Shabaran (now a ruined site on the river Kubâ) had been an important centre inhabited by Christians (Muçaddasî, 376) before Shahrwan became the capital of Shirkhân. On the banks of the river Kuban may still be seen ruins with a wall running from the sea to Bâbâ Dagh. Near the town of Kubâ is the tomb of the Shirkhân-Shâh Kâwâs b. Kaykhšâb (d. 774/1373).

It was only in the 18th century that Kubâ enjoyed a period of independence. In the time of Shâh Sulaymân Safawî, a member of the family of the īsmân of Kaytâk (cf. dâghistân) called Husayn Kâhân arrived at the court of Isfâhan. He became a Shâfî and gained the favour of the Shâh, who appointed him Khân of Kuba and of Sulîyân (at the mouth of the Kura). Husayn Kâhân built the castle of Khânâd. His grandson Husayn Ali b. Ahmad, with the help of Peter the Great, regained the ancestral estates of the Kâhân, but his power was threatened by the alliance of Suleyman, prince of the Kâhân, with Hâfiz Dâwâd, religious chief of Muskûr, who with the help of Turkmen played a considerable part in Daghistân from 1712. Nadîr Shâh restored Sulîyân to Husayn Ali (after the death of Nadir, local dynasties arose everywhere. At this time Husayn Ali moved his capital from Khânâd to Kubâ where he built a town and annexed Shâbard and Kuban. He died in 1171/1758. His son Fath Ali Khân who succeeded him sought the help of the empress Catherine II, who in 1189/1775 sent General de Medem to Derbend, under a pretext of avenging the death of the academical Gmelin, who had died on 27 June 1774 in captivity with the ōmî of Kaytâk. With the help of the Russians, Fath Ali re-established his authority over what he could regard as his hereditary fief (Daghistân, Kubba, Shâlwan). He also took Shirkhân, and the Khân of Bâkû appointed him his son's guardian. The influence of Fath Ali Khân gradually extended beyond the bounds of the district. In 1213/1798 he sent 9,000 men to Gilan to restore Hidâyat Khân, who had been driven out by the Khânîs [q.v.]. In 1220/1805 he seized Khânâd and placed on the Shâh-sewân (q.v.) recognised his authority. The Khân of Kuba and of Tabâr sought his support. Fath Ali is credited with ambitious designs on Daghistân. To reconcile his plans with those of the king Frâdul of Georgia, Fath Ali met the latter at Shamîrûn (Shamîkor) but soon afterwards fell ill and died in 1220/1799.

The political and military work of Fath Ali Khân crumbled away under his successors. His young son Shâykh 'Ali Ághâ succeeded in 1791 had a very adventurous career. This young Khân relied on the support of the Khânîs, but Count Zâbîb took Derbend on 4 May 1796, and entrusted the government to his sister Pêt-Áddân Khanum. Taken prisoner by the Russians, Shâykh 'Ali Ághâ escaped and renewed the struggle. On the accession of the emperor Paul, Russian policy suddenly changed and the Russian troops were withdrawn. Shâykh 'Ali returned to Derbend. In 1807 he and the other Khânîs sent a delegation to Alexander I, but by 1808 we again find Shâykh 'Ali rebelling against the Russians to whom he caused continual trouble till 1236/1811. The Khânate of Kubâ was occupied by the Russians in 1806, and by the treaty of 1813 Persia renounced her claim to the eastern Caucasus. From its incorporation in the Russian empire, Kubâ formed a "government" of Shirkhân (bùrân of Bâkû). Since 1919 Kubâ has been part of the republic of Daghistân, at first independent and then a Soviet SSR.

himself (1794-1846) was published at Bâkî in 1826 (Travaux de la société scientifique de l’Afghanistan, part 4). The principal documents are in the collection by A. Bargès, Thèses 1866 ff., L-xi, index under ‘Obebdin-Kûbba.

**AL-KUBBA, KUBBAT AL-SÂLAM, K. AL-ARQ, K. ARQ** "the dome of the inhabited world, of the earth, of Arin," expressions used by the Islamic geographers and astronomers to denote the geographical centre of the earth (waqat al-arq) at the zenith of which exists the kubbat al-sanâ or waqat al-sanâ; the kubbat al-arq, defined as being equidistant from the four cardinal points or dîdâl (see e.g. Ibn Rusth, 8, tr. Wiet, 2). It is theoretically to be found at 90° from each of the poles and meridians of longitude zero and 180°, passing through the two extremities of the inhabited world (whether the longitudes are calculated starting from the east or the west). It is thus situated on the equator, and, for those authorities who followed Ptolomy, at 90° to the east of the meridian of the fantastic Jâles (see [AL-QALAAZ AL-KHALIFAT] taken as the starting point. Now, if the theoretical position of the kubba causes no problems, its localisation in practice does in fact pose an interesting one.

The author of the *Hudud al-Sâlam* (tr. Minorsky, 58, § 4, No. 13) echoes a tradition which places the centre of the inhabited world in an island called Yâra (read as Bâra by Minorsky) at a longitude of 90° east, and he adds that the satellites and fixed stars were calculated in relation to this equinoctial island (istifa al-lâyli wa-‘l-nahâr; cf. Ibn Rusth, 8 tr. 92, "Ille équatoriale"). However, al-Bîrûnî in his *al-Kâmûn al-Mâs’dîd*, whilst noting the fact that this island is mentioned by al-Fâ’Âdî and Ya’ûb b. Târîk, places it at 90°-50° longitude east, i.e. at 50° to the east of Yamakufi (Djemsîk/Djamasîg), which marked the extreme eastern boundary of the inhabited world, and he states that there are some more or less unknown places there. In his *Ind.*, tr. i, 303-4, al-Bîrûnî notes that the name Yamakofî is reminiscent of Kankdiz/Gangdiz, which Abû Ma’shar al-Balkhî took as the starting-place for the longitudes, calculated from east to west and no longer from west to east (cf. D. Pingree, *The thousands of Abû Mas’har*, London 1963, 45 and index). Al-Mas’ûdî, *Marâdî*, ii, 134 = § 555, records an ancient Iranian tradition, attributes to Kay Khwariz the foundation of Kankidz and he notes specifically that certain authorities equate it with Yang-ch’ou; he further adds that several Chinese kings made it their capital. Al-Bîrûnî, loc. cit., mentions Kay Kâwîs or Djînâ, Djamasîg as founder of this legendary town which was to remain, at least theoretically, as the extreme limit of the known world for later scholars. Abû Ma’shar likewise places it to the east of China and at 90° from the kubbat al-arq, but he identifies it with Îzây, which is a dangerous error.

The Indians used to calculate the longitudes from Lanka (Ceylon), whose southern tip is not very far from the equator, but they were led to displace the original meridian westwards and to adopt instead that of Udi-djâyn, which is near to the Tropic of Cancer but not at all near to the Equator. The name of this town, which has indeed a genuine geographical existence, was written in Arabic script Ûzâyn/îzây. (cf. Ibn Rusth, 22, tr. 19 and n. 6, with bibl.; al-Mas’ûdî, *Tanbih*, ed. Sâwi, Cairo 1357/1937, 192, and then, by means of a wrong reading, Arînî arînî; it is under this latter form that this toponym appears in later works, that it is transcribed in the mediaeval Latin translations, and that it appears even in some French lexica (Arînî). Being unaware of the exact position of Udi-djâyn, some authors tended to consider it as an island in the Indian Ocean (cf. *Udi-djâyn*, tr. 296), or at least to place it at 90° from the equator, totally unaware of their error (thus Ibn Rusth, loc. cit., or al-Mas’ûdî, *Tanbih*, loc. cit.). In this way, kubbat Arîn and kubbat al-arq became synonymous; an astronomer as recent as al-Rûdrînî correctly defines the kubbat al-arq or al-Sâlam as the point of intersection of the equator and the dîridâl wa-‘l-nahâr and still calls it the kubbat Arîn, but he probably saw only there a traditional name without any direct connection with the town of Udi-djâyn.

Finally, it may be noted that the use of the word *kubba* to denote the geographical centre of the earth has given rise to the idea that a particularly high point of the earth is involved here. The Indian tradition which makes the zero meridian go through Ceylon, where Adam’s Peak rises, may conceivably be influenced by this conception, which al-Bîrûnî attacked in his *Kânûn* (cf. A. Bausani, in *Studies on Islam*, Amsterdam-London 1974, 28-9).

(Ch. Pellat)

**KUBBAT AL-HAWâ** "the Dome of the Winds", a popular appellation for isolated monasteries situated on rocky spurs, for example, the (undated) domed tomb of a Sâhabî on the west bank of the Nile (cf. M. de Muray, *‘Handbook for travellers in Upper and Lower Egypt*, 9th edition, ed. Mary Brodick, London 1896, 920) above Aswân. This presumably postdates the destruction of an adjacent Coptic monastery, attested by a graffito, in Shams al-Dawla’s Nubian expedition of 1173, though the monasteries of the area, to judge from desecratory Muslim visitation inscriptions in Arabic dated, *inter alia*, 894/1294-5, in the neighbouring monastery of *St. Simon* (not mentioned in U. Monneret de Villard, *Description générale du monastère de Ste. Simon à Assûn*, Milan 1927), survived for a further century or more.

The most celebrated edifice of the name no longer exists. This is recorded by al-Khûndî (Nâdirî Mîrîr, *Gest*, 147, li. 14-15; cf. al-Makîrî, *Khâtâf*, ii, 1853, 201, li. 21; 202, li. 3-32) as a palace built by Hîthâm b. Hârîm, governor of Egypt in 604/609-10 on a spur of the Mukaﬁm hills. This was deliberately destroyed on the fall of the Fatimid dynasty and no trace of it exists. The exact site has been disputed, but its total disappearance makes it more probable that it was on the site later occupied by the Ayyûbîd Citadel of Cairo (K. A. C. Creswell, *The Muslim architecture of Egypt*, ii, Oxford 1959, 6, and references) than higher on the Mukaﬁm hills in the neighbourhood of the Fâtîmid ma’sâhid, generally known as the Masjih al-Dîwâni. The site of this Kubbat al-Hawâ was subsequently converted into a cemetery, and various mosques, which have equally disappeared without trace, were erected there (P. Casanova, *Histoire et description de la Citadelle du Caire* [= MMABC VI], Paris 1894, 586).}

Though the possibility that the Cairene Kubbat al-Hawâ may be identified with the presumed Fâtîmid observatory on the Mukaﬁm hills must be
discounted (cf. A. Sayih, The observatory in Islam and its place in the general history of the observatory, Ankara 1960, 130-58), the sense of the term *Kubbat al-Hawā* suggests the persistence into Islamic tradition of some reminiscence of the Athenian Tower of the Winds, described as an *horologium* by Varro (*De re rustica*, 3.5.17) and dated accordingly pre-32 B.C., but also representing the winds on its eight facets (H. S. Robinson, *The Tower of the Winds and the Roman market place*, in *American Journal of Archaeology*, xvi [1914], 291-305; J. V. Noble and J. J. de Solla Price, *The water clock in the Tower of the Winds*, in *ibid.*, ii [1968], 34-55). The term *Kubbat al-Hawā* may have been taken over from this structure associated with time-keeping or meteorology, though the evidence for this in the standard authorities is lacking. The reasons, incidentally, for the use, in the 18th century A.D., of the Tower of the Winds in Athens as a *sacri-lībāh* of the Kordīr dervishes (Hasslick, *Christianity and Islam under the Sultans*, Oxford 1928, i, 12 et passim) have still to be elucidated.

**Bibliography:** given in the article.

(J. M. Rogers)

**KUBBAT al-SĀHRA, the Dome of the Rock,** at times called the Mosque of ‘Umar, is the oldest remaining monument of Islamic architecture, and probably the first conscious work of art of Islamic civilization.

**Location and description.** The Dome of the Rock is located on an artificial platform, roughly but not exactly in the centre of the Haram al-Sharif (q.v.) in Jerusalem. The shape and emplacement of the platform were probably determined by the ruined state of the old Jewish Temple area, together with whatever Roman constructions may have been left; it is also possible that there were pious and historical or legendary associations with parts of this area of the Haram, but these are difficult to demonstrate (see below).

A celebrated inscription, in which al-Mahmūn replaced ‘Abd al-Malik’s name with his own, dates the construction of the Dome (*kubha* in the inscription) to 72/691-2. It has been superbly described in all details by K. A. C. Creswell, and recent repairs have only confirmed most of his reconstruction of the original monument. It consists of a dome (20.44 m. in diameter and 30 m. in height) surrounded by two octagonal ambulatories, each side of the outer one being around 20.50 m. Interior supports consisted of piers and columns; the dome was set on a high drum being around 20.50 m. Interior supports consisted of piers and columns; the dome was set on a high drum (for instance, it is likely that the beams of the ambulatory’s roof were visible, since painted ones may thus have been an Islamic form). The second characteristic is that, from the point of view of its plan and composition, the Dome of the Rock belongs to a high tradition of Byzantine architecture represented by monuments found in Ravenna, Syria (St. Sixton, Bosra), and Jerusalem (Holy Sepulchre, Church of the Ascension). It is almost certain that its builders and planners were Christians from Syria or Palestine.

The Dome of the Rock was lavishly decorated with marble, mosaics, and gilt bronze plaques. The cupola was gilded on the outside and the outer walls were in large part covered with mosaics. Most of the exterior decoration has disappeared, but, in spite of numerous restorations, the interior still approximates to its original appearance of a glittering sheathing of mosaics. Almost every part of the walls was covered with vegetal and geometric designs, and these included the very unusual motif of royal crowns and jewels. A fairly complete description of all these themes has been provided by Marguerite van Brechem in *Creswell’s Early Muslim architecture*. Although there is some debate about the origins of the mosaicists (Syrian or Byzantine), there is little disagreement about the stylistic origins of the decoration. Most of it derives from the mosaics of late Antiquity and early Byzantine art, but there are also definite Iranian elements. Together with the important absence of any figural representations, this mixture of sources indicates that a conscious new Muslim taste affected the decoration of the Dome of the Rock far more than its architecture. We shall return later to the interpretation which could be given to these mosaics, since it is closely related to the problem of the meaning of the whole monument.

As we shall see, a key document for whatever interpretation is given lies in the long inscription in gold mosaic cubes which runs along both sides of the octagonal arcades. In addition to providing the date of the building, this inscription contains numerous **Kur’anic** passages which range from statements of the faith of Islam (**CXLII, XXIII, 54, XVII, XXI, etc.**) to the major **Christological** passages in the Holy Book (especially iv, 159-71 and xix, 34-7). These are our earliest dated fragments from the Kur’ān, and C. Ressas has shown recently that many letters were already provided with clear diacritical marks (see *Bibl.*).

Although the Dome of the Rock has been amazingly well preserved, it was affected by many alterations and repairs over the centuries. The exact chronology of all these changes is difficult to establish. The cupola was redone in Fatimid times and under the Ottomans; the roof of the octagon was repaired in Abbāsid times; and their ceilings transformed under the Mamlūks. These changes added a horoscope to the screen around the Rock, which has now been removed, but it was the Ottomans who in the 16th/17th century covered the building’s exterior walls with some of the best-known examples of Turkish ceramics. Between 1956 and 1964 a Restoration Committee under the leadership of Egyptian and Jordanian architects and authorities undertook a complete restoration of the monument. Some part, such as the dome, was totally redone, others, the mosaic for instance, cleaned and repaired. The guiding principle of this work was to put every part of the building back in its earliest documented shape. Although future research may quibble at some of the decisions taken (for instance, it is likely that the beams of the ambulatory’s roof were visible, since painted ones were found there), it has been one of the most successful jobs of restoration known anywhere, and it is hoped that a carefully-kept record will soon be published.

**Significance.** The Dome of the Rock has excited more scholarly concern than any other Islamic monument, and this for several reasons. It is a unique building which was rarely copied for its shape (a few later mausoleums like the Sulaybīya in Sāmarrā or Kāflān’s tomb in Cairo may have used it as a model), and never for its functions. It does not fit into any architectural series. Also it is located on the site of the Jewah Temple, in the holy city of
Christianity, without showing obvious traces of impact from the two older monotheistic faiths. It does not look like a mosque, and the Al-Aqsa nearby fulfilled the congregational needs of the Muslim community. Finally, literary sources on the Dome of the Rock are confused and contradictory, even though the inscription on the building indicates that it was a major effort of the Umayyad dynasty.

The many explanations which exist can be divided into three broad groups. The first one is the traditional pious Muslim view, which interprets the Rock as the place whence the Prophet went on his celebrated Journey into Heaven (mi'raj). That such became eventually the holy meaning of the Dome of the Rock is undisputable, since the whole Haram became the Masjid al-Aqsa of Kur'an, XVII, 1. But, while the association between the Rock and the Prophet's Journey may have been made quite early, there is no trace of it in the most authentic document about the monument, sc. its long inscription.

The second explanation is specifically historical, and goes back to a passage from al-Ya'qubi. This explanation holds that, during the struggle of the Umayyads with Ibn al-Zubayr, 'Abd al-Malik attempted to create in Jerusalem a shrine which would compete with the Ka'ba and the pilgrimage to Mecca. Recently, W. Caskel revised the theory by pointing out that the Umayyads as a dynasty did seek a cultic center in Syria or Palestine, and that Jerusalem was the only one which fulfilled the necessary conditions. The main objection to this theory is that, even though there are several literary indications of a special Umayyad attachment to Palestine, there is some doubt as to whether such a building was constructed at the time. The necessary conditions could be altered. Furthermore, al-Ya'qubi was a violently anti-Umayyad polemist, whose interpretations are open to criticism.

The third explanation is cultural-historical. Starting with the evidence of the inscriptions and of the mosaics, it proposes to see in the Dome of the Rock a monument proclaiming the new faith and empire in the city of the older two religions. It sanctified anew a Jewish sanctuary and slowly incorporated within itself the memories of Abraham, Joseph, among others. It set up the crowns of the Rock, sacred in Jewish tradition, and went back to a passage from al-Ya'qubi. This explanation holds that, during the struggle of the Umayyads with Ibn al-Zubayr, 'Abd al-Malik attempted to create in Jerusalem a shrine which would compete with the Ka'ba and the pilgrimage to Mecca. KUBILAY, Mongol Great Khan (1260-94), the
brother and successor of Mongke [q.v.], was born in
1215. In 1251 Mongke entrusted him with the ad-
ministration of Northern China, and he took part
in the subsequent war which his brother launched
against the Sung rulers of the South. The conquest
of the Sung was finally completed only during his
own reign (1259), when the whole of China was again
united under one ruler for the first time since the
ten century. Already in 1260 he had transferred
the capital of the Empire from Karakorum [q.v.] to
Peking, in Mongol Khán-Bâlgh [q.v., i.e. "Khâns
Town", and in 1272 he proclaimed the foundation of
the Yuan Dynasty, the twentieth of the Chinese
Official Dynasties. His right to the Khânate was at
first disputed by his younger brother Arghun, who
who perhaps had the stronger claim, and who finally
succeeded only in 1264; the struggle was then taken
up by Kaydu [q.v.], who remained a thorn in Kubil-
lay's side during the whole of his long reign. Nor was
Kubilay more successful in his campaigns against the
Japanese and the Indo-Chinese or in an attempt to
gain a foothold on the island of Java. In China he
encouraged the propagation of Tibetan Budhism, but, like most of the Great Khans, was favourably
persuaded to abandon his concern with the exter-
nal religious sciences and to devote himself fully to the Śīff path. He then spent some
time in the company of two other preceptors, 'Amânâr b. Yâsir al-Didllis and Ismâl al-Kasîr, from
both of whom he received the ritual kẖîra, before returning to the Shaykh-Abd Allah in Egypt. By
then, Râshîbân evidently regarded Kubrâ as fully
mature, for in about 1340/1345 he sent him back to
Khârazm with full authority to train and initiate
disciples. Kubrâ swiftly gathered a large following,
including a remarkable number of individuals who
attained prominence in their own right as gnostics
and writers on Sîfism; he is, in fact, frequently
designated as sîfis-šâhâs, the "manufacturer of
saints". Among his foremost disciples were Ma'dîd
al-Dîn Baghâlî (d. 616/1219), Nâdir al-Dîn Dîvy Râzî (d. 643/1246; author of the celebrated Sîfî
compendium Murûdî al-fâlîth, ed. Amin Râyîh,
Tehran 1352/1972; Eng. tr. Hamîd Alûgar, The path
of God's bondsman from origin to return, forthcoming);
Sa'd al-Dîn Hâmûyâ (d. 650/1252), Bâbâ Kamâl
Djândjî, Sâyî al-Dîn Bâkhrâyî (d. 653/1256; ed. Sa'd
Nâfi'î, Sâyî al-Dîn Bâkhrâyî, in Madjâla-y Dânînâ-
kada i Abây-yâllâm, ii/4 [Târîx 1314/1955], 1-15;
and Târîx al'âzâr, Sargunbâghî i Sâyî al-Dîn Bâkhrâyî,
Tehran 1341/1962), and Râzî al-Dîn 'Âlî Lâû (d.
642/1244). Kubrâ died during the Mongol conquest
of Khârazm in 647/1250; according to the traditional
accounts, he refused an invitation by the
Mongols to leave the city before they proceeded
with their massacre of the inhabitants, and died at
the head of a band of followers while engaged in
hand-to-hand combat. He is reputed to have been
buried at the site of his kẖânâbakh outside the city,
and his tomb, located in what subsequently became
known as Kâhû (see KAHû), became a centre of pious
veneration, retaining this function even under Soviet rule (cf. G. P. Snesarev, Relikti
domusul'manskekh vernovani i obradyv v Uzbek
Khoremâ, Moscow 1959, 260, 433).

Kubrâ left behind a number of brief but important
works dominated by a concern with the analysis of
the visionary experience. He discussed in them, for
example, the various significances of dreams and
visions; the degrees of luminous epiphany that are
manifested to the mystic; the different classes of
concept and image that engage his atten-

Kubrâ also embarked on a Sîfî commentary on the
Kûrâân in which he was able to complete but was
continued after his death first by his murîd Nâdir
al-Dîn Râzî and then by another Kubrâi, 'Âlî
al-Dîn Simand (cf. H. Corbin, En Islam iranien,
Paris 1972, iii, 127-4, 276 n. 90, and Sîleyman Atef,
Ipar Türkî oãhos, Ankara 1974, 125-60).
The line of Kubra was perpetuated by several of his disciples. Sayf al-Din Bahkazari established a well-endowed Mahabadi in Bukhara. Wakh documents relating to the khanabad have been published by C. D. C. Eickhoff, Europaische dokumente XIV u., Tashkent 1965; it was there that Berke Khan, fifth ruler of the Golden Horde, proclaimed his acceptance of Islam (J. Richard, La conversion de Berke et les débuts de l'Islamisation de la Horde d'Or, in REI, xxxv [1967], 173-9). Sadr al-Din Samarkand, a murid of Bahkazari, travelled to India and established there a branch of the Kubrawiya that came to be known as the Firдавсиyya; its most important figure was Ahmad Yabja Maneri (d. 727/1327), author of widely-read Maktabat (publ. Lucknow 1921). Sa'd al-Din Hamaya established a khanabad at Bahshabad in Khurasan, the direction of which was assumed by his son, Sadr al-Din Ibrahim, who in 694/1295 presided over the conversion to Islam of Shhak Khan, the Ikhshid ruler of Iran (cf. Rashid al-Din Fadl Allah, Tavrib-i Mubarak-i Ghomai, ed. K. John, London 1940, 76-80). Another murid of Sa'd al-Din Hamaya was Faizi al-Din Nasafi (d. 661/1264), author of several important treatises (published by Nok under the title Khdli al-Tawil al-mamii, Tehran, and Paris 1942).

The most long-lived and prolific initiate line deriving from Nadim al-Din Kubra was probably that descending by way of Radl al-Din 'Ali Lldi and two further links of the chain to 'Ali al-Dawla Simman. Simman further elaborated the analysis of the liqaf and also formulated a critique of Ibn 'Arab's doctrine of ma'qul al-wujud that was to have much influence on Indian Naqshbandi circles (see H. Landolt's introduction to his edition of Shhakhd) and also put forward the theoretical posit of the Kubrawiya in its Central Asia and Turkestan (ed. G. Buxhori, Tashkent 1955, ii, 327-8); and at some point the Kubrawiya spread eastwards from Central Asia into the Muslim regions of China (cf. Muhammad Tewa'du, al-islam wu 'l-Shi'a, Cairo 1360/1945, 112). Finally, there are traces of the Kubrawiya in Turkey—a Kubrawiya Shuhayd by the name of Mustafa Dede is recorded to have fought in the ranks of the army that conquered Istanbul (Aytvansar'ai, Hadad al-jamaliyeh, Istanbul 1285/1861, ii, 201)—but no lasting imprint of the order appears to have taken place either in Turkey or the Arab lands. Only a nominal trace of the Kubrawiya in Iran remains a Western Islamic world as one of the multiple secondary affiliations professed by Naqshbandis of the Mudjaddidi-Khul'fi lines (cf. Muhammad As'di al-Irsh, al-Jesala al-'as'adiyya fi l-irshdi al-islami, Istanbul 1343/1924, 29).

(H. Alcar)

KUBRUS, modern Turkish Kbrus, Greek Kpras (etymologically derived probably from the word for "copper"), in western languages Cyprus, is the largest island in the Eastern Mediterranean, with a surface area of 9,251 km². The nearest distance to the mainland is from Cape Kormakiti in the north to Anama on the southern coast of Turkey, 72 km. The island consists of two mountain ranges, Kyrenia-Karpdr rising to 1,019 m. The island consists of two mountain ranges, Kyrenia-Karpdr rising to 1,019 m. The altitude in the north, and Troodos rising up to 1,952 m. in the south-west. In between lies a plain, the Messoria (Turkish Mesarya, Mesalaya), which supports most of the island's agriculture, although its rainfall is meagre and the percentage of irrigated land is not large. Agriculture continues to be the mainstay of the economy. Copper has been mined since before 3,500 B.C., but its known veins, like those of other minerals (iron pyrites), are near exhaustion. Non-metal minerals are available in exportable quantities, e.g. asbestos. Refining of salt is still revenue-producing; it is being extracted from coastal salt lakes in the low lands near Limassol and Larnaca (old names Las Salines, Turia). The geopolitical situation of Cyprus within the spheres of the ancient civilizations of the Near East explains why the island has always played a certain
role in history, although its importance has sometimes been overrated. Lying on the main sea routes of the Levant, within striking distance of the mainland, the island has always been in a dependent position to any of the surrounding big powers; political independence has rarely been attained (see below, Lusignan period).

1. Byzantium and Islam (628-1292)

Cyprus' history in antiquity will not be dealt with here. When the expansion of Islam began, the island was a province of the Byzantine Empire, with its capital at Constantia, ancient Salamis. Since 431 (Council of Ephesus) the Orthodox Church of Cyprus has been autocephalous under an archbishop who ranks immediately behind the four great patriarchs. The church has moulded the island into a social, religious and cultural unit. The old and strong links between clergy and people have created a sense of social solidarity, which has remained characteristic for the history of the Orthodox Greek population of the island during the succession periods of foreign dominations. Cyprus' important cities at this time were: Salamis-Constantia, Citium (near Larnaca), Curium (near Episkopi), Tamasus (= Nea Paphos), Neapolis (= Limassol), Amathus, Arsinou (Marium) (= Chrysochou), Lapithos, Karpassia (Near Rhio karpasso), Contrily (= Kykkos), Tremithus, Soli, Kerynia and Ledrak-Leukadia (= Nicolia).

It was after the reign of Heraclius (610-41) that Cyprus began to be invaded by the Arabs. According to a Greek writer, a raiding party under the caliph Abu Bakr appeared on the island in 632, which is not very probable. In 637 (648, 649?) Mu'awiyah, governor of Syria, organised an expedition against the island, which was in fact the first large-scale maritime enterprise of the Arabs in the Mediterranean (cf. Baladhuri, tr. Hitti, i, 233 ff., 431 f.). His fleet of 17,000 sail, commanded by 'Abd Allah b. Kays, landed the Arab forces at Constantia. The city was besieged, surrendered and sacked. The whole island was overrun. Cyprus was compelled to pay a tribute of 7,000-7,200 goldpieces, to be paid annually to the governor at Damascus, a sum equal to the is¬

2. Byzantium and Islam (628-1292)

The peace treaty concluded between Constantine IV and Abd al-Malik in 685 and renewed in 688-9 with Justinian II provided for the division of the revenues of Armenia, Iberia and Cyprus. The last-mentioned emperor decided to transplant the Orthodox population of Cyprus to the south coast of the sea of Marmara near ancient Cyzicus, where the city of Nova Justiniana (Justinianapolis) was founded for the archbishop of Cyprus and his flock. (This town's name still figures in the title of the head of the church of Cyprus. This exile of the Cypriots lasted till 698, when the island became resettled by its old inhabitants, and also by those who had gone to

Muslim Syria). For two-and-a-half centuries longer, there persisted the intermediate status of Cyprus between the Roman Emperor and the caliph. The island was normally used as a base for Arab maritime actions against Asia Minor.

In 747 a fleet from Alexandria was destroyed by a Byzantine force commanded by the admiral of the Ghyreraiote Theme. Raids and attacks followed each other in 772, 790 and 866 under command of the Abassid governor in Syria, Humaṭ. The island nevertheless remained a part of the Byzantine Empire, and the Emperor Basil II (867-86) reorganised its administration temporarily into a theme, the general Alexius being governor. The tribute to the caliph was continued (cf. Constantine Porphyrogenitus, De Thematibus, Bonn ed., 40). Cyprus served as a base during the campaign of Himeras against the Arabs in Crete [see 915, 916] in 902. In 911-12 an Arab force under Dimyana occupied the island for four months. Byzantine authority was restored after the recovery of Crete in 963. After ca. 983, Cyprus was hardly ever more troubled by Arab invasions, and was able to restore its economy. Evidence for the island's renewed florescence is the new foundation of many of the old cities, sites on the sea coast being abandoned. In 1060-3 and in 1094-9 against the Emperor Alexius Comnenus occurred.

Towards the end of that century, Cyprus became a base for operations of Byzantine land and sea forces, sometimes in combination with those of the Crusaders (in particular, Raymond de St. Gilles, Count of Toulouse, and his successors at Tripoli). Scanty evidence for the interior history of Cyprus in this period points to maladministration and the economic draining of the island's resources by the Byzantine government. The source of Nicolas Monzaon, one-time archbishop of Cyprus, must, however, be considered suspect because of prejudice against the emperor. The first half of the 12th century left Cyprus in peace. Pilgrim traffic passed through it as usual, and relations with Muslim powers were correct. The amir of Beirut and many inhabitants of that city found refuge on Cyprus when Baldwin, king of Jerusalem, captured it on 15 May 1120. The first Maronites probably settled on the island around this time. Inhabitants of Tell Hamdān in Little Armenia were removed to Cyprus by the Emperor John II Comnenus (Caloióannes) (Ibn al-Kaláníš, tr. H. A. R. Gibb, The Damascenes chronicle of the Crusades, London 1932, 241). In 1148 Manuel Comnenus extended the commercial privileges of the Venetians to Crete and Cyprus. This marked the beginning of the Latin penetration.

In 1153 or 1156 the Crusader Renaud of Châtillon, in co-operation with Thébaud II (1145-68) of Little Armenia (Armeno-Cilicia), launched an expedition against Cyprus and put the Byzantine authorities of the Duke John Comnenus out of action. Cyprus suffered badly, and had to pay ransom for hostages from among principal members of the clergy and the lay population.

In 1553/1558 a fleet from Egypt raided Cyprus, and in 1561 pirates equipped by Raymond III of Antioch, Count of Tripoli, raided Cyprus and the coast of Cilicia. The last period of Byzantine dominion over Cyprus was the rule of Isaac Ducas Comnenus, the self-styled Emperor of Cyprus from 1185 to 1191, who was able with support of the Norman King William II to defeat an expedition sent by the Emperor Isaac II Angelus against him and to rule till he was dethroned by Richard the Lion Heart in 1191.
King Richard's fleet ran into heavy weather on its way to the Holy Land. The ship carrying his sister Joanna and his bride Berengaria, daughter of a claimant to the crown of Jerusalem, Richard, after force on Cyprus. Having been joined by Crusader lords from Syria, among whom were Guy de Lusignan, a claimant to the crown of Jerusalem, Richard, after failure of a peaceful settlement, opened war against Isaac and defeated his forces. Isaac surrendered at the end of May 1191. The people of Cyprus delivered half of their possessions to the King of England, who confirmed the laws and institutions as granted to Cyprus by the Emperor Manuel Comnenus. Frankish garrisons took the place of the Greek ones, and two English gentlemen were appointed as justices and sheriffs to administer the island. It was to serve as the base to provision the Crusaders in Syria, and the island became essential for the operations of the Franks in the Holy Land during the next century, after Saladin had almost destroyed the Latin's position there at Hattin (1187).

2. The Frankish period (1192-1291)

(a) The rule of the House of Lusignan (1192-1489).—The King of England sold the island in July 1191 to the Knights of the Temple. During their rule, a rebellion broke out which was suppressed at great cost. In May 1192 King Richard resold Cyprus to Guy de Lusignan, husband to the heiress of the crown of Jerusalem. The Byzantine Emperor could only raise a protest on the diplomatic level.

Aimery de Lusignan succeeded his brother as lord of Cyprus (1192-1209). He continued the feudal organisation, granting fiefs to many Latin nobles and founding an extensive private domain. The state acquired its administrative institutions, and the castles of St. Hilarion ("Dieu d'amour"), Kyrenia (Cérines) and Buffavento were built. By Papal bulls of 20 February and 13 December 1196 a Latin hierarchy was installed under the archdiocese of Nicosia, with three suffragans, as a parallel to the Latin feudal institution. In 1197 Aimery acquired the title of King, holding his dominion from the Emperor Henry VI with Papal assent. In the same year, the Syrian Crusader barons elected him King of Jerusalem in Acre. This personal union was restored under King Hugh III (1207-84) of Lusignan in 1259, to remain as a honofrific title of the Kings of Cyprus after 1270. A third royal title was collected by the Lusignans, that of Armenia in 1388—again an empty title without land.

The new kingdom kept the peace with the Muslim powers in Syria till the 5th Crusade (1228-9). The Cypriots also participated in the expedition to Damietta of 1219-21. During the Seventh Crusade, the King of France, St. Louis, used the island as his support base in the campaign against Egypt, when Damietta was again taken in 1249, and both Kings entered the town triumphantly together. The Kings of Cyprus remained involved in the Crusaders' wars till the end. In 1269 Hugh III became King of Jerusalem, but could not establish his authority over the unruly Crusader barons of Syria, Cyprus and the maritime republics of Italy. He withdrew from Acre in 1270, and when that town fell to the Mamelukes in 1291, Cyprus became the last refuge for the Christians fleeing from Syria. This new position in the Levant was of advantage to Cyprus.

The 14th century was the great period of the king-
In October 1365 Alexandria was temporarily occupied, but the commercial interests of Venice and Genoa stopped any further confrontation with Man- lith power. These two merchant republics were to dominate Cyprus's politics in the last century of its independent existence. At first, it was Genoa which gained the upper hand in the competition with Venice. In 1372 the Genoese Podestà (in Famagusta) defeated the Venetian Bailo, whose party received support from the Greek Cypriots. A Genoese force invaded Famagusta and Nicosia. In October 1374, a treaty was concluded which assured Genoa complete economic hegemony on Cyprus for 90 years. The Maona Cypri was the private mercantile organisation of Genoese bankers established at Famagusta. The King of Cyprus had to cede the town as a guarantee for the payment of reparations amounting to 2,146,400 florins and the yearly tribute to Genoa of 40,000 florins.

The next blow to Cyprus's independence was an invasion by the Mamlik Sultan Barabiy [g.r.]. On 7 July 1426, King James (1398-1432) and his army were defeated near Khiroclita, and Nicosia was plundered. The King was set free on the condition of becoming a vassal, paying 200,000 florins' ransom and a yearly tribute of 8,000 florins. After this invasion, the island's economy began to decline. Social unrest within the Greek population worsened the situation. In 1448 Goshigos fell under control of the Karamun amrate [see KARAMAN-OGULLARI]. Cyprus lost her last continental interest.

When in 1458 Charlotte, the daughter of King John II, came to the throne, her half-brother James the Bastard (1440-73) disputed the succession. He applied to the Mamlik sultan for support. In 1460, with the aid of Mamlik auxiliaries, James II defeated the legitimist opposition and took the last stronghold of the Queen, Kyrenia, and the Genoese held Famagusta in 1461. To defend himself against a Genoese counter-attack, James II enlisted Venice as an ally, and chose a Venetian subject, Caterina Cenaro (d. 1510) as his Queen in 1472 after his death (1473). She was to rule as the last monarch of independent Cyprus till 1489. During her reign Venice installed a virtual protectorate. A Genoese garrison and two Venetian counsellors to the Queen were not considered enough by the Venetian government to safeguard the island from the Ottoman Turks' expansion. In 1488 an Ottoman fleet appeared before Fama- gusta. On 26 February 1489, Queen Caterina abdi- cated in Famagusta, and the Venetian Capitàn Generale da Mar, Francesco Priuli, took over the government of the island.

Thus it was Christian Venice that ended the last of the Crusader states in the East. The Signory of Venice duly notified and offered justification of the take-over to the Sultan Kâzî Bây [g.r.]. On 7 July 1458, the envoy carried with him presents and 16,000 ducats, being the tribute for 2 years. The Sultan therupon agreed to the transfer of the Kingdom of Cyprus to Venice (February 1490).

(b) Venetian rule (1489-1571). — With the acquisition of Cyprus, the commercial "colonial" empire of Venice reached its greatest dimensions. The new possession was reorganised. The centralised government, the Rettori, consisted of the Luogotenente and two counsellors. Venetian nobles elected for a two years' tenure, controlled the finances and administration, and resided at Nicosia. A quadrennial census was instituted, the first reliable population data of Cyprus's history. The governor of Famagusta, the Capitàn del Regno di Ciprd, acted as commander-in-chief of the army and the fortresses in peace-time, and had a share in the civil administration. In time of war or menace, a provost-general was elected for two years to command. From the period of the Lusignan rule, two offices were retained only, the viscounties of Famagusta and Nicosia being reserved for Cypriots. A Great Council replaced the Haute Cour, and did not leave any real power to the Frankish baronage, now a commingling of military adventurers from all over the Mediterranean world.

On the whole, Venetian administration was inefficient and corrupt. It estranged the local Latin ruling class and did not manage to gain the loyalty of the Greek population. The island remained a colony and a military base only for the Venetians, and one inadequately manned at that. The economy continued its decline, aggravated by natural disasters in the course of the century. The burden of the tribute to the Mamlik sultans remained till 1517, when it became payable to the Ottoman sultan at Istanbul. The monopolistic exploitation of the island's resources did not encourage local enterprise. Apart from salt and grain, cotton, cultivated since the early 14th century, became the major source of revenue, replacing sugar cane. Various forms of taxation pressed hard upon the labouring population. A conspiracy against Venice in 1562, led by a Greek, one Jacob Diasorin, was suppressed. Its dangerous aspect was that the rebels had made contact with the Ottomans. The Venetians now modernised the island's defences, and three fortresses, those of Kyrenia, Nicosia and Famagusta, were to be the sole defensible places; old fortifications like St. Hilarion, Duffavento and Kantara were dismantled by 1567.

The Ottoman threat hovered over Cyprus during the rule of Venice, and in the years following the Ottoman-Venetian peace treaty of 1540 (cf. texts ed. by Bonelli, Lehmann and Bombaci), pressure increased. The admiral Phyle Pasha promoted the continuation of a naval policy aimed at annexing the Latin-held islands in the Levant seas on the routes of Ottoman communications: Chios and Cyprus, the principal among them, were both already tributary to the Porte. In the end, the pro-Venetian peace party at the Porte, Sokollu Melhem Pasha's, gave in to the war party, and the attack on Cyprus was decided for the early spring 1570. Joseph Nasi, alias Don Juan Micas, seems to have been implicated here.

Selim II (1566-74) issued his orders for war in 1568. A fezda by the sheykh ül-Islam provided a justification for breaking the peace (cf. text in J.E.S. [B.], 1, 365-7, tr. in d'Ohsson, Tableau, vol. 2. 1814, p. 73 f. = GUR, III, 366 f.). Preparations continued during 1569. On 28 March 1570 the Ottoman envoy Kubîb formally bade to the Senate and the Doge Sultan Selim II's demand for the cession of Cyprus, which was refused. In the meantime, Lala Mustafa Pasha, the fifth vizier [g.r.], was appointed seeder, and Phyle Pasha, the third vizier [g.r.], was made commander of a fleet of 80 galleys and 30 galliots, followed by 'Ali Pasha with troops, munitions and materials for the land campaign.

On 3 July 1570 the Ottoman fleet appeared before Larnaca (Les Salines). A Holy League created by Pope Pius V, Spain and Venice failed to organise a timely counterattack. The Venetian commander, the Luogotenente Nicolò Dundolo, had to limit himself to the defence of the fortress towns. On 25 July 1570 the siege of Nicosia began, and ended on 9 September when the city was taken by storm. Kyrenia capit- ulated without a fight 5 days later. The population
in cash. In practice as well. From 45 to 67% of taxes were paid in kind, as elsewhere in the Ottoman provinces; djīya and iṣpandī [q.v.], were paid in cash.

A squadron of galleys was stationed at Famagusta and Kyrenia. Ottoman troops garrisoned on the island numbered 3,779 including 1,900 Janissaries, estimated in Nicosia, Limassol, Paphos, Famagusta and Kyrenia. A great number of Anatolian Turks from the regions of Konya, Karaman, Iğdır, Isparta, Antalya, Menteş and Dehli were settled on the island as so-called sūrgūl [cf. Barkan, in İFM, xi (1949-50), xv (1955), forımān of Djumādā I 980/1 September 1572 to the Kādī of Karaman, Anadolu and Djūsādariyye; see Muḥi'mān dextār, 19, pp. 334-2, no. 669, publ. in ibid., 525-3]. In total, 186 families immigrated by 1572, mainly farmers. In 1581 8,000 families were registered as immigrants (MD 43, cf. C. Orhonlu, art. in Kibris tarihleri kongresi [see Bibl.], 39-195). Conversion of Latin and Greek Christians added little to the number of Muslim 'Turkish' population, amounting to only about 400.

A major contribution to the welfare of the native Greek population was the Ottoman decision to abolish the Roman Catholic hierarchy and to restore the Orthodox Church of Cyprus under its archbishop. This prelate was made representative of his community vis-à-vis the Ottoman government as the Ethnarch or head of the Greek community. It meant an increasing degree of autonomy for the Orthodox Greek population under its own chosen leaders, and the relatively unhampered development of its own cultural tradition into modern times. This privileged status of the Greek population, together with the new dominating but smaller group of Turkish Muslims on Cyprus, was to form the basic situation of the Cypriots down to modern times. The Latin element entirely lost its former status. It survived only in small numbers, profiting from diplomatic protection within the framework of the Capitulations system [see tavrīyāz].

Ottoman possession of the island was not seriously threatened after 1571. The Grand Duke of Tuscany organised a raid on Famagusta in 1607 at the time of his grand oriental scheme involving Fakhr al-Dīn, amīr of the Druzes, and the rebel Djiḥamūlī ʿAli Pāșa [q.v.]. The Veneto-Ottoman war of Candia (1645-9) did not have any great effect on Cyprus. In the 17th and 18th centuries, Cyprus was still an important centre of Levant trade, cotton and salt being valuable commodities. Consuls of Venice, France, of the Dutch Republic (since 1673), and of England resided at Limassol, the last being the statutory (sehole [q.v. in Suppl.]) of the island. The consuls and their national groups of foreign residents sometimes played an important political as well as a commercial role on the island, especially in times of rebellion.

The importance of Cyprus decreased after the conquest of Crete was completed in 1669. At that time, the beglerbegī was incorporated into the province of the Kapudān Pāshā, who sent a deputy-governor, the müstifim. The role of the Orthodox hierarchy in the administration increased at the same time. Strife among the Ottoman notables of Nicosia led to armed conflict, which in its turn caused the Porte to interfere by sending troops repeatedly. Çufutoglu Ahmed Pâşâ at last succeeded in defeating the rebels and executing their leader Muḥimed Ağa in ca. 1700. In 1703 Cyprus was transformed into a hikâs of the Grand Vizier. The government was now exercised by a muḥāṣṣil (takṣīṣāt) in the name of the latter, who was a farmer of taxes at the same time. The frequent change of these functionaries, as elsewhere, led to overburdening by taxation. In 1745 Cyprus once more
again became an independent province under its own pasa for a few years. Abu Bekir Pasha (1746-8) exercised his charge satisfactorily, bequeathing to the island an aqueduct serving Larnaca, the harbour and passing ships (vakifyya of 12 Rabii 1 1161/12 March 1774, in Lycia, Cyprus, 60-74).

In 1754 a bifl-s hamayt was issued at the request of the archbishop and suffragans to fix the amount of the kharadji together with the mit/iaffU and nazîl taxes at 214 piasters per head on 10,006 assessments. The bishops acquired the status of kâdhâbah (Gr. demogenor), responsible for the peace and the payment of taxes by the Greek subject population. In 1764 Cil Cctmân Agha, mukaffâl of the Grand Vizier and a miletusin, doubled the kharadji on Christians and Muslims alike, who rose in revolt and killed him. The revolt lasted till August 1765. Cyprus suffered the depredations of the Russian fleet after the destruction of the Ottoman one (Chesme 3-7 July 1770) till 1774. From 1777 to 1783 Elâhîddî Abu 'l-Dâkî Agha was mukaffâl. By this time, the actual administration and levying of taxes was shared between the Ottoman administrator and the Archbishops and bishops, who employed the Greek administration and levying of taxes at 214 piasters per head on 10,006 assessments. The bishops acquired the status of kâdhâbah (Gr. demogenor), responsible for the peace and the payment of taxes by the Greek subject population.

In 1770-1774 to 1783 'Abd al-Mu'min was in office. In 1780 a revolt of the Turkish troops broke out against the Archbishop and the dragman Hâdimî Georgiakos (executed in 1809), and this lasted till 1805. The Greek Cypriots contributed little to the Greek War of Independence (1821-2). The little involvement there was (1821) gave the mislumîn the pretext for, firstly, a general disarmament of all Christians. Then the leading personalities were arrested and put to death in July 1821, among them the Archbishop Kyprianos (1790-2) and three bishops. After the massacre there followed a partial confiscation of the possessions of the victims and of the churches and monasteries on the islands, although much was restored later. The Christians living within the fortresses of Nicosia, Famagusta and other towns were ordered to remove themselves to the outside, a situation which has remained. The archbishops never recovered their powerful pre-1821 position. The Greek Kingdom was recognised by the Porte in 1829, and this caused the beginning of nationalist aspirations of enosis amongst the Greek Cypriots. The overtaxation of the island's resources continued to frustrate a fundamental improvement of its economy, and revolts by both groups of the population occurred in 1833.

In 1838 the era of the Tursmîdi [q.v.] set in. By 1849 Cyprus was reformed as a sângat of the province of the Islands of the Aegean Sea, Djezd-Pir-i babr-i sefid [q.v.] and administuted by a mislumîf, assisted by a mislumîf council where Christians and Muslims were represented. Governors followed each other in quick succession. In 1861 Cyprus became an independent sângat (Hill, IV, 230). The second largest decree of 1856 was applied in Cyprus, and the effects of reform were becoming noticeable during the last decades of the Ottoman administration (1856-78), when courts came into being. The population increased from ca. 160,000 in 1840 to 200,000 in 1862. The island's economy progressed moderately, and Larnaca remained the principal port. The administrative status of Cyprus was however reduced again in 1866 to a sângat in the wilâyet of the Islands, but restored in 1870.

A few days before the Congress of Berlin, Great Britain concluded with Sultan 'Abd ul-Hamîd II [q.v.] a secret Convention of Defensive Alliance in which she promised help to defend his empire against Russian encroachment. The sultan ceded Cyprus for occupation and administration as a “place d'armes”. In an annexe of 1 July 1876 it was provided that the annual surplus revenue of Cyprus, assessed from the average of the previous 5 years, was to continue to be paid to the Sultan. The sailing 'tribute' in fact never reached the Sultan, but was diverted to the creditors of the Ottoman Debt instead, and this arrangement remained in force till Sir Ronald Storrs's administration in 1927. The Sultan retained his sovereign rights to the island and continued appointing its mukffî and kâdhâb. This status gave little incentive to the British government to develop Cyprus, but elementary reforms and ameliorations were effected. With the outbreak of the First World War in 1914, Great Britain annexed the island. A representative régime was instituted (1922), with a council of 18 members, comprising 9 Greeks, 3 Turks and 6 British officials. Any proposal for union with Greece, enosis, could thus be deadlocked by the Turco-British bloc. The repeated refusal of Greece to accept the partition between the Greek and the British part in the Peace of Lausanne (1923), Turkey formally renounced all claims to Cyprus, in 1925 Cyprus became a British crown colony.

A small number of Turks, however, opted for the Turkish nationality and left. The first great conflict between Greeks and British broke in 1931 during Sir Ronald Storrs's tenure as governor. A state of emergency was proclaimed. Military government remained till after World War II. Already in 1941, however, political parties were permitted again: a communist party A.K.E.L., a Greek nationalist party K.K.R., and a Turkish party. Trade Unions came about mainly under communist leadership. Municipal elections were held in 1943. After 1945 the British government did not consider any change of status for Cyprus. In 1950 Greek Cypriot nationalists organised a plebiscite among Greek Cypriots, and 96% voted for enosis. The young Bishop of Kition, Michael Mouslios, was the organiser of this demonstration. On 18 October 1950 he was elected the “Most Blessed and Most Reverend Archbishop of New Justiniana and all Cyprus” under the name Makarios III (1919-77). In 1954 a Cyprus-born Greek officer, George Grivas, began organising an anti-British guerrilla organisation, E.O.K.A. The British government devised a new constitution for the colony without giving any hopes for independence. In early 1955 the first discussion of the Cyprus problem in the U.N.O. failed to have a pre-Great result. Soon afterwards guerrilla warfare by E.O.K.A. began. In July 1955 the British Premier Sir Anthony Eden held the first tripartite talks on the question, with Greece and Turkey, the latter also invited to have a say as an ally of N.A.T.O. Turkey's point of view was maintained by the status quo as a guarantee against enosis. The leader of the Greek Cypriots, Archbishop Makarios III, protested against discussion of the interests of Cyprus without the presence of its own people, meaning only the Greek Cypriots. E.O.K.A. stepped up its activities. Field-Marshal Sir John Harding was appointed governor. He opened talks with Makarios upon the base of “a wide measure of self government”. This was acceptable for the Turks and nearly so for Makarios. The talks were unexpectedly broken off by order of the London government, and Makarios deported to the Seychelles Islands (9 March 1956).

E.O.K.A. terrorism came into full fury. The
British began to recruit Turkish Cypriots as policemen, who consequently also fell victim to Greek bullets; the beginning of inter-communal violence dates back from this time. A Turkish militant organisation grew up, and a Turkish Cypriot leader emerged, Dr. Faizil Küçük. At the U.N.O. meeting in February 1957, neither Greece nor its Turkish answer taksim (division of Cyprus into two partial got sufficient support. The new British Prime Minister, Harold Macmillan, decided to refuse Makarios, who was not, however, allowed to return to his island, and Sir Hugh Foot was appointed governor. The Menderes government in Ankara protested against this liberal figure succeeding the Field-Marshal, and blocked the plans for self-government of Cyprus, the return of the Archbishop and talks with all Cypriot leaders. A revised Foot-Macmillan constitutional proposal contained many elements later used in the London-Zurich treaties of 1959. At the time of its announcement, Cyprus experienced the worst terrorist fighting between the two communities, between E.O.K.A. and F.M.T., the Turkish National Defence Organisation, with 200 dead in two months. At this time there were 20,000 British troops on the island.

Civil war suddenly came to an end in July 1958, although E.O.K.A. continued its fight against the British. Makarios, fearing an Anglo-Turkish cooperation to divide Cyprus, came forward in September with a proposal for independence under auspices of the U.N.O. Grivas did not support it, and enosis remained his only aim. Great Britain did not consider it either, but began to change its own position: 25,000 troops on Cyprus became too heavy a burden, and a Greco-Turkish conflict would have endangered the N.A.T.O. Sovereign base areas in Cyprus would be sufficient for Britain's strategic needs. Athens wanted to prevent taksim; but Ankara could accept any compromise which prevented enosis. The U.S.A. made it clear that it would not continue supporting Great Britain in the Middle East. Any Greco-Turkish solution must be accepted.

In December 1958, the first talks between Greece and Turkey (by Averoff-Tosssizza and Zorlu respectively) were held. In February 1959 the prime ministers and foreign secretaries reached agreements in Zurich. At a second meeting in London these and a number of fundamental articles of its Constitution, the independence of Cyprus and its status as defined its Turkish and Greek Cypriot guerrillas and men of the National Service, and could thus mobilise a Greek National Guard to control the extremist bands directed by Grivas from Athens. The situation worsened in the course of the year. The U.S. President Lyndon Johnson warned the Prime Minister Ionin in June that Turkey would not be protected by N.A.T.O. in case of a Russian attack after Turkish unilateral action. All over the island the Turkish Cypriots withdrew inside fortified enclaves surrounded by Greek Cypriot guerrillas and men of the National Guard. This meant a definitive change of the old settlement pattern of 120 all-Turkish and 106 mixed villages. There was a relocation to Turkish-dominated areas of at least 25,000 Turkish refugees. In 1969, 115,189 Turk refugees still remained unsettled. A precarious balance was maintained by the U.N.
Force in Cyprus (U.N.F.L.C.Y.P.). Greek Cypriots dominated the greater part of the Republic. A U.N. mediator, Golo Plaza, began his work in March 1965. Makarios and Kılıçlık did not act together any more, nor did the cabinet or parliament. Makarios kept on insisting that the imposed constitution was impracticable. Kılıçlık maintained that a limitation of independence was necessary for the survival of the Turkish community, which must never be treated as a minority, and proposed løksis. Neither of the two Cypriot parties was able to make concessions.

Greco-Turkish talks in 1966 led to no results. In the autumn of 1967, violence flared up again after Greek Cypriot provocation. The Ankara government threatened intervention. The Athens Junta government gave in, and withdrew Grivas from the island. Makarios's position had now become the stronger one. Kılıçlık proclaimed a separate transitional government for all Turkish sectors in December 1967. On 25 February 1968, presidential elections were held which resulted in a 95.4% vote for Makarios and his independence policy. Concessions were granted to the Turks. R. Denktas was allowed to return and was elected president of the Turkish Communal Chamber. He conducted intercommunal talks with G. Clerides in June, July and autumn of 1968 and in the spring of 1969. On 8 March 1970, an attack was made on President Makarios, probably by Greek ex-E.O.K.A. members. Parliamentary elections were held in July 1970 separately by both communities.

The year 1972 saw talks on Cyprus by the governments of Athens and Ankara in Lisbon (by Foreign Ministers Okşay and Xanthopoulos-Palamas). The communal talks between Denktas and Clerides were also continued. In September, General Grivas returned secretly to organise a new E.O.K.A. terrorist movement, mainly directed against Makarios' government on 23 July 1974. M. Zeka, "The privileges granted to the Orthodox and Latin Churches in Cyprus" (T. S. R. Boase and A. H. S. KUBUS — KUBU

since independence (1963).

is Islam, but this is mixed with animistic beliefs.

The predominant religion in 1949. In 1938, the monarchy was abolished and he was elected head of the self-governing kingdom of the last king, Hasan bin Zayn, was appointed as head was allotted a certain territory as an appanage. The family which ruled this area until 1958 was finally settled in Sarawak; some of his descendants and favour of the British, left Kubu in 1823 and Alawl bin c threw up as a defence against raids by pirates. Kubu was transformed into its present administra¬

Kubu, consisting of three notables, each of whom soon after his brother-in-law, the Arab adventurer, left the mouth of the river Terentang with a few Arab, Buginese and Malay followers in 1843. Some of them 643 foreigners, most of them Chinese. The migration of Pcntianak, situated in the south of the delta of the Great Kapuas river, in the Indonesian province of Western Kalimantan in Borneo (Java in Suppl.). In 1971 it had 16,951 inhabitants, and among them 643 foreigners, most of them Chinese. The scattered population is mainly of mixed Arab, Buginese, or Malay origin, besides the Chinese and few Dayaks. Since 1955, the Indonesian government has tried to open some areas for Javanese immigrants.

The family which ruled this area until 1958 was of Arab descent originating from Hadramawt. The founder of the kingdom was Sayyid (according to some Sharif) Tidrus al-Idrus, who settled not far from the mouth of the river Terentang with a few Arab, Buginese and Malay followers in 1700, soon after his brother-in-law, the Arab adventurer Sharif 'Abd al-Rahman al-Kadri, had founded the sultanate of Pontianak. The capital and kingdom received its name from an antecedent (Malay kubu) thrown up as a defence against raids by pirates. He put himself under the protection of the Dutch East India Company, who recognised him as a ruler with the title tana (lord). One of his sons, 'Alawf bin Tidrus, because of his opposition against the Dutch and favour of the British, left Kubu in 1823 and finally settled in Sarawak; some of his descendants have had a certain political influence there, especially since independence (1963).

In 1909, the Dutch introduced a bestuur comité in Kubu, consisting of three notables, each of whom was allotted a certain territory as an appanage. The last king, Hasan bin Zayn, was appointed as head of the bestuur comité by the Japanese in 1941, before he was elected head of the self-governing kingdom in 1949. In 1958, the monarchy was abolished and Kubu was transformed into its present administrative position as a kampung. The predominant religion is Islam, but this is mixed with animistic beliefs.
KUBU — KÜÇAK KHAN DJANGALI

Bibliography: see that for KUBU in EI, and also J. U. Louta'an, Sejarah hubun adat dan adat-adat Kalamantan Barat, Pontianak 1975.

(W. H. Rassner — [O. Schumacher])

**KÜÇAK KHAN DJANGALI**, Mirza, known also as Shaykh Yûnus (1880-1921), Persian revolutionary and the first person to declare a republican regime in Iran. He was born into a lower middle-class family of Râgh, in the north of Iran, and studied Arabic and other religious subjects in the traditional schools in his region. He then moved to Tehran, continuing his studies in a religious school called the madrasa-yi ma'hadîyuyûn. His early training in traditional schools, together with his association with the Russian revolutionary in Tâlib and Bâku in 1908, plus his close co-operation with the militant Iranians involved in the Persian Constitutional Revolution of 1906-17, developed in Kûçak Khan a strong sense both of revolutionary patriotism and also of devotion to Islam. We therefore see him occasionally consulting the Qur'an as well as setting up sessions for reciting the heroic poetry of Firdawsi [q.v.] (Dâhirân Ferkhâr, Sardâr-i Dîngal Mirzû Kûçak Khân, Tehran 1965, 37-8). In 1909 Kûçak joined the revolutionary group of Gilân aimed at overthrowing the then despotic Shâh. Muhammad 'Ali (reigned 1907-9). The Gilân Bâkhtiyâr forces moved on Tehran victoriously in July 1909 and Kûçak Khan was taking to the authorities. afterwards his frozen corpse was found and his head was taken to the authorities.

Kûçak Khan's writings and manifestos suggest that he was aiming at a united Iran without any foreign interference, including that of the Soviets. He believed in land reform and in compulsory education, and during his short control over Gilân, he did carry out some land reform and founded a number of public primary schools in Sawmâ'âsar, Shafi'i, Rasmî, and Malek Tehran.

The evaluation of the revolutionary activities of Kûçak Khan has caused controversy, and many contradictory accounts have also been given concerning the factual history of the Dîngalî movement. He has been called a "willing puppet" of the Soviets (George Lenczewski, *Russia and the West in Iran*, 1918-1948, Ithaca 1949, 60). On the other hand, Soviet writers (*The borders of Soviet Central Asia*, *in Central Asian Review*, iv [1950], 287-331), as well as the Iranian revolutionary groups (S. 'Awn Allâhî, *Inbîd-i hâkî-i siyâsî-yi whudb va nadvâd-i adl-va hârâgî-yi Iran, and Tâjî Mâwzî, *Inbîd-i whudb va nadvâd-i Gilân*, both in *Inbîdî-î whudb va Iran*, ed. Hâdî-i Tâlâ-yî Iran, 1967, 241-4, 65-74; *Dîngalî-hûn vesâlîn-i Iran, in Tâlâ-yî Iran, 1918-1948*). Maydânî and a number of the 'Adâlat Party members, who considered Kûçak Khan to be a national hero. A third group of the accounts are hostile to the movement, expressing openly the attitude of the big landowners of Iran, particularly of those of Gilân; the best example of this group of literature is the anonymously-written book *Tâlîbâ-yi Dîngalîyân*, Tehran 1928.

Bibliography: Abdûl-Hadi Hairi, *Sûret-i Kâbindâ恰当 and constitutionalism in Iran: a study of the role played by the Persian residents of Iran in Iranian politics*, Leiden 1977; Mahdi Bâkdî, *Shâhî-hârâgî yî Gilân*, Tehran 1971; Husayn Mâkhlî, *Mûkhtâsar az 'indîsî-yi yîsâl yî Sâlim Ahmad Shâh-kâfird', Tehran 1944; *Idem, Tarîf-hî bîstilî-yi Iran*, iî, Tehran 1944-6; 'Abîd Allah Mustâdfî, *Shâhî-zâl-va hârâgî-yi men*, iii, 1954; *Ali Kûdbî, Kitâb Kâbindâ yî Fîzîyân dar Khûrâsan*, Tehran 1973; Mahdi Kull Hidâyat, *Khûfîrît va hâbîrat*., Tehran 1965; *Mazâkî, Asâd-dî dîmbî-yi hârâgî, sâzuyîl-dîmbî-yi Dîngalî-yi Iran, and the opposing British and Persian troops. There were also intermittent fights between Kûçak Khan on the one hand and other Dîngalî leaders, such as Hûdâ Allah Khân and Khâtû Kûrdân and a number of the 'Adâlat Party members, who held extremist communist views. These conflicts finally resulted in the murder of a prominent revolutionary, Haydar Khân 'Amîd Ughîr [q.v. in Suppl.]. In the meantime, the pro-British Sayyid Diyar' al-Dîn Tâbahâbâ set up the Zarganda Committee, which was joined by a number of the large landowners of Gilân such as Fath Allah Khân Sardar Mânâsîr. At the same time the Soviets decided to establish friendship with the British and the government of Tehran, culminating in the Soviet-Persian Agreement of 1921, on the basis of which the Soviet Ambassador to Tehran, M. Kotskevî, wrote a long letter to Kûçak Khan urging him to put an end to his revolutionary activities. Thus abandoned, Kûçak Khan took refuge in the forests of Gilân, and shortly afterwards his frozen corpse was found and his head was taken to the authorities.
KOCAN, modern form of the medieval Islamic Khabbashan/ Khudan, a town of northern Khurasan on the main highway connecting Tehran and Mashhad. It lies several miles upstream, sc. to the east-south-east, of the mediaeval town.

Khabbashan was apparently the earliest Islamic town of its name, although nothing is known about its form during the period of the Arab conquests and the ensuing two or three centuries. But already in the 4th/5th and early 5th/6th centuries, such writers as Ibn Hawkal; ed. Kraemer, 433, tr. Kraemer-Wicz, 140, Mashhad; and C. E. Bosworth in the Hadid al-Gilan, tr. Minorsky, 105, § 23, and Bayhaqi, Tarikh-i Mas'udi, ed. Ghani and Fayyad, 604, 607, tr. Arends, 573, 579, spell its name as Khudan. Samani (who had personally visited the town), As'udib, ed. Hyderbadi, v, 223-4, repeated in Yakuti, ed. Beirut, ii, 399-400, says that the locals pronounced Kudjan. The geographers and others describe it as the chef-lieu (kazaba) of the rich and flourishing rural district (rustaq) of Ustuwawa (the Artoor of Greek sources), which was administratively a dependency of Nishapur and comprised 93 villages. It constituted the granary of Nishapur, growing corn and fruits in both rain-watered fields (masabah) and in those irrigated by the Khurasan and the Sals, and because the pasture grounds to the north and east were especially attractive to powers with nomadic followings, such as the Saljuks under Toghril Beg during the 6th/7th century, and the Sals under Toghril Beg during the 6th/7th century. But already in the 4th/5th century, the name Ustuwawa was going out of use, the local pronunciation "Kudjan" had taken over.

Khuban makes sporadic appearances in the mediaeval Islamic chronicles, since it lay on the principal route from Gurgan and the Caspian provinces to Tus and Nishapur, and because the pasture grounds of the upper Atrek valley were especially attractive to powers with nomadic followings, such as the Saljuks, the Mongols and the Il-Khanids. It played a part in the manoeuvrings of Nasir of Ghur during the 13th/14th century, during which it was occupied by the Mongols under Mustafa Khan. The town suffered badly during Cingiz Khan's invasion of Khurasan in 1218-19, and was burned by the Mongols, who remained in occupation until 1221.

After the Mongol invasion, the town continued to decline. It was later occupied by the Il-Khanids, who granted a charter to the town in 1292-93, during which period the town enjoyed some measure of autonomy. It was later recaptured by the Mongols, who granted a new charter to the town in 1300-1. The town suffered badly during Cingiz Khan's attack on Khurasan. According to Djouwari, the Mongol general Sibetyam brought great slaughter at Khabbashan, Isfarkin [gaz.], and (?) Adilian, and for nearly 40 years the town lay devastated and depopulated. Then in 654/1256, Djouwani—who had with considerable assurance purchased a quarter of the town from its inhabitants—himself persuaded Hulegu to rebuild it. The latter issued a charter for the repair of the buildings and the rebuilding of the houses and markets, all at his own expense, and the Amir Sayf al-Din Aka expended 3,000 dinars on reconstructing and restoring the Friday mosque and cemetery [Djouwani-Boyle, i, 146, ii, 517, tr. Boyle, in Cambridge history of Iran, v, 342].
Khuršān thus enjoyed a recovery of prosperity under the later Mongols and Il-Khānids. Rashīd al-Dīn mentions that there was an imperial workshop (kābād-dāna) there (Petrusevský, in ibid., v, 513), and also that Ghilān, when governor of Khuršān and a representative of Ghiyath al-Dīn, Uṣūldīn, established a Buddhist shrine in the town for those devotees within the Mongol court entourage and official classes (Dīnāʾī al-tawārīḵī, ed. Aliradī, ii, Baku 1957, 375, cf. D’Ohs- son, Histoire des Mongols, The Hague 1834-5, iv, 247-8). However, Khūţān had at some point of time also acquired an imām and saint’s tomb of some importance, sc. that of Ibrahim, son of the Eighth Imam al-Ridūlī al-Alī al-Ridūlī. The whole Ateş-Rashīf Rūd corridor lay in the front line of Persian defences against the Özbegs during the Safavid period. Hence Shāh ʿAbbās I settled Kurdish tribesmen in northern Khuršān, to the number, it is said, of 15,000 families, and subsequently, what were in effect a string of Kurdish tribal principalities grew up along the frontier, with hereditary chieftains and exemption from taxation in return for maintaining armed cavalrymen against incursions from Central Asia. Khūţān came within the area of the Ẓafarānī Kurds, whose hereditary leaders had the title of Ḥabībī bestowed upon them. Nādir Shāh had an especially consistent policy of resettling peoples in frontier regions for strategic purposes, and during his reign (1148-60/1736-47) there were considerable further implantations in northern Khuršān, including the Khūţān district (see on all these population movements, J. R. Perry, Forced migration in Iran during the seventeenth and eighteenth centuries, in Iranian studies, Jnl. of the Society for Iranian Studies, vili (New York, Autumn 1973), 205 ff.).

The local chiefs of Khūţān were nevertheless frequently in revolt against the Persian central government. Nādir Shāh was killed in 1260/1847 whilst engaged in the subjugation of the town, and a nearby hill is still called Nādir Tepe. In the reign of the Kādārī Fath ʿAlī Shāh, the Ḥabībī Ṭabī Ṭabī Khān (who entertained the British traveller J. B. Fraser in Khūţān in 1832) revolted against his overlord, so that the Ḥabībīs would led or heṣar, ʿAbbās Ṭabī [q.v.], came and suppressed the outbreak, razing the town’s walls and causing much destruction within it. Severe earthquakes in 1852, 1871, 1893 and 1895 increased the devastation, and Curzon, who was there in 1889, found many ruined houses there, estimating the population at less than 12,000. With the pushing forward in the latter 19th century of the Russian frontier in Central Asia up to the natural frontier of the Kopet Dāgh-Khāh Hazar Masjīd range and the subjection to Imperial Russian rule of the formerly predatory Türkmen, the three Kurdish principalities of northern Khuršān, Khūţān, Budjīnūr [q.v.] and Darreh Caz, lost much of their military and strategic raïsouns d’être, and Curzon noted that the power and prestige of the then Ḥabībī, Shujaʿī al-Dawla Husayn Khān b. Ridūlī Kālī Khān, had diminished (G. N. Curzon, Persia and the Persian question, London 1894, i, 94-112).

In the present century, Khūţān has remained the centre of an important wheat-growing area, supplying much of the rest of Persia; these crops are grown, as in mediæval times, both on sun-dried irrigated land and on damānī, dry-farmed (cf. Admiralty hand- book, Persia London 1945, 49, 43, 429; 457). Administratively, Khūţān is now the chef-lieu of a shahrastān or district of the 5th wāzīd of or province of Khuršān; the population of the shahrastān in 1950 was ca. 111,000 (cf. Farhang-i diwānī-yi ʿIrān, iv, 307).

Bibliography: In addition to sources given in the article, see Le Strange, The lands of the Eastern Caliphate, 393, and for the accounts of European travellers who visited Khūţān, see A. G. Curzon, Die Entforschung Persiens, Vienna 1892, 157-65, 221, 2, 252.

KÜÇÜK KAYNARDJA (modern Tăkh, Köçük Kaynarca, "little hot spring", a village in northeastern Bulgaria, 25 km. south-east of Silistra, noteworthly as the place at which was concluded between the Ottoman and Russian Empires on 12 Djuilād I 1188/89 July 1774 one of the most famous and important treaties in the history of diplomacy. The Treaty of Küçük Kaynardja, which brought to an end a disastrous war over the partition of Poland on which the Porte had irresponsibly embarked six years previously, contained terms which were uniformly regrettable in their consequences for the Ottoman state and, in particular, for the ğlāhānate of the Crimea.

The peace which consisted of 48 articles and a separate secret convention of two articles, was the final outcome of protracted negotiations for a truce which had been conducted by the two sides since 1186/1772. Only in the campaign of 1288/1774, with Russian forces strongly entrenched south of the Danube and with the strong fortress of Shumen (Shurli, Shuruni), which commanded the passage of the Balkan range, abandoned by the Ottomans, were negotiations pushed rapidly to a conclusion. The Ottoman field-commander (serdar-i ekmek), the Grand Vizier Muḥṣin ʿAbd al-Muṣīm, was Prince Nikolai Ropsin, who had served as Russian ambassador at the Porte prior to the outbreak of hostilities.

Negotiations were begun and rapidly concluded in the Russian camp before Shumen on 8 Djuilād I 1288/89/1, July 1774; the actual date and place of signing were stipulated by the Russians for their historical significance. The controlling text of the treaty was drawn up in Italian; Russian and Turkish versions were also signed by the respective plenipotentiaries. Contrary to a widely-held belief, there are only minor textual variations between the Russian and Turkish versions.

The consequences of the Treaty of Küçük Kaynardja were most unfortunate for the ğlāhānate of the Crimea. Although by the terms of art. 3 Russian forces were to evacuate its territory with the exception of the strong points of Kerč and Yeřči Kal’ev, the Ottomans were obliged to relinquish their suzerainty over the ğlāhānate, and to concede to the Crimean Tatars a specious and unlooked-for "independence" (serbestiyyet). Religious supremacy over the Muslim inhabitants of the ğlāhānate was reserved to the Ottoman sultan as rightful caliph ("Supremo Califfo Maomettano"), a concept entirely foreign to the Muslims of the Crimea. In return for maintaining armed cavalrymen against incursions from Central Asia, the treaty was drawn up in Italian: Russian and Turkish versions.

The famous and important treaties in the history of diplomacy, which were uniformly regrettable in their consequences for the Ottoman state and, in particular, for the ğlāhānate of the Crimea.
terms of the treaty were equally ominous. Through her possession of the fortresses of Khilburn (Kilburn) [q.v.] (art. 18), Herceg Veli Balce [q.v.] (arts. 3 and 19), Azak (Azov) [q.v.] (art. 20) and Greater and Lesser Karaband [see kasabas] (art. 21), and despite restitution to the Ottomans of Özal (Ochakov) and Bessarabia, including, inter alia, the fortresses of Asz-Kermen, Kili, Itamlik, Bender and Khotin [q.v.], Russia gained a secure and permanent strategic foothold on the northern shores of the Black Sea, thus bringing to an end its four centuries’ history as an Ottoman “lake”. This new position of strength Russia was able immediately to exploit through further concessions (art. 21) which gave her unrestricted commercial privileges in the Black Sea and through the Straits into the Mediterranean, and the right to establish consulates and vice-consulates at will on Ottoman territory and to maintain a permanent embassy at Istanbul. A further detailed clause afforded Russia a privileged position with regard to the Christian population and the semi-autonomous hospodars of Moldavia and Wallachia (Bogdahn and Elik [q.v.] (art. 18), while by art. 13 the Porte was to cede to Catherine II and her successors the title of padişah (tawaddum Rusaylarını padişahî, i.e. “Emperor of all the Russians”).

Two articles in particular (arts. 7 and 14) of the treaty have given rise to much subsequent misunderstanding. Art. 7, which in fact specifically recognised the protection of the Ottoman government over its own Christian subjects, permitted Russia only to make representations on behalf of a single church building—an Orthodox church in Ghalata [q.v. in Suppl.], separate from the Russian embassy chapel, where services were to be held according to the Russian rite—and those who served in it. Art. 14, which actually gave to Russia the right to establish a church in Ghalata to serve the Russian community resident there “on the example of the other Powers”—i.e., France and Austria—had already been proposed in the negotiations of 1772-3, related to Moldavia and Wallachia, or to the Archipelago and for the payment by the Ottoman side, of Cerme Tuhin, Küçük Kaynardja, in I.A. vi, 1041-77. The sole monograph devoted to the Treaty of Küçük Kaynardja is E. I. Drufinina, Kucük-Kaynardjası mir 1774 года, Moscow 1955; a collection of essays of unequal value by Soviet and East European historians (N. Todorov, E. I. Drufinina and others) is contained in Etnics Bolkaniques (Sofia), 1976, 74-127. For the effect of the treaty on the khimate of the Crimea, see A. W. Fisher, The Russian annexation of the Crimea 1774-1783, Cambidge 1970; for a more extended treatment from the Ottoman side, cf. Cemal Tuhin, Küçük Kaynardja, in I.A. vi, 1041-77. The most recent study is R. H. Davison, “Russian skill and Turkish imbidity”: the treaty of Küçük Kaynardja reconsidered, in Slavic Review, xxxv (1976), 403-83. All these works contain supplementary bibliographies and further references to sources in the relevant languages.

(K. J. Hnevood)
fear of poverty. It was during these later years that Sa'id Efendi came into contact with Prince 'Abd al-Hamid, advising him on administrative matters, so that one of the latter's first acts after his accession to the sultanate was to raise him to the rank of Pasha and appoint him as Chief Secretary (1875-8), at which time he acquired the nickname *Kâzîk* ("the small one") to distinguish him from Ingiliz Sa'id Pasha, who also advised the sultan for a time until he was dismissed due to implication in the *All Sulât* affair.

Küçük Sa'id now became the Sultan's chief instrument in the Ottoman cabinet. As minister of justice (1878-9), he worked to modernise the Nikâm-i-iyye secular court system, introducing the institution of public defender, and also securing promulgation of new commercial and criminal codes of law. In seven terms as Grand Vizier (1879-80, 1880-2, 1882-5, 1885, 1901-3, 1906), he faithfully carried out the sultan's reform programs, also taking the initiative to introduce important reforms. He developed a program to centralise government control of the provincial, modernised the financial system, increased tax collections and balanced the budgets, negotiated the settlement with the empire's foreign creditors that led to the creation of the Public Debt Commission (1881), established the Istanbul Chamber of Commerce to develop native trade and industry, modernised and expanded the system of secular schools on the elementary and higher technical levels in particular, reorganised and modernised the regular police, and made the secular courts fully independent of government interference so they could administer justice without fear of intervention.

He played a major role in modernising the bureaucratic hierarchy, introducing examinations for appointment and promotion and establishing a pension system so that aged officials could retire without fear of poverty. As the sultan became increasingly withdrawn and subject to the influence of his palace coterie, Sa'id Pasha became more and more fearful of his master. At the same time, his rivalry with Melimed Kamil increased to the point of prompting the latter to seek the sultan's call to resume the Grand Vizierate. As a result, Sa'id Pasha became more and more fearful of his master. He played a major role in modernising the bureaucratic hierarchy, introducing examinations for appointment and promotion and establishing a pension system so that aged officials could retire without fear of poverty.

The name of 'Izker' for the capital of Küçük (near the confluence of the Tobol and Yenisei) seems to be found only in Russian sources; it is only from the latter also that the principal events of his reign can be chronologically arranged. Küçük was never a capital; it is not clear whether he was driven out of his kingdom after the defeat of his father but had expelled his predecessor Vägidar; in 1563 Vägidar is still mentioned as king of Siberia, while in 1569 we find Küçük. In 1582 'Izker was conquered by Russian Cossacks under Yermak; the Cossacks owed their victory to the use of firearms, then still unknown in Siberia. Küçük's son Mähtem-Kul (Muhammad-Kull) was sent a prisoner to Moscow. It was not till Yermak fell in an unexpected attack (1586 or 1587) that 'Izker was vacated by the Russians; but by the year 1587 we find troops, who had just arrived, building the Russian town of Tobolsk near this town. Küçük did not suffer his last defeat at the hands of the Russians till 20 August 1599. He is said to have been slain by the Nagay, with whom he had taken refuge, out of revenge for his father's death, and not in battle. The document used by Radloff (Aus Sibirien), Leipzig 1893, 146 f., dealing with an embassy from Küçük to Bukhârâ and the order by 'Abd Alîth Khân to his governor in Khâzârn to send teachers of religion to Siberia, cannot be genuine. Khâzârn was at this date an independent kingdom and not under the rule of the Khân of Bukhârâ. The form "Közeim" adopted by Rudloff is also not to be found in any historical sources.
KUDĀ'A, a group of Arab tribes of obscure origin. The opinions of the genealogists about their origin are contradictory. Some of them assert that they were descendants of Ma'add, others say that they were from Hijāry. Both parties had recourse to traditions and utterances attributed to the Prophet, in which he is said either to have declared that Ma'add's blocky was Abū Kudā'a, or to have stated explicitly that Kudā'a is a descendant of Hijāry. Harmonizing traditions reported that the mother of Kudā'a was the wife of Mālik b. ‘Amr b. Murra b. Mālik b. Hijāry and later married Ma'add, bringing with her Kudā'a, her son from the first marriage. Kudā'a was therefore later called Kudā'a b. Ma'add. A contradictory tradition of this kind claimed that Kudā'a was the son of Ma'add; later his mother married Mālik b. ‘Amr al-Hijāry, who adopted the child, Kudā'a, and thus he was called Kudā'a al-Hijāry (see M. J. Kister and M. Plessner, *Notes on Cachet's Gambhara an-nasab*, in *Oriens*, xxv-xxvi [1976], 56-2, and references in notes 43-51; also ‘Nār al-Dīn al-Haythamī, *Ma'dīnas* al-masīhid, repr. Beirut 1967, ii, 104-3; A. Ḥāshī, vii, 77-8; al-Ḥamdānī, al-Mīlī, ed. Muhammad al-Akwārī al-Bīlāwī, Cairo 1385/1965, i, 126-90). Some traditions say that the Kudā'a tribes related themselves to Ma'add, but turned to the Hijāryi nasab under Mu’awiya's pressure and bribes (see e.g. Kister and Plessner, *op. cit.*, note 57-7; ‘Nār al-Dīn al-Haythamī, *op. cit.*, i, 104; A. Ḥāshī, *loc. cit.*; Ibn al-Naqqāṣ, al-Aḥṣābiyya al-habishiyu wa-ẓāribīhā fi l-ḥūṣ al-muṣilīni, Beirut 1964, 340-3; and see al-Kūṭāmī, al-Dhūw, ed. Ibrahim al-Samarrī and Ahmad Māṭiţī, Cairo 1960, 34, 145, 147, 149; al-Kumayt, *al-‘Amīdī*, Cairo 1959, i, 60-1). The name Kudā'a is an early one and can be traced in fragments of the old Arab poetry. The tribes recorded as Kudā'a were: Kalb (q.t.), Djuhayna, Bahl (q.t.), Gilawān (q.t.), Mahra, Dhuwa, Dārām (q.t.), Udhrā (q.t.), Bahlāy (see al-Kays), Tanūkh (q.t.) and Salīb; the attribution of some of these tribes to Kudā'a (like Tanūkh, Khawāt and Mahra) was the subject of dispute among genealogists. Several of the clans of Kudā'a joined other tribes, adopting their pedigrees and changing their tribal identity.

Among the prominent divisions of Kudā'a one may particularly refer here to Djuhayna and Bahl. 

r. The vast territory of Djuhayna, controlling the coastal route of the caravans between Syria and Mecca, included the localities of Sa‘īdī, al-Mawā‘il, al Marwa, al Awā‘ār and Yamū‘; to them belonged the mountains of Tabar (q.t.); and see M. von Oppenheim, *Die Beduinen*, Leipzig 1943, ii, 361, on the mountains of Ra‘āw, al-Mawā‘il, al-Iṣlibür, al-Musul, and al-Aqṣārī, ed. Muhammad Hanifullāh, Cairo 1959, i, 249). It was Abū Allāh b. Unayz who asked the Prophet on which night he should come to Medina from his abode in Al Bawabī during Ra‘āw, and the Prophet bade him come on the night of 27 Ramadān; this night is therefore named "The Night of the Dhu‘ayn". It refers, of course, to the laylat al-bar‘ūr (see e.g. al-Ghazālī, al-Iṣlibür, vi, 133; Ibn ‘Abd al-Barr, *op. cit.*, 670).

According to a tradition recorded by Ibn al-Kahlīl, a Djuhayni, ‘Abd al-Dīr b. Ḥudayr (or Dhu‘ayn) in another version, intended to build a sanctuary in one of the centres of Dhu‘ayn, Kawmād, to rival the Ka‘ba of Mecca; however, he encountered opposition on the part of his people who were reluctant to aid him in carrying out his plan (Ibn al-Kahlīl, al-Amānī, ed. Ahmad Zaki Pasha, Cairo 1343/1924, 455; ‘Abdālī, *s.v.* Kawmād). This report may give us a clue for assessing the attitude of some other tribal groups of Dhu‘ayn. Ibn Ḥishām records a tradition according to which al-Ghawb, who was in charge of certain pilgrimages practices in Mecca, used to announce during one of the services, "O God I am following the example of others; if there is a sin it is Kudā’a’s" (Ibn Ḥishām, *Sirā, ed. al-Sākā, al-Abyārī, Sharabī, Cairo 1355/1936, i, 126, l. 21; Guillain’s translation, *The Life of Muhammad*, Karachi 1967, 53, of the second hemistich “If that is wrong, the fault is Kudā’a’s" is inaccurate). It is evident that this description points to certain of the Kudā’a who were reluctant to acknowledge the authority of Mecca and the sanctity of the Ka‘ba.

The relations of Dhu‘ayn with the Aws and Khatrazj seem to have been quite close; some Dhu‘ayn are recorded as allies of the Medinan families or clans (see e.g. Ibn Hazm, *Djahmara an-nasib al-‘arab*, ed. ‘Abd al-Salām Ḥarūn, Cairo 1952, 444). It is noteworthy that among the Ansārī group who gave the Prophet the oath of allegiance at the Aqṣārī was an ally of the Banī Salīmā of Kalbi extraction, who joined Dhu‘ayn and stayed with them, ‘Abd Allāh b. Unayz; he gained the honourable titles of al-muhādīr, al-‘anṣārī, al-Salīmā, al-‘uqūdī al-habī (see e.g. Ibn Ḥishām, ii, 126 sup.; Ibn al-Kahlīl, *Dhulmān*, Br. Mus., Add. 22346, f. 73; Ibn Ḥishām, *al-Tabbāh*, ed. ‘Ali al-Biṣālī, Cairo 1380/1970, ii, 15-17, no. 453; Ibn Kudā’a al-Makdisī, *al-‘Iṣlibūr* fi nasab al-ṣāriha min al-ansār, ed. ‘Ali Nuwayhid, Beirut 1952/1972, 166-8; Ibn ‘Abd al-Barr, *al-‘Iṣlibūr*, ed. al-Biṣālī, Cairo 1380/1970, 606-29, no. 1477; al-Baladīrī, *Anṣārī*, ed. Muhammad Hanifullāh, Cairo 1959, i, 249). It was ‘Abd Allāh b. Unayz who asked the Prophet on which night he should come to Medina from his abode in Al Bawabī during Ra‘āw, and the Prophet bade him come on the night of 27 Ramadān; this night is therefore named "The Night of the Dhu‘ayn". It refers, of course, to the laylat al-bar‘ūr (see e.g. al-Ghazālī, al-Iṣlibūr, vi, 133; Ibn ‘Abd al-Barr, *op. cit.*, 670).

On the Day of Bu‘āshī (q.t.), Dhu‘ayn fought on the side of the Khazraj (Aḥzāhī, xv, 162-3; ‘Abd al-Kahlīl, *al-Iṣlibūr*, Cairo 1956, ii, 602), but on the eve of the encounter of Badr al-mu‘addī they were said to have hurried to Medina (together with Bahl) as allies of the Aws (al-Wakīl, *Mughrāb*, ed. Marsden Jones, Oxford 1966, 385, l. 11).

When the Prophet settled in Medina, he was, of course, concerned to establish peaceful relations with its neighbours, Dhu‘ayn. Dhu‘ayn, making a careful assessment of the fundamental change in the situation in Medina with the advent of the Prophet, were eager to secure their position in the new structure of power. According to some traditions, a delegation of Dhu‘ayn came to the Prophet in Medina, pointed out that the Prophet ailed...
"among them" (bayna azhunna, i.e. in the area controlled by them) and requested him to conclude with them an agreement of mutual security (fa-as'ul khallat a'manah wa-salamah). This treaty was indeed agreed upon between the Prophet and Dhuayna. A peculiar aspect of this treaty was the tacit agreement by the Prophet for Dhuayna not to convert to Islam; this is clearly indicated in the account of the treaty, wa-lam yusulim. The implementation of the treaty occurred a short time after its conclusion; the Prophet sent a troop of less than hundred warriors to raid a tribal group of Kinana which dwelt in the neighborhood of Dhuayna. When the Muslim warriors realised that the Kinana outnumbered them, they retreated asking refuge with Dhuayna. When the Dhuayans interrogated them as to why they had gone out fighting in the holy month of Rajab, they justified their deed by mentioning that they were driven out from the Haram (of Mecca) during the holy month. The account further tells about dissension among the Muslim warriors; a group of them wanted to remain in the place where they were staying, whilst another one planned to return to the Prophet to obtain a decision from him. When this group met the Prophet, he expressed his anger about the division that had occurred within the expedition, which having left in unity returned divided. He then appointed 'Abd Allah b. Dhuayna as the commander of the troop; 'Abd Allah b. Dhuayna was thus the first appointed amir in Islam (Ibn Abi Shayba, Ta'rikh, Ms. Berlin 9409 — Sprunger 804, ff. 823b-824a; cf. Nūr al-Dīn al-Haytham, Madīmna al-ansādī, vi, 66, 7, with an essential variant, that the Dhuayans converted to Islam after the conclusion of the treaty; and see al-Bahṣikī, Dalāl al-mubawwasa, ed. 'Abd al-Rahmān Uhmān, Cairo 1385/1966, ii, 325-4 [the commander of the first troop, dispatched by the Prophet, was Sād b. Abī Waqās]; Ibn Dhuaynal, Ta'rifī, Ms. Br. Mus. Or. 5912, i, 226b).

The reports about the first cases of cooperation between Dhuayans and the nascent Muslim community at Medina, though sometimes divergent or even contradictory, point clearly to the period preceding the battle of Badr and are connected with the earliest attempts of the Prophet at impeding the free traffic of the Kuraishi caravans. The detachments dispatched by the Prophet were relatively small and served a twofold purpose: that of reconnoitering in case a greater force of the enemy made an appearance, and of an attacking troop in case they met with a smaller division of the enemy. It was essential in such a situation to have at their disposal a territory with a friendly population both for military enterprises and as a resort to which the Muslim troops (see e.g. Ibn Hazm, Dīvān, i, 288, no. 640, iv, 747, no. 5485; al-Wāṣilī, 401; al-Baladhurī, Amīr, i, 289). Another Dhuayn, Khashad, granted shelter to two other spies of the Prophet, Talba b. 'Ubayd Allah and Sa'd b. Zayd; he misled the men of the Kuraishi caravan who inquired about the spies sent by the Prophet. After the departure of the Kuraishi caravan, Khashad accompanied the two spies to Tūrūba, where he met the Prophet; the Prophet wanted to grant him Yahūdī (as an iṣlāh or fīsīʿ), but Khashad advised the Prophet to grant it to one of his relatives (see e.g. al-Wāṣilī, 19:20; Ibn Ḥadīdār, v, 390, no. 7409; Ibn Abī-Ṭālib, Uṣūl, iv, 539; al-Maqrīzī, Ḩalāl al-ansādī, ed. Māmūd Shākir, Cairo 1941, i, 62). Another Dhuayn, Maqīd b. Amr, performed an even more complicated service for the Muslim detachment; he interposed between the small Muslim force under the command of Hamza b. 'Abd al-Mulkīb and the Kuraishi caravan escorted by 300 Kuraishi riders under the command of Dhuayna (see e.g. al-Wāṣilī, 10:10; al-Bayḥāqī, Dalāl al-mubawwasa, ed. 'Abd al-Rahmān Muhammad ʿUthmān, Cairo 1385/1966, ii, 302; Ibn Ḥāmid, Dīvān, i, 245, 265). Maqīd succeeded in accomplishing in his task as he was an ally (halāf, musāwī) of both parties (i.e. of the Muslim party and the Kuraishi). It is noteworthy for the assessment of the personality of Maqīd and the reliability of the traditions that some reports state that he did not convert to Islam (see e.g. al-Zākfi, Shākīr al-muṣāwī al-ḍāliyya, Cairo 1345, i, 321).

The reports about the participation of Dhuayans in the first encounters of the Prophet with Kuraishi seem to be sound, and are confirmed by a tradition recorded by al-Ṭabarānī, stating that the first tribe to fight on the side of the Prophet was Dhuayna (al-Ṭabarānī, al-ṣerīb, Ms. Br. Mus. Or. 1350, f. 156b).

Some factors which motivated Dhuayna in concluding the treaty with the Prophet can be deduced from a report recorded by al-Sāmḥūdī and al-Ṣayfūzābādī; the Prophet awoke at Dhu l-Marwa; Dhuayn people assembled at the place from the mountains and the plains and complained of being pressed by alien people, who were trying by force to get hold of their wells. Then the Prophet granted the people of Dhuayna the lands of Dhu l-Marwa, forbade them to be treated with iniquity and announced that the angel Dārūrī ordered him to consider Dhuayna as his allies (al-Samḥūdī, Wājīf al-ṣerīb, ed. Muḥammad Muḥ'īl b. ʿUthmān, al-Raḥmān Mūḥammad ʿUthmān, Cairo 1375/1955, 1565-6; al-Fayṣālī, Dālāl al-mubawwasa, ed. Muḥammad Muḥ'īl b. ʿUthmān, Cairo 1375/1955, 1565-6; al-Ṣayfūzābādī, al-Majān al月中āb fī maṣālik l-faṣl, ed. Huṣayn Muhammad ʿUthmān, Cairo 1385/1969, 375). It is plausible that this utterance of the Prophet confirmed Dhuayna's rights to their landed property and formed a warning for tribal groups to refrain from transgressing on the wells (see wells and other property of Dhuayna, as they were the allies of the Prophet and their rights would be defended by the Prophet. The lands of Dhu l-Marwa were in fact granted by the Prophet to a man from Dhuayna (see Ibn Sa'd, Taḥābādī, Beirut 1385/1960, i, 271; see on 'Awṣāda b. Ḥarmāma, Ibn al-Kalbī-Caṣṣīl, Samarhābit an-nsana, ii, 216; Ibn Ḥadīdār, al-ṣarīb, iv, 753, no. 6093; on Dhu l-Marwa see al-Bakrī, Maṣāʾiṭ, s.v. Marwa).

The Prophet concluded several treaties with the various tribal groups of Dhuayna. Some of these treaties can be traced to the very early period of the Prophet's stay at Medina; they do not contain any stipulation as to conversion to Islam. There are, however, some treaties which may be attributed to a later period, when conversion to Islam became obligatory, and include instructions concerning the religious duties to be performed (see e.g. Ibn Sa'd, i,
A tradition recorded by Ibn Sa'd (I, 333) says that a delegation of Djuhayna embraced Islam at the advent of the Prophet to Medina; this story may, however, refer to a unit of Djuhayna, and certainly not to the whole tribe.

The early conversion of several groups of Djuhayna and another Kud'a group, the Aslam, is reflected in some traditions attributed to the Prophet, in which Djuhayna is counted among the tribal groups surpassing (in virtues) the great tribes of Asad, Ghaffar, Tan'im, and 'Amr b. Sa'da (see e.g. al-Humaydi, Musnad, ed. Habib al-Rahman al-A'zami, Beirut-Cairo 1381, ii, no. 1048; Abdel al-Razzak, al-Musawwara, ed. al-A'zami, Beirut 1392/1972, xi, 47, no. 1987; al-Tabarani, al-Mu'jam al-aghir, ed. Abdel al-Rahman al-Uthman, Cairo 1388/1968, i, 54, ii, 85), i.e. the leaders of Djuhayna. The sources are based on the early organization of the tribe. Only few cases of opposition by some units of Djuhayna against the Muslim community are known (see e.g. al-Wahidi, 774-5; al-Tabarani, Ta'rikh, ed. Muhammad Abu Ta'fail Ibrhaim, Cairo 1969, i, 39, about the expeditions of Abu Hurayra). When the Prophet set out into the fields of Hudsayiba, some nomad Djuhanis were disinclined to respond to his summons and to join him, fearing that the Muslims might be defeated by the Kurayshi forces (see e.g. Djumshid, Tafsir, ed. Abdel al-Rahman al-Thir al-Sarati, Beirut n.d., 601 inf.; Muhammad, Tafsir, Ms. Abnet ii, 74/11, ff. 160b, 165b; al-Wahidi, 574, 619; al-Nawawi, al-Dawri, Marai ibad, Cairo 1305, ii, 305 inf.; al-Kurthi, Tafsir, Cairo 1387/1967, xvi, 265, 348; al-Suyuti, al-Durr al-mannur, Cairo 1314, vii, 72-73).

Djuhayna appeared as a strong force of 800 warriors and 50 riders (or 1400 warriors according to Tabari, Ta'rikh, ii, 65 sup.) on the expedition for the conquest of Mecca; four banners were borne by its leaders (see e.g. al-Wahidi, 799, 820, 864; al-Mustakhi al-Hindfi, Kaws al-farid, Hyderabad 1908, 1970, xvii, 78, no. 199; and see Ibn Hidjar, al-Ihza, ii, 445, no. 2549; i, 604 sup., no. 2897, vii, 165, no. 8096; Ibn al-Athir, Usd, i, 124; Ibn 'Abd al-Barr, isbikhi, 871-2). The Djuhanis Ra'af b. Makth was appointed by the Prophet as tax-collector (nawzadid) of his tribe (al-Wahidi, 1073). A number of Djuhanis emigrated to Medina; the Prophet himself fixed the place of the tribal mosque of Djuhayna in Medina (Ibn Sa'd, i, 332).

Djuhayna remained faithful to Islam after the death of the Prophet (cf. al-Wahidi, 1122) and favourable utterances attributed to the Prophet emphasised their virtues. The Prophet is said to have considered Djuhayna among his mawali (see e.g. al-Ayni, Umudat al-kaw, Cairo 1348, xvii, 76-6; al-Khumasi, Farid al-hakir, Beirut 1391/1972, iv, 53, about the Djuhanis' support). The Prophet is said to have recommended seeking refuge in the mountains of Djuhayna during the periods of strife, fitan (see e.g. al-Bakri, 134; Hamad al-Dijar, Abu Ali al-Hajjani, Ri'yad 1388/1968, 192; and see the utterance of the Prophet in Ibn Sa'd, i, 333). In an alleged utterance, the Prophet is said to have recommended marrying Djuhanis women (Ibn Hibbani, Kitab al-Majdhirin, ed. 'Aziz, Preq al-Nakahbandi, Hyderabad 1939/1970, ii, 10). A peculiar tradition attributed to the Prophet forbids anyone to harm Djuhayna, saying "he who harms Djuhayna harms me, and he who harms me harms God"; this utterance was instantly denied when transmitted to Muhammad b. 'Abd al-Muttalib (al-Majlidi, al-Majlidi, 60, no. 247).

Djuhayna participated, together with other groups of Kud'a, in the conquest of Egypt; some of them settled in Fustat (cf. Ibn 'Abd al-Hakam, Futuhat Murs, ed. Torrey, New Haven 1922, index). Djuhanis lived in Mansfahat and Askuf. After clashes with other tribal groups, Djuhayna migrated to Upper Egypt and settled in the region of Khitan during the Fatimid period; they became one of the powerful Arab tribes of Egypt (see Makrizi, al-Bayan, 1397, "Annam fa asf ir mid min al-anaw, ed. Abdel al-Majdidi, Cairo 1961; and see the researches of 'Abdel, in ibid., 57-72). Groups of Djuhayna penetrated in the 8th/14th century into the Christian kingdom of Nubia and got mastery over it. From Nubia, Djuhayna continued to push forward into the Sudan and mixed with the native tribes (see C. H. Becker, Zur Geschichte des 8tlichen Sudan, in ibid., i, 153-73; iedem, EP art. Djuhayna; F. C. Thomas Jr., The Juhaina Arabs of Chad, in MEJ (1959), 144-53; von Oppenheim, op. cit., ii, 359). In the Djuhan territories of the Arab peninsula, the different sections of that tribe became controlled by the descendents of Ali, who succeeded in acquiring a great deal of landed property in these regions. Nevertheless, the Djuhanis were always on the move, succeeding in keeping their identity throughout the centuries. Although wandering at the beginning of the First World War, the majority of the tribe followed the sons of the Sharif Husayn; later, they changed attitude and became loyal subjects of the Sa'd dynasty (see von Oppenheim, ii, 360). In recent times, they have been exerting themselves in developing their region (see Hamad al-Dijar, Bilad Ya'aba, passion).

2. To the north of the territory of Djuhayna was the region of Bal, another branch of Kud'a. Starting at Wadi Idam, their usual habitations extended far to the north, including the places of Shaghab, Bad' and Tayma (cf. Ibn Khaldun, Thar, ii, 326; von Oppenheim, ii, 355, 365-3). The Kud'a tribal groups of Bal, Djuhayna and 'Udra migrated, according to tradition, to the Wadi 'Udair in which they settled and cultivated the soil, dug the wells and planted palm-trees. According to an agreement between the Jewish settlers and these Kud'a groups, the Jews undertook to give them a certain payment; in return Bal, Djuhayna and 'Udra were under obligation to give protection to the Jewish settlers against the Bedouin tribes, including other Kud'a units (see Yaqut, s. v. al-Kur; al-Bakri, Madinat, i, 43). The stipulations of this agreement remained valid until the advent of Islam; then the 'Udair Djamra b. al-Numan visited the Prophet and was given by him a grant of land. The Jewish settlers of the family of 'Umayd (or 'A'id) were allowed by the Prophet to stay in their places; they were granted by the Prophet the privilege of receiving a certain annual payment (see Ibn Sa'd, i, 379; al-Bakri, i, 44; cf. al-Ashraf, ed. M. A. 그리고, Medina, Oxford 1926, 109-9). Some clans of Bal got involved in internal fighting; one of the fighting groups, the Bani Hisina, was compelled to seek refuge with the Jewish settlers of Tayma, and at their demand converted to Judaism. Some of these refugees left later for Medina and embraced Islam at the advent of the Prophet (see al-Bakri, i, 29). A corroborating report counts among the Jewish tribal groups at Medina three groups from Bal (see Ibn Khaldun, op. cit., i, 505; and cf. al-Samhawi, Wafal wa-'awaf, ed. Muhammad Mubayyid-Din 'Abd al-Hamid, Cairo 1374/1955, i, 162-5, 199, 206, 223). Some traditions, in reporting of the migration of the Balawi clans to Medina, remark that they became allies (akalud) of the Aws and Khazzad (see e.g. al-Bakri, i, 28; Ibn 'Abd al-Barr, al-Tabarani, 317).
In the conquest of Egypt, the forces of Ball played an important role. The expedition against the Ball sent in 8 AH was intended to gain their allegiance and secure the territory for the Muslim community; it was essential for the latter to secure the co-operation of the Ball who dwelt in the northern regions of the peninsula, who controlled the road to Medina and Mecca, and of whom some members were in the service of the Byzantine army; the commander of the troop which fought the Muslim force at Mu’ta was a Ballawi (see al-Wakidi, 760). It was a shrewd decision of the Prophet to appoint *Amr b. al-‘Aṣ, whose mother was from Ball, as commander of the Muslim force (ibid., 770); the expedition was also directed at the Mahra and Balkayn, two Kudass tribesmen in the region of Ball. In 9 AH the Prophet met the delegation of Ball, who embraced Islam (see e.g. Ibn Sa’d, i, 330; al-Zarkānî, Sharḥ al-masālik, iv, 57-8; Ibn Kayyim al-Djawziyya, Zad al-ma’dî, Beirut n.d., iii, 49).

The forces of Ball played an important role in the conquest of Egypt; *Amr b. al-‘Aṣ fought under the banner of Ball (see Ibn *Abd al-Hakam, i, 62). Umar established the pay of Balli warriors as equal to that of Mu’ta, Kalb and Tayyîn, sc. 300-400 dinars; it was lower than that of the Yemeni tribes because they were closer to the places of migration (see al-Djalîl, al-Uthmanîyya, ed. *Abd al-Salâm Hârîn, Cairo 1974/1955, 242). When Umar was informed that a man from Ball summoned his people in Syria by the battle-cry *yâ Kudâa, he ordered a third of Kudass to be removed to Egypt, as Ball formed a third part of Kudâa; they were indeed transferred to Egypt (Ibn *Abd al-Hakam, 116; al-Makrizî, al-Muyayn, 29). It was a Balawi, *Abd al-Rahmân b. *Udâys, a Companion of the Prophet, who was at the head of a troop of riders in revolt against Uthman. He was later imprisoned by Mu’tawiya, and was killed on his flight from the prison (see al-Samâ`î, al-‘Arabî, Hyderabad 1964, ii, 324, Ibn al-Athîr, Ust, iii, 309-10; Ibn Hadjâr, *IbSa, iv, 334, no. 5166; Muhammad b. Yahyâ al-‘Ashârî al-Mudâlî, Tâ'kîm, s.l. m. nashîl al-‘Ashârî Uthmanî, ed. Muhammad Yûsuf *Yâsîr, Beirut 1964, index).

Ball settlements are mentioned in the regions of Alghmîn, Asyût and Ushmîn; they were expelled by the forces under the command of *Abd al-Qâdir and were compelled to move to the south. In the 8th/14th century the Balli entered together with Djuhayna, the Sudan and contributed considerably to the Islamisation and Arabisation of the native tribes of the Bedja and the Bakhrâ [scr.]; the Arabic language is known among the Bedja even today as “Balawiyat”, i.e. the language of Ball.

In the Arabian peninsula, the Balli played during the First World War an important role in the conflict between the Sharîf Husayn and the Turkish authorities, finally (in 1918) following the lead of the sons of the Sharîf Husayn.

Some groups of Balli joined the new régime in the Hijâz in 1925 and became loyal subjects of Sa’dîd Arabia, but some rebellious units of Balli took refuge in the kingdom of Trans-Jordan. They crossed the borders at ‘Akkaba and raidied, together with other rebels, the northern districts of Sa’dîd Arabia in 1932, but were defeated by the Sa’dîd forces (cf. von Oppenheim, ii, 354).

In Spain descendants of the Balli tribe lived in the region of Cordova or Kurtaba and it was reported that they excelled in hospitality. They were unable to speak Romance (al-lafiniyya), and spoke only Arabic, according to Ibn Hadjâr, *Djumhura, 443. Bibliography: given in the article essentially, but see also W. Robertson Smith, Kinship and marriage in early Arabia, Cambridge 1885, 8-9, 155, 246-9, and H. Lammens, *El art. s.v.

[M. J. Köster]

KUDÂMA, D. *Ya‘far al-Kâtîb al-Bahlâdî, Abu al-Farahî, philologist, historian, and one of the first scholars to introduce the systematic study of the figures of speech in Arabic literature. The date of his birth is nowhere mentioned and may have been as early as around the year 260/873-4. He died at an uncertain date which is variously given as “during the reign of al-Muktafl” (i.e. not later than 310/921, 328/1939-40, and 337/1958). The dates “shortly after 300” and 350 cannot be correct (see below).

Almost every aspect of Kudâma’s biography, his work, and his personality as a scholar raises delicate problems which cannot be fully discussed, let alone answered, in the context of this article. The only data which are certain, or at least have not been questioned, are (a) that he converted from Christianity to Islam during the reign of al-Muktafl (289-95/906-8); (b) that he held important positions in various diwans of the central administration in Baghdad till he won an appointment in *Shawwi
al-Muhassin was in charge of the dfudn al-maghrib 297/910. or shortly thereafter, to the of al-Hariri (quoted in commentary on the Kitdb Nakd al-$hi'r written by fcudama, since al-Mufarrizi fcud.) in his Kitdb Nakd al-$hi'r famous and often-quoted (c) that he was alive in 320/932; and (d) that he was [q.v.] FurAt dlwdn al-ma&rib in the when Abu M-Hasan b. al-Air. 13), who lived three centuries later, is the only author to mention that the Nakd was sometimes attributed to Kudama’s father. The Tavikh Baghdad does not have a biography of Kudama. It only mentions (vii, 205) one Djafar b. Kudama b. Ziydi whom the Khattb describes as a learned and distinguished secretary. The Khattb also mentions that Djafar wrote books dealing with the secretarial art as well as other subjects, that he was often quoted as an authority by Abu 'l-Faradj al-isfahani, the author of the Aghdih, and was himself a pupil of, among others, Hammad, the son of the famous Isfah b. Ibakhir al-Mawsil. Ibn al-Nadim states that this Isfah b. Ibakhir was a pupil of Kudama’s father. Djafar, was a man without scholarly distinction, and this statement is repeated by Ydkht, who clearly borrowed it from Ibn al-Nadim. Since Ydkht (ii, 412-15) also has a fairly elaborate biography of Djafar b. Kudama b. Ziydi al-Khit (he adds the kunya Abu 'l-Khit, cf. Aghdih, x, 281, l. 7) he apparently did not believe that this Djafar b. Kudama was the father of our author, since otherwise he would have noticed the discrepancy between the facts as they appear from this biography and the characterization of Kudama’s father as a man without learning (if the “poet-secretary”, Djafar b. Kudama, mentioned in the Fihrist, 168, l. 7, is identical with the scholar mentioned in the Tavikh Baghdad and in Ydkht, Ibn al-Nadim must have held the same view). Ydkht’s contemporary, al-Mutarrizi does not, however, hesitate to identify the scholar mentioned in the Tavikh Baghdad as the father of Kudama. The question is of considerable interest, since according to the Aghdih (v, 280-3, xii, 54), Djafar b. Kudama b. Ziydi al-Khit (in several places in the Aghdih) was a close friend of Ibn al-Mu'tazz (q.v.), the author of the Kitdb al-Badi*. Yet Kudama is reported to have written a book to refute Ibn al-Mu'tazz (according to the version of the title of the book in Ydkht, in order to refute Ibn al-Mu'tazz’s views on the poet Abu Tammam) and makes no mention of his predecessor in the Nakd, even though some of the subject matter is the same and may even have been borrowed by Kudama from the Kitdb al-Badi* (see Naka, introd., 20-30). Kudama also fails to use the term badi*, but here the explanation may be that, unlike Ibn al-Mu'tazz, Kudama was not concerned with the identification of the figures of speech to which this term was applicable, and that the practice of using the term as a collective for figures of speech had not yet been established (cf. Kitdb al-Badi*, ed. I. Kratchkovsky, London 1955, 57, l. 15-58, l. 3, and S. Bonnebakker, Ibn Abi 'l-Isha’s text of the Kitdb al-Badi*, in Israel Oriental Studies, ii [1972], 89-90). One could also suggest that the Nakd was written shortly after the abortive attempt to bring Ibn al-Mu'tazz to the throne and that Kudama thought it wiser not to make any reference to the unfortunate “one-day caliph”, His attack on Ibn al-Mu'tazz could have been written in the same period as an attempt to dissociate himself from his famous predecessor. Still, the possibility remains that there were two personal¬ties by the name of Djafar b. Kudama who could easily be confused. The first would have been a member of a Christian family and a professional secretary who occupied a minor position in the central administration, in which he was succeeded by his son, Kudama; the second a Muslim official who enjoyed considerable reputation as a scholar, distinguished himself as a poet, and won the favour of Ibn al-Mu'tazz, of Ibn al-Mu'tazz’s champion, the vizier ‘Ali b. Isa (see below), and later of ‘Ali b. ‘Isa’s rival, the vizier Abu 'l-Hassan b. al-Furat (see Hitti al-Sabi*, Tha'far al-mun'tad*tarib al-musarab, ed. H. F. A. Meroz, Beirut 1904, 211-12; Ydkht, ii, 414, l. 9-10). It is curious that the Aghdih nowhere mentions that Djafar b. Kudama was a Christian, and even suggests in two places that his name was Djafar b. Muhammad b. Kudama (v, 134, note and xxxii, 315). That both this Djafar and Kudama were acquainted with members of the Ibn al-Furat family and with the vizier ‘Ali b. ‘Isa [q.v.] may be due to the fact that both of them pursued the same type of official career (for ‘Ali b. ‘Isa and Djafar, see Ydkht, ii, 413, l. 16-18, and for ‘Ali b. ‘Isa and Kudama, see below). Similarly, the fact that Djafar and Kudama distinguished themselves as men of letters would account for their reliance on the same sources: Kudama, in his Kitdb al-'Ahdhur, used the same sources as Ibn Khusrudadih (q.v.) (see de Goej’s ed., introd., xxxii). Djafar was acquainted with the same Ibn Khusrudadih, and 'as is shown by an swad* in the Aghdih, xxii, 201, l. 6. It appears certain that Kudama knew a definition of the tefsim as Ibn Khusrudadih, and a definition of the taksim by Isfah b. Ibakhir al-Mawsil and a definition of the taksim by the same scholar (see Bonebakker, Notes on the Kitdb Naka al-Usgid*, Istanbul 1968, 18-19: idem, Materials for the History of Arabic Rhetoric, in AION, Suppl. no. 4 = vol. xxxv [1922], 35, 45, 48-50; cf. also Naka, introd., 26, l. 17-21). Djafar was a pupil of Isfah’s son, Hammad. Less likely to be coincidental—and therefore to be considered an argument in favour of al-Mutarrizi’s identification of the author of the Fihrist, as two authors with the family of the Tha’iris (see Materials, 35-7; Aghdih, v, 390, xi, 337, xviii, 125). Finally there is strong evidence that the author of the Aghdih, who related many traditions from Djafar, also knew Kudama’s work and may even have met him in person (see Notes, 17-18, 27-9: Materials, 39, 51). If al-Mutarrizi is correct, one could suggest that Ibn al-Nadim had wrongly identified a certain Abu Kudama as the father of our author. This Abu Kudama appears in al-Muzahhbin’s al-Mu‘adhdib (Cairo 1936/1955, 572) as a kutib who composed bad verse (cf. also an anec¬dote on a certain Ibn Kudama whom Ydkht, ii, 414-5 is apparently unable to identify, and al-Soll, Kitdb al-A’rabi: Advabb al-Radi wa-l-Mudabihi, ed. J. Heyworth Dunne, Cairo 1935/1935, 21-23). The date 1348/44 for Kudama’s death which is reported by Ibn al-Djawari (al-Mustasama, vi, 365) and repeated by others, is rejected by Ydkht (v, 204). Ydkht also rejects a statement by an un¬named commentator on the Makdnat of al-Hariri who makes Kudama a secretary of the Buwayhids. He argues that Kudama was a contemporary of Tha’ibah (adraha zamana Tha’ibah†), al-Muharrad, Abu Sa'id al-Sukkari, Ibn Kultabya, and other scholars of the same generation. Ibn Taghrizbidi, Nujum (Cairo 1934, iii, 297-8) goes further and says 319
explicitly that Kudama was a pupil of al-Mutarrad, and according to Ibn al-Dajwiz, he consulted Ibn Thahab; but in the N subt there is evidence only of a personal acquaintance between Kudama and Thahab (q. 291/964) (Nabid, text. 33, 44, 45, 502, 115, 117, introd. 23). If Kudama was indeed a pupil of Abu Sa'd al-Sukkarli (q. at the latest 275/888), this would mean that he was born around 260, which would not necessarily conflict with the date reported by Ibn al-Dajwiz. Yaqut offers the year 320/932 as the only reliable terminus post quem. Abu Hayyan al-Tawhidi, to whom Yaqut refers, mentions that in that year Abu 'Amr (sic; read Abu 'Umar wa-7) Kudama b. Dia'i attended a famous dispute between Abu Sa'd al-Sirafi and Abu Bigh Matta b. Yudai, in the presence of Abu 'l-Fath al-Fadli b. Dia'i b. al-Furat (in 326 according to Abu Hayyan's Intikha, Cairo 1373/1953, 1, 108, but cf. i, 129, 1; in 323 according to his Muhkamati, Cairo 1347/1953, 69, and Yaqut, iii, 106 and vii, 204, see also JRAS [1905], 82, 84-5). According to a second report by Abu Hayyan al-Tawhidi (Intikha, ii, 145-6), Kudama attended a famous dispute between al-Khardi and the vizier Firdaws b. Zayid b. al-Sayf at the vizer's home in that year.

The two other dates for Kudama's death, "during the reign of al-Mutakrid" and 328, appear respectively in al-Suyull, Tarikh al-khulafa' (Cairo 1351, 256 — Cairo 1383/1964, 380) and in al-Dhayl tarif, al-Baghdadi of Ibn al-Nadikjar (q. v.) as quoted in an unedited section of the Wafiq li l-Wafayd of al-Safadi (see Tabana, 9 and 71).

Finally, mention should be made of de Slane's assertion that Kudama belonged to a Christian family from Basra, possibly based on a statement by al-Idrisi, who mentions one Kudama al-Basri among the sources which he used in compiling his monumental geography (Opus geographicum, i, Naples-Rome 1970, 6).

It is not easy to determine the range of Kudama's scholarly interests on the basis of the titles of his works. So much seems certain that he was competent in the administration, especially in the fields of government, taxation and its historical, geographical, as well as a historian, a philologist, and an expert on linguistic usage, literary traditions, and the proper elements or to combinations of these elements. The success of the poems thus depends on the ratio between good qualities and defects (safa' and 'unfa'), as defined by the metre). In passing, he reminds his readers that the use of the four constituent elements separately or in combination is not necessarily conflict with the date reported by Ibn al-Dajwiz, that Kudama himself added a ninth (Tabana, 93). This statement conflicts with the testimony of al-Mutarrad, which had read the work and found that it had only seven. A note in the Chester Beatty manuscript of the Fihrist (quoted on p. 144 of the Tehran ed. of 1391/1971) lends support to al-Mutarrad's assertion and suggests that the 8th manzila did not originally belong to the Kitab al-Khardi, though it may have been identical with a Kitab al-Siyyan by Kudama which is also listed in the Fihrist. This 8th manzila is the only extant section that remains unedited (apart from the historical outline in the 7th manzila, which is clearly a copy of al-Mutarrad's Introduction to Fihrist, xi, 306). Ibn al-Tubb, a pupil of Ibn al-Mubarrad, earned Kudama his proverbial reputation as a master of eloquence (see al-Hariri, Hakamati, ed. of Sary, 9; al-Kalkashandi, Sibth, xi, 306; al-Makarim, Nafal al-Teb, ed. Jasan 'Abbas, Beirut 1358/1970, ii, 1570). There is no satisfactory explanation for the statement of the Fihrist (repeated by others) that the book consisted of eight manzila, to which Kudama himself added a ninth (Tabana, 93). This statement conflicts with the testimony of al-Mutarrad, who had read the work and found that it had only seven. A note in the Chester Beatty manuscript of the Fihrist (quoted on p. 144 of the Tehran ed. of 1391/1971) lends support to al-Mutarrad's assertion and suggests that the 8th manzila did not originally belong to the Kitab al-Khardi, though it may have been identical with a Kitab al-Siyyan by Kudama which is also listed in the Fihrist. This 8th manzila is the only extant section that remains unedited (apart from the historical outline in the 7th manzila, which is clearly a copy of al-Mutarrad's Introduction to Fihrist, xi, 306). Ibn al-Tubb, a pupil of Ibn al-Mubarrad, earned Kudama his proverbial reputation as a master of eloquence (see al-Hariri, Hakamati, ed. of Sary, 9; al-Kalkashandi, Sibth, xi, 306; al-Makarim, Nafal al-Teb, ed. Jasan 'Abbas, Beirut 1358/1970, ii, 1570).
poet's mind. He will therefore limit himself to the principal "aims" (asba'ah), i.e. subjects or themes which can be associated with these mads and to which the mind should correspond. Panegyric, satire, elegy, description, and the nasib (i.e., which he sees as an erotic theme). The various figures of speech which come next are interpreted as ornaments pertaining to the mads or as successful combinations of the four constituent elements. In the classification of these figures Kudama shows much ingenuity. He has to recognize, however, that there are no figures of speech that can be classified as combinations of lafs with wasin and mads with wasin: all technically good poetry that adequately expresses the poet's intentions illustrates these two combinations. Specimens of bad poetry are therefore the only illustrations of the principles involved. The section on the defects in poetry follows the arrangement of the section on the good qualities: Kudama examines the faults resulting from a wrong use of the four constituent elements and classifies certain errors under these four elements or the combinations of these elements two by two. He also shows how the figures of speech are sometimes handled incorrectly. In both sections the discussion follows the pattern of term-definition-example found in the Kiblat al-Badî and the Kawnid al-kayyil of Thâlab [q.t.]; but whereas the two earlier treatises usually do not comment on the examples, Kudama often analyses his examples in detail.

There are some further points in Kudama's presentation that deserve to be mentioned. The following are perhaps the most important: (a) his interest in Greek philosophy which appears, for instance, in his analysis of the function of the four cardinal virtues, 'abd, shafa'a, 'adl, and ifîsa in panegyric, elegy, and satire (he goes on to list other virtues as deriving either from these cardinal virtues themselves or from combinations of these cardinal virtues two by two), from a quotation from Galen's Pulp 169 in the chapter on satire, and from arguments based on Aristotle's Categories (further details in Naâd, introd., 56-54 and the recent studies cited in the Bibliography). There is no clear evidence, however, that he was influenced by the Poetics and the Rhetoric of Aristotle; (b) his defence of the hyperbole (ghulûw) and the simile (qa'un) throughout his work, and his recognition of the existence of hyperbole in ancient poetry; (c) his lack of interest in the early 'Abbasid poets (mudhâthim). This tendency appears clearly from the above-mentioned list of the "principal aims" from which verses like the love lyric (ghazal), the wine poem (dhuwwûya), and the hunting poem (lawadîyya) are conspicuously absent. Kudama nowhere expresses a categorical judgment. One could suggest, however, that his choice reflects a belief, which was perhaps not uncommon in his days, that "Abbasid poetry did not represent a real break with ancient, that is classical, tradition. Consequently he may not have felt that there was a need to justify his choice. The same may be true of the examples, most of which are taken from ancient poetry, though Kudama occasionally discusses examples by later poets (see Naâd, text, 80-1, 83; for a list of mudhâthim poets quoted in the Naâd, see p. 72 of the article by Kratchkovsky cited in the Bibliography).

Kudama may have been more dependent on his predecessors than is apparent at first sight (see Naâd, introd., 22-26). He may have followed Ibn Kutaiba and Ibn al-Mu'tâazz respectively when he discussed the lafs and the mads as independent constituent elements and distinguished between the proper and the erroneous use of the figures of speech. He may have depended on Ibn al-Mu'tâazz and on earlier critics for the choice of his terminology and examples. Yet the theory on which he based the framework of his thesis, as well as many aspects of the elaboration of this theory, appear to be unique. However, his system did not provide a sound basis for a theory of literature and quickly fell into oblivion: the four-element scheme was rarely taken over and never in its complete form. The same is true of the distinction between masâ'î and 'ufûd and the system of cardinal virtues. By contrast, those aspects of his work that conformed closely to the system of Ibn al-Mu'tâazz and the 2nd and 3rd century scholars who preceded him were readily accepted, in particular his terminology and definitions of the figures of speech. Kudama's figures were combined with those of Ibn al-Mu'tâazz and came to be known collectively as 'aâdî. The exact extent of Kudama's influence is not, however, always easy to determine, since direct references to Kudama are far exceeded by instances of unacknowledged borrowing (Naâd, introd., 44-60). In other cases it is clear that scholars used not only the Naâd, but also the Kharr al-dawâ (ibid., 57 and 47 note). There is a third category of borrowings where scholars borrowing from Kudama without having any direct knowledge of the text they are quoting (ibid., 58; Bonebakker, Notes, 16-17 and the above-mentioned article in AIJON, 309-26). Parallel to this we find that biographers after the time of Yûsûf copy out their predecessors or other erroneous information on the author and his work (see, for instance, al-Sharîfi, Sharh Mudhâm al-hâiri, Cairo 1372/1952, i, 26).

Kudama's Naâd was the subject of rejections and commentaries, none of which appear to have survived. A complex system of division into sections, chapters, and paragraphs introduced by Hamza al-Ishânî [q.t.] was recently discovered in a manuscript in Tunisia (see Bonebakker in a forthcoming article in ESO, which also offers minor corrections to the text of his ed.). A work with the title Naâd al-ma'lıh, erroneously attributed to Kudama, was identified in 1949 as the Kiblat al-Burhan fi wasil al-bayân of Abu 'l-Husayn Ishâk b. Ibrâhîm b. Sulaymân b. Wâhid al-Kittîb (ed. A. Matjûb and Sâlih al-Hâdhâbî, Baghdad 1387/1967), though it is occasionally still quoted by its old title [see ibn Wâhid in Suppl.]. The Shî'î bias of this last work may have prompted Aghâ Buzurg al-Târirî to include Kudama in his Ta`ahhit al-dâ`îm al-shi`î (al-Karn al-
KUDAMA — al-KUDS

I. The last six hundred years

1. Names. In early Islam the full name of Jerusalem was 'Ilyakh shadow of the Temple' (Tabari, i, 2360, l. 15). In practice, 'Ilyakh', or, more commonly, Isfah al-mudfr, was used. 'Ilyakh' (Ilyakh) as such was not the original name, but Mash'ad, or Mash'ad, ed. 1945, i, 141, 1. 5, 247, is the Roman Aelia, but since this origin was unknown to the Christian scholars, they suggested various other ex-

I. The first six hundred years

A. History

1. The Islamic history of Jerusalem clearly falls into three periods. During the first six hundred years, the life of the city was so enervated by the hands of an conspicuous tribal commander, the period of the history of the period was solemnly inaugurated by the erection of the marvellous Dome of the Rock, the majestic testimony to the Islamic presence in the Holy City; it culminated in the vicissitudes of the Crusades and was concluded by the devastations of the first half of the 7th/13th century, which, with the exception of the buildings on the Temple area and the Holy Sepulchre, left Jerusalem a heap of ruins.

The subsequent six hundred years were comparatively uneventful. Jerusalem mostly lived the life of an out-of-the-way provincial town, delivered to the exactions of rapacious officials and notables, often also to tribulations at the hands of seditious fellahin or nomads. But, in conformity with the religious policy of the Mamluks and Ottomans, and with the general spirit of the age, Jerusalem greatly benefited by its holy character. The many Mamluk buildings still decorating the old city and Sultan Sutayman's wall encircling it manifest this trend to the present-day visitor.

The modern history of Jerusalem begins with its conquest by Ibrahim Pasha in 1831. The reforms started by the son of Muhammad 'Alî could not be ignored by the Ottomans, to whose control the city reverted in 1834. The restrictions imposed on the non-Muslims were alleviated. Many important Christian buildings and institutions were erected both inside and outside the old city. The improved living conditions (albeit still very hard) induced many religious persons to settle in Jerusalem.

By about 1880 Jews formed the majority of the population. Jerusalem became the capital of a mutawasirlik, whose governor was directly responsible to the government in Istanbul, and by 1920 it was the capital of mandatory Palestine. In December 1949 the State of Israel made it its capital and seat of government (a step not recognised internationally).

Fortunately, the war of 1967 and the events following it have not changed the historical character of the old city, while the new city has immensely expanded in every respect and direction. Jerusalem will always live on its past, but at present one feels in it the pulse of an active and vigorous community.

Mudir al-Din al-Úlaymi, the excellent historian of Jerusalem, who wrote his book al-UN al-jordâni bi-ta'rikh iil-Kuds wa l-Khadîj in 1949, rightly observes (p. 6) that besides material of the type of the al-Jordâni ("Praises of the excellence of the city"), "Umar's conquest" and stories about the Dome of the Rock and scholars visiting Jerusalem, little useful about the history of the city had been written before him. He explains this deficiency partly by the interruption of the Muslim tradition by the Christian conquest (122, 262, etc.) and mentions the symbolic fact that Abu l-i-Kasim al-Makkî, who had compiled a book on the subject, was killed by the Crusaders before completing it (245). The intrinsic reason for the absence of coherent information was, of course, the character of Jerusalem as a holy city which lived on the care lavished on it from outside, rather than being itself of political, administrative or cultural significance. Consequently, the presentation of its history must be one of highlights rather than a continuous account.

2. Names. In early Islam the full name of Jerusalem was 'Ilyakh shadow of the Temple' (Tabari, i, 2360, l. 15). In practice, 'Ilyakh', or, more commonly, Isfah al-mudfr, was used. 'Ilyakh' (Ilyakh) as such was not the original name, but Mash'ad, or Mash'ad, ed. 1945, i, 141, 1. 5, 247, is the Roman Aelia, but since this origin was unknown to the Muslim scholars, they suggested various other ex-

322 KUDAMA — al-KUDS

1. The Islamic history of Jerusalem clearly falls into three periods. During the first six hundred years, the possession of the city was contested between Islam and Christianity and between many Islamic princes and factions. After the bloodless and poorly-recorded delivery of the towns to the hands of an conspicuous tribal commander, the position of the period was solemnly inaugurated by the erection of the marvellous Dome of the Rock, the majestic testimony to the Islamic presence in the Holy City; it culminated in the vicissitudes of the Crusades and was concluded by the devastations of the first half of the 7th/13th century, which, with the exception of the buildings on the Temple area and the Holy Sepulchre, left Jerusalem a heap of ruins.

The subsequent six hundred years were comparatively uneventful. Jerusalem mostly lived the life of an out-of-the-way provincial town, delivered to the exactions of rapacious officials and notables, often also to tribulations at the hands of seditious fellahin or nomads. But, in conformity with the religious policy of the Mamluks and Ottomans, and with the general spirit of the age, Jerusalem greatly benefited by its holy character. The many Mamluk buildings still decorating the old city and Sultan Sutayman's wall encircling it manifest this trend to the present-day visitor.

The modern history of Jerusalem begins with its conquest by Ibrahim Pasha in 1831. The reforms started by the son of Muhammad 'Alî could not be ignored by the Ottomans, to whose control the city reverted in 1834. The restrictions imposed on the non-Muslims were alleviated. Many important Christian buildings and institutions were erected both inside and outside the old city. The improved living conditions (albeit still very hard) induced many religious persons to settle in Jerusalem. By about 1880 Jews formed the majority of the population. Jerusalem became the capital of a mutawasirlik, whose governor was directly responsible to the government in Istanbul, and by 1920 it was the capital of mandatory Palestine. In December 1949 the State of Israel made it its capital and seat of government (a step not recognised internationally).

Fortunately, the war of 1967 and the events following it have not changed the historical character of the old city, while the new city has immensely expanded in every respect and direction. Jerusalem will always live on its past, but at present one feels in it the pulse of an active and vigorous community.

Mudir al-Din al-Úlaymi, the excellent historian of Jerusalem, who wrote his book al-UN al-jordâni bi-ta'rikh iil-Kuds wa l-Khadîj in 1949, rightly observes (p. 6) that besides material of the type of the al-Jordâni ("Praises of the excellence of the city"), "Umar's conquest" and stories about the Dome of the Rock and scholars visiting Jerusalem, little useful about the history of the city had been written before him. He explains this deficiency partly by the interruption of the Muslim tradition by the Christian conquest (122, 262, etc.) and mentions the symbolic fact that Abu l-i-Kasim al-Makkî, who had compiled a book on the subject, was killed by the Crusaders before completing it (245). The intrinsic reason for the absence of coherent information was, of course, the character of Jerusalem as a holy city which lived on the care lavished on it from outside, rather than being itself of political, administrative or cultural significance. Consequently, the presentation of its history must be one of highlights rather than a continuous account.

2. Names. In early Islam the full name of Jerusalem was 'Ilyakh shadow of the Temple' (Tabari, i, 2360, l. 15). In practice, 'Ilyakh', or, more commonly, Isfah al-mudfr, was used. 'Ilyakh' (Ilyakh) as such was not the original name, but Mash'ad, or Mash'ad, ed. 1945, i, 141, 1. 5, 247, is the Roman Aelia, but since this origin was unknown to the Muslim scholars, they suggested various other ex-
plansations, such as the sanctuary of Elijah (Mutahhar b. Thahir, al-Bid to ta'arikh, ed. Huarte, iv, 87, i. 8; from Hebrew, since the Kuranic form of the name is Iyya, or "the House of God" (Yah as name of God is mentioned by Mutahhar). Bayt al-masdah is Aramaic beth mashakhshuh, "Temple", and was used in this sense by Muslims, e.g. Yed al-faraid, 1321, ii, 984; in the prayer found: "God, from all places you have chosen Iyya and from Iyya—bayt al-masdah". Soon, however, the term was also used by Muslims as "city of holiness", but as "city of the sanctuary". This was borne out by the usage of Karaite scholars writing in Jerusalem early in the 10th century, when call the city bayt al-masda, but the Temple area al-kuds (see the lengthy quotation in J. Mans. Texts and studies, Philadelphia 1935, ii, 18; cf. also the Geniza [g.v.] fragment in S. Assaf, Texts and studies, Jerusalem 1946, 21, l. 13). Similarly, in a version of the often-quoted tradition in which the Jewish convert Kuba al-Abbi tries to induce the caliph 'Umar to pray north of the Holy Rock, he says to him: "Then the entire al-kuds, that is, al-masdah al-karunan (1) will be before you (Suytj, Ihaf al-aghfa, Ms. Heb. Univ. Library, fol. 8ta, l. 8). It should be noted that, in letters from the 9thcentury, when Hebrew had replaced Aramaic, Jerusalem was commonly called 'ir hak-kudshah, to be understood as "city of the sanctuary".

In accordance with the principle that "the multitude of names proves the excellence of their bearer", Ihaf al-aghfa, ii, 98-100 enumerates seventeen Arabic names of Jerusalem (Midrash Tehillim, ed. S. Schechter, 1896, 8-9, has "seventy"). Suyutj's list does not include here the Kur^anic expressions taken by the Muslim commentators as denoting Jerusalem, such as masdah al-ahab (see below), or masdah al-anna, "the safe abode" (X, 93, cf. next sched, Jeremiah xxxi, 22). Al-arid al-mu-kaddasa (V, 21), "the Holy Land", also was understood as denoting Jerusalem (Ihaf, fol. 183b, l. 9), which is in conformity with Jewish and Christian usage, which often expands the name of the city on the country. This explanation might have influenced the pronunciation of bayt al-masda as bayut al-mu-kaddasa.

Vastous Arabic versions of Hebr. gedol (Ps. lxvi, 3) and Aram.URBAH (Arabicised urba) are found in the sources and even in ancient Arabic poetry (Sallam, al-Ash'a, al-Bakri, 144, l. 22, 872, l. 177; Salim, Ihaf, l. 300). Whether dar al-salamin, "abode of peace" (S. Assaf, Texts, 108-10, corresponding to Hebr. 'ir hask-shelah, Gottheld-Worsel, Geniza fragments from the First Collection, New York 1936, 26), founded in Genizah letters of the 11th century, was used also by Muslims has not yet been ascertained.

3. Jerusalem in the Kur^an. Jerusalem is not mentioned expressly in the Kur^an. But "the city of the sanctuary" certainly was known to the Prophet. Sura XVII, significantly named both al-Isr^a and Banu Isr^a'il, in vv. 2-8 clearly refers to the destruction of the first and second temples (called masdah in V, 7) as crucial events in the history of the Banu Isr^a'il. Al-masdah al-aqsa in the opening verse of the Sura is taken by the prevailing Muslim tradition as referring to the sanctuary of Jerusalem. Against this, it has been argued that there was no building on the site of the Temple at the time of the Prophet, that the Holy Land is called in the Kur^an the "nearer" (XXX, 2) and not the farthest (XVII, 19), and that, in general, the verse makes the impression (and is taken thus by Islamic tradition) of an account of a nightly ascension to a heavenly sanctuary (details in the articles of Bevan, Schrieke and Horovitz, cited in akb2ag). But knowledge of the state of the site of the Temple or consistency in geographical definitions were outside the interests of the Prophet. It may be concluded with reasonable certainty that, at the time when XVII, 1, was combined with XVII, 2-8, the tradition identifying al-masdah al-aqsa for the purposes of Jerusalem was already dominant, and that the original meaning of the verse as that of a visionary experience was connected with it in one way or another (cf. "The Jerusalem above", St. Paul's Epistle to the Galatians, iv, 26).

The situation is similar with regard to the kibla, or direction of prayer (II. 133-36). Again, Jerusalem is not mentioned expressly, but the Islamic tradition that it was intended by "the first kibla" is no doubt genuine; since the new kibla, which satisfied the Prophet's heart, was to the direction of the sanctuary of his native city, it stands to reason that the original one also was oriented to a holy city, and there was none for monotheists except Jerusalem. No "political" reasons, however, should be assumed for this change ("trying to win the Jews", "breaking with the Jews"). One prayed towards Jerusalem because this was the direction of the People of the Book as was known in Medina. It simply was the proper thing to do. When Islam became a separate religion with Mecca as its central sanctuary, the change was natural and religiously cogent.

4. The Conquest. The battle of Anjnadajn (q.v.) in the summer of 1363 opened southern Palestine to the conquering Muslims. No siege was laid on Jerusalem, but already in his sermon on Christmas night 634 the aged patriarch Sophronius expressed his grief that it was impossible to proceed from Jerusalem to Bethlehem as usual because of the marauding Arabs. A few days later, in his sermon on Epiphany, he mourned over the bloodshed, the destruction of the monasteries, the plunder of the cities and the burning of the villages by the Saracen, "who boast they would conquer the entire world!" Still, four years passed from the Arab invasion of Palestine to the fall of Jerusalem. It came about early in the year 635 (end of 15, or beginning of 17 A.H.), after the decisive battle of the Yarmuk (q.v.) (Radjab 15/ Aug. 636).

The stories about the fall of Jerusalem can be divided into three groups. The ancient and most trustworthy tradition simply reports that the capitulation was arranged with Khulid b. Thabit al-Fahmi, a little-known tribal commander, under the condition that the open country belonged to the Muslims, while the city would not be touched as long as its inhabitants paid the tribute imposed on them (Baladhr, Fudkh, 139, ii, 49). No treaty is mentioned yet. The second type, represented, e.g. by Ya'subi, ii, 167, and Eutychius, Annales, ii, 17, reproduces a treaty,
but the treaty is very succinct and does not differ much from Ballaghur’s version. Later, conditions similar to those made with the Byzantine authorities in Egypt were added and some (but not all) Christian authors added the condition “that no Jew should live with them in Jerusalem.” This condition is found also in Tabari, i, 2405, from where several later Muslim writers have copied it. But Tabari’s source here was Sayf b. ‘Umar, whose fathomless unreliability has been proved in detail long time ago (J. Wellhausen, Skizzen und Vorarbeiten, vi, 3–7) and who tells us, e.g. here, Tabari, i, 2404, about the conquest of Ramla, a city founded by the crown prince Sulaymân b. ‘Abd al-Malik eighty years later. A mere look at the treaty produced by Sayf, its wrong data and fantastic witnesses, shows its worthless. It is natural, however, that in times of tension, as in 879/1474, when the Mamluk sultan ordered the rebuilding of a synagoge in Jerusalem, or as from 1929, this treaty served a purpose. From the Christian point of view, it is understandable that some writers wished to preserve Jerusalem as a Christian city, as it was in Byzantine times, but this was hardly in the interests of the Muslims, and their actions proved that such a stipulation never existed. In addition to these three comparatively old versions, a later one, represented among many others by ‘Uni, 225, adds several conditions of the legendary ‘Covenant of ‘Umar”, in which the Christians undertake, inter alia, not to speak Arabic. Even more fantastic is Ibn ‘Asakir, ii, 323 (peasó-áwakeilâ), where the treaty is made with twenty Jews headed by ’Uways (a scribal error for Yusha*), b. Nûn. This is a “harmonising” legend; a Jew, bearing the same name as the Jewish conqueror of the Holy Land, delivers it into the hands of the Muslims.

5. The beginnings of Islamisation. Tabari, i, 2406, itt., and many later Muslim and Christian sources, tell about a visit to Jerusalem by the caliph ‘Umar, but all we have about it are legends whose easily recognisable tendencies betray their worthless. According to one school, the caliph was accompanied by Jews who showed him the true site of the Temple, which was concealed by rubble purposely heaped on it by Christians. When the place was cleared and the ubiquitous Kab al-Albâb [g.t-.] suggested to ‘Umar to pray behind the Holy Rock so that the two ñibâb should be in front of him (see § 2, above), the caliph refused, since the Muslims should turn towards the Ka’ba alone. This is, of course, one of the many traditions against the bida’ of the overrating of the sanctity of Jerusalem (see § 11, below). According to Christian sources, the caliph visited the churches, but declined to pray in one of them in order to preclude any claims on it by later Muslim generations. This legend was a pious wish which originated at a time when the encroachments of the Muslims, which later became a reality, still were only a menace, see § 7, below. Since the conditions of the surrender safeguarded to the Christians the use of their churches, it is likely that the Temple area, which was largely or entirely uncovred, served as a place of prayer to the Muslims from the very beginning, and there is reason to doubt that this was done on order of the ruling caliph ‘Umar.

As far as the ancient sources go, it appears that the early Muslim settlers in Jerusalem were people from Medina, such as Aws, the nephew of the Prophet’s court poet Hassan b. Thâabit. Aws was a disciple of Ka’b al-Albâb and himself a pietist; Ibn Sa’d, vii/2, 124; his tomb was still known at the time of Muhammad b. ‘Abd al-Dîn, ‘Uni, 253. Several other Medinese are listed as settlers in Jerusalem by Ibn Sa’d, iii/4, 57; vii/2, 123, etc. Among them the famous “companion” ‘Ubâda b. ‘Amr, the first Muslim judge in the city (al-Dhahabi, Duwal al-Islâm, 1364, i, 14) is to be noted. The Ansâr were accounted of Yaman; thus it was natural that the Yemeni auxiliary corps, al-madad min ahl al-Yaman, also was stationed there (Ibn Sa’d, vii/2, 140, l. 14). Simeon, the father of Muhammad’s Jewish concubine Raybâna, settled in Jerusalem and delivered sermons in the Muslim place of worship on the Temple area. He, too, of course, was from Medina (‘Uni, 253).

The strange hadîth running ‘umkra bâyi al-malâbîsh âhârû yâhârîs, ‘The building of Jerusalem is the destruction of Medina’, might have been originally a bon mot on this exodus from the capital of the Hijâj to Jerusalem (which cannot have been more than a trickle); but soon became a standing element in the madâkîm literature. Its continuation: wa-khalîsh yâhârû al-malâbîsh ‘al-malâmâ, ‘and the destruction of Medina is the beginning of the war of the End of the Days’ (Mukaddasi, 124; his tomb was still known at the time of Mugjîr). ‘Uni, 120, al-Sirâqî al-munir, i, 460, where are further sources).

Mukaddasi, 171, l. 12 and others report that the caliph ‘Uthman, whose rule began only eight years after the Islamic conquest of Jerusalem, dedicated the revenue from the rich vegetable gardens of Siloam (which, in accordance with the peace settlement, belonged to the Muslims) to the poor of the city. Umâ al-Darî, the wife of the wise kadi of Damascus, spent every year six months in Jerusalem, where “she sat among the poor” (‘Uni, 254). These and similar reports are not necessarily spurious, but may betray early Christian influence.

The Islamic conquest threw the Christian community of the city into complete disarray. The aged patriarch Sophronius died shortly afterwards and no new one was appointed until 760. The further history of the patriarchate of Jerusalem in early Islamic times is almost as obscure as that of the Jewish spiritual leadership in the country during that period. But Jerusalem retained largely its Christian character. As Mukaddasi tells us (184, l. 16 ff.), the Christian holidays regulated the rhythm of the year also for the Muslim population, and through Jerusalem and the hermits populating the mountains in its environment, pious Muslims became acquainted with the ways of Christian asceticism (S. D. Goitein, Studies in Islamic history, 141, 146).

6. The Umayyads (29–172/640–750). About two years after the fall of Jerusalem, the Umayyad Mu’awiya was appointed commander of the army operating in Palestine and Syria. He governed these countries for forty years, first as governor, and later as caliph. Jerusalem was the scene of two decisive events in his career. In 38/658, Muhammad, as caliph in Jerusalem. A Syriac source, giving this date, reports also that Mu‘awiya in the latter’s favour (‘Uni, vi/2, 1, l. 22 ff.; the text of the agreement seems to be genuine). In Safar-Rabi‘ I 40/July 660 homage was paid to Mu’awiya as caliph in Jerusalem. A Syriac source, giving this date, reports also that Mu’awiya prayed on this occasion at Golgotha, Gethsemane and the Tomb of Maria (T. Nökleke, in ZDMG, xxix, 55). This was hardly mere politics (ibid., 83), but a manifestation of the chiliasmic state of mind of the time, so Islam entering into its inheritance of the preceding monothestic religions.
During the long rule of Mu'awiyah, the Muslim place of worship on the Temple area, approximately described by bishop Arculfus in ca. 680 (see L. Bieder, Corpus Christianorum, Series Latina, cit.), Turnhout 1965, 177), must have taken shape. Mutahhar b. Tahir, iv, 87, l. 11, expressly states that Mu'awiyah built the Muslim sanctuary there “after ‘Umar”. It stands also to reason that the plan for the erection of the Dome of the Rock, which needed immense preparations, was already made during the protracted and orderly rule of Mu'awiyah. The inscription in the dome bears the year 726/fig-2, but the beginning of ‘Abd al-Malik’s reign (68/685-705) was extremely turbulent. ‘Abd al-Malik had good reasons to make efforts towards the completion of the building, which would show him as the great champion of Islam, but the early years of his caliphate were hardly suited for both conceiving such an enormous undertaking and carrying it out to its very end during a comparatively short period. Contrariwise, Mu’awiyah is known also by his extensive buying and building activities in Mecca (in order to provide shelter for pilgrims and mujahidin, in which he was not followed by later Umayyads, see M. J. Kister, Some reports concerning Mecca, in JESHO, xv (1972), 84-91).

Goldschner, Alm. St., ii, 55-7, Erg. tr. ii, 44-5, expounded the theory that ‘Abd al-Malik, by erecting the Dome of the Rock, tried to divert the Pilgrimage from Mecca, then the capital of his rival ‘Abd Allah b. Zubayr, to Jerusalem, and that the many “traditions” in the name of the Prophet in favour or against the sanctity of Jerusalem reflect this political contest for the caliphate. This thesis was generally accepted and has found its way into the textbooks on Islamic history. It cannot be maintained, however. None of the great Muslim historians of the 3rd/9th century who describe the conflict between ‘Abd al-Malik and Ibn Zubayr in utmost detail, nor any of the older geographers, including al-Muhaddith, a native of Jerusalem, makes the slightest allusion to such an intention of the Umayyad caliph. On the contrary, the allegation that ‘Abu ‘Aas, ii, 68/29, and others, report expressly that the sovereignty of ‘Abd al-Malik’s expeditionary force participated in the hajj. They wished to do so even during the very siege of Mecca, a request which Ibn Zubayr naturally had to refuse, Baidhur, Anas, ii, 360. Moreover, it is obvious that ‘Abd al-Malik would not have had to struggle, but endangered his position by trying to divert the hajj from the holy sites expressly mentioned in the Qur’an, and this after the hajj had been emphatically turned away from Jerusalem. By abolishing one of the five pillars of Islam, he would have made himself a kafir, against whom the dhikr was obligatory. The two older sources that mention that ‘Abu ‘Aas, ii, 68/29, and others, report expressly that the sovereignty of ‘Abd al-Malik’s expeditionary force participated in the hajj to Jerusalem, are, Tawfiq, ii, 342, and Eutychius, i, 39, invalidate their statements by others, obviously untrue, connected with them. They have the Umayyads forbid the Pilgrimage to Mecca, which is in flagrant contradiction to trustworthy reports that Umayyad caliphs made the pilgrimage themselves. Nasir-i Khurasan, who visited Jerusalem in 439/1047, reports that people in Palestine who were unable to make the hajj, assembled in Jerusalem wa-br-nsify b-Island, “and performed the wukuf”, the standing in the presence of God which was the main ceremony at the sacred mountain of ‘Arafat (q.f.). This statement, which has sometimes been adduced as a corroboration of Goldschner’s thesis, must be understood in a wider Islamic context. Such a substitute for the pilgrimage is attested also for the main cities of other provinces, such as Basra and Fustat; it even had a special name, tabayf, derived from ‘Arafat, Ibn Taghribirdi, i, 207. But, like the individual sacrifices, it manifested a participation in the hajj, celebrated on the same day in Arabia, not its replacement by a local pilgrimage.

The real urge for the erection of the Dome of the Rock on the site where it stands and in the form which it has, was religious, in addition, of course, to the natural acculturation of the Arabs to an environment, where magnificent edifices were the eloquent witnesses of a triumphant Church and of great rulers. Rajah b. Hayyva [q.f.] of Baytān, who was in charge of the building operations (Ums, 241, and others: probably only the financial aspect, while the mawsil Yaqub b. Salam supervised the actual work) was the most prominent theologian of the time, a priest and ascetic, (Ibn Hanjar, Tahāhiq, iii, 286), and he and people of his ilk might have been the spiritual originators of the undertaking. By choosing the site, Islam manifested itself as the exclusive heir of the older religions. The gorgeous mosaics, representing jewels and ornaments of the greatest variety, were in chilastic fulfillment of the prophetic descriptions of the future Jerusalem (Isaiah, liv, 22, etc.), which had become incunabula for the Moslems (Ibn al-Fakir, BG, v, 97, l. 11-13) and were incorporated by them in the legendary descriptions of Solomon’s Temple (Kusa, 59, l. 20). The detailed inscriptions in the Dome betray a spirit of Islamic mission, specifically to the Christians, since the “prophethood” of Jesus is emphatically stressed and his sonship denied with equal fervour. Details in the articles of Goltein, Grabar and Caskell; see Bibliography.

Muslim and Jewish sources report that Jews were employed as servants of the sanctuary on the Temple area, its cleaning and illumination (including the making of the glass lamps). If true at all, these reports can refer only to an early and very short period. On the other hand, the contribution of oil for the illumination of the temple area seems to have been regarded by both Christians and Jews as a pious deed, widely observed. Al-Khazzaz (d. 201/817-4) in his book on wukuf, 341, says: “If a Christian or Jew dedicates his land or house to the repairs of the Bayt al-makdis or for the purchase of oil for its illumination, it is permissible to accept this from him, for this is an act of piety both with regard to Muslims and to them.” Previously, the author had explained that it was not permitted to accept from non-Muslims a wukuf for specific Muslim purposes. An Italian Jew of the 16th century, who was of great munificence, also contributed oil “to the sanctuary on the Western Wall, namely to the altar (clearly an expression for a non-Jewish building) which is inside,” (Alkazzaz’s chronicle, ed. B. Ritter, Jerusalem 1944, 47).

Besides the erection of the Dome of the Rock, the Umayyad period contributed to Jerusalem other great architectural achievements, the masjid al-aqsa and the daj al-imārah, see section B. New gates were added (Ibn Kajir, xi, 256, repeating the anecdote that the gate with the inscription of al-Hajjaj, at that time governor of Fustāt, remained intact, while that bearing the name of ‘Abd al-Malik collapsed) and the road to Jerusalem was repaired (mentioned also in a Jewish source), its milestones receiving Arab inscriptions (RGCA, no. 13). It is evident that such comprehensive building operations must have had a considerable impact on the composition of Jerusalem’s population.
The extensive foundations of Umayyad buildings laid bare to the south and south west of the Aqṣā mosque during the recent excavations of B. Mazar (1968-76) suggest that the Muslims planned to do in Palestine what they had done in Ḫirītīya, Egypt and Syria, sc. to replace the Byzantine capital situated on the seashore (Caesarea) by an inland administrative centre. In view of the lack of written sources on the subject, we cannot know why Jerusalem finally did not acquire this status. For the then available means of transportation, Jerusalem was perhaps too far away from the main lines of international traffic.

The foundation of Ramla [q.v.] as capital city of the province of Filēstīn by the new project Sulaymān was in the first place a blow for neighbouring Lod or Lydda, but in the long run it was detrimental to Jerusalem. According to later traditions, Sulaymān himself received homage in Jerusalem and intended to stay there (Ibn Khārīr, ix, 174; cf. also E. Sivan, in Israel Or. Stud., i, 170, n. 31), but he took Ramla as his permanent residence and the town became the administrative and economic centre of the country. The inhabitants of Jerusalem were well aware of this fact, as Mūṣṭağhār b. Tāhīr, one of them, observes (iv, 72, l. 2-3): *bayt al-madās min sawād al-ramlā bā'd mā kāhan dār al-muḥsī fiyyāmin Sulaymān wa-Dā'ūd, "Jerusalem is a provincial town attached to Ramla after having been the seat of the government in the days of Solomon and David".

7. The Abbasid Period (132-238/750-969). The end of Umayyad rule was for Jerusalem, as for Palestine and Syria in general, a period of great tribulations. In the wake of a rebellion against the last Umayyad Marwūn II, the walls of Jerusalem were pulled down and its inhabitants punished. Earthquakes aggravated the situation. At the beginning, the new dynasty paid special tribute to the holy character of the city. This was manifested by the first visit of al-Manṣūr, who set out for Jerusalem immediately after returning to Baghdad from the pilgrimage to Mecca of the year 140/759-80 (Tabari, iii, 129). He did so in order to fulfill a vow (Masūdī, vi, 272, l. 9), made perhaps because a hundred lunar years had passed since Muʿāwiya had received homage in the Holy City in 140/757 (Tabari, iii, 129). As in connection with the event in the Maghrib, al-Manṣūr accompanied as far as Jerusalem the large army assembled by him for the quelling of the revolt (Balāghūr, Futūḥ, 233, l. 4-5, Ibn al-Athīr, v, 469). His son al-Mahdī also visited Jerusalem and prayed there (Tabari, iii, 500), but Hārūn al-Rashīd, who made the ḫidīdī almost every second year and frequented Syria because of the Holy War against Byzantium, never came to Jerusalem. Nor did his son al-Maʿmūn, although he sojourned in Syria and even in Egypt, or any other later Abbasid caliph. This change of attitude probably reflects the new trend of Islamic piety, which abhorred the *bidās, the foreign elements and "innovations", in the legends about Jerusalem.

Theophanes, Chronographia, i, 446, reports that a ṣuflār, on the occasion of his visit to Jerusalem, ordered the Christians and Hebrews to tattoo on their names on their hands (so that they could not escape the poll tax), whereupon many Christians fled to "Romania" via the sea. Such measures had been taken earlier in Islam; their adoption with regard to Jerusalem obviously means that at that time both the Muslim and the non-Muslim population of the city must have become quite numerous and the mutual assimilation of the various elements comparatively progressed. This increase must have been due to religious incentive, for the ancient ḫadīth assuring the Muslims that God permanently guaranteed sustenance to the inhabitants of Jerusalem (Ibn al-Fāḍīl, BGA, vi, 94, l. 12, and others) proves that life there never was easy. The legendary biographies of most of the early ṣufls, especially those of Iranian origin, contain the detail that they stayed in Jerusalem one time or another (JAOΣ, lx, 207), and well-founded sources prove a considerable Muslim influx from Iran, see § 9, below.

The Christians of Jerusalem received a mighty uplift by the interest shown for the Holy City by the rulers and the pious of Western Europe. Whatever the truth about the embassies exchanged between Hārūn al-Rashīd and Charlemagne, and the delivery to the latter of the key and the standard of Jerusalem (received by him in Rome in the year 800, at the time of his coronation as Emperor), there can be no doubt that many new buildings destined for the religious and material needs of pilgrims and newcomers were erected in Jerusalem by the emperor and his successors (a list in T. Tobler, Itinera Hierosolymitana, i, 314). Charlemagne's son and successor Louis ordered each estate in his empire to contribute one denarius for the needs of Christian Jerusalem. It is evident that most of the money needed for the payment of the poll tax and other impositions on the Christians of the city came from abroad. The composition of the Christian population may be gauged from a list of the hermits living in cells on the Mount of Olives, of whom eleven said their psalmodies in Greek, six in Syriac, five in Latin, four in Georgian, two in Armenian, and one in Arabic (Tobler, op. cit., 1, 302).

Co. 800, the Jewish High Council, the yevuwh, headed by the Gaon (corresponding to the Christian patriarch), moved from Tiberias to Jerusalem. His authority was soon challenged by the Karaites [q.v.], a dissident Jewish sect, which made Jerusalem its centre. The Karaita dispensation, which mainly developed on Iranian soil, is to be understood in the Islamic context as a branch of the *Ṣofūbīyya [q.v.], emphasizing the return to the Bible, the revival of the *ḥagak, a par excellence (Eutychius, ii, 15), and the return to the Torah, the survival of the Book of the Law. As is the case in general, the movement originated preponderantly in circles near to the Arabs, Jewish government officials or otherwise prominent people. Consequently, the Karaita settlers in Jerusalem easily got the upper hand. Jerusalem became indeed their main spiritual centre. In the ensuing controversies, which, during the turbulent 9th and 10th centuries, were brought before the Muslim authorities, one Gaon lost his life and two others with difficulty escaped a similar fate (J. Mann, Jews in Egypt and Palestine under the Pāṭīnids, repr. 1970, ii, 57). In the course of time, the two denominations learned to co-exist and to cooperate, but in Jerusalem rather less than, e.g., in Egypt. The Pāṭīnids recognized the Gaon of Jerusalem as the head of the Rabbānīte Jews in their empire (see Gotthelf, A Mediterranean society, ii, Berkeley and Los Angeles 1972, 3 ff.).

During the period of the Crusades, Jerusalem suffered by a famine and became depleted of its Muslims, an opportunity used by the patriarch to execute repairs in the building of the Holy Sepulchre (Eutychius, ii, 55-57). More serious was a great revolt of *fiddātīn, which broke out at the end of the reign of his successor al-Muʿtāsīm (228-27 853-42). The revolt was led by one Abū Ḥarb al-
Mubārakāʿ ("veiled one")—as former impostors had been—and soon encompassed the whole of Syria. Its leader assumed the role of the Sufyākā, or messiah of Umayyad stock, reduced the poll tax and made other promises to the population. But soon he changed his ways. When he entered Jerusalem, its entire populace, Muslims, Christians and Jews, fled and all the places of worship were pillaged. Only a large contribution by the patriarch prevented him from burning the Holy Sepulchre. It was a typical peasants' revolt, which was unable to make a stand against the regular army sent to subdue it by al-Mustasim's successor (Ibn al-Athir, vi, 372-2, who does not mention Jerusalem; Michael Synes, ii, 541).

In 255/869-70 Syria and Palestine received for the first time a Turk as governor (Amādūr, Ibn al-Athir, vii, 165, ii, 8-7), but this did not change the ways of the Abābid regime, which had long before assumed the character of a bureaucracy based largely on foreign hirelings. Precisely at that time, the patriarch Theodosius of Jerusalem praised the Saracens for permitting the Christians to build churches and to live in accordance with their religion without oppression. [Ibn. Sādiq, Kitāb al-Ittār, vol. v, 1400, ed. 1626, and Bernard the monk expressed his admiration for the safety of the roads in the country (Tobler, Itinera, 319).]

Amād b. Tūlūn, who had made himself lord of Egypt in 254/868, conquered Palestine in 264/878, but in the wars between the Tūlūnid and the other Íkhshīdīs [q.v.], the rulers of Egypt, and their overlords, the Abābid caliphs, Jerusalem played no role. But a new turn in the concepts about the holy character of Jerusalem must have taken place. The belief that it would be the scene of the Last Judgment and the gate to Paradise (Ibn al-Fākīh, BGA, v, 94, etc.), must have gained ground, whence people who could afford it arranged for their burial there. Tabari, i, 485, l. 24, and others report that the Jews from all countries, following the example of Moses, who carried the coffin of Joseph with him from Egypt, used to bring their dead to the Holy Land. This custom, as is proved by many Geniza documents, was indeed widespread, even among people of limited means. It went back to Roman times, when "Ḥimyarītē" Jews buried their dead in the Beth-Sha'arāyim necropolis near Haifa. In the 4th/5th century it must have become popular among Muslims. Iṣāṣ b. Māzir al-Nāṣirī, the first Abābid governor of Egypt after the overthrow of the Tūlūnīs, was buried in Jerusalem in 396/1006; the founder of the Íkhshīdish dynasty, the Turk Muhammad b. Ṭughjūlī, happened to die in Damascus in 334/946, but he and several other members of his family and retinue, including the famous black eunuch Kāfūr, one of the able rulers of Egypt, were interred in Jerusalem.

Tabari, iii, 2728, l. 18, and others report under the year 891 that the esoteric sect of the Karmājīn [q.v.] turned towards Jerusalem in their prayers. But he notes also that they kept Monday instead of Friday as their weekly day of worship and celebrated it (in the Jewish fashion) as a day of rest. Such oddities (if they really existed) were of no general significance for Islam. In their devastating raids, the Karmājīn reached also Palestine, but Jerusalem is not mentioned at that time in connection with their exploits.

The absence of a strong central government during the 3rd/4th century and perhaps also other circumstances, such as the Byzantine offensive against Islamic territories (culminating in the boating threat of the emperor Nicephorus II Phocas in 964, that he would take Jerusalem) caused friction between the various religious communities. Half of the outer court of the Holy Sepulchre was taken away and a mosque erected on it (later called maqṣūrāt ʿUmar, probably in order to emphasize, against Christian claims (above, § 4), that the caliph had preferred the Christians' demands); only in 952, under the caliph al-Mustasim's successor (Ibn al-Athir, vi, 371-2, who does not mention Jerusalem; Michael Synes, ii, 541).

In 255/869-70 Syria and Palestine received for the first time a Turk as governor (Amādūr, Ibn al-Athir, vii, 165, ii, 8-7), but this did not change the ways of the Abābid regime, which had long before assumed the character of a bureaucracy based largely on foreign hirelings. Precisely at that time, the patriarch Theodosius of Jerusalem praised the Saracens for permitting the Christians to build churches and to live in accordance with their religion without oppression. [Ibn. Sādiq, Kitāb al-Ittār, vol. v, 1400, ed. 1626, and Bernard the monk expressed his admiration for the safety of the roads in the country (Tobler, Itinera, 319).]

Amād b. Tūlūn, who had made himself lord of Egypt in 254/868, conquered Palestine in 264/878, but in the wars between the Tūlūnid and the other Íkhshīdīs [q.v.], the rulers of Egypt, and their overlords, the Abābid caliphs, Jerusalem played no role. But a new turn in the concepts about the holy character of Jerusalem must have taken place. The belief that it would be the scene of the Last Judgment and the gate to Paradise (Ibn al-Fākīh, BGA, v, 94, etc.), must have gained ground, whence people who could afford it arranged for their burial there. Tabari, i, 485, l. 24, and others report that the Jews from all countries, following the example of Moses, who carried the coffin of Joseph with him from Egypt, used to bring their dead to the Holy Land. This custom, as is proved by many Geniza documents, was indeed widespread, even among people of limited means. It went back to Roman times, when "Ḥimyarītē" Jews buried their dead in the Beth-Sha'arāyim necropolis near Haifa. In the 4th/5th century it must have become popular among Muslims. Iṣāṣ b. Māzir al-Nāṣirī, the first Abābid governor of Egypt after the overthrow of the Tūlūnīs, was buried in Jerusalem in 396/1006; the founder of the Íkhshīdish dynasty, the Turk Muhammad b. Ṭughjūlī, happened to die in Damascus in 334/946, but he and several other members of his family and retinue, including the famous black eunuch Kāfūr, one of the able rulers of Egypt, were interred in Jerusalem.

Tabari, iii, 2728, l. 18, and others report under the year 891 that the esoteric sect of the Karmājīn [q.v.] turned towards Jerusalem in their prayers. But he notes also that they kept Monday instead of Friday as their weekly day of worship and celebrated it (in the Jewish fashion) as a day of rest. Such oddities (if they really existed) were of no general significance for Islam. In their devastating raids, the Karmājīn reached also Palestine, but Jerusalem is not mentioned at that time in connection with their exploits.

The absence of a strong central government during the 3rd/4th century and perhaps also other circumstances, such as the Byzantine offensive against Islamic territories (culminating in the boating threat of the emperor Nicephorus II Phocas in 964, that he would take Jerusalem) caused friction between the various religious communities. Half of the outer court of the Holy Sepulchre was taken away and a mosque erected on it (later called maqṣūrāt ʿUmar, probably in order to emphasize, against Christian claims (above, § 4), that the caliph had preferred the Christians' demands); only in 952, under the caliph al-Mustasim's successor (Ibn al-Athir, vi, 371-2, who does not mention Jerusalem; Michael Synes, ii, 541).

In 255/869-70 Syria and Palestine received for the first time a Turk as governor (Amādūr, Ibn al-Athir, vii, 165, ii, 8-7), but this did not change the ways of the Abābid regime, which had long before assumed the character of a bureaucracy based largely on foreign hirelings. Precisely at that time, the patriarch Theodosius of Jerusalem praised the Saracens for permitting the Christians to build churches and to live in accordance with their religion without oppression. [Ibn. Sādiq, Kitāb al-Ittār, vol. v, 1400, ed. 1626, and Bernard the monk expressed his admiration for the safety of the roads in the country (Tobler, Itinera, 319).]

Amād b. Tūlūn, who had made himself lord of Egypt in 254/868, conquered Palestine in 264/878, but in the wars between the Tūlūnid and the other Íkhshīdīs [q.v.], the rulers of Egypt, and their overlords, the Abābid caliphs, Jerusalem played no role. But a new turn in the concepts about the holy character of Jerusalem must have taken place. The belief that it would be the scene of the Last Judgment and the gate to Paradise (Ibn al-Fākīh, BGA, v, 94, etc.), must have gained ground, whence people who could afford it arranged for their burial there. Tabari, i, 485, l. 24, and others report that the Jews from all countries, following the example of Moses, who carried the coffin of Joseph with him from Egypt, used to bring their dead to the Holy Land. This custom, as is proved by many Geniza documents, was indeed widespread, even among people of limited means. It went back to Roman times, when "Ḥimyarītē" Jews buried their dead in the Beth-Sha'arāyim necropolis near Haifa. In the 4th/5th century it must have become popular among Muslims. Iṣāṣ b. Māzir al-Nāṣirī, the first Abābid governor of Egypt after the overthrow of the Tūlūnīs, was buried in Jerusalem in 396/1006; the founder of the Íkhshīdish dynasty, the Turk Muhammad b. Ṭughjūlī, happened to die in Damascus in 334/946, but he and several other members of his family and retinue, including the famous black eunuch Kāfūr, one of the able rulers of Egypt, were interred in Jerusalem.

Tabari, iii, 2728, l. 18, and others report under the year 891 that the esoteric sect of the Karmājīn [q.v.] turned towards Jerusalem in their prayers. But he notes also that they kept Monday instead of Friday as their weekly day of worship and celebrated it (in the Jewish fashion) as a day of rest. Such oddities (if they really existed) were of no general significance for Islam. In their devastating raids, the Karmājīn reached also Palestine, but Jerusalem is not mentioned at that time in connection with their exploits.
Sala'ha collapsed, made things worse (according to a Geniza letter, the collapse occurred on the 23 July, at 4 p.m., J. Mann, Texts and studies, I, 315). The persecution petered out, but the Jews and Christians were much too impoverished to be able to undo the destruction. It took almost forty years until the restoration of the Holy Sepulchre was completed.

Around the middle of the 5th/11th century, Jerusalem began to take the place of Ramla as the main city of the country. Ramla had suffered by the earthquakes of 424/1033 and 460/1068 and by the endless depredations of the bedouins more extensively than had Jerusalem (cf. Yābūr b. Sa'd al-Anḍālī, ii, 201). Contrariwise, the stream of pilgrims from Europe to Jerusalem became ever stronger, the great caravan of 12,000 pilgrims from southern Germany and Holland arriving in 1055, so lively described by Lamber of Hiersfeld, being one of its best known examples. It may also be that the techniques of warfare and fortifications had changed, making Jerusalem more easily defendable than a city in a flat country like Ramla. The audacity of the Fatimids to strengthen the walls of Jerusalem in 424/1033 and again in 455/1065, In the last third of the 5th/11th century, Jerusalem and not Ramla was in the centre of military events.

The Seljuk invasions set into motion motley crowds of soldiers of fortune from many nations, led by ruthless condottieri. One of these was the Turkoman Atsh b. Yuvāk [q.v.], whom the Fatimids government, paralysed by faction, plague and complete anarchy in Egypt, called in against the unruly bedouins in Palestine. But Atsh turned against the Fatimids and took Jerusalem in 469/1077 after a prolonged siege. Emboldened by his successes, he attacked Egypt itself, but there had been replaced by the Armenian convert Bahr al-Dānānī [q.v.], and Atsh was forced to retreat (469/1077).

In a long Hebrew poem celebrating the Fatimid victory, a Jewish dignitary from Palestine describes in detail the sufferings of Jerusalem, and in particular the devastation of its environment with its vineyards and orchards by Atsh's forces (ed. J. Greenstone, repr. from AJSL [1906], r-34). The local population rose against the barbarian conquerors and Atsh had to take Jerusalem a second time, putting the inhabitants to sword, even those who had fled into the al-Akāba mosque. Only those who had taken refuge in the Dome of the Rock were spared. Atsh was soon liquidated by the brother of the Seljuk Sultan Malik Shāh, Tutush, who then was governor of Damascus (490/1099). Thus Jerusalem was incorporated in the great Seljuk empire, the borders of which henceforth were given as stretching "from Kāheghūr to Jerusalem" (Yaḥyā, Muṣṭafā al-Ǧānānī, iii, 136). Tutush assigned Jerusalem to Artuk [q.v.], the founder of the Mesopotamian dynasty called after him. It is not sure when exactly Artuk took possession of the city; it was in his hands in 479/1086 (Ibn al-Ḫidrī, 7, 96), and was given by him to two of his sons in 494/1093.

In the middle of the 5th/11th century, Jerusalem and not Ramla was in the centre of military events. The Muslim geographers naturally dedicated most of their attention to the sacred buildings and the fortifications, see section B. Al-Mu'adaddās, a keen observer (see e.g. his remark about a bath near the Bīb al-Asbūt (St. Stephen's gate), which was built half in the local tradition, and half according to the Persian fashion, 440, i. 15) again and again praises the unique beauty of Jerusalem (e.g. 53, i. 16; 166; 2, 16; n.n.), its clean and well-stocked markets and public bathhouses, and does not forget to mention the latrines near the mosques and in the bazaars (184, i. 9). During the 4th/10th century, it seems, Muslim religious instruction in Jerusalem was mainly concentrated in the mosques of the Haram (comparable to what happened in other Islamic cities; see also below). In the wake of al-Hakīm's persecution, some Christian buildings might have become available for the dawāsir mentioned by Muḍhir al-Dīn, 264. The Persian religious group of the Karrāmīyya [q.v.], which had first settled in Jerusalem already around the middle of the 3rd/9th century, erected Ǧānābūs for the needs of its members. By the middle of the 5th/11th century, the Christian quarter in the north-western part of the city, that is, around the Holy Sepulchre and other age-old churches, the Armenian quarter near St. James cathedral in the south, as well as two Jewish enclaves, one near the Damascus gate, other enclaves, one near the Easterners, were well-established. The synagogues referred to by Muṭlaḥār, Niṣrār Kūrāwraw and Khātim, might have been identical with the madīrās or houses of learning mentioned in a Geniza letter as places where prayers were held. The Karaites lived in a separate quarter in the south of the city, called Ḍarūt al-mashārīk, the quarter of the Eunuchers, since most of them had come from Persia and Ṭirāq. It is difficult to form a judgment about the size of the population. Niṣrār Kūrāwraw's 20,000 betrays only the mysterious and widely-diffused predilection for the number 20. He gives 20,000 also for Tripoli in Lebanon, and for the number of people assembling in Jerusalem during the "id al-ḥabīb", but Ibn Aḏīr, xi, 20, assigns that number to the membership of the Kāmilīya quarter settled in Jerusalem. Al-Mu'adaddās is more helpful when he says that Jerusalem was smaller than Mecca, but larger than Medina (167, i. 9), or more populous than many a provincial capital (169, i. 13). The repeatedly-mentioned number of 70,000 persons killed by the Crusaders in 492/1099 can by no means be used as an indication of the number of the inhabitants. Many people fled into the city before the approaching
invaders, and in general, on such occasions numbers are grossly exaggerated and worthless. If the al-Aqsa mosque was indeed reduced from fourteen to seven aisles after the earthquake of 424/1033 and others, the population must have considerably shrunk, possibly an outcome of the catastrophic tribulations by the bedouins in the 1020s. The most characteristic trait of life in Jerusalem was, of course, that "no day passed without foreigners" (Mufcaddasī, 166, l. 6). Pilgrims from all regions filled the city (ibid., 167, n. 12). The usage of pious Muslims to enter the state of foreigners' (Mufcaddasī, 166, l. 6).

Pilgrims from all regions filled the city (ibid., 167, n. 12). The usage of pious Muslims to enter the state of foreigners', (Mufcaddasī, 166, l. 6).

Those newcomers who could afford it bought houses and stores and lived on the income from their rents. Others tried to do some business, with the intention to locking himself up and of seeking solitude. al-fdhjAli sojourned there in 488/1095 not in order to teach or to study, cf. Yākūt, i, 356, 589, 887, etc.; Ibn 'Asakīr, i, 397-98, ii, 54, l. 31 164, 144, iv, 353, l. 10; 134, l. 2. But for characteristic traits of Yākūt's Dictionary of learned men Basra occurs 170 times, Damascus 100, but Jerusalem only once and in passing: In the K. al-āghānī it is not mentioned at all. Al-Muqaddasī's complaint, 167: "The mosque (that is, the house of study, see above) is not empty, there are no scholars and no savants, no disputes and no instruction", was certainly an exaggeration, inspired by the deep love of the writer for his native city, as was his famous censure that Christians and Jews had there the upper hand, but Jerusalem certainly could not boast of excellence in the sciences of Islam or any other fields. The great al-Jāzā'ī sojourned there in 488/1095 not in order to make contacts, but with the intention to locking himself up and of seeking solitude.

The city had some importance as a refuge or place of banishment for persons with unorthodox views and ways of life. This trend began already in Unayzah times (Tabari, i, 150, l. 10; Ibn Sa'd, viii, 550-5). Thā'far b. Yazid had to leave Damascus because of his Kadari [q.v.] views and died in Jerusalem ca. 453/1062 (Ibn 'Asakir, i, 68, l. 2r: iii, 383-84). Tekin, the Turkish governor of Jerusalem (who, at his request was buried in Jerusalem in 421/933) banished thither the Sufi Abu l-Hasan al-Dinawari (Suyūṭī, al-Muṣūlah, i, 294). In Mamluk times forced retirement in Jerusalem became almost customary, see § 12, below.
Jerusalem was a town of copyists, the occupation of the pious who were both learned and poor. Christian Arabic manuscripts written in the monastery of Mkr Sb'â near Jerusalem in the second half of the 4th/10th century and in Jerusalem at the beginning of the 4th/10th are still extant, and an Armenian manuscript from Jerusalem from the year 870 is known (J. Blau, ‘the manuscripts of the Geniza’, in J. Blau, ed., five scholars of the Geniza, 1966, I, 34, 53, 55). E. Stone, The manuscript library of the Armenian Patriarchate in Jerusalem, in Tarbiz, xii (1972), 158). Jewish copyists active in Jerusalem during the 5th/11th century give us many details about their work.

According to Mughrîl al-Dîn, 263-5, the main local madkhâb in the town, even before the Crusades, was Shâfi'a, with a sprinkling of the Hanbali, introduced by the Persian Abu 'l-Fardâl al-Shâ'âbî, while a Hamânî Turk was the hâdî, a situation similar to that of much later times.

There was a marked difference between the spirit of the late 4th/10th century and the 5th/11th one. The former was characterised by three highly interrelated elements: Jerusalemite of Persian origin and of wide humanistic interests; the great traveller al-Mukaddasî, one of the finest personalities produced by Islamic civilisation; al-Mu'âthhâr b. Tâhîr, a keen and remarkably unbiased student of religions, writing in Bâist, eastern Persia; and Abû Sulaymîn Muhammîd b. Ma'sâbîr al-Kâdî al-Bâsî. According to Abu Sulayman al-Manîdî, was the author of the rasâ'îl of the Ikhwâ' al-Safa' [1972, p. 33].

The subsequent century witnessed a narrowing down to the more specifically Islamic branches of knowledge. A typical representative of the age was Abu 'l-Fâdî b. Tâhîr al-Kayyârânî, active in Arabic language study, hadîthi, and, especially, mysticism; he made his extensive travels on foot, carrying his books on his back and finally settled in Hamadhân, continuing the long-standing connection between Jerusalem and Persia. Abu-Mu'âthhâr al-Murâdîja, the author of a book on the Fadîl al-Kâdîs (see § 11, below) lived in the same century. The leading scholar of Jerusalem, the shaykh al-Shâ'îs in the whole of Syria), Abu 'l-Fâth Nâsîr b. Ibrahim, left the city for Tyre (Yâlîf, Mirîlî, iii, 197-3). The Jewish Gaon did the same (ca. 1071). This, as well as many Geniza letters, shows that the situation in Jerusalem had become unbearable long before the Crusaders temporarily suspended Muslim and Jewish life in the city altogether.

16. Crusaders and Jews. The Crusaders laid siege on Jerusalem on June 6, 1099 and took it by assault on July 15, penetrating into the city from three different points. The behaviour of the different groups of conquerors, Frenchmen, Flemings, Provençals and Normans from Scilly, was not entirely uniform. Tancred, the leader of the Normans, granted safe-conduct to the Fâtimî commander of the citadel (the "Tower of David") and to his men. A Geniza letter reports that the Jews in the entourage of the commander were included in the safe-conduct. Thus, no doubt, the Muslim civilians in the citadel were saved as well. The same letter says also that "the damned ones called Ashkénazîm" (convincingly identified by B. Z. Edel as Normans), "unlike others", did not rape women. The massacre of the Muslims and the Jews in the town was perpetrated out of military and religious considerations alike. The Crusaders did not run berserk, but proceeded systematically, as is shown first by the fact that they took time to collect hundreds of books, which they sold at Ascalon soon afterwards. The Geniza naturally speaks about Hebrew books, but there is no reason to assume that Muslim books were treated differently. The fact that a number of prisoners were sold far beneath the standard price of 33 2/3 dinars per person does not prove at all that the Crusaders were ignorant of the accepted norms; the war situation did not permit the keeping of large numbers of captives for a protracted period. But prisoners from better families, for whom higher ransoms could be expected, were retained in Antioch for years. All in all, the letters of persons actually involved in the events somehow qualify the accepted notions about the conquest of Jerusalem by the Crusaders. There was a gruesome bloodbath, no doubt. But it was not as all-embracing as the summary reports of the chroniclers led us to believe.

Jerusalem became a Christian city, where no Muslim or Jewish cult was permitted and no non-Christian could take residence permanently. The mosques were turned into churches or used as secular buildings. The newly-founded kingdom was appropriately called the Kingdom of Jerusalem, Regnum Hierusalem, since the conversion of the Holy City into a Christian centre was the purpose of its erection. As a capital city, Jerusalem soon began to flourish. The court, the administration of the state, the ecclesiastical authorities, the monastic and military religious orders were all located here, and thousands of pilgrims visited the city every year, many staying on for longer periods or for good. Besides Eastern Christians, such as Syrians, Copts, Armenians and Georgians, the inhabitants were mostly Europeans, above all French. Smaller European communities, such as Spaniards, Provençals, Germans and Hungarians, lived in compact groups around their churches and public institutions. Many new buildings were erected, of which the enlarged Holy Sepulchre was the most conspicuous. The remarkably spacious and beautiful market hall, erected on the foundations of a similar Islamic building, still dominates daily life in the Old City today. Everywhere in Jerusalem the vestiges of Crusaders' activities are visible. When, after the war of 1099, the ruins of the Jewish quarter were cleared away, what is believed to be the remains of St. Mary of the Germans made their appearance.

Less than a decade after the conquest, a letter from Palestine (not from Jerusalem) reports that life in the country had returned to normal also for the non-Christian population. Jerusalem remained closed to Muslims and Jews, but, in the course of time, they were permitted to come there for business and prayer. A famous incident reported in the autobiography of Usâma b. Munkird [88] shows him performing his prayers on the Temple area during a considerable stretch of time (ed. P. K. Hitti, Princeton 1930, 134-5). Jewish dyers worked for the King's wardrobe in the vicinity of the palace ca. 1170.

After the decisive victory of Hattin (Rabi' II 583/July 1187), Saladin advanced towards Jerusalem and laid siege on the city. After prolonged negotiations, in which the defenders threatened to kill the Muslim prisoners and all non-combatants (so that they would not be sold into slavery), to burn all the valuable buildings and to destroy the buildings on the Haram al-Shâ'î, an agreement was reached in Ramadan 583/November 1187, which permitted the inhabitants to ransom themselves after surrender. Only the Eastern Christians remained, and Jerusalem soon assumed the character of a predominantly Muslim city. The Muslim shrines were given back to their original destination and many Christian buildings were
dedicated to Muslim purposes. Outstanding examples were the convent of the church of St. Anne, which became the famous Salahyya madrasa, so called after its founder Saladin, and the Muristan, a hospital, which originally had been the church at the hostel of the Knights of St. John. The Holy Sepulchre was left to the Christians, but the pilgrimage to it was temporarily suspended until 1229.

There remained the problem of repopulation. In 587/1191 the great port city of Ascalon was dismantled and destroyed at Saladin's command, in order to prevent the Crusaders from turning it into a new base for their operations. The disposessed inhabitants must have found new homes in the empty houses of Jerusalem, for the Geniza letters from this period repeatedly speak of a community of Ḥashāla in the Holy City, and Jews certainly were given no preferential treatment. Another community listed alongside with them was that of the Maghāribiyya—a trend noted already two hundred years before by al-Mukaddisi, see § 9 above. Inversely mentioned in the same source are the Jews from Yaman, Ḥaṣā', and Egypt. The influx of learned Jews from France attested for the period ca. 1120-15 in both literary texts and Geniza letters proves that Ayyubid rule at that time must have had a reputation of an orderly government able to guarantee the safety of foreigners. But life in Jerusalem was hard, and before the 9th/10th century was cut, we already read about newcomers who had left for the greener pastures of Egypt and the port cities of the Eastern Mediterranean.

A new and catastrophic turning point in the history of Jerusalem was the rule of Saladin's nephew al-Mu'azzam, the Sultan of Damascus. On the one hand, as his many inscriptions prove, al-Mu'azzam did much to adorn the Haram, and erected there the miḥrāb of Muslim purposes. Outstanding examples are the often quoted by B. Tarbis, Historia major, iv, 190, quoted by B. Z. Kedar, in Tarbiy, xii [1972] 88). But this lasted only a very short time. The Egyptian Ayyūbīs, al-Malik al-Sālīḥ Nāṣir al-Dīn, enlisted the help of the wild Khārazmians, who had been driven to the West by the Mongols. The Khārazmians overran Syria and Palestine, took Jerusalem in Rabī' I 629/August 1244 and plundered and murdered in the town, desecrating the Holy Sepulchre and other churches. The combined armies of the Khārazmians and al-Malik al-Sālīḥ Nāṣir al-Dīn joined battle with the Syrians and their allies, the Crusaders, and vanquished them (Dūmādī I 542/October 1244). Consequently, Jerusalem came under the domination of the rulers of Egypt, under which, after a short interval in 647/1250, when again it was returned to the Sultan of Damascus, it remained until the Ottoman conquest of 923/1516-17.

II. The second six hundred years

11. The sanctity of Jerusalem in Islam. Fadhil al-Kuds. The history of Jerusalem during this period was largely influenced by the enhanced religious halo it had acquired through the long struggle between Christians and Muslims. The position of Jerusalem in Islam had its ups and downs. It cannot be described yet in full, since important relevant texts, such as the Tafsir of al-Mukhtārī (d. 520/1126), the Musannaf of 'Abd al-Razzāk (d. 622/1227) and the two oldest books of Fadhil al-Kuds still await publication (see below). An excellent discussion of the various trends on the subject and the present stage of research is found in F. Sivan, Le carnet de Jérusalem dans l'Islam aux XIIe-XIIIe siècles, in SI, xxv (1967), 149-82, and idem, Les commencements de Fadhil al-Quds, in Israel Or. Stud., i (1971), 267-91.

It was entirely in the spirit of early Islam that it incorporated the Jewish and Christian notions of the holiness of Jerusalem and made the area of the ancient Jewish Temple into a Muslim place of worship (§§ 4-6, above). The hajj ranking Jerusalem as the third central sanctuary of Islam after Mecca and Medina, excluding others, was formulated in the course of the first century of Islam and obtained general recognition during the second, after the sultan of Jerusalem had been vehemently contested as being alien to Islam, whose cradle was the Hijājī (the saying attributed to ʿAbd Allāh b. Mas'ūd and Ḥudhayfah: "Even if the distance between me and Jerusalem was only two pace-stones, I would not go there", quoted in M. J. Kister, You shall only set out for three mosques, a study of an early tradition, in Le Mésion, lxix [1969], 173-96, where the material about this struggle is assembled [this quotation at 182, n. 39].

Both aspects, the veneration for Jerusalem and the objection to it, deepened with the increasing influx of foreign ideas on the subject and their development by Islamic popular pieties. The notion that Jerusalem was holy as the domicile of the ancient prophets and saints [see arba'at] and as the scene of Muhammad's Isra' and Mi'raj [q.v.] (the latter was mentioned in Saladin's letter to Richard Coeur de Lion as the main proof for the Muslims' claim on Jerusalem, Sivan, Caractère sacré, 165) were accepted by everyone; it was the more exuberant legends woven around those notions and, above all, the belief that Jerusalem would be the scene of Resurrection and of the Last Judgment, and the crude fantasies evolving from those themes, which aroused criticism and suspicion that they were local inventions destined to attract pilgrims and visitors. As Ibn Kathir, Bidaya, vii, 260, l. 4 ff., formulated it: "They (the people of Jerusalem) have depicted there the spectacles of the Sīrat (the bridge suspended in the air) as the corridor of the Paradise, of the footprints of the Prophets, and of the valley of Gehenna". As a result, Jerusalem during the 3rd-5th/9th-10th centuries did not com-
mand a paramount position in the religious consciousness of the Islamic world. While many Islamic cities inspired books of *fadd'il* already by the end of the 3rd and throughout the 4th centuries, Jerusalem appears only with two, compiled during the 5th: a tract by Abū Bakr al-Wasīṭī, a *khaliṣ* of the al-Aqsa mosque (recently identified by M. J. Kaiser in the library of the al-Ḥijāzī Fatḥ mosque of Acre, in the course of publication by Y. Haszon), and another by Abu 'l-Ḥajjāj al-Mugharrar b. Muradīdhī, a *khaliṣ* living in Jerusalem (to be edited by E. Siwan). The author of a third compilation, mainly of *hadiths*, Abu 'l-Qāsim al-Malākī al-Makdisī, did not complete his work, since he was captured and killed by the Crusaders, see above. It is characteristic that these three authors were inhabitants of Jerusalem. The often-noted astounding fact that the conquest of Jerusalem by the Crusaders and its conversion into an exclusively Christian city did not arouse any strong Muslim reaction for decades also indicates that the veneration for the Holy City had not yet become a spiritual force in Islam.

The situation changed when ʿImād al-Dīn Zanjī's conquest of Edessa in 339/1532 suggested to an influential ruler that territorial aspirations could well be furthered by religious propaganda. The court poets and secretaries of Zanjī and his son Nur al-Dīn took up the topic of the *dākhil* for Jerusalem. With Saladin, both before and after 583/1187, this propaganda reached its apex. While no *fadd'il* for Jerusalem worked appeared during the first half of the 6th/12th century, they became abundant and ubiquitous in the second half and in the subsequent centuries. How much Jerusalem had become an all-Islamic concern might be gauged from the widely diffused protests against al-Mu'arrāzī's dismantling of the city in 616/1219 and al-Kāmil's coding it to the Emperor Frederick II in 626/1229. Precisely after Jerusalem had ceased to be a military or political issue, sc. during the Mamlūk period, the *fadd'il* of Jerusalem multiplied; at least thirty are known from this period, see Siwan, *Curators 1549*, p 181. The exceptions taken by Ibn Tayniyya [et al.] in his treatise on the subject were directed against the *bidā'as* disfiguring the cult of Jerusalem; its canonical status as third in rank of the sanctuaries of Islam was never questioned.

To modern Muslims, this position symbolizes the universal character of Islam. Sayyid Rūḥ (d. 1966) writes in his huge work on the *kurūf* with reference to Sūrah XVII, 1: "The *Isra* connects the great monotheistic religions from Abraham and Ishmael to the Seal of the Prophets. It combines the sites holy to the monotheistic religions with one another and it is as if Muhammad..."

Jerusalem under the Mamlūks (648-922/1250-1356). At the beginning of this period, Jerusalem was mostly in ruins and deserted. The few Christians who remained or returned there after the sack by the Khawārizmians in 624/1224 and the Muslims and Jews who had settled there anew, fled in 658/1256 before the onslaught of the Mongols who had reached places as far south of Jerusalem as Hebron and Gaza (latest discussion of the sources: B. Z. Kedar, *Tarbis*, xli [1971], 89-93). After the victory of the Mamlūks at ʿAyn Dāhūt [q v] in Shawwal 588/September 1289, Jerusalem was definitely incorporated in their empire and was administered first by the Mamlūk viceroy of Damascus. In 728/1328 the Jerusalem district was made a separate administrative unit, whose governor, styled naẓīr, or deputy of the Sultan, was directly responsible to the government in Cairo. The sanctuaries of the Haram (together with that of Hebron) were under the supervision of the "superintendent of the two holy sites", nāṣir al-haramayn, who was responsible for their upkeep and in charge of their endowments. The history of the period was mainly one of rebuilding the city, see section B, Monuments. While the sultans repaired or adorned the great sanctuaries and carried out works for providing them with water, or erected important institutions such as the Ashrafīyya (see section B), the amirs and princes of the Mamlūk empire, as well as of other Muslim states and private persons erected *madrasas*, *sādiqiyas*, *bānūnaks*, and mausoleums, many of which are still extant, or at least identifiable. Most of these buildings were small, having the appearance of ordinary townhouses, and were probably built with the use of ruins and their materials. But some of these foundations, such as the 8th/14th century Tengiyya college, were spacious and distinguished.

Because of its relative isolation, its proximity of Egypt the absence of strong fortifications or of a garrison at any site, which might be used by a potential insurgent, Jerusalem served as a place of compulsory sojourn for discharged, dismissed, or exiled members of the Mamlūk military nobility, the so-called *faddīls*. What had been in early Islam an occasional occurrence (§ 9, above), now became a widespread practice of high socio-economic importance. As D. Ayallon, in a special study devoted to the subject, has pointed out, the Holy City was the most commonly assigned place of exile in the entire Mamlūk empire. (Discharges from service, banishment and imprisonments in Mamlūk society, in *Israel Or. St.*, ii [1973], 324-49). To the many reasons for this choice adduced by the author, ibid., 335, it might be added that the authorities intended with this perhaps the repopulation of the city. In any case, there is evidence to prove that the amirs assigned by the government and who often possessed means of their own, were in a position to keep fine households and to leave behind them well-constructed mansions.

In the main, Jerusalem of the Mamlūk period must be envisaged as a city of Muslim divines living on pious foundations and salaries. The most conspicuous aspect of the members of this dominant class of Jerusalem's society was their mobility. They served, often simultaneously, in different occupations and posts, such as professors or 'repetitors' in madrasas, as *khaliṣ*, *bidā'īs*, or heads of dervish convents. They rarely stayed in Jerusalem for good, but moved on to Cairo or Damascus or other places, often returning for some time to Jerusalem, and finally concluding their lives somewhere else or back in the Holy City. Their literary output was equally diversified, comprising several or all of the fields of *hadith*, *Ṣibā* (qāf and *surūb*), *tafsīr*, *sira*, occasionally also Arabic language and rhetoric. Arranging and classifying the knowledge they wished to impart under novel headings, or in the form of commentaries to other works, or in versifications, were favourite means of pouring old wine into new bottles.

A second characteristic of this class of scholars was the prominence of leading families which divided between themselves the most richly-endowed offices. This was, of course, nothing new in Islam. But in Jerusalem, which lived on endowments from abroad, nepotism was rife, and family rule was not always
to the benefit of scholarship or good administration (we often hear about pious foundations falling into

desuetude). The most prominent family of Muslim
divines during almost the entire Mamluk period (and
also in early Ottoman times), were the Banū Ibn
Djamāʿa, who originated in Hama and in-
habited in Jerusalem a mansion bordering on the
north-west corner of the Haram. The biographies of
the more prolific authors of this family show, how-
ever, that they passed most of their adult lives in
the great centres of Islamic scholarship, sc. Cairo
and Damascus. In Jerusalem they mostly served as
khāsis and qāfīs. One branch of them, the al-
Khaṭṭāb family, is still extant. There are other
families in Jerusalem, unconnected with them, bear-
ing this name.) An Egyptian family, the Karaḵān-
dis, shared with them: the prerogative of the office
of ḥāfīs in the al-ʿĀṣa mosque. The Banū ʿAlāmīn,
also living on the northern edge of the Haram,
mostly hold the position of heads of the large al-
Ṣāliḥiya aš-ṣāḥīh. All these were ṣāḥīfs. The
most important Hanafi family were the Dayris,
natives of Palestine. They served as Ḥanafis judges
in Jerusalem and in other cities of Palestine, as
well as in Cairo, as teachers in the Hanafi al-Maḡ-
ẓamīyya maddīnī, and one of them became nāṣir
al-barānumayn. The well-known modern al-Khaṭṭāb
family (see §§ 23 and 14, below) derives its origin
from them.

Besides the great families of divines, there were
smaller ones, as well as unaffiliated scholars, local
and foreign, who were appointed to teaching of
juridical posts, or purchased them (or parts of them;
positions were often held in partnership). Of the
more distinguished scholars who passed considerable
parts of their lives in Jerusalem, Ibn al-Ḥāmin, an
expert on arithmetic and the science of the division
of inheritances (d. 422/1031), and Kamāl al-Dīn
Ibn Abī ʿShārif, a native of Jerusalem and great
authority on Muslim law (822-905/1419-1500), both
prolific authors, should be noted. Both died in
Jerusalem and were buried in the Māmmūlāt cemetery
(ʿAṣīr al-ʿArīf, Muḥṣafāt fi taḥlīl al-Quds, Jeru-
salem 1961, 566, 568).

Jerusalem, the city of the poor and the pious,
was the proper domicile for Ṣūfis. Mujār al-Dīn
notes about twenty Ṣūfī convents representing most
of the major orders and several less known orders.
E. Ashor, in his study on Jerusalem in the Mamluk
period (the most comprehensive one on the subject,
see Bibliography) describes the ambivalent relations
prevailing in Jerusalem, as elsewhere, between the
two classes of Islamic divines, the scholars and the
mystics. On the one hand, we read about members of
a ṣāhiya studying at a madrasa or about prominent
scholars adopting the Ṣūfī way of life. On the other
hand, the ecstatic practices of some orders, especially
the whirling dances accompanied by instrumental
music (prohibited in principle by Islam) were sharply
condemned. A collection of ʿaṭārīs in this spirit,
written by an Ibn Djamāʿa and copied many years
later by a Dayris, has been described by Ashor:

The Christians, hard pressed in this intensely
Islamic atmosphere of Mamlūk Jerusalem, were
strengthened by the establishment of a Franciscan
monastery on Mount Zion in the 1330s. Mount Zion
with its many religious associations, the "Tomb of
David", the Cenaculum (scene of the Last Supper)
and the Dormitic (the place where Mary, the mother
of Jesus, fell into eternal sleep), was the scene of
endless contests between Christians and Muslims
and even Jews, involving the demolition, re-erected
and renewed destruction of buildings down to the
very end of the Mamlūk period, see section B.
Other Christian buildings were also objects of at-
tacks. The demolition and restoration in 1379/1474
of the synagogue of the then small Jewish
community is described in great detail by Mujār al-Dīn,
653-46, by Ibn Ḥāmath, ii, 754-5, and in a book
especially devoted to this matter by the Shāfiʿī bābī
de Ummayr al-ʿABBAYA (analysed by Goitein, in
Zion, xiii-xiv [1948-9], 38-39). Against orders from
Cairo, Ibn ʿAbbaya three times decided that the
Jewish place of worship was to be closed; it was
finally demolished by mobs led by a Ṣūfī gāyīb.
Upon this, the Sultan took stern measures. Ibn
ʿAbbaya and others involved were summoned to
the capital, ʿAbbaya stayed his post and ended his days in Damascus, con-
soling himself with writing poems; the synagogue
was restored. These happenings were typical for their
time and place. Ibn ʿAbbaya was certainly right in
asserting that the synagogue was "new", that is, a
building erected after the advent of Islam and used
as a non-Muslim house of worship, which was against
the provisions of Islamic law. But the government,
naturally, had to pay attention to the exigencies of
life and the preservation of public order.

The impressive number of Muslim schools founded
in Jerusalem in the course of this period (ʿAṣīr al-
ʿArīf, Muḥṣafāt, 256-57, describes fifty-six) should
not be taken as an indication of economic prosperity.
The endowments were mostly limited in size and
dwindled rapidly. The governors and other officials
who had often to buy their offices for considerable
sums and frequently also served for only short terms,
had to indemnify themselves by heavy impositions,
first on the non-Muslims, but on Muslims as well.
Jerusalem's only important industry (still flourishing
in the 19th century), sc. the manufacture of soap
made from the oil produced in the then rich olive
groves of its environment, was heavily damaged by
the pernicious economic policy of the Mamlūk
government, which monopolised production and
forced the population to buy quantities not needed by
it for exorbitant prices. The constant insecurity
inside and, in particular, outside the city added to
the hardships of life. Early in the 16th century no
one could make the bābād from Jerusalem for ten
years because bedouin anarchy prevented travel
between Jerusalem and the Red Sea (L. A. Mawer,
A sequel to Mujār al-Dīn's chronicle, in JPOS, xi
[1931], 95-9, Ar. text xi-xii). At that time, as travel-
lers' reports show, there were still many unbuilt
areas within the boundaries of the city. But the
core of the Old City outside the Haram, as it
appears today, was the creation of the Mamlūk
period.

The exact date of the entry of the Turks into Jeru-
usalem during the victorious campaign of Selim I
against the Mamlūks in 1516-17 is not known. His
successor Sultan Suleyman ʿKhanul left most dur-
ing impressions on the city: the wall, constructed
between 944/1537 and 948/1544, as indicated in its
seven decorative inscriptions, the renovated Dome
of the Rock and the four beautified fountain, the
ʿAbbāsī, inside the city and the one near the Sultan's
Pool, also created by him, at the foot of Mount Zion.
The many ʿaṣārāt made by him and his wife ʿArūrīn,
further contributed to the welfare of the city
during his reign. The soup kitchen, ʿammār, donated
by her for the feeding of the poor and of students,
naturally does not operate any more, but its caul-

AL-KUDS
The Ottoman archives for the first time provide us with exact demographic, topographic and, to a certain extent, also economic data about Jerusalem. Bernard Lewis analyses the relevant material in Studies in the Ottoman Archives, in BSOAS xvi/3 (1954), 476, and Yerushalayim, ii/5, Jerusalem 1955, 217-27 (see ibid., 177, n. 1, further publications of his on the subject, and also his Notes and documents from the Turkish archives, Jerusalem 1954). The population movement during Sulaymân's reign is illustrated on p. 242 by lists of taxpayers: A = Heads of households; B = Bachelors; E = Exempt from the duty of paying taxes, such as religious dignitaries and insane persons:

Despite this data, the total increase in the Jewish population, which until the end of the sixteenth century was more numerous than the Christians, was due to the fact that Jerusalem had not been predominantly Jewish since the Second Temple. By 1553 it was inhabited by a mixed community of Christian and Jewish pilgrims, who paid a large share of the tax revenue. The first Jewish community in Jerusalem was established in the late 18th century, and by 1800 it numbered about 1,000 persons.

Thus at the beginning of the Ottoman period Jerusalem had a population of about 4,000 inhabitants, which tripled during Sulaymân's reign (Lewis points out that the later lists might have been more complete than the first one). The slower increase of the Jewish population, which until the end of the sixteenth century was more numerous than the Christians, was due to the fact that Christianity was the official religion of the Ottoman Empire. By the 17th century the revenue from economic activities had dwindled to next to nothing (one list notes as income from the ûbitân only 500 lire, one-twelfth of that of Sidon, ibid.) and consisted mainly in taxes and tolls on Christians and Jews. A firman by Selim III (1205/1206) reducing the toll usually imposed on a Jewish pilgrim entering Jerusalem from between 3 and 4 to the legal 14 lire, and freeing him from any payment while leaving the city, shows that arbitrary extortions were common in those matters (M. Maçoğlu, Christian pilgrims during the Ottoman period, in Jerusalem 1970, 38).

An important source for the socio-economic history of Jerusalem under the Ottomans is contained in the sâdik of the nâshâma menâiriyya of the city. Arif al-îrîf, Mufassal, 241 ff., provides a number of specimens: a detailed list of prices by the hâdid in the presence of the two menâisib in 970/1563, the inventory of the estate of a Christian veterinary surgeon from the same year, and prices of building lots, houses, rents, salaries and mahr through three centuries. Other matters, like three letters concerning the revolt of the nabi id-al-âqîfî and the demolition of his mansion, or notes about Jewish communal affairs, are also included. Only a systematic study of the entire material will provide historically valid results.

The governor of Jerusalem was a military man (a tentative list of Ottoman governors 1517-1917 in Arif al-îrîf, Mufassal, 312-28). The governor, the holders of fiefs in the sâdîk and the garrison in the town were not normally recruited locally. The hâdid was sent from Istanbul and invariably belonged to the Hanafi rite. This preponderance of a foreign ruling class with no roots in the city and often connected with it only for short periods naturally precluded healthy developments. But it had also its advantages. Since few Turks settled permanently in Jerusalem, its Arab character was preserved and germs of local autonomy developed. Popular risings, sometimes deteriorating into riots, occasionally chased a particularly oppressive (or weak) governor from the city. A more constant factor was the rise of families becoming powerful by the holding of well-paid religious offices, tax-farming, the administration of waqfs and by acting as protectors of villages (in which capacity they also mostly recruited locally). The well-known families of the Khâlid, Khâlid (see sec. 12, above) 'Alamî, Anassi, Dâjdânî, Husaynî, Nâshâhîbî, Nasâyîb and others, were formed or gained prominence in this period. The very considerable percentage of fair, blue-eyed, round-headed persons found in these families indicates that the local upper class, during the long centuries of Otto-
man domination, became thoroughly mixed with the many non-Arab elements passing through the city.

An interesting picture of folk life in Jerusalem is preserved in a pamphlet by Abu T-Fath ad-Daljjuni (d. 1660), entitled 8ait al-hajaj al-masaghil. It shows the harem al-gharif as the scene of popular feasts and other mundane activities (see M. Perlmanna, A seventeenth century examination concerning al-Quds, in Israel Oriental Studies, III [1973], 263-93, reproducing the Arabic original of the Dajaniyya).

The 17th century opened for Jerusalem ominously. In 1808 a fire destroyed most of the western part of the Holy Sepulchre. Sultan Mahmud II granted the Greeks the right to restore the building, but the Janissaries in the town, who were angry that the citadel was Garrisoned by other troops, invited the Muslim population to obstruct the repairs. A general revolt ensued. Finally, the wali of Damascus, alerted by the beleaguered of Jerusalem, sent a detachment of Maghribi horsemen on a clandestine route, which succeeded in penetrating into the city and to overpower the insurgents. Thirty-eight of the leaders were hanged (Sharif Al-Arif, Mu'aṣṣalat, 356-3, quoting Milkiyy al-Burayk al-Dinashiri). At the time of the Greek revolt of 1821, the Christians of Jerusalem were charged with conniving with them and were in great danger. But thanks to the quick action of the wali of Damascus and the firm attitude of the khatf of Jerusalem, no harm was done to the Christians. Another wali of Damascus was the cause of a revolt of large dimensions and long duration. Townsmen and jellabāni alike refused to pay the heavy taxes imposed by him. He came to Jerusalem with a large army in 1835 and raised a fine of 100,000 dinars from the rebellious city. But hardly had he turned his back when the population rose again; the mutasallim, who had been on a punitive expedition to Bethlehem, was unable to re-enter Jerusalem; the few soldiers who had remained in the citadel were easily overpowered, and the city and the countryside alike were in full revolt. Even when the Sultan sent a special detachment which laid siege to the city, the inhabitants would not budge. Only when the balls from the canons deployed on the Mount of Olives fell into the city and set some houses of notables on fire was the resistance broken (Neophytoς of Cyprus, Annales of Palestine, 1821-1841, ed. S. N. Spyridon, Jerusalem: 1938, 3:4). This time the revolt was terminated without bloodshed. But it showed that the spirit of resistance to tyranny, fully ablaze in Hellas, was not entirely absent from the Holy City.

III. Modern times

14. 1837-1877. A time of radical changes. Before one half of this short period was over, Jerusalem had become preponderantly Christian and Jewish, while the Muslim population, too, had made visible progress. The unprecedented expansion of the Christians was caused by the increasing dependence of Ottoman Turkey on developments in Europe, with its rivalry states and churches, and by the upsurge of political, religious, humanitarian and scientific interest in the Holy Land manifest in many Christian countries. The steep increase in the number of Jews, who formed the majority of the population by the end of the seventies, was a corollary of the general improvement; they formed a modest community of devout and mostly poor people. This development was put into motion by the conquest of Palestine by Ibrahim Pasha, the stepson of Muhammad al-Nasir, in 1831. His actions, of particular
world by telegraph, and in 1868 the first road between Jerusalem and Jaffa usable by wheeled vehicles was completed. The railway followed only in 1892, and the French company building it had to insure its safety and that of its station-buildings (even that of Jerusalem) by arrangements with the heads of the villages adjacent to it. Postal services were provided by the Austrian, French and other foreign agencies. There were many changes in the administration of the Jerusalem district (details in *Abd al-'Aziz bin Wādā, Muḥaṣṣarīyat al-Kuḍūs waḥādī al-Sāhib al-Ṣāhib al-Utbīyah*, in *Palestine Affairs*, iv [Beirut 1991], 128-41). In a letter to the German consul, dated 2 January 1872, the Pasha of Jerusalem calls himself "gouverneur de la Palestine" (M. Ma'oz, *Palestine during the Ottoman period*, 25), but the Jerusalem administrative unit never comprised more than the southern part of the country. As from 1874 (as several times before) Jerusalem was an independent (*muḥāṣarāt*) directly responsible to Istanbul and was headed by a rather ramified administration, having besides departments for general administration, finance,iffs (land registers), ‘awal, security, agricultural control and charity funds for foreign affiliates, and also special committees for foreign consulsates and foreign nationals in the town. In the consultative bodies, both of the district and the city, Christians and Jews were represented, albeit less than warranted by their numbers.

The area of Jerusalem, its physical appearance and the size and composition of its population totally changed during this period. Cathedrals and churches, some new mosques, synagogues and veshivas (rabbinical colleges), palaces of patriarchs, convents, hospices, schools (first schools for girls, Jewish 1884; Arab, a German foundation, 1868), scientific institutions, hospitals, clinics, orphanages and other charitable foundations were erected in and outside the Old City, see section B. As from 1890, the inhabitants of the Old City began to establish new quarters outside, with the Jews, who were particularly closely examined, taking the lead. For a further twenty years, the gates remained closed during the nights, which was not conducive to the security of the suburbs. The Muslims preferred to settle in the south (Abu Ṭūl) and in particular north of the city, in Wādī Dījūz and the hills west of it; the Greek Orthodox centred mostly in the vicinity of St. Simon, the summer residence of their patriarch (the Katamon quarter), and the Jews founded about sixty suburbs mostly in the west. The “German colony” of the Templars in the south-west, and the “American colony” in the north, largely inhabited by Swedes, were renowned as particularly noisy. Selma Lagerlöf’s famous novel *Jerusalem* (1902-2) depicts, besides the religious and personal pigrimage of Swedish pilgrims, also local representatives of Islamic mysticism, inspired probably by the *šābh* of the Shaykh Dāʾirah mosque near the American colony, who was a leading Shī ṣī.

The events of the Young Turkish revolution of 1908, the disappointment following it and of World War I, with its terrible sufferings by an oppressive military dictatorship, famine and epidemics and the subsequent shrinking of the population—all these belong to the general history of the country. An often-reproduced photograph shows the British general Allenby entering the Holy City on 11 December 1917 on foot, displaying Christian humility. 35. *After 1917.* The military government of the British occupation army was replaced by civil administration on 1 July 1920. Jerusalem, as the seat of the Mandatory government, of the executives of the Jewish world organisations for Palestine, of the national council of the Jews of Palestine, of the Muslim Supreme Council (created in 1922), the various Christian church authorities and other local and foreign bodies, recovered, albeit slowly, from the effects of World War I. According to the census of 1922, the population comprised 90,501 souls, of whom 51,222 were Jews, 19,894 Muslims, 19,335 Christians and 12 others. It increased to about 150,000 at the beginning of World War II.

During the Mandatory period, important public buildings were erected, such as Government House (later the headquarters of the U.N. Truce Supervision Organisation), the Hebrew University campus and the Hadassah Hospital compound on Mount Scopus, the Pontifical Biblical Institute and the Rockefeller Archaeological Museum, the YMCA and several new churches and a great number of schools. New suburbs were founded, some of which quickly developed into populous centres.

The composition of the municipal corporation council experienced many changes, but always a Muslim mayor was appointed, although the vast majority of the population and especially of the taxpayers, was Jewish. When, after the death of a Muslim mayor in 1944, the Jewish acting mayor demanded to be appointed officially, the council was dissolved and replaced by a commission composed exclusively of British officials.

The Pro-Jerusalem Society, whose committee comprised leading religious dignitaries, prominent scholars and other outstanding Jerusalem personalities, was indicative of the hopes for co-operation prevailing in the years immediately following the arrival of the British; its subsequent dissolution manifested the change of hearts and conditions. An interconfessional meeting place of longer duration was the Palestine Oriental Society, which had its seat in Jerusalem and in which local, British, American, French and other scholars joined efforts. The newly founded Hebrew University (opened 1925), the British, French, American and Pontifical institutes for archaeological and biblical studies and the ever-increasing number of writers (e.g. S. Y. Agnon, Nobel Prize winner) and artists of all descriptions created a lively intellectual atmosphere. The Government Arab College, led by the jovial savant Ahmad Sā‘ūd al-Ḥishābi, laid the foundations for the rise of a new generation of Arab intellectuals in the country. Younger writers connected with the Government Department of Education, such as Ishāq Mūsā al-Husaynī and A. L. Tāhiwī, published the first fruits of their pens. Jerusalem authors, such as Isḥāq al-Najjāri, Ṣahl al-Salākhīn and ʿAlī Baydās, enjoyed good standing in the world of Arabic letters. Alongside with all these developments much of the traditional life of the various communities and their subsections continued almost unchanged.

The clash of the national aspirations of Arabs and Jews affected the destinies of Jerusalem more than that of any other city in Palestine. The first bloody events occurred in Jerusalem in April 1920 with several Jews and Arabs killed and many wounded. Al-Ḥādhī ‘Abūn al-Iḥsānī, who had been condemned to death by a military court as main instigator of the disturbances and exempted from the amnesty granted by the new High Commissioner Sir Herbert Samuel when he took office, was appointed by him soon afterwards as muftī of Jerusalem and then elected head of the Supreme Muslim Council.
created by the government (1949). For the next seventeen years al-Hajjid Amin strove for unrestricted leadership of the Palestine Arabs, which brought him into conflict with other leaders, especially the mayor of Jerusalem, Raghib al-Nahshibli and the amir (since 1946 king) Abd Allah of Transjordan. The Western Wall - Burals fa-v.l affair, which led to the shocking events of August 1929 (when, however, Jerusalem suffered less than Safad and Hebron) greatly enhanced al-Hajjid Amin's prestige, and so did his collections in India and elsewhere for repairs on the Haram and the organisation of the Muslim Conference convened in Jerusalem in 1931. The burial in the same year of the Indian leader Muhammad 'Ali in the western portico of the Haram was another significant step in arousing the interest of the Muslim world.

The mass immigration of Jewish refugees in 1933 and after led to a general uprising of the Arab population and ferocious fighting. Intermittent warfare between the followers of al-Hajjid Amin and his adversaries exacerbated the situation. Among the many victims were a Danish archaeologist and two Arabs famous as discoverer of the Lachish ostraca, and two Arabist authors of a useful classical Arabic reader.

The Peel Royal Commission, sent out in 1936 to investigate the situation, for the first time recommended the creation of an Arab and a Jewish state and the conversion of Jerusalem, together with Bethlehem, into a separate unit remaining under British mandate. But neither this nor any other of the subsequent attempts of the mandatory government to find a solution led to results. On 29 November 1947, the General Assembly of the United Nations adopted Resolution 189 (II) calling for the division of Palestine into two states, but united by economic union. Jerusalem was to be "internationalised".

Immediately after this decision the country was in flames. Jerusalem in particular suffered great losses in lives and property even before 15 May 1948, the official end of the British mandate. An Egyptian detachment took position in the Bethlehem area, while the Transjordanian Arab Legion attacked the Jewish quarter in the Old City. It was left by its Jewish population on 27 May and subsequently demolished, including its old Sephardi synagogues and the two large Ashkenazi synagogues, the Hurva (dedicated 1865) and Nisan Bak (1872), whose cupolas had been landmarks of Jerusalem.

The ceasefire divided Jerusalem by a line slightly west of the western wall of the Old City. This left a number of predominantly non-Jewish quarters within the Israeli sector, while Mount Scopus with its University and Hadassah Hospital compounds formed an Israeli enclave, which soon became useless, since the free access to it, envisaged in the armistice agreement with Transjordan of 3 April 1949, was never granted. East Jerusalem was cut off from its electricity and water supply and from its direct routes to the West and the South. Both parties had to work hard before a semblance of normality was restored.

On 13 December 1948 the Transjordanian parliament resolved the annexation of the areas of Palestine occupied by the Arab Legion. Israel followed suit by transferring its parliament from Tel Aviv to Jerusalem in February 1949 and proclaiming Jerusalem its capital on 13 December 1949. Both actions were in contradiction of the U.N. resolution of November 1947, which had foreseen Jerusalem as a corpus separatum. The matter came up repeatedly in the U.N. until 1954, when it was left dormant, until the war of 1967 created an entirely new situation.

The history of the Israeli sector of Jerusalem during the years 1948-1967 lies outside the scope of this article. Suffice it to say that during this period it received most of the administrative and cultural edifices of a modern society.
most conspicuous expression of this policy was to be found in the exclusive control which the Muslim religious institutions retained on the mosques of the Temple Mount and in the continued independent activities of the Muslim Waqf and religious courts.

The declarations and actions of the Israeli authorities aiming at the “reunification” of Jerusalem were immediately followed by resolutions of the General Assembly and the Security Council of the U.N. calling for a return to the status quo prior to the war, as well as by protests on the side of Muslim bodies all over the world. The creation of a huge square in front of the Western Wall and of secure approaches to the inner city involved the demolition of a considerable number of Arab dwellings. Although such measures had been envisaged already in Ottoman times and although the inhabitants were indemnified, these were, of course, grave actions. Relevant complaints were submitted by Jordan to U.N., as from June 1967 but were described by Israel as grossly exaggerated. The fire damage caused to the Aksa mosque on 21 August 1969 by a deranged Christian tourist from Australia made great stirrings in the world and it took some time until the truth penetrated.

About a year after the fire, the Muslim Council began repairing the damage caused by the fire. The repairs took several years and are practically completed. During this time, not only the inner wall of the mosque were built anew, including areas which were not damaged during the fire. With the funds of the Muslim Waqf several ancient drinking fountains and the market of the cotton merchants were restored, existing mosques were repaired, and two new mosques were built.

The Islamic monuments of Jerusalem reflect at the same time the unique character of the Holy City itself with its complex memories translated into major works of architecture or into mystical and liturgical associations and the peculiarities of the Muslim rule of the city as it has been outlined in the historical section A of this article. With the Dome of the Rock, Jerusalem possesses the first consciously-created masterpiece of Islamic art, while the city remains unique among almost all Muslim cities in the manner in which its Muslim monuments are almost entirely concentrated in one part of the city, on or near the Haram al-Sharif (q.v.). The first feature reflects the singular position of Jerusalem in early Umayyad times, while the second one is a direct result of the city's unique character. Any understanding of Jerusalem's monumental history requires, therefore, both an awareness of the city's archaeology, i.e., of its own peculiar relationship between a complicated topography and remains from former civilisations, and a knowledge of the types of official, religious, emotional, and financial investments which Muslim culture put into it at various times. As has been shown in the historical part, the latter changed considerably over the centuries and the changes affected the growth and the meaning of monuments in a way which is totally unique in Islamic history. While the presentation which follows is primarily historical, it should be borne in mind that eventually a similar survey could and should be made quarter by quarter, or else from the point of view of the type of political or pietistic associations which have surrounded the Muslim monuments of Jerusalem.

There is no complete study of Jerusalem's Islamic monuments as a whole. The most thorough investigation is that of Max van Berchem, which utilises simultaneously inscriptions, architectural remains, and written sources, especially the invaluable guidebook of Muṣṭif al-Dīn. Since his text a number of monographs have modified our understanding of the two main buildings on the Haram (we will use the term for convenience's sake, even though it did not become common until the Ottomans, see AL-HARAM AL-ṢAMĀK, the Dome of the Rock and the Aḳṣa mosque, while recent and still unfinished excavations to the south and southwest of the Haram have introduced a large number of new elements in any understanding of the city in early Islamic times. A survey of Jerusalem's Ayyubid and Mamlūk remains has only recently been initiated and very little has been published so far. The bibliography which follows this essay gives an idea of the considerable amount of information we will give about Jerusalem, but this very abundance identifies the main problem faced by the investigator of the city's monuments, which is to determine what in them is typical of Islamic culture as a whole and what is unique to a unique city. We shall return to this question at the end of our survey. In the meantime, it has seemed preferable to describe the city's growth chronologically and to identify in it four major periods of development: (1) early Islamic up to the middle of the 3rd/10th century; (2) from the middle of the 4th/10th century to the Crusades (492/1099); (3) Ayyubid and Mamlūk periods, from the time of the reconquest at the end of the 6th/12th century to 1517; (4) Ottoman periods. No mention is made of the city's development after its awakening to the modern world in the 19th century, for by then we are no longer dealing with an Islamic city in the traditional sense but with a modern town searching for ways to accommodate its own unique spiritual and emotional values with the pressures of contemporary life. Much thought has been given to these problems in Jerusalem since the first reports sponsored by British mandatory authorities and by various ecclesiastical groups. Their investigation and discussion belongs, however, to modern urbanism rather than to the understanding of a Muslim city.
city's conquest and by the circumstances surrounding its first Muslim settlements. However uncertainly known the actual events of the conquest; may have been, one key archaeological point is clear: the huge Herodian setting for the Jewish Temple on the eastern side of the city was standing in ruins; many courses of its magnificent masonry, most of its gates, possible fragments of its towers could still be recognised, and its surface as well as the surrounding areas were littered with easily-accessible stones from its constructions. For scriptural reasons, the Christians had left the Herodian space unused except for a small and comparatively late memorial church to St. James in the southwestern corner. South of the Temple area there were Christian hostels and monasteries, but apparently no major living areas, for the Christian city was concentrated in the western side of the town, around the hills of Zien and Golgotha, with the Holy Sepulchre and its attendant constructions as focal points. Whether or not there was a Byzantine wall enclosing the whole of Zion hill and the spur of Mount Moriah which overlooks Siloam from the north (the so-called wall of Eudoxia) is still a moot question, but seems likely.

Almost as soon as the formal take-over had been completed, the Muslims appropriated for themselves the Herodian Temple area for their own administrative and religious purposes. The reasons for this act were many. It was a large empty space in a city in which by treaty the conquerors were not allowed to expropriate Christian buildings; the early Muslims were under the influence of Jewish converts with presumed knowledge of the area's holy significance; the Muslims may have wanted to show their opposition to the Christian belief that the area must stay empty; and, finally, the Muslims themselves may have had a spiritual attachment to Jerusalem before conquering it, though the possibility is difficult to demonstrate. But regardless of the reasons, the key point is that a huge space became available to the new culture in a striking location overlooking most of the city. It can furthermore be deduced from a variety of later developments that the earliest settlements by Muslims took place in the sparsely populated area south and south-west of the Temple.

There began then a monumental and ideological Islamisation of an ancient site, for which we possess a rather remarkable series of documents, even though all of its concrete modalities are still far from being clear. What occurred in effect is that the Muslims provided new and highly individual meanings to an existing space with different meanings. The following chronological scheme can be provided for this unusual development, although, as will be seen, much in it is still hypothetical.

First a small "rudely built . . . quadrangular place of prayer" (as described by the western pilgrim Arculfus ca. 680) was erected. It was mostly in wood and set somewhere in the midst of the Herodian ruins. Nothing is known of its internal arrangements, but it was probably a typically early Islamic hypostyle mosque. Its exact location is also unknown, although it is likely but by no means certain that it was not far from the place of the present Al-Asr mosque. This building probably remained until the first decade of the 8th century, but, as will be seen below, there is a possibility that already under Abd al-Malik a new building was begun. There is no textual or archaeological information as to whether any of the newly found buildings south and south-west of the Haram belong to this very first period, but the possibility cannot be excluded.

The second step in the development of the Herodian site coincided with the rule of Abd al-Malik. Its most remarkable monument is the Dome of the Rock completed in 716/7. Often described and often studied, it consists of two octagonal ambulatories around a dome-covered cylinder, 30.30 m. high and 20.30 m. in diameter. The dome is set over a huge hexastyle portico or courtyard or exedra or underground chamber. The building is provided with four axial gates provided by often redone porches. The building is a remarkably thought-out composition whose every detail in plan and in evaluation has been most accurately measured so as to create the most impressive effect. Its conception, and almost every architectural detail in its interior arrangement (piers, columns, capitals, arches, etc.), belong to the architectural repertory of Byzantine art and more specifically to the marturium tradition of Jerusalem buildings like the Holy Sepulchre or the church of the Ascension. It is from the same tradition that derives its internal decoration of marble panelling and especially of mosaics covering almost all wall surfaces above the capitals and cornices of piers and columns. There is both literary and archaeological evidence that the early building was also covered with mosaics on the outside. The subject matter of these mosaics is also derived from earlier artistic traditions, mostly Mediterranean, but also with a few themes of Iranian origin. These mosaics are often considered as typical examples of a pre-Islamic way of decorating the interior of major buildings. This is true to the extent that a rich variety of vegetal and occasionally geometric motifs, superbly adapted to the shapes provided by the architecture, have any number of models in earlier buildings, even though rarely preserved in such spectacular fashion. But there is quite a bit of originality in these mosaics as well. In subject matter two points are of importance. One is the presence of an imperial jewelry of Byzantine and Iranian origin on all wall faces directed toward the centre of the building. The other is the absence of any representation of living beings several decades before we become aware of a partial Muslim prohibition of images. A long inscription, however, comprising primarily Koranic quotations, has been shown to fulfill an iconographic purpose by its choice of passages, as will be discussed below. Stylistically, the mosaics are perhaps less unique, although their effect as a sort of sheath over the architecture rather than as a series of independent panels emphasising each part of the building may be understood as prefiguring the later use in Islamic art of decoration overwhelming the architectonic values of a monument.

The Dome of the Rock, as it appears today, is not entirely in its original shape. Beyond numerous repairs and restorations carried out over the centuries on basically original elements (particularly under the Fatimids and after the Crusades), there are two areas where later changes have completely obliterated earlier features. Inside, all the ceilings, including the dome, appear in Mamluk or Ottoman garb and the whole exterior has been re-done with superbly coloured tiles in the 16th/17th and 18th/19th centuries. In the 1950s and 1960s the building was virtually taken apart by a team of Egyptian architects and engineers supported with contributions from the whole Muslim world and then put back together and restored in a particularly successful manner. Every part of the building was put back in the manner which reflects the earliest information we possess about it.

The most frequently-raised question about the
Dome of the Rock is that of its original purpose. Three explanations are available. One is that it is a building commemorating the Prophet's Night Journey and Ascension (isdā' and mi'raj); the second one is that it sought to replace the Meccan Ka'ba for Muslim pilgrimage; the third one is that it was a monument celebrating the new faith's presence in the city of Judaism and Christianity and its belonging to the same monotheistic tradition.

Too many arguments (see above, section A and articles by Goitein and Grabar) exist against the second explanation to maintain its possibility. The first one has the advantage of corresponding to the eventual association which was and still is made by Muslim piety, but there is much doubt about the likelihood of its existence at the time of 'Abd al-Malik.

The third explanation agrees with the political and psychological circumstances of the times and with the internal evidence of the decoration (with its royal symbols strongly like trophies around the centre of the building) and especially of the inscriptions (which contain the whole Christology of the Koran) for the link between the Dome of the Rock and Islam. The fact that the Dome of the Rock would then appear as an extraordinary monument which succeeded in providing new meanings to traditional forms.

But the construction of the Dome of the Rock raises a number of additional problems which pertain to the archaeological history of the city of Jerusalem. It is on an artificial platform situated eccentrically to any other part of the former Temple area. The platform was reached through a series of stairs, some of which must have been there at the time of 'Abd al-Malik. Since we know otherwise that at the time of the Muslim conquest the Temple area was in ruins, we must conclude that by 71/691 a considerable amount of work had already been accomplished on the walls and pavements of the area as well as on its gates. The nature and extent of this work cannot be determined but, if it is true, as H. Stern believes (contra Creswell and Hamilton) that the earliest Aqṣā mosque may have been begun at the time of 'Abd al-Malik, then we must also assume that much of the south walls of the Haram and the Double and Triple gates had been rebuilt, for, as Corbett and Monneret de Villard have suggested, their plans and location may be Herodian but their construction and completion are early Islamic.

Be this as it may, the third step in the transformation of the Temple area by the Muslims can be dated to the time of al-Walid (86-96/705-13). It is to him that we owe the first clearly documented Aqṣā mosque (see, however, the controversies between Stern, Hamilton and Creswell). It was a building consisting of an uncertain number of naves perpendicular to the ḫāṣa wall with a central nave provided with a dome (following here Stern contra Creswell). The plan was an unusual one for its time, and should probably be explained by the fact that the substructures of the Haram platform which had to be restored by this time consisted of north-south arcades serving as supports for the building above. The Aqṣā mosque was decorated with mosaics and with marble and was also provided with remarkable carved and painted woodwork, now kept in the Palestine Archaeological Museum and in the Aqṣā Museum. One last point should be made about the Aqṣā mosque. Although its internal organisation was but a modification of the hypostyle tradition prevalent at the time, it was quite consciously located on the same axis as the earlier Dome of the Rock and thus was part of an architecturally thought-out ensemble comprising a congregational and a commemorative building, just as in the complex of the Holy Sepulchre in the western part of Jerusalem. Although their exact chronology is still difficult to establish with any sort of precision, we may also assume that the group of large buildings which succeeded the Aqṣā mosque and with known associations with Judaism and Christianity had been completed by the time of al-Walid. Whether they were the palaces and administrative buildings (dīr al-imāra) mentioned in papryi, whether they were commercial establishments or more simply the residence of whatever Arab families and clans moved into the city in early Islamic times, they form a striking monumental ensemble of large constructions along streets and stairs (partly Herodian) leading up to the Double Gate, at the time the main entrance into the Haram al-Sharif, or, as we probably must call it, the mutājil bayt al-maldūd, the mosque of Jerusalem. It is at this time that we begin to have the first indications of specifically Muslim associations with the Haram, whether it be the strictly new ones pertaining to the life of the Prophet or Muslim versions of the lives of earlier prophets. These developments are, however, very difficult to date properly. What can be ascertained is that by the middle Umayyad period a uniquely original architectural composition had been created: two major buildings on a partly refurbished enormous space inherited from earlier times which, unlike the Roman temple in Damascus, was too large to be transformed into a single building for new Muslim functions, but which therefore ended up by acquiring particularly original ones.

The following two centuries are the least documented in the monumental history of Jerusalem. Yet their importance is considerable, not so much by their contribution to the architecture of the city (consisting mostly of repairs and restorations, including major reconstructions of the Aqṣā mosque under al-Maṣṣūr and al-Mahdi) as by the indications they provide of the continuing concern of the Muslim community at large for its sanctuary in Jerusalem. Part of this concern is purely practical; walls are built up or repaired after earthquakes; the area of the Haram is officially measured and apparently surveyed, as appears from inscriptions which are our main sources for this aspect of Muslim activities on the Haram. Each gate was provided with a wooden portico ordered by the mother of al-Mu'tadid, who also paid for the repair of the Dome of the Rock's porch. A portico was built on the western and northern sides of the Haram, thus providing a formal frame to the sanctuary; some of the minarets may be of that time.

But another concern is far more interesting. It consists in the growth of pious associations. The latter were certainly translated into buildings, although none of the latter are known to have survived and our information is entirely through the testimony of geographers like Ibn al-Fakhr and al-Muṣaddasī or through litterateurs like Ibn 'Abd Rabbih. Three themes appear in these associations which will remain constantly in the religious and architectural history of the Haram: the Night Journey of the Prophet commemorated through a score of maṭabs and of ṣubbas, ancient prophets commemorated either through gates or through miḥrābs, and eschatology commemorated by the new interpretations given to the strange ṭubbah al-Silhīa (Dome of the Chain, probably the Treasury of Umayyad times, see van Berchem) as the place of Judgement, by a ṭubbah of
the Trumpet, or by the appearance of a new name to the Golden Gate, the Gate of Mercy. The theme of eschatology should probably be related to the development of the Muslim cemetery to the east of the Haram into something more than just a local cemetery, for even the rulers of Il-khānīd Egypt wanted to be buried there. But it is also true that funerary cult grew at that time in many parts of the Muslim world, although Jerusalem, as the town of the Prophets and of Resurrection, played a unique part in this growth.

 Altogether, then, if one takes the time of al-Mukaddasī (ca. 385/085) as the terminal point of the first period in the monumental history of Jerusalem, one can clearly see that its most remarkable achievement was the transformation of the city into a unique Islamic sanctuary, by then already accepted as the third most important sanctuary of the faith. Dominated by the Dome of the Rock, high above the whole city, comprising a large mosque with a cupola, full of new commemorative buildings of varying sizes, partly surrounded by a portico, with almost all of its gates underground leading to the streets of the city and possibly also to the west, the Haram must have been a very impressive sight, a fitting tribute to the Umayyad princes who initiated the transformation of an empty space full of memories into a Muslim holy place. But beyond such conclusions as can be drawn from the buildings of Jerusalem in early Islamic times for religious and cultural history, they also lead to a number of important conclusions for the historian of art. For, on the one hand, they illustrate the ways in which pre-Islamic themes have been transformed into Islamic ones and, on the other, they are our best examples of what may be called an imperial Islamic style initiated by the Umayyad dynasty.

 Little is known about Islamic constructions outside the Haram area. From an inscription analysed by van Berchem and from a passage in the Christian chronicler Eutychius (Maiestas, Ville. no. 24), it appears that in the early 4th/xoth century a mosque was built within the compound of the Holy Sepulchre in contradiction to the early treaties between Muslims and Christians. Nothing is known of its shape.

 3. From ca. 338/950 to the Crusaders.

 In many ways, the second period is nothing but a continuation of the first one. Repairs and restorations are recorded in texts and in inscriptions as buildings deteriorated or as they were damaged by man or by nature. But two phenomena identified primarily with the Fatimid dynasty appear to indicate more significant changes.

 The first of these affected the whole city of Jerusalem. It is that under the caliph al-Ẓahir, probably around 921/1030-3, the walls of the city were rebuilt and, more importantly, shortened on the south side of the city to approximately their present position. What this meant is that the traditional Muslim quarter to the south of the Haram was abandoned and that the underground gates found there were blocked. The main entrances into the sanctuary were shifted to the west and possibly to the north. This involved certain changes in the names of gates (cf. Haram), but it also involved a major building-up of the western gate, the present Bab al-Silsila, and Nasīrī Khirshaw, which was there in 438/1047, describes the brilliance of its mosaics, apparently similar to those of the Aṣṣā mosque which are Fatimid (cf. below). It is also from the Persian traveller that we can infer that the commercial centre of the city had by then shifted to the area west of the sanctuaries, probably to where it is now.

 The second phenomenon is the rebuilding of the Aṣṣā mosque also under al-Ẓahir. Probably as a reflection of a depopulation in the city, the mosque diminished in size to approximately its present dimensions, but the most remarkable feature of the Fatimid mosque consists in its mosaic decoration, studied by Henri Stern who showed, among other things, that the Fatimids used Umayyad models in their decoration. If one considers that a number of additional buildings were built on the Haram—for instance a mosque near the Golden Gate—and that the imperial mosaic inscription on the triumphal arch of the Aṣṣā is the first one in Jerusalem to begin with Kur’ān, xvi, v the sarat verse, one may propose the hypothesis that there had been a formal attempt by the dynasty to build up the holiness of Jerusalem's sanctuaries. This development, which was cut short in the second half of the 5th/11th century by political difficulties, must probably be connected with other Fatimid activities in Palestine, as exemplified for instance in the celebrated minbar now in Hebron (G. Wiet, Notes d'épigraphie arabe, in Syria, v (1924), 217 ff) and even with the earlier destruction of the Holy Sepulchre under al-Ḥākim. All these matters still require fuller investigation. What is important at this stage is that, even though the city had diminished in size, the Fatimids, probably for religious and political reasons of their own, sought to increase both the splendour and the meaning of the main sanctuaries of Jerusalem.

 It should also be pointed out that it is under the Fatimids that we have our first evidence for the use of the citadel on the western side of the city. The evidence is primarily archaeological.

 3. The Ayyubids and Mamluks.

 As is well known, the Crusaders took over the Haram area and transformed it into a palace and eventually into the military and religious centre of the Knights Templar. Since the earlier underground gates had been blocked, the Crusaders made a new gate, the so-called Single Gate leading directly into the Stables of Solomon in the north-eastern part of the sanctuary. In addition, the Crusaders modified the Holy Sepulchre and built many new churches, some of which, like the Church of St. Anne, still survive, even though in a slightly romanticised 19th century garb. Much in the city's topography during the time of the Latin Kingdom is not clear, but it does seem that they initiated many buildings in the valley immediately east of the Haram and thus began the process of partial levelling of the Haram's platform with its western surroundings which has continued from that moment onwards. Finally, it should be noted that the Crusaders were very active builders and, even though much of their work was destroyed, it provided an enormous supply of already-carved stones with the result that, in addition to remaining completed units such as the transept of the Aṣṣā mosque, a large number of subsequent Muslim buildings, especially in the area of the Bab al-Silsila or in adjoining streets, contain decorative units taken from Latin constructions.

 It is possible to discuss as one entity the monuments built in Jerusalem between 1200 and 1300 for two main reasons. One is that the nearly ninety original monuments which remain (not to speak of those mentioned in Mudīr al-Dīn's chronicle) have
not been studied with as much attention as the earlier ones, and stylistic or functional differentiations which doubtlessly occurred cannot therefore be identified as precisely. The second reason is that, partly because of the number and partly because they are functionally and even stylistically relatible to monuments found in Cairo, Damascus, or Aleppo, these monuments lend themselves more readily than the earlier ones to typological rather than to chronological definition.

One kind of architectural activity which followed the Crusades does, however, escape this general rule. It consisted in the task of re-Islamising the city. Churches were destroyed or transformed into mosques and the two main sanctuaries on the Haram were systematically cleansed of as many traces of Christian occupation as possible. This activity was particularly notable in the Alqâ’ mosque, where Saladin put up a new mihrab with a rare mosaic decoration and to which he transported Nâr al-Dîn’s celebrated minbar made especially for Jerusalem and which was tragically destroyed in 1969 (cf. the historical section, § 25, above). In addition, Saladin and his immediate followers sought to repair, rebuild, and resacralize all the holy places which had existed on the Haram. As van Beekem showed on several occasions, this task was carried out in some confusion and led to any number of misunderstandings. On the whole, however, it seems that the old sanctuary was returned quite rapidly to its former shape but not necessarily splendour, for, as will be shown presently, a totally new taste affected its western and northern sides.

One can put into the same category of refurbishing the city of Jerusalem the rebuilding of its walls. Inscriptions, texts, and masonry are for the time being quite confusing for the establishment of a coherent chronology of the fortifications from the 7th/14th century until the Ottomans. It is not even certain whether the present walls coincide with those rebuilt under the Ayyûbids, although what differences may have existed were probably minimal. The citadel on the western side of the city, whose use by the Muslims before the Crusades is still uncertainly documented either archaeologically or through literary sources, was entirely redone and remained in use as a typical late mediaeval khalîf until very recent times.

Within a walled city with its restored ancient sanctuary and with a diminished Christian population, an enormous building activity took place over three centuries. Its first characteristic is that it was almost entirely concentrated on the Haram proper and on its western and northern sides, either alongside the sanctuary itself or along the streets leading to it. Only two Muslim buildings are known with certainty in the whole western half of the city. Its second characteristic is that it was a continuous activity. It is true of course that one can recognize and identify certain particularly active moments, such as the twenties and thirties of the 8th/14th century, during the times of the remarkable governor Tenkiz or else the times of Ka’itbay in the 9th/15th century. But these clusters of activity, which deserve individual monographs, should not hide the fact that buildings were erected all the time and by an extraordinarily broad social spectrum of sponsors.

The functions of the buildings are typical of any place in the Mamlík period: schools, orphanages, libraries, madrasas, baths, dhûnbâ’s, ribats, hospitals, commercial establishments, caravanserais, public latrines, fountains. The only apparent peculiarity of Jerusalem when compared to Cairo or to Aleppo is the preponderance of purely charitable institutions over private mosques, madrasas, baths, tenkizes, ribâts. The latter bear witness to a quite scarce. This latter point obviously reflects the practicality of Muslim piety as well as the fact that, as a politically provincial city, Jerusalem did not lend itself to the conspicuous consumption inherent in the construction of masjids.

Few plans and elevations are available for these buildings but, when they do exist, the plans appear to be variations of the ubiquitous central plan (often covered, either because of the size of the building or because of the impact of another tradition of construction than Cairo’s) with one to four aisles. The most visible feature of each building was always its facade, and Jerusalem is provided with an unusually wide range of Mamlík portals. There are few variations in their plans, but many in their elevation, especially in the types of vaults used. Superb muqarnas series coexist with simple barrel vaults and the zone of transition of the Bâb al-Silsilah’s domes exhibit the remarkable range of models available to local masons and architects. Of all the buildings the most remarkable ones are the Tenkiziyah, the Aghûnîyâ, and the Sûk al-Kattânîn for the 8th/14th century and the Aqûfriyâ or the jewel-like fountain of Ka’itbay on the Haram for the 9th/15th one. The construction is throughout of stone and all monuments exhibit the superb technique of Palestinian masonry: closely jointed courses often of stone of alternating colour, joggled voussoirs, sobriety of decoration consisting usually of mouldings around openings or of inscriptions. While it will eventually be possible to determine a number of stylistic details which will identify a Jerusalem style of architecture, the main impression given by most of these monuments is that they exemplify the consistently high standards of Mamlík architecture all over Syria and Egypt.

The more important aspect of all these constructions lies in the manner in which they have transformed the Haram. For instead of being simply an area surrounded by a portico and reached through a number of more or less monumental gates, the northern and western sides of the Haram became a show place of façades to buildings whose function was no longer connected to the Haram but received a certain value or grace from it. Thus the most magnificent gateway on the Haram is not an entrance to it but to the bazaar of cloth merchants. The older, traditional gates with their consecrated names lost their importance. The Haram itself became cluttered with all sorts of new buildings which detract by their very multiplicity from the main sanctuaries, inasmuch as many of them were for private or restricted use as places of prayer or for public charity rather than for the formal expression of the faith’s beliefs. What seems to be involved is at the same time a different, far more practical and more pluralistic piety, and also a different taste, no longer the imperial taste of the Umayyads nor pluralistic piety, and also a different taste, no longer the imperial taste of the Umayyads nor the imperial taste of the Umayyads nor the imperial taste of the Umayyads nor the imperial taste of the Umayyads, but the taste of a wider social order which sought individual salvation through works rather than through the monumental glorification of the faith.

4. The Ottomans.

During the first years of Ottoman rule, earlier practices continued and a madrasa like the Risâliyâ (947/1540) still follows Mamlík practice and Mamlík ideals. A large number of fountains are even later.
But the main effort of the Ottoman dynasty in its heyday was once again an imperial one, and it is therefore not an accident that its two most spectacular achievements are still among the most impressive monuments of the city. One is the tile revetment of the Dome of the Rock and the other is in the walls and gates of Jerusalem. Both are essentially 19th-century achievements attributed to Sultan Abdul Aziz, the Magnificent, and it is important to note that neither one sought to be functionally or spiritually original. For regardless of their effectiveness, which is striking indeed, their main point is that they have managed to capture two consistent themes in the monumental history of Jerusalem: the creation of a new Muslim holy place and the symbolic as well as physical separation of the Holy City from the rest of the world.

After this century, the main activity of the Ottoman consisted in constant repairs of the main sanctuaries of the Haram. The quality of these repairs decreased with the centuries as Ottoman wealth decreased and as Jerusalem declined in population and importance, until the second half of the 19th century, when European interest, significant and architecture into the city.

In the most recent years, two different types of investigations have been carried out in Islamic Jerusalem. The first one is the continuation and partial publication of excavations to the south and southwest of the Haram. These have by now fully demonstrated that the Umayyads utilised and probably rebuilt the staircase of Herodian origin leading to the sanctuary. See N. Avigad, Archaeological discoveries in the Jewish quarter of Jerusalem, Second Temple period, Jerusalem 1976, and Mayer Ben-Dov, Hashiridim min 'atikufa hamuslamit hadasom b'zakor har habayit, in Hademoniot (Jerusalem 1972).

The second group of investigations are the studies of Mamluk monuments by A. Walls and M. Burgoyne, published in vols. iii (1971) onwards of Levant, Jnal. of the British School of Archaeology in Jerusalem, and with a checklist by Burgoyne, The architecture of Islamic Jerusalem, British School of Archaeology in Jerusalem, 1976. In addition to providing accurate plans and elevations of buildings to the west of the Haram, these studies have at times dealt with broader issues and a particularly original note by A. Walls in Levant, viii (1975), 159-61, suggests that the construction of the minarets of Alif 9all (1465-6) and of the Al-Saltibeya (1477) in the western and primarily Christian part of the city served to frame symbolically the domes of the Holy Sepulchre with prototypical Muslim monuments.

No understanding of Jerusalem in the Middle Ages can avoid a thorough acquaintance with pre-Islamic Jerusalem. Among the huge bibliography dealing with the latter, the most convenient works are L. H. Vincent, Jerusalem de l'Antiquité au Moyen Age, Paris 1934, summarising and revising his older work; J. Simons, Jerusalem, Leiden 1954; and A. Aliv-Yunai, The Mutasim mosaic, Jerusalem 1934.

KUDSI, MUHAMMAD DJAN, poet at the Mughal court in India. He was born and raised in Maskhad, from where he performed the pilgrimage to Mecca, and was then engaged in the grocer trade before he went to India. In 1651/1652 he joined the court of the Emperor Shah Jahan's poets. Daghistan, the author of the Riyad al-daw'ara, states that Kudsi preceded Kallam as poet-laureate to Shih Dihshah, but this is not confirmed by contemporary sources. He died in Lahore in 1656/1657 and, according to Ashar's Atsh-hada, his remains were removed to Khurasan.

Kudsi's poems are distinguished by a felicity of style. Like Kallam, he was also engaged to compose a poetic history of Shah Dihshah's reign. Though less talented than his more famous contemporary, he seems to have been held in high esteem, and was regarded as a leading poet of his day.

KUDUMMUL, a small volcanic island in the Red Sea in 17° 5' N lat., called Kontumble on the English Admiralty charts and Qotanbul in Admiralty handbook, Western Arabia and the Red Sea, London 1946, 133. The island has a rich flora, which has been studied by the botanist Ehrenberg, and is noteworthy for its iron deposits, which are mentioned as early as the geographer Ibn al-Mudjim (d. 930 [1233]). Kudummun, which lies near Harmila on the Arabian coast off Asir [q.v.], once marked the boundary between the land of the Kotihi and Yemen.

**AL-KUDURI, ‘ABD AL-HUSAYN AL-AHMACD B. MUHAMMAD B. AHMAD B. DIIFAN B., HAMMAN AL-BAGHDADI, HAMDI Pasha al-Abas b. Said b. Mihb al-Hakim, who was born and who died at Baghdad (325 [935] Radjab 428/972-24 April 1377). He was head of the Hamzah school in ‘Irak, and had occasion to lead several public discussions, in which he defended his own viewpoint, with his contemporary, the Shafi‘i Abn Haidar al-Isfarayn, whom he however especially revered. A number of pupils gathered around him, the most famous of whom was al-Khath al-Baghdadi [q.v.].

As well as various works like his K. al-Nihayah on marriage and his K. al-Taqriyyah on the differences between the Hanafis and Shafi‘is, al-Kuduri wrote a Muhkamah, which had a great scholarly renown and entered into the comparison so as to set right the Ruhul al-Khayr wa al-Wahdat al-Mi‘kil. It is a concise legal manual, but clearer than the one of the same name by Khall b. Idris [q.v.]; it deals with ritual, contracts, personal status, criminal law and the law of succession, without particular care for logical order. This Muhkamah inspired many commentaries, including e.g., al-Dawwara al-nasyiria of Abn Bakr b. Abn al-Abbاض (Istanbul 1951, 191, 1323, Delhi 1327) and al-Luhbah fi sharh al-Khitab of Abn al-Qar Dhi al-Mayyadah (in the margins of the previous work, and Cairo 1342/1927). Numerous ms. of the Muhkamah exist, which has been published many times, notably at Delhi in 1847, at Bombay in 1903 with tr. in Persian and Frgtn, at Istanbul in 1851 with a Turkish paraphrase, and in 1909 also. The chapter on the holy war was edited and translated into Latin by Rosenmüller, in Arabica, Leipzig 1855-6, and in French by Ch. Solve, Paris 1859; that on marriage was edited and translated by G. Helmstoffer, Frankfurt 1852; and more recently, G.-H. Bousquet and L. Bercher edited and translated extensive passages in Le statut personnel en droit musulman et la France, Tunis n.d.

**Bibliography:** Intro to Istanbul 1903 ed.,...
basing it in particular on Chinese testimony; a text of al-Tabari situates the place ‘Akūl between the Euphrates and the houses of Kūfa, probably to the north of the ‘anēr. Perhaps it is nearer the truth to see its origin in the Persianised form Kūfas (Sarkis, in *Studer* [1954]). Only a text of Sayf b. ‘Umar (al-Tabari, ed. Cairo, iv, 40 ff.) gives some detailed information on the first settlement, on the ḥādiyya of the mosque and the palace, and the apportioning of land to the tribes, clans and fragments of tribes, who constituted the army of Madā‘īn. This has to be rectified and completed in the light of other historical and geographical texts. A public area was at first delimited; this was to include essentially the mosque and the governor’s palace, and to become the focal point from which the whole encampment branched out. Fifteen mānāḥidj or avenues separating the tribal lots, each forty cubits wide, radiated from this central area. Along the five mānāḥidj of the north were settled the tribes Sulaym, Thāqif, handān, Badjila, Taghlib and Taym al-Lāt; to the south, the asad, Nakhā, Kinda and Azd; to the east, the Ansār, Muṣayyana, Tamūn and Muḥārīb, asad and ‘Amir; finally, to the west, Badjila, Baglā, Dājila and Diḥayyana. This picture, it may be seen, contradicts a tradition of al-Ṣalḥi cited by al-Baladhūrī (Futūḥ, 276) according to which all the Yemenis were placed to the east, between the mosque and the Euphrates, and the Nizaris to the west, a tradition which study of the topography of Kūfa as it appears from the narratives on the great revolts of the rst/7th century does not corroborate. But it is beyond doubt that some alterations were effected by historical evolution in this picture of tribal geography: the Tamīm, in particular, migrated from the east to the west with the ‘Abis. The problem of the great tribes of Ṭabī‘a, Bakr and ‘Abd al-‘Alāys still remains. For the most part, the Bakr migrated to Baṣra, but a certain number of them settled at Kūfa—including the ancient family of Ḥū ‘Iyya—at the time of the caliphate of ʿAlī, to leave it again in 40/660 for Baṣra. In any event, a certain number of characteristic features of the tribal establishment at Kūfa are to be noted: settlement of the main part—but not the whole—of the Arab mukātīla who had to confront the Sāānim armies; heterogeneity of the tribal structure, in contrast to Baṣra; presence of a majority of Mudar and Ḥaṣāyq elements formed either from large Bedouin clans (Tamūn, asad), or from clans of the Ḥ cred (Thāqif, Sulaym, ʿUṣayn, Muṣayyana, Muḥārīb), but nevertheless a concentration of a strong Yemeni minority, completely unaccompanied elsewhere. It may even be asked if early Kūfa did not contain a majority of Yemenis, who later became a weaker and weaker minority; certain modern authors have gone as far as to assert that the ḥādiyya of Kūfa was conceived to shelter these distant migrants, together with those of the Ḥ cred, rather than the others (M. Ḥind, in *IJMES*, ii [1921], 346-67). The pure Yemeni elements are here massively present (Ḥimyar, Handān, Ḥadramawt, Madhhabī) alongside tribes newly Yemenised (Kinda and Badjila in particular, Azd Sarit and Tayy), but the tribe which became the most numerous of the Yemenis and without doubt of all the tribes, that of Handān, was not settled at Kūfa as early as the Madhhabī, Baglā and Kinda, and it was made up for the most part of recent immigrants (mukātīla), who had come under Ḥimyar, ʿAlī and perhaps Muṣayyana. It remains a fact that the Yemeni phenomenon was to determine the political destiny of Kūfa as well as the colour of its civilisation. According to Massignon, it is through the influence of the old Yemeni element, city dwellers for a long period, that the sedentarisation of the Arab tribes at Kūfa was effected; hence a civilising and urbanising role of the first order may be attributed to it from very early on. Figures for the total population vary according to the sources and periods. It may be admitted that during the very first phase, there were between 20,000 and 30,000 inhabitants (al-Baladhūrī, Futūḥ, 276), although Yāḥūl gives the figure of 40,000 (Baladīn, 401). A text of Abū ʿUmar (al-Tabari, v, 79) speaks of the mobilisation by All of the 57,000 mukātīla, of whom 40,000 were adults and 17,000 adolescents. Ziyād b. Abī Suʿūma, having enlarged the mosque, foresaw it as accommodating 69,000 people, a figure corroborated by a reliable piece of information given by al-Baladhūrī (Futūḥ, 345) concerning the people registered in the dhīnak. So there would have been, around the year 50/670, 90,000 men and 80,000 women and children, that is, 140,000 Arabs of whom a census had been made, to which it is reasonable to add the clandestine residents and the non-Arabs, slaves or mamlīkī. Certainly at the same period the figure for the population of Baṣra (200,000) registered rather outnumbered that of Kūfa, but the demographic inflation in the space of a generation was nevertheless considerable. This may explain the transplantation by Ziyād to Khurāsan of 50,000 people, of whom 40,000 were from Baṣra and 10,000 from Kūfa. It is probable that after Ziyād and throughout the Umayyad regime, the number of Arabs drawing stipends and registered remained stable or even had a tendency to diminish from al-Hadījī (73-95/694-713) onwards, but the number of non-Arabs, uprooted from the land, new mamlīkī flocking to the ‘anēr, cannot be known for certain. The fact that this last governor took drastic measures to repulse them is clear proof of the existence of this disordered influx, dangerous for the equilibrium of the city. The history of the population of Kūfa, in the earliest and Umayyad period, is that of a very swift and essentially Arab expansion in a first phase (17-23/638-73), followed by a stabilisation, at times disrupted by the rural non-Arab immigration. The topographic framework of Kūfa during the rst/7th century evolved while remaining faithful to the original plan. The first Kūfa, that of ‘Umar (17-23/638-43) was a military camp, geometrical, airy and open, where tents quickly raised for an expedition were drawn up in lines. Soon, without doubt after the pacification of the Iranian territories, the need arose for a more permanent settlement, where tents were replaced by huts of reeds, which were abundant in the region. A third stage saw the substitution of houses (idbr) for huts, in labīn or clay dried and cut up in large rectangular blocks, a stage inaugurated under the first governorship of al-Mughaṭa b. ‘Abī ‘Amra (22-4/642-4). In fact, all this information given by Yāḥūl and reproduced by Massignon. Nevertheless, it is contradicted by Sayf, who compresses the stages, stating that the building of Kūfa in labīn was decided very rapidly, before the ḥādiyya itself, in 17/638. Finally, it is with Ziyād (50-1/670-3) that the idbr or Mesopotamian fired brick was introduced, at first to construct the cathedral mosque and the governor’s palace which adorned it on the south, later no doubt for the houses of the aristocracy or idbr. crossroads by the Iranian form of

Kfifa. The
masddijd, the

or tribal lots which constituted the main

Kfifa was to undergo profound
changes during the high 'Abb&sid period. The early
'Abbisids considered making it their capital and
established themselves there for some time, but the
'Aldi presence and sympathies were so strong that
they wavered for some time between Kufa, Anb&r
and the new city of H&shimiyya which was coupled
with Ba& Ibn Hubayra, before al-Mu&uir founded
Baghd&d (145-6/762-3) and moved the dayr al-nash
and dayr&nda there from Kufa (al-Bald&ji, F& modes, 291), which indicates clearly that Kufa had assumed
the role of administrative capital of the empire,
even if the caliphs did not always reside there.

During this short period of thirty years (132-46/
750-63), there took place an Islamicisation of a part of
the Kuften toponymy, following the influx of Kufan
soldiers: for example, the streets of Lab&jmn "Ar& and H&dij‘am ‘Antara and the naming of
crossroads by the Iranian form of bah&jld, such as
the bah&jld of Badji (al-Bald&ji, F& modes, 280).

On the other hand, the early 'Abbisids undertook
the building at Kufa of al-Ru&fi and the castle of
Abu ’-K&j‘a; above all, al-Mu&uir, after the move
to Baghdad, had the city surrounded by ramparts
and a moat, making the inhabitants bear the costs of
It is probable that the enclosure did not
not surround the Kudais and some gi&bd&ni outside the
centre, thus creating a differentiation between a
madina and suburbs. The term madina in the sense
of a historical urban nucleus, elaborated, closely
packed and protected by walls with gates, makes its
appearance for the first time in the account given by
al-Tabari with regard to the revolt of Ibn Tab&tab (199/814). The same author remarks that the Kudais
contained dwelling houses, just as there appears in
his writing the idea of a suburb or rabd (viii, 561).

Thus we are in the presence of the "process of
civilisation" of Kufa in every sense of the term:
it became a classical Muslim town after having been
an Arab camp-town, and it became a civil centre
after having been a military camp. Finally, during
the 3rd/9th century, and although it always remained
clearly Arab, its population was mixed and the city
began to live in osmosis with the Sawad’iyun or
people from the Sawad who started to become
Muslim. Nevertheless, there is a problem of knowing
whether, at its apogee as a city, in the 3rd/9th century, Kufa entirely lost its character of a spacious town and came to resemble those Islamic cities of a latter age where the madina became an assemblage extremely crowded with houses and almost stifling. It does not seem so, because the geographers of a later period, such as al-Muqaddasi and much later Ibn Djubayr (though the latter was writing in a period of the city's complete decadence), allow one to catch a glimpse of the existence of green or garden spaces in the heart of the town. But these same geographers, as the archaeological remains stretching as far as Najaf also indicate, testify to the expansion of Kufa towards the west, far beyond the early boundaries. But then, Kufa was no longer one of the centres from which early Islam, i.e. conquering Arab Islam, radiated, but an important city of 'Irak, the simple capital of an administrative area.

The provincialisation of Kufa, and even its decadence, became an established fact in the 4th/10th century. The old structures (the military arba', the tribal spirit, the financial system) began to break down, because the whole edifice of the conquest, inherited from the Arab empire, and of which Kufa was merely the concrete form, became obsolete, and it is known that at its height the caliphate submitted to the tribunal of the Buyids the same time as the majority of the Muslim world broke up. Because of this, the decadence of Kufa was only one of the manifestations of this profound change which intercontinental commercial activity was unable to sustain and prolong, as at Bagrá for one or two centuries. One may speak of a crisis of the Islamic city (Massignon), but in reality we are concerned with a general crisis of early Islam as a state and society, indeed as a civilisation: even more, one might say, with a historical mutation for which a town like Kufa should certainly pay the price. On the concrete level, there was the great Isma'il outbreak at the end of the 3rd/9th century, of which Kufa was the primordial crucible and of which the Isma'ili phenomenon vanished. The urbanised space in the heart of the town. But these same disturbances was made there at that date. The great mosque, the cupola had been erected by al-Mukhtar had been repaired and over which a diawba of Kufa as it was never to recover from these. It is this which explains the emergence in 334/945, not far from it, thanks to the protection of the Bujids, of Najaf or Mashhad. The city was the capital of the Buyids from the end of the 3rd/gth century, had become the specifically distinguishing dimension of Kufa. Shi'i religious symbolism was concentrated there, and as it happened, the old Arab Kufa which was far from being identified with the Shi'i phenomenon vanished. The urbanised tribal structure also collapsed at the same time as there arose a "re-bedouinisation" or, at any rate, a growing thrust from a new nomadic world of the Arabo-'Irak steppe. Thus it was in 386/996 that Bahá' al-Dawla ceded Kufa as an ishtá to the chief of the 'Okaylids. The Banu Asad, the Tayyi', of whom a large fringe remained outside the city limits, because undoubtedly living in symbiosis with it, and also the Shammar, newly-come on the scene, dominated Kufa and ruined it. Thus these same Asad (to differentiate them from the settled Asad), from whom the grammarians of Kufa derive, by means of a real ethnological effort, the all the flavour of their citations, preserving themselves with their very strong identity, came to present themselves as taking part in the ruin of Kufa, the new incarnation of Lugal, Ur and Babylon, and which was soon dead like them. In 495/1091, with the emergence of al-Hilla, Kufa lost definitively its importance and the major part of its inhabitants. Ibn Djubayr (539-61/1144-1227), who visited it a little later (578/83-1182-5), speaks of it as a deserted and ruined city but one where some inhabitants still survived, subjected to the regular pillages of the tribe of Khashdāja. Kufa, Beitir 1950, 187, 188. The whole built-up area between the mosque and the Euphrates had been destroyed and was covered now with orchards. He speaks at some length of the cathedral mosque, still standing, with its high ceilings, its columns leaning on the inside, a prayer hall with five bays, its sacred vestiges in 927, the mausoleum of 'Ali, the timar of Noah and the supposed tomb of Muslim b. 'Askil. After the Mongols had conquered 'Irak, Mustawfi Kaswini wrote for the Mongol prince a treatise describing the resources of the country (Nushtal al-hilal, tr. Le Strange, 30, 166, 210), where he speaks of Kufa as having ramparts with a circumference of 28,000 paces and of its important agricultural role. Finally, Ibn Ba'ttuta (9th/14th century) who, on the subject of Kufa, reproduces in part Ibn Djubayr but adds some personal elements, sees it, in a similar way to Mustawfi, as a town ruined for the most part, but not yet dead. According to him, of the ksa al-hidra, nothing more than the foundations remained, but the marabouts, still beautiful, survived. He speaks of the disappearance of Kufa as if there were no more than one, where the tomb of al-Mukhtar had been repaired and over which a cupola had been erected (Kufa, Beitir 1950, 210). In the Ottoman period, Kufa fell to the rank of a sāhīya dependent on the kādī of Najaf, which was dependent in its turn on the sāhīya of Karbalā'. Niebuhr visited it and compiled a plan of it. Massignon went there for a first time in 1908 and for a second time in 1934. He spoke of the 'now deserted site of the great city which was the most Arab of the Muslim metropolitan', which, of just a few traces of buildings were marked out: the Djamé, the tombs of Hāni', the Banu 'Ishaq and the Bayt 'Alla, two large houses, one of which was built as the English, the small oratory Hannāna and the madrasa al-Sabha. He noted that a new quarter had appeared between the mosque and the Euphrates. It still exists, and has even been extended; however, it is less important than the recent western quarter, towards Najaf, which is mainly residential. Some other European archaeological missions went to al-Hira (Tablot Rice in 1931, in particular). Since 1928, the site of Kufa, declared an archaeological site, has become an object of interest to the 'Irāq academic authorities and a first season of excavations was made there at that date. The great mosque, completely and sometimes awkwardly restored, remains the central building; it seems to be raised in comparison with its earlier level and only the ramparts remain. The 'asr, much larger, has just been mapped out. It is a building now in ruins, though more instructive than the mosque. Let us also note the presence of the mosque of al-Sabha to the west of the site. Various objects in glass and ceramic and some coins of the Umayyad period have been found. Nevertheless, the archaeological exploration of Kufa may be considered as only in its early stage and, if well handled, as being capable of adding much to our knowledge of the city, still essentially one derived from books.

II. Politics, ideology and culture in Kufa.

While in the ist/7th century Kufa played a political
role of the first order, as the matrix of a large number of matters of future significance for Islam, in the 2nd/8th, after the foundation of Baghdad and with the opening-up of the Islamic empire, politics and the struggle for power left Kufa aside; but, on the other hand, cultural activities developed there and achieved a high level (between 250 to 350/approx. 760 to 860). From then there is evidence of a triple Kufa: a political Kufa (up to 150); a cultural Kufa (150-250) and then a purely ideological Kufa (250-350) which had become a focal point of doctrinal Shi'ism.

The principal episodes which punctuated the political activity of early Kufa were: the participation in the revolt against Uthman (34/655-4); the support given to Ali for the two great internecine battles of al-Daimal (36/656) and Siffin (37/657); the emergence in its heart of the Kharijite movement; the beginnings of political Shi'ism with the accession, which was suppressed, of Hujir b. 'Ali al-Kindi (31/651). After that, the pro-Shi'i revolts succeeded one another, and were just as regularly quelled: the episode of Muslim b. 'Ali and the massacre at Karbala' (60-1/659-60), the march of the Taawubah (63/664), the uprising of al-Mugthar (66/685-6), the preaching of al-Mughira and of Baytun, the revolt of Zayd b. Ali (122/740) and that of 'Abd Allah b. Mu'awiya (127/744). Finally, it was Kufa which was the directing brain behind the 'Abbasid da'wun, and it was at the great mosque of Kufa that the first caliph of the new dynasty was solemnly invested (76/799). But Kufa equally underwent numerous rounds of Kharijite assaults, particularly in 76/695, when it was threatened by Shabiha, and more seriously in 127-8/744-5 by al-Dahhak. It participated, in 82-3/701-2, alongside Basra, in the great revolt of Ibn al-Ash'ath which brought the Umayyad régime close to its collapse and which was a revolt of the ansar without ideological content.

This abundance of insurrections, of seditious actions and political events, earned Kufa the reputation of a turbulent, agitated, ambitious city, and, for the later Shi'i consciousness, of a martyr city. Thus on the majority Sunni side, there were some solid prejudices, on the other side, a whole apocalyptic elaboration in which "sacred Baghdad will be destroyed and Kufa will be queen of the world, after having been a dwelling of exile and waiting for true believers." According to the kitab of Salman, "Kufa is the kabba (= royal tent) of Islam; a time will come for the world when there will be no true believer except the one who lives there or whose heart sights for it" (Massippon, Explication du plan de Kufa, repr. in Opera Minora, iii, 54).

In reality, this constant political effervescence of the 1st/7th century resulted from the structure of Kufa itself as well as in historical evolution. As a fundamental component of the system of the ansar at least until 30/650, the date at which Basra outstripped it in the conquest of the Iranian East, Kufa sheltered the conquerors of 'Iran from the time of the first wave onwards, that of the Ahi al-Ayyam until the Ahl al-Kadisiyya. The first presumed upon the antiquity of their conversion and their faithfulness to Islam, the second had participated in the Ridda, but they were of no less high Arab lineage. Kufa, on the other hand, drained the major part of the resources of the Sawadd and the leaders of the army managed the ancient royal domains, this becoming later a real apple of discord, while the immigration to Basra, except for that of the Bakr, was that of latecomers, of tribes from the Arabian south-east, newly come to the scene of conquest and arriving in complete, homogenous tribal groups. Within the tribal structure of Kufa, in the conditions which surrounded its genesis, by the attraction exercised over the new immigrants or najdall, and the lack of any immigration control, from the very fact of its supremacy in the high period, some germs of tension took root which were ready to develop. Under the caliphate of 'Umar, the equilibrium was maintained, and the armies of Kufa were occupied in conquering Persia. It is in the caliphate of 'Uthman that the internal conflicts began to appear; the former Islamic élite, raised up by 'Umar, yielded ground to the traditional chiefs who shared in the awliya and now their position reinforced by the waves of najdall of their own tribes; at a typical case of opposition is between an Aghfar Nakhita and an Aghfar b. Kays). The activism of the 'Abi al-Ayyam, disappointed by the new polities, resulted in the murder of 'Uthman in which a number among them were involved, and this ranged them necessarily on the side of 'Ali. 'Ali's coming to Kufa highlighted the new phenomenon of the supremacy of the ansar over Arabia for the definition of the political destiny of the Arabs; for four years, Kufa was to be if not the capital of the empire, seeing that the empire was divided, at least a centre of major decision and the seat of the caliphate. From this privileged episode of its existence, Kufa was to derive its future pretensions, but also a persistent faithfulness to 'Ali and his family. Nevertheless, from its origins, the faithfulness was far from making for unanimity. The 'Ashraf or traditional chiefs of the tribes, having in general participated at al-Kadisiya, and being enrolled in the jahfa of the 1st/7th, were lukewarm towards the cause of 'Ali and consequently also the mass of the inhabitants who, in general, followed them. The activists remained (who may be named as the jahfa (q.v.), of whom a majority cast in its lot with 'Ali and on whom he showered benefits, but of whom a minority, harder and more intransigent, showed itself reticent and soon hostile with regard to him. After the arbitration, it appeared that 'Ali could no longer be certain of anyone except his partisans, his ahl, in the political sense of the term, while the intransigent members of the jahfa fell into Kharijism and the conservative group of the 'Ashraf abandoned him; whereas the dislocation of the coalition which he had constituted, whenever the minority character and powerlessness of the jahfa for a century. The Umayyads governed indeed with the support of the 'Ashraf, who did not like them, but found in them a principle of order. They were satisfied with their growing social influence, guaranteed by the Umayyad régime. It is this which explains why the 'Ashraf ranged themselves on the side of the established power every time that a Shi'i insurrection broke out, and why that power gained their collaboration in disarming the Shi'i troops. In 61/680, they even took part in the murder of Husayn; they mobilised actively against al-Mugthar, who threatened their privileges; and they regrouped themselves around the governor in order to bring about the failure of Zayd b. 'Ali's action. Only the great revolt of 32-3/701-2 was a specifically Shi'i revolt against the preponderance of the Ahl al-Sham, the tyranny of the governor al-Hadjdad and, because of this, it was led by the 'Ashraf as well as by the jahfa. But there followed a large-scale militarisation of the mshir and the foundation of Wasit, the settlement of the Syrian army in 'Irak as if in occupied territory.

If, throughout the 1st/7th century, the majority of the 'Ashraf showed themselves hostile to the
Shi'i movement, certain of the Ashāfīs nevertheless participated actively in it, such as al-Muhājir himself, ‘Abd Allāh b. ‘Abd al-Rahmān b. Sufyān al-Shābānī. But after al-Mu‘āthir, it was above all popular elements which supported Shi‘i activism, whether from among the Arabs, Yemenis in particular, and more precisely, Yemenis from certain clans of Hamdān (Khwārij, Shāhīr, etc.), or else recruited from among the plebeians of the new immigrant wave, a mass operation utilised by al-Mu‘āthir. It is probable that the rallying of the Yemenis to the Shi‘i cause was due to their marginal position in the Arab city, socially as well as culturally, for there is no doubt that a number of poor were recruited from the clans of Hamdān (clans of ra‘ī and shaykh) and that the call for the rights of the ‘Alī b. Abī Taﬁl found some echoes in the old Yemeni consciousness. It is this which explains the populist character of the revolt of al-Mu‘āthir (66-76/685-95), perhaps the most important Shi‘i revolt of the 1st/7th century. It succeeded in assuming power at Kufa for some time; above all, it fashioned the Shi‘i consciousness by giving it a mystique, a language, slogans and some elements of a doctrine. Also, the Kaysānīyya (q.v.), who derived from it, would be, after Abū Ḥasan, at the root of the ʿalawī for the Family.

With the Abāsids dynasty, there took place an intellectualisation and a deepening of Shi‘ism, the political action becoming intermittent. Hence one must wait until the year 293/808 to see a resurgence of an insurrection of the old style, that of Ibn Tabāṭabā, and the year 250/864 for that of Yabāb b. ‘Umer, far less dangerous, to break out. But Shi‘ism as a faith did not cease to gain ground, so that it very quickly became the quasi-unique ideology of the town at the end of the 3rd/9th century and constituted a cultural and religious tradition in the 4th/10th century. Certainly, it was at this moment that the Shi‘i imagination, re-reading the history of the town, reclassified its sites according to its own standards, dividing quarters and mosques into blessed and cursed ones.

Kufa was able to export its Shi‘i consciousness to the Iranian world, and to Kūm, especially, Kūm was indeed a projection of Shi‘i Kufa, as Balūk, Marz and Nishābūr were a projection of Başra. Because of this, as a colonising centre, Kufa showed itself less active than Başra. Each of the two cities is known to have had its ‘ulama‘ and its ma‘ṣūla (q.v.). The central Iranian territory was practically partitioned: Rayy was the ma‘ṣūla of Kufa, and Isbāhān depended on it, but the ma‘ṣūla of Kufa, so, Nishābūr, showed itself less active than Basra. Each of the two cities is known to have had its ‘ulama‘ and its ma‘ṣūla (q.v.).

The central Iranian territory was practically partitioned: Rayy was the ma‘ṣūla of Kufa, and Isbāhān depended on it, but the ma‘ṣūla of Kufa, so, Nishābūr, showed itself less active than Basra, so, Dīnawar, although several sources speak of Dīnawar as the ma‘ṣūla of Kufa. But it is especially in the race to the peripheral Iranian territories, from 294/899 onwards, that Başra gained the upper hand, with the conquest of Khurāsān, while Kufa had to content itself with ʿAṣhārābād, a province of little account, with Kāshān as an extreme ma‘ṣūla. Nevertheless, over the centuries, the specificity of Shi‘i nature of Kufa was never completely lost in the rest of Iran, but rather became integral into the whole Shi‘i consciousness of Islam by way of Baghdad and, by that of Kūm and Mashhad, to the whole modern Iranian lands, while Başra was not alone in defining the structures of later Sunni Islam, although it had been a primordial centre bringing the idea of ʿism into action. However, the religious and cultural legacy of Kufa should not be limited to the transmission of the Shi‘i tradition. Far more important can be shown by analysis to be the participation of Kufa in the elaboration of the universal Arabo-Islamic culture which became rooted in the great ʿism of the first two centuries. Baghdād was to be the heir of Kufa and Başra. These two fundamental matricles which defined the general lines of the culture of Islam, each with its own genius: Kufa excelled in the recovery of the Arab poetic patrimony, in the exegesis of the Kur‘ān, in law and genealogy, whereas Başra, more rationalist and critical, invented Arabic grammar and was the great centre of Mu‘tazili speculation.

There are two great cultural moments in the history of Kufa: the one oral, of obscure gestation, where the culture, still undifferentiated, was seeking to establish its foundations (77/696-706/9); the other, brilliant, which developed a true classicism and bequeathed to us some great works (250-254/767-864). In both cases, the two fundamental poles around which the new culture expressed itself were Bedouin Arabism and the Islamic message, the influence of the conquered peoples proving negligible. Arabic writing was perfected at Kufa, undoubtedly with the participation of the Arabs of al-Hira, and Kufa, having become a monumental writing, may be considered the most ancient specimen of post-Islamic Arabic writing, although the type of writing was used on Sasanid ʿilmār. It is also in very early Kufa that Ibn Mas‘ūd lived and taught, later becoming the eponym whose name crystallised the traditionist current and to whom some disciples were attached: Alkama b. Kays, al-Aswad b. Yazid, Masrāk b. al-Adīda, ʿUbayda, al-Hanfūl and Sufyān. Schacht thought that the founding role of Ibn Mas‘ūd was fictitious and that some forged traditions were projected on to him between 100 and 310/719-745, establishing the chain Hamdād b. Abī Su‘aymān-ɪbrāhīm al-Nagha‘īl b. Mas‘ūd, but that nevertheless ʿiskh, which preceded kadsh, was created by the single key centre of Kufa. In fact, it seems clear that the three key-personalities, in the 1st/7th century, played a main role in the first glimmerings of law, kadsh and exegesis: ʿIbrāhīm al-Nagha‘īl, Sā‘īd b. Dinawar and Abī ʿAmr b. Shurhābīl al-Shāhīs. In the domain of spirituality, there was no personality here comparable to Ṣanān al-Basri, but the currents of asceticism and mysticism found their masters in Uways al-Karad and Rāfī‘ b. Khudaym. Let us cite in the sphere of ʿaṣf and al-khābār the names of two precursors: Muṣjīd b. Sa‘īd and Muhammad al-Kalbī, for the collection of poetry that of Hamdād; and for poetic creation, the names of ʿAshā Hamdān and al-Kindī.

The second phase of the cultural history of Kufa, whose beginnings coincide with those of the Abāsids dynasty, saw the differentiation of the disciplines and the emergence of the great founders and systemisers: Abī Ḥanīfa, master of the school of ʿaṣf in canon law (d. 156/772); Abī ʿAbd Allāh, one of the first great Arab historians (al-ḥāmashiyyān) (d. 155/772); al-Ku‘ayfī, to whom the first work of grammar is attributed, ʿArīb b. Bahdāl (d. 137/754) and Ibrāhīm b. ʿAmr, who, together with al-Risāla, established three of the great eras of the Kur‘ān. Later, the generation of those who died in the years between 280 and 300/796-816 assumed the burden of recording, codifying and totalising the knowledge founded in the preceding period, so that the works which survive today belong to this generation of active disciples and totalisers: Abī Yusuf (d. 272/986) and Muḥammad b. al-Ḥasan al-Shaybānī (d. 258/874) in law; Ḥaqqī b. Muḥammad al-Kalbī (d. 260/874), highly erudite, a genealogist and al-khābār, well-versed in
knowledge of the Arab patrimony which he worked increasingly at collecting and establishing; and finally al-Kisāʾī (d. 179/795), who was the master of the grammatical school of Kufa. This school collective opinion still claims to set up as a rival of that of Basra. It is regarded as more deeply rooted in the Arab environment, with a passion for anomalies opposed to that of Basra, engendered a line of grammarians marked by two wijsrs.

But the renewal of interest in the political and cultural history of Kufa, that by which it is largely known, is its school of grammar and its role as cradle of Shi'ism, perhaps because this is what delivering to the Islamic world the admirable work of al-Farḥād, who is comparable to al-Astakh. This being granted, al-Kisāʾī, like Shbahay at Baṣra, engendered a line of grammarians marked out by al-Farrāʾ, who is comparable to al-Astakh. This being granted, al-Kisāʾī, like Shbahay at Baṣra, engendered a line of grammarians marked out by al-Farrāʾ, who is comparable to al-Astakh.

Two generations, begins to give forth an eclectic school of Kufa and Basra for the totalisation of the earlier knowledge of the two wijsrs. A particularisation of the fundamental contribution of Basra, according to the Islamic world the admirable work of al-Farḥād, who is comparable to al-Astakh. This being granted, al-Kisāʾī, like Shbahay at Baṣra, engendered a line of grammarians marked out by al-Farrāʾ, who is comparable to al-Astakh. This being granted, al-Kisāʾī, like Shbahay at Baṣra, engendered a line of grammarians marked out by al-Farrāʾ, who is comparable to al-Astakh.

But already Baḥdād, after having gathered to itself the greatest names of Kufa and Baṣra for two generations, begins to give forth an eclectic school of Kufa and Basra for the totalisation of the earlier knowledge of the two wijsrs.

In the intellectual consciousness of contemporary Islam, that which is willingly remembered of the historical evolution of Kufa, that by which it is largely known, is its school of grammar and its role as cradle of Shi'ism, perhaps because this is what particularises it the most in the last instance, and laid the foundations for its survival in the other. But the renewal of interest in the political and cultural history of ancient Islam will allow for the growth of a further consensus. Kufa is thus assumed as a place of Arab settlement and immigration, as a centre of great political struggles and as a specifically Arab city which, along with Basra, established the basis and true style of the cultural scheme of Islam.

**Bibliography:** The most ancient sources on the history of Kufa, consisting of monographs written by the al-Murrahāyyn of the 2nd/8th century, have entirely disappeared as such, but some more or less important fragments of them are to be found in the great well known standard works which have derived from them the main part of their material part. Let us cite first al-Haytham b. 'Abdi, Kitāb Kūfah al-Kūfah, K. Ittiḥād al-Kūfah, K. Kūfah al-Kūfah wa l-Bayyin, K. Faḥāṣ bi l-Kūfah, K. Islām bi l-Kūfah, K. Shabāb al-Baṣrī, Kitāb al-Kūfah, K. Ummad al-Kūfah, al-Kūfah, which have derived from them the main part of their material part. Let us cite first al-Haytham b. 'Abdi, Kitāb Kūfah al-Kūfah, K. Ittiḥād al-Kūfah, K. Kūfah al-Kūfah wa l-Bayyin, K. Faḥāṣ bi l-Kūfah, K. Islām bi l-Kūfah, K. Shabāb al-Baṣrī, Kitāb al-Kūfah, K. Kufra, a group of oases in the Eastern Sahara in the Libyan Desert half-way between Cyrenaica and Wadai. For a long time it was known only from Rohlf's account, who managed to reach it in 1879. Subsequently, Kufra has been visited by two other Europeans, l′Arche de Logis Lapierre (1918) and Mrs. Rosita Forbes (1920-1). Their descriptions have completed and corrected that of Rohlf.

The name Kufra applies to a number of oases...
which stretch from the south-east to the north-west in a line about 300 km. long, between 24° and 26° N., 18° 40' and 21° 40' E. The most southerly oasis lies about 1,350 km. south-east of Tripoli and 900 km. south of Benghazi. There are five in all, and they are separated from each other by air, or plains of compressed gravel. The total area of the group amounts to about 17,842 km². It occupies the bottom of a depression which rises in altitude from 250 m. in the north to 450 m. in the south. The soil is generally formed from overlapping strata of marly sand in the northern area of the dunes which join those of the Libyan desert. In the central and southern parts, the depression is crossed by calcareous mountains which rise above a base of Numidian sandstone; their summits are table-shaped and similar to that of the gap of the South Algerian Sahara.

There are neither springs or running water at Kutna, but everywhere the water-table rises to between one and three metres from the surface. At various points of the landscape the water forms brackish lagoons or even permanent lakes, of which the most imposing is 10 km. long. They can be regarded as the remains of an earlier situation when the lacustrine nature of the oasis was much more marked than it is today. The subterranean water is sufficient to support plentiful and varied vegetation. In the dried-out basins had (cornus oleosa monacantha) and dis grow, which provide excellent food for camels. Although the green belt around the lakes and marsh depressions is often very narrow, cereal crops are grown in it—wheat, barley, camels. Although the green belt around the lakes and marsh depressions is often very narrow, cereal crops are grown in it—wheat, barley, which provide excellent food for camels. Although the green belt around the lakes and marsh depressions is often very narrow, cereal crops are grown in it—wheat, barley, camels.

Almost the entire population belongs to the Zawiya tribes, Arabised Berbers who took the place of the Tubu, the previous masters of the oases. Most of them are semi-nomadic and occupy only temporary encampments. The geographical position of Kufra gives it a certain commercial importance. It was a stopping place on the caravan route leading from the interior to the coast. The oases have been used for livestock such since the beginning of the 19th century. According to Muhammad al-Hashālī, there was a market at Dhût, where business was conducted by barter. As in all Saharan markets, the chief item of trade was slaves.

There is very little information on the history of Kufra. According to Rohlf's, it could have been inhabited by the Garamantes. Buildings there are comparable with some at Fazzān [q.v.] which Duveyrier pointed out and which seem to go back a considerable period in time. When its history began, the country was occupied by the Tubu, who left many traces of their stay from this period—cemeteries, houses and fortified villages built on the summits of mountains. The population of these places was pagan, and this may explain the origin of the name Kufra, the previous masters of the oases. In about 1730 they were succeeded by the Bashkardis, a group of dialects making up Bashkard form a distinctive Iranian language of its own, to be separated from Balū, which is the Kirman-western Balūcistān region, in early medieval Islamic times.

The name, literally "mountain dwellers", probably stems ultimately from O. Pers. kufi£i/kufīl ("mountain"); the name of a people in the Diabāl Bāzīr in eastern Kūrān, where dwelt the Balūc. Grosso modo, this region corresponded with the little-known one of Bashkard/kushkard [q.v. in Suppl.] in modern Persia, sc. the mountainous area lying to the east of Mālib and between the Dīz Murūt depression on the north and the coastal plain of Mālik to the south. Whether the Bashkardis are descendants of the mediaeval Kūfīls is unclear and probably impossible to prove or disprove, in view of the dearth of historical, demographic and linguistic information on this remote corner of Persia; one can only remark that the two groups of dialects making up Bashkard form a distinct Iranian language of its own, to be separated from New Persian on the one hand and Balūc on the other.

The Arabic and Persian geographical writers of the 9th/10th century (Yṣṭāfi, I. A. Haskalw, the Huddāl-al-Islām, etc.) mention the region of the Kūfīls as a mountainous one, lying to the south of the Diabāl Bāzīr in eastern Kūrān, where dwelt the Balūc. Grosso modo, this region corresponded with the little-known one of Bashkard/kushkard [q.v. in Suppl.] in modern Persia, sc. the mountainous area lying to the east of Mālib and between the Dīz Murūt depression on the north and the coastal plain of Mālik to the south. Whether the Bashkardis are descendants of the mediaeval Kūfīls is unclear and probably impossible to prove or disprove, in view of the dearth of historical, demographic and linguistic information on this remote corner of Persia; one can only remark that the two groups of dialects making up Bashkard form a distinct Iranian language of its own, to be separated from New Persian on the one hand and Balūc on the other.

The Islamic sources agree on stigmatising the Kūfīls on the 4th/5th/7th-12th centuries as a predatory people, nominally Muslim, but behaving with inhuman cruelty to the travellers and others whom they intercepted within the Dīgāl-e Lāt, into which they raided from their hill fastnesses; there is a classic description of their characteristic savagery in al-Muṣīlīd (writings: cf. 375/985), 488-90, of Schweitzer, Jean (in Moniteur, 1823, 2). The Dīgāl awaits Muṣīr-al-Dawla and his nephew Ajūd al-Dawla took draconian measures against the Kūfīls as they extended their rule eastwards from Fārs to Kūrān and put an end to the independent power in Kūrān of Muhammad b. Iyās [see LisyD.S.]. In 326/936 Muṣīr-al-Dawla defeated the "chief of the Kūfīls and Balūc", All b. al-Zanjādī, at Daghfir in the sadīt or mountainous zone of Kūrān, but had to leave him in control of the Kūfīls' mountain haunts.
After the death of Muhammad b. Iyâs in 336/947, 'Abd al-Dawla invaded Kirman and wrested the province from the former's sons and their allies the Kûfish. During 360-1/970-2, two campaigns were launched against the Köfiz, as a result of which the Köfiz lands lay waste, and large numbers of them deported or taken as hostages (for details, see C. E. Bosworth, *The Banû Iyâs of Kirman* (320-359/932-58), *in Iran and Islam, in memory of the late Vladimir Minorsky*, ed. Bosworth, Edinburgh 1971, 111-28).

The Köfiz did not, of course, disappear after this. They continued to prey on travellers through the Great Desert, although the establishment in the 9th/10th century of the Great Saljûk suzervative and the autonomous Saljûk amirate in Kirman seems to have reduced their activities to manageable proportions. The amir of Kirman Kâwûr [q.v.] is said to have massacred the Köfiz chiefs in their strongholds in the Djibal Bâriz, and after this, mention of the Köfiz as a distinct ethnic element drops out of mention in the histories; presumably they now mingled with the general ethnic stock of south-eastern Persia.

**Bibliography:** The information of the medieval geographers is given in *La Strage, *The lands of the Eastern Caliphate*, 316-17, 424-3, and Schwartz, *Iran on Mitteleast*, 261-6, etc. also *Hudud al-Slam*, 65, 154, 201, 371-5. The Köfiz campaigns are described by Miskawayh in his *Taškâr al-arman*, later repeated in Ibn al-Aghâr; see Bosworth, *The Bush ãyûs of Köfiz, Inc. ii*. All these sources are utilised in the detailed study by idem, *The Köfizh and Qays in Persian history*, in *Iran, Iran: the British Institute of Persian Studies*, xiv (1975), 9-17. (C. E. Bosworth)

**KûH-I BABBâ**, the mountain massif of central Afghanistan, being the westwards and southwards extension of the Pamirs "knot" and the Hindu Kush [q.v.] of north-eastern Afghanistan. The name Köhâ-Babbâ is properly given to the west-east chain of magistral running westwards from Kâbul and lying to the south of the upper Heri Rôd, with outliers running southwards and westwards through the regions of the Ghûrât and Hazârâyât [see GUR and HAQZARAYAT in Suppl.] between such river valleys as those of the Helmand, Arghandab and Tarnak. On the northern side of the Heri Rôd, stretch the Paropamisus Mountains, rising to 3,600 m./11,800 ft., and northwestwards to the Murghab valley and the Russian border, the Köhâ Bbîr (4,230 m./13,880 ft.) and its continuation the Band-i Turkistan (3,500 m./11,500 ft.). To the east of Kâbul, the Safî Köh stretches to the south of Djalâhâb-shift towards the Khyber Pass [see KHAVIR PASS] and the Pakistan frontier, attaining a height of 4,760 m./15,580 ft. The central Köhâ Bbîr has as its highest point Shâh Fûlaâr, 3,140 m./10,300 ft. high and covered in perpetual snow. The whole region is thus a ganglion of mountain chains and upland plateaux, across which communication has always been arduous; thus the Uzun Pass between the headwaters of the Kâbul River and the Helmand lies at 3,330 m./10,900 ft., the Shîkhir Pass between the Kâbul valley and northern Afghanistan via the Ghôrbân lies at 3,000 m./9,845 ft., the Hadîjâg Pass from the Unâî district northwards to Bâmâyân at 2,700 m./8,856 ft., and the Khîrûn Pass connecting the valleys of the upper Heri Rôd and the Helmand lies at 3,700 m./9,790 ft.

Because of the difficult communications, the historic routes linking the principal towns of Afghanistan, e.g. Kâbul, Kandahâr and Herât, have often gone round this central massif southwards or northwards, and today, it remains one of the most thinly-populated and least-known regions of the country. Much field work, archaeological, ethnological and topographical, needs to be done here, and this will certainly throw important light on Afghanistan's past history. Because of the configuration and the harsh climate, much of the region is totally unpopulated, but on the plateaux and in the villages there is pastoralist transhumance and nomadism and some agriculture. The population of the Ghûrât and Hazârâyât regions is predominantly Tadjik, with vestigial ethnic elements like the Mongols, and with increased penetration on the southern fringes by Pashtûns. The towns of the region, like Pandjâb or Pandjâl, Qohzâh, Uzûqân and Daulâtâr, are small and have only local importance.

**KÔH-I NûR** (Koh-i Noor) a diamond, now weighing 1006/16 carats, but originally much larger; the early history of it is obscure, and authorities are not agreed as to whether it may be identified with the diamond mentioned by Bâbûr in his Memoirs ([Babur-nâma, tr. Beveridge, 477, 702]; but ca. 1656 it was presented by Mr Dunjîl [see MUHAMMAD SA'îD] to the Moghal emperor, Shâh Djiân, and was seen in 1665 by Tavernier in the treasury of Awrangzâb; in 1739 it was carried off to Persia by Nârîd Shâh, who gave it the name it now bears. Nâdîr Shâh's grandson, Shâh Rûdî, gave it in 1755 to Ahmad Shâh Durrâd, whose grandson, Shâh Shâhjâhân, when in exile in Lahore in 1813, had to surrender it to the Sikh Maharajâ Djalî Singh. On his death-bed in 1839, Ranjit Singh is said to have expressed a wish that the diamond should be sent to the temple of Dâjânnâth, in Orissa, but it remained in Lahore until the annexation of the Pandjâb in 1849 by the East India Company, who presented it to Queen Victoria. It was subsequently incorporated in the state crown used by Queen Elizabeth, consort of King George VI, at their coronation in 1937.

**AL-KÔHÎ [see Suppl.]**

**AL-KÔHÎN**, name of a certain number of Moroccan families, of Jewish origin but converted to Islam. One of the best-known of them is the family to which belonged ABU MUHAMMAD 'ABD AL-KÂDIR B. AHMAD, who towards the end of the 12th/18th century pursued religious studies under the direction of such famous scholars as Ibn al-Hajjâl [i.e., Hammâd b. Ahmad], and Ibn al-Hûrân [see Suppl.]. Being a immediate disciple of Mawâyî al-'Arbî al-Dârkarî [see DARSAYV] he joined the religious order which the latter had recently founded. He made his first pilgrimage, and wrote about this in a *Riha* apparently lost, then finally settled in Medina where he died in Safar 1354/April-May 1834.
Al-Kūhīn—Kūhīstān or Kūhīstān

Al-Kūhīn left behind a Fihrist q.v. called Imādat al-Dīn Abd al-Malik al-Dirayn Allah, known as Aṣība ibn al-Kūhīn (Ms. Rabat, 374, f. 120), two commentaries on al-Buhārī, Mīnak iḥyāyya wa-ma‘āshīh iḥyāyya iṣba‘al il-‘Ābī (Ms. Rabat, 34) and Nazzīf al-ward wa-t‘arrab wa l-misih al-‘ābī bi-sharh al-Thālibī (Ms. Rabat, 892 D), and finally, a Muyay al-fahīr al-matadārā ṣawīr al-munjīn al-munjīn, a selective gloss on the Sharh al-Adh-dhunayiyah of Ibn Aṣība [q.v.], printed at Istanbul in 13235; purely grammatical explanations are set aside, and only the allusive character is kept, in which the grammar is used to illustrate the process of the manifestation of divine light (J. L. Michon, 282, cf. 1375, where two passages from this work are translated).

One of this mystic’s descendants, Ḥasan b. Muḥammad b. Kāsim b. Aḥmad b. ‘Abd al-Kādir (b. 1315 in Cairo) is the author of the Kitāb Taḥālah al-Shāhīyya al-kūhīsī, published at Cairo in 1347/1928-9.

Bibliography: Kattānī, Sa‘ūd al-aswāl, līth. Fās 1316, i, 305-70; Al-Hayy al-Kattānī, Fihīrīs al-fahīs, Fās 1346-7/1937-8, i, 308-71; R. Bassett, in Recueil de Mémoires et de Textes publiés en l’honneur du XIVe Congrès des Orientalisti, Algiers 1903, 205; E. Lévy-Provençal, Chorfa; Becokkoid, S. II, 881; J. L. Michon, Ibn Aṣība et son Mīrāfī, Paris 1933, index. (En.)

Kūhīstān (o) or Kūhīstān is the arabicised form of the Persian name Kūhīstān meaning a mountainous country (derived from kūh, “mountain” with the suffix -istān) and corresponds to the Arabic designation al-Dībā‘ī. As the Iranian plateau is very mountainous, we find many more or less extensive areas in it to which the name Kūhīstān has been given, as Yākūt has already remarked (iv, 204). Many of these names have disappeared in course of time. Thus Kāzvīn (ed. Wistenfeld, 228) says that the term Kūhīstān is used for Media, which other geographers always call al-Dībā‘ī. In the Shāh-nāma of Firdawsi we even find Kūhīstān used as the old name of Mā‘arward-(Nahr (ed. Vulcher, 351) but this is probably a case of erroneous identification made by Firdawsi himself (ed. also Vulcher, 261, n. 351).

The principal districts that are or have been called Kūhīstān are as follows:

1. Kūhīstān-i Ḩurāsān. This is the mountainous and partially arable region which stretches south of Nīshāpūr as far as Sīstān in the south-east. It is surrounded on all sides by the great salt desert of the Central Iranian plateau and consists of scattered groups of oases; one feature of its geographical unity is the fact that no part of it belongs to one of the great centres of civilisation that surround it. These are in the north Nīshāpūr, in the north-east Herāt, in the south-east Sīstān, in the south-west Kirmān with Yezd, and in the west Media. Although Kūhīstān has always been connected with these by caravan routes and is therefore not absolutely cut off, its isolated position, combined with the relatively lower productivity of the soil, has caused it to be little known and neglected and its inhabitants have usually been ruled by a member of independent lords. If it has been reckoned a district of Khūrāsān, this is only because Nīshāpūr and Herāt are relatively the nearest places to it. Kūhīstān has therefore never been a very clear-cut geographical term; a modern traveller like Curzon, although he describes the different districts, does not even mention its name.

The orography of Kūhīstān is still little known.
Kûhîstân, especially for through trade between Kîrmân and Khûrûshân. The province was further noted for a very fine woolen woven there, which Abu Nwâs mentions under the name Kûhîyân (cf. Dâqîqî, Bâyân, Cairo 133l, 1, 29, and R. B. Serjeaut, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1973, 63-6); this industry flourished at Târûf in the mountains near such harvests and was marked there. In the year 1444/1052, Nâṣîr-i Khûrûshân passed through Kûhîstân, going from Ispâhân. He went by Tabâsh, Tûn, Kâ'ûn and Sarâqîsh and describes them as large flourishing towns. In the time of the Salûqs, Kûhîstân, the old asylum of the Zoroastrians, became a refuge for the Ismâ'îlî heretics, who for this reason were often called al-muhdíba al-khûshîya. They built here strongholds on the model of the famous citadel of Alamût; there are still many ruins of these castles which have not yet been fully examined (Herzfeld, Resebeichir, 273; M. G. S. Hodgson, The order of Assassins, The Hague 1953, index; B. Lewis, The Assassins, a radical sect in Islam, London 1967, 45-5; P. R. E. Willey, The Assassins in Kûhîstân, in Jnl. Royal Central Asiatic Soc., iv (1964), 180-2). The Khûshân-âbâbîs had on several occasions to send military expeditions to punish the mullahs (cf. Dînavârî, Taqih-dîüh, Qishân-Gûshh, ii, 47, 49). The coming of the Mongols, who exterminated the Ismâ'îlîs, at the same time brought about the ruin of Kûhîstân. The region lost all importance and the geographers—who Abu 'l-Fidâ'î only quote their predecessors of several centuries before. It is improbable that this is the district referred to by Marco Polo under the name of Tunocain, which Le Strange, Land, 352 proposes to identify with Tân-u Kâ'ûn. During the following centuries the region must have very often been in a state of anarchy (cf. Idîflî, tr. Juhnber, i, 430) when power was in the hands of chiefs of Arab origin. The Sevâfsids exercised some authority there, but after them, power lay in the hands of the amirs of Tabâsh and of Kâ'ûn. At this time, Kûhîstân inclined towards Afghanistan rather than Persia, until the Khâjârs succeeded in bringing it under their sway towards the middle of the 10th century. The chiefs of the ruling families kept their positions as governors for the Shâh and received pompous titles from the Persian court. About 1000 the amirs of Kâ'ûn no longer lived in this town but in Birjand; they claim descent from the Arab tribe of Khûshayma. Some members of this family also ruled some. The rulers of Tabâsh also governed at this time the district of Dûnâbîbâd (chief town Dûnâyân). The settled population of Kûhîstân is of a very ancient stock; their houses are also of a very archaic type. Their dialect seems to offer few peculiarities. The district contains the closest groups of Tûshâr and Dûnâbîbâd and that of Kâ'ûn, Tûn and Birjand. Many villages around Kâ'ûn and Birjand are inhabited exclusively by Sayyids. In some places we also find descendants of the Ismâ'îlîs, who recognise the authority of the Agha Khân, e.g. at Kâ'ûn and Birjand. There are also small colonies of Bahâ'îs, while the Sunni Afghan element is relatively strong. The nomads are for the most part Arab Semites, still speaking Arabic; they live along the main routes, and include the Khûshâyma, from whom came the amirs of Kâ'ûn. A few Turkish tribes are found only in the north as for Turbât-i Haydarî. Finally, in the south there are Balûsh, who move in summer towards Sîstân.

Kûhîstân has never in its history contained any major urban centres comparable to those of northern and eastern Kûshrûsân; when Sykes was there in 1900, Kâ'ûn had only ca. 4,000 inhabitants. This may be one reason why the region (with the exception of the more northerly part, around Zawzan, see 1sâfîr) did not in earlier times produce such an abundance of 'alamâ' and scholars as the other cities of Kûshrûsân. However, Storck, Persian literature, 1, 79-8 mentions a modern Tell Kûshûrî as the scene of Kâ'ûnî by one Dîwâ' al-Dîn Kâ'ûnî on some poets of Kâ'ûnî and Birjand, and in mediaeval times we find Thâfîbî mentioning poets with the name of Kâ'ûnî, e.g. the Abû Mansûr Kâ'ûnî b. Ibrahim Kâ'ûnî in Turtuvarî al-yul'tma, ed. Eghbal, ii, 4. Birjand has in recent times been the most important town, even though it lies in a less fertile situation than the smaller Kâ'ûn. Administratively, much of Kûhîstân falls today within the shâhrastân of Birjand, in the 4th 'asîn or province of Khûrûshân, and within this shâhrastân or district there is bâbâsh or sub-district of the same name (pop. in 1950, 43,600) and a further bâbâsh of Kâ'ûn (pop. in 1950, 65,000). The products of the region include some cereals, such as wheat and barley, opium, silk and saffron, and there is carpet-weaving and camel-raising.

The Arab geographers appear to have known two towns of the name Kûhîstân in the province of Kûrmân. One of them was called Kûhîstân Abî Ghânîm and was in the district of Dûrûf, between this town and the Diabâl al-Kus (Mukaddasî, 47, 4l, 497; Huddâb al-Salam, tr. 65, 124, comm. 37-5; Yûkût, iv, 205; Le Strange, 338). The other Kûhîstân was situated on the road from Sîrdân to Bâm, 6 jinâsh from the former town (Ibn Kuhâshânî, 66; Kudîma, 196; Mühut, 473; Le Strange, 338). 3. Kûhîstân of Bûhû in Afghanistan is a district to the north-east of the town of Bûhû and includes the districts of Pandishir, Nidjzan, Tagan, etc. The population is composed of an element called Tadjiks.
who speak Persian and Pashit, and other elements called Khuhitii who speak Pashita (a Dardic dialect, see DARDIC AND KAFIR LANGUAGES and Parachi (Iranian) (cf. Imperial gazetteer of India, xiv, 244).

4. The northern part of the native state of Swat in the north-west of India is also called Khuhistan. It is the mountainous region around the upper course of the river Swat; it stretches eastwards as far as the Indus and westwards as far as Panjshir so that a distinction is sometimes made between Kuhistan of Swat and Kuhistan of Panjshir. The people of the valleys (estimated to number 300,000) seem to belong to the Indian group of dialects. The principal dialects are: Garwal (Swat Kuhl.), Tawar (Thal Kuhl.), and Mayyuri (Indus Kuhl.).

5. Lastly, Kuhistan is the name of a barren and mountainous region in the eastern part of the district of Kuriati. The population in 1901 was estimated at 12,877 (Imperial gazetteer of India, xv, 353). (J. H. Kramers)
of bronze and the vessels of glass, and a special object known in Khurāsān as waṣama-dīrīk was used for grinding the substance and pouring it into the narrow-necked vessels (for such an object, see G. Fechervari, Islamic metalwork in the Keir collection, London 1976, no. 38, and numerous similar pieces elsewhere).

Al-khulūd also had a specifically medical function as an eye unguent, particulars of which are to be found in Ibn al-Bayḍūr and other such writers. From this function comes the idea of al-khulūd, ophthalmist [see 5AYN].

Al-khulūd is also the origin of our word alcohol. From a fine powder used to stain the eyelids, it came by extension to mean any fine impalpable powder produced by triturating or subliming, and hence was applied to fluids of the idea of sublimation—an essence, quintessence or "spirit" obtained by distillation or rectification. Sublimation and the distillation of drugs was known to Khalāl b. Abābā al-Zahrāwī (Abulcasis) in the late 4th/10th century, but the more complicated process needed for the production of alcohol was probably introduced into the Islamic world from Europe, where it was first discovered in the 12th century. (For a description of the preparation of arak in 16th/17th century Mughal India, see Abu l-Fadl 'Allāmī, Diwan-i Abshar, tr. H. Blochmann and H. S. Jarrett, Calcutta 1893, i, 69.)

Bibliography: the continued publication of previously unknown scientific or semi-scientific texts such as those of al-Ḥamānī and Abu l-Kāsim Kāshānī means that the works cited in the article on al-khulūd in EI1 have become outdated, but no detailed work on al-khulūd has since been published. The reader is referred to E. O. Lippmann, Enstehung und weitere Ausbreitung der Alchemie, Berlin 1935, and to the works of Wiedemann, Beiträge xxiv, 93, 99; xxv, 228; i, 176, 185, in SPME, 1911, 1914, and H. E. Stapleton, Chemistry in Iran and Persia in the tenth century, in Memoirs of the Asiatic Society of Bengal, viii, no. 6, 352, 372; it is advisable to read them in conjunction with all the information now available in the Arabic or Persian texts cited above. Additional information is to be found in other geographical works, in works on pharmacology, and in semi-scientific texts such as Nahr al-Dīn Tūstī, Tanbīḥ-nāmī-yi Iṭḥānī, Tehran 1964. Much material is also to be found in WAKAS, i, 73 f.

(E. Wiedemann - J. W. Allan)

KUHRUD, Arabic form of Persian Kūhrūd "mountain river", a village in western Persia on the summer caravan route between Kāshān and Isfahān [q.v.]. In mediaeval times it fell within the province of Dibāl, and Ḥamāl Allāh Mustawfī, Nuzhāt al-khulūd, tr. 184, places it some 57 miles/92 km. from the latter town; cf. also Schwarz, Iran und Arabien, 349 n. 19. Today, Kuhrud falls administratively in the baškūl of Kūnaq, in the gāhāstān of Kāshān, in the second ıstān or central province of Iran, see Farhang-i ṣ̱anah-i ḡarzī-yi Īrān, iii, 289-290. It lies in the mountains on the slopes of a cultivated valley, and the agreeableness of its climate in summer has been commented upon by numerous European travellers, from Chardin onwards, who have passed through it. E. G. Browne was there in 1888 and collected specimens of the distinctive dialect of the Kuhrūd-Nājīn districts, see his A year amongst the Persians, Cambridge 1926, 293-8.

Kuhrud is apparently unmentioned by the earlier Arab and Persian geographers, until Mustawfī (8th/14th century) comments upon it and upon the fact that the river of Kuhrūd supplied Kāshān with some of its water (op. cit., tr. 72); this river was dammed in Safavid times by the Band-i Kuhrūd in order to assure a supply for Kāshān during the summer months, see Browne, op. cit., 202-3. Its monuments comprise a Safavid caravanserai and two 8th/14th century mosques, one apparently the Shīʿī mosque and the other possibly that of the Sunnī villagers; for these, see O. Watson, The Masjid-i 'Aqīl, Qūhūrd: an architectural and epigraphic survey, in Iran: Final of the British Inst. of Persian Studies, xii (1975), 59-74. The mountains of the Kuhrūd district produce lead and cobalt, and the village may accordingly have had connections with the great ceramics centre of Kāshān; see Hans Wulf, The traditional crafts of Persia, Cambridge, Mass. 1966, 163.

Bibliography: given in the article.

(C. E. Bosworth)

KOKAWA, or KUKA, capital of Bornū [q.v.] for much of the 19th century, situated at 12° 35' N. and 13° 36' E. It was founded about 1814 by al-Hājjī Muhammad al-Ămirī b. Muhammad al-Kānimī [see AL-KĀNĪMI], better known as Shāhīr, or Shāhūn, al-Kānimī. He was a Kanembe malam [q.v.], who had established himself at Ngala, south of Lake Chad. In 1808 or 1809 Fulani forces, linked with the Shāhīr of Unman dan Fodio [q.v.], occupied and ravaged Birnin Gazzargum [q.v.], then the capital of Bornū. The Bornū ruler, or mai [q.v.], called upon al-Kānimī's help. The city changed hands several times but, although eventually the Fulani were conclusively expelled, Gazzargum never became the capital again. Mai Dunama wandered about, earning the derisive title "mai of the calabash" (a significant item of luggage) for his much travelling. Al-Kānimī received the fief of Ngornu, northwest of Ngala but still far from Gazzargum, for services rendered. Dunama was deposed by his uncle, Muhammad Ngilermu, who established a new capital, Birnin Kafala, very near Ngornu. About 1813 al-Kānimī's power had so much grown that he was able to depose the mai, Muhammad, and to reinstate Dunama, keeping however Kafala as the mai's official capital. With Gazzargum abandoned, Kafala very much in the shadow of al-Kānimī, and the mai's power somewhat at odds with local leaders in his own fief of Ngornu, there was no obvious centre of power in Bornū. About 1834 al-Kānimī decided to leave Ngornu, and built a new town, Kukk, again somewhat to the northwest, nine miles from Lake Chad. The name comes from the Kanuri [q.v.] word for baobab (Adansonia digitata) tree, one of which was growing on or near the site of al-Kānimī's own future dwelling.

For the next thirty years, an uneasy balance existed between the legitimate dynasty at Kafela, and the shehu's one at Kukk. In 1837 (Barth) or 1836 (Browne) a Bagirmi [q.v.] force invaded Bornū, intending to oust al-Kānimī and restore to the mai his traditional powers; the plan failed and the mai was killed. Schulze (p. 257) mentions a sack of Kuka by the invaders at this time, but this is not confirmed in other sources. Al-Kānimī struck his own seal, dated 1819-20, but still continued to preserve a figurehead mai. Al-Kānimī died in 1837; the hitherto generally accepted date, 1835, seems almost certainly disproved by manuscript evidence. He was succeeded by his son 'Umar [q.v.], under whom Kukk continued to become increasingly the seat of all real power. In 1846 Wadai [q.v.] was invaded,
with the intention of removing Shehu 'Umar and re-establishing the mai. Koka was partially destroyed, and for two months lay almost a desert; but again the plan miscarried. The mai was executed; after his son was killed in battle some months later, no new mai was appointed. 'Umar openly asserting that sovereignty which he and his father had long enjoyed in fact. Koka was now the official, as well as the actual, capital of Borno.

As, in the period after 1814, power came more and more to centre upon Koka, the essential pattern of government—in essence, through fiels ruled by courtiers—did not change, although there was greater centralisation than in the old days at Gazzargamu. The Koka court was characterised by relative informality, lack of splendour, and a certain religious simplicity, in contrast to the elaborate, and increasingly hollow, ceremonial at Kafela. Yüsuf b. 'Abd al-Kadir, son of a former imam at Gazargamu, was appointed imam of the Koka mosque, and presided over all religious festivals. Minor legal matters, such as divorce and inheritance, were handled by iftim appointed by al-Kanini; serious crimes and capital cases were referred to al-Kanini himself, and his six principal companions. After 1846, ceremonial tended to increase, and the number of courtiers and noblemen grew larger. With the challenge from Kafela removed, and with an over-larger number of people competing for wealth and rewards which were no longer expanding sufficiently rapidly, divisive forces appeared within Koka itself; 'Umar, a pious and amiable man, was also irresolute and weak, unable to maintain his father's firm control of the city and the state.

After the Wadai sack in 1846, Koka was rebuilt, but a new town was added to the east, and into this quarter the political leaders moved. The shah's main palace was in the east town, although that in the west town was refurbished, and the shah visited it from time to time, particularly at religious festivals. The west town, i.e. the original Koka, became the residential area of non-titled families, and foreign merchants; it had the larger population. Each town was walled separately. (Kukawa is a plural form: 'Umar was walled separately. Koka was partially de-re-established the main palace, which was distinguished by an upper storey and some towerlike elevations. Before the palace, in the open area of the court (cowries, strips of cloth, Maria Theresa dollars) seems to have been a considerable improvement by the early 1820s, when also a greater variety of goods is reported on the market, and the use of currency (coppers, strips of cloth, Maria Theresa dollars) seems to have won a wider acceptance. Trade with North Africa was at this time being inconvenienced by the extreme unreliability, in any commercial contracts, of most of the Koka nobility. Koka did not profit much from the state of affairs developing to the south. In 1891 Charles Nodier, of the Royal Niger Company, visited the city in search of a trade treaty, but the North African community there persuaded the Shehu, Hâsîm b. 'Umar, to refuse his presents and send him away.

The population of Koka was probably about 90,000 during its heyday. There were a considerable number of Kurânic scholars and teachers, and many blind beggars; shurafa' came from Morocco and the haramayn, piots men from Egypt and Tunis, Timbuktu and Senegal, pilgrims from the western Sahara and the Hausa and Fulani countries, all more or less attracted by the reputation for open-handed generosity which Shehu 'Umar in particular enjoyed.

The downfall of Koka was at the hand of Râbi'; [q. o.], a man of eastern Sudanese origin. Probably early in 1893, although precise dating of these events is extremely difficult, Râbi' and his army, moving westwards, occupied Logone, the capital city under Bornô. In two battles, at Amja and Legarwa, the Bornô forces vainly tried to defeat Râbi'; after the second defeat, organised Bornô resistance collapsed. Shehu Hâsîm had been present at the second battle, though taking no active part; he fled to Koka, and abandoned it within a few days, at Râbi's approach. Râbi' occupied the town, sometime in 1893, without a struggle. What hap-
pened next is uncertain; some authorities report the ruthless pillaging of the capital, with several thousands of people killed or captured, while others argue that the violence was much more restrained. Certainly an immense booty was captured. Readings from the Qurʾān were among the festivities celebrating the victory. Shortly after the conquest, Rābiḥ decided to move the capital to Dikwa, an older town of strategic importance, where water supplies were better and grain more accessible. Kūkaway was partly demolished, and everything which could not be carried away was burnt. Only the tombs of the Shehus, where Rābiḥ himself had prayed, were respected.

In 1902, the British installed Bukar Garbai, a grandson of ʿUmar, as Shehu, first at Mongunu then moved to Dikwa, and was later reported to be carried away was burnt. Only the tombs of the Shehus, where Rābiḥ himself had prayed, were respected.

The graves of al-Kūfīnī, ʿUmar, and their two immediate successors are still revered, and a baobab tree, said to replace the one from which the town was named, is held in high regard. The town of strategic importance, where water supplies were better and grain more accessible. Kūkaway was partly demolished, and everything which could not be carried away was burnt. Only the tombs of the Shehus, where Rābiḥ himself had prayed, were respected.

Kūlūsūf, or Kūlū, a town in western Anatolia, classical Opsicum. It lies on the margin of a fertile plain, a few miles south of the upper course of the Gediz river and to the north of the main Manisa-Uşak road, in lat. 38° 33′ north and long. 28° 40′ east and at an altitude of 2,140 feet (652 m) it is in a volcanic area (classical Kastelkauene or Combusta), with the extinct volcano Kadıdevli north-east of the town; hence many of the houses are built from dark basalt. There are numerous marble remains from classical times, but the citadel, apparently late medieval, is ruinous.

Kūla came within the lands of the Turkmen khan of the Germiyān-oghullarī (q.v.), and was conquered by Mehmed Germiyānī (ca. 745-753/1340-61), and after his son Sūleyman Shāh Čelebi (ca. 765-90/1365-96) had given Kāṭahiyah and several of his towns to the Ottoman Beyzād I Vildırım as dowry for his daughter Dəwlet Khatīm, he himself went to Kūla to reside and died there. In the Taṣāf uṣūlfiyah at Kāṭahiyah of Yâkūb Čelebi b. Sūleyman Shāh (814/1415), the name of Kūla is rendered as کولا. In Ottoman times, Kūla fell within the sajmāq of Sarıkān, whose capital was Manisa (q.v.); Čelebi Čelebi mentions there 9 quarters, 2,500 households, 24 mosques, 3 baths, 6 caravanserais and 200 shops. In recent times, carpet-weaving has been a significant local craft, and it is now a centre for wine-making. Cünet (ca. 1890) recorded 6,000 inhabitants, of whom 3,653 were Muslims and 343 Greeks, together with 30 mosques and two Greek Orthodox churches. In 1939, Kūla's population was 5,600, whilst the area of which it was the chief-town had one of 38,442 and
was composed of 62 villages. It is now the chef-lieu of an île (formerly base) in the îl (formerly sivay) of Manisa. In 1975 the population was 12,807.

**KULAM,** the name given in mediaeval Arabic geographical and travel literature to the port of Quilon at the southern extremity of the Malabar coast of southwestern peninsular South India, in ancient and modern Kerala (lat. 8° 53' N. and long. 76° 36' E.).

Quilon early became a centre of the St. Thomas Christians of South India, and is mentioned in a letter of the Nestorian Patriarch Hadûyâb of Adiabene (d. 650) to Simon, Metropolitan of Fars, under the name of Colon and as lacking at that time a settled ministry (Assemanus, Bibliotheca orientalis, iii, 2, Rome 1758, 437). The first mention of the place in the Islamic sources appears to be that of the Abîsâr al-asl as-i-Hind (c.e. in Suppl.) (275/851), which mentions "Kulam of Malay" (this latter name being generally preserved in later Arabic sources, e.g. Ibn Battûta, as "Al-Malayyûb"). It describes Kulam as a "hilly coastland." It possibly describes Kulam as a "hilly coastland." It describes Kulam as a "hilly coastland.

The name "Kulam" was later used in mediaeval Arabic (c.f. al-Dîn Kâzarqân, whose father was the local ruler as Tlurvari, sc. Tiruvati of the indigenous Venad dynasty, and praises his impartial justice and his tolerance of the Muslims.

From the opening of the 16th century onwards, the history of Quilon is bound up with European economic and political penetration of South India, a process which soon became unfavourable to the earlier Muslim commercial supremacy along the Malabar coast. In December 1500 Pedro Alvarès Cabral was at Cochin, and received friendly delegations from the ruler of Kannur (c.e. in Suppl.) and from the Queen of Quilon (Portuguese Coñam), both of whom had been anxious to secure Portugal's assistance against the powerful Muslim ruler in Calicut, the Zamorin. In 1502 Vasco da Gama made a treaty with the Queen of Quilon, who promised to load two Portuguese ships per year with pepper, and in the next year the Portuguese merchants were allowed to open a factory there. Muslim opposition was strenuous; Portuguese ships were prevented from loading, and 1503 the Portuguese factor at Quilon was killed by them. In 1505 Don Francisco de Almeida was appointed the first Viceregal of All the Indies, and received instructions to erect four fortresses along the Malabar coast, including one at Quilon. In 1516 and 1520, further treaties were made between the ruler of Quilon and the Portuguese aimed at providing the latter with a monopoly of the export of pepper from there.

In 1551 the Dutch captured the fortress of Quilon from the Portuguese, and in 1659 the Dutch East India Company made a treaty with the Queen. In December 1661 the Admiral Rijklof van Goens appeared with a fleet at Quilon, since regained by the Portuguese, and occupied the fortress without opposition; he then proceeded in 1662 to reduce the fortresses of Cranganor and Cochin (see, for the whole of this period of the rise and fall of Portuguese influence at Quilon, F. C. Danvers, *The Portuguese in India, being a history of the rise and decline of their eastern empire,* London 1894, i, 86-9, 114, 185, 231, 326-7, ii, 325). But during the 17th century, the Dutch fortress at Quilon decayed from lack of cash and of profit in the trading operations there, and during the period of warfare between the British and the rulers of Mysore, Haydar Ali and Tipu Sultan (c.e. in Suppl.), in the late 18th century, these two rulers having in their expansionist phase extended Muslim political control into Malabar, the Dutch fortress of Quilon was reduced in 1766 by the British, and in 1767 by the Mysore army, leaving the area open to British control.

The Jewish traveller Benjamin of Tudela visited Quilon, as did several western ecclesiastical envoys to the Far East in the Mongol period, such as Odoric of Pordenone (translated in Sir Henry Yule, *Cathay and the way thither*, London 1915-16, ii, 129-30) and John of Monte Corvino; the latter mentions that at that time, i.e. the end of the 13th century, the Chinese, Christian and Jewish traders there were present and of profit in the trading operations there, and he and other sources mention corsairs, and these seem to have been largely composed of traders of Persian Shîr origin, the origin merchant being A'asî al-Dîn al-Awadi (i.e. from Awa [c.e. in Suppl.] in northwestern Persia), and the bâds a man from Khuzistan. The Muslim community was, Ibn Battûta relates, prosperous and highly-respected. He names the local ruler as Tiruvati, sc. Tiruvati of the indigenous Venad dynasty, and praises his impartial justice and his tolerance of the Muslims.

During the middle years of the 18th century, the principalities of Quilon had been absorbed by Travancore, and in British India, Quilon continued to fall within the native state of Travancore. It is now (since 1956) in the component state of Kerala in the Indian Union. According to the *Census of India 1961,* the population was 10,807 (in 1961, a total population of 5,914,928 [Hindu 64 %, Christian 25 %, Muslim 9 %]), and Quilon municipality alone 9,018 (1961 figure, 15,962).

**AL-KULAYA** (Lat), "little castle", the diminutive of al-ka'ba [q.v.], like this last used, in one way or another, as a place-name.

1. **Muslim Spain**

Studies of the history and geography of Muslim Spain are familiar with al-kulaya as the name of a number of small or relatively small places whose importance seems to have lain only or primarily in the military purpose they served. In Spanish Omayyad history it occurs as the name of at least three different places mentioned in connection with raids and campaigns. One was situated in the Asturian kingdom, another in the neighbourhood of Guadalajara, and yet another to the north-east of Cordova (Lévi-Provençal, Hist. Exp. mores, ii, 204; ii, 40, 282, 309 [map], 310). The exact location of the first two remains uncertain, but the third, which still bears its old name in Spanish guise, viz. Alcolea, is situated 10 km. or so on the main eastward road of Cordova.

As regards the Nasrid kingdom of Granada, two places called al-Kuley's are listed in their appropriate administrative divisions by Ibn al-Khatib [g.v.]. Both are located in what is today Almeria province. One—Alcolea—lies north of Berja on the main road to Laugar. In other parts of the Peninsula, the same hiqanised name can be found in such compounds as Alcolea de Calatrava (Ciudad Real province), A. del Pinar and A. de las Fuentes (Guadalajara prov.), A. de Cuéllar (Cuenca prov.), A. de Rico (Sevilla prov.); (?l Billal al-Kula'a, Ibn Khaldun, Thar., vii, 196), and A. del Tajo (Toledo prov.). Other Peninsular forms are Alcolehia (Alcantarite prov.) and Aloceteg (Lerida prov.). In Spanish and other European writings the name appears in various guises (Alcolaya, Alcoyia, Alcolea, Alcoleha, etc.). Finally, in Spain today there are a number of place-names which are most probably literal translations of al-kula'a (Castilian diminutive: "castielcho"), e.g. Castilejo (Cáceres and Granada provs.), C. de la Iniesta (Cuenca prov.), C. de Robledo (Soria prov.), etc.

2. **North Africa**

1. **El-Golea** (the French spelling of al-Kulay'a, reflecting the local pronunciation with the usual voiced tsf of nomadic vernaculars) is the name of an oasis town situated at the far eastern end of the great western Erg (Vib); see map above, i, 369; of Saharan Algeria and lying, by road, 906 km. almost due south of Algiers on the parallel 3° 56', and 320 km. south of Ghardaia [g.v.];—air distances are noticeably shorter—at a height of 391 metres. Although the most isolated of Algeria's larger oases, it is one of the most beautiful. In 1573 the d'Arpège of El-Golea had a population of 16,670.

The place owes its name to an old stronghold (erar) built on the north side of a gara (gara, pl. al'ar), i.e. a small, isolated flat-topped hill. This gara, from which it can be seen a vast expanse of desert, sandy to the west and desert grasses to the east, is crowned by something of a protective semi-circle into which the huge oasis nestles beneath. Below the ūsar lies a town that has risen on old and new foundations: the old town, home of an original sedentary population living in mud houses similar in shape and size to the talas of Mali, and the new, modern town, which owes its foundation to the French, but its felicitously harmonious architecture to the inspiration supplied by local tradition. The latter's mosque and marketplace are the focal point of social, religious and economic life. From the outset this new town has accommodated administrative buildings. In 1958 it also witnessed the consecration of the first church in the Sahara.

Today the ūsar is deserted and in ruins. With the establishment and eventual consolidation of French rule, the need for its use as a stronghold disappeared and gradually it came mere to supply the local nomads' needs for storage. Its last inhabitants dispersed throughout the oasis to form hamlet communities alongside various plantations. The remains of the stronghold's double walls still stand, and among the ruins a small, plain mosque can be seen where it has been the custom of local women to gather for Friday prayer. The remains of rock dwellings are also in evidence. Dotted around the foot of the gara on which the ūsar stands, as well as about the oasis generally, are the ḥobbas of local holy men, amounting to between forty and fifty in all and of different shapes and sizes.

As a result of improvements in irrigation and drainage techniques first effected by the French, the oasis now covers more than 800 hectares and supports around 182,000 date-palms watered from artesian wells dug in the bed of the Wad Seguia. Fruit trees also abound, notably citrus and apricot varieties, and there are winter crops of cereals, beans and many other kinds of vegetable.

The inhabitants and frequenters of the oasis are, in the main, wholly or partly sedentarised nomads of the Sha'ānba sub-tribe Mawāalī; traders from the Mzab; negroes and hardān (sing. hardāni [q.v.]) from Twfit (Toat) and Gara (Gourara). These last two groups account for about half the population and between them work the land in one capacity or another. Formerly there was also a Jewish element.

El-Golea's early history is lost in legend. The ūsar in said to have been founded as Taruir (Berber "little castle") by the Zenata in the Middle Ages and to have then been taken by the Tuareg. Its medieval origin may be well founded: Ibn Khaldūn mentions the existence of a seemingly not too dissimilar desert advance post inhabited by Matighara Berbers and frequented in intensely hot weather by veiled nomads. It too was a kulay'a, viz. Kulayat Willan (on some European maps Guleia). Be that as it may, the Sha'ānba in and around El Golea are said, probably rightly, to have come from the region of the Matilf oasis, near Ghardaia, where there is still a branch of the Sha'ānba, and to have been in the carrying-trade there, to say nothing of brigandage, in the late 16th and early 17th centuries. Drifting south as population pressures grew, they made El-Golea their centre and doubtless profited from its position on the route from the Mzab to Twit.
and Tidikelt. In the 12th century, according to al-‘Ayyub, this evidently prosperous place was ruled, through a governor, by the sultan of Wargha. Its first contact with Europe was with Duveyrier in 1659. General de Galliffet reached it in 1873, and in 1891 a permanent garrison was installed. The local Shābāna provided Esquiline with the first detachments of the famous mecakristi with whose aid the central Sahara was brought under French control.

2. Kulayb, a small town of 35,000 inhabitants lying 46 km., by road, west of Algiers. Situated on the landward side of the Sahil hills at a height of 130 metres, it offers a commanding view of the Nīkjī plain. Dating from the Ottoman period, it is said to have been founded by Ḥasan Fasga, son of the corsair Khayr al-Dīn (Bacarzeca) [v.], around 1650. What is certain is that these people formed a nucleus of Muslim refugees from Castile. Andalusia, and the kingdom of Valencia, for whom the excellent prospects offered by its fertile cultivable land were the main attraction. In the sources it is therefore referred to as “Col de Mudechares” (Mudechares being the Spanish mudjafes from Ar. mudjafīn). In modern times Kulayb’s attraction has been the tomb of the “king” (on the use of this title see C. M. L. Latham, ed. De Goeje, 164–6; Ibn Sallām, Jahāk, 22; Ibn al-Kalbl-Caskel, Tab. 104, where Murra Taghlib of the Islamic period, whose murder by al-Nabīgha al-‘Arabī [q.v.], around 665, is the regular subject of the Bedouin elegies on his death, which were attributed to his brother Muḥālīh (both contemporaries with the beginning of Islam) in our sources; in that of al-Nabīgha in particular, the history of the killing of the camel is already told in detail. An allusion to the power of Kulayb is found as early as the musallāk of the Taghlib ‘Amr b. Khliyīn (v. 65). We have, moreover, contemporary documentary evidence of the accounts relating to the fate of Kulayb in the numerous allusions contained in the elegies on his death, which were attributed to his brother Muḥālīh (one of the earliest Arab poets; cf. Ibn Khayyāb, Ṣhir, ed. De Goeye, 164–6; Ibn Sallām, Tabābāl al-lahārāt, ed. Heil, 13 lines 11–16 etc.), but naturally their authenticity is more than doubtful.

The story of the murder of Kulayb is developed in a quite arbitrary fashion in the romance cycle of the Banū Ḥāhālī (cf. Miteirī, Ṣauhāb al-abhum paghanorum, Berlin 1899, 11).

al-KULAYNI, ABU DJAFAR MUHAMMAD — KULDJA

Baghdad whose Persian name Kolên, with imam is Arabicised as Kula and Kulen. His name is thus variously given in the sources as al-Kulayni, al-Kuleni, or, erroneously, al-Kalami.

Few facts are known about his life. Since his chief transmitters of Imami traditions were several scholars of Kumm, it is certain that he studied in that town for a prolonged time, most likely during the last decade of the 3rd century A.H. (905-13). He also transmitted from several scholars of Rayy, among them his maternal uncle Muhammad b. 'Ali al-Kulayni al-Rafi', known as 'Ali, and al-Naḍāshi describes him as the shaykh of the Imamiya in Rayy in his time. It is uncertain if it was in Naysabur or elsewhere that he heard Muhammad b. Isma'il al-Naysaburi, his transmitter of the traditions and views of the Jimami branch of al-Firdaws, Shihab al-Naysaburi, whom he evidently held in high esteem. At an unknown date, perhaps in the first decade of the 4th century A.H. (914-22), he moved to Baghdad where he lived and taught in the Darb al-Silsila near the Bab al-Kufa on the west bank of the Tigris. Here he completed his voluminous Kūth al-Kafi', on which he is said to have worked for twenty years. The book, though mostly a collection of traditions of the Imamis, was meant to be a representative of authoritative Imamite doctrine in theology and fiqh. Thus it is arranged according to subject matter and tends to contain only those traditions which the author considered as reflecting orthodox teaching. Only exceptionally are the views and elaborations of Imamite scholars quoted, such as the elaborations of al-Firdaws b. Shihab on the law of inheritance. The work is divided into the usual dealing mainly with theology, prophecy, the Imamite, and prayers: the Rusūl, dealing with fiqh; and a final volume, entitled K. al-Randah, containing miscellaneous traditions of mostly edifying or paraenetic character. His other works, all of which are lost, included a refutation of the Karaimists, a book on transmitters (ridjāli) a collection of letters of the Imamis, an anthology of poems about them, and a book on the interpretation of dreams. The date of his death is given as 328/940-41 or 329/941.

The latter date, mentioned by al-Nadjashi, is more likely to be correct, since al-Tusi who in his earlier K. al-Flsāri gives the year 329, in his later K. al-Flsālal specifies Shabban 329/May 941. The funeral prayer was held by the Imami Hasanid Abu lvirat Muhammad b. Djafer, and he was buried near the Bab at-Kufa.

KULDIJA or SHULDIJA, modern Ell or Emin, a town in the fertile and mineral-rich upper valley of the Ili river [q.v.] in Central Asia. For the medieval history of the district in which modern Kuldiya lies, see AlMALEGH.

The town of Kuldiya ("Old Kuldiya") was probably a new foundation in 1762 by the Chinese after their victory over the Kalmucks [see KALMUKE] in 1739, and they named it Ning-yuan-chen. Two years later the town of Hoi-yuan-chen was founded as the headquarters of the Chinese governor-general (ts'ung-ch'iao) of Chinese Turkestan; this was known as "Great" or "New" Kuldiya. The Imperial government resettled in the largely depopulated region, amongst other peoples, 6,000 families of Muslim Turks from Kāshgār, after the devastation of the latter province during the wars with the Kalmucks; these came to be called the Tarakes, "agriculturists". Also in the 17th century were settled there Chinese Muslims (probably, in fact, of mixed Chinese and Uygur Turkish blood) called the Dungans or T'ung-kan. In 1851 the Russian traders, and in 1860 the Treaty of Peking between Russia and China gave both Russia and Britain the right to establish consulates in, amongst other places, Kuldja. In 1853 a trade treaty was made at Kuldiya between the advancing Russians and the Chinese, opening the upper II region to Russian traders, and in 1860 the Treaty of Peking between Russia and China gave both Russia and Britain the right to establish consulates in, amongst other places, Kuldja. In 1882 W. Radlov visited both Old and New Kuldiya and described them fully in his Aus Sibirien, Leipzig 1893, ii, 305 ff., 316 ff., see also his Das Il Tschai in Hoch Asien und seine Bewohner, in Petermanns Mittheilungen (1860); a decade or so later, the American traveller E. Schuyler visited Old Kuldiya and its hinterland, see his Turkestan, notes of a journey in Russian Turkestan, Koo-kud, Bakkara, and Kinnish, London 1876, ii, 158-201.

Following a Dungan rebellion in Shen-si, which spread to Kansu [see KANSU] and other Muslim
KULDJIA — KULLIYYA

areas of western China proper in 1862, revolt also broke out amongst the Muslim population of northern Chinese Turkestan, sc. in the province of Dungania, amongst both Tarancis and Dungans, and in 1863 it spread to the Kuldja area. After hard fighting between the Chinese authorities and the rebels, New Kuldja was captured in 1863 by the rebels and completely razed; Schuyler, op. cit., ii, 152-4, found the site utterly deserted apart from the one or two houses of Dungan squatters. The Russian consulate in Kuldja and a Russian factory in the area were destroyed in this strife. The Dungans and Tarancis now began to fight amongst themselves, and after much internecine warfare, power passed in 1867 to a Taranci leader who styled himself Sultan Ata Khan or Abu Ya'kub (in Russian sources, often Abil-Oghda); after savage massacres perpetrated by the Tarancis, some 3,000 Dungans and others fled westwards into Russian territory for refuge. In 1867 also, Ya'kub Beg [p.1], a Khozkand by birth who had earlier fought against the Russians at the battle of Ak Masdjid (see KHOZANDI), established his power in Kagh伤aria, sc. the southern part of Chinese Turkestan. Since Ya'kub Beg was believed to be anti-Russian and received two diplomatic missions from British India, the appearance of an ostensibly hostile power in Central Asia disturbed Russia, and was a factor in the Russian decision to act completely in 1875-6 the Khanate of Khozkand (p.n.). It further led to the Russian occupation in 1871 of Kuldja and the upper Ili basin, this being announced as a temporary measure, till China should re-establish her authority in Kagh伤aria and Dungania. The local ruler Ata Khan was deported to Russia, and lived out his life there as a state pensioner.

The Russians probably assumed that Ya'kub Beg would never be dislodged from power and that the Kuldja district would eventually be permanently annexed. In fact, Ya'kub Beg was defeated in 1876-7 by the Chinese forces and died in May 1877; his state collapsed totally and Chinese authority was restored in Eastern Turkestan. In 1879 negotiations began between the Chinese diplomat Ch'ung-hu and the imperial Russian government, but the Treaty of Livdia made in that year was abortive, and negotiations dragged on for a considerable time, the retrocession of Kuldja being used as a bargaining point. In September 1909 representatives both of the Kuldja regime and the Urumchi one started negotiating with the Communists in Peking, and in December of that year a Communist Provincial Government was proclaimed in Kuldja, independent of the Sin-kiang provincial government in Urumchi. The Kuomintang government in distant Chunking was unable to do more than come to a compromise with Ahmand Djan's regime in Kuldja, but by the end of 1918 its influence in Sin-kiang was in any case declining perceptibly. In September 1919 representatives both of the Kuldja regime and the Urumchi one started negotiating with the Communists in Peking, and in December of that year a Communist Provincial Government was established in Sin-kiang. The Communists eventually acceded to the province a certain autonomy, and in 1934 the Kuldja region was made into the Ili Kazakh Autonomous District of what in 1955 became the Sin-kiang Uighur Autonomous Region. Now, under the Chinese name of Liling, Kuldja is one of the chief towns of that Region.

KULLIYYA (A. lit. "completeness": Turkish: hafiz; Persian: kulliyeh) appeared in the 19th century the technical meaning of faculty as a unit of teaching and learning, mostly at the university level, according to branches of learning.

Islamic education in masjid, madrasa or hikmahak did not know of a division into hikliyyah, which presupposes institutionalised specialisation. So it was only in 1930 that al-Azhari in Cairo was re-organised according to three hikliyyah of higher studies: usul al-din, sharifs, and al-tahaddi al-uraqiyya. Nadif in Irag, as a centre of Shi'ah

KULDJIA, a revolutionary government proclaimed its independence in the Ili region, but in 1912 the new Chinese governor of the whole province, Yang Tseng-Hsin (1911-28) managed to conciliate the separatists and secure unification of the Ili and Sin-kiang regions (see R. Yang, Sinikiang under the administration of governor Yang Tseng-hsin, 1911-1922, in Central Asiatic Jntl., vi [1961], 270-7). Yang weathered a further potential crisis in 1916-17, when thousands of Kazaks fled from Tsarist Russian oppression into the Ili and Kagh伤aria regions (ibid., 305-8), and under his long tenure of power, the whole of Chinese Turkestan enjoyed an unwonted period of prosperity and firm government. He kept up good relations with Soviet Russia, and even after the Kuomintang's diplomatic break with Russia in 1927, the Russian consulates at Kuldja and in other towns remained open. His successor Chen Shih-jen followed a similar policy, and in a secret treaty of 1931 conceded to the Russians rights to commercial offices in Kuldja or Ili, Urumchi, etc.

These governors in the far west of China had been virtually autonomous, but in 1942 Liang Kai-shhek managed to extend the direct control of Chunking over Sin-kiang, with disquieting effects on the non-Chinese population elements there. Hence in November 1944 there was a rebellion of the Kazakh Turks in the Ili region, soon joined by the Uygurs. An Eastern Turkestan Republic was proclaimed in Kuldja, independent of the Sin-kiang provincial government in Urumchi. The Kuomintang government in distant Chunking was unable to do more than come to a compromise with Ahmand Djan's regime in Kuldja, but by the end of 1948 its influence in Sin-kiang was in any case declining perceptibly. In September 1949 representatives both of the Kuldja regime and the Urumchi one started negotiating with the Communists in Peking, and in December of that year a Communist Provincial Government was established in Sin-kiang. The Communists eventually acceded to the province a certain autonomy, and in 1954 the Kuldja region was made into the Ili Kazakh Autonomous District of what in 1955 became the Sin-kiang Uighur Autonomous Region. Now, under the Chinese name of Liling, Kuldja is one of the chief towns of that Region.

sighari learning, had in 1963, besides a number of independent madrasas, a kulliyat al-fikh which was connected with the University of Bagdad. When modern institutions of higher education were established beside the traditional Muslim ones in the 19th and 20th centuries, the latter underwent a number of innovations and reforms which were mostly imposed by the state authorities. In this way, the faculty system was introduced into the traditional Islamic teaching, either by a radical transformation of an existing old-established institution (e.g. at al-Azhar); or by integrating such an institution as a kulliyat al-fikh or a faculty of religious studies into a new medieval or modern type of learning (e.g. at Zaytuna in Tunis); or be established completely new religious institutions with a division into faculties, replacing older such institutions (e.g. the King Saïd Islamic University in Medina). By now, the faculty system has been introduced in nearly all Islamic institutions of higher education; sometimes such institutions have "modern" faculties side-by-side with those of the Islamic sciences. These institutions provide the education of religious leaders and they perform a function in the transmission and reformulation of Islamic thought. They may lead to a career in the judiciary, in institutional teaching or in less formal forms of instruction in Islam, both within and outside Muslim countries.

The non-religious modern (state) universities [see Dajma'] and other institutions of higher education (al-islam al-fr) have been organised according to the faculty system, as taken over from the West, since their establishment in the 19th and sometimes the 19th century. They come under the Ministry of Education, or in some cases the Ministry of Higher Education. These universities expanded greatly in number and size after the independence of the different countries, and they serve the modernisation and development of the societies of these countries by providing them with professional intellects, besides the general role of such institutions in the acquisition and transmission of knowledge. There is a direct link between the modernisation of a society and the expansion of its educational system, including higher education. The educational institutions undergo during their development the influence of those ideological forces which constitute, or accompany, the modernisation process, the dynamic of the modernisation process. The planning of higher education has started in most countries according to the needs of these countries, following western models and resulting in the growth of faculties (kulliyat).

In Arab universities the following kulliyat have developed: adib (arts), habb (law), ulum (sciences) and hibb (medicine), the first two of which are called napor (theoretical), the latter two sumul (practical). Then there are those of tarbiya (education, i.e. for teacher-training at secondary schools), hibr (commerce), sada (administration), haddasa (engineering), and (agriculture), sayduliyah (pharmacy), hibb al-nsan (dentistry) and basf (veterinary medicine). In some cases there is a kulliyat al-adimin al-diniyya (social sciences), but mostly these disciplines are served by an institute instead of a faculty. Some universities, e.g. al-Azhar, have a kulliyat al-handal (women's faculty). In a number of cases, university faculties are the continuation of previously existing educational institutions which became part of the university once it had been founded.

The faculties have been organised in different countries according to French (especially law faculties), British and American models, but they have developed on their own and adjusted to ministerial directives. The kulliyat constitute together a djami'a. Within the university, the kulliyat enjoy a relative independence; their deans have great authority; they often have their own dalil (guide) besides the tahkim or takbir (calendar) of the university. They mostly have their own library and may issue their own periodical. Generally speaking, the decision-making process is slow and the bureaucratic apparatus allows for little efficiency, apart from ever recurring financial problems. Most programmes of study show an early specialisation, and the kulliyat often degenerate into function as professional schools. Certain courses on history, culture and society may be made compulsory for all students. The degrees awarded are those of bachelor, master, specialised diplomas and doctorate. The faculties (kulliyat) are each subdivided into sections (bustam, sing. sum) and specialised institutes may be attached to them. Nearly all teaching is done in the national language, and English and French are not well known; most universities have insufficient funds to obtain books for their libraries in these languages.

Given the great number of students enrolled, faculties like medicine and the sciences limit the admission of students according to the number of places available, taking into account the earlier marks received by applying students. There is evidently a job-market problem in most countries for those who obtain their bachelor degree, and even for those who finish graduate studies. A certain number of students are sent abroad or admitted for foreign scholarships to continue their studies or to specialise; a certain percentage of students, varying according to country, stays abroad. Faculty teachers, on the other hand, have a high teaching load and often take supplementary jobs besides; there is not only a lack of facilities for reading and research, but also in some cases a problem of intellectual independence.

As everywhere else, the kulliyat in Muslim countries are in transition and undergoing permanent reorganisation. The exact, natural and applied sciences have an immediate relevance for the modernisation of these countries. The social sciences, not always developed adequately, are sensitive to ideological considerations, but the dynamic of the present-day situation of the societies of these countries; this holds true for the teaching of history too. The tendency at all faculties is to spread knowledge imposed from above, and this knowledge often appears to be considered as a finite quantity, to be assimilated by memorisation. Consequently, little attention is paid to promoting the awakening of the available natural intelligence.

It would be difficult to interpret the kulliyat, and the institutions of higher education in general, apart from their social content and the function which they fulfill in societies with pressing needs and with many uncertainties. They play an important role, in particular in the construction of a modern society and in the cultural transformation of whole countries. This takes place at a time when the ideals of culture have changed greatly, not only in relation to the religious orientation of the traditional Islamic educational institutions, but also since the political independence of the countries under consideration.

Mantran, *Istanbul dans la seconde moitié du XVIIIe siècle*, Paris 1962 and idem, *La vie quotidienne à Constantinople à l'epoque de Soliman le Magnifique et ses successeurs, XVe et XVIIe siècles*, Paris 1963. Ahmed Retif Altnay's researches into the orders-in-council are important and are published as *Hicri onbirinci asrda Istanbul hayatas*, Istanbul 1939; *Hicri onbirinci asrda Istanbul hayatas*, Istanbul 1931; *Hicri XII. asrda Istanbul hayatas*, Istanbul 1932; and *16. asrda Istanbul hayatas*, Istanbul 1935. Two major works of O. Ergin are *Türk şehirlerinde imaret sistemini*, Istanbul 1939, and *Fatih imardin vakfîyesi*, Istanbul 1945. The journal *Vakfîsler Dergisi*, published intermittently, is a scholarly source. In the first number, Ankara 1939, appeared H. Hunter, *Türk vakfiyeleri ve vakfîyesi*, and A. U. Pope, *A survey of Turkish kulliyye and a medical school.* Besides these with their courts, latrines and two houses for teachers or ruvdârisân there was a school for boys, a chantry, a hostel with stables, a bath or hamam, the mausoleum of the sultan and that of his consort in a cemetery, rooms for mosque servants over gateways, a large kitchen and refectory with vaults supporting the vast platform on which these many buildings were erected, there were ironsmiths, cafes, button shops and other workshops. The one pavilion lacking was the usual royal bayr with access to the mosque or royal lodge (külahar mabâdîn). Each and all of the charitable services had to be staffed, and detailed foundation documents regulated every duty, item of diet or salary. Besides the administrative officers who came under the chief eunuch in the department of the harem at Topkapî Sarâîy, there were religious officers and teachers, porters, chanters, grave diggers, servants responsible for maintenance, including the polishing of courtyards and window grilles, cooks, scullions, plumbers, lamp-lighters, a guard against the theft of oil for lamps, carpenters, masons and tile-makers responsible for the lead sheets covering well over 300 domes. The kitchens coped with the feeding of this company, as well as the students and travellers and the poor; the scraps were given to the dogs. All these services required a considerable supply of water, and the cost of laying pipes and rebuilding aqueducts exceeded that of building the foundation. The initial building costs and the endowment needed to maintain so vast a foundation were raised by an exclusive subscription, including the gift of various properties, ranging from entire estates to a mill or one cottage. The donors ranged from the ruler, who might assign
KUL-OGHLU — AL-KULZUM

same merged within the general urban or rural populations.

KUL-OGHLU, Turkish folk poet of the 11th/12th century. Hardly anything is known about his life. He seems to have belonged to the Janissary corps and to have flourished during the reigns of Ögmen II, Mustafa I, Murad IV and Ibrahim, and to have found particular favour at the court of Murad IV. A contemporary of Kül Mustafa and Kılıç, he was at his best in lyric and epic poems, the best known of which is his elegy for Murad IV. His poems, scattered in most of the 17th and 18th century anthologies of folk poets (dîvans), have been collected and published by Sadettin Nurhet Ergun.

KULUMBAH b. TYAD AL-KUSHEAYRI, Kaysi notable [see s. v.] whom the Unayyad caliph Hisham b. Abd al-Malik sent to the Maghrib, in Djamál II 123/April-May 741, to avenge the bloody defeat which the Berbers, commanded by the successor of Maysara [q.v.], Khaled b. Hamid/ Humayd al-Zanati, had inflicted on the Arabs in the "battle of the nobles" (gamaar al-aghāf). Kulumbah left at the head of an army of 30,000 men, to which there were added contingents raised along the way, and he joined up with Habib b. Abi Ubayda al-Fihri, the former companion of Musa b. Nusayy [q.v.], who was endeavouring to halt the progress of the Sūfi Kādirjītes near Tlemcen.

Kulthum fought with the greatest bravery, reciting verses of the Kūrā to encourage the others, but finally he fell. One-third of the army was killed and a third taken prisoners (Ibn 'Abd al-Haqq, 123/1038-9). Ignoring Habib's sensible advice, Kulthum sent to the front Baldj's cavalry, which succeeded after great efforts in piercing the Berber lines, but the latter returned behind them and overcrowded by their mass the caliph's troops which had taken up battle order too late. Habib and the other chiefs were killed.

KULMUR, the name given by the Arabs to the town of Coimbra, on the right bank of the Mondego River in central Portugal. The town still has some ruins from the Roman period, and was originally called Aeminium; but it took over the name of another important Roman town, Combrigia, which lay 18 km. to the south and had been devastated and depopulated during the barbarian invasions. The episcopal see of Combrigia was transferred to Aeminium in ca. 580-9, and the change of name took place towards the middle of the 7th century A.D. Although the usual Arabic form was Kulmūriya, Ibn al-Kitībiyya (14th/15th century) has that of Kulmūriyya (Iftisāk, 200). The occupying of the town is attributed to Abī al-'Azīz b. Ma'all b. Nusayy, governor of al-Andalus 957-774/16. His lands, like those of Santacruz to the south, appear to have been omitted from the conqueror's division of the territories, probably because of a treaty (cf. Lévi-Provençal, Hist. Esp. mus., iii, 202-2).

The Arab geographers give descriptions of Kulmūriya. Al-Razī states that it was an ancient town, well-fortified and with fertile surrounding estates where there were cornfields, olive groves and gardens. Al-Idrīsī (588/1194) says that the walls had three gates (one of which still exists, with the name of almecina), and mentions the mills along the Mondego vineyards and gardens and also the force of Christians living there. Al-Hamdī repeats this information, and Yākūt gives a brief notice of the town.

Coimbra may have been the central town of a kita or territorial district during its Islamic period. This last was very disturbed, for the town was coveted by the Christians who set afoot the Reconquest [see al-Andalus and Burtugāl]. In 1064/1067 the town was taken by Count Hermengildo in Alfonso III's name, but al-Ma'mūr recaptured it in 1077/1078 after having briefly occupied it two years previously. It was finally conquered by Ferdinand I in 1149/1064 after a six-months' siege. He created the Mozarab Sanzandus Davidic governor as a reward for his role here. The Coimbra district was one of the Mozarabs' most lively centres; as well as the facts described in e.g. the works of Gómez-Moreno and Alonso de Lucio (P. da Costa, 37-8 and map 11) has emphasized the role of the town's Mozarabs in the peopling of northern Portugal during the Reconquest. The presence of the Muslims in the area has left many traces, as its toponomy shows. From the 10th century onwards, Christian documents make a very clear distinction between what was in the almecina (the walled town and citadel) and what was in the arrabalde (< rabada) outside the walls at that time.

AL-KULZUM, an ancient town and seaport on the Red Sea (A. Bahir al-Kulzum [q.v.], Bahir al-Find or Bahir al-Hababūn), now administratively in the province (muḥāfaẓa) of al-Swā'yah. It appears to have been a fort as well as a town, and was,
perhaps, the spot where the troops destined to guard the sluices of the canal were stationed. It was called Castrum by Hierocles and Epiphanius; and X6DEA (Clysmo), or X6X70F4 (first mentioned by Lucian. Kulzum is a corruption of the Greek name X6DEA (in both Arabic and Greek, it means most likely, without any doubt); the Greek refers to the "sluice" at the mouth of the canal, which led from the Nile to the Red Sea). This canal, begun by Pharaoh Necho and finished by Darius of Persia, was later restored by Ptolemy II Philadelphia and by Trajan. In the Muslim period, when the construction of the canal was wrongly ascribed to Hadrian, labour was repeatedly spent on it.

'Umar b. al-Khattab in 23/644-4 for example it repaired to facilitate the transport of corn for Mecca from al-Fusṭāṭ to the Red Sea; it was called after him Khlidī Amir al-Mu'āwīya. According to Abū Sa'īd, its mouth was at al-Kulzum, according to al-Mas'ūdī and others (more accurately) at Diān (sic; Ḍiānāl) al-Fusṭāṭ, one mile from the town, where the Mercur pilgrims from Egypt crossed the canal by a large bridge. The caliph al-Mansūr in 158/775 had it partly filled in, fearing an attack from his uncle Muhammad b. 'Abd Allāh, who had rebelled against him in Medina, so that in Abū Sa'īd's time it ended at al-Sadār at the entrance to the Wādī Tūmlīt. Now but fruitless attempts to make it navigable again were made by the caliph Hārūn al-Rashīd, who is said to have abandoned the attempt out of fear of the Greeks. Henceforth the bulk of its water flowed into the Birkat al-Diāhāb till it was completely filled in (1899) for sanitary reasons.

The town of al-Kulzum owed its importance mainly to this canal, for according to the descriptions of the Arab geographers, it was a desolate and miserable site without water and vegetation; neither trees nor fruits could flourish there. However, it was useful as a source of salt which was transported to useful as a source of salt which was transported to the countryside, and the Greeks made use of it. The only water-supply he knew of in the vicinity was the well al-Suways, which yielded only a miserable site without water and vegetation; neither trees nor fruits could flourish there. Further
etymology (generally based on the Arabic imperative *kuum "rise up") have also been proposed (see for example, Houtum-Schindler, 59 ff.). There are also numerous *Shi'i traditions extolling the virtues of *Kum as a place of refuge for believers etc. (Ta'rikh-i Kum, 50 ff.; Fakhī, 75, 83 ff.); this latter attribute earned it in the course of time numeorous honorific titles such as *Dār al-Mulk, *Dār al-Ibāda, *Dār al-Mawṣūlah, *Dār al-Imām, *Khāk Farāzūn etc. (Fakhī, 14).

This region, with its strong undercurrent of religious feeling (including Jewish and Christian associations; see Monneret de Villard, *Le leggende orientali sui magi evangeliici, Vatican 1952, 84 ff.) became one of the first bastions of Shi'ism (on the Shi'i and non-Shi'i groups at Kum, see Fakhī, 308 ff.). The Zoroastrian community, whose chief, Vazănfādāḡīr, had in an earlier period assisted the *Ash'ārī Arabs to settle in the region, was ultimately eliminated (sometimes brutally) or Islamised; it has been observed, however, that Zoroastrian fire-temples continued to be in use in the area until the 3rd/9th century, and perhaps even later (Monneret de Villard, 339, fn. 6). The *Kuršād and the *Kūdūs are still in use today. A version of a Pahlavi text Ta'rikh-i Kum, which could have been written by the *Ash'ārīs who were fanatical Sunni (Fakhī, 222). Also to be noted are the conflicts between the people of Kum and the people of *Isfahān, who more than tripled the already excessive rate of *shādījāt extracted from the Kumīs; and a further punitive expedition ending in massacre in the reign of al-Maʿум (see Schacht, 582). By contrast, a *Shī′ governor was accorded such cooperation that he was recalled by the caliph (Fisher, 58). In the 3rd/9th century, the principal settlement was Mandjiḏ in one of the original "seven villages" or "seven fortresses" (Fakhī, 13, 58 ff.). In the 14th/20th century, Kum was described as a prosperous city, fortified with a rampart, with fields well-irrigated by means of canals, dams and pumping apparatus. The majority of the population was *Shī′, ethnically Arab but Persian-speaking (Ibn Hulkal, K. Şūrāt al-arḍ, ed. Kraner, 370). There were frequent disputes between Kum and settlements lying up-stream (Taymara/Gulpaygan and Anār/Mahallāt) regarding the distribution of the waters of the Anābār. The flooding of this river was sometimes catastrophic (notably in 292/904-5, 1054, 1069, 1081, 1093; see Houtum-Schindler, 65 ff.; M. Bazīn, *La vie rurale, 33 ff.). With its many *mālas (tradition tells of seventeen *mālas and hundreds of *Ash'ārī *mālas (see Fakhī, 37 ff.); in the 3rd/9th century there were two hundred and sixty-six *Shī′ *mālas and fourteen Sunni *mālas), and especially the facility of the famous *Shī′ī *Sādūk (Muḥammad b. *Alī b. Bāḥrāyān), Kum could boast of having preceded Nādir as a great theological centre.

The prosperity of the city seems to have begun with its administrative independence from *Isfahān in 189/804-5. In 201/816-17, *Fātima al-Maʿṣūma went to visit her brother, the Eighth Imīm, *ʿAlī b. Musa (Ta'rikh-i Kum, 9 ff.); this event contributed most to its fame. The town expanded progressively from north-east to south-west in the direction of the tomb of Fātima, which ultimately
became its centre (Fakhl, 94 ff.). Patronised by the Pahlavi (Fakhl, 127 ff.), Kum was reawakened in the Safavid period for its madrasas, for the sanctuary of Fatima (visited by Sunnis as well as Shi'is), for its religious foundations, and also for its administrators and viziers (see J. Calmar, in *Le monde iranien et l'Islam*, Paris-Geneva 1971, i, 58 ff.) as well as for its many "ulama" and scholars, known by the nickname of Kum, Barq, Baravast, Tabrisi (from Tabriz; Tabris), etc. At the time of the Mongol conquest in 621/1224, its inhabitants were massacred, possibly at the instigation of the Sunnis (see Fakhl, 22)."Hamd Allâh Mustawfi described the town as being mostly in ruins in the 8th/14th century. It seems, however, that there was an attempt at reviving the region under the Mughals, as evidenced by some important hydraulic constructions in the town, such as Mulla (end of the 13th century) and the vaulted dam at Kebar, 25 km. to the south of Kum (see H. Gohlot, *Kèbr en Iran*, 1965, 49 ff.; the same, in *Arts et Manuactures*, Paris, June 1965, 43-9, April 1973, 15-20). Although travellers have drawn attention to the massacre perpetrated by Timur, it seems that the Timurids respected and favoured this holy city (we may note the mosque of Gohar-Shâh, wife of Shah-Rukh, near the mausoleum of Fatima, and the fact that the sultan Muhammad, son of Bayunghur, chose Kum as his capital in 846/1442: see Fakhl, 144-7). It was in any case from the 9th/14th century onwards that the town began to enjoy definite royal patronage. The Turkoman sultans Dinkdn-Shâh, Usan Hasan, Ya'rub, Murad and Alwane used it as a kind of winter capital for hunting, and this tradition was continued under the earlier Safawids, Isma'âl I and Tahmâsp I (Fisher, 56 ff.; Fakhl, 147 ff.), and on the fairness, Turkomans charged with the appointment of an official (mulawalli of the sanctuary and naqib of the sayyids), see Mudarris Ibn Tabâtabâ, in *Karbâng-î İmar-namî, xix/1-4, 118-35*.

But it was above all the religious policy of Shah 'Abbâs I—consisting in attracting pilgrims to the Shi'i shrines of Iran (Masjâd and Kum) rather than to those of 'Irâk, then controlled by the Ottomans—which endowed Kum with an unprecedented glamour. The sanctuary was embellished, and two of its four fâbâhs were transformed into madrasas, with a hostel for pilgrims. Many "ulama" came to Kum to study in such as Mullâ Mu'隐rî Fâyûd, Mullâ 'Abd al-Razâk Lâhîjî, Mullâ Qâbrî Siktî, Karî 'Abd Kumi, etc. (Fisher, 57). Traditions extolling the sanctity of the soil of Kum became current, and to the hundreds of tombs of Imâm-zâdâs (at the time Amin Ahmad Râzî counted 444 of them) were added the tombs of thousands of the faithful. The descendants of Shah 'Abbâs I were buried there, as were thirty-one other princes (M. Bazin, *Qom, ville de pelerinage, 84*). No other Iranian city has such a vast number of tombs of "ulama", of distinguished people or of simple believers, and the cemeteries extend over an enormous area.

In the 17th century, travellers described at length the merits of the town's craft-products (rapier and saber blades, silks, cottons, glass, porcelain, porcelain, white ceramics, etc.; see Bazin, *Qom, 105*). But at the same time it was a kind of land of exile for deposed aristocrats (Fakhl, 151), and insolvent debtors took refuge in the sanctuary (Gemelli Careri, ii, 74-5). Money was coined at Kum in the 16th and 17th centuries, and it appears that the Safawids and the Kâdjârs sought to re-establish this tradition (Houtum-Schinder, 71; Fakhl, 39, 152 ff.).

After the terrible depression of the 18th century (pillage by the Afghans, massacres perpetrated by Ishâq Khan, brother of Nâdir Shâh and by an Uzbek governor in the service of this sovereign: Fakhl, 224 ff.), the practice of building royal monuments was revived by the Kâdjârs. The shrines of Fatima built by 'Abbâs I was embellished by Fath 5All Shâh who also built a madrasa. The vast "new court" (sabr-i ajâ'îd) was constructed by Amin al-Sülûh, vizier of Nâdir al-Din Shâh, in 1833. Around the "old court" (sabr-i 'âd) stand an octagonal monument containing the tombs of senior Kâdjâr dignitaries (Fats 'All Shâh, Muhammad Shâh, his wife Mahdî-Avâhi, etc.) and the sanctuary library (10,000 manuscripts and 5,800 volumes) which also contains a museum. The Masjîd-i A'zâm, constructed on the orders of the Ayât Allâh Burjûdî (d. 1961), stands to the west of the sanctuary which includes other monuments (for a plan of the sanctuary, see Bazin, *Qom, 91*; Fisher, 58; a history of the monuments, including a description of their contemporary state, with plans and illustrations of inscriptions, documents, etc., is supplied by Mudarris Ibn Tabâtabâ, *Turbat-i pâkân, 2 vols., Kum 2535/1976*). The city-sanctuary today (1976) comprises fourteen large traditional madrasas, supervised by the Ayât Allâh, four modern schools (Fisher, 23) as well as numerous private libraries, the most important being that of the Ayât Allâh Marâšî Najâfî (50,000 volumes including 15,000 manuscripts). After 1965, the sanctuary was administered by a mudâsawâr nominated by the Shâh (Fisher, 56). The revenues of the sanctuary and the annual number of pilgrims (about a million in 1970) are poor in comparison with those of Masjîd (four and a half million, including tourists, in 1952/1973). Nevertheless the spiritual role of Kum continues to be very important. Since 1940/1920, a modern Centre for Theological Education (*Hawârdâ-î 5îmil*) has been established there (Fisher, 62 ff.). Three of the most eminent marjâ'-î taklîf (Gulpâygâni, Marâšî Najâfî, Shârî'î Madârî) reside there (on the religious elite and the role of the marjâ'-î taklîf, see Fisher, 30 ff., and A. K. S. Lambton in *Studia Islamica*, xx (1964), 113-35).

The demographic evolution of the town—which, in spite of mistakes on the part of travellers, may be more or less traced from the 9th/15th century onwards—contributes to an understanding of the vicissitudes that have affected it:

- 26,000 houses in 1474 (Barbaro)
- 3,000 inwards in 1524 (Tenneiro)
- 2,000 hearths in 1565 (Mestre Afonso)
- 2,000 families in 1627 (Herbert)
- 15,000 houses in 1673 (Chardin)
- 50 houses (sic) in 1796 (Olivier)

(each hearth, house or family should represent five to six persons).

After 1850, the population fluctuated between 20,000 and 25,000 inhabitants (with a drop to 14,000 in 1874-5 on account of a famine; see A. K. S. Lambton, *Landlord and peasant, 153*, n. 3) rising to 35,000 in 1866-7. Since 1913 (30,000) the population has grown continuously (35,000 in 1937-8; 81,540 in 1967-8; 96,499 in 1976; 134,292 in 1966; and 216,873 in 1976).

Under the Kâdjârs, Kum was a haven of refuge (bast-nishin) for political opponents of the regime. This opposition was particularly marked during the
events of the constitutional revolution of 1905-06. Under Riza Shah (1925-41), the opposition of certain 'ulamâ' was also manifested in various ways (Fisher, 62). There now exists a dichotomy between technocratic and religious power, and some influential 'ulamâ' of Qom have encouraged their disciples to rebel: examples are Kâshânî, under Muṣâbidî, and Khumaynî, who was arrested on the 5th of Khurâd (5th of June) 1973 and exiled to Turkey, then to 'Irak (see H. Algar, in Scholares, saints and Sufis, ed. N. R. Keddie, Berkeley-Los Angeles 1972, 242 ff.); and riots involving 'Muslim Marxist. Irâd' (see H. Algar, in Chicago 1973, 136-47); they occurred in the area of Qom (Iran Central), as Bulletin of the Societé Languedocienne de Géographie (Montpellier 1973, viii, 83-92; idem, Qom, ville de pèlerinage et centre régional, in Revue Géographique de l'Est, 1973-2, 73-135; idem, La vie rurale dans la région de Qom (Iran central), POT-Études, Paris n.d.; F. Belmont, Les villages de l'Iran, i, Paris 1969, 179-92; the Hon. G. N. Curzon, Persia and the Persian question, London 1892, i, 1-2; M. M. J. Fisher, The Qom report, an account of contemporary Shiism, draft July 1976 (typescript report); A. Houm-S tended, Eastern Persian Iran, London 1867, 56-100; Ch. (M. I. Ėren Chesněs [Ch. Pellať])

KUMĀN, a Turkish people whose origin is connected with Central Asia. In all probability their forefathers are to be found in the people indicated by Ma wrs (Tabāh's al-hayānān, ed. Minorsky, 18, § 3), as Şahār (sāhār), identical with the Yellow Uyghurs, who since about 850 A.D. were living to the east of the Tarim basin. This name is probably derived from their physiognomy, varying from that of the other Turkic peoples. At the beginning of the 12th century A.D. (ca. 1012-18), the Şarī left their homeland under the pressure of the Kūn (q.v.) who were migrating to the west before the Kitis. This movement of peoples reached in the west also the regions of the Turkmen, who were driven away to new areas. In the newly-conquered regions to the north of the Şir Darya, close contact between the participants in this migration (the Şarī and the Kūn) and the Kınāk and Kipčak (q.v.) tribes who were living there, led to the formation of a new tribal confederation. It is probable that about this time the Şarī (sārī — yellow) were given by other Turkic-speaking peoples the name Kumān, derived from a root with similar meaning ( thù — yellowish).

A few decades later the Kumān pressed forward to the west. Apart from their own name, various other names were mentioned in Western and Armenian sources (polovci, poloving, polovet, polovci, Polovc, Polovens, Kozarci, etc.), but semantically these terms ("yellow, pale, sallow, bright, clear") accord with the meaning of the name Kumān. Towards the middle of the 11th century A.D., the Kumān were living in the Dniepr region. In 1062 they started launching attacks against Kiev, and in 1078, together with the Peĉenēg, against Byzantium. In 1085 they took part in the rebellion of the Bulgars, but in 1090 they were allies with emperor Alexius against the Peĉenēg. Their raids against Hungary started in the same period. Hungarian historical sources mention them under the name Kūn (enmi, chumi), but it has not yet become clear whether these tribes can be put in direct relation with the above-mentioned Kūn, who probably were absorbed later by the Şarī (i.e. the Kumān). In 1094 and again in 1114 the Emperor Alexius waged two quite important wars against the Kumān, who were to be pushed back to the other side of the Danube. The Mongol invasion put an end to the control of the Kumān over the Pontic steppes, and after the final defeat in 1235, a part of them sought refuge in Bulgaria. Thus they played an important rôle in the history of Hungary, in that the second reign of the Bulgarian Tsars ended in that in Byzantium. The Kumān, who had remained in the Pontus area were incorporated into the western part of the Mongol empire called Kipčak [see Dašt-i Kipčak in Suppl.].

The most important document of the Kumān language is the Codex Cumanicus (14th century) a collection of texts brought together in South Russia by Italian and German missionaries. Some rudimentary remnants of the language are also found in Hungarian. Important references to their language are further present in loan-words of Kumān origin in Hungarian, Bulgarian and Rumanian, as well as in place-names in various regions of these countries. Bibliography: Besides the literature given in the article Kipčak, see J. Németh, Die Volksnämme Kuman und qim, in Köchel-Comes Archiv, iii (1941-4), 95-105; K. Czeglédy, A kipqeck szókincs, in Magyar Folklór Alkotói xıv (1943). About the Codex Cumanicus, see Philologiae turcicae fundamenta, i, Wiesbaden 1959; A. ( G. Hafat)

KUMĀSH (a. pl. akumāsha), in general sense, "cloth", but in a more particularised sense, "a Mamluk garment". The term Kumash in the later Middle Ages commonly designated "cloth" or any "woven stuff" in general and was synonymous with the classical words bāzāz and ḡiyyūb. Abu Ḫadda al-Dīnāqhi (ca. 5/11th century) does not use the term at all in his book on military science. For the Codex Cumanicus, see Philologiae turcicae fundamenta, i, Wiesbaden 1959; A. Tietze, The Kuman riddles and Turkeic folklore, Berkeley-Los Angeles 1956; VI. Drimka, Syntaxe Comana, București 1973; Idem, Problemes d'une nouvelle edition du "Codex Cumanicus"; idem, Miscellanea Cumana I—IV, in Revue Roumaine de Linguistique, xv (1970), 453-59; xvi (1971), 275-85; xvii (1972), 3-21.

and these had a decisive effect on the direction that the influence of the Shi'i tendencies of his native town Qiamhara, b. Tha'Maba (see ibn al-Kalbl-Caskel, rikf and al-Kumayt b. Ma).

It was probably the stigmatism of being a Sayf b. 'Umar world, who is not to be confused with two earlier and lesser known Asadis, nl-Kumayt b. Ma, whose hostility towards the Umayyads he shared; in Ru^ba b. al 'Ad|adi and the Kharidi! al-Tirim^n, to the poetry and the language of the Bedouins, and whose first work was a treatise on figs, which more than half constitutes an opening typical of the 'Alids similar to the 2nd/8th century, a

verses or even whole sections of which he was not

her hostility of Khalid, at a time when the latter needed assurance of the loyalty of the South Arabian elements. By a circuitous policy, the governor informed the caliph of the attitude of the poet, who was imprisoned; with the help of his wife, who had come to visit him, he succeeded in escaping disguised as a woman and, after a period of wandering, he finally obtained pardon from the caliph through the mediation of the prince Maslama b. Higham. On his return to Kufa, he must have been gratified at the dismissal of Khalid (120/738); although his successor, Yusuf b. 'Umar al-Tha'ifi [g.v.] was responsible, two years later (122/740), for the death of Zayd b. 'Abd Allah, who had allowed himself to become involved in a Shi'i revolt. Al-Kumayt had no scruples about flattering him, although he did not succeed in defusing the Yemeni soldiers of his guard, who, on an occasion when he arrived to recite a poem, inflicted on him a mortal wound (126/743).

The renown of the poet, maintained by Shi'i circles, rests fundamentally on the Hâgimîyât, which have been the objects of a commentary by Abu Ri'yâb (d. 336/950 [g.v. in Suppl.] and of a number of editions: of M. Shâbîr al-Khayyât (Cairo 1519, 1532), of Muhammad Mâhâmûd al-Râfi'î (Sharh al-Hâgimîyât, Cairo n.d. [1958]), of 'Abd al-Mu'tâl al-Šâfi'î, with a quite interesting commentary (al-Kumayt b. Zayd al-Asadî, shâfî'î 'asâr, Cairo 1519, 1532, and most of all, of J. Horovitz, with a German translation (Die Hâgimîyat des Kumayt, Leiden 1904). In spite of the title, the poet's praises are not aimed at all the Bani Hâgim, but principally at the Prophet and at 'Ali and his descendants. Some verses (i, 79, ii, 105 ff. of the Horovitz edition), in which mention is made of 'Abd Allah, and of his sons, were no doubt added in the 'Abhâsid period, perhaps by the son of al-Kumayt, al-Mustahill, who was also a poet (see Aghani, index) and was concerned to perpetuate his father's memory. The Hâgimîyat are composed, in the Horovitz edition, of four long hâdâs (103, 140, 133 and 327 verses), of two short hâdâs (35 and 20 verses), of one fragment of seven verses of which more than half constitutes an opening typical of the hâdâs, and of four short pieces of six, two and one verses. In the long poems, al-Kumayt follows the framework of the hâdâs, but with a short and not very conventional nasîb. In the raklit, he follows the classical tradition, and subsequently he produces lavish eulogies of the 'Alids similar to those that were addressed to the Bedouin sayyids. He also borrows frequently from the Kufan, to such an extent that a scholar of Kufa, Ibn Rinkâ [g.v.] was able to compose, in the 12th century, a Kifâh Sanâhir al-Kumayt min al-K'furûn. Some philologists and poets accuse him of plagiarism and incoherence (see for example, al-Masmine, Muwadhdab, 191-8) and do not judge him worthy, in spite of his antiquity, of figuring among the poets who serve as a "proof", a hâdâs (cf. al-Baghdâdi who takes his sheikh no. 15 from a poem of al-Kumayt). His compositions are oriented towards the Shi'i circles, whose members probably did not hesitate to add to them verses or even whole sections of which he was not the author. For R. Blachère, "the simplicity of the language, the platitude of the arguments makes one think of a poetry of propaganda aimed at a public (possibly urban) immune to the lexicographical beauties of the desert poets." The language of al-Kumayt nevertheless does not lack refinement, but the artifi-
cial use of a badly-understood *gārīb* was a source of irritation to some of his contemporaries. In fact, the importance of the Ḥāshimiyāt, insofar as they are entirely authentic, resides in the opinions and the sentiments current in the Shi'ī circles—or rather Zaydi circles, so it seems—of KItāb which they reflect. Al-Kumayt, it is true, regards the first caliphs as usurpers (iv, 10), but he refrains from excommunicating them, even if they did wrong in not handing Fadāk [q.v.] back to Fāṭima; 'All is the worst of the Prophets, who bequeathed the madjdīyya to him near the pool of Kūmūm [vi, 6], which seems to be the earliest evidence of this Shi'ī doctrine: it is to the 'Alīds alone that power belongs and it is they who will consolidate afresh the foundations of Islam which unworthy rulers have shaken. The poet's enthusiasm does not, however, run to the extent of leading him to take up arms in support of the 'Alīds cause, personified especially by Zayd b. 'Alī, and his warfare is limited to virulent versified attacks on the ruling regime, although his convictions do not prevent him from addressing compliments to it, as is shown by the eulogies of Masmada and of Ḥishām himself, after his tares had been heard. He recognises, besides, that in doing this, he had used tabīyya (q.v.), in a verse (iv, 86) where this term, according to Goldziher (in ZDJS, lx, 216) is used for the first time in the sense which the Shi'īs gave to it (Goldziher, in Za, xxix [1909], cf. Arabica, viii [1969], 11), also comments on the metempsychosis referred to in iii, xv, 39-40.

It is probable that Ḥishām would not have shown so much clemency if he had really known the content of the Ḥāshimiyāt; these must in fact have been circulated surreptitiously, with or without the complicity of the local authorities. It seems clear, in fact, in spite of divergences in the traditions, that al-Kumayt owed his rebuffs to the Muhālīkhaba alone. This poem of 300 verses, of which only a part has been preserved, is a riposte to a Kalbī poet referred to by the name al-ʿArwār, who had attacked Muḥār and, among them, the 'Alīds. In the Ḥāshimiyāt there is no sign of any hostility towards the Yemenis, and the poet had even lauded the Muhālīkhaba and, among them, the Kūmālids. In the person of Muḥādar b. Yaʿṣīl b. al-Muḥallab, which seems to prove that the section in which were enumerated the displeasurable characteristics of the tribes of the Yemen is of a mainly occasional nature. Not only was this poem the primary cause of the assassination of al-Kumayt, but in addition, al-Masʿādī (Masʿādī, vi, 30-46 = §§ 2907-72) comes close to seeing here both a manifestation and a cause of the conflicts between the Northern and Southern Arabs which led to the fall of the Umayyads. This Muhālīkhaba certainly enjoyed a dangerous renown among the tribes of Muḥār, since, at the beginning of the following century, another Shi'ī poet, al-Maṣṣūrī [q.v.] (died 619/1221) advised his readers to take up the defence of the Yemenis in a *ḥāšā*, which is said to have comprised 300 verses, of which only 25 are now extant (see ʿAbd al-ʿArūn, al-ʿArūn, al-ʿArūn, Shi'ī Divālī, Damascus 1384/1964, 193-7; idem, Divālī b. ʿAlī al-Khuṣāṣī [q.v.], Damascus 1967, index).

As for the *Malikāts*, preserved by Abū Zayd al-Kurāshī (Dimkara, 287 ff.), it comprises 56 verses and contains general and personal observations and the eulogy of Kurāshī, that is, ultimately of the Umayyads.

The *Dīwān* of al-Kumayt, which must have contained 5,000 verses, has been the object—proof of the interest aroused by this poet—of a number of recensions by Ibn Kūnās, Al-ʿAgāmaʾ, al-Sukkakh and Ibn al-Siklīṭ (*Fāḥīd*, 153, Cairo ed., 225). It has been partially reconstituted by Dāwūd Sallūm, Baghdād 1969-70 (3 vols. without the Ḥāshimiyāt).

In spite of the studies that have been devoted to him, the personality of this poet, who was capable of composing eulogies simultaneously to the 'Alīds and the Umayyads, remains inscrutable, even enigmatic, by reason of the meagre credit that may be accorded to the sources. Sunnī as well as Shi'ī, his versatility even when justified by tabiyya, is such as to throw doubt upon his sincerity and to advise the greatest caution in the use of his work.

**KUMĪDĪS,** a people mentioned in the Arabic and Persian historical and geographical sources of the 4th/10th and 5th/11th centuries as dwelling in the Buttmanat Mts., at the heads of the valleys running southwards through Khurtī and Čagānīān down to the course of the upper Oxus. The *Hūdād al-ʿIlām* (1370/1952) describes them as professional brigands and as linked with a smaller group, the Kandīna Turks. In fact, these two peoples must be remnants of some earlier waves of invaders from Inner Asia, left behind in the Pamir region probably of the Hoplithalites [see HAVĀṬILA], or even of the earlier Sakas; Polymēno mentions a Sakā tribe of Kūmīdī and it is accordingly probable that the name of our people should be read as *Kumūdī* diṣ. Sources like Gardizi and Bayḥādī mention the Kumūdī as marauders called in by warring factions during the decline of the Sāmānīds (e.g. by ʿAbd Allāb Čağānā), and during the disintegration of Ghaznavī power in the west (e.g. by the incoming Karakhānīds); but with the opening of the Saljūk period, they disappear from recorded history.
